Candidatus Erythrobacter colopilega (NL. fem. n. *colopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp011765465*. The type genome for the species is the GenBank assembly GCA_011765465.1. The GC content of the type genome is 66.62 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Erythrobacter decomessa sp. nov.

Candidatus Erythrobacter decomessa (NL. fem. n. *decomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001720465*. The type genome for the species is the GenBank assembly RS_GCF_001720465.1. The GC content of the type genome is 64.72 % and the genome length is 2.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "littoral zone".

Description of *Candidatus* Erythrobacter depacivita sp. nov.

Candidatus Erythrobacter depacivita (NL. fem. n. *depacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp903934325*. The type genome for the species is the GenBank assembly GCA_903934325.1. The GC content of the type genome is 65.67 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Erythrobacter desonicula sp. nov.

Candidatus Erythrobacter desonicula (NL. fem. n. *desonicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp900105095*. The type genome for the species is the GenBank assembly GCA_001314765.1. The GC content of the type genome is 68.36 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Erythrobacter dilecitas sp. nov.

Candidatus Erythrobacter dilecitas (NL. fem. n. *dilecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp009995225*. The type genome for the species is the GenBank assembly GCA_009995225.1. The GC content of the type genome is 62.94 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Erythrobacter dilibatio sp. nov.

Candidatus Erythrobacter dilibatio (NL. fem. n. *dilibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002482865*. The type genome for the species is the GenBank assembly GCA_002482865.1. The GC content of the type genome is 64.53 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Erythrobacter documatica sp. nov.

Candidatus Erythrobacter documatica (NL. fem. n. *documatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp000744895*. The type genome for the species is the GenBank assembly RS_GCF_000744895.1. The GC content of the type genome is 64.18 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Erythrobacter domigitura sp. nov.

Candidatus Erythrobacter domigitura (NL. fem. n. *domigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp000152865*. The type genome for the species is the GenBank assembly RS_GCF_000152865.1. The GC content of the type genome is 60.97 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Erythrobacter eccilicella sp. nov.

Candidatus Erythrobacter eccilicella (NL. fem. n. *eccilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002842925*. The type genome for the species is the GenBank assembly GCA_002842925.1. The GC content of the type genome is 62.16 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Erythrobacter exsufibula sp. nov.

Candidatus Erythrobacter exsufibula (NL. fem. n. *exsufibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002215495*. The type genome for the species is the GenBank assembly RS_GCF_002215495.1. The GC content of the type genome is 67.57 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Erythrobacter exsusentia sp. nov.

Candidatus Erythrobacter exsusentia (NL. fem. n. *exsusentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001542875*. The type genome for the species is the GenBank assembly RS_GCF_001542875.1. The GC content of the type genome is 56.87 % and the genome length is 3.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Erythrobacter gerunimonia sp. nov.

Candidatus Erythrobacter gerunimonia (NL. fem. n. *gerunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001464915*. The type genome for the species is the GenBank assembly GCA_001464915.1. The GC content of the type genome is 62.95 % and the genome length is 2.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Erythrobacter humecitoga sp. nov.

Candidatus Erythrobacter humecitoga (NL. fem. n. *humecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002952215*. The type genome for the species is the GenBank assembly RS_GCF_002952215.1. The GC content of the type genome is 64.3 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Erythrobacter illuvisca sp. nov.

Candidatus Erythrobacter illuvisca (NL. fem. n. *illuvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp009905735*. The type genome for the species is the GenBank assembly RS_GCF_009905735.1. The GC content of the type genome is 64.56 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Erythrobacter infabax sp. nov.

Candidatus Erythrobacter infabax (NL. fem. n. *infabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp000331285*. The type genome for the species is the GenBank assembly RS_GCF_000331285.1. The GC content of the type genome is 67.35 % and the genome length is 2.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water of the Huguangyan Maar Lake".

Description of *Candidatus* Erythrobacter inremicella sp. nov.

Candidatus Erythrobacter inremicella (NL. fem. n. *inremicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001724215*. The type genome for the species is the GenBank assembly GCA_001724215.1. The GC content of the type genome is 61.96 % and the genome length is 2.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Erythrobacter maxumitoga sp. nov.

Candidatus Erythrobacter maxumitoga (NL. fem. n. *maxumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp003264115*. The type genome for the species is the GenBank assembly RS_GCF_003264115.1. The GC content of the type genome is 60.77 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Erythrobacter melopastra sp. nov.

Candidatus Erythrobacter melopastra (NL. fem. n. *melopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp900149685*. The type genome for the species is the GenBank assembly GCA_900149685.1. The GC content of the type genome is 56.24 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Erythrobacter renaviforma sp. nov.

Candidatus Erythrobacter renaviforma (NL. fem. n. *renaviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp004292705*. The type genome for the species is the GenBank assembly GCA_004292705.1. The GC content of the type genome is 64.87 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Erythrobacter tegimimonas sp. nov.

Candidatus Erythrobacter tegimimonas (NL. fem. n. *tegimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002842735*. The type genome for the species is the GenBank assembly GCA_002842735.1. The GC content of the type genome is 62.38 %

and the genome length is 2.66 Mbp.

Description of *Candidatus* Erythrobacter vacilivita sp. nov.

Candidatus Erythrobacter vacilivita (NL. fem. n. *vacilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001556995*. The type genome for the species is the GenBank assembly RS_GCF_001556995.1. The GC content of the type genome is 63.82 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Erythrobacter vehemicella sp. nov.

Candidatus Erythrobacter vehemicella (NL. fem. n. *vehemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp013822695*. The type genome for the species is the GenBank assembly GCA_013822445.1. The GC content of the type genome is 66.07 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Erythrobacter vehicastra sp. nov.

Candidatus Erythrobacter vehicastra (NL. fem. n. *vehicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp011054555*. The type genome for the species is the GenBank assembly GCA_011054555.1. The GC content of the type genome is 67.12 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Erythrobacter venunugo sp. nov.

Candidatus Erythrobacter venunugo (NL. fem. n. *venunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001557115*. The type genome for the species is the GenBank assembly RS_GCF_001557115.1. The GC content of the type genome is 66.38 % and the genome length is 4.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Erythrobacter adfamilega sp. nov.

Candidatus Erythrobacter adfamilega (NL. fem. n. *adfamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp000181515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000181515.1. The GC content of the type genome is 62.86 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Erythrobacter advinago sp. nov.

Candidatus Erythrobacter advinago (NL. fem. n. *advinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp013001165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013001165.1. The GC content of the type genome is 62.35 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Erythrobacter algebimonas sp. nov.

Candidatus Erythrobacter algebimonas (NL. fem. n. *algebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp013911865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013911865.1. The GC content of the type genome is 61.03 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Erythrobacter dilibessa sp. nov.

Candidatus Erythrobacter dilibessa (NL. fem. n. *dilibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp001635685*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001626365.1. The GC content of the type genome is 63.54 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 169 - depth 100m".

Description of *Candidatus* Erythrobacter elastitio sp. nov.

Candidatus Erythrobacter elastitio (NL. fem. n. *elastitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp001542855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001542855.1. The GC content of the type genome is 63.11 % and the genome length is 3.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Erythrobacter holisicula sp. nov.

Candidatus Erythrobacter holisicula (NL. fem. n. *holisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp001678665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001678665.1. The GC content of the type genome is 63.5 % and the genome length is 3.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "quartz stone sublith biofilm".

Description of *Candidatus* Erythrobacter notacugo sp. nov.

Candidatus Erythrobacter notacugo (NL. fem. n. *notacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp002695185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_002695185.1. The GC content of the type genome is 60.7 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Erythrobacter occenitoga sp. nov.

Candidatus Erythrobacter occenitoga (NL. fem. n. *occenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp003248395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003248395.1. The GC content of the type genome is 62.33 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Erythrobacter tenilentia sp. nov.

Candidatus Erythrobacter tenilentia (NL. fem. n. *tenilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp002895025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003447855.1. The GC content of the type genome is 60.85 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Erythrobacter tribratio sp. nov.

Candidatus Erythrobacter tribratio (NL. fem. n. *tribratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter_A sp009993605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009993605.1. The GC content of the type genome is 63.96 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Escherichia adcogitia sp. nov.

Candidatus Escherichia adcogitia (NL. fem. n. *adcogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Escherichia sp002965065*. The type genome for the species is the GenBank assembly RS_GCF_002965065.1. The GC content of the type genome is 50.07 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Escherichia colapitas sp. nov.

Candidatus Escherichia colapitas (NL. fem. n. *colapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Escherichia sp001660175*. The type genome for the species is the GenBank assembly RS_GCF_001660175.1. The GC content of the type genome is 50.61 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Escherichia cucuritia sp. nov.

Candidatus Escherichia cucuritia (NL. fem. n. *cucuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Escherichia sp004211955*. The type genome for the species is the GenBank assembly RS_GCF_004323655.1. The GC content of the type genome is 50.61 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Escherichia detesifica sp. nov.

Candidatus Escherichia detesifica (NL. fem. n. *detesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Escherichia sp000208585*. The type genome for the species is the GenBank assembly RS_GCF_000398885.1. The GC content of the type genome is 50.66 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Escherichia favonifica sp. nov.

Candidatus Escherichia favonifica (NL. fem. n. *favonifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Escherichia sp005843885*. The type genome for the species is the GenBank assembly RS_GCF_005781255.1. The GC content of the type genome is 50.61 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Esculana homagitura sp. nov.

Candidatus Esculana homagitura (NL. fem. n. *homagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W2P13-069 sp004553405*. The type genome for the species is the GenBank assembly GCA_004553405.1. The GC content of the type genome is 65.94 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Esculana gen. nov.

Candidatus Esculana (NL. fem. n. *Esculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W2P13-069*. The type species for the genus is *Candidatus* Esculana homagitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAMH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decuniaceae.

Description of *Candidatus* Esculella vinacitia sp. nov.

Candidatus Esculella vinacitia (NL. fem. n. *vinacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1448 sp003151315*. The type genome for the species is the GenBank assembly GCA_003151315.1. The GC content of the type genome is 46.03 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Esculella gen. nov.

Candidatus Esculella (NL. fem. n. *Esculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1448*. The type species for the genus is *Candidatus* Esculella vinacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Esculia expopimonas sp. nov.

Candidatus Esculia expopimonas (NL. fem. n. *expopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACVK01 sp009991595*. The type genome for the species is the GenBank assembly GCA_009991595.1. The GC content of the type genome is 44.0 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Esculia gen. nov.

Candidatus Esculia (NL. fem. n. *Esculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACVK01*. The type species for the genus is *Candidatus* Esculia expopimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denaviaceae.

Description of *Candidatus* Esculida semapitura sp. nov.

Candidatus Esculida semapitura (NL. fem. n. *semapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXOX01 sp005776585*. The type genome for the species is the GenBank assembly GCA_005776585.1. The GC content of the type genome is 68.56 % and the genome length is 7.0 Mbp.

Description of *Candidatus* Esculida gen. nov.

Candidatus Esculida (NL. fem. n. *Esculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXOX01*. The type species for the genus is *Candidatus* Esculida semapitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2863065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitosaceae.

Description of *Candidatus* Esculula desacessa sp. nov.

Candidatus Esculula desacessa (NL. fem. n. *desacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JADDHL01 sp013151875*. The type genome for the species is the GenBank assembly GCA_013151875.1. The GC content of the type genome is 61.25 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Esculula gen. nov.

Candidatus Esculula (NL. fem. n. *Esculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JADDHL01*. The type species for the genus is *Candidatus* Esculula desacessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelulaceae.

Description of *Candidatus* Essonana alcibago sp. nov.

Candidatus Essonana alcibago (NL. fem. n. *alcibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10118 sp003524845*. The type genome for the species is the GenBank assembly GCA_003524845.1. The GC content of the type genome is 43.44 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Essonana gen. nov.

Candidatus Essonana (NL. fem. n. *Essonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10118*. The type species for the genus is *Candidatus* Essonana alcibago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10105*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lupanellaceae.

Description of *Candidatus* Essonaria arunditia sp. nov.

Candidatus Essonaria arunditia (NL. fem. n. *arunditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVS01 sp009991955*. The type genome for the species is the GenBank assembly GCA_009991955.1. The GC content of the type genome is 49.41 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Essonaria gen. nov.

Candidatus Essonaria (NL. fem. n. *Essonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKVS01*. The type species for the genus is *Candidatus* Essonaria arunditia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Essonaria cenacimonia sp. nov.

Candidatus Essonaria cenacimonia (NL. fem. n. *cenacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVS01 sp007129335*. The type genome for the species is the GenBank assembly GCA_007129335.1. The GC content of the type genome is 48.36 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Essonella accumilega sp. nov.

Candidatus Essonella accumilega (NL. fem. n. *accumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGD01 sp007376405*. The type genome for the species is the GenBank assembly GCA_007376405.1. The GC content of the type genome is 38.52 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Essonella gen. nov.

Candidatus Essonella (NL. fem. n. *Essonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGD01*. The type species for the genus is *Candidatus* Essonella accumilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Essonia funamigena sp. nov.

Candidatus Essonia funamigena (NL. fem. n. *funamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFX01 sp009787445*. The type genome for the species is the GenBank assembly GCA_009787445.1. The GC content of the type genome is 39.53 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Essonia gen. nov.

Candidatus Essonia (NL. fem. n. *Essonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFX01*. The type species for the genus is *Candidatus* Essonia funamigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Essonia insemicula sp. nov.

Candidatus Essonia insemicula (NL. fem. n. *insemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFX01 sp009779925*. The type genome for the species is the GenBank assembly GCA_009779925.1. The GC content of the type genome is 42.58 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Essonida cohonilega sp. nov.

Candidatus Essonida cohonilega (NL. fem. n. *cohonilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDPQ01 sp013042695*. The type genome for the species is the GenBank assembly GCA_013042695.1. The GC content of the type genome is 45.52 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Essonida gen. nov.

Candidatus Essonida (NL. fem. n. *Essonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDPQ01*. The type species for the genus is *Candidatus* Essonida cohonilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Essonosa paralitrix sp. nov.

Candidatus Essonosa paralitrix (NL. fem. n. *paralitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACPNW01 sp902635455*. The type genome for the species is the GenBank assembly GCA_902635455.1. The GC content of the type genome is 28.74 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Essonosa gen. nov.

Candidatus Essonosa (NL. fem. n. *Essonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACPNW01*. The type species for the genus is *Candidatus* Essonosa paralitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Essonula tribrago sp. nov.

Candidatus Essonula tribrago (NL. fem. n. *tribrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *USCg-Taylor sp002007425*. The type genome for the species is the GenBank assembly GCA_002007425.1. The GC content of the type genome is 60.03 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Essonula gen. nov.

Candidatus Essonula (NL. fem. n. *Essonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *USCg-Taylor*. The type species for the genus is *Candidatus* Essonula tribrago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilipariaceae.

Description of *Candidatus* Estovana adsudimonas sp. nov.

Candidatus Estovana adsudimonas (NL. fem. n. *adsudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1073 sp003141675*. The type genome for the species is the GenBank assembly GCA_003141675.1. The GC content of the type genome is 58.12 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Estovana gen. nov.

Candidatus Estovana (NL. fem. n. *Estovana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1073*. The type species for the genus is *Candidatus* Estovana adsudimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-43*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisoranaceae.

Description of *Candidatus* Estovella notacivita sp. nov.

Candidatus Estovella notacivita (NL. fem. n. *notacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUB01 sp004297465*. The type genome for the species is the GenBank assembly GCA_004297465.1. The GC content of the type genome is 66.16 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Estovella gen. nov.

Candidatus Estovella (NL. fem. n. *Estovella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUB01*. The type species for the genus is *Candidatus* Estovella notacivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Estovia adposifica sp. nov.

Candidatus Estovia adposifica (NL. fem. n. *adposifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-57 sp013360865*. The type genome for the species is the GenBank assembly GCA_013360865.1. The GC content of the type genome is 43.93 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Estovia gen. nov.

Candidatus Estovia (NL. fem. n. *Estovia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-57*. The type species for the genus is *Candidatus* Estovia adposifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifosaceae.

Description of *Candidatus* Estovia nubecatica sp. nov.

Candidatus Estovia nubecatica (NL. fem. n. *nubecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-57 sp003599625*. The type genome for the species is the GenBank assembly GCA_003599625.1. The GC content of the type genome is 43.58 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Estovida bifisigena sp. nov.

Candidatus Estovida bifisigena (NL. fem. n. *bifisigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-45-5 sp001816645*. The type genome for the species is the GenBank assembly GCA_001816645.1. The GC content of the type genome is 43.65 % and the genome length is 0.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.1 filter".

Description of *Candidatus* Estovida gen. nov.

Candidatus Estovida (NL. fem. n. *Estovida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-45-5*. The type species for the genus is *Candidatus* Estovida bifisigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-39-9b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexellaceae.

Description of *Candidatus* Estovosa antacitrix sp. nov.

Candidatus Estovosa antacitrix (NL. fem. n. *antacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CUG-92003 sp013618635*. The type genome for the species is the GenBank assembly RS_GCF_013618635.1. The GC content of the type genome is 43.92 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Estovosa gen. nov.

Candidatus Estovosa (NL. fem. n. *Estovosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CUG-92003*. The type species for the genus is *Candidatus* Estovosa antacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ethanoligenens obfusiforma sp. nov.

Candidatus Ethanoligenens obfusiforma (NL. fem. n. *obfusiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ethanoligenens sp003518885*. The type genome for the species is the GenBank assembly GCA_003518885.1. The GC content of the type genome is 42.78 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Eubacterium acropitio sp. nov.

Candidatus Eubacterium acropitio (NL. fem. n. *acropitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_A sp001940235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001940235.1. The GC content of the type genome is 52.29 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Eubacterium conabitrix sp. nov.

Candidatus Eubacterium conabitrix (NL. fem. n. *conabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_A sp900321685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900314185.1. The GC content of the type genome is 51.95 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Eubacterium coturentia sp. nov.

Candidatus Eubacterium coturentia (NL. fem. n. *coturentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_A sp900315125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900315125.1. The GC content of the type genome is 52.66 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Eubacterium resacilega sp. nov.

Candidatus Eubacterium resacilega (NL. fem. n. *resacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_A sp000688015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000688015.1. The GC content of the type genome is 52.97 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Eubacterium repagentia sp. nov.

Candidatus Eubacterium repagentia (NL. fem. n. *repagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_B sp002472145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002472335.1. The GC content of the type genome is 55.14 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Eubacterium tresvicula sp. nov.

Candidatus Eubacterium tresvicula (NL. fem. n. *tresvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_B sp902803185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902803185.1. The GC content of the type genome is 61.76 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Eubacterium adcubicella sp. nov.

Candidatus Eubacterium adcubicella (NL. fem. n. *adcubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp002431395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002431395.1. The GC content of the type genome is 42.4 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Eubacterium admigimonas sp. nov.

Candidatus Eubacterium admigimonas (NL. fem. n. *admigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp003453515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003453515.1. The GC content of the type genome is 48.47 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Eubacterium adtilatio sp. nov.

Candidatus Eubacterium adtilatio (NL. fem. n. *adtilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp000687695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000687695.1. The GC content of the type genome is 45.82 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Eubacterium bigemousia sp. nov.

Candidatus Eubacterium bigemousia (NL. fem. n. *bigemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp900319095*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900319095.1. The GC content of the type genome is 44.38 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Eubacterium devecicella sp. nov.

Candidatus Eubacterium devecicella (NL. fem. n. *devecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp000434115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000434115.1. The GC content of the type genome is 43.19 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Eubacterium dibucitia sp. nov.

Candidatus Eubacterium dibucitia (NL. fem. n. *dibucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp002362575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002362575.1. The GC content of the type genome is 42.84 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Eubacterium dilacimonia sp. nov.

Candidatus Eubacterium dilacimonia (NL. fem. n. *dilacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp002435545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002435545.1. The GC content of the type genome is 43.15 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Eubacterium dilogivita sp. nov.

Candidatus Eubacterium dilogivita (NL. fem. n. *dilogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp003491505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900538975.1. The GC content of the type genome is 40.73 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Eubacterium munifibula sp. nov.

Candidatus Eubacterium munifibula (NL. fem. n. *munifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp000433735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539785.1. The GC content of the type genome is 43.84 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Eubacterium regigitura sp. nov.

Candidatus Eubacterium regigitura (NL. fem. n. *regigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp900318295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902755855.1. The GC content of the type genome is 45.71 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Eubacterium susicicula sp. nov.

Candidatus Eubacterium susicicula (NL. fem. n. *susicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp900539115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_900758065.1. The GC content of the type genome is 42.43 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Eubacterium vilipitia sp. nov.

Candidatus Eubacterium vilipitia (NL. fem. n. *vilipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_F sp002490465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002490465.1. The GC content of the type genome is 42.88 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Eubacterium adrumetta sp. nov.

Candidatus Eubacterium adrumetta (NL. fem. n. *adrumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp902783775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783775.1. The GC content of the type genome is 34.47 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Eubacterium cereventia sp. nov.

Candidatus Eubacterium cereventia (NL. fem. n. *cereventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp000432355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003479405.1. The GC content of the type genome is 35.82 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Eubacterium cinipitio sp. nov.

Candidatus Eubacterium cinipitio (NL. fem. n. *cinipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp900550135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900550135.1. The GC content of the type genome is 33.38 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Eubacterium cnestessa sp. nov.

Candidatus Eubacterium cnestessa (NL. fem. n. *cnestessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp900764695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900764695.1. The GC content of the type genome is 33.44 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Eubacterium conopilega sp. nov.

Candidatus Eubacterium conopilega (NL. fem. n. *conopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp900548465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900761595.1. The GC content of the type genome is 35.35 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Eubacterium lavabimonas sp. nov.

Candidatus Eubacterium lavabimonas (NL. fem. n. *lavabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp902774125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902774125.1. The GC content of the type genome is 38.32 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Eubacterium mavoritia sp. nov.

Candidatus Eubacterium mavoritia (NL. fem. n. *mavoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp002369135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002369135.1. The GC content of the type genome is 36.66 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Eubacterium mirifugo sp. nov.

Candidatus Eubacterium mirifugo (NL. fem. n. *mirifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp900552275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900552275.1. The GC content of the type genome is 33.81 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Eubacterium penecastra sp. nov.

Candidatus Eubacterium penecastra (NL. fem. n. *penecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp902793045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902793045.1. The GC content of the type genome is 36.78 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Eubacterium rinocousia sp. nov.

Candidatus Eubacterium rinocousia (NL. fem. n. *rinocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp000435815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_900538775.1. The GC content of the type genome is 33.09 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Eubacterium satacatio sp. nov.

Candidatus Eubacterium satacatio (NL. fem. n. *satacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp902766735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766735.1. The GC content of the type genome is 38.58 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Eubacterium secunivita sp. nov.

Candidatus Eubacterium secunivita (NL. fem. n. *secunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp000434315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000434315.1. The GC content of the type genome is 32.27 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Eubacterium thessatica sp. nov.

Candidatus Eubacterium thessatica (NL. fem. n. *thessatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_G sp900556905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900556905.1. The GC content of the type genome is 33.71 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Eubacterium accumitia sp. nov.

Candidatus Eubacterium accumitia (NL. fem. n. *accumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp902783945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783945.1. The GC content of the type genome is 50.74 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Eubacterium adsicentia sp. nov.

Candidatus Eubacterium adsicentia (NL. fem. n. *adsicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp002368795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002368795.1. The GC content of the type genome is 54.06 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Eubacterium catilibra sp. nov.

Candidatus Eubacterium catilibra (NL. fem. n. *catilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp002371335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002371335.1. The GC content of the type genome is 46.68 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Eubacterium catilitrix sp. nov.

Candidatus Eubacterium catilitrix (NL. fem. n. *catilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900314295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900314295.1. The GC content of the type genome is 50.47 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Eubacterium divoritia sp. nov.

Candidatus Eubacterium divoritia (NL. fem. n. *divoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp009696005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903789605.1. The GC content of the type genome is 50.89 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Eubacterium ephipousia sp. nov.

Candidatus Eubacterium ephipousia (NL. fem. n. *ephipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp903789595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903789595.1. The GC content of the type genome is 50.99 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Eubacterium fibicetta sp. nov.

Candidatus Eubacterium fibicetta (NL. fem. n. *fibicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp902797025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797025.1. The GC content of the type genome is 53.71 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Eubacterium homunisca sp. nov.

Candidatus Eubacterium homunisca (NL. fem. n. *homunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp002394235*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002372215.1. The GC content of the type genome is 50.59 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Eubacterium horomentia sp. nov.

Candidatus Eubacterium horomentia (NL. fem. n. *horomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp000702845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000702845.1. The GC content of the type genome is 48.71 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Eubacterium idciredo sp. nov.

Candidatus Eubacterium idciredo (NL. fem. n. *idciredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900770225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900770225.1. The GC content of the type genome is 51.57 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Eubacterium menapatio sp. nov.

Candidatus Eubacterium menapatio (NL. fem. n. *menapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900318405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900318405.1. The GC content of the type genome is 52.67 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Eubacterium navififica sp. nov.

Candidatus Eubacterium navififica (NL. fem. n. *navififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp902795835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902795835.1. The GC content of the type genome is 53.78 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Eubacterium purulentia sp. nov.

Candidatus Eubacterium purulentia (NL. fem. n. *purulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900318755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900318755.1. The GC content of the type genome is 55.55 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Eubacterium retunago sp. nov.

Candidatus Eubacterium retunago (NL. fem. n. *retunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp003488475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003488475.1. The GC content of the type genome is 50.85 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Eubacterium tegumetta sp. nov.

Candidatus Eubacterium tegumetta (NL. fem. n. *tegumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900319355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902790655.1. The GC content of the type genome is 52.81 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Eubacterium vocamitrix sp. nov.

Candidatus Eubacterium vocamitrix (NL. fem. n. *vocamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_H sp900317175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782315.1. The GC content of the type genome is 50.91 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Eubacterium biparitas sp. nov.

Candidatus Eubacterium biparitas (NL. fem. n. *biparitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp000270305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902795565.1. The GC content of the type genome is 51.98 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Eubacterium decamiforma sp. nov.

Candidatus Eubacterium decamiforma (NL. fem. n. *decamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp001941025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001941025.1. The GC content of the type genome is 55.93 % and the genome length is 1.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Eubacterium denecugo sp. nov.

Candidatus Eubacterium denecugo (NL. fem. n. *denecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp900546495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900755345.1. The GC content of the type genome is 42.15 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Eubacterium penecentia sp. nov.

Candidatus Eubacterium penecentia (NL. fem. n. *penecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp902797015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797015.1. The GC content of the type genome is 47.37 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Eubacterium tenemifica sp. nov.

Candidatus Eubacterium tenemifica (NL. fem. n. *tenemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp900066595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902362715.1. The GC content of the type genome is 42.48 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Eubacterium turifitudo sp. nov.

Candidatus Eubacterium turifitudo (NL. fem. n. *turifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_I sp900557275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900557275.1. The GC content of the type genome is 42.33 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Eubacterium annicitio sp. nov.

Candidatus Eubacterium annicitio (NL. fem. n. *annicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_J sp004562765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004562765.1. The GC content of the type genome is 48.04 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Eubacterium imbelitio sp. nov.

Candidatus Eubacterium imbelitio (NL. fem. n. *imbelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_J sp009774535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009774535.1. The GC content of the type genome is 46.1 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Eubacterium facunimonia sp. nov.

Candidatus Eubacterium facunimonia (NL. fem. n. *facunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_M sp900540015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900540015.1. The GC content of the type genome is 40.49 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Eubacterium accumicula sp. nov.

Candidatus Eubacterium accumicula (NL. fem. n. *accumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902797155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_902797155.1. The GC content of the type genome is 52.08 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Eubacterium affunousia sp. nov.

Candidatus Eubacterium affunousia (NL. fem. n. *affunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900110635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900110635.1. The GC content of the type genome is 40.77 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Eubacterium armidimonia sp. nov.

Candidatus Eubacterium armidimonia (NL. fem. n. *armidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902772925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902772925.1. The GC content of the type genome is 41.66 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Eubacterium canacigena sp. nov.

Candidatus Eubacterium canacigena (NL. fem. n. *canacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902777655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902774915.1. The GC content of the type genome is 38.62 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Eubacterium capabilenta sp. nov.

Candidatus Eubacterium capabilenta (NL. fem. n. *capabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900314445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002299995.1. The GC content of the type genome is 41.46 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Eubacterium cohorastra sp. nov.

Candidatus Eubacterium cohorastra (NL. fem. n. *cohorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002372755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002372755.1. The GC content of the type genome is 39.44 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Eubacterium colimiforma sp. nov.

Candidatus Eubacterium colimiforma (NL. fem. n. *colimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902783605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783605.1. The GC content of the type genome is 37.94 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Eubacterium detumago sp. nov.

Candidatus Eubacterium detumago (NL. fem. n. *detumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp000687975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000687975.1. The GC content of the type genome is 39.47 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Eubacterium dimiditica sp. nov.

Candidatus Eubacterium dimiditica (NL. fem. n. *dimiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902796375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902796375.1. The GC content of the type genome is 51.53 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Eubacterium diritedo sp. nov.

Candidatus Eubacterium diritedo (NL. fem. n. *diritedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002368685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002368685.1. The GC content of the type genome is 38.89 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Eubacterium domicastra sp. nov.

Candidatus Eubacterium domicastra (NL. fem. n. *domicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900321505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900321505.1. The GC content of the type genome is 48.12 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Eubacterium dupunedo sp. nov.

Candidatus Eubacterium dupunedo (NL. fem. n. *dupunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902760755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_902760755.1. The GC content of the type genome is 52.82 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Eubacterium effigimonas sp. nov.

Candidatus Eubacterium effigimonas (NL. fem. n. *effigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp003520205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003520205.1. The GC content of the type genome is 37.72 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Eubacterium excetimonas sp. nov.

Candidatus Eubacterium excetimonas (NL. fem. n. *excetimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902776395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776395.1. The GC content of the type genome is 38.97 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Eubacterium expugigena sp. nov.

Candidatus Eubacterium expugigena (NL. fem. n. *expugigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902775555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902775555.1. The GC content of the type genome is 50.43 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Eubacterium fiducibula sp. nov.

Candidatus Eubacterium fiducibula (NL. fem. n. *fiducibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002350525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002350525.1. The GC content of the type genome is 41.36 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Eubacterium fumacentia sp. nov.

Candidatus Eubacterium fumacentia (NL. fem. n. *fumacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp000702245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902795455.1. The GC content of the type genome is 44.29 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Eubacterium funivivita sp. nov.

Candidatus Eubacterium funivivita (NL. fem. n. *funivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900316715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902794685.1. The GC content of the type genome is 41.5 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Eubacterium impilatica sp. nov.

Candidatus Eubacterium impilatica (NL. fem. n. *impilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900199595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900199595.1. The GC content of the type genome is 38.76 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Eubacterium insinatio sp. nov.

Candidatus Eubacterium insinatio (NL. fem. n. *insinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002372545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002372545.1. The GC content of the type genome is 50.49 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Eubacterium irrotivita sp. nov.

Candidatus Eubacterium irrotivita (NL. fem. n. *irrotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902796385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902796385.1. The GC content of the type genome is 49.05 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Eubacterium luculago sp. nov.

Candidatus Eubacterium luculago (NL. fem. n. *luculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902782695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782695.1. The GC content of the type genome is 39.18 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Eubacterium malagedo sp. nov.

Candidatus Eubacterium malagedo (NL. fem. n. *malagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002371025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_002371025.1. The GC content of the type genome is 35.8 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Eubacterium melopitrix sp. nov.

Candidatus Eubacterium melopitrix (NL. fem. n. *melopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp900321215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003499345.1. The GC content of the type genome is 42.24 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Eubacterium milipax sp. nov.

Candidatus Eubacterium milipax (NL. fem. n. *milipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002391105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002392425.1. The GC content of the type genome is 40.3 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Eubacterium occucicella sp. nov.

Candidatus Eubacterium occucicella (NL. fem. n. *occucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902789175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902789175.1. The GC content of the type genome is 36.09 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Eubacterium problicula sp. nov.

Candidatus Eubacterium problicula (NL. fem. n. *problicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902792005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902792005.1. The GC content of the type genome is 51.26 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Eubacterium refuledo sp. nov.

Candidatus Eubacterium refuledo (NL. fem. n. *refuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp000703065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000703065.1. The GC content of the type genome is 49.86 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Eubacterium satacicula sp. nov.

Candidatus Eubacterium satacicula (NL. fem. n. *satacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902782965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782965.1. The GC content of the type genome is 39.32 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Eubacterium scintugo sp. nov.

Candidatus Eubacterium scintugo (NL. fem. n. *scintugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp003520105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003520105.1. The GC content of the type genome is 43.07 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Eubacterium semibastra sp. nov.

Candidatus Eubacterium semibastra (NL. fem. n. *semibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002392655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002392655.1. The GC content of the type genome is 40.55 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Eubacterium serotitia sp. nov.

Candidatus Eubacterium serotitia (NL. fem. n. *serotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp002349225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002349225.1. The GC content of the type genome is 39.25 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Eubacterium siligitrix sp. nov.

Candidatus Eubacterium siligitrix (NL. fem. n. *siligitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902773185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902773185.1. The GC content of the type genome is 49.2 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Eubacterium solifilenta sp. nov.

Candidatus Eubacterium solifilenta (NL. fem. n. *solifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902795855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_902795855.1. The GC content of the type genome is 40.11 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Eubacterium tametimonia sp. nov.

Candidatus Eubacterium tametimonia (NL. fem. n. *tametimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp000687655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002395545.1. The GC content of the type genome is 41.04 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Eubacterium tenilifica sp. nov.

Candidatus Eubacterium tenilifica (NL. fem. n. *tenilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902780985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902780985.1. The GC content of the type genome is 44.06 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Eubacterium vehemitura sp. nov.

Candidatus Eubacterium vehemitura (NL. fem. n. *vehemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902781895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902781895.1. The GC content of the type genome is 40.61 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Eubacterium vitififorma sp. nov.

Candidatus Eubacterium vitififorma (NL. fem. n. *vitififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_Q sp902774725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902781115.1. The GC content of the type genome is 40.46 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Eubacterium ablacitas sp. nov.

Candidatus Eubacterium ablacitas (NL. fem. n. *ablacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp009774735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009774735.1. The GC content of the type genome is 39.09 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Eubacterium adfiricula sp. nov.

Candidatus Eubacterium adfiricula (NL. fem. n. *adfiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900547915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900547915.1. The GC content of the type genome is 40.76 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Eubacterium benepicula sp. nov.

Candidatus Eubacterium benepicula (NL. fem. n. *benepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002329285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002329285.1. The GC content of the type genome is 44.0 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Eubacterium catabisca sp. nov.

Candidatus Eubacterium catabisca (NL. fem. n. *catabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900540305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900540305.1. The GC content of the type genome is 40.14 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Eubacterium cerarousia sp. nov.

Candidatus Eubacterium cerarousia (NL. fem. n. *cerarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp011958665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011958665.1. The GC content of the type genome is 37.82 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Eubacterium cilicivita sp. nov.

Candidatus Eubacterium cilicivita (NL. fem. n. *cilicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002361935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002490985.1. The GC content of the type genome is 39.34 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Eubacterium cilotago sp. nov.

Candidatus Eubacterium cilotago (NL. fem. n. *cilotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900539845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_900771725.1. The GC content of the type genome is 44.62 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Eubacterium cnestitica sp. nov.

Candidatus Eubacterium cnestitica (NL. fem. n. *cnestitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp014465955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014465955.1. The GC content of the type genome is 39.32 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Eubacterium demogitura sp. nov.

Candidatus Eubacterium demogitura (NL. fem. n. *demogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002494125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002494125.1. The GC content of the type genome is 41.39 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Eubacterium denicimonia sp. nov.

Candidatus Eubacterium denicimonia (NL. fem. n. *denicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp000431535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014465915.1. The GC content of the type genome is 46.51 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Eubacterium detepitio sp. nov.

Candidatus Eubacterium detepitio (NL. fem. n. *detepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp003526845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539615.1. The GC content of the type genome is 41.73 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Eubacterium dilicimonas sp. nov.

Candidatus Eubacterium dilicimonas (NL. fem. n. *dilicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002493595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002493595.1. The GC content of the type genome is 38.22 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Eubacterium direcibra sp. nov.

Candidatus Eubacterium direcibra (NL. fem. n. *direcibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900539165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539165.1. The GC content of the type genome is 41.08 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Eubacterium documitura sp. nov.

Candidatus Eubacterium documitura (NL. fem. n. *documitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900539775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014465855.1. The GC content of the type genome is 41.57 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Eubacterium estovessa sp. nov.

Candidatus Eubacterium estovessa (NL. fem. n. *estovessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900555015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900555015.1. The GC content of the type genome is 36.21 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Eubacterium exaggiforma sp. nov.

Candidatus Eubacterium exaggiforma (NL. fem. n. *exaggiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900766895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900766895.1. The GC content of the type genome is 41.56 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Eubacterium excinimonas sp. nov.

Candidatus Eubacterium excinimonas (NL. fem. n. *excinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900764665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900764665.1. The GC content of the type genome is 42.56 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Eubacterium funivetta sp. nov.

Candidatus Eubacterium funivetta (NL. fem. n. *funivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp000436835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_000436835.1. The GC content of the type genome is 38.13 % and the genome length is 1.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Eubacterium gasifibula sp. nov.

Candidatus Eubacterium gasifibula (NL. fem. n. *gasifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900540235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900540235.1. The GC content of the type genome is 38.27 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Eubacterium hexagugo sp. nov.

Candidatus Eubacterium hexagugo (NL. fem. n. *hexagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp009774715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009774715.1. The GC content of the type genome is 38.47 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Eubacterium hirudibula sp. nov.

Candidatus Eubacterium hirudibula (NL. fem. n. *hirudibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002493325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002490925.1. The GC content of the type genome is 40.16 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Eubacterium illapetta sp. nov.

Candidatus Eubacterium illapetta (NL. fem. n. *illapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900544515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900544515.1. The GC content of the type genome is 39.49 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Eubacterium inperilenta sp. nov.

Candidatus Eubacterium inperilenta (NL. fem. n. *inperilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900316345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900316345.1. The GC content of the type genome is 43.84 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Eubacterium ludimigena sp. nov.

Candidatus Eubacterium ludimigena (NL. fem. n. *ludimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp002371215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002371215.1. The GC content of the type genome is 43.32 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Eubacterium luticibra sp. nov.

Candidatus Eubacterium luticibra (NL. fem. n. *luticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900543795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900753605.1. The GC content of the type genome is 40.77 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Eubacterium murelivita sp. nov.

Candidatus Eubacterium murelivita (NL. fem. n. *murelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp000434995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900538955.1. The GC content of the type genome is 36.27 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Eubacterium patibugo sp. nov.

Candidatus Eubacterium patibugo (NL. fem. n. *patibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900542875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900757955.1. The GC content of the type genome is 41.17 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Eubacterium pinigitoga sp. nov.

Candidatus Eubacterium pinigitoga (NL. fem. n. *pinigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900767025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900767025.1. The GC content of the type genome is 41.67 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Eubacterium resulitrix sp. nov.

Candidatus Eubacterium resulitrix (NL. fem. n. *resulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900539425*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756045.1. The GC content of the type genome is 41.7 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Eubacterium retunicella sp. nov.

Candidatus Eubacterium retunicella (NL. fem. n. *retunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp000433975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014465985.1. The GC content of the type genome is 43.31 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Eubacterium ridibitoga sp. nov.

Candidatus Eubacterium ridibitoga (NL. fem. n. *ridibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900761545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900761545.1. The GC content of the type genome is 36.77 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Eubacterium senacimonas sp. nov.

Candidatus Eubacterium senacimonas (NL. fem. n. *senacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900772705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900772705.1. The GC content of the type genome is 42.59 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Eubacterium seposago sp. nov.

Candidatus Eubacterium seposago (NL. fem. n. *seposago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900548085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900548085.1. The GC content of the type genome is 42.1 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Eubacterium subinimonas sp. nov.

Candidatus Eubacterium subinimonas (NL. fem. n. *subinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900321905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900321905.1. The GC content of the type genome is 44.77 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Eubacterium vacilibra sp. nov.

Candidatus Eubacterium vacilibra (NL. fem. n. *vacilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900539325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539325.1. The GC content of the type genome is 39.76 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Eubacterium viliticella sp. nov.

Candidatus Eubacterium viliticella (NL. fem. n. *viliticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_R sp900546785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900546785.1. The GC content of the type genome is 46.68 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Eubacterium aprugago sp. nov.

Candidatus Eubacterium aprugago (NL. fem. n. *aprugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_T sp903789635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903789635.1. The GC content of the type genome is 56.51 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Eubacterium cenoditio sp. nov.

Candidatus Eubacterium cenoditio (NL. fem. n. *cenoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_T sp900318155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900318155.1. The GC content of the type genome is 47.83 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Eubacterium indivatio sp. nov.

Candidatus Eubacterium indivatio (NL. fem. n. *indivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_T sp900766045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900766045.1. The GC content of the type genome is 49.89 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Eubacterium indomedo sp. nov.

Candidatus Eubacterium indomedo (NL. fem. n. *indomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eubacterium_T sp902784035*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902784035.1. The GC content of the type genome is 60.55 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Eudoraea cadavedo sp. nov.

Candidatus Eudoraea cadavedo (NL. fem. n. *cadavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eudoraea sp013042925*. The type genome for the species is the GenBank assembly GCA_013042925.1. The GC content of the type genome is 37.43 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Eudoraea recogedo sp. nov.

Candidatus Eudoraea recogedo (NL. fem. n. *recogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eudoraea sp013041785*. The type genome for the species is the GenBank assembly GCA_013041785.1. The GC content of the type genome is 44.72 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Euzebya panifax sp. nov.

Candidatus Euzebya panifax (NL. fem. n. *panifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Euzebya sp003344865*. The type genome for the species is the GenBank assembly RS_GCF_003344865.1. The GC content of the type genome is 70.58 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Euzebyella emortibula sp. nov.

Candidatus Euzebyella emortibula (NL. fem. n. *emortibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Euzebyella sp014349235*. The type genome for the species is the GenBank assembly RS_GCF_014349235.1. The GC content of the type genome is 39.66 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Evangana obsativita sp. nov.

Candidatus Evangana obsativita (NL. fem. n. *obsativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWAZ01 sp013360775*. The type genome for the species is the GenBank assembly GCA_013360775.1. The GC content of the type genome is 61.73 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Evangana gen. nov.

Candidatus Evangana (NL. fem. n. *Evangana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWAZ01*. The type species for the genus is *Candidatus* Evangana obsativita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinanaceae.

Description of *Candidatus* Evangaria detesousia sp. nov.

Candidatus Evangaria detesousia (NL. fem. n. *detesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQZK01 sp009780765*. The type genome for the species is the GenBank assembly GCA_009780765.1. The GC content of the type genome is 35.08 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Evangaria gen. nov.

Candidatus Evangaria (NL. fem. n. *Evangaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQZK01*. The type species for the genus is *Candidatus* Evangaria detesousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Evangella colutitica sp. nov.

Candidatus Evangella colutitica (NL. fem. n. *colutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-575 sp003249645*. The type genome for the species is the GenBank assembly GCA_003249645.1. The GC content of the type genome is 45.85 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Evangella gen. nov.

Candidatus Evangella (NL. fem. n. *Evangella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-575*. The type species for the genus is *Candidatus* Evangella colutitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Evangia adnicitio sp. nov.

Candidatus Evangia adnicitio (NL. fem. n. *adnicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp013824375*. The type genome for the species is the GenBank assembly GCA_013824375.1. The GC content of the type genome is 54.76 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Evangia gen. nov.

Candidatus Evangia (NL. fem. n. *Evangia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7703*. The type species for the genus is *Candidatus* Evangia adnicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Evangia ascelitio sp. nov.

Candidatus Evangia ascelitio (NL. fem. n. *ascelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp002482505*. The type genome for the species is the GenBank assembly GCA_002482505.1. The GC content of the type genome is 54.28 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Evangia assicastra sp. nov.

Candidatus Evangia assicastra (NL. fem. n. *assicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp003486785*. The type genome for the species is the GenBank assembly GCA_003486785.1. The GC content of the type genome is 56.74 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Evangia domabago sp. nov.

Candidatus Evangia domabago (NL. fem. n. *domabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp012517905*. The type genome for the species is the GenBank assembly GCA_012517905.1. The GC content of the type genome is 58.66 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Evangia inmitilenta sp. nov.

Candidatus Evangia inmitilenta (NL. fem. n. *inmitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp002841395*. The type genome for the species is the GenBank assembly GCA_002841395.1. The GC content of the type genome is 54.36 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Evangia istinicella sp. nov.

Candidatus Evangia istinicella (NL. fem. n. *istinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7703 sp003246365*. The type genome for the species is the GenBank assembly GCA_003246365.1. The GC content of the type genome is 50.36 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Evangosa idipsimonas sp. nov.

Candidatus Evangosa idipsimonas (NL. fem. n. *idipsimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ES-bin-26 sp014379925*. The type genome for the species is the GenBank assembly GCA_014379925.1. The GC content of the type genome is 57.92 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Evangosa gen. nov.

Candidatus Evangosa (NL. fem. n. *Evangosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ES-bin-26*. The type species for the genus is *Candidatus* Evangosa idipsimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *172606-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Horomosaceae.

Description of *Candidatus* Evangula antepax sp. nov.

Candidatus Evangula antepax (NL. fem. n. *antepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSA01 sp012031975*. The type genome for the species is the GenBank assembly GCA_012031975.1. The GC content of the type genome is 54.03 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Evangula gen. nov.

Candidatus Evangula (NL. fem. n. *Evangula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAUSA01*. The type species for the genus is *Candidatus* Evangula antepax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Everbana accapitia sp. nov.

Candidatus Everbana accapitia (NL. fem. n. *accapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBL01 sp013288645*. The type genome for the species is the GenBank assembly GCA_013288645.1. The GC content of the type genome is 41.34 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Everbana gen. nov.

Candidatus Everbana (NL. fem. n. *Everbana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBL01*. The type species for the genus is *Candidatus* Everbana accapitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Everbaria cohonilenta sp. nov.

Candidatus Everbaria cohonilenta (NL. fem. n. *cohonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZY01 sp012514615*. The type genome for the species is the GenBank assembly GCA_012514615.1. The GC content of the type genome is 67.98 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Everbaria gen. nov.

Candidatus Everbaria (NL. fem. n. *Everbaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZY01*. The type species for the genus is *Candidatus* Everbaria cohonilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogosaceae.

Description of *Candidatus* Everbella cocolousia sp. nov.

Candidatus Everbella cocolousia (NL. fem. n. *cocolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITSE01 sp903894975*. The type genome for the species is the GenBank assembly GCA_903894975.1. The GC content of the type genome is 63.41 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Everbella gen. nov.

Candidatus Everbella (NL. fem. n. *Everbella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITSE01*. The type species for the genus is *Candidatus* Everbella cocolousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagosaceae.

Description of *Candidatus* Everbia duponisca sp. nov.

Candidatus Everbia duponisca (NL. fem. n. *duponisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3361 sp002360535*. The type genome for the species is the GenBank assembly GCA_002360535.1. The GC content of the type genome is 65.8 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Everbia gen. nov.

Candidatus Everbia (NL. fem. n. *Everbia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3361*. The type species for the genus is *Candidatus* Everbia

duponisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Everbosa sanabifica sp. nov.

Candidatus Everbosa sanabifica (NL. fem. n. *sanabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SH-1 sp003008555*. The type genome for the species is the GenBank assembly RS_GCF_003008555.2. The GC content of the type genome is 65.64 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Everbosa gen. nov.

Candidatus Everbosa (NL. fem. n. *Everbosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SH-1*. The type species for the genus is *Candidatus* Everbosa sanabifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eviscana inorditudo sp. nov.

Candidatus Eviscana inorditudo (NL. fem. n. *inorditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VISM01 sp007827455*. The type genome for the species is the GenBank assembly RS_GCF_007827455.1. The GC content of the type genome is 30.15 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Eviscana gen. nov.

Candidatus Eviscana (NL. fem. n. *Eviscana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VISM01*. The type species for the genus is *Candidatus* Eviscana inorditudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eviscaria ammatitudo sp. nov.

Candidatus Eviscaria ammatitudo (NL. fem. n. *ammatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *32O-W sp001465275*. The type genome for the species is the GenBank assembly RS_GCF_001465275.1. The GC content of the type genome is 56.34 % and the genome length is 5.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Eviscaria gen. nov.

Candidatus Eviscaria (NL. fem. n. *Eviscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *32O-W*. The type species for the genus is *Candidatus* Eviscaria ammatitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eviscida humecago sp. nov.

Candidatus Eviscida humecago (NL. fem. n. *humecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-51-14 sp001802375*. The type genome for the species is the GenBank assembly GCA_001802375.1. The GC content of the type genome is 51.06 % and the genome length is 2.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Eviscida gen. nov.

Candidatus Eviscida (NL. fem. n. *Eviscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-51-14*. The type species for the genus is *Candidatus* Eviscida humecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Evtepia catagetta sp. nov.

Candidatus Evtepia catagetta (NL. fem. n. *catagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Evtepia sp004556345*. The type genome for the species is the GenBank assembly GCA_004556345.1. The GC content of the type genome is 60.82 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Evtepia cicatatio sp. nov.

Candidatus Evtepia cicatatio (NL. fem. n. *cicatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Evtepia sp900758955*. The type genome for the species is the GenBank assembly GCA_900758955.1. The GC content of the type genome is 56.27 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Evtepia derecago sp. nov.

Candidatus Evtepia derecago (NL. fem. n. *derecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Evtepia sp004554585*. The type genome for the species is the GenBank assembly GCA_004554585.1. The GC content of the type genome is 61.3 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Evtepia funebimonia sp. nov.

Candidatus Evtepia funebimonia (NL. fem. n. *funebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Evtepia sp900546255*. The type genome for the species is the GenBank assembly GCA_900759135.1. The GC content of the type genome is 62.76 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Evtepia peropitoga sp. nov.

Candidatus Evtepia peropitoga (NL. fem. n. *peropitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Evtepia sp004551945*. The type genome for the species is the GenBank assembly GCA_004559955.1. The GC content of the type genome is 61.63 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Ewingella exsuritas sp. nov.

Candidatus Ewingella exsuritas (NL. fem. n. *exsuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ewingella sp003864575*. The type genome for the species is the GenBank assembly GCA_003864575.1. The GC content of the type genome is 52.86 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Exadvana detunimonas sp. nov.

Candidatus Exadvana detunimonas (NL. fem. n. *detunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAT2731 sp002707585*. The type genome for the species is the GenBank assembly GCA_002707585.1. The GC content of the type genome is 28.11 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Exadvana gen. nov.

Candidatus Exadvana (NL. fem. n. *Exadvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SAT2731*. The type species for the genus is *Candidatus* Exadvana detunimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Exadvaria octacitura sp. nov.

Candidatus Exadvaria octacitura (NL. fem. n. *octacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIRX01 sp004563715*. The type genome for the species is the GenBank assembly GCA_004563715.1. The GC content of the type genome is 66.7 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Exadvaria gen. nov.

Candidatus Exadvaria (NL. fem. n. *Exadvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIRX01*. The type species for the genus is *Candidatus* Exadvaria octacitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exadvella occumicella sp. nov.

Candidatus Exadvella occumicella (NL. fem. n. *occumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12461 sp902779355*. The type genome for the species is the GenBank assembly GCA_902779355.1. The GC content of the type genome is 50.09 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Exadvella gen. nov.

Candidatus Exadvella (NL. fem. n. *Exadvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12461*. The type species for the genus is *Candidatus* Exadvella occumicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exadvia citivatio sp. nov.

Candidatus Exadvia citivatio (NL. fem. n. *citivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSA01 sp012518455*. The type genome for the species is the

GenBank assembly GCA_012518455.1. The GC content of the type genome is 32.95 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Exadvia gen. nov.

Candidatus Exadvia (NL. fem. n. *Exadvia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSA01*. The type species for the genus is *Candidatus* Exadvia citivatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Exadvida ficulousia sp. nov.

Candidatus Exadvida ficulousia (NL. fem. n. *ficulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-61-13 sp001801865*. The type genome for the species is the GenBank assembly GCA_001801865.1. The GC content of the type genome is 61.25 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Exadvida gen. nov.

Candidatus Exadvida (NL. fem. n. *Exadvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-61-13*. The type species for the genus is *Candidatus* Exadvida ficulousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Exadvosa adsocitura sp. nov.

Candidatus Exadvosa adsocitura (NL. fem. n. *adsocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HG15A2 sp007741515*. The type genome for the species is the GenBank assembly RS_GCF_007741515.1. The GC content of the type genome is 55.06 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Exadvosa gen. nov.

Candidatus Exadvosa (NL. fem. n. *Exadvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HG15A2*. The type species for the genus is *Candidatus* Exadvosa adsocitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Exaggaria buxanilega sp. nov.

Candidatus Exaggaria buxanilega (NL. fem. n. *buxanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-478 sp011329105*. The type genome for the species is the GenBank assembly GCA_011329105.1. The GC content of the type genome is 33.58 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Exaggaria gen. nov.

Candidatus Exaggaria (NL. fem. n. *Exaggaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-478*. The type species for the genus is *Candidatus* Exaggaria buxanilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Exaggella adpecitudo sp. nov.

Candidatus Exaggella adpecitudo (NL. fem. n. *adpecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1719 sp002317145*. The type genome for the species is the GenBank assembly GCA_002317145.1. The GC content of the type genome is 29.52 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Exaggella gen. nov.

Candidatus Exaggella (NL. fem. n. *Exaggella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1719*. The type species for the genus is *Candidatus* Exaggella adpecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Exaggida vicecitica sp. nov.

Candidatus Exaggida vicecitica (NL. fem. n. *vicecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABACD01 sp014237855*. The type genome for the species is the GenBank assembly GCA_014237855.1. The GC content of the type genome is 61.73 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Exaggida gen. nov.

Candidatus Exaggida (NL. fem. n. *Exaggida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABACD01*. The type species for the genus is *Candidatus* Exaggida vicecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Exaggosa innecago sp. nov.

Candidatus Exaggosa innecago (NL. fem. n. *innecago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEV01 sp902826455*. The type genome for the species is the GenBank assembly GCA_902826455.1. The GC content of the type genome is 70.78 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Exaggosa gen. nov.

Candidatus Exaggosa (NL. fem. n. *Exaggosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEEV01*. The type species for the genus is *Candidatus* Exaggosa innecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Exsanellaceae.

Description of *Candidatus* Exaggula tametisca sp. nov.

Candidatus Exaggula tametisca (NL. fem. n. *tametisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1796 sp002319795*. The type genome for the species is the GenBank assembly GCA_002319795.1. The GC content of the type genome is 44.75 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Exaggula gen. nov.

Candidatus Exaggula (NL. fem. n. *Exaggula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1796*. The type species for the genus is *Candidatus* Exaggula tametisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exaspella arnacitica sp. nov.

Candidatus Exaspella arnacitica (NL. fem. n. *arnacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002727735 sp902536695*. The type genome for the species is the GenBank assembly GCA_902536695.1. The GC content of the type genome is 33.27 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Exaspella gen. nov.

Candidatus Exaspella (NL. fem. n. *Exaspella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002727735*. The type species for the genus is *Candidatus* Exaspella arnacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Exaspella ascaliforma sp. nov.

Candidatus Exaspella ascaliforma (NL. fem. n. *ascaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002727735 sp002727735*. The type genome for the species is the GenBank assembly GCA_002727735.1. The GC content of the type genome is 32.15 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Exaspella catecicula sp. nov.

Candidatus Exaspella catecicula (NL. fem. n. *catecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002727735 sp002694645*. The type genome for the species is the GenBank assembly GCA_002694645.1. The GC content of the type genome is 33.17 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Exaspella deparentia sp. nov.

Candidatus Exaspella deparentia (NL. fem. n. *deparentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002727735 sp902597025*. The type genome for the species is the GenBank assembly GCA_902597025.1. The GC content of the type genome is 33.48 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Exaspida astapisca sp. nov.

Candidatus Exaspida astapisca (NL. fem. n. *astapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDD01 sp012512955*. The type genome for the species is the GenBank assembly GCA_012512955.1. The GC content of the type genome is 49.64 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Exaspida gen. nov.

Candidatus Exaspida (NL. fem. n. *Exaspida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDD01*. The type species for the genus is *Candidatus* Exaspida astapisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DULZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelellaceae.

Description of *Candidatus* Exaspida corocetta sp. nov.

Candidatus Exaspida corocetta (NL. fem. n. *corocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDD01 sp012520135*. The type genome for the species is the GenBank assembly GCA_012520135.1. The GC content of the type genome is 46.17 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Exasposa turicatio sp. nov.

Candidatus Exasposa turicatio (NL. fem. n. *turicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOP01 sp011337885*. The type genome for the species is the GenBank assembly GCA_011337885.1. The GC content of the type genome is 45.76 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Exasposa gen. nov.

Candidatus Exasposa (NL. fem. n. *Exasposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOP01*. The type species for the genus is *Candidatus* Exasposa turicatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifariaceae.

Description of *Candidatus* Exaspula peripibra sp. nov.

Candidatus Exaspula peripibra (NL. fem. n. *peripibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWS01 sp012103475*. The type genome for the species is the GenBank assembly GCA_012103475.1. The GC content of the type genome is 46.06 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Exaspula gen. nov.

Candidatus Exaspula (NL. fem. n. *Exaspula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWS01*. The type species for the genus is *Candidatus* Exaspula peripibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Excalaria fiducifica sp. nov.

Candidatus Excalaria fiducifica (NL. fem. n. *fiducifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MGML01 sp011191975*. The type genome for the species is the GenBank assembly GCA_011191975.1. The GC content of the type genome is 44.97 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Excalaria gen. nov.

Candidatus Excalaria (NL. fem. n. *Excalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MGML01*. The type species for the genus is *Candidatus* Excalaria fiducifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2162*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifosaceae.

Description of *Candidatus* Excalaria maliviforma sp. nov.

Candidatus Excalaria maliviforma (NL. fem. n. *maliviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MGML01 sp001796415*. The type genome for the species is the GenBank assembly GCA_001796415.1. The GC content of the type genome is 46.43 % and the genome length is 1.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Excalia urbicitura sp. nov.

Candidatus Excalia urbicitura (NL. fem. n. *urbicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBA01 sp011526095*. The type genome for the species is the GenBank assembly GCA_011526095.1. The GC content of the type genome is 74.07 % and the genome length is 9.53 Mbp.

Description of *Candidatus* Excalia gen. nov.

Candidatus Excalia (NL. fem. n. *Excalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBA01*. The type species for the genus is *Candidatus* Excalia urbicitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excalosa apoplifica sp. nov.

Candidatus Excalosa apoplifica (NL. fem. n. *apoplifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKWV01 sp013697735*. The type genome for the species is the GenBank assembly GCA_013697735.1. The GC content of the type genome is 69.73 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Excalosa gen. nov.

Candidatus Excalosa (NL. fem. n. *Excalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKWV01*. The type species for the genus is *Candidatus* Excalosa apoplifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excalosa tibicimonia sp. nov.

Candidatus Excalosa tibicimonia (NL. fem. n. *tibicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKWV01 sp007128755*. The type genome for the species is the GenBank assembly GCA_007128755.1. The GC content of the type genome is 71.49 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Excalula demigibra sp. nov.

Candidatus Excalula demigibra (NL. fem. n. *demigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SLSW01 sp007130245*. The type genome for the species is the GenBank assembly GCA_007130245.1. The GC content of the type genome is 71.34 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Excalula gen. nov.

Candidatus Excalula (NL. fem. n. *Excalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSW01*. The type species for the genus is *Candidatus* Excalula demigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excalula medimibula sp. nov.

Candidatus Excalula medimibula (NL. fem. n. *medimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSW01 sp009377645*. The type genome for the species is the GenBank assembly GCA_009377645.1. The GC content of the type genome is 72.88 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Excamana tenemilega sp. nov.

Candidatus Excamana tenemilega (NL. fem. n. *tenemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXG01 sp004292785*. The type genome for the species is the GenBank assembly GCA_004292785.1. The GC content of the type genome is 34.5 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Excamana gen. nov.

Candidatus Excamana (NL. fem. n. *Excamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXG01*. The type species for the genus is *Candidatus* Excamana tenemilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excamaria anarritura sp. nov.

Candidatus Excamaria anarritura (NL. fem. n. *anarritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1839 sp900555545*. The type genome for the species is the GenBank assembly GCA_900555545.1. The GC content of the type genome is 54.08 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Excamaria gen. nov.

Candidatus Excamaria (NL. fem. n. *Excamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1839*. The type species for the genus is *Candidatus* Excamaria anarritura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excamella duponitas sp. nov.

Candidatus Excamella duponitas (NL. fem. n. *duponitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFP01 sp011065005*. The type genome for the species is the GenBank assembly GCA_011065005.1. The GC content of the type genome is 43.37 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Excamella gen. nov.

Candidatus Excamella (NL. fem. n. *Excamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFP01*. The type species for the genus is *Candidatus* Excamella duponitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excamida homilatio sp. nov.

Candidatus Excamida homilatio (NL. fem. n. *homilatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-245 sp003551325*. The type genome for the species is the GenBank assembly GCA_003551325.1. The GC content of the type genome is 62.45 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Excamida gen. nov.

Candidatus Excamida (NL. fem. n. *Excamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-245*. The type species for the genus is *Candidatus* Excamida homilatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excamida utrinousia sp. nov.

Candidatus Excamida utrinousia (NL. fem. n. *utrinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-245 sp003552425*. The type genome for the species is the GenBank assembly GCA_003552425.1. The GC content of the type genome is 63.42 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Excamosa latibibula sp. nov.

Candidatus Excamosa latibibula (NL. fem. n. *latibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-467 sp003252455*. The type genome for the species is the GenBank assembly GCA_003252455.1. The GC content of the type genome is 65.08 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Excamosa gen. nov.

Candidatus Excamosa (NL. fem. n. *Excamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SZUA-467*. The type species for the genus is *Candidatus* Excamosa latibibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excanana amatrimonas sp. nov.

Candidatus Excanana amatrimonas (NL. fem. n. *amatrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDC01 sp013287815*. The type genome for the species is the GenBank assembly GCA_013287815.1. The GC content of the type genome is 42.58 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Excanana gen. nov.

Candidatus Excanana (NL. fem. n. *Excanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDC01*. The type species for the genus is *Candidatus* Excanana amatrimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excanaria antevibra sp. nov.

Candidatus Excanaria antevibra (NL. fem. n. *antevibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OACT-916 sp003260275*. The type genome for the species is the GenBank assembly RS_GCF_003260275.1. The GC content of the type genome is 63.91 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Excanaria gen. nov.

Candidatus Excanaria (NL. fem. n. *Excanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OACT-916*. The type species for the genus is *Candidatus* Excanaria antevibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excanella medimicella sp. nov.

Candidatus Excanella medimicella (NL. fem. n. *medimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-23 sp001801465*. The type genome for the species is the GenBank assembly GCA_001801465.1. The GC content of the type genome is 35.05 % and the genome length is 2.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Excanella gen. nov.

Candidatus Excanella (NL. fem. n. *Excanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-35-23*. The type species for the genus is *Candidatus* Excanella medimicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenosaceae.

Description of *Candidatus* Excania dilibastra sp. nov.

Candidatus Excania dilibastra (NL. fem. n. *dilibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TKL69 sp007301515*. The type genome for the species is the GenBank assembly RS_GCF_007301515.1. The GC content of the type genome is 38.53 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Excania gen. nov.

Candidatus Excania (NL. fem. n. *Excania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TKL69*. The type species for the genus is *Candidatus* Excania dilibastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excanida dinupisca sp. nov.

Candidatus Excanida dinupisca (NL. fem. n. *dinupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUU01 sp012841485*. The type genome for the species is the GenBank assembly GCA_012841485.1. The GC content of the type genome is 66.16 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Excanida gen. nov.

Candidatus Excanida (NL. fem. n. *Excanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUU01*. The type species for the genus is *Candidatus* Excanida dinupisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZEB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifulaceae.

Description of *Candidatus* Excanida inobsibula sp. nov.

Candidatus Excanida inobsibula (NL. fem. n. *inobsibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUU01 sp012512265*. The type genome for the species is the GenBank assembly GCA_012512265.1. The GC content of the type genome is 65.89 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Excanosa depocitrix sp. nov.

Candidatus Excanosa depocitrix (NL. fem. n. *depocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1770 sp002315325*. The type genome for the species is the GenBank assembly GCA_002315325.1. The GC content of the type genome is 51.96 %

and the genome length is 2.29 Mbp.

Description of *Candidatus* Excanosa gen. nov.

Candidatus Excanosa (NL. fem. n. *Excanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1770*. The type species for the genus is *Candidatus* Excanosa depocitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Excanula prodritoga sp. nov.

Candidatus Excanula prodritoga (NL. fem. n. *prodritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6715 sp004005965*. The type genome for the species is the GenBank assembly RS_GCF_004005965.1. The GC content of the type genome is 35.77 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Excanula gen. nov.

Candidatus Excanula (NL. fem. n. *Excanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6715*. The type species for the genus is *Candidatus* Excanula prodritoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excararia duricessa sp. nov.

Candidatus Excararia duricessa (NL. fem. n. *duricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla175 sp007750855*. The type genome for the species is the GenBank assembly RS_GCF_007750855.1. The GC content of the type genome is 66.45 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Excararia gen. nov.

Candidatus Excararia (NL. fem. n. *Excararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pla175*. The type species for the genus is *Candidatus* Excararia duricessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Excarella codifitoga sp. nov.

Candidatus Excarella codifitoga (NL. fem. n. *codifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTQ01 sp013812265*. The type genome for the species is the GenBank assembly GCA_013812265.1. The GC content of the type genome is 68.05 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Excarella gen. nov.

Candidatus Excarella (NL. fem. n. *Excarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTQ01*. The type species for the genus is *Candidatus* Excarella codifitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excarida istinitura sp. nov.

Candidatus Excarida istinitura (NL. fem. n. *istinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin15 sp004377275*. The type genome for the species is the GenBank assembly GCA_004377275.1. The GC content of the type genome is 54.37 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Excarida gen. nov.

Candidatus Excarida (NL. fem. n. *Excarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E29-bin15*. The type species for the genus is *Candidatus* Excarida istinitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogellaceae.

Description of *Candidatus* Excarosa lavacicella sp. nov.

Candidatus Excarosa lavacicella (NL. fem. n. *lavacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MZ-XQ sp002838205*. The type genome for the species is the GenBank assembly RS_GCF_002838205.1. The GC content of the type genome is 32.07 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Excarosa gen. nov.

Candidatus Excarosa (NL. fem. n. *Excarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MZ-XQ*. The type species for the genus is *Candidatus* Excarosa lavacicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excarosa ruricentia sp. nov.

Candidatus Excarosa ruricentia (NL. fem. n. *ruricentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MZ-XQ sp002838185*. The type genome for the species is the GenBank assembly RS_GCF_002838185.1. The GC content of the type genome is 31.59 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Excarosa solifigena sp. nov.

Candidatus Excarosa solifigena (NL. fem. n. *solifigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MZ-XQ sp013282175*. The type genome for the species is the GenBank assembly RS_GCF_013282175.1. The GC content of the type genome is 30.05 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Excarula catapago sp. nov.

Candidatus Excarula catapago (NL. fem. n. *catapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J029 sp014382465*. The type genome for the species is the GenBank assembly GCA_014382465.1. The GC content of the type genome is 71.55 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Excarula gen. nov.

Candidatus Excarula (NL. fem. n. *Excarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J029*. The type species for the genus is *Candidatus* Excarula catapago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Excarula curacilenta sp. nov.

Candidatus Excarula curacilenta (NL. fem. n. *curacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J029 sp003696625*. The type genome for the species is the GenBank assembly GCA_003696625.1. The GC content of the type genome is 72.6 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Excerana affunilega sp. nov.

Candidatus Excerana affunilega (NL. fem. n. *affunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKXD01 sp903831265*. The type genome for the species is the GenBank assembly GCA_903831265.1. The GC content of the type genome is 34.14 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Excerana gen. nov.

Candidatus Excerana (NL. fem. n. *Excerana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKXD01*. The type species for the genus is *Candidatus* Excerana affunilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4408*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasanaceae.

Description of *Candidatus* Exceraria oppanax sp. nov.

Candidatus Exceraria oppanax (NL. fem. n. *oppanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIF01 sp903970355*. The type genome for the species is the GenBank assembly GCA_903970355.1. The GC content of the type genome is 47.03 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Exceraria gen. nov.

Candidatus Exceraria (NL. fem. n. *Exceraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIF01*. The type species for the genus is *Candidatus* Exceraria oppanax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excerella ablacitica sp. nov.

Candidatus Excerella ablacitica (NL. fem. n. *ablacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8529 sp003531155*. The type genome for the species is the GenBank assembly GCA_003531155.1. The GC content of the type genome is 36.42 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Excerella gen. nov.

Candidatus Excerella (NL. fem. n. *Excerella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8529*. The type species for the genus is *Candidatus* Excerella ablacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Excerella cenobicula sp. nov.

Candidatus Excerella cenobicula (NL. fem. n. *cenobicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8529 sp013376985*. The type genome for the species is the GenBank assembly GCA_013376985.1. The GC content of the type genome is 35.33 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Excerella inobsilega sp. nov.

Candidatus Excerella inobsilega (NL. fem. n. *inobsilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8529 sp003818205*. The type genome for the species is the GenBank assembly GCA_003818205.1. The GC content of the type genome is 37.95 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Excerella problitoga sp. nov.

Candidatus Excerella problitoga (NL. fem. n. *problitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8529 sp013141385*. The type genome for the species is the GenBank assembly GCA_013141385.1. The GC content of the type genome is 35.26 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Exceria ecnepicula sp. nov.

Candidatus Exceria ecnepicula (NL. fem. n. *ecnepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7502 sp000317085*. The type genome for the species is the GenBank assembly RS_GCF_000317085.1. The GC content of the type genome is 40.62 % and the genome length is 3.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sphagnum bog".

Description of *Candidatus* Exceria gen. nov.

Candidatus Exceria (NL. fem. n. *Exceria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7502*. The type species for the genus is *Candidatus* Exceria ecnepicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excerosa masocitoga sp. nov.

Candidatus Excerosa masocitoga (NL. fem. n. *masocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCO01 sp012729725*. The type genome for the species is the GenBank assembly GCA_012729725.1. The GC content of the type genome is 59.65 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Excerosa gen. nov.

Candidatus Excerosa (NL. fem. n. *Excerosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCO01*. The type species for the genus is *Candidatus* Excerosa masocitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SM23-33. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Excerula immaditica sp. nov.

Candidatus Excerula immaditica (NL. fem. n. *immaditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXL01 sp011367845*. The type genome for the species is the GenBank assembly GCA_011367845.1. The GC content of the type genome is 65.49 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Excerula gen. nov.

Candidatus Excerula (NL. fem. n. *Excerula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXL01*. The type species for the genus is *Candidatus* Excerula immaditica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excetana maligitrix sp. nov.

Candidatus Excetana maligitrix (NL. fem. n. *maligitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Aalborg-AAW-1 sp001007975*. The type genome for the species is the GenBank assembly GCA_001007975.1. The GC content of the type genome is 33.33 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Enrichment reactor seeded with activated sludge".

Description of *Candidatus* Excetana gen. nov.

Candidatus Excetana (NL. fem. n. *Excetana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Aalborg-AAW-1*. The type species for the genus is *Candidatus* Excetana maligitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Excetaria perexifica sp. nov.

Candidatus Excetaria perexifica (NL. fem. n. *perexifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2385 sp013152105*. The type genome for the species is the GenBank assembly GCA_013152105.1. The GC content of the type genome is 67.28 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Excetaria gen. nov.

Candidatus Excetaria (NL. fem. n. *Excetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2385*. The type species for the genus is *Candidatus* Excetaria perexifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilanaceae.

Description of *Candidatus* Excetaria stercicella sp. nov.

Candidatus Excetaria stercicella (NL. fem. n. *stercicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2385 sp002343455*. The type genome for the species is the GenBank assembly GCA_002343455.1. The GC content of the type genome is 71.4 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Excetella delubago sp. nov.

Candidatus Excetella delubago (NL. fem. n. *delubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RFNJ01 sp009927255*. The type genome for the species is the GenBank assembly GCA_009927255.1. The GC content of the type genome is 56.47 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Excetella gen. nov.

Candidatus Excetella (NL. fem. n. *Excetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFNJ01*. The type species for the genus is *Candidatus* Excetella delubago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotidaceae.

Description of *Candidatus* Excetia agnomatio sp. nov.

Candidatus Excetia agnomatio (NL. fem. n. *agnomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMMS01 sp014378915*. The type genome for the species is the GenBank assembly GCA_014378915.1. The GC content of the type genome is 40.64 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Excetia gen. nov.

Candidatus Excetia (NL. fem. n. *Excetia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMMS01*. The type species for the genus is *Candidatus* Excetia agnomatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excetida ermelousia sp. nov.

Candidatus Excetida ermelousia (NL. fem. n. *ermelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAURD01 sp012034075*. The type genome for the species is the

GenBank assembly GCA_012034075.1. The GC content of the type genome is 54.53 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Excetida gen. nov.

Candidatus Excetida (NL. fem. n. *Excetida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAURD01*. The type species for the genus is *Candidatus* Excetida ermelousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excetula habacimonia sp. nov.

Candidatus Excetula habacimonia (NL. fem. n. *habacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5287 sp002411345*. The type genome for the species is the GenBank assembly GCA_002411345.1. The GC content of the type genome is 35.72 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Excetula gen. nov.

Candidatus Excetula (NL. fem. n. *Excetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5287*. The type species for the genus is *Candidatus* Excetula habacimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excinana maledentia sp. nov.

Candidatus Excinana maledentia (NL. fem. n. *maledentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBME01 sp903954065*. The type genome for the species is the GenBank assembly GCA_903954065.1. The GC content of the type genome is 59.92 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Excinana gen. nov.

Candidatus Excinana (NL. fem. n. *Excinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBME01*. The type species for the genus is *Candidatus* Excinana maledentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *V1-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifulaceae.

Description of *Candidatus* Excinaria advinitudo sp. nov.

Candidatus Excinaria advinitudo (NL. fem. n. *advinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVH01 sp012517255*. The type genome for the species is the GenBank assembly GCA_012517255.1. The GC content of the type genome is 64.56 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Excinaria gen. nov.

Candidatus Excinaria (NL. fem. n. *Excinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVH01*. The type species for the genus is *Candidatus* Excinaria advinitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Excinella obvolitio sp. nov.

Candidatus Excinella obvolitio (NL. fem. n. *obvolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2709075 sp002709075*. The type genome for the species is the GenBank assembly GCA_002709075.1. The GC content of the type genome is 40.38 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Excinella gen. nov.

Candidatus Excinella (NL. fem. n. *Excinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2709075*. The type species for the genus is *Candidatus* Excinella obvolitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Excinia conipitrix sp. nov.

Candidatus Excinia conipitrix (NL. fem. n. *conipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUKX01 sp903899795*. The type genome for the species is the GenBank assembly GCA_903899795.1. The GC content of the type genome is 36.17 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Excinia gen. nov.

Candidatus Excinia (NL. fem. n. *Excinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUKX01*. The type species for the genus is *Candidatus* Excinia conipitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excinida adtesibula sp. nov.

Candidatus Excinida adtesibula (NL. fem. n. *adtesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-10 sp001793015*. The type genome for the species is the GenBank assembly GCA_001793015.1. The GC content of the type genome is 38.09 % and the genome length is 1.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Excinida gen. nov.

Candidatus Excinida (NL. fem. n. *Excinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-10*. The type species for the genus is *Candidatus* Excinida adtesibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Excinosa ammuligena sp. nov.

Candidatus Excinosa ammuligena (NL. fem. n. *ammuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4789 sp012518875*. The type genome for the species is the GenBank assembly GCA_012518875.1. The GC content of the type genome is 47.34 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Excinosa gen. nov.

Candidatus Excinosa (NL. fem. n. *Excinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4789*. The type species for the genus is *Candidatus* Excinosa ammuligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excinosa exhilatio sp. nov.

Candidatus Excinosa exhilatio (NL. fem. n. *exhilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4789 sp013201395*. The type genome for the species is the GenBank assembly GCA_013201395.1. The GC content of the type genome is 47.1 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Excinosa macilatio sp. nov.

Candidatus Excinosa macilatio (NL. fem. n. *macilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4789 sp002402945*. The type genome for the species is the GenBank assembly GCA_002402945.1. The GC content of the type genome is 49.19 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Excocida socagilenta sp. nov.

Candidatus Excocida socagilenta (NL. fem. n. *socagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Leaf443 sp001425575*. The type genome for the species is the GenBank assembly RS_GCF_001425575.1. The GC content of the type genome is 69.92 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Excocida gen. nov.

Candidatus Excocida (NL. fem. n. *Excocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Leaf443*. The type species for the genus is *Candidatus* Excocida socagilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excocosa innulisca sp. nov.

Candidatus Excocosa innulisca (NL. fem. n. *innulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOSQ01 sp903860935*. The type genome for the species is the GenBank assembly GCA_903860935.1. The GC content of the type genome is 69.06 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Excocosa gen. nov.

Candidatus Excocosa (NL. fem. n. *Excocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOSQ01*. The type species for the genus is *Candidatus* Excocosa innulisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACIAM-22H2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelosaceae.

Description of *Candidatus* Excocula esculitio sp. nov.

Candidatus Excocula esculitio (NL. fem. n. *esculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-6406 sp012032425*. The type genome for the species is the GenBank assembly GCA_012032425.1. The GC content of the type genome is 56.13 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Excocula gen. nov.

Candidatus Excocula (NL. fem. n. *Excocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-6406*. The type species for the genus is *Candidatus* Excocula esculitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excocula forinax sp. nov.

Candidatus Excocula forinax (NL. fem. n. *forinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-6406 sp000332095*. The type genome for the species is the GenBank assembly RS_GCF_000332095.2. The GC content of the type genome is 55.18 % and the genome length is 5.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Fresh water; California; USA; 1964".

Description of *Candidatus* Excogana aruspilega sp. nov.

Candidatus Excogana aruspilega (NL. fem. n. *aruspilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6627 sp002455955*. The type genome for the species is the GenBank assembly GCA_002455955.1. The GC content of the type genome is 50.76 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Excogana gen. nov.

Candidatus Excogana (NL. fem. n. *Excogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6627*. The type species for the genus is *Candidatus* Excogana aruspilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Excogana saburitura sp. nov.

Candidatus Excogana saburitura (NL. fem. n. *saburitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6627 sp009391845*. The type genome for the species is the GenBank assembly GCA_009391845.1. The GC content of the type genome is 67.77 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Excogia domicitura sp. nov.

Candidatus Excogia domicitura (NL. fem. n. *domicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZYG01 sp014239775*. The type genome for the species is the GenBank assembly GCA_014239775.1. The GC content of the type genome is 34.81 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Excogia gen. nov.

Candidatus Excogia (NL. fem. n. *Excogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZYG01*. The type species for the genus is *Candidatus* Excogia domicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Excogida bigemedo sp. nov.

Candidatus Excogida bigemedo (NL. fem. n. *bigemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA791 sp002297005*. The type genome for the species is the GenBank assembly GCA_002297005.1. The GC content of the type genome is 31.22 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Excogida gen. nov.

Candidatus Excogida (NL. fem. n. *Excogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA791*. The type species for the genus is *Candidatus* Excogida bigemedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Excogida inpasatica sp. nov.

Candidatus Excogida inpasatica (NL. fem. n. *inpasatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA791 sp902803265*. The type genome for the species is the GenBank assembly GCA_902803265.1. The GC content of the type genome is 30.66 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Excogida sarabitas sp. nov.

Candidatus Excogida sarabitas (NL. fem. n. *sarabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA791 sp902783785*. The type genome for the species is the GenBank assembly GCA_902783785.1. The GC content of the type genome is 29.17 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Excomaria pimenitrix sp. nov.

Candidatus Excomaria pimenitrix (NL. fem. n. *pimenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJZ01 sp013003255*. The type genome for the species is the GenBank assembly GCA_013003255.1. The GC content of the type genome is 62.47 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Excomaria gen. nov.

Candidatus Excomaria (NL. fem. n. *Excomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJZ01*. The type species for the genus is *Candidatus* Excomaria pimenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Excomella ammatessa sp. nov.

Candidatus Excomella ammatessa (NL. fem. n. *ammatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRGV01 sp011049955*. The type genome for the species is the GenBank assembly GCA_011049955.1. The GC content of the type genome is 44.25 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Excomella gen. nov.

Candidatus Excomella (NL. fem. n. *Excomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRGV01*. The type species for the genus is *Candidatus* Excomella

ammatessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7526*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabulaceae.

Description of *Candidatus* Excomia cinipiforma sp. nov.

Candidatus Excomia cinipiforma (NL. fem. n. *cinipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9040 sp003452475*. The type genome for the species is the GenBank assembly GCA_003452475.1. The GC content of the type genome is 47.64 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Excomia gen. nov.

Candidatus Excomia (NL. fem. n. *Excomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9040*. The type species for the genus is *Candidatus* Excomia cinipiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Excomia impinitas sp. nov.

Candidatus Excomia impinitas (NL. fem. n. *impinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9040 sp002731665*. The type genome for the species is the GenBank assembly GCA_002731665.1. The GC content of the type genome is 47.8 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Excomida licenentia sp. nov.

Candidatus Excomida licenentia (NL. fem. n. *licenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVHJ01 sp903905665*. The type genome for the species is the GenBank assembly GCA_903905665.1. The GC content of the type genome is 54.33 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Excomida gen. nov.

Candidatus Excomida (NL. fem. n. *Excomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVHJ01*. The type species for the genus is *Candidatus* Excomida licenentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Excomosa abnocitrix sp. nov.

Candidatus Excomosa abnocitrix (NL. fem. n. *abnocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2224 sp007130675*. The type genome for the species is the GenBank assembly GCA_007130675.1. The GC content of the type genome is 60.11 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Excomosa gen. nov.

Candidatus Excomosa (NL. fem. n. *Excomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2224*. The type species for the genus is *Candidatus* Excomosa abnocitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Excomosa indepitas sp. nov.

Candidatus Excomosa indepitas (NL. fem. n. *indepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2224 sp012719295*. The type genome for the species is the GenBank assembly GCA_012719295.1. The GC content of the type genome is 64.5 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Excomosa recorax sp. nov.

Candidatus Excomosa recorax (NL. fem. n. *recorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2224 sp002348185*. The type genome for the species is the GenBank assembly GCA_002348185.1. The GC content of the type genome is 63.85 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Excorana atlaniforma sp. nov.

Candidatus Excorana atlaniforma (NL. fem. n. *atlaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TK10-74A sp003228175*. The type genome for the species is the GenBank assembly GCA_003228175.2. The GC content of the type genome is 68.5 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Excorana gen. nov.

Candidatus Excorana (NL. fem. n. *Excorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TK10-74A*. The type species for the genus is *Candidatus* Excorana atlaniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin125*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogulaceae.

Description of *Candidatus* Excorella apsenugo sp. nov.

Candidatus Excorella apsenugo (NL. fem. n. *apsenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSTH01 sp011329435*. The type genome for the species is the GenBank assembly GCA_011329435.1. The GC content of the type genome is 39.04 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Excorella gen. nov.

Candidatus Excorella (NL. fem. n. *Excorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSTH01*. The type species for the genus is *Candidatus* Excorella apsenugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-47-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuridaceae.

Description of *Candidatus* Excorida telefibra sp. nov.

Candidatus Excorida telefibra (NL. fem. n. *telefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVZ01 sp009785595*. The type genome for the species is the GenBank assembly GCA_009785595.1. The GC content of the type genome is 48.08 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Excorida gen. nov.

Candidatus Excorida (NL. fem. n. *Excorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVZ01*. The type species for the genus is *Candidatus* Excorida telefibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Excucella depetiforma sp. nov.

Candidatus Excucella depetiforma (NL. fem. n. *depetiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14267 sp902797415*. The type genome for the species is the GenBank assembly GCA_902797415.1. The GC content of the type genome is 28.25 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Excucella gen. nov.

Candidatus Excucella (NL. fem. n. *Excucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14267*. The type species for the genus is *Candidatus* Excucella depetiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Excucia inhosetta sp. nov.

Candidatus Excucia inhosetta (NL. fem. n. *inhosetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7236 sp002473275*. The type genome for the species is the GenBank assembly GCA_002473275.1. The GC content of the type genome is 35.44 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Excucia gen. nov.

Candidatus Excucia (NL. fem. n. *Excucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7236*. The type species for the genus is *Candidatus* Excucia inhosetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecellaceae.

Description of *Candidatus* Excucida anaclago sp. nov.

Candidatus Excucida anaclago (NL. fem. n. *anaclago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTT01 sp004322435*. The type genome for the species is the GenBank assembly GCA_004322435.1. The GC content of the type genome is 70.7 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Excucida gen. nov.

Candidatus Excucida (NL. fem. n. *Excucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTT01*. The type species for the genus is *Candidatus* Excucida anaclago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papiliaceae.

Description of *Candidatus* Excucula accorimonia sp. nov.

Candidatus Excucula accorimonia (NL. fem. n. *accorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11126 sp902766015*. The type genome for the species is the GenBank assembly GCA_902766015.1. The GC content of the type genome is 53.1 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Excucula gen. nov.

Candidatus Excucula (NL. fem. n. *Excucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11126*. The type species for the genus is *Candidatus* Excucula accorimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exculana assucessa sp. nov.

Candidatus Exculana assucessa (NL. fem. n. *assucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDI01 sp903847335*. The type genome for the species is the GenBank assembly GCA_903847335.1. The GC content of the type genome is 53.66 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Exculana gen. nov.

Candidatus Exculana (NL. fem. n. *Exculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINDI01*. The type species for the genus is *Candidatus* Exculana assucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Excularia ephipessa sp. nov.

Candidatus Excularia ephipessa (NL. fem. n. *ephipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J032 sp003696955*. The type genome for the species is the GenBank assembly GCA_003696955.1. The GC content of the type genome is 70.36 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Excularia gen. nov.

Candidatus Excularia (NL. fem. n. *Excularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J032*. The type species for the genus is *Candidatus* Excularia ephipessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exculella tenebilega sp. nov.

Candidatus Exculella tenebilega (NL. fem. n. *tenebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADDZP01 sp902812475*. The type genome for the species is the GenBank assembly RS_GCF_902812475.1. The GC content of the type genome is 69.34 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Exculella gen. nov.

Candidatus Exculella (NL. fem. n. *Exculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZP01*. The type species for the genus is *Candidatus* Exculella tenebilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desonosaceae.

Description of *Candidatus* Exculia encenicella sp. nov.

Candidatus Exculia encenicella (NL. fem. n. *encenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-004216475 sp004216475*. The type genome for the species is the GenBank assembly RS_GCF_004216475.1. The GC content of the type genome is 60.98 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Exculia gen. nov.

Candidatus Exculia (NL. fem. n. *Exculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-004216475*. The type species for the genus is *Candidatus* Exculia encenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exculida luceritoga sp. nov.

Candidatus Exculida luceritoga (NL. fem. n. *luceritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSA01 sp011331335*. The type genome for the species is the

GenBank assembly GCA_011331335.1. The GC content of the type genome is 66.15 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Exculida gen. nov.

Candidatus Exculida (NL. fem. n. *Exculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSSA01*. The type species for the genus is *Candidatus* Exculida luceritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Exculosa siminitica sp. nov.

Candidatus Exculosa siminitica (NL. fem. n. *siminitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-7 sp005877775*. The type genome for the species is the GenBank assembly GCA_005877775.1. The GC content of the type genome is 58.5 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Exculosa gen. nov.

Candidatus Exculosa (NL. fem. n. *Exculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NS-7*. The type species for the genus is *Candidatus* Exculosa siminitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exculula exsusitia sp. nov.

Candidatus Exculula exsusitia (NL. fem. n. *exsusitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MD308 sp010206225*. The type genome for the species is the GenBank assembly GCA_010206225.2. The GC content of the type genome is 42.77 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Exculula gen. nov.

Candidatus Exculula (NL. fem. n. *Exculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MD308*. The type species for the genus is *Candidatus* Exculula exsusitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exculula saburetta sp. nov.

Candidatus Exculula saburetta (NL. fem. n. *saburetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MD308 sp000403475*. The type genome for the species is the GenBank assembly RS_GCF_000403475.2. The GC content of the type genome is 44.96 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Exentana colimibra sp. nov.

Candidatus Exentana colimibra (NL. fem. n. *colimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUC01 sp013812065*. The type genome for the species is the GenBank assembly GCA_013812065.1. The GC content of the type genome is 70.98 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Exentana gen. nov.

Candidatus Exentana (NL. fem. n. *Exentana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCUC01*. The type species for the genus is *Candidatus* Exentana colimibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exentana galacimonia sp. nov.

Candidatus Exentana galacimonia (NL. fem. n. *galacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUC01 sp013812485*. The type genome for the species is the GenBank assembly GCA_013812485.1. The GC content of the type genome is 71.44 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Exentana velivisca sp. nov.

Candidatus Exentana velivisca (NL. fem. n. *velivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUC01 sp902806245*. The type genome for the species is the GenBank assembly GCA_902806245.1. The GC content of the type genome is 72.14 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Exentaria macilifica sp. nov.

Candidatus Exentaria macilifica (NL. fem. n. *macilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-54-11 sp001797905*. The type genome for the species is the GenBank assembly GCA_001797905.1. The GC content of the type genome is 53.8 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Exentaria gen. nov.

Candidatus Exentaria (NL. fem. n. *Exentaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-54-11*. The type species for the genus is *Candidatus* Exentaria macilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-54-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funivariaceae.

Description of *Candidatus* Exentella paropousia sp. nov.

Candidatus Exentella paropousia (NL. fem. n. *paropousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-330 sp003137035*. The type genome for the species is the GenBank assembly GCA_003137035.1. The GC content of the type genome is 64.59 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Exentella gen. nov.

Candidatus Exentella (NL. fem. n. *Exentella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-330*. The type species for the genus is *Candidatus* Exentella paropousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exentella tomogitia sp. nov.

Candidatus Exentella tomogitia (NL. fem. n. *tomogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-330 sp003154855*. The type genome for the species is the GenBank assembly GCA_003154855.1. The GC content of the type genome is 64.77 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Exentida homilitas sp. nov.

Candidatus Exentida homilitas (NL. fem. n. *homilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-51-8 sp001805895*. The type genome for the species is the GenBank assembly GCA_001805895.1. The GC content of the type genome is 50.73 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Exentida gen. nov.

Candidatus Exentida (NL. fem. n. *Exentida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-51-8*. The type species for the genus is *Candidatus* Exentida homilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Exentula ciminibra sp. nov.

Candidatus Exentula ciminibra (NL. fem. n. *ciminibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XBB2008 sp900102235*. The type genome for the species is the GenBank assembly RS_GCF_900102235.1. The GC content of the type genome is 47.43 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Exentula gen. nov.

Candidatus Exentula (NL. fem. n. *Exentula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XBB2008*. The type species for the genus is *Candidatus* Exentula ciminibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exforaria peripousia sp. nov.

Candidatus Exforaria peripousia (NL. fem. n. *peripousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14223 sp902796955*. The type genome for the species is the GenBank assembly GCA_902796955.1. The GC content of the type genome is 41.39 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Exforaria gen. nov.

Candidatus Exforaria (NL. fem. n. *Exforaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14223*. The type species for the genus is *Candidatus* Exforaria peripousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exforella hecatitudo sp. nov.

Candidatus Exforella hecatitudo (NL. fem. n. *hecatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTL01 sp013812395*. The type genome for the species is the GenBank assembly GCA_013812395.1. The GC content of the type genome is 70.07 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Exforella gen. nov.

Candidatus Exforella (NL. fem. n. *Exforella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTL01*. The type species for the genus is *Candidatus* Exforella hecatitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exforella homulugo sp. nov.

Candidatus Exforella homulugo (NL. fem. n. *homulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTL01 sp013698135*. The type genome for the species is the GenBank assembly GCA_013698135.1. The GC content of the type genome is 70.09 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Exforia utillitoga sp. nov.

Candidatus Exforia utillitoga (NL. fem. n. *utillitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYLO01 sp012521855*. The type genome for the species is the GenBank assembly GCA_012521855.1. The GC content of the type genome is 38.98 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Exforia gen. nov.

Candidatus Exforia (NL. fem. n. *Exforia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYLO01*. The type species for the genus is *Candidatus* Exforia utillitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desacanaceae.

Description of *Candidatus* Exforida exaspetta sp. nov.

Candidatus Exforida exaspetta (NL. fem. n. *exaspetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFA01 sp013286795*. The type genome for the species is the GenBank assembly GCA_013286795.1. The GC content of the type genome is 30.11 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Exforida gen. nov.

Candidatus Exforida (NL. fem. n. *Exforida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFA01*. The type species for the genus is *Candidatus* Exforida exaspetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDEC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupidaceae.

Description of *Candidatus* Exforosa citipitudo sp. nov.

Candidatus Exforosa citipitudo (NL. fem. n. *citipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSS01 sp013140485*. The type genome for the species is the GenBank assembly GCA_013140485.1. The GC content of the type genome is 56.37 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Exforosa gen. nov.

Candidatus Exforosa (NL. fem. n. *Exforosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSS01*. The type species for the genus is *Candidatus* Exforosa citipitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exforosa lucubatio sp. nov.

Candidatus Exforosa lucubatio (NL. fem. n. *lucubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSS01 sp009691305*. The type genome for the species is the GenBank assembly GCA_009691305.1. The GC content of the type genome is 57.12 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Exforula lutuledo sp. nov.

Candidatus Exforula lutuledo (NL. fem. n. *lutuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDD01 sp007693725*. The type genome for the species is the GenBank assembly GCA_007693725.1. The GC content of the type genome is 64.83 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Exforula gen. nov.

Candidatus Exforula (NL. fem. n. *Exforula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDD01*. The type species for the genus is *Candidatus* Exforula lutuledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SM1A02. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Exhedana conigivita sp. nov.

Candidatus Exhedana conigivita (NL. fem. n. *conigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-43-15b sp001816385*. The type genome for the species is the GenBank assembly GCA_001816385.1. The GC content of the type genome is 43.02 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Exhedana gen. nov.

Candidatus Exhedana (NL. fem. n. *Exhedana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-43-15b*. The type species for the genus is *Candidatus* Exhedana conigivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulanaceae.

Description of *Candidatus* Exhedella detepedo sp. nov.

Candidatus Exhedella detepedo (NL. fem. n. *detepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-34-10 sp002790395*. The type genome for the species is the GenBank assembly GCA_002790395.1. The GC content of the type genome is 33.59 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Exhedella gen. nov.

Candidatus Exhedella (NL. fem. n. *Exhedella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UM-FILTER-34-10*. The type species for the genus is *Candidatus* Exhedella detepedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhedia nosocivita sp. nov.

Candidatus Exhedia nosocivita (NL. fem. n. *nosocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLOWO2-12-38-17 sp001830285*. The type genome for the species is the GenBank assembly GCA_001830285.1. The GC content of the type genome is 37.88 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Exhedia gen. nov.

Candidatus Exhedia (NL. fem. n. *Exhedia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLOWO2-12-38-17*. The type species for the genus is *Candidatus* Exhedia nosocivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhedosa salubitudo sp. nov.

Candidatus Exhedosa salubitudo (NL. fem. n. *salubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSM01 sp009380105*. The type genome for the species is the GenBank assembly GCA_009380105.1. The GC content of the type genome is 70.63 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Exhedosa gen. nov.

Candidatus Exhedosa (NL. fem. n. *Exhedosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSM01*. The type species for the genus is *Candidatus* Exhedosa

salubitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhedula catalax sp. nov.

Candidatus Exhedula catalax (NL. fem. n. *catalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLD01 sp011333355*. The type genome for the species is the GenBank assembly GCA_011333355.1. The GC content of the type genome is 36.49 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Exhedula gen. nov.

Candidatus Exhedula (NL. fem. n. *Exhedula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLD01*. The type species for the genus is *Candidatus* Exhedula catalax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponidaceae.

Description of *Candidatus* Exheraria velivitoga sp. nov.

Candidatus Exheraria velivitoga (NL. fem. n. *velivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFRY01 sp004562065*. The type genome for the species is the GenBank assembly GCA_004562065.1. The GC content of the type genome is 50.25 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Exheraria gen. nov.

Candidatus Exheraria (NL. fem. n. *Exheraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFRY01*. The type species for the genus is *Candidatus* Exheraria velivitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exherella culilugo sp. nov.

Candidatus Exherella culilugo (NL. fem. n. *culilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4081 sp002383615*. The type genome for the species is the GenBank assembly GCA_002383615.1. The GC content of the type genome is 51.04 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Exherella gen. nov.

Candidatus Exherella (NL. fem. n. *Exherella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4081*. The type species for the genus is *Candidatus* Exherella culilugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exheria ellebitudo sp. nov.

Candidatus Exheria ellebitudo (NL. fem. n. *ellebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-921 sp003153975*. The type genome for the species is the GenBank assembly GCA_003153975.1. The GC content of the type genome is 62.07 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Exheria gen. nov.

Candidatus Exheria (NL. fem. n. *Exheria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-921*. The type species for the genus is *Candidatus* Exheria ellebitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exherosa aggenitio sp. nov.

Candidatus Exherosa aggenitio (NL. fem. n. *aggenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKD01 sp009778255*. The type genome for the species is the GenBank assembly GCA_009778255.1. The GC content of the type genome is 42.86 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Exherosa gen. nov.

Candidatus Exherosa (NL. fem. n. *Exherosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKD01*. The type species for the genus is *Candidatus* Exherosa aggenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulosaceae.

Description of *Candidatus* Exherosa minurimonia sp. nov.

Candidatus Exherosa minurimonia (NL. fem. n. *minurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKD01 sp009782975*. The type genome for the species is the GenBank assembly GCA_009782975.1. The GC content of the type genome is 52.17 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Exhilana acratitrix sp. nov.

Candidatus Exhilana acratitrix (NL. fem. n. *acratitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMD01 sp009777315*. The type genome for the species is the GenBank assembly GCA_009777315.1. The GC content of the type genome is 53.8 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Exhilana gen. nov.

Candidatus Exhilana (NL. fem. n. *Exhilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMD01*. The type species for the genus is *Candidatus* Exhilana acratitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhilaria depubitudo sp. nov.

Candidatus Exhilaria depubitudo (NL. fem. n. *depubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSDH01 sp011055475*. The type genome for the species is the GenBank assembly GCA_011055475.1. The GC content of the type genome is 64.48 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Exhilaria gen. nov.

Candidatus Exhilaria (NL. fem. n. *Exhilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSDH01*. The type species for the genus is *Candidatus* Exhilaria depubitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhilella conubibra sp. nov.

Candidatus Exhilella conubibra (NL. fem. n. *conubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDLV01 sp013001815*. The type genome for the species is the GenBank assembly GCA_013001815.1. The GC content of the type genome is 35.54 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Exhilella gen. nov.

Candidatus Exhilella (NL. fem. n. *Exhilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDLV01*. The type species for the genus is *Candidatus* Exhilella conubibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehiciaceae.

Description of *Candidatus* Exhilia induvilenta sp. nov.

Candidatus Exhilia induvilenta (NL. fem. n. *induvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1296 sp003151215*. The type genome for the species is the GenBank assembly GCA_003151215.1. The GC content of the type genome is 44.21 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Exhilia gen. nov.

Candidatus Exhilia (NL. fem. n. *Exhilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1296*. The type species for the genus is *Candidatus* Exhilia induvilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1295*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Antegiaceae.

Description of *Candidatus* Exhilida gasifica sp. nov.

Candidatus Exhilida gasifica (NL. fem. n. *gasifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7692 sp001897535*. The type genome for the species is the GenBank assembly GCA_001897535.1. The GC content of the type genome is 37.04 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Exhilida gen. nov.

Candidatus Exhilida (NL. fem. n. *Exhilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7692*. The type species for the genus is *Candidatus* Exhilida gasifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LD1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalidaceae.

Description of *Candidatus* Exhilida ossucitoga sp. nov.

Candidatus Exhilida ossucitoga (NL. fem. n. *ossucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7692 sp002482725*. The type genome for the species is the GenBank assembly GCA_002482725.1. The GC content of the type genome is 44.26 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Exhilosa effulitoga sp. nov.

Candidatus Exhilosa effulitoga (NL. fem. n. *effulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11372 sp900767715*. The type genome for the species is the GenBank assembly RS_GCF_900767715.1. The GC content of the type genome is 41.69 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Exhilosa gen. nov.

Candidatus Exhilosa (NL. fem. n. *Exhilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11372*. The type species for the genus is *Candidatus* Exhilosa effulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Exhilula binocatica sp. nov.

Candidatus Exhilula binocatica (NL. fem. n. *binocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXJ01 sp009784895*. The type genome for the species is the GenBank assembly GCA_009784895.1. The GC content of the type genome is 62.4 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Exhilula gen. nov.

Candidatus Exhilula (NL. fem. n. *Exhilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXJ01*. The type species for the genus is *Candidatus* Exhilula binocatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhonaria pragmetta sp. nov.

Candidatus Exhonaria pragmetta (NL. fem. n. *pragmetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-14 sp013216135*. The type genome for the species is the GenBank assembly GCA_013216135.1. The GC content of the type genome is 33.64 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Exhonaria gen. nov.

Candidatus Exhonaria (NL. fem. n. *Exhonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-14*. The type species for the genus is *Candidatus* Exhonaria pragmetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LMEP-6097*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumiaceae.

Description of *Candidatus* Exhonella ancipitica sp. nov.

Candidatus Exhonella ancipitica (NL. fem. n. *ancipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBU01 sp009695005*. The type genome for the species is the GenBank assembly GCA_009695005.1. The GC content of the type genome is 39.94 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Exhonella gen. nov.

Candidatus Exhonella (NL. fem. n. *Exhonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBU01*. The type species for the genus is *Candidatus* Exhonella ancipitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumosaceae.

Description of *Candidatus* Exhonia subadedo sp. nov.

Candidatus Exhonia subadedo (NL. fem. n. *subadedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIN01 sp013003715*. The type genome for the species is the GenBank assembly GCA_013003715.1. The GC content of the type genome is 50.56 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Exhonia gen. nov.

Candidatus Exhonia (NL. fem. n. *Exhonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDIN01*. The type species for the genus is *Candidatus* Exhonia subadedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhonosa apsolitrix sp. nov.

Candidatus Exhonosa apsolitrix (NL. fem. n. *apsolitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-37 sp003232015*. The type genome for the species is the GenBank assembly GCA_003232015.1. The GC content of the type genome is 42.41 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Exhonosa gen. nov.

Candidatus Exhonosa (NL. fem. n. *Exhonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-37*. The type species for the genus is *Candidatus* Exhonosa apsolitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubosaceae.

Description of *Candidatus* Exhorana acricifica sp. nov.

Candidatus Exhorana acricifica (NL. fem. n. *acricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTH01 sp004563405*. The type genome for the species is the GenBank assembly GCA_004563405.1. The GC content of the type genome is 62.7 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Exhorana gen. nov.

Candidatus Exhorana (NL. fem. n. *Exhorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFTH01*. The type species for the genus is *Candidatus* Exhorana acricifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Exhorana arcelitio sp. nov.

Candidatus Exhorana arcelitio (NL. fem. n. *arcelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTH01 sp004554085*. The type genome for the species is the GenBank assembly GCA_004554085.1. The GC content of the type genome is 61.69 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Exhorana inpenilenta sp. nov.

Candidatus Exhorana inpenilenta (NL. fem. n. *inpenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTH01 sp004557125*. The type genome for the species is the GenBank assembly GCA_004557125.1. The GC content of the type genome is 61.37 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Exhoraria inabsibula sp. nov.

Candidatus Exhoraria inabsibula (NL. fem. n. *inabsibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVA01 sp013044065*. The type genome for the species is the GenBank assembly GCA_013044065.1. The GC content of the type genome is 56.7 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Exhoraria gen. nov.

Candidatus Exhoraria (NL. fem. n. *Exhoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVA01*. The type species for the genus is *Candidatus* Exhoraria inabsibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludidaceae.

Description of *Candidatus* Exhorella subaditrix sp. nov.

Candidatus Exhorella subaditrix (NL. fem. n. *subaditrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOJ01 sp009908915*. The type genome for the species is the GenBank assembly GCA_009908915.1. The GC content of the type genome is 64.3 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Exhorella gen. nov.

Candidatus Exhorella (NL. fem. n. *Exhorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAOJ01*. The type species for the genus is *Candidatus* Exhorella subaditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Exhoria nugivitica sp. nov.

Candidatus Exhoria nugivitica (NL. fem. n. *nugivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2706885 sp002706885*. The type genome for the species is the GenBank assembly GCA_002706885.1. The GC content of the type genome is 65.91 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Exhoria gen. nov.

Candidatus Exhoria (NL. fem. n. *Exhoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2706885*. The type species for the genus is *Candidatus* Exhoria nugivitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Exhorida televitica sp. nov.

Candidatus Exhorida televitica (NL. fem. n. *televitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-612 sp003134505*. The type genome for the species is the GenBank assembly GCA_003134505.1. The GC content of the type genome is 70.32 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Exhorida gen. nov.

Candidatus Exhorida (NL. fem. n. *Exhorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-612*. The type species for the genus is *Candidatus* Exhorida televitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exhorula thessitoga sp. nov.

Candidatus Exhorula thessitoga (NL. fem. n. *thessitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPI01 sp011046695*. The type genome for the species is the GenBank assembly GCA_011046695.1. The GC content of the type genome is 57.45 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Exhorula gen. nov.

Candidatus Exhorula (NL. fem. n. *Exhorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPI01*. The type species for the genus is *Candidatus* Exhorula thessitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Exiguobacterium cerofibra sp. nov.

Candidatus Exiguobacterium cerofibra (NL. fem. n. *cerofibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium sp902362975*. The type genome for the species is the GenBank assembly RS_GCF_902362975.1. The GC content of the type genome is 47.85 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Exiguobacterium coninitio sp. nov.

Candidatus Exiguobacterium coninitio (NL. fem. n. *coninitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium sp001908175*. The type genome for the species is the GenBank assembly RS_GCF_001908175.1. The GC content of the type genome is 47.49 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "blood".

Description of *Candidatus* Exiguobacterium cruppibula sp. nov.

Candidatus Exiguobacterium cruppibula (NL. fem. n. *cruppibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium sp003331145*. The type genome for the species is the GenBank assembly RS_GCF_003331145.1. The GC content of the type genome is 51.63 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Exiguobacterium deleciforma sp. nov.

Candidatus Exiguobacterium deleciforma (NL. fem. n. *deleciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium sp003467445*. The type genome for the species is the GenBank assembly RS_GCF_902364895.1. The GC content of the type genome is 51.21 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Exiguobacterium vehicitoga sp. nov.

Candidatus Exiguobacterium vehicitoga (NL. fem. n. *vehicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium sp004336985*. The type genome for the species is the GenBank assembly RS_GCF_004337025.1. The GC content of the type genome is 51.52 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Exiguobacterium afranago sp. nov.

Candidatus Exiguobacterium afranago (NL. fem. n. *afranago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp902363455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902363455.1. The GC content of the type genome is 47.0 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Exiguobacterium altifetta sp. nov.

Candidatus Exiguobacterium altifetta (NL. fem. n. *altifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp001870785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001870785.1. The GC content of the type genome is 46.88 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment from Tibetan glacier".

Description of *Candidatus* Exiguobacterium conibax sp. nov.

Candidatus Exiguobacterium conibax (NL. fem. n. *conibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp003339585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003339585.1. The GC content of the type genome is 47.25 % and the genome

length is 3.09 Mbp.

Description of *Candidatus* Exiguobacterium essonilenta sp. nov.

Candidatus Exiguobacterium essonilenta (NL. fem. n. *essonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp001275385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001275385.1. The GC content of the type genome is 45.92 % and the genome length is 3.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "apartment interior at Bryn Mawr College".

Description of *Candidatus* Exiguobacterium ludibitoga sp. nov.

Candidatus Exiguobacterium ludibitoga (NL. fem. n. *ludibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp001423965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002380785.1. The GC content of the type genome is 47.18 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Exiguobacterium pinifessa sp. nov.

Candidatus Exiguobacterium pinifessa (NL. fem. n. *pinifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exiguobacterium_A sp004339505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004339505.1. The GC content of the type genome is 47.04 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Exilispira serotibula sp. nov.

Candidatus Exilispira serotibula (NL. fem. n. *serotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exilispira sp012517545*. The type genome for the species is the GenBank assembly GCA_012517545.1. The GC content of the type genome is 30.43 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Exilispira undeviforma sp. nov.

Candidatus Exilispira undeviforma (NL. fem. n. *undeviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Exilispira sp012797605*. The type genome for the species is the GenBank assembly GCA_012797605.1. The GC content of the type genome is 28.04 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Exindana baropimonas sp. nov.

Candidatus Exindana baropimonas (NL. fem. n. *baropimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFEE01 sp002793745*. The type genome for the species is the GenBank assembly GCA_002793745.1. The GC content of the type genome is 44.73 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Exindana gen. nov.

Candidatus Exindana (NL. fem. n. *Exindana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PFEE01*. The type species for the genus is *Candidatus* Exindana baropimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1406*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Molecanaceae.

Description of *Candidatus* Exindella recogitoga sp. nov.

Candidatus Exindella recogitoga (NL. fem. n. *recogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADID01 sp013151505*. The type genome for the species is the GenBank assembly GCA_013151505.1. The GC content of the type genome is 43.33 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Exindella gen. nov.

Candidatus Exindella (NL. fem. n. *Exindella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADID01*. The type species for the genus is *Candidatus* Exindella recogitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Exindia divulatica sp. nov.

Candidatus Exindia divulatica (NL. fem. n. *divulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSCZ01 sp011048855*. The type genome for the species is the GenBank assembly GCA_011048855.1. The GC content of the type genome is 52.74 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Exindia gen. nov.

Candidatus Exindia (NL. fem. n. *Exindia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSCZ01*. The type species for the genus is *Candidatus* Exindia divulatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exindida adlenago sp. nov.

Candidatus Exindida adlenago (NL. fem. n. *adlenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FREY01 sp900143635*. The type genome for the species is the GenBank assembly RS_GCF_900143635.1. The GC content of the type genome is 59.64 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Exindida gen. nov.

Candidatus Exindida (NL. fem. n. *Exindida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FREY01*. The type species for the genus is *Candidatus* Exindida adlenago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exindosa saburatio sp. nov.

Candidatus Exindosa saburatio (NL. fem. n. *saburatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B140-G9 sp003644295*. The type genome for the species is the GenBank assembly GCA_003644295.1. The GC content of the type genome is 45.73 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Exindosa gen. nov.

Candidatus Exindosa (NL. fem. n. *Exindosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B140-G9*. The type species for the genus is *Candidatus* Exindosa saburatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Exorbana bigaritia sp. nov.

Candidatus Exorbana bigaritia (NL. fem. n. *bigaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADEFF01 sp902826565*. The type genome for the species is the GenBank assembly GCA_902826565.1. The GC content of the type genome is 67.84 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Exorbana gen. nov.

Candidatus Exorbana (NL. fem. n. *Exorbana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFF01*. The type species for the genus is *Candidatus* Exorbana bigaritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exorbaria necopitia sp. nov.

Candidatus Exorbaria necopitia (NL. fem. n. *necopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GW928-bin9 sp004296785*. The type genome for the species is the GenBank assembly GCA_004296785.1. The GC content of the type genome is 72.15 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Exorbaria gen. nov.

Candidatus Exorbaria (NL. fem. n. *Exorbaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GW928-bin9*. The type species for the genus is *Candidatus* Exorbaria necopitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Exorbella arcititica sp. nov.

Candidatus Exorbella arcititica (NL. fem. n. *arcititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPQ01 sp012510305*. The type genome for the species is the

GenBank assembly GCA_012510305.1. The GC content of the type genome is 57.67 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Exorbella gen. nov.

Candidatus Exorbella (NL. fem. n. *Exorbella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZPQ01*. The type species for the genus is *Candidatus* Exorbella arcititica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Exorbella cenodimonia sp. nov.

Candidatus Exorbella cenodimonia (NL. fem. n. *cenodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPQ01 sp012797095*. The type genome for the species is the GenBank assembly GCA_012797095.1. The GC content of the type genome is 58.11 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Exorbella elastatio sp. nov.

Candidatus Exorbella elastatio (NL. fem. n. *elastatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPQ01 sp012510325*. The type genome for the species is the GenBank assembly GCA_012510325.1. The GC content of the type genome is 57.32 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Exorbella inbelibra sp. nov.

Candidatus Exorbella inbelibra (NL. fem. n. *inbelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPQ01 sp012797175*. The type genome for the species is the GenBank assembly GCA_012797175.1. The GC content of the type genome is 52.61 %

and the genome length is 1.94 Mbp.

Description of *Candidatus* Exorbella inorditoga sp. nov.

Candidatus Exorbella inorditoga (NL. fem. n. *inorditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPQ01 sp012840855*. The type genome for the species is the GenBank assembly GCA_012840855.1. The GC content of the type genome is 57.07 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Exorbia asbesatio sp. nov.

Candidatus Exorbia asbesatio (NL. fem. n. *asbesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-18-A sp001776475*. The type genome for the species is the GenBank assembly GCA_001776475.1. The GC content of the type genome is 40.51 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Exorbia gen. nov.

Candidatus Exorbia (NL. fem. n. *Exorbia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-18-A*. The type species for the genus is *Candidatus* Exorbia asbesatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Exorbida cimitimonas sp. nov.

Candidatus Exorbida cimitimonas (NL. fem. n. *cimitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXE01 sp012516075*. The type genome for the species is the

GenBank assembly GCA_012516075.1. The GC content of the type genome is 60.06 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Exorbida gen. nov.

Candidatus Exorbida (NL. fem. n. *Exorbida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXE01*. The type species for the genus is *Candidatus* Exorbida cimitimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Exorbosa adsigentia sp. nov.

Candidatus Exorbosa adsigentia (NL. fem. n. *adsigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVZN01 sp002069125*. The type genome for the species is the GenBank assembly GCA_002069125.1. The GC content of the type genome is 57.27 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Exorbosa gen. nov.

Candidatus Exorbosa (NL. fem. n. *Exorbosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVZN01*. The type species for the genus is *Candidatus* Exorbosa adsigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5368*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuferariaceae.

Description of *Candidatus* Exorbula luticifica sp. nov.

Candidatus Exorbula luticifica (NL. fem. n. *luticifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIRYW01 sp903882905*. The type genome for the species is the GenBank assembly GCA_903882905.1. The GC content of the type genome is 34.82 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Exorbula gen. nov.

Candidatus Exorbula (NL. fem. n. *Exorbula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRYW01*. The type species for the genus is *Candidatus* Exorbula luticifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZIN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinulellaceae.

Description of *Candidatus* Exorcaria aciscitio sp. nov.

Candidatus Exorcaria aciscitio (NL. fem. n. *aciscitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKT01 sp012522255*. The type genome for the species is the GenBank assembly GCA_012522255.1. The GC content of the type genome is 36.73 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Exorcaria gen. nov.

Candidatus Exorcaria (NL. fem. n. *Exorcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYKT01*. The type species for the genus is *Candidatus* Exorcaria aciscitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exorcella negiditura sp. nov.

Candidatus Exorcella negiditura (NL. fem. n. *negiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQZC01 sp009780925*. The type genome for the species is the

GenBank assembly GCA_009780925.1. The GC content of the type genome is 70.43 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Exorcella gen. nov.

Candidatus Exorcella (NL. fem. n. *Exorcella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQZC01*. The type species for the genus is *Candidatus* Exorcella negiditura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exorcida manufilega sp. nov.

Candidatus Exorcida manufilega (NL. fem. n. *manufilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712715 sp002712715*. The type genome for the species is the GenBank assembly GCA_002712715.1. The GC content of the type genome is 29.54 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Exorcida gen. nov.

Candidatus Exorcida (NL. fem. n. *Exorcida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712715*. The type species for the genus is *Candidatus* Exorcida manufilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Exorcula abascimonia sp. nov.

Candidatus Exorcula abascimonia (NL. fem. n. *abascimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-10-35-9 sp002773835*. The type genome for the species is the GenBank assembly GCA_002773835.1. The GC content of the type genome is 35.13 %

and the genome length is 1.74 Mbp.

Description of *Candidatus* Exorcula gen. nov.

Candidatus Exorcula (NL. fem. n. *Exorcula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-10-35-9*. The type species for the genus is *Candidatus* Exorcula abascimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Exoscana sicunicula sp. nov.

Candidatus Exoscana sicunicula (NL. fem. n. *sicunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KACC-21507 sp009906835*. The type genome for the species is the GenBank assembly RS_GCF_009906835.1. The GC content of the type genome is 43.21 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Exoscana gen. nov.

Candidatus Exoscana (NL. fem. n. *Exoscana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KACC-21507*. The type species for the genus is *Candidatus* Exoscana sicunicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exoscaria aminnitoga sp. nov.

Candidatus Exoscaria aminnitoga (NL. fem. n. *aminnitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUY01 sp013044175*. The type genome for the species is the GenBank assembly GCA_013044175.1. The GC content of the type genome is 45.6 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Exoscaria gen. nov.

Candidatus Exoscaria (NL. fem. n. *Exoscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEUY01*. The type species for the genus is *Candidatus* Exoscaria aminnitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exoscia detenigena sp. nov.

Candidatus Exoscia detenigena (NL. fem. n. *detenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHE01 sp012735505*. The type genome for the species is the GenBank assembly GCA_012735505.1. The GC content of the type genome is 50.42 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Exoscia gen. nov.

Candidatus Exoscia (NL. fem. n. *Exoscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHE01*. The type species for the genus is *Candidatus* Exoscia detenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecosaceae.

Description of *Candidatus* Expalaria anacletta sp. nov.

Candidatus Expalaria anacletta (NL. fem. n. *anacletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACSU01 sp010119145*. The type genome for the species is the GenBank assembly GCA_010119145.1. The GC content of the type genome is 31.78 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Expalaria gen. nov.

Candidatus Expalaria (NL. fem. n. *Expalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACSU01*. The type species for the genus is *Candidatus* Expalaria anacletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Expalella cisalifica sp. nov.

Candidatus Expalella cisalifica (NL. fem. n. *cisalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBA01 sp011046145*. The type genome for the species is the GenBank assembly GCA_011046145.1. The GC content of the type genome is 36.09 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Expalella gen. nov.

Candidatus Expalella (NL. fem. n. *Expalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBA01*. The type species for the genus is *Candidatus* Expalella cisalifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarariaceae.

Description of *Candidatus* Expalia solifastra sp. nov.

Candidatus Expalia solifastra (NL. fem. n. *solifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWL01 sp903642235*. The type genome for the species is the GenBank assembly RS_GCF_903642235.1. The GC content of the type genome is 61.3 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Expalia gen. nov.

Candidatus Expalia (NL. fem. n. *Expalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAHJWL01*. The type species for the genus is *Candidatus* Expalia solifastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expalida immusitura sp. nov.

Candidatus Expalida immusitura (NL. fem. n. *immusitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-19 sp001789725*. The type genome for the species is the GenBank assembly GCA_001789725.1. The GC content of the type genome is 38.1 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Expalida gen. nov.

Candidatus Expalida (NL. fem. n. *Expalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-19*. The type species for the genus is *Candidatus* Expalida immusitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Expalosa bicinicula sp. nov.

Candidatus Expalosa bicinicula (NL. fem. n. *bicinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11386 sp900761915*. The type genome for the species is the GenBank assembly RS_GCF_900761915.1. The GC content of the type genome is 59.46 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Expalosa gen. nov.

Candidatus Expalosa (NL. fem. n. *Expalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11386*. The type species for the genus is *Candidatus* Expalosa bicinicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Expanana ratififica sp. nov.

Candidatus Expanana ratififica (NL. fem. n. *ratififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1613 sp900553395*. The type genome for the species is the GenBank assembly GCA_900553395.1. The GC content of the type genome is 27.18 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Expanana gen. nov.

Candidatus Expanana (NL. fem. n. *Expanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1613*. The type species for the genus is *Candidatus* Expanana ratififica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Expanaria sicunitura sp. nov.

Candidatus Expanaria sicunitura (NL. fem. n. *sicunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXZ01 sp009776725*. The type genome for the species is the GenBank assembly GCA_009776725.1. The GC content of the type genome is 51.98 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Expanaria gen. nov.

Candidatus Expanaria (NL. fem. n. *Expanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXZ01*. The type species for the genus is *Candidatus* Expanaria sicunitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Expanaria vanitugo sp. nov.

Candidatus Expanaria vanitugo (NL. fem. n. *vanitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXZ01 sp009781525*. The type genome for the species is the GenBank assembly GCA_009781525.1. The GC content of the type genome is 50.84 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Expanella infatigena sp. nov.

Candidatus Expanella infatigena (NL. fem. n. *infatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMJR01 sp900299355*. The type genome for the species is the GenBank assembly GCA_900299355.1. The GC content of the type genome is 60.62 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Expanella gen. nov.

Candidatus Expanella (NL. fem. n. *Expanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMJR01*. The type species for the genus is *Candidatus* Expanella infatigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabosaceae.

Description of *Candidatus* Expanosa agripitio sp. nov.

Candidatus Expanosa agripitio (NL. fem. n. *agripitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin90 sp009838595*. The type genome for the species is the GenBank assembly GCA_009838595.1. The GC content of the type genome is 57.32 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Expanosa gen. nov.

Candidatus Expanosa (NL. fem. n. *Expanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin90*. The type species for the genus is *Candidatus* Expanosa agripitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Expanosa ludimimonia sp. nov.

Candidatus Expanosa ludimimonia (NL. fem. n. *ludimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin90 sp002238855*. The type genome for the species is the GenBank assembly GCA_002238855.1. The GC content of the type genome is 57.14 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Expanosa octipousia sp. nov.

Candidatus Expanosa octipousia (NL. fem. n. *octipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin90 sp009840355*. The type genome for the species is the GenBank assembly GCA_009840355.1. The GC content of the type genome is 58.0 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Expasana cosidifica sp. nov.

Candidatus Expasana cosidifica (NL. fem. n. *cosidifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-43-42 sp002793915*. The type genome for the species is the GenBank assembly GCA_002793915.1. The GC content of the type genome is 43.0 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Expasana gen. nov.

Candidatus Expasana (NL. fem. n. *Expasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-43-42*. The type species for the genus is *Candidatus* Expasana cosidifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-48-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifariaceae.

Description of *Candidatus* Expasaria obnunicula sp. nov.

Candidatus Expasaria obnunicula (NL. fem. n. *obnunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBE01 sp013288805*. The type genome for the species is the GenBank assembly GCA_013288805.1. The GC content of the type genome is 56.13 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Expasaria gen. nov.

Candidatus Expasaria (NL. fem. n. *Expasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBE01*. The type species for the genus is *Candidatus* Expasaria obnunicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expasida arvecessa sp. nov.

Candidatus Expasida arvecessa (NL. fem. n. *arvecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60009 sp003574735*. The type genome for the species is the GenBank assembly RS_GCF_003574735.1. The GC content of the type genome is 63.63 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Expasida gen. nov.

Candidatus Expasida (NL. fem. n. *Expasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYSU-D60009*. The type species for the genus is *Candidatus* Expasida arvecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expasida recogigena sp. nov.

Candidatus Expasida recogigena (NL. fem. n. *recogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60009 sp013822765*. The type genome for the species is the GenBank assembly GCA_013822765.1. The GC content of the type genome is 65.32 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Expasosa dibapedo sp. nov.

Candidatus Expasosa dibapedo (NL. fem. n. *dibapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACQG01 sp009995045*. The type genome for the species is the GenBank assembly GCA_009995045.1. The GC content of the type genome is 47.38 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Expasosa gen. nov.

Candidatus Expasosa (NL. fem. n. *Expasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACQG01*. The type species for the genus is *Candidatus* Expasosa

dibapedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expasula pragmessa sp. nov.

Candidatus Expasula pragmessa (NL. fem. n. *pragmessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1349 sp003153915*. The type genome for the species is the GenBank assembly GCA_003153915.1. The GC content of the type genome is 62.38 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Expasula gen. nov.

Candidatus Expasula (NL. fem. n. *Expasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1349*. The type species for the genus is *Candidatus* Expasula pragmessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Expecana domicibra sp. nov.

Candidatus Expecana domicibra (NL. fem. n. *domicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2689465 sp002689465*. The type genome for the species is the GenBank assembly GCA_002689465.1. The GC content of the type genome is 54.6 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Expecana gen. nov.

Candidatus Expecana (NL. fem. n. *Expecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2689465*. The type species for the genus is *Candidatus* Expecana domicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MPNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridellaceae.

Description of *Candidatus* Expecella cilotitia sp. nov.

Candidatus Expecella cilotitia (NL. fem. n. *cilotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA937 sp002293455*. The type genome for the species is the GenBank assembly GCA_002293455.1. The GC content of the type genome is 44.63 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Expecella gen. nov.

Candidatus Expecella (NL. fem. n. *Expecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA937*. The type species for the genus is *Candidatus* Expecella cilotitia .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Expecia adluvitrix sp. nov.

Candidatus Expecia adluvitrix (NL. fem. n. *adluvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp005885515*. The type genome for the species is the GenBank assembly GCA_005885515.1. The GC content of the type genome is 70.3 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Expecia gen. nov.

Candidatus Expecia (NL. fem. n. *Expecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-744*. The type species for the genus is *Candidatus* Expecia adluvitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expecia adnubigena sp. nov.

Candidatus Expecia adnubigena (NL. fem. n. *adnubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp005884115*. The type genome for the species is the GenBank assembly GCA_005884115.1. The GC content of the type genome is 69.33 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Expecia adpacax sp. nov.

Candidatus Expecia adpacax (NL. fem. n. *adpacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp003151895*. The type genome for the species is the GenBank assembly GCA_003151895.1. The GC content of the type genome is 67.72 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Expecia conigilega sp. nov.

Candidatus Expecia conigilega (NL. fem. n. *conigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp009781575*. The type genome for the species is the GenBank assembly GCA_009781575.1. The GC content of the type genome is 72.06 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Expecia coturitoga sp. nov.

Candidatus Expecia coturitoga (NL. fem. n. *coturitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp903970315*. The type genome for the species is the GenBank assembly GCA_903970315.1. The GC content of the type genome is 68.06 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Expecia holovicula sp. nov.

Candidatus Expecia holovicula (NL. fem. n. *holovicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp903970125*. The type genome for the species is the GenBank assembly GCA_903970125.1. The GC content of the type genome is 66.87 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Expecia immobatio sp. nov.

Candidatus Expecia immobatio (NL. fem. n. *immobatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp013815355*. The type genome for the species is the GenBank assembly GCA_013815355.1. The GC content of the type genome is 68.66 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Expecia notacimonia sp. nov.

Candidatus Expecia notacimonia (NL. fem. n. *notacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-744 sp003134675*. The type genome for the species is the GenBank assembly GCA_003134675.1. The GC content of the type genome is 67.39 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Expenaria amnigimonia sp. nov.

Candidatus Expenaria amnigimonia (NL. fem. n. *amnigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAN01 sp009780185*. The type genome for the species is the GenBank assembly GCA_009780185.1. The GC content of the type genome is 43.77 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Expenaria gen. nov.

Candidatus Expenaria (NL. fem. n. *Expenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAN01*. The type species for the genus is *Candidatus* Expenaria

amnigimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Expenaria ludimitudo sp. nov.

Candidatus Expenaria ludimitudo (NL. fem. n. *ludimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAN01 sp009781725*. The type genome for the species is the GenBank assembly GCA_009781725.1. The GC content of the type genome is 45.27 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Expenaria regifibula sp. nov.

Candidatus Expenaria regifibula (NL. fem. n. *regifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAN01 sp009785605*. The type genome for the species is the GenBank assembly GCA_009785605.1. The GC content of the type genome is 45.58 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Expenella defenessa sp. nov.

Candidatus Expenella defenessa (NL. fem. n. *defenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVF01 sp012517325*. The type genome for the species is the GenBank assembly GCA_012517325.1. The GC content of the type genome is 61.48 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Expenella gen. nov.

Candidatus Expenella (NL. fem. n. *Expenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVF01*. The type species for the genus is *Candidatus* Expenella defenessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululosaceae.

Description of *Candidatus* Expenia omnipitoga sp. nov.

Candidatus Expenia omnipitoga (NL. fem. n. *omnipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-154 sp005879655*. The type genome for the species is the GenBank assembly GCA_005879655.1. The GC content of the type genome is 49.76 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Expenia gen. nov.

Candidatus Expenia (NL. fem. n. *Expenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-154*. The type species for the genus is *Candidatus* Expenia omnipitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expenida tirunousia sp. nov.

Candidatus Expenida tirunousia (NL. fem. n. *tirunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMOA01 sp014378225*. The type genome for the species is the GenBank assembly GCA_014378225.1. The GC content of the type genome is 55.79 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Expenida gen. nov.

Candidatus Expenida (NL. fem. n. *Expenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMOA01*. The type species for the genus is *Candidatus* Expenida tirunousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expenosa defesitoga sp. nov.

Candidatus Expenosa defesitoga (NL. fem. n. *defesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSHX01 sp011055965*. The type genome for the species is the GenBank assembly GCA_011055965.1. The GC content of the type genome is 70.51 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Expenosa gen. nov.

Candidatus Expenosa (NL. fem. n. *Expenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSHX01*. The type species for the genus is *Candidatus* Expenosa defesitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expenula colubibra sp. nov.

Candidatus Expenula colubibra (NL. fem. n. *colubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHEG01 sp002842835*. The type genome for the species is the GenBank assembly GCA_002842835.1. The GC content of the type genome is 68.56 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Expenula gen. nov.

Candidatus Expenula (NL. fem. n. *Expenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHEG01*. The type species for the genus is *Candidatus* Expenula colubibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expisaria cerevousia sp. nov.

Candidatus Expisaria cerevousia (NL. fem. n. *cerevousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA999 sp012031145*. The type genome for the species is the GenBank assembly GCA_012031145.1. The GC content of the type genome is 53.55 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Expisaria gen. nov.

Candidatus Expisaria (NL. fem. n. *Expisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA999*. The type species for the genus is *Candidatus* Expisaria cerevousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expisaria divoledo sp. nov.

Candidatus Expisaria divoledo (NL. fem. n. *divoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA999 sp002291895*. The type genome for the species is the GenBank assembly GCA_002291895.1. The GC content of the type genome is 56.99 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Expisella secunessa sp. nov.

Candidatus Expisella secunessa (NL. fem. n. *secunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1418 sp900551595*. The type genome for the species is the GenBank assembly GCA_900551595.1. The GC content of the type genome is 49.49 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Expisella gen. nov.

Candidatus Expisella (NL. fem. n. *Expisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UMGS1418*. The type species for the genus is *Candidatus* Expisella secunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expisida defesatica sp. nov.

Candidatus Expisida defesatica (NL. fem. n. *defesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAZ01 sp013695175*. The type genome for the species is the GenBank assembly GCA_013695175.1. The GC content of the type genome is 35.58 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Expisida gen. nov.

Candidatus Expisida (NL. fem. n. *Expisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAZ01*. The type species for the genus is *Candidatus* Expisida defesatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expisosa lanigimonas sp. nov.

Candidatus Expisosa lanigimonas (NL. fem. n. *lanigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYJX01 sp902519405*. The type genome for the species is the GenBank assembly GCA_902519405.1. The GC content of the type genome is 42.18 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Expisosa gen. nov.

Candidatus Expisosa (NL. fem. n. *Expisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABYJX01*. The type species for the genus is *Candidatus* Expisosa lanigimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expisula accumicella sp. nov.

Candidatus Expisula accumicella (NL. fem. n. *accumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWF01 sp903864575*. The type genome for the species is the GenBank assembly GCA_903864575.1. The GC content of the type genome is 67.33 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Expisula gen. nov.

Candidatus Expisula (NL. fem. n. *Expisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWF01*. The type species for the genus is *Candidatus* Expisula accumicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Expisula betacatio sp. nov.

Candidatus Expisula betacatio (NL. fem. n. *betacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWF01 sp902806345*. The type genome for the species is the GenBank assembly GCA_902806345.1. The GC content of the type genome is 71.22 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Expopana viginimonas sp. nov.

Candidatus Expopana viginimonas (NL. fem. n. *viginimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J017 sp003695915*. The type genome for the species is the GenBank assembly GCA_003695915.1. The GC content of the type genome is 54.77 % and the

genome length is 3.71 Mbp.

Description of *Candidatus* Expopana gen. nov.

Candidatus Expopana (NL. fem. n. *Expopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J017*. The type species for the genus is *Candidatus* Expopana viginimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Expoparia invesilega sp. nov.

Candidatus Expoparia invesilega (NL. fem. n. *invesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMPS01 sp014377395*. The type genome for the species is the GenBank assembly GCA_014377395.1. The GC content of the type genome is 52.21 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Expoparia gen. nov.

Candidatus Expoparia (NL. fem. n. *Expoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMPS01*. The type species for the genus is *Candidatus* Expoparia invesilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expopella excerigena sp. nov.

Candidatus Expopella excerigena (NL. fem. n. *excerigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMI01 sp014584695*. The type genome for the species is the GenBank assembly GCA_014584695.1. The GC content of the type genome is 71.9 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Expopella gen. nov.

Candidatus Expopella (NL. fem. n. *Expopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACTMI01*. The type species for the genus is *Candidatus* Expopella excerigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Expopella viragax sp. nov.

Candidatus Expopella viragax (NL. fem. n. *viragax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMI01 sp011525905*. The type genome for the species is the GenBank assembly GCA_011525905.1. The GC content of the type genome is 73.41 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Expopia pedificula sp. nov.

Candidatus Expopia pedificula (NL. fem. n. *pedificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LN3S51 sp007855645*. The type genome for the species is the GenBank assembly RS_GCF_007855645.1. The GC content of the type genome is 59.07 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Expopia gen. nov.

Candidatus Expopia (NL. fem. n. *Expopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LN3S51*. The type species for the genus is *Candidatus* Expopia pedificula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expopida recucifica sp. nov.

Candidatus Expopida recucifica (NL. fem. n. *recucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11710 sp003510435*. The type genome for the species is the GenBank assembly GCA_003510435.1. The GC content of the type genome is 34.82 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Expopida gen. nov.

Candidatus Expopida (NL. fem. n. *Expopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11710*. The type species for the genus is *Candidatus* Expopida recucifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Expoposa argitatica sp. nov.

Candidatus Expoposa argitatica (NL. fem. n. *argitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBT01 sp011525785*. The type genome for the species is the GenBank assembly GCA_011525785.1. The GC content of the type genome is 70.14 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Expoposa gen. nov.

Candidatus Expoposa (NL. fem. n. *Expoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBT01*. The type species for the genus is *Candidatus* Expoposa argitatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Expopula visocessa sp. nov.

Candidatus Expopula visocessa (NL. fem. n. *visocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R4HLG17 sp003012345*. The type genome for the species is the GenBank assembly RS_GCF_003012345.1. The GC content of the type genome is 55.07 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Expopula gen. nov.

Candidatus Expopula (NL. fem. n. *Expopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R4HLG17*. The type species for the genus is *Candidatus* Expopula visocessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expugella subadibula sp. nov.

Candidatus Expugella subadibula (NL. fem. n. *subadibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSM105185 sp009695605*. The type genome for the species is the GenBank assembly RS_GCF_009695605.1. The GC content of the type genome is 30.57 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Expugella gen. nov.

Candidatus Expugella (NL. fem. n. *Expugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSM105185*. The type species for the genus is *Candidatus* Expugella subadibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expugida insuritio sp. nov.

Candidatus Expugida insuritio (NL. fem. n. *insuritio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWI01 sp902806355*. The type genome for the species is the GenBank assembly GCA_902806355.1. The GC content of the type genome is 62.7 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Expugida gen. nov.

Candidatus Expugida (NL. fem. n. *Expugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWI01*. The type species for the genus is *Candidatus* Expugida insuritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Expugosa octodilega sp. nov.

Candidatus Expugosa octodilega (NL. fem. n. *octodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCIZ01 sp003666685*. The type genome for the species is the GenBank assembly RS_GCF_003666685.1. The GC content of the type genome is 64.45 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Expugosa gen. nov.

Candidatus Expugosa (NL. fem. n. *Expugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RCIZ01*. The type species for the genus is *Candidatus* Expugosa octodilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expugula diluvax sp. nov.

Candidatus Expugula diluvax (NL. fem. n. *diluvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-12 sp001787455*. The type genome for the species is the GenBank assembly GCA_001787455.1. The GC content of the type genome is 38.78 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Expugula gen. nov.

Candidatus Expugula (NL. fem. n. *Expugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-12*. The type species for the genus is *Candidatus* Expugula diluvax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Expurosa adporilega sp. nov.

Candidatus Expurosa adporilega (NL. fem. n. *adporilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZCR01 sp012516175*. The type genome for the species is the GenBank assembly GCA_012516175.1. The GC content of the type genome is 33.51 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Expurosa gen. nov.

Candidatus Expurosa (NL. fem. n. *Expurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZCR01*. The type species for the genus is *Candidatus* Expurosa adporilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Expurosa conigicula sp. nov.

Candidatus Expurosa conigicula (NL. fem. n. *conigicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZCR01 sp012513195*. The type genome for the species is the GenBank assembly GCA_012513195.1. The GC content of the type genome is 33.28 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Expurula delecago sp. nov.

Candidatus Expurula delecago (NL. fem. n. *delecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701545 sp002701545*. The type genome for the species is the GenBank assembly GCA_002701545.1. The GC content of the type genome is 56.07 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Expurula gen. nov.

Candidatus Expurula (NL. fem. n. *Expurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2701545*. The type species for the genus is *Candidatus* Expurula delecago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsanana rorulastra sp. nov.

Candidatus Exsanana rorulastra (NL. fem. n. *rorulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MGR-bin208 sp013696395*. The type genome for the species is the GenBank assembly GCA_013696395.1. The GC content of the type genome is 38.1 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Exsanana gen. nov.

Candidatus Exsanana (NL. fem. n. *Exsanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *MGR-bin208*. The type species for the genus is *Candidatus* Exsanana rorulastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsanaria vehicicula sp. nov.

Candidatus Exsanaria vehicicula (NL. fem. n. *vehicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITDR01 sp903891165*. The type genome for the species is the GenBank assembly GCA_903891165.1. The GC content of the type genome is 62.99 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Exsanaria gen. nov.

Candidatus Exsanaria (NL. fem. n. *Exsanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITDR01*. The type species for the genus is *Candidatus* Exsanaria vehicicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXON01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucellaceae.

Description of *Candidatus* Exsanella exorbitudo sp. nov.

Candidatus Exsanella exorbitudo (NL. fem. n. *exorbitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-336 sp003155335*. The type genome for the species is the GenBank assembly GCA_003155335.1. The GC content of the type genome is 66.93 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Exsanella gen. nov.

Candidatus Exsanella (NL. fem. n. *Exsanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-336*. The type species for the genus is *Candidatus* Exsanella

exorbitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Exsanellaceae.

Description of *Candidatus* Exsanellaceae fam. nov.

Candidatus Exsanellaceae (NL. fem. n. *Exsanellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-336.* The type genus for the taxon is *Candidatus* Exsanella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Exsanellales.

Description of *Candidatus* Exsanellales ord. nov.

Candidatus Exsanellales (NL. fem. n. *Exsanellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-336.* The type genus for the taxon is *Candidatus* Exsanella .

According to the GTDB R06-RS202, this order belongs to the class *Vicinamibacteria*.

Description of *Candidatus* Exsanida bisulatio sp. nov.

Candidatus Exsanida bisulatio (NL. fem. n. *bisulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1952 sp004144185*. The type genome for the species is the GenBank assembly GCA_004144185.1. The GC content of the type genome is 52.43 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Exsanida gen. nov.

Candidatus Exsanida (NL. fem. n. *Exsanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1952*. The type species for the genus is *Candidatus* Exsanida bisulatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsanida peracousia sp. nov.

Candidatus Exsanida peracousia (NL. fem. n. *peracousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1952 sp002336725*. The type genome for the species is the GenBank assembly GCA_002336725.1. The GC content of the type genome is 53.69 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Exsanosa pinigedo sp. nov.

Candidatus Exsanosa pinigedo (NL. fem. n. *pinigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-44-23 sp001773775*. The type genome for the species is the GenBank assembly GCA_001773775.1. The GC content of the type genome is 43.74 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Exsanosa gen. nov.

Candidatus Exsanosa (NL. fem. n. *Exsanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-FULL-44-23*. The type species for the genus is *Candidatus* Exsanosa pinigedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsanula levidousia sp. nov.

Candidatus Exsanula levidousia (NL. fem. n. *levidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABXJW01 sp013375395*. The type genome for the species is the GenBank assembly GCA_013375395.1. The GC content of the type genome is 49.54 %

and the genome length is 4.25 Mbp.

Description of *Candidatus* Exsanula gen. nov.

Candidatus Exsanula (NL. fem. n. *Exsanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABXJW01*. The type species for the genus is *Candidatus* Exsanula levidousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Exsataria anxifibra sp. nov.

Candidatus Exsataria anxifibra (NL. fem. n. *anxifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2685965 sp002685965*. The type genome for the species is the GenBank assembly GCA_002685965.1. The GC content of the type genome is 65.06 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Exsataria gen. nov.

Candidatus Exsataria (NL. fem. n. *Exsataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2685965*. The type species for the genus is *Candidatus* Exsataria anxifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002748355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisiaceae.

Description of *Candidatus* Exsatia domabitrix sp. nov.

Candidatus Exsatia domabitrix (NL. fem. n. *domabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIULK01 sp903899885*. The type genome for the species is the

GenBank assembly GCA_903899885.1. The GC content of the type genome is 64.36 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Exsatia gen. nov.

Candidatus Exsatia (NL. fem. n. *Exsatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIULK01*. The type species for the genus is *Candidatus* Exsatia domabitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsatida adsenitudo sp. nov.

Candidatus Exsatida adsenitudo (NL. fem. n. *adsenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUAL01 sp012960835*. The type genome for the species is the GenBank assembly GCA_012960835.1. The GC content of the type genome is 33.71 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Exsatida gen. nov.

Candidatus Exsatida (NL. fem. n. *Exsatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUAL01*. The type species for the genus is *Candidatus* Exsatida adsenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Exsatida vitabimonia sp. nov.

Candidatus Exsatida vitabimonia (NL. fem. n. *vitabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUAL01 sp014381465*. The type genome for the species is the GenBank assembly GCA_014381465.1. The GC content of the type genome is 32.38 %

and the genome length is 1.98 Mbp.

Description of *Candidatus* Exsatosa immobitica sp. nov.

Candidatus Exsatosa immobitica (NL. fem. n. *immobitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJO01 sp011524805*. The type genome for the species is the GenBank assembly GCA_011524805.1. The GC content of the type genome is 49.38 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Exsatosa gen. nov.

Candidatus Exsatosa (NL. fem. n. *Exsatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJO01*. The type species for the genus is *Candidatus* Exsatosa immobitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsatula vacilisca sp. nov.

Candidatus Exsatula vacilisca (NL. fem. n. *vacilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *A37T11 sp900109895*. The type genome for the species is the GenBank assembly RS_GCF_900109895.1. The GC content of the type genome is 43.07 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Exsatula gen. nov.

Candidatus Exsatula (NL. fem. n. *Exsatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *A37T11*. The type species for the genus is *Candidatus* Exsatula vacilisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsisana anamnousia sp. nov.

Candidatus Exsisana anamnousia (NL. fem. n. *anamnousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6054 sp002429045*. The type genome for the species is the GenBank assembly GCA_002429045.1. The GC content of the type genome is 67.59 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Exsisana gen. nov.

Candidatus Exsisana (NL. fem. n. *Exsisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6054*. The type species for the genus is *Candidatus* Exsisana anamnousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Exsisana antegousia sp. nov.

Candidatus Exsisana antegousia (NL. fem. n. *antegousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6054 sp003696675*. The type genome for the species is the GenBank assembly GCA_003696675.1. The GC content of the type genome is 66.0 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Exsisaria colubitura sp. nov.

Candidatus Exsisaria colubitura (NL. fem. n. *colubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUUB01 sp012031215*. The type genome for the species is the GenBank assembly GCA_012031215.1. The GC content of the type genome is 48.21 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Exsisaria gen. nov.

Candidatus Exsisaria (NL. fem. n. *Exsisaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUUB01*. The type species for the genus is *Candidatus* Exsisaria colubitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsisella algebigena sp. nov.

Candidatus Exsisella algebigena (NL. fem. n. *algebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9264 sp002709225*. The type genome for the species is the GenBank assembly GCA_002709225.1. The GC content of the type genome is 56.25 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Exsisella gen. nov.

Candidatus Exsisella (NL. fem. n. *Exsisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9264*. The type species for the genus is *Candidatus* Exsisella algebigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsisella detumimonas sp. nov.

Candidatus Exsisella detumimonas (NL. fem. n. *detumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9264 sp002724245*. The type genome for the species is the GenBank assembly GCA_002724245.1. The GC content of the type genome is 56.56 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Exsisella rumifessa sp. nov.

Candidatus Exsisella rumifessa (NL. fem. n. *rumifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9264 sp002702965*. The type genome for the species is the GenBank assembly GCA_002702965.1. The GC content of the type genome is 60.01 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Exsisia cituvigena sp. nov.

Candidatus Exsisia cituvigena (NL. fem. n. *cituvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-190-2 sp002050025*. The type genome for the species is the GenBank assembly GCA_002050025.1. The GC content of the type genome is 45.82 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Exsisia gen. nov.

Candidatus Exsisia (NL. fem. n. *Exsisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-190-2*. The type species for the genus is *Candidatus* Exsisia cituvigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsisosa recocitas sp. nov.

Candidatus Exsisosa recocitas (NL. fem. n. *recocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTFU01 sp011389435*. The type genome for the species is the GenBank assembly GCA_011389435.1. The GC content of the type genome is 42.16 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Exsisosa gen. nov.

Candidatus Exsisosa (NL. fem. n. *Exsisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTFU01*. The type species for the genus is *Candidatus* Exsisosa recocitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1551*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidariaceae.

Description of *Candidatus* Exsisula occalitia sp. nov.

Candidatus Exsisula occalitia (NL. fem. n. *occalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDQZ01 sp013041975*. The type genome for the species is the GenBank assembly GCA_013041975.1. The GC content of the type genome is 46.44 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Exsisula gen. nov.

Candidatus Exsisula (NL. fem. n. *Exsisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDQZ01*. The type species for the genus is *Candidatus* Exsisula occalitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsolana apraritura sp. nov.

Candidatus Exsolana apraritura (NL. fem. n. *apraritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHP01 sp013151785*. The type genome for the species is the GenBank assembly GCA_013151785.1. The GC content of the type genome is 43.37 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Exsolana gen. nov.

Candidatus Exsolana (NL. fem. n. *Exsolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHP01*. The type species for the genus is *Candidatus* Exsolana apraritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JdFR-85. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepiaceae.

Description of *Candidatus* Exsolana intesigena sp. nov.

Candidatus Exsolana intesigena (NL. fem. n. *intesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHP01 sp011321725*. The type genome for the species is the GenBank assembly GCA_011321725.1. The GC content of the type genome is 47.38 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Exsolaria revecessa sp. nov.

Candidatus Exsolaria revecessa (NL. fem. n. *revecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-378 sp003246295*. The type genome for the species is the GenBank assembly GCA_003246295.1. The GC content of the type genome is 36.21 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Exsolaria gen. nov.

Candidatus Exsolaria (NL. fem. n. *Exsolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-378*. The type species for the genus is *Candidatus* Exsolaria revecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsolella halucitoga sp. nov.

Candidatus Exsolella halucitoga (NL. fem. n. *halucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSB01 sp012840625*. The type genome for the species is the GenBank assembly GCA_012840625.1. The GC content of the type genome is 44.68 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Exsolella gen. nov.

Candidatus Exsolella (NL. fem. n. *Exsolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSB01*. The type species for the genus is *Candidatus* Exsolella halucitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsolida insusitio sp. nov.

Candidatus Exsolida insusitio (NL. fem. n. *insusitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHKY01 sp008363385*. The type genome for the species is the GenBank assembly GCA_008363385.1. The GC content of the type genome is 73.1 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Exsolida gen. nov.

Candidatus Exsolida (NL. fem. n. *Exsolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHKY01*. The type species for the genus is *Candidatus* Exsolida insusitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebosaceae.

Description of *Candidatus* Exsolosa exsupigena sp. nov.

Candidatus Exsolosa exsupigena (NL. fem. n. *exsupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J078 sp003695205*. The type genome for the species is the GenBank assembly GCA_003695205.1. The GC content of the type genome is 61.79 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Exsolosa gen. nov.

Candidatus Exsolosa (NL. fem. n. *Exsolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J078*. The type species for the genus is *Candidatus* Exsolosa exsupigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsolula nubigisca sp. nov.

Candidatus Exsolula nubigisca (NL. fem. n. *nubigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1540 sp900552775*. The type genome for the species is the GenBank assembly GCA_900552775.1. The GC content of the type genome is 43.77 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Exsolula gen. nov.

Candidatus Exsolula (NL. fem. n. *Exsolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1540*. The type species for the genus is *Candidatus* Exsolula nubigisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defasiaceae.

Description of *Candidatus* Exsomana ammixitoga sp. nov.

Candidatus Exsomana ammixitoga (NL. fem. n. *ammixitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJNA01 sp903821805*. The type genome for the species is the GenBank assembly GCA_903821805.1. The GC content of the type genome is 31.23 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Exsomana gen. nov.

Candidatus Exsomana (NL. fem. n. *Exsomana* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJNA01*. The type species for the genus is *Candidatus* Exsomana ammixitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsomaria invicivita sp. nov.

Candidatus Exsomaria invicivita (NL. fem. n. *invicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PR03 sp003576805*. The type genome for the species is the GenBank assembly GCA_003576805.1. The GC content of the type genome is 73.14 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Exsomaria gen. nov.

Candidatus Exsomaria (NL. fem. n. *Exsomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PR03*. The type species for the genus is *Candidatus* Exsomaria invicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifiaceae.

Description of *Candidatus* Exsomia adlecitica sp. nov.

Candidatus Exsomia adlecitica (NL. fem. n. *adlecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNFI01 sp014384665*. The type genome for the species is the GenBank assembly GCA_014384665.1. The GC content of the type genome is 32.72 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Exsomia gen. nov.

Candidatus Exsomia (NL. fem. n. *Exsomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNFI01*. The type species for the genus is *Candidatus* Exsomia adlecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetanaceae.

Description of *Candidatus* Exsomida detenitura sp. nov.

Candidatus Exsomida detenitura (NL. fem. n. *detenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin107 sp009839615*. The type genome for the species is the GenBank assembly GCA_009839615.1. The GC content of the type genome is 61.08 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Exsomida gen. nov.

Candidatus Exsomida (NL. fem. n. *Exsomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin107*. The type species for the genus is *Candidatus* Exsomida detenitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turifosaceae.

Description of *Candidatus* Exsomida feficigena sp. nov.

Candidatus Exsomida feficigena (NL. fem. n. *feficigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin107 sp002238965*. The type genome for the species is the GenBank assembly GCA_002238965.1. The GC content of the type genome is 59.46 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Exsomida risibastra sp. nov.

Candidatus Exsomida risibastra (NL. fem. n. *risibastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin107 sp011523725*. The type genome for the species is the GenBank assembly GCA_011523725.1. The GC content of the type genome is 60.79 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Exsomula ammulisca sp. nov.

Candidatus Exsomula ammulisca (NL. fem. n. *ammulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRL01 sp003176035*. The type genome for the species is the GenBank assembly GCA_003176035.1. The GC content of the type genome is 48.54 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Exsomula gen. nov.

Candidatus Exsomula (NL. fem. n. *Exsomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRL01*. The type species for the genus is *Candidatus* Exsomula ammulisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsorana vacilitas sp. nov.

Candidatus Exsorana vacilitas (NL. fem. n. *vacilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-544 sp003251175*. The type genome for the species is the GenBank assembly GCA_003251175.1. The GC content of the type genome is 69.88 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Exsorana gen. nov.

Candidatus Exsorana (NL. fem. n. *Exsorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SZUA-544*. The type species for the genus is *Candidatus* Exsorana vacilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Exsoria inrefisca sp. nov.

Candidatus Exsoria inrefisca (NL. fem. n. *inrefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVSF01 sp014534085*. The type genome for the species is the GenBank assembly GCA_014534085.1. The GC content of the type genome is 54.75 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Exsoria gen. nov.

Candidatus Exsoria (NL. fem. n. *Exsoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVSF01*. The type species for the genus is *Candidatus* Exsoria inrefisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsoria tranvedo sp. nov.

Candidatus Exsoria tranvedo (NL. fem. n. *tranvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVSF01 sp014534385*. The type genome for the species is the GenBank assembly GCA_014534385.1. The GC content of the type genome is 56.79 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Exsorula dimidigena sp. nov.

Candidatus Exsorula dimidigena (NL. fem. n. *dimidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AG-363-P08 sp003278365*. The type genome for the species is the GenBank assembly GCA_003278365.1. The GC content of the type genome is 39.96 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Exsorula gen. nov.

Candidatus Exsorula (NL. fem. n. *Exsorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-P08*. The type species for the genus is *Candidatus* Exsorula dimidigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsorula luceletta sp. nov.

Candidatus Exsorula luceletta (NL. fem. n. *luceletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-P08 sp003280185*. The type genome for the species is the GenBank assembly GCA_003280185.1. The GC content of the type genome is 40.73 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Exsorula nidificella sp. nov.

Candidatus Exsorula nidificella (NL. fem. n. *nidificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-P08 sp003280055*. The type genome for the species is the GenBank assembly GCA_003280055.1. The GC content of the type genome is 39.72 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Exsorula venunicula sp. nov.

Candidatus Exsorula venunicula (NL. fem. n. *venunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-P08 sp003278195*. The type genome for the species is the GenBank assembly GCA_003278195.1. The GC content of the type genome is 39.62 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Exsufaria ecastimonia sp. nov.

Candidatus Exsufaria ecastimonia (NL. fem. n. *ecastimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOMS01 sp014324115*. The type genome for the species is the GenBank assembly GCA_014324115.1. The GC content of the type genome is 54.64 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Exsufaria gen. nov.

Candidatus Exsufaria (NL. fem. n. *Exsufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACOMS01*. The type species for the genus is *Candidatus* Exsufaria ecastimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsufaria echidibra sp. nov.

Candidatus Exsufaria echidibra (NL. fem. n. *echidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOMS01 sp013002305*. The type genome for the species is the GenBank assembly GCA_013002305.1. The GC content of the type genome is 50.72 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Exsufaria taxilax sp. nov.

Candidatus Exsufaria taxilax (NL. fem. n. *taxilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOMS01 sp014238285*. The type genome for the species is the GenBank assembly GCA_014238285.1. The GC content of the type genome is 47.07 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Exsufia demigitica sp. nov.

Candidatus Exsufia demigitica (NL. fem. n. *demigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OR-1 sp000813145*. The type genome for the species is the GenBank assembly RS_GCF_000813145.1. The GC content of the type genome is 54.18 % and the genome length is 4.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Exsufia gen. nov.

Candidatus Exsufia (NL. fem. n. *Exsufia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OR-1*. The type species for the genus is *Candidatus* Exsufia demigitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsufia tomacibula sp. nov.

Candidatus Exsufia tomacibula (NL. fem. n. *tomacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OR-1 sp009684525*. The type genome for the species is the GenBank assembly GCA_009684525.1. The GC content of the type genome is 58.06 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Exsufosa capabastra sp. nov.

Candidatus Exsufosa capabastra (NL. fem. n. *capabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATWF01 sp000421105*. The type genome for the species is the GenBank assembly RS_GCF_000421105.1. The GC content of the type genome is 48.53 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Exsufosa gen. nov.

Candidatus Exsufosa (NL. fem. n. *Exsufosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATWF01*. The type species for the genus is *Candidatus* Exsufosa

capabastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsufula vitabatio sp. nov.

Candidatus Exsufula vitabatio (NL. fem. n. *vitabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPNT01 sp004959855*. The type genome for the species is the GenBank assembly RS_GCF_004959855.1. The GC content of the type genome is 61.85 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Exsufula gen. nov.

Candidatus Exsufula (NL. fem. n. *Exsufula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPNT01*. The type species for the genus is *Candidatus* Exsufula vitabatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsupana adpecax sp. nov.

Candidatus Exsupana adpecax (NL. fem. n. *adpecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862085 sp007751475*. The type genome for the species is the GenBank assembly RS_GCF_007751475.1. The GC content of the type genome is 67.03 % and the genome length is 7.72 Mbp.

Description of *Candidatus* Exsupana gen. nov.

Candidatus Exsupana (NL. fem. n. *Exsupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2862085*. The type species for the genus is *Candidatus* Exsupana adpecax .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-002686595. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Exsupana favilago sp. nov.

Candidatus Exsupana favilago (NL. fem. n. *favilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862085 sp002862085*. The type genome for the species is the GenBank assembly GCA_002862085.1. The GC content of the type genome is 70.79 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Exsuparia arancentia sp. nov.

Candidatus Exsuparia arancentia (NL. fem. n. *arancentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVT01 sp009785715*. The type genome for the species is the GenBank assembly GCA_009785715.1. The GC content of the type genome is 69.24 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Exsuparia gen. nov.

Candidatus Exsuparia (NL. fem. n. *Exsuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVT01*. The type species for the genus is *Candidatus* Exsuparia arancentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-688*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Attubulaceae.

Description of *Candidatus* Exsuposa humecessa sp. nov.

Candidatus Exsuposa humecessa (NL. fem. n. *humecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFZ01 sp012511485*. The type genome for the species is the

GenBank assembly GCA_012511485.1. The GC content of the type genome is 44.06 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Exsuposa gen. nov.

Candidatus Exsuposa (NL. fem. n. *Exsuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFZ01*. The type species for the genus is *Candidatus* Exsuposa humecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsurana divoriforma sp. nov.

Candidatus Exsurana divoriforma (NL. fem. n. *divoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6178 sp002422205*. The type genome for the species is the GenBank assembly GCA_002422205.1. The GC content of the type genome is 52.75 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Exsurana gen. nov.

Candidatus Exsurana (NL. fem. n. *Exsurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6178*. The type species for the genus is *Candidatus* Exsurana divoriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipariaceae.

Description of *Candidatus* Exsuraria utricessa sp. nov.

Candidatus Exsuraria utricessa (NL. fem. n. *utricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2022 sp002335495*. The type genome for the species is the GenBank assembly GCA_002335495.1. The GC content of the type genome is 38.08 %

and the genome length is 0.82 Mbp.

Description of *Candidatus* Exsuraria gen. nov.

Candidatus Exsuraria (NL. fem. n. *Exsuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2022*. The type species for the genus is *Candidatus* Exsuraria utricessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Exsuria admutatica sp. nov.

Candidatus Exsuria admutatica (NL. fem. n. *admutatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAK01 sp005882445*. The type genome for the species is the GenBank assembly GCA_005882445.1. The GC content of the type genome is 68.87 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Exsuria gen. nov.

Candidatus Exsuria (NL. fem. n. *Exsuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBAK01*. The type species for the genus is *Candidatus* Exsuria admutatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NP-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabosaceae.

Description of *Candidatus* Exsuria cicarigena sp. nov.

Candidatus Exsuria cicarigena (NL. fem. n. *cicarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAK01 sp005882275*. The type genome for the species is the

GenBank assembly GCA_005882275.1. The GC content of the type genome is 68.94 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Exsurida impinago sp. nov.

Candidatus Exsurida impinago (NL. fem. n. *impinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-33 sp003233175*. The type genome for the species is the GenBank assembly GCA_003233175.1. The GC content of the type genome is 57.8 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Exsurida gen. nov.

Candidatus Exsurida (NL. fem. n. *Exsurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-33*. The type species for the genus is *Candidatus* Exsurida impinago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsurula tranvugo sp. nov.

Candidatus Exsurula tranvugo (NL. fem. n. *tranvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1976 sp900556765*. The type genome for the species is the GenBank assembly GCA_900556765.1. The GC content of the type genome is 49.13 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Exsurula gen. nov.

Candidatus Exsurula (NL. fem. n. *Exsurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1976*. The type species for the genus is *Candidatus* Exsurula tranvugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exsurula vitifitura sp. nov.

Candidatus Exsurula vitifitura (NL. fem. n. *vitifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1976 sp900769535*. The type genome for the species is the GenBank assembly RS_GCF_900769535.1. The GC content of the type genome is 43.73 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Exsusana vanitibra sp. nov.

Candidatus Exsusana vanitibra (NL. fem. n. *vanitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724185 sp002724185*. The type genome for the species is the GenBank assembly GCA_002724185.1. The GC content of the type genome is 44.59 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Exsusana gen. nov.

Candidatus Exsusana (NL. fem. n. *Exsusana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2724185*. The type species for the genus is *Candidatus* Exsusana vanitibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Exsusaria arrugitica sp. nov.

Candidatus Exsusaria arrugitica (NL. fem. n. *arrugitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-231 sp003551305*. The type genome for the species is the GenBank assembly GCA_003551305.1. The GC content of the type genome is 66.44 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Exsusaria gen. nov.

Candidatus Exsusaria (NL. fem. n. *Exsusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1Sed10-231*. The type species for the genus is *Candidatus* Exsusaria arrugitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefulaceae.

Description of *Candidatus* Exsusia elastiforma sp. nov.

Candidatus Exsusia elastiforma (NL. fem. n. *elastiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYX01 sp902810735*. The type genome for the species is the GenBank assembly RS_GCF_902810735.1. The GC content of the type genome is 61.13 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Exsusia gen. nov.

Candidatus Exsusia (NL. fem. n. *Exsusia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYX01*. The type species for the genus is *Candidatus* Exsusia elastiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Exsusida delecimonas sp. nov.

Candidatus Exsusida delecimonas (NL. fem. n. *delecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEQ01 sp013388755*. The type genome for the species is the GenBank assembly GCA_013388755.1. The GC content of the type genome is 62.32 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Exsusida gen. nov.

Candidatus Exsusida (NL. fem. n. *Exsusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEQ01*. The type species for the genus is *Candidatus* Exsusida delecimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extibacter depecousia sp. nov.

Candidatus Extibacter depecousia (NL. fem. n. *depecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Extibacter sp001185345*. The type genome for the species is the GenBank assembly RS_GCF_001185345.1. The GC content of the type genome is 48.6 % and the genome length is 3.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Intestinal epithelium".

Description of *Candidatus* Extinaria ecastax sp. nov.

Candidatus Extinaria ecastax (NL. fem. n. *ecastax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYWY01 sp012516165*. The type genome for the species is the GenBank assembly GCA_012516165.1. The GC content of the type genome is 47.09 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Extinaria gen. nov.

Candidatus Extinaria (NL. fem. n. *Extinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYWY01*. The type species for the genus is *Candidatus* Extinaria ecastax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vaciliaceae.

Description of *Candidatus* Extinella hecatetta sp. nov.

Candidatus Extinella hecatetta (NL. fem. n. *hecatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-0-80-50-8 sp002779345*. The type genome for the species is the GenBank assembly GCA_002779345.1. The GC content of the type genome is 49.66 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Extinella gen. nov.

Candidatus Extinella (NL. fem. n. *Extinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20-14-0-80-50-8*. The type species for the genus is *Candidatus* Extinella hecatetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-51-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodulaceae.

Description of *Candidatus* Extinia dimacax sp. nov.

Candidatus Extinia dimacax (NL. fem. n. *dimacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-41-20 sp001801575*. The type genome for the species is the GenBank assembly GCA_001801575.1. The GC content of the type genome is 40.81 % and the genome length is 2.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Extinia gen. nov.

Candidatus Extinia (NL. fem. n. *Extinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-41-20*. The type species for the genus is *Candidatus* Extinia dimacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Extinosa anatressa sp. nov.

Candidatus Extinosa anatressa (NL. fem. n. *anatressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1768 sp002315335*. The type genome for the species is the GenBank assembly GCA_002315335.1. The GC content of the type genome is 42.74 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Extinosa gen. nov.

Candidatus Extinosa (NL. fem. n. *Extinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1768*. The type species for the genus is *Candidatus* Extinosa anatressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extipana lacinicula sp. nov.

Candidatus Extipana lacinicula (NL. fem. n. *lacinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMJ01 sp014584705*. The type genome for the species is the GenBank assembly GCA_014584705.1. The GC content of the type genome is 61.44 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Extipana gen. nov.

Candidatus Extipana (NL. fem. n. *Extipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACTMJ01*. The type species for the genus is *Candidatus* Extipana lacinicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extiparia desomousia sp. nov.

Candidatus Extiparia desomousia (NL. fem. n. *desomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W498 sp011170285*. The type genome for the species is the GenBank assembly GCA_011170285.1. The GC content of the type genome is 45.79 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Extiparia gen. nov.

Candidatus Extiparia (NL. fem. n. *Extiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W498*. The type species for the genus is *Candidatus* Extiparia desomousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Extiparia incocilenta sp. nov.

Candidatus Extiparia incocilenta (NL. fem. n. *incocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W498 sp011191875*. The type genome for the species is the GenBank assembly GCA_011191875.1. The GC content of the type genome is 46.08 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Extipella totidatio sp. nov.

Candidatus Extipella totidatio (NL. fem. n. *totidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUOZ01 sp012034655*. The type genome for the species is the GenBank assembly GCA_012034655.1. The GC content of the type genome is 49.5 % and the genome length is 6.32 Mbp.

Description of *Candidatus* Extipella gen. nov.

Candidatus Extipella (NL. fem. n. *Extipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUOZ01*. The type species for the genus is *Candidatus* Extipella totidatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extipia ecastitoga sp. nov.

Candidatus Extipia ecastitoga (NL. fem. n. *ecastitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGP01 sp013821605*. The type genome for the species is the GenBank assembly GCA_013821605.1. The GC content of the type genome is 57.47 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Extipia gen. nov.

Candidatus Extipia (NL. fem. n. *Extipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDGP01*. The type species for the genus is *Candidatus* Extipia ecastitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extipida ficulibula sp. nov.

Candidatus Extipida ficulibula (NL. fem. n. *ficulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNA01 sp011047485*. The type genome for the species is the GenBank assembly GCA_011047485.1. The GC content of the type genome is 42.57 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Extipida gen. nov.

Candidatus Extipida (NL. fem. n. *Extipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNA01*. The type species for the genus is *Candidatus* Extipida ficulibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifidaceae.

Description of *Candidatus* Extiposa lapilago sp. nov.

Candidatus Extiposa lapilago (NL. fem. n. *lapilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B14-G9 sp003643935*. The type genome for the species is the GenBank assembly GCA_003643935.1. The GC content of the type genome is 46.38 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Extiposa gen. nov.

Candidatus Extiposa (NL. fem. n. *Extiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B14-G9*. The type species for the genus is *Candidatus* Extiposa lapilago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1062*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapariaceae.

Description of *Candidatus* Extorana indifivita sp. nov.

Candidatus Extorana indifivita (NL. fem. n. *indifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJL01 sp013298865*. The type genome for the species is the GenBank assembly GCA_013298865.1. The GC content of the type genome is 36.11 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Extorana gen. nov.

Candidatus Extorana (NL. fem. n. *Extorana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJL01*. The type species for the genus is *Candidatus* Extorana indifivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extoraria turifago sp. nov.

Candidatus Extoraria turifago (NL. fem. n. *turifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-299 sp003157675*. The type genome for the species is the GenBank assembly GCA_003157675.1. The GC content of the type genome is 68.78 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Extoraria gen. nov.

Candidatus Extoraria (NL. fem. n. *Extoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-299*. The type species for the genus is *Candidatus* Extoraria turifago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-181*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorellaceae.

Description of *Candidatus* Extorella abambitudo sp. nov.

Candidatus Extorella abambitudo (NL. fem. n. *abambitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR8 sp003220195*. The type genome for the species is the GenBank assembly GCA_003220195.1. The GC content of the type genome is 68.29 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Extorella gen. nov.

Candidatus Extorella (NL. fem. n. *Extorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR8*. The type species for the genus is *Candidatus* Extorella abambitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Extorosa novilimonia sp. nov.

Candidatus Extorosa novilimonia (NL. fem. n. *novilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOL01 sp009908885*. The type genome for the species is the GenBank assembly GCA_009908885.1. The GC content of the type genome is 66.48 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Extorosa gen. nov.

Candidatus Extorosa (NL. fem. n. *Extorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAOL01*. The type species for the genus is *Candidatus* Extorosa novilimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extunana accucessa sp. nov.

Candidatus Extunana accucessa (NL. fem. n. *accucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYE01 sp009692935*. The type genome for the species is the GenBank assembly GCA_009692935.1. The GC content of the type genome is 64.61 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Extunana gen. nov.

Candidatus Extunana (NL. fem. n. *Extunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYE01*. The type species for the genus is *Candidatus* Extunana accucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomiaceae.

Description of *Candidatus* Extunaria invecitrix sp. nov.

Candidatus Extunaria invecitrix (NL. fem. n. *invecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715565 sp002715565*. The type genome for the species is the GenBank assembly GCA_002715565.1. The GC content of the type genome is 28.17 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Extunaria gen. nov.

Candidatus Extunaria (NL. fem. n. *Extunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715565*. The type species for the genus is *Candidatus* Extunaria invecitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Extunella acrobitrix sp. nov.

Candidatus Extunella acrobitrix (NL. fem. n. *acrobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9300 sp011050615*. The type genome for the species is the GenBank assembly GCA_011050615.1. The GC content of the type genome is 42.13 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Extunella gen. nov.

Candidatus Extunella (NL. fem. n. *Extunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9300*. The type species for the genus is *Candidatus* Extunella acrobitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Extunella indubimonas sp. nov.

Candidatus Extunella indubimonas (NL. fem. n. *indubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9300 sp003518245*. The type genome for the species is the GenBank assembly GCA_003518245.1. The GC content of the type genome is 39.31 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Extunia cerevitio sp. nov.

Candidatus Extunia cerevitio (NL. fem. n. *cerevitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBO01 sp013288575*. The type genome for the species is the GenBank assembly GCA_013288575.1. The GC content of the type genome is 43.45 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Extunia gen. nov.

Candidatus Extunia (NL. fem. n. *Extunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBO01*. The type species for the genus is *Candidatus* Extunia cerevitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-0-20-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monaciaceae.

Description of *Candidatus* Extunula acrolifica sp. nov.

Candidatus Extunula acrolifica (NL. fem. n. *acrolifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC2-7 sp012932915*. The type genome for the species is the GenBank assembly RS_GCF_012932915.1. The GC content of the type genome is 63.81 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Extunula gen. nov.

Candidatus Extunula (NL. fem. n. *Extunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YC2-7*. The type species for the genus is *Candidatus* Extunula acrolifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Extunula exheritas sp. nov.

Candidatus Extunula exheritas (NL. fem. n. *exheritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC2-7 sp008297975*. The type genome for the species is the GenBank assembly RS_GCF_008297975.1. The GC content of the type genome is 64.3 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Exturana inlibicula sp. nov.

Candidatus Exturana inlibicula (NL. fem. n. *inlibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOJT01 sp004376485*. The type genome for the species is the GenBank assembly GCA_004376485.1. The GC content of the type genome is 45.41 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Exturana gen. nov.

Candidatus Exturana (NL. fem. n. *Exturana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SOJT01*. The type species for the genus is *Candidatus* Exturana inlibicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AE-B3A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ciminariaceae.

Description of *Candidatus* Exturana maxilugo sp. nov.

Candidatus Exturana maxilugo (NL. fem. n. *maxilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOJT01 sp004376185*. The type genome for the species is the GenBank assembly GCA_004376185.1. The GC content of the type genome is 44.8 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Exturaria capilitrix sp. nov.

Candidatus Exturaria capilitrix (NL. fem. n. *capilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHA01 sp013821315*. The type genome for the species is the GenBank assembly GCA_013821315.1. The GC content of the type genome is 35.89 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Exturaria gen. nov.

Candidatus Exturaria (NL. fem. n. *Exturaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHA01*. The type species for the genus is *Candidatus* Exturaria capilitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exturella adtemilenta sp. nov.

Candidatus Exturella adtemilenta (NL. fem. n. *adtemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUNF01 sp012838635*. The type genome for the species is the GenBank assembly GCA_012838635.1. The GC content of the type genome is 30.47 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Exturella gen. nov.

Candidatus Exturella (NL. fem. n. *Exturella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUNF01*. The type species for the genus is *Candidatus* Exturella adtemilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Exturella exsoritudo sp. nov.

Candidatus Exturella exsoritudo (NL. fem. n. *exsoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNF01 sp012839485*. The type genome for the species is the GenBank assembly GCA_012839485.1. The GC content of the type genome is 29.91 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Exturia denicitica sp. nov.

Candidatus Exturia denicitica (NL. fem. n. *denicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM516 sp002869275*. The type genome for the species is the GenBank assembly GCA_002869275.1. The GC content of the type genome is 56.41 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Exturia gen. nov.

Candidatus Exturia (NL. fem. n. *Exturia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM516*. The type species for the genus is *Candidatus* Exturia denicitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinariaceae.

Description of *Candidatus* Exturosa bonifilega sp. nov.

Candidatus Exturosa bonifilega (NL. fem. n. *bonifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1165 sp011053085*. The type genome for the species is the GenBank assembly GCA_011053085.1. The GC content of the type genome is 51.47 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Exturosa gen. nov.

Candidatus Exturosa (NL. fem. n. *Exturosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-1165*. The type species for the genus is *Candidatus* Exturosa bonifilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exturosa scorbibra sp. nov.

Candidatus Exturosa scorbibra (NL. fem. n. *scorbibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1165 sp013314735*. The type genome for the species is the GenBank assembly GCA_013314735.1. The GC content of the type genome is 53.89 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Exturula infelilenta sp. nov.

Candidatus Exturula infelilenta (NL. fem. n. *infelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZF01 sp012514975*. The type genome for the species is the GenBank assembly GCA_012514975.1. The GC content of the type genome is 64.53 %

and the genome length is 4.12 Mbp.

Description of *Candidatus* Exturula gen. nov.

Candidatus Exturula (NL. fem. n. *Exturula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZF01*. The type species for the genus is *Candidatus* Exturula infelilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B51-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peracariaceae.

Description of *Candidatus* Exurrana atropicella sp. nov.

Candidatus Exurrana atropicella (NL. fem. n. *atropicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-36-11 sp002778535*. The type genome for the species is the GenBank assembly GCA_002778535.1. The GC content of the type genome is 36.19 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Exurrana gen. nov.

Candidatus Exurrana (NL. fem. n. *Exurrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-36-11*. The type species for the genus is *Candidatus* Exurrana atropicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2196*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidulaceae.

Description of *Candidatus* Exurraria malivedo sp. nov.

Candidatus Exurraria malivedo (NL. fem. n. *malivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-250 sp003235605*. The type genome for the species is the

GenBank assembly GCA_003235605.1. The GC content of the type genome is 65.43 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Exurraria gen. nov.

Candidatus Exurraria (NL. fem. n. *Exurraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-250*. The type species for the genus is *Candidatus* Exurraria malivedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifulaceae.

Description of *Candidatus* Exurria abagmastra sp. nov.

Candidatus Exurria abagmastra (NL. fem. n. *abagmastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PD-1 sp013285385*. The type genome for the species is the GenBank assembly RS_GCF_013285385.1. The GC content of the type genome is 52.14 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Exurria gen. nov.

Candidatus Exurria (NL. fem. n. *Exurria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PD-1*. The type species for the genus is *Candidatus* Exurria abagmastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exurrida cadavetta sp. nov.

Candidatus Exurrida cadavetta (NL. fem. n. *cadavetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUGU01 sp903898785*. The type genome for the species is the GenBank assembly GCA_903898785.1. The GC content of the type genome is 65.31 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Exurrida gen. nov.

Candidatus Exurrida (NL. fem. n. *Exurrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUGU01*. The type species for the genus is *Candidatus* Exurrida cadavetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Exurrida pedepugo sp. nov.

Candidatus Exurrida pedepugo (NL. fem. n. *pedepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUGU01 sp903884105*. The type genome for the species is the GenBank assembly GCA_903884105.1. The GC content of the type genome is 62.89 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Exurrosa obtecitoga sp. nov.

Candidatus Exurrosa obtecitoga (NL. fem. n. *obtecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMNW01 sp014378345*. The type genome for the species is the GenBank assembly GCA_014378345.1. The GC content of the type genome is 57.56 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Exurrosa gen. nov.

Candidatus Exurrosa (NL. fem. n. *Exurrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMNW01*. The type species for the genus is *Candidatus* Exurrosa obtecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ezakiella cilotitica sp. nov.

Candidatus Ezakiella cilotitica (NL. fem. n. *cilotitica* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ezakiella sp900540185*. The type genome for the species is the GenBank assembly GCA_900540185.1. The GC content of the type genome is 37.3 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Fabibacter ablepago sp. nov.

Candidatus Fabibacter ablepago (NL. fem. n. *ablepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fabibacter sp001747095*. The type genome for the species is the GenBank assembly RS_GCF_001747095.1. The GC content of the type genome is 41.74 % and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sea surface microlayer".

Description of *Candidatus* Fabibacter dinupago sp. nov.

Candidatus Fabibacter dinupago (NL. fem. n. *dinupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fabibacter sp002477595*. The type genome for the species is the GenBank assembly GCA_002387525.1. The GC content of the type genome is 40.67 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Fabibacter insalimonia sp. nov.

Candidatus Fabibacter insalimonia (NL. fem. n. *insalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fabibacter sp013373005*. The type genome for the species is the GenBank assembly GCA_013373005.1. The GC content of the type genome is 41.79 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Fabibacter remulago sp. nov.

Candidatus Fabibacter remulago (NL. fem. n. *remulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fabibacter sp002427755*. The type genome for the species is the GenBank assembly GCA_002427755.1. The GC content of the type genome is 39.04 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Fabibacter refunatio sp. nov.

Candidatus Fabibacter refunatio (NL. fem. n. *refunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fabibacter_A sp012926615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012926615.1. The GC content of the type genome is 34.84 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Facklamia sifunitura sp. nov.

Candidatus Facklamia sifunitura (NL. fem. n. *sifunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Facklamia_A sp014049385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014049385.1. The GC content of the type genome is 36.34 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Facunana amatribula sp. nov.

Candidatus Facunana amatribula (NL. fem. n. *amatribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12499 sp001788415*. The type genome for the species is the GenBank assembly GCA_001788415.1. The GC content of the type genome is 71.12 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Facunana gen. nov.

Candidatus Facunana (NL. fem. n. *Facunana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12499*. The type species for the genus is *Candidatus* Facunana amatribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Facunana duponitrix sp. nov.

Candidatus Facunana duponitrix (NL. fem. n. *duponitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12499 sp001788395*. The type genome for the species is the GenBank assembly GCA_001788395.1. The GC content of the type genome is 70.17 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Facunaria humecentia sp. nov.

Candidatus Facunaria humecentia (NL. fem. n. *humecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUEN01 sp903898185*. The type genome for the species is the GenBank assembly GCA_903896475.1. The GC content of the type genome is 53.72 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Facunaria gen. nov.

Candidatus Facunaria (NL. fem. n. *Facunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUEN01*. The type species for the genus is *Candidatus* Facunaria humecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunulaceae.

Description of *Candidatus* Facunella fetutetta sp. nov.

Candidatus Facunella fetutetta (NL. fem. n. *fetutetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZGX01 sp903932685*. The type genome for the species is the GenBank assembly GCA_903932685.1. The GC content of the type genome is 41.94 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Facunella gen. nov.

Candidatus Facunella (NL. fem. n. *Facunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZGX01*. The type species for the genus is *Candidatus* Facunella fetutetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Facunia denoritoga sp. nov.

Candidatus Facunia denoritoga (NL. fem. n. *denoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2161 sp002730525*. The type genome for the species is the GenBank assembly GCA_002730525.1. The GC content of the type genome is 67.05 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Facunia gen. nov.

Candidatus Facunia (NL. fem. n. *Facunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2161*. The type species for the genus is *Candidatus* Facunia denoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metapiaceae.

Description of *Candidatus* Facunia galacitia sp. nov.

Candidatus Facunia galacitia (NL. fem. n. *galacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2161 sp002328835*. The type genome for the species is the GenBank assembly GCA_002687695.1. The GC content of the type genome is 63.7 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Facunida ceromivita sp. nov.

Candidatus Facunida ceromivita (NL. fem. n. *ceromivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSJC7 sp005671395*. The type genome for the species is the GenBank assembly RS_GCF_013359925.1. The GC content of the type genome is 55.89 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Facunida gen. nov.

Candidatus Facunida (NL. fem. n. *Facunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LSJC7*. The type species for the genus is *Candidatus* Facunida ceromivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Facunida excalessa sp. nov.

Candidatus Facunida excalessa (NL. fem. n. *excalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSJC7 sp010092695*. The type genome for the species is the GenBank assembly RS_GCF_010092695.1. The GC content of the type genome is 54.58 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Facunida fiducitas sp. nov.

Candidatus Facunida fiducitas (NL. fem. n. *fiducitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSJC7 sp000302695*. The type genome for the species is the GenBank assembly RS_GCF_000302695.1. The GC content of the type genome is 54.83 % and the genome length is 4.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "antimony tailing".

Description of *Candidatus* Facunosa minuritura sp. nov.

Candidatus Facunosa minuritura (NL. fem. n. *minuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4363 sp002393965*. The type genome for the species is the GenBank assembly GCA_002396045.1. The GC content of the type genome is 49.43 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Facunosa gen. nov.

Candidatus Facunosa (NL. fem. n. *Facunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4363*. The type species for the genus is *Candidatus* Facunosa minuritura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Facunula errabedo sp. nov.

Candidatus Facunula errabedo (NL. fem. n. *errabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4486 sp002389045*. The type genome for the species is the GenBank assembly GCA_002389045.1. The GC content of the type genome is 54.0 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Facunula gen. nov.

Candidatus Facunula (NL. fem. n. *Facunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA4486*. The type species for the genus is *Candidatus* Facunula errabedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Facunulaceae fam. nov.

Candidatus Facunulaceae (NL. fem. n. *Facunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4486.* The type genus for the taxon is *Candidatus* Facunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Facunulales.

Description of *Candidatus* Facunulales ord. nov.

Candidatus Facunulales (NL. fem. n. *Facunulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4486.* The type genus for the taxon is *Candidatus* Facunula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Faecalibacillus democago sp. nov.

Candidatus Faecalibacillus democago (NL. fem. n. *democago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacillus sp003480255*. The type genome for the species is the GenBank assembly GCA_900758515.1. The GC content of the type genome is 30.09 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Faecalibacillus denunibra sp. nov.

Candidatus Faecalibacillus denunibra (NL. fem. n. *denunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacillus sp900544435*. The type genome for the species is the GenBank assembly GCA_900758025.1. The GC content of the type genome is 28.92 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Faecalibacterium carecigena sp. nov.

Candidatus Faecalibacterium carecigena (NL. fem. n. *carecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900551435*. The type genome for the species is the GenBank assembly GCA_900771915.1. The GC content of the type genome is 58.59 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Faecalibacterium cocibimonia sp. nov.

Candidatus Faecalibacterium cocibimonia (NL. fem. n. *cocibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900765105*. The type genome for the species is the GenBank assembly GCA_900765105.1. The GC content of the type genome is 58.49 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Faecalibacterium colapicula sp. nov.

Candidatus Faecalibacterium colapicula (NL. fem. n. *colapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900765705*. The type genome for the species is the GenBank assembly GCA_900765705.1. The GC content of the type genome is 55.56 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Faecalibacterium hemititoga sp. nov.

Candidatus Faecalibacterium hemititoga (NL. fem. n. *hemititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900772565*. The type genome for the species is the GenBank assembly GCA_900772565.1. The GC content of the type genome is 58.34 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Faecalibacterium hexamitura sp. nov.

Candidatus Faecalibacterium hexamitura (NL. fem. n. *hexamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900539945*. The type genome for the species is the GenBank assembly GCA_900756745.1. The GC content of the type genome is 60.05 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Faecalibacterium renavessa sp. nov.

Candidatus Faecalibacterium renavessa (NL. fem. n. *renavessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp002160915*. The type genome for the species is the GenBank assembly RS_GCF_002161515.1. The GC content of the type genome is 60.68 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Faecalibacterium repagatica sp. nov.

Candidatus Faecalibacterium repagatica (NL. fem. n. *repagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900539885*. The type genome for the species is the GenBank assembly GCA_900760515.1. The GC content of the type genome is 58.0 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Faecalibacterium semigitas sp. nov.

Candidatus Faecalibacterium semigitas (NL. fem. n. *semigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900758465*. The type genome for the species is the GenBank assembly GCA_900758465.1. The GC content of the type genome is 60.56 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Faecalibacterium subadimonas sp. nov.

Candidatus Faecalibacterium subadimonas (NL. fem. n. *subadimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp003449675*. The type genome for the species is the GenBank assembly GCA_900766095.1. The GC content of the type genome is 58.84 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Faecalibacterium tegimibra sp. nov.

Candidatus Faecalibacterium tegimibra (NL. fem. n. *tegimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp900540455*. The type genome for the species is the GenBank assembly GCA_900540455.1. The GC content of the type genome is 58.19 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Faecalibacterium vigenatica sp. nov.

Candidatus Faecalibacterium vigenatica (NL. fem. n. *vigenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalibacterium sp002160895*. The type genome for the species is the GenBank assembly RS_GCF_002161315.1. The GC content of the type genome is 59.6 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Faecalicoccus melilessa sp. nov.

Candidatus Faecalicoccus melilessa (NL. fem. n. *melilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalicoccus sp900546545*. The type genome for the species is the GenBank assembly RS_GCF_012843735.1. The GC content of the type genome is 38.45 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Faecalimonas cibaritoga sp. nov.

Candidatus Faecalimonas cibaritoga (NL. fem. n. *cibaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Faecalimonas sp900556835*. The type genome for the species is the GenBank assembly GCA_900556835.1. The GC content of the type genome is 38.24 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Faecalimonas cuferitoga sp. nov.

Candidatus Faecalimonas cuferitoga (NL. fem. n. *cuferitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900550235*. The type genome for the species is the GenBank assembly GCA_900550235.1. The GC content of the type genome is 38.5 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Faecalimonas forinitoga sp. nov.

Candidatus Faecalimonas forinitoga (NL. fem. n. *forinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900550975*. The type genome for the species is the GenBank assembly GCA_900550975.1. The GC content of the type genome is 40.77 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Faecalimonas fusifimonas sp. nov.

Candidatus Faecalimonas fusifimonas (NL. fem. n. *fusifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900555395*. The type genome for the species is the GenBank assembly GCA_900555395.1. The GC content of the type genome is 42.98 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Faecalimonas mirabitura sp. nov.

Candidatus Faecalimonas mirabitura (NL. fem. n. *mirabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900316755*. The type genome for the species is the GenBank assembly GCA_900316755.1. The GC content of the type genome is 43.94 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Faecalimonas murelastra sp. nov.

Candidatus Faecalimonas murelastra (NL. fem. n. *murelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp000209385*. The type genome for the species is the GenBank assembly RS_GCF_902381685.1. The GC content of the type genome is 38.77 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Faecalimonas obtenitica sp. nov.

Candidatus Faecalimonas obtenitica (NL. fem. n. *obtenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900546325*. The type genome for the species is the GenBank assembly GCA_900546325.1. The GC content of the type genome is 43.99 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Faecalimonas roruliforma sp. nov.

Candidatus Faecalimonas roruliforma (NL. fem. n. *roruliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Faecalimonas sp900551895*. The type genome for the species is the GenBank assembly GCA_900551895.1. The GC content of the type genome is 38.1 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Falsibacillus obteniforma sp. nov.

Candidatus Falsibacillus obteniforma (NL. fem. n. *obteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Falsibacillus sp003668575*. The type genome for the species is the GenBank assembly RS_GCF_003668575.1. The GC content of the type genome is 42.29 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Falsirhodobacter munimitoga sp. nov.

Candidatus Falsirhodobacter munimitoga (NL. fem. n. *munimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Falsirhodobacter sp000739715*. The type genome for the species is the GenBank assembly RS_GCF_000739715.2. The GC content of the type genome is 60.25 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Falsochrobactrum vitupigena sp. nov.

Candidatus Falsochrobactrum vitupigena (NL. fem. n. *vitupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Falsochrobactrum sp003149535*. The type genome for the species is the GenBank assembly RS_GCF_003149535.1. The GC content of the type genome is 56.92 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Famelana arillastra sp. nov.

Candidatus Famelana arillastra (NL. fem. n. *arillastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG163 sp009930305*. The type genome for the species is the GenBank assembly GCA_009930305.1. The GC content of the type genome is 34.64 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Famelana gen. nov.

Candidatus Famelana (NL. fem. n. *Famelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG163*. The type species for the genus is *Candidatus* Famelana arillastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Famelana dibapitia sp. nov.

Candidatus Famelana dibapitia (NL. fem. n. *dibapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG163 sp900316125*. The type genome for the species is the GenBank assembly GCA_902755145.1. The GC content of the type genome is 44.86 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Famelana exsatousia sp. nov.

Candidatus Famelana exsatousia (NL. fem. n. *exsatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG163 sp002069025*. The type genome for the species is the GenBank assembly GCA_002069025.1. The GC content of the type genome is 34.93 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Famelana levifitio sp. nov.

Candidatus Famelana levifitio (NL. fem. n. *levifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG163 sp900316995*. The type genome for the species is the GenBank assembly GCA_902795655.1. The GC content of the type genome is 43.52 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Famelaria binocitoga sp. nov.

Candidatus Famelaria binocitoga (NL. fem. n. *binocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMP01 sp009841105*. The type genome for the species is the GenBank assembly GCA_009839965.1. The GC content of the type genome is 66.01 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Famelaria gen. nov.

Candidatus Famelaria (NL. fem. n. *Famelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXMP01*. The type species for the genus is *Candidatus* Famelaria binocitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-232*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Viceciaceae.

Description of *Candidatus* Famelaria caselitas sp. nov.

Candidatus Famelaria caselitas (NL. fem. n. *caselitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMP01 sp009841075*. The type genome for the species is the GenBank assembly GCA_009843905.1. The GC content of the type genome is 60.75 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Famelaria homagiforma sp. nov.

Candidatus Famelaria homagiforma (NL. fem. n. *homagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMP01 sp009838635*. The type genome for the species is the GenBank assembly GCA_009843115.1. The GC content of the type genome is 66.96 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Famelaria illuviforma sp. nov.

Candidatus Famelaria illuviforma (NL. fem. n. *illuviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMP01 sp011523395*. The type genome for the species is the GenBank assembly GCA_011523395.1. The GC content of the type genome is 66.8 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Famelaria repepitia sp. nov.

Candidatus Famelaria repepitia (NL. fem. n. *repepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMP01 sp011523635*. The type genome for the species is the GenBank assembly GCA_011523635.1. The GC content of the type genome is 66.61 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Famelella deparitura sp. nov.

Candidatus Famelella deparitura (NL. fem. n. *deparitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAEEV01 sp013185065*. The type genome for the species is the GenBank assembly RS_GCF_011038995.1. The GC content of the type genome is 65.34 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Famelella gen. nov.

Candidatus Famelella (NL. fem. n. *Famelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAAEEV01*. The type species for the genus is *Candidatus* Famelella deparitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Famelella indubilenta sp. nov.

Candidatus Famelella indubilenta (NL. fem. n. *indubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAEEV01 sp900754955*. The type genome for the species is the GenBank assembly RS_GCF_900754955.1. The GC content of the type genome is 64.9 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Famelella tameticula sp. nov.

Candidatus Famelella tameticula (NL. fem. n. *tameticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAEEV01 sp011038975*. The type genome for the species is the GenBank assembly RS_GCF_011038955.1. The GC content of the type genome is 64.64 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Famelia siminivita sp. nov.

Candidatus Famelia siminivita (NL. fem. n. *siminivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKWO01 sp007128895*. The type genome for the species is the GenBank assembly GCA_007128895.1. The GC content of the type genome is 65.77 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Famelia gen. nov.

Candidatus Famelia (NL. fem. n. *Famelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKWO01*. The type species for the genus is *Candidatus* Famelia siminivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Famelida viginilenta sp. nov.

Candidatus Famelida viginilenta (NL. fem. n. *viginilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC12-FULL-57-11 sp903843045*. The type genome for the species is the GenBank assembly GCA_903825955.1. The GC content of the type genome is 61.8 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Famelida gen. nov.

Candidatus Famelida (NL. fem. n. *Famelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YC12-FULL-57-11*. The type species for the genus is *Candidatus* Famelida viginilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Famelida vivifimonas sp. nov.

Candidatus Famelida vivifimonas (NL. fem. n. *vivifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC12-FULL-57-11 sp001791645*. The type genome for the species is the GenBank assembly GCA_001791645.1. The GC content of the type genome is 57.68 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Famelosa abnocimonas sp. nov.

Candidatus Famelosa abnocimonas (NL. fem. n. *abnocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXTV01 sp903922465*. The type genome for the species is the GenBank assembly GCA_903922465.1. The GC content of the type genome is 35.98 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Famelosa gen. nov.

Candidatus Famelosa (NL. fem. n. *Famelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXTV01*. The type species for the genus is *Candidatus* Famelosa abnocimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXTV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Famelosaceae.

Description of *Candidatus* Famelosaceae fam. nov.

Candidatus Famelosaceae (NL. fem. n. *Famelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXTV01.* The type genus for the taxon is *Candidatus* Famelosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Famelula absoritudo sp. nov.

Candidatus Famelula absoritudo (NL. fem. n. *absoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVN01 sp007136165*. The type genome for the species is the GenBank assembly GCA_007136165.1. The GC content of the type genome is 55.4 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Famelula gen. nov.

Candidatus Famelula (NL. fem. n. *Famelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWVN01*. The type species for the genus is *Candidatus* Famelula absoritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWVN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Famelulaceae.

Description of *Candidatus* Famelulaceae fam. nov.

Candidatus Famelulaceae (NL. fem. n. *Famelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWVN01.* The type genus for the taxon is *Candidatus* Famelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *PWVN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Famelulales.

Description of *Candidatus* Famelulales ord. nov.

Candidatus Famelulales (NL. fem. n. *Famelulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWVN01.* The type genus for the taxon is *Candidatus* Famelula .

According to the GTDB R06-RS202, this order belongs to the class *Dethiobacteria*.

Description of *Candidatus* Famelula ecfacilega sp. nov.

Candidatus Famelula ecfacilega (NL. fem. n. *ecfacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PWVN01 sp003561835*. The type genome for the species is the GenBank assembly GCA_003561835.1. The GC content of the type genome is 59.37 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Famelula regigetta sp. nov.

Candidatus Famelula regigetta (NL. fem. n. *regigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVN01 sp003567935*. The type genome for the species is the GenBank assembly GCA_003567935.1. The GC content of the type genome is 55.11 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Faticana curabatio sp. nov.

Candidatus Faticana curabatio (NL. fem. n. *curabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG740 sp902797445*. The type genome for the species is the GenBank assembly GCA_902773205.1. The GC content of the type genome is 58.92 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Faticana gen. nov.

Candidatus Faticana (NL. fem. n. *Faticana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG740*. The type species for the genus is *Candidatus* Faticana curabatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Faticana dicanitia sp. nov.

Candidatus Faticana dicanitia (NL. fem. n. *dicanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG740 sp900321945*. The type genome for the species is the

GenBank assembly GCA_902759775.1. The GC content of the type genome is 60.99 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Faticana encometta sp. nov.

Candidatus Faticana encometta (NL. fem. n. *encometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG740 sp902778055*. The type genome for the species is the GenBank assembly GCA_902778055.1. The GC content of the type genome is 58.36 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Faticana pabilitica sp. nov.

Candidatus Faticana pabilitica (NL. fem. n. *pabilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG740 sp900316415*. The type genome for the species is the GenBank assembly GCA_902756005.1. The GC content of the type genome is 60.71 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Faticaria colubetta sp. nov.

Candidatus Faticaria colubetta (NL. fem. n. *colubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11712 sp000995965*. The type genome for the species is the GenBank assembly GCA_001784795.1. The GC content of the type genome is 43.39 % and the genome length is 0.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point A".

Description of *Candidatus* Faticaria gen. nov.

Candidatus Faticaria (NL. fem. n. *Faticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11712*. The type species for the genus is *Candidatus* Faticaria colubetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA11712. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Faticariaceae.

Description of *Candidatus* Faticariaceae fam. nov.

Candidatus Faticariaceae (NL. fem. n. *Faticariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11712.* The type genus for the taxon is *Candidatus* Faticaria .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Faticaria manubicella sp. nov.

Candidatus Faticaria manubicella (NL. fem. n. *manubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11712 sp001784875*. The type genome for the species is the GenBank assembly GCA_001784975.1. The GC content of the type genome is 43.59 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Faticella adsocastra sp. nov.

Candidatus Faticella adsocastra (NL. fem. n. *adsocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp002170885*. The type genome for the species is the GenBank assembly GCA_002170885.2. The GC content of the type genome is 31.43 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Faticella gen. nov.

Candidatus Faticella (NL. fem. n. *Faticella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G09*. The type species for the genus is *Candidatus* Faticella adsocastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

TMED25. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipiaceae.

Description of *Candidatus* Faticella arrecessa sp. nov.

Candidatus Faticella arrecessa (NL. fem. n. *arrecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp002723035*. The type genome for the species is the GenBank assembly GCA_002723035.1. The GC content of the type genome is 31.89 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Faticella bigarentia sp. nov.

Candidatus Faticella bigarentia (NL. fem. n. *bigarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp902626605*. The type genome for the species is the GenBank assembly GCA_902626605.1. The GC content of the type genome is 31.83 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Faticella capudimonas sp. nov.

Candidatus Faticella capudimonas (NL. fem. n. *capudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp002683015*. The type genome for the species is the GenBank assembly GCA_002683015.1. The GC content of the type genome is 31.89 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Faticella codifimonas sp. nov.

Candidatus Faticella codifimonas (NL. fem. n. *codifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp902537725*. The type genome for the species is the GenBank assembly GCA_902537725.1. The GC content of the type genome is 31.79 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Faticella denecimonia sp. nov.

Candidatus Faticella denecimonia (NL. fem. n. *denecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp003278145*. The type genome for the species is the GenBank assembly GCA_902596725.1. The GC content of the type genome is 32.23 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Faticella furibitudo sp. nov.

Candidatus Faticella furibitudo (NL. fem. n. *furibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp003279705*. The type genome for the species is the GenBank assembly GCA_003279705.1. The GC content of the type genome is 31.71 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Faticella homililenta sp. nov.

Candidatus Faticella homililenta (NL. fem. n. *homililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G09 sp002704345*. The type genome for the species is the GenBank assembly GCA_002457395.1. The GC content of the type genome is 32.66 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Faticia cunabitica sp. nov.

Candidatus Faticia cunabitica (NL. fem. n. *cunabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11704 sp903834855*. The type genome for the species is the GenBank assembly GCA_903821935.1. The GC content of the type genome is 35.02 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Faticia gen. nov.

Candidatus Faticia (NL. fem. n. *Faticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11704*. The type species for the genus is *Candidatus* Faticia cunabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deforariaceae.

Description of *Candidatus* Faticia insubatio sp. nov.

Candidatus Faticia insubatio (NL. fem. n. *insubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11704 sp003518045*. The type genome for the species is the GenBank assembly GCA_003518045.1. The GC content of the type genome is 35.78 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Faticia molecitica sp. nov.

Candidatus Faticia molecitica (NL. fem. n. *molecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11704 sp903875555*. The type genome for the species is the GenBank assembly GCA_903890235.1. The GC content of the type genome is 33.05 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Faticida hemidiforma sp. nov.

Candidatus Faticida hemidiforma (NL. fem. n. *hemidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12088 sp007116405*. The type genome for the species is the GenBank assembly GCA_007121795.1. The GC content of the type genome is 53.78 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Faticida gen. nov.

Candidatus Faticida (NL. fem. n. *Faticida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12088*. The type species for the genus is *Candidatus* Faticida hemidiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Faticida infenisca sp. nov.

Candidatus Faticida infenisca (NL. fem. n. *infenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12088 sp003252295*. The type genome for the species is the GenBank assembly GCA_003252295.1. The GC content of the type genome is 42.58 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Faticida munifibra sp. nov.

Candidatus Faticida munifibra (NL. fem. n. *munifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12088 sp000998045*. The type genome for the species is the GenBank assembly GCA_003518505.1. The GC content of the type genome is 42.06 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Faticida rorulitura sp. nov.

Candidatus Faticida rorulitura (NL. fem. n. *rorulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12088 sp000998805*. The type genome for the species is the GenBank assembly GCA_000998805.1. The GC content of the type genome is 42.22 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Faticula conamitica sp. nov.

Candidatus Faticula conamitica (NL. fem. n. *conamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-56-15 sp004297165*. The type genome for the species is the GenBank assembly GCA_004297165.1. The GC content of the type genome is 59.12 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Faticula gen. nov.

Candidatus Faticula (NL. fem. n. *Faticula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-56-15*. The type species for the genus is *Candidatus* Faticula conamitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Faticula ephemugo sp. nov.

Candidatus Faticula ephemugo (NL. fem. n. *ephemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-56-15 sp001801825*. The type genome for the species is the GenBank assembly GCA_001801825.1. The GC content of the type genome is 55.39 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Fatifana immobugo sp. nov.

Candidatus Fatifana immobugo (NL. fem. n. *immobugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11393 sp002791835*. The type genome for the species is the GenBank assembly GCA_002791835.1. The GC content of the type genome is 36.61 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Fatifana gen. nov.

Candidatus Fatifana (NL. fem. n. *Fatifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11393*. The type species for the genus is *Candidatus* Fatifana immobugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11393*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifanaceae.

Description of *Candidatus* Fatifanaceae fam. nov.

Candidatus Fatifanaceae (NL. fem. n. *Fatifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11393.* The type genus for the taxon is *Candidatus* Fatifana .

According to GTDB R06-RS202, this family belongs to the order *Paracaedibacterales*.

Description of *Candidatus* Fatifana periciforma sp. nov.

Candidatus Fatifana periciforma (NL. fem. n. *periciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11393 sp003542655*. The type genome for the species is the GenBank assembly GCA_003542655.1. The GC content of the type genome is 36.54 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Fatifaria metapicula sp. nov.

Candidatus Fatifaria metapicula (NL. fem. n. *metapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1058 sp003154115*. The type genome for the species is the GenBank assembly GCA_003154115.1. The GC content of the type genome is 57.59 % and the genome length is 7.7 Mbp.

Description of *Candidatus* Fatifaria gen. nov.

Candidatus Fatifaria (NL. fem. n. *Fatifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Fen-1058*. The type species for the genus is *Candidatus* Fatifaria metapicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1058*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifariaceae.

Description of *Candidatus* Fatifariaceae fam. nov.

Candidatus Fatifariaceae (NL. fem. n. *Fatifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1058.* The type genus for the taxon is *Candidatus* Fatifaria .

According to GTDB R06-RS202, this family belongs to the order *Thermoflexales*.

Description of *Candidatus* Fatifella defanicella sp. nov.

Candidatus Fatifella defanicella (NL. fem. n. *defanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-40-11 sp002780305*. The type genome for the species is the GenBank assembly GCA_002788915.1. The GC content of the type genome is 39.64 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Fatifella gen. nov.

Candidatus Fatifella (NL. fem. n. *Fatifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-40-11*. The type species for the genus is *Candidatus* Fatifella defanicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifellaceae.

Description of *Candidatus* Fatifellaceae fam. nov.

Candidatus Fatifellaceae (NL. fem. n. *Fatifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UM-FILTER-40-11*. The type genus for the taxon is *Candidatus* Fatifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fatifellales.

Description of *Candidatus* Fatifellales ord. nov.

Candidatus Fatifellales (NL. fem. n. *Fatifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-40-11*. The type genus for the taxon is *Candidatus* Fatifella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Fatifia cicaredo sp. nov.

Candidatus Fatifia cicaredo (NL. fem. n. *cicaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG11 sp003223455*. The type genome for the species is the GenBank assembly GCA_003223455.1. The GC content of the type genome is 68.5 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Fatifia gen. nov.

Candidatus Fatifia (NL. fem. n. *Fatifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG11*. The type species for the genus is *Candidatus* Fatifia cicaredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fatifia corocibula sp. nov.

Candidatus Fatifia corocibula (NL. fem. n. *corocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG11 sp002215645*. The type genome for the species is the GenBank

assembly GCA_002215645.1. The GC content of the type genome is 64.99 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Fatifia saxifibula sp. nov.

Candidatus Fatifia saxifibula (NL. fem. n. *saxifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG11 sp013361335*. The type genome for the species is the GenBank assembly GCA_013361605.1. The GC content of the type genome is 69.89 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Fatifia sicunivita sp. nov.

Candidatus Fatifia sicunivita (NL. fem. n. *sicunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG11 sp014378185*. The type genome for the species is the GenBank assembly GCA_014378185.1. The GC content of the type genome is 65.73 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Fatifida susicivita sp. nov.

Candidatus Fatifida susicivita (NL. fem. n. *susicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5409 sp002410615*. The type genome for the species is the GenBank assembly GCA_002397505.1. The GC content of the type genome is 33.04 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Fatifida gen. nov.

Candidatus Fatifida (NL. fem. n. *Fatifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5409*. The type species for the genus is *Candidatus* Fatifida susicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5453*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifosaceae.

Description of *Candidatus* Fatifosa decunibula sp. nov.

Candidatus Fatifosa decunibula (NL. fem. n. *decunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1212 sp902792515*. The type genome for the species is the GenBank assembly GCA_902792515.1. The GC content of the type genome is 54.37 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Fatifosa gen. nov.

Candidatus Fatifosa (NL. fem. n. *Fatifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1212*. The type species for the genus is *Candidatus* Fatifosa decunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifosaceae.

Description of *Candidatus* Fatifosaceae fam. nov.

Candidatus Fatifosaceae (NL. fem. n. *Fatifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1212.* The type genus for the taxon is *Candidatus* Fatifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fatifosales.

Description of *Candidatus* Fatifosales ord. nov.

Candidatus Fatifosales (NL. fem. n. *Fatifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1212.* The type genus for the taxon is *Candidatus* Fatifosa .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Fatifosa defalago sp. nov.

Candidatus Fatifosa defalago (NL. fem. n. *defalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1212 sp002309655*. The type genome for the species is the GenBank assembly GCA_002309655.1. The GC content of the type genome is 54.83 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Fatifosa illepatio sp. nov.

Candidatus Fatifosa illepatio (NL. fem. n. *illepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1212 sp902782645*. The type genome for the species is the GenBank assembly GCA_902782645.1. The GC content of the type genome is 49.83 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Fatifosa oppugitoga sp. nov.

Candidatus Fatifosa oppugitoga (NL. fem. n. *oppugitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1212 sp002308595*. The type genome for the species is the GenBank assembly GCA_002308595.1. The GC content of the type genome is 51.29 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Fatifula inculago sp. nov.

Candidatus Fatifula inculago (NL. fem. n. *inculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZOE01 sp012797915*. The type genome for the species is the GenBank assembly GCA_012797915.1. The GC content of the type genome is 59.08 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Fatifula gen. nov.

Candidatus Fatifula (NL. fem. n. *Fatifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZOE01*. The type species for the genus is *Candidatus* Fatifula inculago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZOE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifulaceae.

Description of *Candidatus* Fatifulaceae fam. nov.

Candidatus Fatifulaceae (NL. fem. n. *Fatifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZOE01.* The type genus for the taxon is *Candidatus* Fatifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GN15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solacidales.

Description of *Candidatus* Fatilaria irregifica sp. nov.

Candidatus Fatilaria irregifica (NL. fem. n. *irregifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-47 sp002452555*. The type genome for the species is the GenBank assembly GCA_002452555.1. The GC content of the type genome is 42.09 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Fatilaria gen. nov.

Candidatus Fatilaria (NL. fem. n. *Fatilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *46-47*. The type species for the genus is *Candidatus* Fatilaria irregifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *46-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilariaceae.

Description of *Candidatus* Fatilariaceae fam. nov.

Candidatus Fatilariaceae (NL. fem. n. *Fatilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *46-47*. The type genus for the taxon is *Candidatus* Fatilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *AB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tomogidales.

Description of *Candidatus* Fatilaria obtesilenta sp. nov.

Candidatus Fatilaria obtesilenta (NL. fem. n. *obtesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-47 sp003644575*. The type genome for the species is the GenBank assembly GCA_003644575.1. The GC content of the type genome is 45.55 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Fatilaria visifatio sp. nov.

Candidatus Fatilaria visifatio (NL. fem. n. *visifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-47 sp001509335*. The type genome for the species is the GenBank assembly GCA_001509335.1. The GC content of the type genome is 45.9 % and the genome length is 2.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample SB2".

Description of *Candidatus* Fatilella lacinastra sp. nov.

Candidatus Fatilella lacinastra (NL. fem. n. *lacinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9655 sp013815465*. The type genome for the species is the GenBank assembly GCA_013815465.1. The GC content of the type genome is 42.31 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Fatilella gen. nov.

Candidatus Fatilella (NL. fem. n. *Fatilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9655*. The type species for the genus is *Candidatus* Fatilella lacinastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9655*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilellaceae.

Description of *Candidatus* Fatilellaceae fam. nov.

Candidatus Fatilellaceae (NL. fem. n. *Fatilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9655.* The type genus for the taxon is *Candidatus* Fatilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9655*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fatilellales.

Description of *Candidatus* Fatilellales ord. nov.

Candidatus Fatilellales (NL. fem. n. *Fatilellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9655.* The type genus for the taxon is *Candidatus* Fatilella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Fatilella necopetta sp. nov.

Candidatus Fatilella necopetta (NL. fem. n. *necopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9655 sp013287665*. The type genome for the species is the GenBank assembly GCA_013287665.1. The GC content of the type genome is 43.47 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Fatilella recumedo sp. nov.

Candidatus Fatilella recumedo (NL. fem. n. *recumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9655 sp001767835*. The type genome for the species is the GenBank assembly GCA_001768775.1. The GC content of the type genome is 42.28 % and the genome length is 1.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Fatilella subabitio sp. nov.

Candidatus Fatilella subabitio (NL. fem. n. *subabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9655 sp001897795*. The type genome for the species is the GenBank assembly GCA_001897795.1. The GC content of the type genome is 40.58 % and the genome length is 2.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Fatilia expenilenta sp. nov.

Candidatus Fatilia expenilenta (NL. fem. n. *expenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin16 sp002238425*. The type genome for the species is the GenBank assembly GCA_002238425.1. The GC content of the type genome is 65.63 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Fatilia gen. nov.

Candidatus Fatilia (NL. fem. n. *Fatilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin16*. The type species for the genus is *Candidatus* Fatilia expenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2963*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nimirellaceae.

Description of *Candidatus* Fatilia saxififorma sp. nov.

Candidatus Fatilia saxififorma (NL. fem. n. *saxififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin16 sp009838965*. The type genome for the species is the GenBank assembly GCA_009838965.1. The GC content of the type genome is 65.94 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Fatilida bigarifica sp. nov.

Candidatus Fatilida bigarifica (NL. fem. n. *bigarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-28 sp003554105*. The type genome for the species is the GenBank assembly GCA_007122415.1. The GC content of the type genome is 41.99 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Fatilida gen. nov.

Candidatus Fatilida (NL. fem. n. *Fatilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-28*. The type species for the genus is *Candidatus* Fatilida bigarifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T1SED10-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilidaceae.

Description of *Candidatus* Fatilidaceae fam. nov.

Candidatus Fatilidaceae (NL. fem. n. *Fatilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1SED10-28.* The type genus for the taxon is *Candidatus* Fatilida .

According to GTDB R06-RS202, this family belongs to the order *Peptostreptococcales*.

Description of *Candidatus* Fatilosa bimotisca sp. nov.

Candidatus Fatilosa bimotisca (NL. fem. n. *bimotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABDMD01 sp014075255*. The type genome for the species is the GenBank assembly GCA_014075255.1. The GC content of the type genome is 39.55 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Fatilosa gen. nov.

Candidatus Fatilosa (NL. fem. n. *Fatilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDMD01*. The type species for the genus is *Candidatus* Fatilosa bimotisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paraciaceae.

Description of *Candidatus* Fatilosa fumififica sp. nov.

Candidatus Fatilosa fumififica (NL. fem. n. *fumififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDMD01 sp013001685*. The type genome for the species is the GenBank assembly GCA_013001685.1. The GC content of the type genome is 38.78 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Fatilula alsulitoga sp. nov.

Candidatus Fatilula alsulitoga (NL. fem. n. *alsulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITNO01 sp903822375*. The type genome for the species is the GenBank assembly GCA_903822375.1. The GC content of the type genome is 61.5 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Fatilula gen. nov.

Candidatus Fatilula (NL. fem. n. *Fatilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITNO01*. The type species for the genus is *Candidatus* Fatilula alsulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Fatilulaceae fam. nov.

Candidatus Fatilulaceae (NL. fem. n. *Fatilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAITNO01.* The type genus for the taxon is *Candidatus* Fatilula .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Fatilula arillax sp. nov.

Candidatus Fatilula arillax (NL. fem. n. *arillax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITNO01 sp903893795*. The type genome for the species is the GenBank assembly GCA_903893795.1. The GC content of the type genome is 61.48 % and the genome length is 7.02 Mbp.

Description of *Candidatus* Favilana bimetisca sp. nov.

Candidatus Favilana bimetisca (NL. fem. n. *bimetisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9455 sp002313245*. The type genome for the species is the GenBank assembly GCA_003451055.1. The GC content of the type genome is 57.72 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Favilana gen. nov.

Candidatus Favilana (NL. fem. n. *Favilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9455*. The type species for the genus is *Candidatus* Favilana bimetisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Favilaria adpagessa sp. nov.

Candidatus Favilaria adpagessa (NL. fem. n. *adpagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-20 sp009693345*. The type genome for the species is the GenBank assembly GCA_009693345.1. The GC content of the type genome is 64.77 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Favilaria gen. nov.

Candidatus Favilaria (NL. fem. n. *Favilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-66-20*. The type species for the genus is *Candidatus* Favilaria adpagessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Favilaria dicimilenta sp. nov.

Candidatus Favilaria dicimilenta (NL. fem. n. *dicimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-20 sp009693335*. The type genome for the species is the GenBank assembly GCA_009693335.1. The GC content of the type genome is 63.01 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Favilaria immobitio sp. nov.

Candidatus Favilaria immobitio (NL. fem. n. *immobitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-20 sp005240145*. The type genome for the species is the GenBank assembly GCA_005240145.1. The GC content of the type genome is 65.41 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Favilaria inpuritica sp. nov.

Candidatus Favilaria inpuritica (NL. fem. n. *inpuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-20 sp001770285*. The type genome for the species is the GenBank assembly GCA_001770285.1. The GC content of the type genome is 66.31 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Favilaria saburicula sp. nov.

Candidatus Favilaria saburicula (NL. fem. n. *saburicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-20 sp005777205*. The type genome for the species is the GenBank assembly GCA_005777205.1. The GC content of the type genome is 67.09 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Favilella ancepugo sp. nov.

Candidatus Favilella ancepugo (NL. fem. n. *ancepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-11 sp001798105*. The type genome for the species is the GenBank assembly GCA_001798105.1. The GC content of the type genome is 40.2 % and the genome length is 1.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Favilella gen. nov.

Candidatus Favilella (NL. fem. n. *Favilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-40-11*. The type species for the genus is *Candidatus* Favilella ancepugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favilellaceae.

Description of *Candidatus* Favilellaceae fam. nov.

Candidatus Favilellaceae (NL. fem. n. *Favilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-40-11.* The type genus for the taxon is *Candidatus* Favilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Favilellales.

Description of *Candidatus* Favilellales ord. nov.

Candidatus Favilellales (NL. fem. n. *Favilellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-40-11.* The type genus for the taxon is *Candidatus* Favilella .

According to the original version of GTDB R06-RS202, this family belongs to the class *O2-12-FULL-43-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colepidae.

Description of *Candidatus* Favilia apseniforma sp. nov.

Candidatus Favilia apseniforma (NL. fem. n. *apseniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp903912585*. The type genome for the species is the GenBank assembly GCA_903912585.1. The GC content of the type genome is 70.3 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Favilia gen. nov.

Candidatus Favilia (NL. fem. n. *Favilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXSE01*. The type species for the genus is *Candidatus* Favilia apseniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA2241. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Favilia depecitica sp. nov.

Candidatus Favilia depecitica (NL. fem. n. *depecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp012514235*. The type genome for the species is the GenBank assembly GCA_012514235.1. The GC content of the type genome is 70.6 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Favilia omnifigena sp. nov.

Candidatus Favilia omnifigena (NL. fem. n. *omnifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp903927755*. The type genome for the species is the GenBank assembly GCA_903927755.1. The GC content of the type genome is 69.68 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Favilia secunicella sp. nov.

Candidatus Favilia secunicella (NL. fem. n. *secunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp903921965*. The type genome for the species is the GenBank assembly GCA_903921965.1. The GC content of the type genome is 71.88 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Favilia sugilimonas sp. nov.

Candidatus Favilia sugilimonas (NL. fem. n. *sugilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp012719015*. The type genome for the species is the GenBank assembly GCA_012719015.1. The GC content of the type genome is 70.91 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Favilia vigenifica sp. nov.

Candidatus Favilia vigenifica (NL. fem. n. *vigenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSE01 sp903862845*. The type genome for the species is the GenBank assembly GCA_903928885.1. The GC content of the type genome is 68.93 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Favilida agratentia sp. nov.

Candidatus Favilida agratentia (NL. fem. n. *agratentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5542 sp002426825*. The type genome for the species is the GenBank assembly GCA_002426825.1. The GC content of the type genome is 41.57 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Favilida gen. nov.

Candidatus Favilida (NL. fem. n. *Favilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5542*. The type species for the genus is *Candidatus* Favilida agratentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5542*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favilidaceae.

Description of *Candidatus* Favilidaceae fam. nov.

Candidatus Favilidaceae (NL. fem. n. *Favilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5542.* The type genus for the taxon is *Candidatus* Favilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7879*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gabinosales.

Description of *Candidatus* Favilosa adhinivita sp. nov.

Candidatus Favilosa adhinivita (NL. fem. n. *adhinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp009773165*. The type genome for the species is the GenBank assembly GCA_009773165.1. The GC content of the type genome is 39.33 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Favilosa gen. nov.

Candidatus Favilosa (NL. fem. n. *Favilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6192*. The type species for the genus is *Candidatus* Favilosa adhinivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Favilosa adtilitas sp. nov.

Candidatus Favilosa adtilitas (NL. fem. n. *adtilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp903891085*. The type genome for the species is the GenBank assembly GCA_903891085.1. The GC content of the type genome is 39.86 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Favilosa licenifica sp. nov.

Candidatus Favilosa licenifica (NL. fem. n. *licenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp903957365*. The type genome for the species is the GenBank assembly GCA_903957365.1. The GC content of the type genome is 38.56 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Favilosa musuligena sp. nov.

Candidatus Favilosa musuligena (NL. fem. n. *musuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp002422725*. The type genome for the species is the GenBank assembly GCA_002422725.1. The GC content of the type genome is 42.4 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Favilosa peripitica sp. nov.

Candidatus Favilosa peripitica (NL. fem. n. *peripitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp002421995*. The type genome for the species is the GenBank assembly GCA_002421995.1. The GC content of the type genome is 43.82 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Favilosa utpotiforma sp. nov.

Candidatus Favilosa utpotiforma (NL. fem. n. *utpotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp002842755*. The type genome for the species is the GenBank assembly GCA_002842755.1. The GC content of the type genome is 37.95 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Favilosa velifimonia sp. nov.

Candidatus Favilosa velifimonia (NL. fem. n. *velifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6192 sp013141455*. The type genome for the species is the GenBank assembly GCA_013141455.1. The GC content of the type genome is 39.74 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Favilula canacatio sp. nov.

Candidatus Favilula canacatio (NL. fem. n. *canacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp011391215*. The type genome for the species is the GenBank assembly GCA_011391215.1. The GC content of the type genome is 60.21 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Favilula gen. nov.

Candidatus Favilula (NL. fem. n. *Favilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2250*. The type species for the genus is *Candidatus* Favilula canacatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Favilula cicarimonas sp. nov.

Candidatus Favilula cicarimonas (NL. fem. n. *cicarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp903930805*. The type genome for the species is the GenBank assembly GCA_903930805.1. The GC content of the type genome is 58.87 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Favilula curabitas sp. nov.

Candidatus Favilula curabitas (NL. fem. n. *curabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp011330945*. The type genome for the species is the GenBank assembly GCA_011330945.1. The GC content of the type genome is 65.17 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Favilula dececitoga sp. nov.

Candidatus Favilula dececitoga (NL. fem. n. *dececitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp004323595*. The type genome for the species is the

GenBank assembly RS_GCF_004323595.1. The GC content of the type genome is 63.59 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Favilula indevitura sp. nov.

Candidatus Favilula indevitura (NL. fem. n. *indevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp013426785*. The type genome for the species is the GenBank assembly GCA_013426785.1. The GC content of the type genome is 60.8 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Favilula luticastra sp. nov.

Candidatus Favilula luticastra (NL. fem. n. *luticastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp903950295*. The type genome for the species is the GenBank assembly GCA_903950295.1. The GC content of the type genome is 60.36 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Favilula malogicula sp. nov.

Candidatus Favilula malogicula (NL. fem. n. *malogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp003966565*. The type genome for the species is the GenBank assembly RS_GCF_003966565.1. The GC content of the type genome is 62.44 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Favilula pavimetta sp. nov.

Candidatus Favilula pavimetta (NL. fem. n. *pavimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp002347405*. The type genome for the species is the GenBank assembly GCA_002347405.1. The GC content of the type genome is 61.77 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Favilula semipiforma sp. nov.

Candidatus Favilula semipiforma (NL. fem. n. *semipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp002347285*. The type genome for the species is the GenBank assembly GCA_002347285.1. The GC content of the type genome is 66.93 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Favilula turicicula sp. nov.

Candidatus Favilula turicicula (NL. fem. n. *turicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2250 sp013791905*. The type genome for the species is the GenBank assembly GCA_013791905.1. The GC content of the type genome is 60.76 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Favonana volunessa sp. nov.

Candidatus Favonana volunessa (NL. fem. n. *volunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6929 sp002448815*. The type genome for the species is the GenBank assembly GCA_003525465.1. The GC content of the type genome is 47.67 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Favonana gen. nov.

Candidatus Favonana (NL. fem. n. *Favonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6929*. The type species for the genus is *Candidatus* Favonana volunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Favonaria decunatica sp. nov.

Candidatus Favonaria decunatica (NL. fem. n. *decunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGE01 sp013153575*. The type genome for the species is the GenBank assembly GCA_013153575.1. The GC content of the type genome is 29.11 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Favonaria gen. nov.

Candidatus Favonaria (NL. fem. n. *Favonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGE01*. The type species for the genus is *Candidatus* Favonaria decunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonariaceae.

Description of *Candidatus* Favonariaceae fam. nov.

Candidatus Favonariaceae (NL. fem. n. *Favonariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGE01.* The type genus for the taxon is *Candidatus* Favonaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Favonaria inremitia sp. nov.

Candidatus Favonaria inremitia (NL. fem. n. *inremitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGE01 sp013153865*. The type genome for the species is the GenBank assembly GCA_013153865.1. The GC content of the type genome is 35.86 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Favonaria monocibra sp. nov.

Candidatus Favonaria monocibra (NL. fem. n. *monocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAADGE01 sp013152535*. The type genome for the species is the GenBank assembly GCA_013152535.1. The GC content of the type genome is 31.86 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Favonella bicubifica sp. nov.

Candidatus Favonella bicubifica (NL. fem. n. *bicubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10066 sp003448535*. The type genome for the species is the GenBank assembly GCA_011522795.1. The GC content of the type genome is 41.19 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Favonella gen. nov.

Candidatus Favonella (NL. fem. n. *Favonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10066*. The type species for the genus is *Candidatus* Favonella bicubifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Favonellaceae fam. nov.

Candidatus Favonellaceae (NL. fem. n. *Favonellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10066.* The type genus for the taxon is *Candidatus* Favonella .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Favonella minurastra sp. nov.

Candidatus Favonella minurastra (NL. fem. n. *minurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10066 sp014239715*. The type genome for the species is the GenBank assembly GCA_014239715.1. The GC content of the type genome is 41.65 %

and the genome length is 2.25 Mbp.

Description of *Candidatus* Favonida nutabisca sp. nov.

Candidatus Favonida nutabisca (NL. fem. n. *nutabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-40-16 sp002791475*. The type genome for the species is the GenBank assembly GCA_002787835.1. The GC content of the type genome is 39.77 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Favonida gen. nov.

Candidatus Favonida (NL. fem. n. *Favonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-40-16*. The type species for the genus is *Candidatus* Favonida nutabisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Favonosa denavitrix sp. nov.

Candidatus Favonosa denavitrix (NL. fem. n. *denavitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AU392 sp003443635*. The type genome for the species is the GenBank assembly RS_GCF_003443635.1. The GC content of the type genome is 30.66 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Favonosa gen. nov.

Candidatus Favonosa (NL. fem. n. *Favonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AU392*. The type species for the genus is *Candidatus* Favonosa denavitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Favonula apsegitio sp. nov.

Candidatus Favonula apsegitio (NL. fem. n. *apsegitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp003164715*. The type genome for the species is the GenBank assembly GCA_003164715.1. The GC content of the type genome is 66.99 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Favonula gen. nov.

Candidatus Favonula (NL. fem. n. *Favonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1447*. The type species for the genus is *Candidatus* Favonula apsegitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Favonula bicalibra sp. nov.

Candidatus Favonula bicalibra (NL. fem. n. *bicalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp003168315*. The type genome for the species is the GenBank assembly GCA_003168315.1. The GC content of the type genome is 66.69 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Favonula dupunitrix sp. nov.

Candidatus Favonula dupunitrix (NL. fem. n. *dupunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp003140665*. The type genome for the species is the GenBank assembly GCA_003133585.1. The GC content of the type genome is 66.47 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Favonula nidifedo sp. nov.

Candidatus Favonula nidifedo (NL. fem. n. *nidifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp903919205*. The type genome for the species is the GenBank assembly GCA_903896945.1. The GC content of the type genome is 68.83 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Favonula senipastra sp. nov.

Candidatus Favonula senipastra (NL. fem. n. *senipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp903890485*. The type genome for the species is the GenBank assembly GCA_903825185.1. The GC content of the type genome is 64.74 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Favonula vavasibra sp. nov.

Candidatus Favonula vavasibra (NL. fem. n. *vavasibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp003151515*. The type genome for the species is the GenBank assembly GCA_003151515.1. The GC content of the type genome is 67.03 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Favonula volunax sp. nov.

Candidatus Favonula volunax (NL. fem. n. *volunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp903887455*. The type genome for the species is the GenBank assembly GCA_903887455.1. The GC content of the type genome is 66.27 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Favonula volunibula sp. nov.

Candidatus Favonula volunibula (NL. fem. n. *volunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1447 sp003151495*. The type genome for the species is the GenBank assembly GCA_003151495.1. The GC content of the type genome is 66.51 %

and the genome length is 4.12 Mbp.

Description of *Candidatus* Feculana saburitudo sp. nov.

Candidatus Feculana saburitudo (NL. fem. n. *saburitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002773005 sp002771215*. The type genome for the species is the GenBank assembly GCA_002771215.1. The GC content of the type genome is 39.89 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Feculana gen. nov.

Candidatus Feculana (NL. fem. n. *Feculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002773005*. The type species for the genus is *Candidatus* Feculana saburitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002773005*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feculanaceae.

Description of *Candidatus* Feculanaceae fam. nov.

Candidatus Feculanaceae (NL. fem. n. *Feculanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002773005.* The type genus for the taxon is *Candidatus* Feculana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12157_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumiales.

Description of *Candidatus* Fecularia bipenitica sp. nov.

Candidatus Fecularia bipenitica (NL. fem. n. *bipenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVVG01 sp903909295*. The type genome for the species is the GenBank assembly GCA_903866725.1. The GC content of the type genome is 51.32 %

and the genome length is 1.43 Mbp.

Description of *Candidatus* Fecularia gen. nov.

Candidatus Fecularia (NL. fem. n. *Fecularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVVG01*. The type species for the genus is *Candidatus* Fecularia bipenitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Feculella pavicimonas sp. nov.

Candidatus Feculella pavicimonas (NL. fem. n. *pavicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWFE01 sp002071445*. The type genome for the species is the GenBank assembly GCA_012516865.1. The GC content of the type genome is 44.08 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Feculella gen. nov.

Candidatus Feculella (NL. fem. n. *Feculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWFE01*. The type species for the genus is *Candidatus* Feculella pavicimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Feculida democisca sp. nov.

Candidatus Feculida democisca (NL. fem. n. *democisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B5-G15 sp003645825*. The type genome for the species is the

GenBank assembly GCA_003645825.1. The GC content of the type genome is 39.93 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Feculida gen. nov.

Candidatus Feculida (NL. fem. n. *Feculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B5-G15*. The type species for the genus is *Candidatus* Feculida democisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B5-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feculidaceae.

Description of *Candidatus* Feculidaceae fam. nov.

Candidatus Feculidaceae (NL. fem. n. *Feculidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B5-G15.* The type genus for the taxon is *Candidatus* Feculida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semunellales.

Description of *Candidatus* Feculosa deforifica sp. nov.

Candidatus Feculosa deforifica (NL. fem. n. *deforifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA845 sp002711995*. The type genome for the species is the GenBank assembly GCA_002295955.1. The GC content of the type genome is 40.15 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Feculosa gen. nov.

Candidatus Feculosa (NL. fem. n. *Feculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA845*. The type species for the genus is *Candidatus* Feculosa deforifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Feculosa dicimigena sp. nov.

Candidatus Feculosa dicimigena (NL. fem. n. *dicimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA845 sp002718735*. The type genome for the species is the GenBank assembly GCA_002716305.1. The GC content of the type genome is 38.84 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Feculula pedififorma sp. nov.

Candidatus Feculula pedififorma (NL. fem. n. *pedififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1319 sp002306985*. The type genome for the species is the GenBank assembly GCA_002306985.1. The GC content of the type genome is 57.59 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Feculula gen. nov.

Candidatus Feculula (NL. fem. n. *Feculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1319*. The type species for the genus is *Candidatus* Feculula pedififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1319*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecululaceae.

Description of *Candidatus* Fecululaceae fam. nov.

Candidatus Fecululaceae (NL. fem. n. *Fecululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1319.* The type genus for the taxon is *Candidatus* Feculula .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Fecunana bucelitudo sp. nov.

Candidatus Fecunana bucelitudo (NL. fem. n. *bucelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINNR01 sp903851235*. The type genome for the species is the GenBank assembly GCA_903851235.1. The GC content of the type genome is 41.9 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Fecunana gen. nov.

Candidatus Fecunana (NL. fem. n. *Fecunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINNR01*. The type species for the genus is *Candidatus* Fecunana bucelitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAINNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunanaceae.

Description of *Candidatus* Fecunanaceae fam. nov.

Candidatus Fecunanaceae (NL. fem. n. *Fecunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINNR01.* The type genus for the taxon is *Candidatus* Fecunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYA2-FULL-43-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denavulales.

Description of *Candidatus* Fecunaria malogax sp. nov.

Candidatus Fecunaria malogax (NL. fem. n. *malogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7797 sp002480645*. The type genome for the species is the GenBank assembly GCA_002453215.1. The GC content of the type genome is 42.93 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Fecunaria gen. nov.

Candidatus Fecunaria (NL. fem. n. *Fecunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7797*. The type species for the genus is *Candidatus* Fecunaria malogax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fecunella conigago sp. nov.

Candidatus Fecunella conigago (NL. fem. n. *conigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6898 sp003252075*. The type genome for the species is the GenBank assembly GCA_003252075.1. The GC content of the type genome is 52.15 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Fecunella gen. nov.

Candidatus Fecunella (NL. fem. n. *Fecunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6898*. The type species for the genus is *Candidatus* Fecunella conigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6898*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunellaceae.

Description of *Candidatus* Fecunellaceae fam. nov.

Candidatus Fecunellaceae (NL. fem. n. *Fecunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6898.* The type genus for the taxon is *Candidatus* Fecunella .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Fecunella direpitio sp. nov.

Candidatus Fecunella direpitio (NL. fem. n. *direpitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6898 sp002451165*. The type genome for the species is the GenBank assembly GCA_002451165.1. The GC content of the type genome is 51.5 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Fecunella telegifica sp. nov.

Candidatus Fecunella telegifica (NL. fem. n. *telegifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6898 sp012026685*. The type genome for the species is the GenBank assembly GCA_012026685.1. The GC content of the type genome is 53.77 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Fecunella turilatio sp. nov.

Candidatus Fecunella turilatio (NL. fem. n. *turilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6898 sp002448975*. The type genome for the species is the GenBank assembly GCA_002448975.1. The GC content of the type genome is 52.37 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Fecunia amatricella sp. nov.

Candidatus Fecunia amatricella (NL. fem. n. *amatricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-68-16 sp003133645*. The type genome for the species is the GenBank assembly GCA_003133645.1. The GC content of the type genome is 69.45 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Fecunia gen. nov.

Candidatus Fecunia (NL. fem. n. *Fecunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-68-16*. The type species for the genus is *Candidatus* Fecunia amatricella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fecunia deforiforma sp. nov.

Candidatus Fecunia deforiforma (NL. fem. n. *deforiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-68-16 sp001766905*. The type genome for the species is the GenBank assembly GCA_001766905.1. The GC content of the type genome is 67.63 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Fecunia monacugo sp. nov.

Candidatus Fecunia monacugo (NL. fem. n. *monacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-68-16 sp004298115*. The type genome for the species is the GenBank assembly GCA_004298115.1. The GC content of the type genome is 71.18 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Fecunia nubifastra sp. nov.

Candidatus Fecunia nubifastra (NL. fem. n. *nubifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-68-16 sp002279285*. The type genome for the species is the GenBank assembly GCA_002279205.1. The GC content of the type genome is 70.0 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Fecunia vinacibra sp. nov.

Candidatus Fecunia vinacibra (NL. fem. n. *vinacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-68-16 sp003158745*. The type genome for the species is the GenBank assembly GCA_003154505.1. The GC content of the type genome is 66.89 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Fecunida monumigena sp. nov.

Candidatus Fecunida monumigena (NL. fem. n. *monumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKPM01 sp903829325*. The type genome for the species is the GenBank assembly GCA_903829325.1. The GC content of the type genome is 55.14 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Fecunida gen. nov.

Candidatus Fecunida (NL. fem. n. *Fecunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKPM01*. The type species for the genus is *Candidatus* Fecunida monumigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fecunosa tegimicella sp. nov.

Candidatus Fecunosa tegimicella (NL. fem. n. *tegimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHBQ01 sp003243865*. The type genome for the species is the GenBank assembly GCA_003243865.1. The GC content of the type genome is 60.54 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Fecunosa gen. nov.

Candidatus Fecunosa (NL. fem. n. *Fecunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHBQ01*. The type species for the genus is *Candidatus* Fecunosa tegimicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family

QHBQ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunosaceae.

Description of *Candidatus* Fecunosaceae fam. nov.

Candidatus Fecunosaceae (NL. fem. n. *Fecunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHBQ01.* The type genus for the taxon is *Candidatus* Fecunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *54-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacidales.

Description of *Candidatus* Fecunula supelitrix sp. nov.

Candidatus Fecunula supelitrix (NL. fem. n. *supelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-5 sp003598085*. The type genome for the species is the GenBank assembly GCA_003598085.1. The GC content of the type genome is 54.76 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Fecunula gen. nov.

Candidatus Fecunula (NL. fem. n. *Fecunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-5*. The type species for the genus is *Candidatus* Fecunula supelitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunulaceae.

Description of *Candidatus* Fecunulaceae fam. nov.

Candidatus Fecunulaceae (NL. fem. n. *Fecunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-5.* The type genus for the taxon is *Candidatus* Fecunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fecunulales.

Description of *Candidatus* Fecunulales ord. nov.

Candidatus Fecunulales (NL. fem. n. *Fecunulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-5.* The type genus for the taxon is *Candidatus* Fecunula .

According to the original version of GTDB R06-RS202, this family belongs to the class *SURF-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fecunulae.

Description of *Candidatus* Fecunulae class. nov.

Candidatus Fecunulae (NL. fem. n. *c__Fecunulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-5.* The type genus for the taxon is *Candidatus* Fecunula .

According to GTDB R06-RS202, this class belongs to the phylum *Abyssubacteria*.

Description of *Candidatus* Feditana amnenifica sp. nov.

Candidatus Feditana amnenifica (NL. fem. n. *amnenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WOZS01 sp011620135*. The type genome for the species is the GenBank assembly GCA_011620135.1. The GC content of the type genome is 62.11 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Feditana gen. nov.

Candidatus Feditana (NL. fem. n. *Feditana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WOZS01*. The type species for the genus is *Candidatus* Feditana amnenifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

WOZS01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditanaceae.

Description of *Candidatus* Feditanaceae fam. nov.

Candidatus Feditanaceae (NL. fem. n. *Feditanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WOZS01*. The type genus for the taxon is *Candidatus* Feditana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2770*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detenellales.

Description of *Candidatus* Feditaria laxitax sp. nov.

Candidatus Feditaria laxitax (NL. fem. n. *laxitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPUP01 sp903868285*. The type genome for the species is the GenBank assembly GCA_903921815.1. The GC content of the type genome is 61.66 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Feditaria gen. nov.

Candidatus Feditaria (NL. fem. n. *Feditaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPUP01*. The type species for the genus is *Candidatus* Feditaria laxitax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Feditella rinocivita sp. nov.

Candidatus Feditella rinocivita (NL. fem. n. *rinocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIQBE01 sp903870015*. The type genome for the species is the GenBank assembly GCA_903870015.1. The GC content of the type genome is 43.05 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Feditella gen. nov.

Candidatus Feditella (NL. fem. n. *Feditella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQBE01*. The type species for the genus is *Candidatus* Feditella rinocivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQBE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditellaceae.

Description of *Candidatus* Feditellaceae fam. nov.

Candidatus Feditellaceae (NL. fem. n. *Feditellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQBE01.* The type genus for the taxon is *Candidatus* Feditella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIQBE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Feditellales.

Description of *Candidatus* Feditellales ord. nov.

Candidatus Feditellales (NL. fem. n. *Feditellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQBE01.* The type genus for the taxon is *Candidatus* Feditella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Feditida defesimonia sp. nov.

Candidatus Feditida defesimonia (NL. fem. n. *defesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG12999 sp902784685*. The type genome for the species is the GenBank assembly GCA_902784685.1. The GC content of the type genome is 41.46 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Feditida gen. nov.

Candidatus Feditida (NL. fem. n. *Feditida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12999*. The type species for the genus is *Candidatus* Feditida defesimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG12999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditidaceae.

Description of *Candidatus* Feditidaceae fam. nov.

Candidatus Feditidaceae (NL. fem. n. *Feditidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG12999.* The type genus for the taxon is *Candidatus* Feditida .

According to the original version of GTDB R06-RS202, this family belongs to the order *RUG12999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Feditidales.

Description of *Candidatus* Feditidales ord. nov.

Candidatus Feditidales (NL. fem. n. *Feditidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG12999.* The type genus for the taxon is *Candidatus* Feditida .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Feditida invecivita sp. nov.

Candidatus Feditida invecivita (NL. fem. n. *invecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12999 sp902783995*. The type genome for the species is the

GenBank assembly GCA_902783995.1. The GC content of the type genome is 41.05 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Feditida monumastra sp. nov.

Candidatus Feditida monumastra (NL. fem. n. *monumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12999 sp902784805*. The type genome for the species is the GenBank assembly GCA_902784805.1. The GC content of the type genome is 40.9 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Feditosa adlociforma sp. nov.

Candidatus Feditosa adlociforma (NL. fem. n. *adlociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2466 sp900299195*. The type genome for the species is the GenBank assembly GCA_900299195.1. The GC content of the type genome is 42.57 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Feditosa gen. nov.

Candidatus Feditosa (NL. fem. n. *Feditosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2466*. The type species for the genus is *Candidatus* Feditosa adlociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2466*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditosaceae.

Description of *Candidatus* Feditosaceae fam. nov.

Candidatus Feditosaceae (NL. fem. n. *Feditosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2466.* The type genus for the taxon is *Candidatus* Feditosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2466*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Feditosales.

Description of *Candidatus* Feditosales ord. nov.

Candidatus Feditosales (NL. fem. n. *Feditosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2466.* The type genus for the taxon is *Candidatus* Feditosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *FAC87*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Desurosae.

Description of *Candidatus* Feditosa adsesitia sp. nov.

Candidatus Feditosa adsesitia (NL. fem. n. *adsesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2466 sp013205415*. The type genome for the species is the GenBank assembly GCA_013205415.1. The GC content of the type genome is 41.44 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Feditosa casigivita sp. nov.

Candidatus Feditosa casigivita (NL. fem. n. *casigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2466 sp009692515*. The type genome for the species is the GenBank assembly GCA_009692515.1. The GC content of the type genome is 40.9 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Feditosa furibugo sp. nov.

Candidatus Feditosa furibugo (NL. fem. n. *furibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2466 sp002342225*. The type genome for the species is the GenBank assembly GCA_009926805.1. The GC content of the type genome is 42.47 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Feditosa obtenitia sp. nov.

Candidatus Feditosa obtenitia (NL. fem. n. *obtenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2466 sp005776395*. The type genome for the species is the GenBank assembly GCA_005776395.1. The GC content of the type genome is 40.76 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Feditula horomivita sp. nov.

Candidatus Feditula horomivita (NL. fem. n. *horomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-31 sp001304035*. The type genome for the species is the GenBank assembly GCA_001304035.1. The GC content of the type genome is 40.33 % and the genome length is 2.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Feditula gen. nov.

Candidatus Feditula (NL. fem. n. *Feditula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-31*. The type species for the genus is *Candidatus* Feditula horomivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditulaceae.

Description of *Candidatus* Feditulaceae fam. nov.

Candidatus Feditulaceae (NL. fem. n. *Feditulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-31.* The type genus for the taxon is *Candidatus* Feditula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Feditulales.

Description of *Candidatus* Feditulales ord. nov.

Candidatus Feditulales (NL. fem. n. *Feditulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-31.* The type genus for the taxon is *Candidatus* Feditula .

According to the original version of GTDB R06-RS202, this family belongs to the class *SM23-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Feditulae.

Description of *Candidatus* Feditulae class. nov.

Candidatus Feditulae (NL. fem. n. *c__Feditulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-31.* The type genus for the taxon is *Candidatus* Feditula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SM23-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Feditulota.

Description of *Candidatus* Feditulota phyl. nov.

Candidatus Feditulota (NL. fem. n. *Feditulota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-31.* The type genus for the taxon is *Candidatus* Feditula .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Fefelana anaplatica sp. nov.

Candidatus Fefelana anaplatica (NL. fem. n. *anaplatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A130 sp013214695*. The type genome for the species is the GenBank assembly GCA_013214695.1. The GC content of the type genome is 56.9 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Fefelana gen. nov.

Candidatus Fefelana (NL. fem. n. *Fefelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R2A130*. The type species for the genus is *Candidatus* Fefelana anaplatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fefelana bisulitura sp. nov.

Candidatus Fefelana bisulitura (NL. fem. n. *bisulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A130 sp000179775*. The type genome for the species is the GenBank assembly RS_GCF_000179775.1. The GC content of the type genome is 56.93 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Subsurface (10-m) water samples were collected in Niskinbottles at a station located 8 km west of the mouth of Yaquina Bay; Oregon".

Description of *Candidatus* Fefelana detositas sp. nov.

Candidatus Fefelana detositas (NL. fem. n. *detositas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A130 sp011087605*. The type genome for the species is the GenBank assembly GCA_011087605.1. The GC content of the type genome is 52.7 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Fefelana sacomitura sp. nov.

Candidatus Fefelana sacomitura (NL. fem. n. *sacomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A130 sp014238155*. The type genome for the species is the GenBank assembly GCA_014238155.1. The GC content of the type genome is 52.21 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Fefelana utricibula sp. nov.

Candidatus Fefelana utricibula (NL. fem. n. *utricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A130 sp003233475*. The type genome for the species is the GenBank assembly GCA_003233475.1. The GC content of the type genome is 50.04 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Fefelaria dimadisca sp. nov.

Candidatus Fefelaria dimadisca (NL. fem. n. *dimadisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMVM01 sp903844895*. The type genome for the species is the GenBank assembly GCA_903844895.1. The GC content of the type genome is 43.6 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Fefelaria gen. nov.

Candidatus Fefelaria (NL. fem. n. *Fefelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMVM01*. The type species for the genus is *Candidatus* Fefelaria dimadisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIMVM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fefelariaceae.

Description of *Candidatus* Fefelariaceae fam. nov.

Candidatus Fefelariaceae (NL. fem. n. *Fefelariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMVM01.* The type genus for the taxon is *Candidatus* Fefelaria .

According to GTDB R06-RS202, this family belongs to the order *Oligoflexales*.

Description of *Candidatus* Fefelella catecitia sp. nov.

Candidatus Fefelella catecitia (NL. fem. n. *catecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS680 sp900544525*. The type genome for the species is the GenBank assembly GCA_900544525.1. The GC content of the type genome is 34.67 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Fefelella gen. nov.

Candidatus Fefelella (NL. fem. n. *Fefelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS680*. The type species for the genus is *Candidatus* Fefelella catecitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fefelia colimax sp. nov.

Candidatus Fefelia colimax (NL. fem. n. *colimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMP01 sp003557485*. The type genome for the species is the GenBank assembly GCA_003557485.1. The GC content of the type genome is 44.05 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Fefelia gen. nov.

Candidatus Fefelia (NL. fem. n. *Fefelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWMP01*. The type species for the genus is *Candidatus* Fefelia colimax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWQF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapiaceae.

Description of *Candidatus* Fefelia detunibra sp. nov.

Candidatus Fefelia detunibra (NL. fem. n. *detunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMP01 sp003558145*. The type genome for the species is the GenBank assembly GCA_003565465.1. The GC content of the type genome is 44.08 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Fefelida detotousia sp. nov.

Candidatus Fefelida detotousia (NL. fem. n. *detotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CS4-C045 sp011772275*. The type genome for the species is the GenBank assembly GCA_011773715.1. The GC content of the type genome is 61.41 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Fefelida gen. nov.

Candidatus Fefelida (NL. fem. n. *Fefelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CS4-C045*. The type species for the genus is *Candidatus* Fefelida detotousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7805*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficulariaceae.

Description of *Candidatus* Fefelosa dibucifica sp. nov.

Candidatus Fefelosa dibucifica (NL. fem. n. *dibucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPYM01 sp903869345*. The type genome for the species is the GenBank assembly GCA_903958145.1. The GC content of the type genome is 61.25 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Fefelosa gen. nov.

Candidatus Fefelosa (NL. fem. n. *Fefelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAIPYM01*. The type species for the genus is *Candidatus* Fefelosa dibucifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticidaceae.

Description of *Candidatus* Fefelula semibisca sp. nov.

Candidatus Fefelula semibisca (NL. fem. n. *semibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6729 sp002454015*. The type genome for the species is the GenBank assembly GCA_002454015.1. The GC content of the type genome is 60.72 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Fefelula gen. nov.

Candidatus Fefelula (NL. fem. n. *Fefelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6729*. The type species for the genus is *Candidatus* Fefelula semibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6729*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fefelulaceae.

Description of *Candidatus* Fefelulaceae fam. nov.

Candidatus Fefelulaceae (NL. fem. n. *Fefelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6729.* The type genus for the taxon is *Candidatus* Fefelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6729*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fefelulales.

Description of *Candidatus* Fefelulales ord. nov.

Candidatus Fefelulales (NL. fem. n. *Fefelulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6729.* The type genus for the taxon is *Candidatus* Fefelula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Feficana cacalibra sp. nov.

Candidatus Feficana cacalibra (NL. fem. n. *cacalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMH01 sp903900235*. The type genome for the species is the GenBank assembly GCA_903869705.1. The GC content of the type genome is 65.22 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Feficana gen. nov.

Candidatus Feficana (NL. fem. n. *Feficana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUMH01*. The type species for the genus is *Candidatus* Feficana cacalibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Feficana desepifica sp. nov.

Candidatus Feficana desepifica (NL. fem. n. *desepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMH01 sp009699875*. The type genome for the species is the GenBank assembly GCA_009700605.1. The GC content of the type genome is 55.07 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Feficana forabastra sp. nov.

Candidatus Feficana forabastra (NL. fem. n. *forabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMH01 sp903825895*. The type genome for the species is the GenBank assembly GCA_903824745.1. The GC content of the type genome is 56.21 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Feficana retunousia sp. nov.

Candidatus Feficana retunousia (NL. fem. n. *retunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMH01 sp903893955*. The type genome for the species is the GenBank assembly GCA_903902025.1. The GC content of the type genome is 65.99 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Feficaria obfenigena sp. nov.

Candidatus Feficaria obfenigena (NL. fem. n. *obfenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11386 sp003532715*. The type genome for the species is the GenBank assembly GCA_003532715.1. The GC content of the type genome is 61.56 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Feficaria gen. nov.

Candidatus Feficaria (NL. fem. n. *Feficaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11386*. The type species for the genus is *Candidatus* Feficaria obfenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficariaceae.

Description of *Candidatus* Feficariaceae fam. nov.

Candidatus Feficariaceae (NL. fem. n. *Feficariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA11386.* The type genus for the taxon is *Candidatus* Feficaria .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Feficella semiletta sp. nov.

Candidatus Feficella semiletta (NL. fem. n. *semiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5745 sp002435905*. The type genome for the species is the GenBank assembly GCA_003536815.1. The GC content of the type genome is 50.51 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Feficella gen. nov.

Candidatus Feficella (NL. fem. n. *Feficella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5745*. The type species for the genus is *Candidatus* Feficella semiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficellaceae.

Description of *Candidatus* Feficellaceae fam. nov.

Candidatus Feficellaceae (NL. fem. n. *Feficellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5745.* The type genus for the taxon is *Candidatus* Feficella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRI-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibellales.

Description of *Candidatus* Feficia pinifastra sp. nov.

Candidatus Feficia pinifastra (NL. fem. n. *pinifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *39-52-133 sp002278935*. The type genome for the species is the GenBank assembly GCA_002281365.1. The GC content of the type genome is 52.53 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Feficia gen. nov.

Candidatus Feficia (NL. fem. n. *Feficia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *39-52-133*. The type species for the genus is *Candidatus* Feficia pinifastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Feficida forabousia sp. nov.

Candidatus Feficida forabousia (NL. fem. n. *forabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8649 sp002708985*. The type genome for the species is the GenBank assembly GCA_002708985.1. The GC content of the type genome is 41.7 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Feficida gen. nov.

Candidatus Feficida (NL. fem. n. *Feficida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8649*. The type species for the genus is *Candidatus* Feficida forabousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficidaceae.

Description of *Candidatus* Feficidaceae fam. nov.

Candidatus Feficidaceae (NL. fem. n. *Feficidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8649*. The type genus for the taxon is *Candidatus* Feficida .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Feficida holisisca sp. nov.

Candidatus Feficida holisisca (NL. fem. n. *holisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8649 sp003447535*. The type genome for the species is the GenBank assembly GCA_003447535.1. The GC content of the type genome is 42.41 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Feficida rubecimonia sp. nov.

Candidatus Feficida rubecimonia (NL. fem. n. *rubecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8649 sp002862745*. The type genome for the species is the GenBank assembly GCA_003331825.1. The GC content of the type genome is 42.97 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Feficosa episcago sp. nov.

Candidatus Feficosa episcago (NL. fem. n. *episcago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7950 sp003535305*. The type genome for the species is the GenBank assembly GCA_003535305.1. The GC content of the type genome is 49.86 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Feficosa gen. nov.

Candidatus Feficosa (NL. fem. n. *Feficosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7950*. The type species for the genus is *Candidatus* Feficosa episcago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7950*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficosaceae.

Description of *Candidatus* Feficosaceae fam. nov.

Candidatus Feficosaceae (NL. fem. n. *Feficosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7950.* The type genus for the taxon is *Candidatus* Feficosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7950*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Feficosales.

Description of *Candidatus* Feficosales ord. nov.

Candidatus Feficosales (NL. fem. n. *Feficosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7950.* The type genus for the taxon is *Candidatus* Feficosa .

According to the GTDB R06-RS202, this order belongs to the class *Bipolaricaulia*.

Description of *Candidatus* Feficula desupitrix sp. nov.

Candidatus Feficula desupitrix (NL. fem. n. *desupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS692 sp900544545*. The type genome for the species is the GenBank assembly GCA_900544545.1. The GC content of the type genome is 48.29 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Feficula gen. nov.

Candidatus Feficula (NL. fem. n. *Feficula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS692*. The type species for the genus is *Candidatus* Feficula desupitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Femelana monimimonia sp. nov.

Candidatus Femelana monimimonia (NL. fem. n. *monimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-60-27 sp001873115*. The type genome for the species is the GenBank assembly GCA_002772305.1. The GC content of the type genome is 59.92 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Femelana gen. nov.

Candidatus Femelana (NL. fem. n. *Femelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-60-27*. The type species for the genus is *Candidatus* Femelana monimimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Femelaria lacinibula sp. nov.

Candidatus Femelaria lacinibula (NL. fem. n. *lacinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2766 sp002352645*. The type genome for the species is the GenBank assembly GCA_002352645.1. The GC content of the type genome is 54.07 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Femelaria gen. nov.

Candidatus Femelaria (NL. fem. n. *Femelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2766*. The type species for the genus is *Candidatus* Femelaria lacinibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2766*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Femelariaceae.

Description of *Candidatus* Femelariaceae fam. nov.

Candidatus Femelariaceae (NL. fem. n. *Femelariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2766.* The type genus for the taxon is *Candidatus* Femelaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2766*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Femelariales.

Description of *Candidatus* Femelariales ord. nov.

Candidatus Femelariales (NL. fem. n. *Femelariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2766.* The type genus for the taxon is *Candidatus* Femelaria .

According to the GTDB R06-RS202, this order belongs to the class *Acidimicrobiia*.

Description of *Candidatus* Femelella patibisca sp. nov.

Candidatus Femelella patibisca (NL. fem. n. *patibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIGHO2-12-38-15 sp001801745*. The type genome for the species is the GenBank assembly GCA_001802425.1. The GC content of the type genome is 38.26 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Femelella gen. nov.

Candidatus Femelella (NL. fem. n. *Femelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HIGHO2-12-38-15*. The type species for the genus is *Candidatus* Femelella patibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAISUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Piniganaceae.

Description of *Candidatus* Femelia cilotatica sp. nov.

Candidatus Femelia cilotatica (NL. fem. n. *cilotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-40 sp003599745*. The type genome for the species is the GenBank assembly GCA_003599745.1. The GC content of the type genome is 55.94 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Femelia gen. nov.

Candidatus Femelia (NL. fem. n. *Femelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-40*. The type species for the genus is *Candidatus* Femelia cilotatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-40*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Femeliaceae.

Description of *Candidatus* Femeliaceae fam. nov.

Candidatus Femeliaceae (NL. fem. n. *Femeliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-40.* The type genus for the taxon is *Candidatus* Femelia .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Femelida conabibula sp. nov.

Candidatus Femelida conabibula (NL. fem. n. *conabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G85 sp003331505*. The type genome for the species is the GenBank assembly GCA_902577165.1. The GC content of the type genome is 31.36 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Femelida gen. nov.

Candidatus Femelida (NL. fem. n. *Femelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G85*. The type species for the genus is *Candidatus* Femelida conabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Femelosa infesigena sp. nov.

Candidatus Femelosa infesigena (NL. fem. n. *infesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGC01 sp013815535*. The type genome for the species is the GenBank assembly GCA_013815535.1. The GC content of the type genome is 60.61 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Femelosa gen. nov.

Candidatus Femelosa (NL. fem. n. *Femelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDGC01*. The type species for the genus is *Candidatus* Femelosa infesigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDGC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Femelosaceae.

Description of *Candidatus* Femelosaceae fam. nov.

Candidatus Femelosaceae (NL. fem. n. *Femelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDGC01.* The type genus for the taxon is *Candidatus* Femelosa .

According to GTDB R06-RS202, this family belongs to the order *Ktedonobacterales*.

Description of *Candidatus* Femelula repuditoga sp. nov.

Candidatus Femelula repuditoga (NL. fem. n. *repuditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-39-44 sp002789815*. The type genome for the species is the GenBank assembly GCA_001872695.1. The GC content of the type genome is 39.33 % and the genome length is 0.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Femelula gen. nov.

Candidatus Femelula (NL. fem. n. *Femelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-39-44*. The type species for the genus is *Candidatus* Femelula repuditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-39-44*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Femelulaceae.

Description of *Candidatus* Femelulaceae fam. nov.

Candidatus Femelulaceae (NL. fem. n. *Femelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-39-44.* The type genus for the taxon is *Candidatus* Femelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fidenellales.

Description of *Candidatus* Fenollaria antirilenta sp. nov.

Candidatus Fenollaria antirilenta (NL. fem. n. *antirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fenollaria sp900539225*. The type genome for the species is the GenBank assembly GCA_900539225.1. The GC content of the type genome is 36.11 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Fenollaria inretastra sp. nov.

Candidatus Fenollaria inretastra (NL. fem. n. *inretastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fenollaria sp900539725*. The type genome for the species is the GenBank assembly GCA_900539725.1. The GC content of the type genome is 36.4 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Ferdinandcohnia sacomisca sp. nov.

Candidatus Ferdinandcohnia sacomisca (NL. fem. n. *sacomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferdinandcohnia sp003400205*. The type genome for the species is the GenBank assembly RS_GCF_003400205.1. The GC content of the type genome is 37.75 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Fermentimonas affanax sp. nov.

Candidatus Fermentimonas affanax (NL. fem. n. *affanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp012518155*. The type genome for the species is the GenBank assembly GCA_012518155.1. The GC content of the type genome is 48.41 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Fermentimonas indecilenta sp. nov.

Candidatus Fermentimonas indecilenta (NL. fem. n. *indecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp012839475*. The type genome for the species is the GenBank assembly GCA_012839475.1. The GC content of the type genome is 49.23 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Fermentimonas inretago sp. nov.

Candidatus Fermentimonas inretago (NL. fem. n. *inretago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp012513315*. The type genome for the species is the GenBank assembly GCA_012513315.1. The GC content of the type genome is 36.5 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Fermentimonas locupastra sp. nov.

Candidatus Fermentimonas locupastra (NL. fem. n. *locupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp002398875*. The type genome for the species is the GenBank assembly GCA_002424205.1. The GC content of the type genome is 37.67 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Fermentimonas ludifitica sp. nov.

Candidatus Fermentimonas ludifitica (NL. fem. n. *ludifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp012838585*. The type genome for the species is the GenBank assembly GCA_012838585.1. The GC content of the type genome is 50.44 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Fermentimonas mahelisca sp. nov.

Candidatus Fermentimonas mahelisca (NL. fem. n. *mahelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fermentimonas sp012841425*. The type genome for the species is the GenBank assembly GCA_012841425.1. The GC content of the type genome is 36.32 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Ferrimonas bovicatica sp. nov.

Candidatus Ferrimonas bovicatica (NL. fem. n. *bovicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrimonas sp005116665*. The type genome for the species is the GenBank assembly RS_GCF_005116665.1. The GC content of the type genome is 51.8

% and the genome length is 4.75 Mbp.

Description of *Candidatus* Ferrimonas pudibitia sp. nov.

Candidatus Ferrimonas pudibitia (NL. fem. n. *pudibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrimonas sp012295575*. The type genome for the species is the GenBank assembly RS_GCF_012295575.1. The GC content of the type genome is 49.35 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Ferrimonas visocugo sp. nov.

Candidatus Ferrimonas visocugo (NL. fem. n. *visocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrimonas sp005116715*. The type genome for the species is the GenBank assembly RS_GCF_005116715.1. The GC content of the type genome is 61.01 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Ferriphaselus admutastra sp. nov.

Candidatus Ferriphaselus admutastra (NL. fem. n. *admutastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferriphaselus sp000746095*. The type genome for the species is the GenBank assembly RS_GCF_000746095.1. The GC content of the type genome is 60.65 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Ferrovibrio depetivita sp. nov.

Candidatus Ferrovibrio depetivita (NL. fem. n. *depetivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrovibrio sp002796975*. The type genome for the species is the GenBank assembly GCA_002796975.1. The GC content of the type genome is 63.03 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Ferrovibrio entomedo sp. nov.

Candidatus Ferrovibrio entomedo (NL. fem. n. *entomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrovibrio sp002482765*. The type genome for the species is the GenBank assembly GCA_002482765.1. The GC content of the type genome is 62.47 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Ferrovum dilacatio sp. nov.

Candidatus Ferrovum dilacatio (NL. fem. n. *dilacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferrovum sp010435995*. The type genome for the species is the GenBank assembly GCA_010435995.1. The GC content of the type genome is 53.85 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Ferruginibacter ablacitio sp. nov.

Candidatus Ferruginibacter ablacitio (NL. fem. n. *ablacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp903871575*. The type genome for the species is the GenBank assembly GCA_903871575.1. The GC content of the type genome is 37.87 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Ferruginibacter acontimonia sp. nov.

Candidatus Ferruginibacter acontimonia (NL. fem. n. *acontimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp002336815*. The type genome for the species is the GenBank assembly GCA_002336815.1. The GC content of the type genome is 43.91 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Ferruginibacter acrimifica sp. nov.

Candidatus Ferruginibacter acrimifica (NL. fem. n. *acrimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp014377385*. The type genome for the species is the GenBank assembly GCA_014377385.1. The GC content of the type genome is 40.66 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Ferruginibacter anamnitrix sp. nov.

Candidatus Ferruginibacter anamnitrix (NL. fem. n. *anamnitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp903831575*. The type genome for the species is the GenBank assembly GCA_903831575.1. The GC content of the type genome is 34.36 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Ferruginibacter cocoditio sp. nov.

Candidatus Ferruginibacter cocoditio (NL. fem. n. *cocoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp013288745*. The type genome for the species is the GenBank assembly GCA_013288745.1. The GC content of the type genome is 36.83 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ferruginibacter conabugo sp. nov.

Candidatus Ferruginibacter conabugo (NL. fem. n. *conabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp013141435*. The type genome for the species is the GenBank assembly GCA_013141435.1. The GC content of the type genome is 32.0 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Ferruginibacter defesitio sp. nov.

Candidatus Ferruginibacter defesitio (NL. fem. n. *defesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp001898465*. The type genome for the species is the GenBank assembly GCA_001724485.1. The GC content of the type genome is 39.32 %

and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Ferruginibacter delacivita sp. nov.

Candidatus Ferruginibacter delacivita (NL. fem. n. *delacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp903858475*. The type genome for the species is the GenBank assembly GCA_903889855.1. The GC content of the type genome is 37.92 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Ferruginibacter dicanastra sp. nov.

Candidatus Ferruginibacter dicanastra (NL. fem. n. *dicanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp009885535*. The type genome for the species is the GenBank assembly GCA_009885535.1. The GC content of the type genome is 34.06 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Ferruginibacter dilogitrix sp. nov.

Candidatus Ferruginibacter dilogitrix (NL. fem. n. *dilogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp003534175*. The type genome for the species is the GenBank assembly GCA_003534175.1. The GC content of the type genome is 44.48 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Ferruginibacter filifisca sp. nov.

Candidatus Ferruginibacter filifisca (NL. fem. n. *filifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp014377975*. The type genome for the species is the GenBank assembly GCA_014377975.1. The GC content of the type genome is 38.12 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Ferruginibacter infatitio sp. nov.

Candidatus Ferruginibacter infatitio (NL. fem. n. *infatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp003455235*. The type genome for the species is the GenBank assembly GCA_003455235.1. The GC content of the type genome is 47.3 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Ferruginibacter lugubessa sp. nov.

Candidatus Ferruginibacter lugubessa (NL. fem. n. *lugubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp002343985*. The type genome for the species is the GenBank assembly GCA_002425015.1. The GC content of the type genome is 47.52 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Ferruginibacter musulitrix sp. nov.

Candidatus Ferruginibacter musulitrix (NL. fem. n. *musulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp002352045*. The type genome for the species is the GenBank assembly GCA_002455285.1. The GC content of the type genome is 37.67 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Ferruginibacter obmutifica sp. nov.

Candidatus Ferruginibacter obmutifica (NL. fem. n. *obmutifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp013141115*. The type genome for the species is the GenBank assembly GCA_013141115.1. The GC content of the type genome is 37.11 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Ferruginibacter optumicella sp. nov.

Candidatus Ferruginibacter optumicella (NL. fem. n. *optumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp903837525*. The type genome for the species is the GenBank assembly GCA_903837525.1. The GC content of the type genome is 33.24 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Ferruginibacter propribula sp. nov.

Candidatus Ferruginibacter propribula (NL. fem. n. *propribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp014379905*. The type genome for the species is the GenBank assembly GCA_014379905.1. The GC content of the type genome is 40.41 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Ferruginibacter repepitoga sp. nov.

Candidatus Ferruginibacter repepitoga (NL. fem. n. *repepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp014379625*. The type genome for the species is the GenBank assembly GCA_014379625.1. The GC content of the type genome is 40.89 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Ferruginibacter risibiforma sp. nov.

Candidatus Ferruginibacter risibiforma (NL. fem. n. *risibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp002400445*. The type genome for the species is the GenBank assembly GCA_002400445.1. The GC content of the type genome is 43.08 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Ferruginibacter robigentia sp. nov.

Candidatus Ferruginibacter robigentia (NL. fem. n. *robigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp002381005*. The type genome for the species is the GenBank assembly GCA_003456255.1. The GC content of the type genome is 38.18 %

and the genome length is 2.34 Mbp.

Description of *Candidatus* Ferruginibacter tenementia sp. nov.

Candidatus Ferruginibacter tenementia (NL. fem. n. *tenementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp903878475*. The type genome for the species is the GenBank assembly GCA_903864605.1. The GC content of the type genome is 43.0 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Ferruginibacter vitupiforma sp. nov.

Candidatus Ferruginibacter vitupiforma (NL. fem. n. *vitupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ferruginibacter sp013298665*. The type genome for the species is the GenBank assembly GCA_013298665.1. The GC content of the type genome is 47.54 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Fervidobacterium detotimonas sp. nov.

Candidatus Fervidobacterium detotimonas (NL. fem. n. *detotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fervidobacterium sp003526765*. The type genome for the species is the GenBank assembly GCA_012516815.1. The GC content of the type genome is 39.88 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Fervidobacterium inoblimonia sp. nov.

Candidatus Fervidobacterium inoblimonia (NL. fem. n. *inoblimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fervidobacterium sp003522805*. The type genome for the species is the GenBank assembly GCA_003522805.1. The GC content of the type genome is 39.1 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Fervidobacterium taxilastra sp. nov.

Candidatus Fervidobacterium taxilastra (NL. fem. n. *taxilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fervidobacterium sp002432805*. The type genome for the species is the GenBank assembly GCA_002417795.1. The GC content of the type genome is 39.72 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Fetifana recogousia sp. nov.

Candidatus Fetifana recogousia (NL. fem. n. *recogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11236 sp003455335*. The type genome for the species is the GenBank assembly GCA_003455335.1. The GC content of the type genome is 55.42 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Fetifana gen. nov.

Candidatus Fetifana (NL. fem. n. *Fetifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11236*. The type species for the genus is *Candidatus* Fetifana recogousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11236*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifanaceae.

Description of *Candidatus* Fetifanaceae fam. nov.

Candidatus Fetifanaceae (NL. fem. n. *Fetifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11236.* The type genus for the taxon is *Candidatus* Fetifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11236*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetifanales.

Description of *Candidatus* Fetifanales ord. nov.

Candidatus Fetifanales (NL. fem. n. *Fetifanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11236.* The type genus for the taxon is *Candidatus* Fetifana .

According to the GTDB R06-RS202, this order belongs to the class *Fibrobacteria*.

Description of *Candidatus* Fetifaria levifugo sp. nov.

Candidatus Fetifaria levifugo (NL. fem. n. *levifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAU01 sp007126675*. The type genome for the species is the GenBank assembly GCA_007126675.1. The GC content of the type genome is 42.52 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Fetifaria gen. nov.

Candidatus Fetifaria (NL. fem. n. *Fetifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAU01*. The type species for the genus is *Candidatus* Fetifaria levifugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetifella cacalitudo sp. nov.

Candidatus Fetifella cacalitudo (NL. fem. n. *cacalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXS01 sp005791235*. The type genome for the species is the GenBank assembly GCA_005791235.1. The GC content of the type genome is 33.76 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Fetifella gen. nov.

Candidatus Fetifella (NL. fem. n. *Fetifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXXS01*. The type species for the genus is *Candidatus* Fetifella cacalitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetifella umbilisca sp. nov.

Candidatus Fetifella umbilisca (NL. fem. n. *umbilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXS01 sp903828265*. The type genome for the species is the GenBank assembly GCA_903828265.1. The GC content of the type genome is 33.41 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Fetifia arundentia sp. nov.

Candidatus Fetifia arundentia (NL. fem. n. *arundentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG695 sp902797455*. The type genome for the species is the GenBank assembly GCA_902797455.1. The GC content of the type genome is 59.84 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Fetifia gen. nov.

Candidatus Fetifia (NL. fem. n. *Fetifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG695*. The type species for the genus is *Candidatus* Fetifia arundentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetifia everbitrix sp. nov.

Candidatus Fetifia everbitrix (NL. fem. n. *everbitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG695 sp902766935*. The type genome for the species is the

GenBank assembly GCA_902766935.1. The GC content of the type genome is 60.46 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Fetifia hegumetta sp. nov.

Candidatus Fetifia hegumetta (NL. fem. n. *hegumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG695 sp900321495*. The type genome for the species is the GenBank assembly GCA_900321495.1. The GC content of the type genome is 59.09 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Fetifia triscisca sp. nov.

Candidatus Fetifia triscisca (NL. fem. n. *triscisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG695 sp902796885*. The type genome for the species is the GenBank assembly GCA_902796885.1. The GC content of the type genome is 57.98 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Fetifosa sonipax sp. nov.

Candidatus Fetifosa sonipax (NL. fem. n. *sonipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MHYJ01 sp001828445*. The type genome for the species is the GenBank assembly GCA_001828445.1. The GC content of the type genome is 43.34 % and the genome length is 2.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Fetifosa gen. nov.

Candidatus Fetifosa (NL. fem. n. *Fetifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MHYJ01*. The type species for the genus is *Candidatus* Fetifosa sonipax .

According to the original version of GTDB R06-RS202, this genus belongs to the family

MHYJ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifosaceae.

Description of *Candidatus* Fetifosaceae fam. nov.

Candidatus Fetifosaceae (NL. fem. n. *Fetifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MHYJ01.* The type genus for the taxon is *Candidatus* Fetifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *MHYJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetifosales.

Description of *Candidatus* Fetifosales ord. nov.

Candidatus Fetifosales (NL. fem. n. *Fetifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MHYJ01.* The type genus for the taxon is *Candidatus* Fetifosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *MHYJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fetifosae.

Description of *Candidatus* Fetifosae class. nov.

Candidatus Fetifosae (NL. fem. n. *c__Fetifosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MHYJ01.* The type genus for the taxon is *Candidatus* Fetifosa .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Fetifula acrufugo sp. nov.

Candidatus Fetifula acrufugo (NL. fem. n. *acrufugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2386 sp005776475*. The type genome for the species is the GenBank assembly GCA_005776475.1. The GC content of the type genome is 68.81 %

and the genome length is 5.22 Mbp.

Description of *Candidatus* Fetifula gen. nov.

Candidatus Fetifula (NL. fem. n. *Fetifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2386*. The type species for the genus is *Candidatus* Fetifula acrufugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifulaceae.

Description of *Candidatus* Fetifulaceae fam. nov.

Candidatus Fetifulaceae (NL. fem. n. *Fetifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2386.* The type genus for the taxon is *Candidatus* Fetifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetifulales.

Description of *Candidatus* Fetifulales ord. nov.

Candidatus Fetifulales (NL. fem. n. *Fetifulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2386.* The type genus for the taxon is *Candidatus* Fetifula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Didacellae.

Description of *Candidatus* Fetifula expanentia sp. nov.

Candidatus Fetifula expanentia (NL. fem. n. *expanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2386 sp002343845*. The type genome for the species is the

GenBank assembly GCA_002343845.1. The GC content of the type genome is 71.19 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Fetulana refulentia sp. nov.

Candidatus Fetulana refulentia (NL. fem. n. *refulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3212 sp002363615*. The type genome for the species is the GenBank assembly GCA_002363615.1. The GC content of the type genome is 39.57 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Fetulana gen. nov.

Candidatus Fetulana (NL. fem. n. *Fetulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3212*. The type species for the genus is *Candidatus* Fetulana refulentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetularia vitigastra sp. nov.

Candidatus Fetularia vitigastra (NL. fem. n. *vitigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1077 sp003141235*. The type genome for the species is the GenBank assembly GCA_003141385.1. The GC content of the type genome is 50.01 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Fetularia gen. nov.

Candidatus Fetularia (NL. fem. n. *Fetularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1077*. The type species for the genus is *Candidatus* Fetularia vitigastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Fetulella anactigena sp. nov.

Candidatus Fetulella anactigena (NL. fem. n. *anactigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002816585*. The type genome for the species is the GenBank assembly GCA_002816585.1. The GC content of the type genome is 58.28 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Fetulella gen. nov.

Candidatus Fetulella (NL. fem. n. *Fetulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9611*. The type species for the genus is *Candidatus* Fetulella anactigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Fetulella cnestax sp. nov.

Candidatus Fetulella cnestax (NL. fem. n. *cnestax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002730485*. The type genome for the species is the GenBank assembly GCA_002730485.1. The GC content of the type genome is 56.34 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Fetulella conubiforma sp. nov.

Candidatus Fetulella conubiforma (NL. fem. n. *conubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp009391975*. The type genome for the species is the GenBank assembly GCA_009391975.1. The GC content of the type genome is 57.75 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Fetulella defesentia sp. nov.

Candidatus Fetulella defesentia (NL. fem. n. *defesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002746355*. The type genome for the species is the GenBank assembly GCA_003973495.1. The GC content of the type genome is 58.94 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Fetulella demigax sp. nov.

Candidatus Fetulella demigax (NL. fem. n. *demigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002328185*. The type genome for the species is the GenBank assembly GCA_009391395.1. The GC content of the type genome is 58.64 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Fetulella evangibra sp. nov.

Candidatus Fetulella evangibra (NL. fem. n. *evangibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002697005*. The type genome for the species is the GenBank assembly GCA_002697005.1. The GC content of the type genome is 54.4 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Fetulella inlumetta sp. nov.

Candidatus Fetulella inlumetta (NL. fem. n. *inlumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp012959605*. The type genome for the species is the GenBank assembly GCA_012959605.1. The GC content of the type genome is 54.72 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Fetulella innoxatio sp. nov.

Candidatus Fetulella innoxatio (NL. fem. n. *innoxatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp013204585*. The type genome for the species is the GenBank assembly GCA_013204585.1. The GC content of the type genome is 55.76 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Fetulella locupitas sp. nov.

Candidatus Fetulella locupitas (NL. fem. n. *locupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002816575*. The type genome for the species is the GenBank assembly GCA_002816575.1. The GC content of the type genome is 61.04 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Fetulella redacilenta sp. nov.

Candidatus Fetulella redacilenta (NL. fem. n. *redacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002721995*. The type genome for the species is the GenBank assembly GCA_002721995.1. The GC content of the type genome is 60.65 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Fetulella relecimonas sp. nov.

Candidatus Fetulella relecimonas (NL. fem. n. *relecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002698265*. The type genome for the species is the GenBank assembly GCA_009392435.1. The GC content of the type genome is 58.9 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Fetulella vicecitoga sp. nov.

Candidatus Fetulella vicecitoga (NL. fem. n. *vicecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp002816355*. The type genome for the species is the GenBank assembly GCA_002816355.1. The GC content of the type genome is 56.97 %

and the genome length is 1.55 Mbp.

Description of *Candidatus* Fetulella vitifibra sp. nov.

Candidatus Fetulella vitifibra (NL. fem. n. *vitifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9611 sp009392075*. The type genome for the species is the GenBank assembly GCA_009392075.1. The GC content of the type genome is 57.54 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Fetulia nubigigena sp. nov.

Candidatus Fetulia nubigigena (NL. fem. n. *nubigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUPP01 sp903901045*. The type genome for the species is the GenBank assembly GCA_903901045.1. The GC content of the type genome is 63.42 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Fetulia gen. nov.

Candidatus Fetulia (NL. fem. n. *Fetulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUPP01*. The type species for the genus is *Candidatus* Fetulia nubigigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIUPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetuliaceae.

Description of *Candidatus* Fetuliaceae fam. nov.

Candidatus Fetuliaceae (NL. fem. n. *Fetuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUPP01.* The type genus for the taxon is *Candidatus* Fetulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIUPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetuliales.

Description of *Candidatus* Fetuliales ord. nov.

Candidatus Fetuliales (NL. fem. n. *Fetuliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUPP01.* The type genus for the taxon is *Candidatus* Fetulia .

According to the GTDB R06-RS202, this order belongs to the class *Brocadiae*.

Description of *Candidatus* Fetulida cunabitudo sp. nov.

Candidatus Fetulida cunabitudo (NL. fem. n. *cunabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPRO1 sp002050235*. The type genome for the species is the GenBank assembly GCA_014584405.1. The GC content of the type genome is 69.72 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Fetulida gen. nov.

Candidatus Fetulida (NL. fem. n. *Fetulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTPRO1*. The type species for the genus is *Candidatus* Fetulida cunabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPRO1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetulidaceae.

Description of *Candidatus* Fetulidaceae fam. nov.

Candidatus Fetulidaceae (NL. fem. n. *Fetulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UTPRO1.* The type genus for the taxon is *Candidatus* Fetulida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UTPRO1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetulidales.

Description of *Candidatus* Fetulidales ord. nov.

Candidatus Fetulidales (NL. fem. n. *Fetulidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UTPRO1*. The type genus for the taxon is *Candidatus* Fetulida .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Fetulosa citipentia sp. nov.

Candidatus Fetulosa citipentia (NL. fem. n. *citipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS263 sp900540535*. The type genome for the species is the GenBank assembly GCA_902406065.1. The GC content of the type genome is 41.21 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Fetulosa gen. nov.

Candidatus Fetulosa (NL. fem. n. *Fetulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS263*. The type species for the genus is *Candidatus* Fetulosa citipentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetulula denecigena sp. nov.

Candidatus Fetulula denecigena (NL. fem. n. *denecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QUBU01 sp011526045*. The type genome for the species is the GenBank assembly GCA_011526045.1. The GC content of the type genome is 66.52 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Fetulula gen. nov.

Candidatus Fetulula (NL. fem. n. *Fetulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QUBU01*. The type species for the genus is *Candidatus* Fetulula denecigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Fetulula denometta sp. nov.

Candidatus Fetulula denometta (NL. fem. n. *denometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QUBU01 sp014337915*. The type genome for the species is the GenBank assembly GCA_008363175.1. The GC content of the type genome is 68.35 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Fetutana ceromentia sp. nov.

Candidatus Fetutana ceromentia (NL. fem. n. *ceromentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9339 sp001801345*. The type genome for the species is the GenBank assembly GCA_001801345.1. The GC content of the type genome is 37.12 % and the genome length is 1.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Fetutana gen. nov.

Candidatus Fetutana (NL. fem. n. *Fetutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9339*. The type species for the genus is *Candidatus* Fetutana ceromentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9339*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutanaceae.

Description of *Candidatus* Fetutanaceae fam. nov.

Candidatus Fetutanaceae (NL. fem. n. *Fetutanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9339.* The type genus for the taxon is *Candidatus* Fetutana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9339*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetutanales.

Description of *Candidatus* Fetutanales ord. nov.

Candidatus Fetutanales (NL. fem. n. *Fetutanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9339.* The type genus for the taxon is *Candidatus* Fetutana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Fetutaria lavacatica sp. nov.

Candidatus Fetutaria lavacatica (NL. fem. n. *lavacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12026 sp000990005*. The type genome for the species is the GenBank assembly GCA_000989845.1. The GC content of the type genome is 32.92 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Fetutaria gen. nov.

Candidatus Fetutaria (NL. fem. n. *Fetutaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12026*. The type species for the genus is *Candidatus* Fetutaria lavacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Fetutaria lenunitrix sp. nov.

Candidatus Fetutaria lenunitrix (NL. fem. n. *lenunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12026 sp000989765*. The type genome for the species is the GenBank assembly GCA_000989595.1. The GC content of the type genome is 32.92 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Fetutella affabitica sp. nov.

Candidatus Fetutella affabitica (NL. fem. n. *affabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp013316535*. The type genome for the species is the GenBank assembly GCA_013316535.1. The GC content of the type genome is 52.56 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Fetutella gen. nov.

Candidatus Fetutella (NL. fem. n. *Fetutella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7173*. The type species for the genus is *Candidatus* Fetutella affabitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fetutella apograstra sp. nov.

Candidatus Fetutella apograstra (NL. fem. n. *apograstra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900759895*. The type genome for the species is the GenBank assembly RS_GCF_900759895.1. The GC content of the type genome is 55.94 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Fetutella bicoritoga sp. nov.

Candidatus Fetutella bicoritoga (NL. fem. n. *bicoritoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900555165*. The type genome for the species is the GenBank assembly GCA_900555165.1. The GC content of the type genome is 57.53 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Fetutella capuditoga sp. nov.

Candidatus Fetutella capuditoga (NL. fem. n. *capuditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp001689485*. The type genome for the species is the GenBank assembly GCA_009774915.1. The GC content of the type genome is 50.72 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Fetutella cenacessa sp. nov.

Candidatus Fetutella cenacessa (NL. fem. n. *cenacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900768685*. The type genome for the species is the GenBank assembly RS_GCF_900768685.1. The GC content of the type genome is 43.09 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Fetutella ciminitrix sp. nov.

Candidatus Fetutella ciminitrix (NL. fem. n. *ciminitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp001689685*. The type genome for the species is the GenBank assembly GCA_003979065.1. The GC content of the type genome is 57.18 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Fetutella cisalax sp. nov.

Candidatus Fetutella cisalax (NL. fem. n. *cisalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900548705*. The type genome for the species is the GenBank assembly RS_GCF_900753055.1. The GC content of the type genome is 52.87 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Fetutella defulitica sp. nov.

Candidatus Fetutella defulitica (NL. fem. n. *defulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp013316675*. The type genome for the species is the GenBank assembly GCA_013316675.1. The GC content of the type genome is 50.93 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Fetutella dibucastra sp. nov.

Candidatus Fetutella dibucastra (NL. fem. n. *dibucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp001915385*. The type genome for the species is the GenBank assembly GCA_001915385.1. The GC content of the type genome is 50.93 % and the genome length is 2.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Fetutella duponitoga sp. nov.

Candidatus Fetutella duponitoga (NL. fem. n. *duponitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp004102805*. The type genome for the species is the GenBank assembly GCA_009774935.1. The GC content of the type genome is 51.38 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Fetutella lenocibula sp. nov.

Candidatus Fetutella lenocibula (NL. fem. n. *lenocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp002491305*. The type genome for the species is the GenBank assembly GCA_002491305.1. The GC content of the type genome is 56.85 %

and the genome length is 2.17 Mbp.

Description of *Candidatus* Fetutella ludifousia sp. nov.

Candidatus Fetutella ludifousia (NL. fem. n. *ludifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900546835*. The type genome for the species is the GenBank assembly GCA_900546835.1. The GC content of the type genome is 54.79 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Fetutella malivago sp. nov.

Candidatus Fetutella malivago (NL. fem. n. *malivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900540205*. The type genome for the species is the GenBank assembly RS_GCF_900760135.1. The GC content of the type genome is 53.39 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Fetutella siligatica sp. nov.

Candidatus Fetutella siligatica (NL. fem. n. *siligatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp004557825*. The type genome for the species is the GenBank assembly GCA_004557825.1. The GC content of the type genome is 55.14 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Fetutella subinimonia sp. nov.

Candidatus Fetutella subinimonia (NL. fem. n. *subinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900545955*. The type genome for the species is the GenBank assembly GCA_900545955.1. The GC content of the type genome is 55.26 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Fetutella subucax sp. nov.

Candidatus Fetutella subucax (NL. fem. n. *subucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp001701135*. The type genome for the species is the GenBank assembly GCA_001701135.1. The GC content of the type genome is 54.27 % and the genome length is 2.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Fetutella tubicisca sp. nov.

Candidatus Fetutella tubicisca (NL. fem. n. *tubicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7173 sp900552325*. The type genome for the species is the GenBank assembly GCA_900552325.1. The GC content of the type genome is 55.27 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Fetutia cosidibra sp. nov.

Candidatus Fetutia cosidibra (NL. fem. n. *cosidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1660 sp002320815*. The type genome for the species is the GenBank assembly GCA_002320815.1. The GC content of the type genome is 71.56 % and the genome length is 7.98 Mbp.

Description of *Candidatus* Fetutia gen. nov.

Candidatus Fetutia (NL. fem. n. *Fetutia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1660*. The type species for the genus is *Candidatus* Fetutia cosidibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Fetutida fusifisca sp. nov.

Candidatus Fetutida fusifisca (NL. fem. n. *fusifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBAT01 sp005240105*. The type genome for the species is the GenBank assembly GCA_005240105.1. The GC content of the type genome is 47.92 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Fetutida gen. nov.

Candidatus Fetutida (NL. fem. n. *Fetutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBAT01*. The type species for the genus is *Candidatus* Fetutida fusifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBAT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutidaceae.

Description of *Candidatus* Fetutidaceae fam. nov.

Candidatus Fetutidaceae (NL. fem. n. *Fetutidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBAT01.* The type genus for the taxon is *Candidatus* Fetutida .

According to GTDB R06-RS202, this family belongs to the order *Obscuribacterales*.

Description of *Candidatus* Fetutosa adsenilenta sp. nov.

Candidatus Fetutosa adsenilenta (NL. fem. n. *adsenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBI01 sp013360565*. The type genome for the species is the GenBank assembly GCA_013360565.1. The GC content of the type genome is 68.42 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Fetutosa gen. nov.

Candidatus Fetutosa (NL. fem. n. *Fetutosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBI01*. The type species for the genus is *Candidatus* Fetutosa adsenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutosaceae.

Description of *Candidatus* Fetutosaceae fam. nov.

Candidatus Fetutosaceae (NL. fem. n. *Fetutosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWBI01.* The type genus for the taxon is *Candidatus* Fetutosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABWBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetutosales.

Description of *Candidatus* Fetutosales ord. nov.

Candidatus Fetutosales (NL. fem. n. *Fetutosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWBI01.* The type genus for the taxon is *Candidatus* Fetutosa .

According to the GTDB R06-RS202, this order belongs to the class *Sumerlaeia*.

Description of *Candidatus* Fibicana armipiforma sp. nov.

Candidatus Fibicana armipiforma (NL. fem. n. *armipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-51-40 sp003599015*. The type genome for the species is the GenBank assembly GCA_003599015.1. The GC content of the type genome is 49.3 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Fibicana gen. nov.

Candidatus Fibicana (NL. fem. n. *Fibicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-51-40*. The type species for the genus is *Candidatus* Fibicana armipiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fibicana susicousia sp. nov.

Candidatus Fibicana susicousia (NL. fem. n. *susicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-51-40 sp001874005*. The type genome for the species is the GenBank assembly GCA_002784205.1. The GC content of the type genome is 50.83 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Fibicaria omnivetta sp. nov.

Candidatus Fibicaria omnivetta (NL. fem. n. *omnivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11417 sp900761895*. The type genome for the species is the GenBank assembly RS_GCF_900761895.1. The GC content of the type genome is 55.65 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Fibicaria gen. nov.

Candidatus Fibicaria (NL. fem. n. *Fibicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11417*. The type species for the genus is *Candidatus* Fibicaria omnivetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM11417*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibicariaceae.

Description of *Candidatus* Fibicariaceae fam. nov.

Candidatus Fibicariaceae (NL. fem. n. *Fibicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *HGM11417*. The type genus for the taxon is *Candidatus* Fibicaria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Fibicella adsecivita sp. nov.

Candidatus Fibicella adsecivita (NL. fem. n. *adsecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGO01 sp903859225*. The type genome for the species is the GenBank assembly GCA_903859225.1. The GC content of the type genome is 65.66 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Fibicella gen. nov.

Candidatus Fibicella (NL. fem. n. *Fibicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOGO01*. The type species for the genus is *Candidatus* Fibicella adsecivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodosaceae.

Description of *Candidatus* Fibicella pedifitrix sp. nov.

Candidatus Fibicella pedifitrix (NL. fem. n. *pedifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGO01 sp903839615*. The type genome for the species is the GenBank assembly GCA_903930365.1. The GC content of the type genome is 64.2 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Fibicella solacitica sp. nov.

Candidatus Fibicella solacitica (NL. fem. n. *solacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGO01 sp903857865*. The type genome for the species is the

GenBank assembly GCA_903898825.1. The GC content of the type genome is 64.68 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Fibicia delucitio sp. nov.

Candidatus Fibicia delucitio (NL. fem. n. *delucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-73-35 sp001788495*. The type genome for the species is the GenBank assembly GCA_001790345.1. The GC content of the type genome is 73.44 % and the genome length is 4.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Fibicia gen. nov.

Candidatus Fibicia (NL. fem. n. *Fibicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-73-35*. The type species for the genus is *Candidatus* Fibicia delucitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Fibiciaceae fam. nov.

Candidatus Fibiciaceae (NL. fem. n. *Fibiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-73-35.* The type genus for the taxon is *Candidatus* Fibicia .

According to GTDB R06-RS202, this family belongs to the order *Rokubacteriales*.

Description of *Candidatus* Fibicia detecitrix sp. nov.

Candidatus Fibicia detecitrix (NL. fem. n. *detecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-73-35 sp001790205*. The type genome for the species is the

GenBank assembly GCA_001790205.1. The GC content of the type genome is 73.0 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Fibicia venucimonas sp. nov.

Candidatus Fibicia venucimonas (NL. fem. n. *venucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-73-35 sp001790315*. The type genome for the species is the GenBank assembly GCA_001790335.1. The GC content of the type genome is 71.52 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Fibicida dilogifica sp. nov.

Candidatus Fibicida dilogifica (NL. fem. n. *dilogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-38-69 sp001803205*. The type genome for the species is the GenBank assembly GCA_003504255.1. The GC content of the type genome is 37.54 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Fibicida gen. nov.

Candidatus Fibicida (NL. fem. n. *Fibicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-38-69*. The type species for the genus is *Candidatus* Fibicida dilogifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-38-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibicidaceae.

Description of *Candidatus* Fibicidaceae fam. nov.

Candidatus Fibicidaceae (NL. fem. n. *Fibicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-38-69.* The type genus for the taxon is *Candidatus* Fibicida .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Fibicosa insusatio sp. nov.

Candidatus Fibicosa insusatio (NL. fem. n. *insusatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAP01 sp011373785*. The type genome for the species is the GenBank assembly GCA_011373785.1. The GC content of the type genome is 59.23 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Fibicosa gen. nov.

Candidatus Fibicosa (NL. fem. n. *Fibicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKAP01*. The type species for the genus is *Candidatus* Fibicosa insusatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Fibicosa malagilega sp. nov.

Candidatus Fibicosa malagilega (NL. fem. n. *malagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAP01 sp903825435*. The type genome for the species is the GenBank assembly GCA_903914795.1. The GC content of the type genome is 58.98 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Fibrella sicubitica sp. nov.

Candidatus Fibrella sicubitica (NL. fem. n. *sicubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Fibrella sp002108455*. The type genome for the species is the GenBank assembly RS_GCF_002108455.1. The GC content of the type genome is 52.78 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Fibrobacter admoratica sp. nov.

Candidatus Fibrobacter admoratica (NL. fem. n. *admoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900142545*. The type genome for the species is the GenBank assembly RS_GCF_900142545.1. The GC content of the type genome is 50.23 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Fibrobacter democimonas sp. nov.

Candidatus Fibrobacter democimonas (NL. fem. n. *democimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002210285*. The type genome for the species is the GenBank assembly RS_GCF_002210285.1. The GC content of the type genome is 53.4 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Fibrobacter desomibra sp. nov.

Candidatus Fibrobacter desomibra (NL. fem. n. *desomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900177805*. The type genome for the species is the GenBank assembly RS_GCF_900177805.1. The GC content of the type genome is 47.93 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Fibrobacter desomilenta sp. nov.

Candidatus Fibrobacter desomilenta (NL. fem. n. *desomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900142475*. The type genome for the species is the GenBank assembly GCA_004560505.1. The GC content of the type genome is 52.01 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Fibrobacter dilogiforma sp. nov.

Candidatus Fibrobacter dilogiforma (NL. fem. n. *dilogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002210345*. The type genome for the species is the GenBank assembly RS_GCF_902770285.1. The GC content of the type genome is 48.77 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Fibrobacter epiclimonia sp. nov.

Candidatus Fibrobacter epiclimonia (NL. fem. n. *epiclimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900141705*. The type genome for the species is the GenBank assembly RS_GCF_900141705.1. The GC content of the type genome is 53.44 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Fibrobacter excucitudo sp. nov.

Candidatus Fibrobacter excucitudo (NL. fem. n. *excucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002391195*. The type genome for the species is the GenBank assembly GCA_002391195.1. The GC content of the type genome is 52.25 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Fibrobacter haricedo sp. nov.

Candidatus Fibrobacter haricedo (NL. fem. n. *haricedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900142535*. The type genome for the species is the GenBank assembly GCA_002317455.1. The GC content of the type genome is 49.78 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Fibrobacter haricivita sp. nov.

Candidatus Fibrobacter haricivita (NL. fem. n. *haricivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900143015*. The type genome for the species is the GenBank assembly RS_GCF_900143015.1. The GC content of the type genome is 46.82 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Fibrobacter herinitura sp. nov.

Candidatus Fibrobacter herinitura (NL. fem. n. *herinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900313675*. The type genome for the species is the GenBank assembly RS_GCF_902757465.1. The GC content of the type genome is 52.6 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Fibrobacter homogax sp. nov.

Candidatus Fibrobacter homogax (NL. fem. n. *homogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900215325*. The type genome for the species is the GenBank assembly GCA_900318925.1. The GC content of the type genome is 49.04 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Fibrobacter horomitica sp. nov.

Candidatus Fibrobacter horomitica (NL. fem. n. *horomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900143055*. The type genome for the species is the GenBank assembly RS_GCF_900230125.1. The GC content of the type genome is 53.82 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Fibrobacter insepilega sp. nov.

Candidatus Fibrobacter insepilega (NL. fem. n. *insepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Fibrobacter sp002210295*. The type genome for the species is the GenBank assembly RS_GCF_002210295.1. The GC content of the type genome is 50.94 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Fibrobacter invetibula sp. nov.

Candidatus Fibrobacter invetibula (NL. fem. n. *invetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002395745*. The type genome for the species is the GenBank assembly GCA_002395745.1. The GC content of the type genome is 54.23 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Fibrobacter lapicitio sp. nov.

Candidatus Fibrobacter lapicitio (NL. fem. n. *lapicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002382975*. The type genome for the species is the GenBank assembly GCA_002382975.1. The GC content of the type genome is 51.64 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Fibrobacter monocessa sp. nov.

Candidatus Fibrobacter monocessa (NL. fem. n. *monocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp003149045*. The type genome for the species is the GenBank assembly RS_GCF_003253655.1. The GC content of the type genome is 48.69 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Fibrobacter reduventia sp. nov.

Candidatus Fibrobacter reduventia (NL. fem. n. *reduventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002449765*. The type genome for the species is the GenBank assembly GCA_002342555.1. The GC content of the type genome is 53.91 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Fibrobacter refunitia sp. nov.

Candidatus Fibrobacter refunitia (NL. fem. n. *refunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900142465*. The type genome for the species is the GenBank assembly RS_GCF_002210365.1. The GC content of the type genome is 48.92 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Fibrobacter semibessa sp. nov.

Candidatus Fibrobacter semibessa (NL. fem. n. *semibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900316465*. The type genome for the species is the GenBank assembly RS_GCF_902755055.1. The GC content of the type genome is 50.62 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Fibrobacter solifimonia sp. nov.

Candidatus Fibrobacter solifimonia (NL. fem. n. *solifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900142495*. The type genome for the species is the GenBank assembly GCA_001603925.1. The GC content of the type genome is 50.17 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Fibrobacter vacilifica sp. nov.

Candidatus Fibrobacter vacilifica (NL. fem. n. *vacilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp001603905*. The type genome for the species is the GenBank assembly GCA_001462305.1. The GC content of the type genome is 51.36 % and the genome length is 3.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cellulose fed anaerobic digester inoculated with sludge".

Description of *Candidatus* Fibrobacter vagabibra sp. nov.

Candidatus Fibrobacter vagabibra (NL. fem. n. *vagabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp002394865*. The type genome for the species is the GenBank assembly GCA_002372655.1. The GC content of the type genome is 48.08 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Fibrobacter vigenivita sp. nov.

Candidatus Fibrobacter vigenivita (NL. fem. n. *vigenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter sp900177705*. The type genome for the species is the GenBank assembly RS_GCF_900177705.1. The GC content of the type genome is 50.23 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Fibrobacter defarilega sp. nov.

Candidatus Fibrobacter defarilega (NL. fem. n. *defarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter_A sp002390045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902791455.1. The GC content of the type genome is 48.82 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Fibrobacter turibicella sp. nov.

Candidatus Fibrobacter turibicella (NL. fem. n. *turibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter_A sp002797675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003014635.1. The GC content of the type genome is 48.94 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Fibrobacter vitupessa sp. nov.

Candidatus Fibrobacter vitupessa (NL. fem. n. *vitupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibrobacter_A sp003003115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003003115.1. The GC content of the type genome is 44.84 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Fibromonas adcucatio sp. nov.

Candidatus Fibromonas adcucatio (NL. fem. n. *adcucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp001462225*. The type genome for the species is the GenBank assembly GCA_001462225.1. The GC content of the type genome is 43.25 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "termite gut".

Description of *Candidatus* Fibromonas docibitica sp. nov.

Candidatus Fibromonas docibitica (NL. fem. n. *docibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp009788135*. The type genome for the species is the GenBank assembly GCA_009788135.1. The GC content of the type genome is 43.21 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Fibromonas eviscicula sp. nov.

Candidatus Fibromonas eviscicula (NL. fem. n. *eviscicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp001462235*. The type genome for the species is the GenBank assembly GCA_001462235.1. The GC content of the type genome is 41.49 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "termite gut".

Description of *Candidatus* Fibromonas obtecisca sp. nov.

Candidatus Fibromonas obtecisca (NL. fem. n. *obtecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp009777135*. The type genome for the species is the GenBank assembly GCA_009777135.1. The GC content of the type genome is 42.13 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Fibromonas selecago sp. nov.

Candidatus Fibromonas selecago (NL. fem. n. *selecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp009786285*. The type genome for the species is the GenBank assembly GCA_009786285.1. The GC content of the type genome is 42.24 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Fibromonas tabitiforma sp. nov.

Candidatus Fibromonas tabitiforma (NL. fem. n. *tabitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fibromonas sp009787645*. The type genome for the species is the GenBank assembly GCA_009787645.1. The GC content of the type genome is 42.63 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ficedaria visocifica sp. nov.

Candidatus Ficedaria visocifica (NL. fem. n. *visocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002717915 sp002717915*. The type genome for the species is the GenBank assembly GCA_002695075.1. The GC content of the type genome is 41.33 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Ficedaria gen. nov.

Candidatus Ficedaria (NL. fem. n. *Ficedaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002717915*. The type species for the genus is *Candidatus* Ficedaria visocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Ficedella bisacibra sp. nov.

Candidatus Ficedella bisacibra (NL. fem. n. *bisacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3305 sp902796405*. The type genome for the species is the GenBank assembly GCA_902796405.1. The GC content of the type genome is 55.07 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ficedella gen. nov.

Candidatus Ficedella (NL. fem. n. *Ficedella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3305*. The type species for the genus is *Candidatus* Ficedella bisacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ficedella conaritica sp. nov.

Candidatus Ficedella conaritica (NL. fem. n. *conaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3305 sp902783295*. The type genome for the species is the GenBank assembly GCA_902783295.1. The GC content of the type genome is 52.83 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Ficedella monopicella sp. nov.

Candidatus Ficedella monopicella (NL. fem. n. *monopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3305 sp002373555*. The type genome for the species is the GenBank assembly GCA_002373555.1. The GC content of the type genome is 54.36 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ficedia visifigena sp. nov.

Candidatus Ficedia visifigena (NL. fem. n. *visifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11327 sp900759935*. The type genome for the species is the GenBank assembly RS_GCF_900759935.1. The GC content of the type genome is 44.25 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Ficedia gen. nov.

Candidatus Ficedia (NL. fem. n. *Ficedia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11327*. The type species for the genus is *Candidatus* Ficedia visifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM11327*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficediaceae.

Description of *Candidatus* Ficediaceae fam. nov.

Candidatus Ficediaceae (NL. fem. n. *Ficediaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGM11327.* The type genus for the taxon is *Candidatus* Ficedia .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Ficedida indipiforma sp. nov.

Candidatus Ficedida indipiforma (NL. fem. n. *indipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAINVV01 sp903881215*. The type genome for the species is the GenBank assembly GCA_903881215.1. The GC content of the type genome is 41.96 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Ficedida gen. nov.

Candidatus Ficedida (NL. fem. n. *Ficedida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINVV01*. The type species for the genus is *Candidatus* Ficedida indipiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ficedida monacivita sp. nov.

Candidatus Ficedida monacivita (NL. fem. n. *monacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINVV01 sp903902325*. The type genome for the species is the GenBank assembly GCA_903899285.1. The GC content of the type genome is 44.72 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Ficedida verecastra sp. nov.

Candidatus Ficedida verecastra (NL. fem. n. *verecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINVV01 sp903854235*. The type genome for the species is the GenBank assembly GCA_903866555.1. The GC content of the type genome is 46.39 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Ficedosa exhoribra sp. nov.

Candidatus Ficedosa exhoribra (NL. fem. n. *exhoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMRA01 sp014376695*. The type genome for the species is the GenBank assembly GCA_014376695.1. The GC content of the type genome is 39.43 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Ficedosa gen. nov.

Candidatus Ficedosa (NL. fem. n. *Ficedosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMRA01*. The type species for the genus is *Candidatus* Ficedosa exhoribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficedosaceae.

Description of *Candidatus* Ficedosaceae fam. nov.

Candidatus Ficedosaceae (NL. fem. n. *Ficedosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMRA01.* The type genus for the taxon is *Candidatus* Ficedosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACMRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedosales.

Description of *Candidatus* Ficedosales ord. nov.

Candidatus Ficedosales (NL. fem. n. *Ficedosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMRA01.* The type genus for the taxon is *Candidatus* Ficedosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *JACMRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ficedosae.

Description of *Candidatus* Ficedosae class. nov.

Candidatus Ficedosae (NL. fem. n. *c__Ficedosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMRA01.* The type genus for the taxon is *Candidatus* Ficedosa .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Fictibacillus deculifica sp. nov.

Candidatus Fictibacillus deculifica (NL. fem. n. *deculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fictibacillus sp004216955*. The type genome for the species is the GenBank assembly RS_GCF_004216955.1. The GC content of the type genome is 39.76 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Fictibacillus hemitousia sp. nov.

Candidatus Fictibacillus hemitousia (NL. fem. n. *hemitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fictibacillus sp005503015*. The type genome for the species is the GenBank assembly RS_GCF_005503015.1. The GC content of the type genome is 39.25 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Fictibacillus semimastra sp. nov.

Candidatus Fictibacillus semimastra (NL. fem. n. *semimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fictibacillus_C sp001510655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900112635.1. The GC content of the type genome is 43.04 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Ficulana ablacetta sp. nov.

Candidatus Ficulana ablacetta (NL. fem. n. *ablacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9159 sp003453735*. The type genome for the species is the GenBank assembly GCA_003453735.1. The GC content of the type genome is 48.26 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Ficulana gen. nov.

Candidatus Ficulana (NL. fem. n. *Ficulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9159*. The type species for the genus is *Candidatus* Ficulana ablacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9159*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficulanaceae.

Description of *Candidatus* Ficulanaceae fam. nov.

Candidatus Ficulanaceae (NL. fem. n. *Ficulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9159.* The type genus for the taxon is *Candidatus* Ficulana .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Ficularia insuritoga sp. nov.

Candidatus Ficularia insuritoga (NL. fem. n. *insuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7805 sp902630355*. The type genome for the species is the GenBank assembly RS_GCF_902630355.1. The GC content of the type genome is 54.73 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Ficularia gen. nov.

Candidatus Ficularia (NL. fem. n. *Ficularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7805*. The type species for the genus is *Candidatus* Ficularia insuritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7805*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficulariaceae.

Description of *Candidatus* Ficulariaceae fam. nov.

Candidatus Ficulariaceae (NL. fem. n. *Ficulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7805.* The type genus for the taxon is *Candidatus* Ficularia .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Ficularia intenibra sp. nov.

Candidatus Ficularia intenibra (NL. fem. n. *intenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7805 sp002168195*. The type genome for the species is the GenBank assembly GCA_002168195.1. The GC content of the type genome is 50.51 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Ficularia nubecicella sp. nov.

Candidatus Ficularia nubecicella (NL. fem. n. *nubecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7805 sp014237955*. The type genome for the species is the GenBank assembly GCA_014237955.1. The GC content of the type genome is 51.58 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Ficularia solacitia sp. nov.

Candidatus Ficularia solacitia (NL. fem. n. *solacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7805 sp002480485*. The type genome for the species is the GenBank assembly GCA_002480485.1. The GC content of the type genome is 51.66 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Ficulella visifitoga sp. nov.

Candidatus Ficulella visifitoga (NL. fem. n. *visifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1864 sp900555835*. The type genome for the species is the GenBank assembly GCA_900555835.1. The GC content of the type genome is 29.13 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Ficulella gen. nov.

Candidatus Ficulella (NL. fem. n. *Ficulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1864*. The type species for the genus is *Candidatus* Ficulella visifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Ficulia pedifedo sp. nov.

Candidatus Ficulia pedifedo (NL. fem. n. *pedifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQRY01 sp903874345*. The type genome for the species is the GenBank assembly GCA_903874345.1. The GC content of the type genome is 41.48 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Ficulia gen. nov.

Candidatus Ficulia (NL. fem. n. *Ficulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQRY01*. The type species for the genus is *Candidatus* Ficulia pedifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Ficulida asbesatica sp. nov.

Candidatus Ficulida asbesatica (NL. fem. n. *asbesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009840695*. The type genome for the species is the GenBank assembly GCA_009840695.1. The GC content of the type genome is 68.47 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Ficulida gen. nov.

Candidatus Ficulida (NL. fem. n. *Ficulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VYCW01*. The type species for the genus is *Candidatus* Ficulida asbesatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Ficulida cuticetta sp. nov.

Candidatus Ficulida cuticetta (NL. fem. n. *cuticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009843915*. The type genome for the species is the GenBank assembly GCA_009843915.1. The GC content of the type genome is 68.97 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Ficulida denorentia sp. nov.

Candidatus Ficulida denorentia (NL. fem. n. *denorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009843735*. The type genome for the species is the GenBank assembly GCA_009843735.1. The GC content of the type genome is 69.62 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Ficulida dibucetta sp. nov.

Candidatus Ficulida dibucetta (NL. fem. n. *dibucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009842325*. The type genome for the species is the GenBank assembly GCA_009845195.1. The GC content of the type genome is 68.87 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Ficulida menapitudo sp. nov.

Candidatus Ficulida menapitudo (NL. fem. n. *menapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009835735*. The type genome for the species is the GenBank assembly GCA_009844235.1. The GC content of the type genome is 67.1 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Ficulida nocumitica sp. nov.

Candidatus Ficulida nocumitica (NL. fem. n. *nocumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009844405*. The type genome for the species is the GenBank assembly GCA_009845665.1. The GC content of the type genome is 69.17 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Ficulida resacitica sp. nov.

Candidatus Ficulida resacitica (NL. fem. n. *resacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYCW01 sp009837445*. The type genome for the species is the GenBank assembly GCA_009845185.1. The GC content of the type genome is 69.42 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Ficulosa culibitrix sp. nov.

Candidatus Ficulosa culibitrix (NL. fem. n. *culibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699365 sp002699365*. The type genome for the species is the GenBank assembly GCA_003533285.1. The GC content of the type genome is 42.56 %

and the genome length is 1.43 Mbp.

Description of *Candidatus* Ficulosa gen. nov.

Candidatus Ficulosa (NL. fem. n. *Ficulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699365*. The type species for the genus is *Candidatus* Ficulosa culibitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Ficulula tiguritas sp. nov.

Candidatus Ficulula tiguritas (NL. fem. n. *tiguritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-35-8 sp001778235*. The type genome for the species is the GenBank assembly GCA_001778235.1. The GC content of the type genome is 35.25 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Ficulula gen. nov.

Candidatus Ficulula (NL. fem. n. *Ficulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-35-8*. The type species for the genus is *Candidatus* Ficulula tiguritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenanaceae.

Description of *Candidatus* Fidenana homilatica sp. nov.

Candidatus Fidenana homilatica (NL. fem. n. *homilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPQ01 sp012838235*. The type genome for the species is the GenBank assembly GCA_012838235.1. The GC content of the type genome is 39.83 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Fidenana gen. nov.

Candidatus Fidenana (NL. fem. n. *Fidenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPQ01*. The type species for the genus is *Candidatus* Fidenana homilatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenanaceae.

Description of *Candidatus* Fidenanaceae fam. nov.

Candidatus Fidenanaceae (NL. fem. n. *Fidenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUPQ01.* The type genus for the taxon is *Candidatus* Fidenana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fidenanales.

Description of *Candidatus* Fidenanales ord. nov.

Candidatus Fidenanales (NL. fem. n. *Fidenanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUPQ01.* The type genus for the taxon is *Candidatus* Fidenana .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Fidenana proscitura sp. nov.

Candidatus Fidenana proscitura (NL. fem. n. *proscitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUPQ01 sp002070475*. The type genome for the species is the GenBank assembly GCA_002070475.1. The GC content of the type genome is 35.36 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Fidenana resalitica sp. nov.

Candidatus Fidenana resalitica (NL. fem. n. *resalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPQ01 sp012729955*. The type genome for the species is the GenBank assembly GCA_012729955.1. The GC content of the type genome is 36.38 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Fidenaria giganitas sp. nov.

Candidatus Fidenaria giganitas (NL. fem. n. *giganitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4092 sp002428325*. The type genome for the species is the GenBank assembly GCA_002428325.1. The GC content of the type genome is 43.46 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Fidenaria gen. nov.

Candidatus Fidenaria (NL. fem. n. *Fidenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4092*. The type species for the genus is *Candidatus* Fidenaria giganitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4092*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenariaceae.

Description of *Candidatus* Fidenariaceae fam. nov.

Candidatus Fidenariaceae (NL. fem. n. *Fidenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4092.* The type genus for the taxon is *Candidatus* Fidenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA4092. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fidenariales.

Description of *Candidatus* Fidenariales ord. nov.

Candidatus Fidenariales (NL. fem. n. *Fidenariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4092.* The type genus for the taxon is *Candidatus* Fidenaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4092*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fidenariae.

Description of *Candidatus* Fidenariae class. nov.

Candidatus Fidenariae (NL. fem. n. *c__Fidenariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4092.* The type genus for the taxon is *Candidatus* Fidenaria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Retecidota.

Description of *Candidatus* Fidenella bipatax sp. nov.

Candidatus Fidenella bipatax (NL. fem. n. *bipatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-35-9 sp002793435*. The type genome for the species is the GenBank assembly GCA_002793435.1. The GC content of the type genome is 33.2 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Fidenella gen. nov.

Candidatus Fidenella (NL. fem. n. *Fidenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-35-9*. The type species for the genus is *Candidatus* Fidenella bipatax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenellaceae.

Description of *Candidatus* Fidenellaceae fam. nov.

Candidatus Fidenellaceae (NL. fem. n. *Fidenellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-35-9.* The type genus for the taxon is *Candidatus* Fidenella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fidenellales.

Description of *Candidatus* Fidenellales ord. nov.

Candidatus Fidenellales (NL. fem. n. *Fidenellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-35-9.* The type genus for the taxon is *Candidatus* Fidenella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Fidenella intenisca sp. nov.

Candidatus Fidenella intenisca (NL. fem. n. *intenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-35-9 sp000991185*. The type genome for the species is the GenBank assembly GCA_000991185.1. The GC content of the type genome is 33.98 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Fidenia buxaniforma sp. nov.

Candidatus Fidenia buxaniforma (NL. fem. n. *buxaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720975 sp002720975*. The type genome for the species is the GenBank assembly GCA_002720975.1. The GC content of the type genome is 63.98 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Fidenia gen. nov.

Candidatus Fidenia (NL. fem. n. *Fidenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720975*. The type species for the genus is *Candidatus* Fidenia buxaniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Fidenia robigago sp. nov.

Candidatus Fidenia robigago (NL. fem. n. *robigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720975 sp012959525*. The type genome for the species is the GenBank assembly GCA_012959525.1. The GC content of the type genome is 63.93 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Fidenosa aprucatio sp. nov.

Candidatus Fidenosa aprucatio (NL. fem. n. *aprucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1181 sp902784425*. The type genome for the species is the GenBank assembly GCA_902784425.1. The GC content of the type genome is 40.15 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Fidenosa gen. nov.

Candidatus Fidenosa (NL. fem. n. *Fidenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1181*. The type species for the genus is *Candidatus* Fidenosa

aprucatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fidenosa denunitrix sp. nov.

Candidatus Fidenosa denunitrix (NL. fem. n. *denunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1181 sp002310215*. The type genome for the species is the GenBank assembly GCA_002366915.1. The GC content of the type genome is 48.72 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Fidenosa desulivita sp. nov.

Candidatus Fidenosa desulivita (NL. fem. n. *desulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1181 sp902766045*. The type genome for the species is the GenBank assembly GCA_902766045.1. The GC content of the type genome is 38.98 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Fidenosa encomisca sp. nov.

Candidatus Fidenosa encomisca (NL. fem. n. *encomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1181 sp900769555*. The type genome for the species is the GenBank assembly RS_GCF_900769555.1. The GC content of the type genome is 35.46 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Fidenula ensicivita sp. nov.

Candidatus Fidenula ensicivita (NL. fem. n. *ensicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1002 sp012727435*. The type genome for the species is the GenBank assembly GCA_012727435.1. The GC content of the type genome is 53.39 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Fidenula gen. nov.

Candidatus Fidenula (NL. fem. n. *Fidenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1002*. The type species for the genus is *Candidatus* Fidenula ensicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Fidenula obmuritica sp. nov.

Candidatus Fidenula obmuritica (NL. fem. n. *obmuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1002 sp012837425*. The type genome for the species is the GenBank assembly GCA_012837425.1. The GC content of the type genome is 53.87 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Fidenula pinifimonia sp. nov.

Candidatus Fidenula pinifimonia (NL. fem. n. *pinifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1002 sp900547565*. The type genome for the species is the GenBank assembly RS_GCF_900753155.1. The GC content of the type genome is 51.14 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Fiducana defaritoga sp. nov.

Candidatus Fiducana defaritoga (NL. fem. n. *defaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-64-13 sp001800095*. The type genome for the species is the GenBank assembly GCA_001799925.1. The GC content of the type genome is 63.92 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Fiducana gen. nov.

Candidatus Fiducana (NL. fem. n. *Fiducana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-64-13*. The type species for the genus is *Candidatus* Fiducana defaritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocanaceae.

Description of *Candidatus* Fiducaria conarivita sp. nov.

Candidatus Fiducaria conarivita (NL. fem. n. *conarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6927 sp002717725*. The type genome for the species is the GenBank assembly GCA_002450815.1. The GC content of the type genome is 36.82 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Fiducaria gen. nov.

Candidatus Fiducaria (NL. fem. n. *Fiducaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6927*. The type species for the genus is *Candidatus* Fiducaria conarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fiducariaceae.

Description of *Candidatus* Fiducariaceae fam. nov.

Candidatus Fiducariaceae (NL. fem. n. *Fiducariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6927.* The type genus for the taxon is *Candidatus* Fiducaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Defulidales.

Description of *Candidatus* Fiducella effunatica sp. nov.

Candidatus Fiducella effunatica (NL. fem. n. *effunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN23 sp002923335*. The type genome for the species is the GenBank assembly GCA_002923335.1. The GC content of the type genome is 65.62 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Fiducella gen. nov.

Candidatus Fiducella (NL. fem. n. *Fiducella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN23*. The type species for the genus is *Candidatus* Fiducella effunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fiducellaceae.

Description of *Candidatus* Fiducellaceae fam. nov.

Candidatus Fiducellaceae (NL. fem. n. *Fiducellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN23.* The type genus for the taxon is *Candidatus* Fiducella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nivomellales.

Description of *Candidatus* Fiducida benifatica sp. nov.

Candidatus Fiducida benifatica (NL. fem. n. *benifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUY01 sp013003295*. The type genome for the species is the

GenBank assembly GCA_013003295.1. The GC content of the type genome is 47.09 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Fiducida gen. nov.

Candidatus Fiducida (NL. fem. n. *Fiducida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQUY01*. The type species for the genus is *Candidatus* Fiducida benifatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fiducida corocimonia sp. nov.

Candidatus Fiducida corocimonia (NL. fem. n. *corocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUY01 sp003385635*. The type genome for the species is the GenBank assembly GCA_003385625.1. The GC content of the type genome is 53.51 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Fiducida ficulimonas sp. nov.

Candidatus Fiducida ficulimonas (NL. fem. n. *ficulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUY01 sp013003215*. The type genome for the species is the GenBank assembly GCA_013003215.1. The GC content of the type genome is 49.48 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Fiducosa taraxicula sp. nov.

Candidatus Fiducosa taraxicula (NL. fem. n. *taraxicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-11 sp001803465*. The type genome for the species is the GenBank assembly GCA_001803465.1. The GC content of the type genome is 45.66 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2

conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Fiducosa gen. nov.

Candidatus Fiducosa (NL. fem. n. *Fiducosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-11*. The type species for the genus is *Candidatus* Fiducosa taraxicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fiducosaceae.

Description of *Candidatus* Fiducosaceae fam. nov.

Candidatus Fiducosaceae (NL. fem. n. *Fiducosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-45-11.* The type genus for the taxon is *Candidatus* Fiducosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Fiducula nubifitoga sp. nov.

Candidatus Fiducula nubifitoga (NL. fem. n. *nubifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-43-9 sp001818315*. The type genome for the species is the GenBank assembly GCA_001818735.1. The GC content of the type genome is 42.69 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Fiducula gen. nov.

Candidatus Fiducula (NL. fem. n. *Fiducula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WO2-43-9*. The type species for the genus is *Candidatus* Fiducula nubifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-48-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubariaceae.

Description of *Candidatus* Figilana decititoga sp. nov.

Candidatus Figilana decititoga (NL. fem. n. *decititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIODY01 sp903857255*. The type genome for the species is the GenBank assembly GCA_903910525.1. The GC content of the type genome is 35.41 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Figilana gen. nov.

Candidatus Figilana (NL. fem. n. *Figilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIODY01*. The type species for the genus is *Candidatus* Figilana decititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIODY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Figilanaceae.

Description of *Candidatus* Figilanaceae fam. nov.

Candidatus Figilanaceae (NL. fem. n. *Figilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIODY01.* The type genus for the taxon is *Candidatus* Figilana .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Figilana recomicula sp. nov.

Candidatus Figilana recomicula (NL. fem. n. *recomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIODY01 sp903871715*. The type genome for the species is the GenBank assembly GCA_903871715.1. The GC content of the type genome is 35.95 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Figilaria allapago sp. nov.

Candidatus Figilaria allapago (NL. fem. n. *allapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3388 sp002358855*. The type genome for the species is the GenBank assembly GCA_002358855.1. The GC content of the type genome is 32.98 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Figilaria gen. nov.

Candidatus Figilaria (NL. fem. n. *Figilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3388*. The type species for the genus is *Candidatus* Figilaria allapago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Figilaria cetaritia sp. nov.

Candidatus Figilaria cetaritia (NL. fem. n. *cetaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3388 sp004551865*. The type genome for the species is the GenBank assembly GCA_004551865.1. The GC content of the type genome is 42.32 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Figilaria irrelax sp. nov.

Candidatus Figilaria irrelax (NL. fem. n. *irrelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3388 sp002358835*. The type genome for the species is the GenBank assembly GCA_002358835.1. The GC content of the type genome is 37.58 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Figilaria relenastra sp. nov.

Candidatus Figilaria relenastra (NL. fem. n. *relenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3388 sp900545215*. The type genome for the species is the GenBank assembly RS_GCF_900770905.1. The GC content of the type genome is 43.62 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Figilaria resupicula sp. nov.

Candidatus Figilaria resupicula (NL. fem. n. *resupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3388 sp900546465*. The type genome for the species is the GenBank assembly GCA_900546465.1. The GC content of the type genome is 41.55 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Figilella capilicella sp. nov.

Candidatus Figilella capilicella (NL. fem. n. *capilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-1 sp903909505*. The type genome for the species is the GenBank assembly GCA_903909505.1. The GC content of the type genome is 50.75 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Figilella gen. nov.

Candidatus Figilella (NL. fem. n. *Figilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RAAP-1*. The type species for the genus is *Candidatus* Figilella capilicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Figilella colutifica sp. nov.

Candidatus Figilella colutifica (NL. fem. n. *colutifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-1 sp001443525*. The type genome for the species is the GenBank assembly GCA_001443525.1. The GC content of the type genome is 49.94 % and the genome length is 4.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "100% of the reads came from bioreactor sample SAMN04151528".

Description of *Candidatus* Figilella gasifitica sp. nov.

Candidatus Figilella gasifitica (NL. fem. n. *gasifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-1 sp903953895*. The type genome for the species is the GenBank assembly GCA_903955365.1. The GC content of the type genome is 50.11 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Figilella regifimonia sp. nov.

Candidatus Figilella regifimonia (NL. fem. n. *regifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-1 sp903839535*. The type genome for the species is the GenBank assembly GCA_903828875.1. The GC content of the type genome is 47.26 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Figilia acratugo sp. nov.

Candidatus Figilia acratugo (NL. fem. n. *acratugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp009774215*. The type genome for the species is the GenBank assembly GCA_009774215.1. The GC content of the type genome is 49.69 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Figilia gen. nov.

Candidatus Figilia (NL. fem. n. *Figilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3282*. The type species for the genus is *Candidatus* Figilia acratugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Figilia arbavessa sp. nov.

Candidatus Figilia arbavessa (NL. fem. n. *arbavessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002492725*. The type genome for the species is the GenBank assembly GCA_002492725.1. The GC content of the type genome is 49.24 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Figilia bigaretta sp. nov.

Candidatus Figilia bigaretta (NL. fem. n. *bigaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002492525*. The type genome for the species is the GenBank assembly GCA_002493035.1. The GC content of the type genome is 44.69 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Figilia corocitia sp. nov.

Candidatus Figilia corocitia (NL. fem. n. *corocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp009774655*. The type genome for the species is the GenBank assembly GCA_009774655.1. The GC content of the type genome is 49.19 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Figilia decinicula sp. nov.

Candidatus Figilia decinicula (NL. fem. n. *decinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002493835*. The type genome for the species is the GenBank assembly GCA_002493835.1. The GC content of the type genome is 46.1 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Figilia expugago sp. nov.

Candidatus Figilia expugago (NL. fem. n. *expugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002361735*. The type genome for the species is the GenBank assembly GCA_002361735.1. The GC content of the type genome is 49.1 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Figilia galacatica sp. nov.

Candidatus Figilia galacatica (NL. fem. n. *galacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002490835*. The type genome for the species is the GenBank assembly GCA_002490835.1. The GC content of the type genome is 49.35 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Figilia istinilega sp. nov.

Candidatus Figilia istinilega (NL. fem. n. *istinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002491905*. The type genome for the species is the GenBank assembly GCA_002491905.1. The GC content of the type genome is 49.75 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Figilia lametilenta sp. nov.

Candidatus Figilia lametilenta (NL. fem. n. *lametilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002490705*. The type genome for the species is the GenBank assembly GCA_002491275.1. The GC content of the type genome is 48.71 %

and the genome length is 3.31 Mbp.

Description of *Candidatus* Figilia ludifatio sp. nov.

Candidatus Figilia ludifatio (NL. fem. n. *ludifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp003611805*. The type genome for the species is the GenBank assembly GCA_009774265.1. The GC content of the type genome is 49.09 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Figilia obvaligena sp. nov.

Candidatus Figilia obvaligena (NL. fem. n. *obvaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp003612405*. The type genome for the species is the GenBank assembly RS_GCF_003612405.1. The GC content of the type genome is 45.66 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Figilia oppugitio sp. nov.

Candidatus Figilia oppugitio (NL. fem. n. *oppugitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp009774585*. The type genome for the species is the GenBank assembly GCA_009774585.1. The GC content of the type genome is 44.33 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Figilia rurigicula sp. nov.

Candidatus Figilia rurigicula (NL. fem. n. *rurigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp002361355*. The type genome for the species is the GenBank assembly GCA_002361355.1. The GC content of the type genome is 48.99 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Figilia tubicitio sp. nov.

Candidatus Figilia tubicitio (NL. fem. n. *tubicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp009774175*. The type genome for the species is the GenBank assembly GCA_009774175.1. The GC content of the type genome is 48.58 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Figilia urbicago sp. nov.

Candidatus Figilia urbicago (NL. fem. n. *urbicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3282 sp009774575*. The type genome for the species is the GenBank assembly GCA_009774575.1. The GC content of the type genome is 48.54 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Figilida subacimonas sp. nov.

Candidatus Figilida subacimonas (NL. fem. n. *subacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-41-6 sp000997355*. The type genome for the species is the GenBank assembly GCA_000997495.1. The GC content of the type genome is 41.29 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Figilida gen. nov.

Candidatus Figilida (NL. fem. n. *Figilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-41-6*. The type species for the genus is *Candidatus* Figilida subacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Figilosa holisago sp. nov.

Candidatus Figilosa holisago (NL. fem. n. *holisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWXQ01 sp903916675*. The type genome for the species is the GenBank assembly GCA_903916675.1. The GC content of the type genome is 63.84 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Figilosa gen. nov.

Candidatus Figilosa (NL. fem. n. *Figilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWXQ01*. The type species for the genus is *Candidatus* Figilosa holisago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenariaceae.

Description of *Candidatus* Figilosa visifitura sp. nov.

Candidatus Figilosa visifitura (NL. fem. n. *visifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWXQ01 sp903861045*. The type genome for the species is the GenBank assembly GCA_903861045.1. The GC content of the type genome is 62.34 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Figilula nugigousia sp. nov.

Candidatus Figilula nugigousia (NL. fem. n. *nugigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5755 sp002419005*. The type genome for the species is the GenBank assembly GCA_002419005.1. The GC content of the type genome is 42.15 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Figilula gen. nov.

Candidatus Figilula (NL. fem. n. *Figilula* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5755*. The type species for the genus is *Candidatus* Figilula nugigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5755*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Figilulaceae.

Description of *Candidatus* Figilulaceae fam. nov.

Candidatus Figilulaceae (NL. fem. n. *Figilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5755.* The type genus for the taxon is *Candidatus* Figilula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Divulosales.

Description of *Candidatus* Filifana apogricula sp. nov.

Candidatus Filifana apogricula (NL. fem. n. *apogricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp902773085*. The type genome for the species is the GenBank assembly GCA_902773085.1. The GC content of the type genome is 27.88 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Filifana gen. nov.

Candidatus Filifana (NL. fem. n. *Filifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7642*. The type species for the genus is *Candidatus* Filifana apogricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Filifana atricicula sp. nov.

Candidatus Filifana atricicula (NL. fem. n. *atricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900763245*. The type genome for the species is the GenBank assembly RS_GCF_900763245.1. The GC content of the type genome is 40.99 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Filifana bigementia sp. nov.

Candidatus Filifana bigementia (NL. fem. n. *bigementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp002297045*. The type genome for the species is the GenBank assembly GCA_002451385.1. The GC content of the type genome is 45.79 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Filifana catilimonia sp. nov.

Candidatus Filifana catilimonia (NL. fem. n. *catilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp002399505*. The type genome for the species is the GenBank assembly GCA_002399505.1. The GC content of the type genome is 41.29 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Filifana cetarigena sp. nov.

Candidatus Filifana cetarigena (NL. fem. n. *cetarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900549915*. The type genome for the species is the GenBank assembly GCA_900549915.1. The GC content of the type genome is 41.99 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Filifana diponibra sp. nov.

Candidatus Filifana diponibra (NL. fem. n. *diponibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900316035*. The type genome for the species is the GenBank assembly GCA_002481535.1. The GC content of the type genome is 45.46 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Filifana divolilega sp. nov.

Candidatus Filifana divolilega (NL. fem. n. *divolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp002404835*. The type genome for the species is the GenBank assembly GCA_002404835.1. The GC content of the type genome is 41.24 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Filifana foricedo sp. nov.

Candidatus Filifana foricedo (NL. fem. n. *foricedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp002483745*. The type genome for the species is the GenBank assembly GCA_002408745.1. The GC content of the type genome is 37.57 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Filifana nugivax sp. nov.

Candidatus Filifana nugivax (NL. fem. n. *nugivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp002404995*. The type genome for the species is the GenBank assembly GCA_002404995.1. The GC content of the type genome is 42.58 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Filifana rarefax sp. nov.

Candidatus Filifana rarefax (NL. fem. n. *rarefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7642 sp902771745*. The type genome for the species is the GenBank assembly GCA_902771745.1. The GC content of the type genome is 40.72 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Filifana robigastra sp. nov.

Candidatus Filifana robigastra (NL. fem. n. *robigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900539865*. The type genome for the species is the GenBank assembly GCA_900539865.1. The GC content of the type genome is 38.21 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Filifana tabifibra sp. nov.

Candidatus Filifana tabifibra (NL. fem. n. *tabifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900313465*. The type genome for the species is the GenBank assembly GCA_902757505.1. The GC content of the type genome is 40.43 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Filifana vitigedo sp. nov.

Candidatus Filifana vitigedo (NL. fem. n. *vitigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7642 sp900770925*. The type genome for the species is the GenBank assembly RS_GCF_900770925.1. The GC content of the type genome is 44.08 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Filifaria amercessa sp. nov.

Candidatus Filifaria amercessa (NL. fem. n. *amercessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA160-P02 sp000383355*. The type genome for the species is the GenBank assembly GCA_000383355.1. The GC content of the type genome is 31.79 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Filifaria gen. nov.

Candidatus Filifaria (NL. fem. n. *Filifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AAA160-P02*. The type species for the genus is *Candidatus* Filifaria amercessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Filifaria antevilenta sp. nov.

Candidatus Filifaria antevilenta (NL. fem. n. *antevilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA160-P02 sp013214275*. The type genome for the species is the GenBank assembly GCA_013214275.1. The GC content of the type genome is 37.0 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Filifaria bucelitica sp. nov.

Candidatus Filifaria bucelitica (NL. fem. n. *bucelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA160-P02 sp014075215*. The type genome for the species is the GenBank assembly GCA_011087845.1. The GC content of the type genome is 34.24 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Filifella necopitas sp. nov.

Candidatus Filifella necopitas (NL. fem. n. *necopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-43-38 sp000997105*. The type genome for the species is the GenBank assembly GCA_000997105.1. The GC content of the type genome is 42.16 % and the genome length is 0.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Filifella gen. nov.

Candidatus Filifella (NL. fem. n. *Filifella* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-43-38*. The type species for the genus is *Candidatus* Filifella necopitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Filifia armififorma sp. nov.

Candidatus Filifia armififorma (NL. fem. n. *armififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp002320005*. The type genome for the species is the GenBank assembly GCA_002320005.1. The GC content of the type genome is 43.57 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Filifia gen. nov.

Candidatus Filifia (NL. fem. n. *Filifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-145*. The type species for the genus is *Candidatus* Filifia armififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Filifia butubiforma sp. nov.

Candidatus Filifia butubiforma (NL. fem. n. *butubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp900545135*. The type genome for the species is the GenBank assembly GCA_900545135.1. The GC content of the type genome is 46.39 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Filifia imbelitrix sp. nov.

Candidatus Filifia imbelitrix (NL. fem. n. *imbelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp003150015*. The type genome for the species is the GenBank assembly GCA_003150015.1. The GC content of the type genome is 41.85 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Filifia incenastra sp. nov.

Candidatus Filifia incenastra (NL. fem. n. *incenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp900542565*. The type genome for the species is the GenBank assembly GCA_900542565.1. The GC content of the type genome is 47.64 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Filifia metucastra sp. nov.

Candidatus Filifia metucastra (NL. fem. n. *metucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp900542295*. The type genome for the species is the GenBank assembly GCA_900542295.1. The GC content of the type genome is 39.42 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Filifia pulegicula sp. nov.

Candidatus Filifia pulegicula (NL. fem. n. *pulegicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp900754795*. The type genome for the species is the GenBank assembly RS_GCF_900754795.1. The GC content of the type genome is 48.04 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Filifia tenemago sp. nov.

Candidatus Filifia tenemago (NL. fem. n. *tenemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-145 sp000435715*. The type genome for the species is the GenBank assembly GCA_000435715.1. The GC content of the type genome is 45.35 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Filifia vanitago sp. nov.

Candidatus Filifia vanitago (NL. fem. n. *vanitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-145 sp900540145*. The type genome for the species is the GenBank assembly GCA_900540145.1. The GC content of the type genome is 41.86 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Filifosa advigago sp. nov.

Candidatus Filifosa advigago (NL. fem. n. *advigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp007130585*. The type genome for the species is the GenBank assembly GCA_007130585.1. The GC content of the type genome is 51.79 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Filifosa gen. nov.

Candidatus Filifosa (NL. fem. n. *Filifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3SED10-7*. The type species for the genus is *Candidatus* Filifosa advigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Filifosa armifitura sp. nov.

Candidatus Filifosa armifitura (NL. fem. n. *armifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *T3SED10-7 sp007136055*. The type genome for the species is the GenBank assembly GCA_007136055.1. The GC content of the type genome is 46.51 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Filifosa cituvivita sp. nov.

Candidatus Filifosa cituvivita (NL. fem. n. *cituvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp007119965*. The type genome for the species is the GenBank assembly GCA_007128785.1. The GC content of the type genome is 50.27 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Filifosa doxoligena sp. nov.

Candidatus Filifosa doxoligena (NL. fem. n. *doxoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp003566935*. The type genome for the species is the GenBank assembly GCA_003566935.1. The GC content of the type genome is 46.37 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Filifosa ludibetta sp. nov.

Candidatus Filifosa ludibetta (NL. fem. n. *ludibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp007127255*. The type genome for the species is the GenBank assembly GCA_003561605.1. The GC content of the type genome is 45.39 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Filifosa necopigena sp. nov.

Candidatus Filifosa necopigena (NL. fem. n. *necopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp007126465*. The type genome for the species is the GenBank assembly GCA_007126465.1. The GC content of the type genome is 47.72 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Filifosa nutamilenta sp. nov.

Candidatus Filifosa nutamilenta (NL. fem. n. *nutamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp003564055*. The type genome for the species is the GenBank assembly GCA_003564055.1. The GC content of the type genome is 45.68 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Filifosa sataciforma sp. nov.

Candidatus Filifosa sataciforma (NL. fem. n. *sataciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-7 sp003564505*. The type genome for the species is the GenBank assembly GCA_003564505.1. The GC content of the type genome is 44.87 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Filimonas betacentia sp. nov.

Candidatus Filimonas betacentia (NL. fem. n. *betacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Filimonas sp003097095*. The type genome for the species is the GenBank assembly RS_GCF_003097095.1. The GC content of the type genome is 44.81 % and the genome length is 7.78 Mbp.

Description of *Candidatus* Filomicrobium chernitrix sp. nov.

Candidatus Filomicrobium chernitrix (NL. fem. n. *chernitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Filomicrobium sp001516065*. The type genome for the species is the GenBank assembly GCA_001516065.1. The GC content of the type genome is 60.4 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Fimbriimonas adsicugo sp. nov.

Candidatus Fimbriimonas adsicugo (NL. fem. n. *adsicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp002336105*. The type genome for the species is the GenBank assembly GCA_002336105.1. The GC content of the type genome is 50.49 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Fimbriimonas benepitica sp. nov.

Candidatus Fimbriimonas benepitica (NL. fem. n. *benepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp903833215*. The type genome for the species is the GenBank assembly GCA_903910415.1. The GC content of the type genome is 53.77 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Fimbriimonas cerofifica sp. nov.

Candidatus Fimbriimonas cerofifica (NL. fem. n. *cerofifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp903899015*. The type genome for the species is the GenBank assembly GCA_903913995.1. The GC content of the type genome is 51.12 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Fimbriimonas culigitudo sp. nov.

Candidatus Fimbriimonas culigitudo (NL. fem. n. *culigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp903904815*. The type genome for the species is the GenBank assembly GCA_903904815.1. The GC content of the type genome is 56.53 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Fimbriimonas papilastra sp. nov.

Candidatus Fimbriimonas papilastra (NL. fem. n. *papilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp903927345*. The type genome for the species is the GenBank assembly GCA_903927345.1. The GC content of the type genome is 54.53 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Fimbriimonas televitas sp. nov.

Candidatus Fimbriimonas televitas (NL. fem. n. *televitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fimbriimonas sp903927025*. The type genome for the species is the GenBank assembly GCA_903919575.1. The GC content of the type genome is 55.66 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Finegoldia embamicula sp. nov.

Candidatus Finegoldia embamicula (NL. fem. n. *embamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Finegoldia sp900766215*. The type genome for the species is the GenBank assembly GCA_900766215.1. The GC content of the type genome is 31.78 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Finniella resurimonia sp. nov.

Candidatus Finniella resurimonia (NL. fem. n. *resurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Finniella sp903905285*. The type genome for the species is the GenBank assembly GCA_903821505.1. The GC content of the type genome is 43.06 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Fischerella homicisca sp. nov.

Candidatus Fischerella homicisca (NL. fem. n. *homicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fischerella sp000447295*. The type genome for the species is the GenBank assembly RS_GCF_001275395.1. The GC content of the type genome is 40.21

% and the genome length is 7.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater reservoir".

Description of *Candidatus* Fischerella inpenedo sp. nov.

Candidatus Fischerella inpenedo (NL. fem. n. *inpenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fischerella sp002368315*. The type genome for the species is the GenBank assembly RS_GCF_002368315.1. The GC content of the type genome is 40.03 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Fischerella pedepitia sp. nov.

Candidatus Fischerella pedepitia (NL. fem. n. *pedepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fischerella sp000517105*. The type genome for the species is the GenBank assembly GCA_013388695.1. The GC content of the type genome is 42.54 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Flammeovirga excamedo sp. nov.

Candidatus Flammeovirga excamedo (NL. fem. n. *excamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flammeovirga sp014534745*. The type genome for the species is the GenBank assembly RS_GCF_014534745.1. The GC content of the type genome is 34.76 % and the genome length is 8.0 Mbp.

Description of *Candidatus* Flammeovirga invinicula sp. nov.

Candidatus Flammeovirga invinicula (NL. fem. n. *invinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flammeovirga sp012641475*. The type genome for the species is the GenBank assembly RS_GCF_012641475.1. The GC content of the type genome is 34.2 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Flammeovirga retunitura sp. nov.

Candidatus Flammeovirga retunitura (NL. fem. n. *retunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flammeovirga sp001583495*. The type genome for the species is the GenBank assembly RS_GCF_001583495.1. The GC content of the type genome is 34.8 % and the genome length is 8.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Flammeovirga semimax sp. nov.

Candidatus Flammeovirga semimax (NL. fem. n. *semimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flammeovirga sp000812565*. The type genome for the species is the GenBank assembly RS_GCF_000812565.1. The GC content of the type genome is 34.87 % and the genome length is 8.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea".

Description of *Candidatus* Flaviaesturariibacter ancepitrix sp. nov.

Candidatus Flaviaesturariibacter ancepitrix (NL. fem. n. *ancepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviaesturariibacter sp004337505*. The type genome for the species is the GenBank assembly RS_GCF_004337505.1. The GC content of the type genome is 57.65 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Flaviaesturariibacter innasitura sp. nov.

Candidatus Flaviaesturariibacter innasitura (NL. fem. n. *innasitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviaesturariibacter sp004173235*. The type genome for the species is the GenBank assembly GCA_004173235.1. The GC content of the type genome is 56.65 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Flaviaesturariibacter insuredo sp. nov.

Candidatus Flaviaesturariibacter insuredo (NL. fem. n. *insuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviaesturariibacter sp004343705*. The type genome for the species is the GenBank assembly RS_GCF_004343705.1. The GC content of the type genome is 59.34 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Flavicella catecatio sp. nov.

Candidatus Flavicella catecatio (NL. fem. n. *catecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavicella sp002477565*. The type genome for the species is the GenBank assembly GCA_002477565.1. The GC content of the type genome is 41.08 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Flaviflexus agnicitrix sp. nov.

Candidatus Flaviflexus agnicitrix (NL. fem. n. *agnicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviflexus sp003971195*. The type genome for the species is the GenBank assembly RS_GCF_003971195.1. The GC content of the type genome is 59.47 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Flaviflexus mirabitica sp. nov.

Candidatus Flaviflexus mirabitica (NL. fem. n. *mirabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviflexus sp014069875*. The type genome for the species is the GenBank assembly RS_GCF_014525475.1. The GC content of the type genome is 63.05 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Flavihumibacter affunedo sp. nov.

Candidatus Flavihumibacter affunedo (NL. fem. n. *affunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavihumibacter sp014379785*. The type genome for the species is the GenBank assembly GCA_014379785.1. The GC content of the type genome is 45.67 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Flavihumibacter cerebessa sp. nov.

Candidatus Flavihumibacter cerebessa (NL. fem. n. *cerebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavihumibacter sp004295245*. The type genome for the species is the GenBank assembly GCA_004295245.1. The GC content of the type genome is 39.73 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Flavihumibacter dedigivita sp. nov.

Candidatus Flavihumibacter dedigivita (NL. fem. n. *dedigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavihumibacter sp014380425*. The type genome for the species is the GenBank assembly GCA_014380425.1. The GC content of the type genome is 44.31 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Flavihumibacter extoritura sp. nov.

Candidatus Flavihumibacter extoritura (NL. fem. n. *extoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavihumibacter sp002483205*. The type genome for the species is the GenBank assembly GCA_002483205.1. The GC content of the type genome is 42.6 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Flavihumibacter indecicula sp. nov.

Candidatus Flavihumibacter indecicula (NL. fem. n. *indecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavihumibacter sp000814325*. The type genome for the species is the GenBank assembly RS_GCF_000814325.1. The GC content of the type genome is 43.35 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coal mine powder".

Description of *Candidatus* Flavihumibacter refocousia sp. nov.

Candidatus Flavihumibacter refocousia (NL. fem. n. *refocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavihumibacter sp001601815*. The type genome for the species is the GenBank assembly GCA_001601815.1. The GC content of the type genome is 44.98 % and the genome length is 4.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "CACIAM 22 non-axenic culture of unicellular cyanobacterium started from water sample from Bolonha Lake".

Description of *Candidatus* Flavimaricola intamessa sp. nov.

Candidatus Flavimaricola intamessa (NL. fem. n. *intamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavimaricola sp004000435*. The type genome for the species is the GenBank assembly RS_GCF_004000435.1. The GC content of the type genome is 63.31 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Flavimobilis carecitas sp. nov.

Candidatus Flavimobilis carecitas (NL. fem. n. *carecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavimobilis sp011300875*. The type genome for the species is the GenBank assembly RS_GCF_011300875.1. The GC content of the type genome is 72.31 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Flavipsychrobacter admigedo sp. nov.

Candidatus Flavipsychrobacter admigedo (NL. fem. n. *admigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903881585*. The type genome for the species is the GenBank assembly GCA_903881585.1. The GC content of the type genome is 45.98 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Flavipsychrobacter adnunessa sp. nov.

Candidatus Flavipsychrobacter adnunessa (NL. fem. n. *adnunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013285905*. The type genome for the species is the GenBank assembly GCA_013285905.1. The GC content of the type genome is 41.37 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Flavipsychrobacter adrenentia sp. nov.

Candidatus Flavipsychrobacter adrenentia (NL. fem. n. *adrenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp001897835*. The type genome for the species is the GenBank assembly GCA_001897835.1. The GC content of the type genome is 45.58 % and the genome length is 4.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Flavipsychrobacter ambusicula sp. nov.

Candidatus Flavipsychrobacter ambusicula (NL. fem. n. *ambusicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002423665*. The type genome for the species is the GenBank assembly GCA_002423665.1. The GC content of the type genome is 44.25 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Flavipsychrobacter atlanilega sp. nov.

Candidatus Flavipsychrobacter atlanilega (NL. fem. n. *atlanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903882965*. The type genome for the species is the GenBank assembly GCA_903882965.1. The GC content of the type genome is 41.01 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Flavipsychrobacter biveritas sp. nov.

Candidatus Flavipsychrobacter biveritas (NL. fem. n. *biveritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903853805*. The type genome for the species is the GenBank assembly GCA_903828935.1. The GC content of the type genome is 37.19 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Flavipsychrobacter blactitio sp. nov.

Candidatus Flavipsychrobacter blactitio (NL. fem. n. *blactitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp014377675*. The type genome for the species is the GenBank assembly GCA_014377675.1. The GC content of the type genome is 44.02 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Flavipsychrobacter chernitia sp. nov.

Candidatus Flavipsychrobacter chernitia (NL. fem. n. *chernitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp902168085*. The type genome for the species is the GenBank assembly GCA_902168085.1. The GC content of the type genome is 44.59 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Flavipsychrobacter denigivita sp. nov.

Candidatus Flavipsychrobacter denigivita (NL. fem. n. *denigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903824665*. The type genome for the species is the GenBank assembly GCA_903950175.1. The GC content of the type genome is 46.95 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Flavipsychrobacter derecicula sp. nov.

Candidatus Flavipsychrobacter derecicula (NL. fem. n. *derecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002127285*. The type genome for the species is the GenBank assembly RS_GCF_002127285.1. The GC content of the type genome is

42.65 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Flavipsychrobacter dereligena sp. nov.

Candidatus Flavipsychrobacter dereligena (NL. fem. n. *dereligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013287555*. The type genome for the species is the GenBank assembly GCA_013287555.1. The GC content of the type genome is 42.51 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Flavipsychrobacter detosastra sp. nov.

Candidatus Flavipsychrobacter detosastra (NL. fem. n. *detosastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903929655*. The type genome for the species is the GenBank assembly GCA_903929655.1. The GC content of the type genome is 40.39 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Flavipsychrobacter detotitoga sp. nov.

Candidatus Flavipsychrobacter detotitoga (NL. fem. n. *detotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903851455*. The type genome for the species is the GenBank assembly GCA_903851455.1. The GC content of the type genome is 47.1 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Flavipsychrobacter detumifica sp. nov.

Candidatus Flavipsychrobacter detumifica (NL. fem. n. *detumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903839875*. The type genome for the species is the GenBank assembly GCA_903899265.1. The GC content of the type genome is 42.81 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Flavipsychrobacter encomitica sp. nov.

Candidatus Flavipsychrobacter encomitica (NL. fem. n. *encomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013288285*. The type genome for the species is the GenBank assembly GCA_013288285.1. The GC content of the type genome is 46.03 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Flavipsychrobacter essonisca sp. nov.

Candidatus Flavipsychrobacter essonisca (NL. fem. n. *essonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp001897855*. The type genome for the species is the GenBank assembly GCA_001897855.1. The GC content of the type genome is 42.91 % and the genome length is 3.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Flavipsychrobacter essonousia sp. nov.

Candidatus Flavipsychrobacter essonousia (NL. fem. n. *essonousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013815385*. The type genome for the species is the GenBank assembly GCA_013815385.1. The GC content of the type genome is 43.2 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Flavipsychrobacter exorcousia sp. nov.

Candidatus Flavipsychrobacter exorcousia (NL. fem. n. *exorcousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903882805*. The type genome for the species is the GenBank assembly GCA_903882805.1. The GC content of the type genome is 44.28 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Flavipsychrobacter exsisessa sp. nov.

Candidatus Flavipsychrobacter exsisessa (NL. fem. n. *exsisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903906615*. The type genome for the species is the GenBank assembly GCA_903906615.1. The GC content of the type genome is 47.66 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Flavipsychrobacter fumificula sp. nov.

Candidatus Flavipsychrobacter fumificula (NL. fem. n. *fumificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002336915*. The type genome for the species is the GenBank assembly GCA_002336915.1. The GC content of the type genome is 45.7 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Flavipsychrobacter hibisousia sp. nov.

Candidatus Flavipsychrobacter hibisousia (NL. fem. n. *hibisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903835005*. The type genome for the species is the GenBank assembly GCA_903889375.1. The GC content of the type genome is 42.19 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Flavipsychrobacter immemetta sp. nov.

Candidatus Flavipsychrobacter immemetta (NL. fem. n. *immemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903887005*. The type genome for the species is the GenBank assembly GCA_903887005.1. The GC content of the type genome is 39.9 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Flavipsychrobacter immuritia sp. nov.

Candidatus Flavipsychrobacter immuritia (NL. fem. n. *immuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013285595*. The type genome for the species is the GenBank assembly GCA_013285595.1. The GC content of the type genome is 45.13

% and the genome length is 2.93 Mbp.

Description of *Candidatus* Flavipsychrobacter indilastra sp. nov.

Candidatus Flavipsychrobacter indilastra (NL. fem. n. *indilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp004144175*. The type genome for the species is the GenBank assembly GCA_004144175.1. The GC content of the type genome is 46.02 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Flavipsychrobacter indirimonas sp. nov.

Candidatus Flavipsychrobacter indirimonas (NL. fem. n. *indirimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903903635*. The type genome for the species is the GenBank assembly GCA_903903635.1. The GC content of the type genome is 41.95 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Flavipsychrobacter indubatio sp. nov.

Candidatus Flavipsychrobacter indubatio (NL. fem. n. *indubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002421685*. The type genome for the species is the GenBank assembly GCA_002421685.1. The GC content of the type genome is 46.1 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Flavipsychrobacter indupifica sp. nov.

Candidatus Flavipsychrobacter indupifica (NL. fem. n. *indupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903926605*. The type genome for the species is the GenBank assembly GCA_903926605.1. The GC content of the type genome is 46.48 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Flavipsychrobacter inmoditoga sp. nov.

Candidatus Flavipsychrobacter inmoditoga (NL. fem. n. *inmoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903929195*. The type genome for the species is the GenBank assembly GCA_903929195.1. The GC content of the type genome is 32.56 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Flavipsychrobacter inpudimonia sp. nov.

Candidatus Flavipsychrobacter inpudimonia (NL. fem. n. *inpudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013288445*. The type genome for the species is the GenBank assembly GCA_013288445.1. The GC content of the type genome is 45.4 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Flavipsychrobacter inretessa sp. nov.

Candidatus Flavipsychrobacter inretessa (NL. fem. n. *inretessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903821975*. The type genome for the species is the GenBank assembly GCA_903821975.1. The GC content of the type genome is 44.08 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Flavipsychrobacter lanugifica sp. nov.

Candidatus Flavipsychrobacter lanugifica (NL. fem. n. *lanugifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002389765*. The type genome for the species is the GenBank assembly GCA_002389765.1. The GC content of the type genome is 42.29 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Flavipsychrobacter lucelatica sp. nov.

Candidatus Flavipsychrobacter lucelatica (NL. fem. n. *lucelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903829015*. The type genome for the species is the GenBank assembly GCA_903920285.1. The GC content of the type genome is 43.75 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Flavipsychrobacter lucubilenta sp. nov.

Candidatus Flavipsychrobacter lucubilenta (NL. fem. n. *lucubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013286835*. The type genome for the species is the GenBank assembly GCA_013287035.1. The GC content of the type genome is 42.27 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Flavipsychrobacter maledicella sp. nov.

Candidatus Flavipsychrobacter maledicella (NL. fem. n. *maledicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903904855*. The type genome for the species is the GenBank assembly GCA_903831985.1. The GC content of the type genome is 41.74 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Flavipsychrobacter meridimonas sp. nov.

Candidatus Flavipsychrobacter meridimonas (NL. fem. n. *meridimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903905065*. The type genome for the species is the GenBank assembly GCA_903906415.1. The GC content of the type genome is 46.15 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Flavipsychrobacter nidifigena sp. nov.

Candidatus Flavipsychrobacter nidifigena (NL. fem. n. *nidifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp900299255*. The type genome for the species is the GenBank assembly GCA_900299255.1. The GC content of the type genome is 44.61

% and the genome length is 3.47 Mbp.

Description of *Candidatus* Flavipsychrobacter noninicula sp. nov.

Candidatus Flavipsychrobacter noninicula (NL. fem. n. *noninicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002483105*. The type genome for the species is the GenBank assembly GCA_002483105.1. The GC content of the type genome is 43.94 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Flavipsychrobacter pecunastra sp. nov.

Candidatus Flavipsychrobacter pecunastra (NL. fem. n. *pecunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013286485*. The type genome for the species is the GenBank assembly GCA_013286485.1. The GC content of the type genome is 38.68 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Flavipsychrobacter peripitio sp. nov.

Candidatus Flavipsychrobacter peripitio (NL. fem. n. *peripitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903877645*. The type genome for the species is the GenBank assembly GCA_903909445.1. The GC content of the type genome is 46.3 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Flavipsychrobacter recocatio sp. nov.

Candidatus Flavipsychrobacter recocatio (NL. fem. n. *recocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903916555*. The type genome for the species is the GenBank assembly GCA_903916555.1. The GC content of the type genome is 32.6 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Flavipsychrobacter sugilitoga sp. nov.

Candidatus Flavipsychrobacter sugilitoga (NL. fem. n. *sugilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903835145*. The type genome for the species is the GenBank assembly GCA_903900985.1. The GC content of the type genome is 44.0 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Flavipsychrobacter tirocugo sp. nov.

Candidatus Flavipsychrobacter tirocugo (NL. fem. n. *tirocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp013289355*. The type genome for the species is the GenBank assembly GCA_013289355.1. The GC content of the type genome is 42.36 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Flavipsychrobacter tirunitrix sp. nov.

Candidatus Flavipsychrobacter tirunitrix (NL. fem. n. *tirunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903905685*. The type genome for the species is the GenBank assembly GCA_903905685.1. The GC content of the type genome is 50.83 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Flavipsychrobacter vehicifica sp. nov.

Candidatus Flavipsychrobacter vehicifica (NL. fem. n. *vehicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp903887415*. The type genome for the species is the GenBank assembly GCA_903887415.1. The GC content of the type genome is 45.65 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Flavipsychrobacter volucentia sp. nov.

Candidatus Flavipsychrobacter volucentia (NL. fem. n. *volucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavipsychrobacter sp002337045*. The type genome for the species is the GenBank assembly GCA_002337045.1. The GC content of the type genome is 41.98 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Flaviramulus aciscicella sp. nov.

Candidatus Flaviramulus aciscicella (NL. fem. n. *aciscicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviramulus sp013001275*. The type genome for the species is the GenBank assembly GCA_013001275.1. The GC content of the type genome is 32.05 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Flaviramulus aglasousia sp. nov.

Candidatus Flaviramulus aglasousia (NL. fem. n. *aglasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviramulus_A sp009498295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009498295.1. The GC content of the type genome is 34.96 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Flaviramulus vecorisca sp. nov.

Candidatus Flaviramulus vecorisca (NL. fem. n. *vecorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flaviramulus_A sp002741945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002741945.1. The GC content of the type genome is 31.56 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Flavisolibacter caselugo sp. nov.

Candidatus Flavisolibacter caselugo (NL. fem. n. *caselugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavisolibacter sp014163555*. The type genome for the species is the GenBank assembly RS_GCF_014163555.1. The GC content of the type genome is 47.17 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Flavisolibacter excarimonas sp. nov.

Candidatus Flavisolibacter excarimonas (NL. fem. n. *excarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavisolibacter sp003628535*. The type genome for the species is the GenBank assembly RS_GCF_003628535.1. The GC content of the type genome is 49.71 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Flavisolibacter peracatica sp. nov.

Candidatus Flavisolibacter peracatica (NL. fem. n. *peracatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavisolibacter sp013327885*. The type genome for the species is the GenBank assembly RS_GCF_013327885.1. The GC content of the type genome is 48.34 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Flavisolibacter utillax sp. nov.

Candidatus Flavisolibacter utillax (NL. fem. n. *utillax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavisolibacter sp002050435*. The type genome for the species is the GenBank assembly GCA_002050435.1. The GC content of the type genome is 41.8 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Flavivirga penecivita sp. nov.

Candidatus Flavivirga penecivita (NL. fem. n. *penecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavivirga sp012910715*. The type genome for the species is the GenBank assembly RS_GCF_012910715.1. The GC content of the type genome is 33.51

% and the genome length is 5.03 Mbp.

Description of *Candidatus* Flavobacterium abanticella sp. nov.

Candidatus Flavobacterium abanticella (NL. fem. n. *abanticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001975985*. The type genome for the species is the GenBank assembly RS_GCF_001975985.1. The GC content of the type genome is 33.26 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Flavobacterium abnoritas sp. nov.

Candidatus Flavobacterium abnoritas (NL. fem. n. *abnoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004122105*. The type genome for the species is the GenBank assembly RS_GCF_004122105.1. The GC content of the type genome is 39.44 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Flavobacterium absuretta sp. nov.

Candidatus Flavobacterium absuretta (NL. fem. n. *absuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002483315*. The type genome for the species is the GenBank assembly GCA_002483315.1. The GC content of the type genome is 32.16 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Flavobacterium accucugo sp. nov.

Candidatus Flavobacterium accucugo (NL. fem. n. *accucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp014281985*. The type genome for the species is the GenBank assembly RS_GCF_014281985.1. The GC content of the type genome is 31.86 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Flavobacterium adfunibula sp. nov.

Candidatus Flavobacterium adfunibula (NL. fem. n. *adfunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002001005*. The type genome for the species is the GenBank assembly RS_GCF_002001005.1. The GC content of the type genome is 34.35 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Flavobacterium adgesitas sp. nov.

Candidatus Flavobacterium adgesitas (NL. fem. n. *adgesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000708595*. The type genome for the species is the GenBank assembly RS_GCF_000708595.2. The GC content of the type genome is 33.26 % and the genome length is 4.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Flavobacterium admodiforma sp. nov.

Candidatus Flavobacterium admodiforma (NL. fem. n. *admodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000744835*. The type genome for the species is the GenBank assembly RS_GCF_000744835.1. The GC content of the type genome is 33.3 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Flavobacterium adselicella sp. nov.

Candidatus Flavobacterium adselicella (NL. fem. n. *adselicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007109225*. The type genome for the species is the GenBank assembly RS_GCF_007109225.1. The GC content of the type genome is 37.58 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Flavobacterium agricigena sp. nov.

Candidatus Flavobacterium agricigena (NL. fem. n. *agricigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009711135*. The type genome for the species is the GenBank assembly RS_GCF_009711135.1. The GC content of the type genome is 33.9 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Flavobacterium alismitas sp. nov.

Candidatus Flavobacterium alismitas (NL. fem. n. *alismitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004016525*. The type genome for the species is the GenBank assembly RS_GCF_004016525.1. The GC content of the type genome is 34.21 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Flavobacterium ancipitas sp. nov.

Candidatus Flavobacterium ancipitas (NL. fem. n. *ancipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009826935*. The type genome for the species is the GenBank assembly RS_GCF_009826935.1. The GC content of the type genome is 39.93 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Flavobacterium antegatio sp. nov.

Candidatus Flavobacterium antegatio (NL. fem. n. *antegatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012032075*. The type genome for the species is the GenBank assembly GCA_012032075.1. The GC content of the type genome is 29.78 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Flavobacterium argumitudo sp. nov.

Candidatus Flavobacterium argumitudo (NL. fem. n. *argumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003668995*. The type genome for the species is the GenBank assembly RS_GCF_003668995.1. The GC content of the type genome is 32.27

% and the genome length is 4.94 Mbp.

Description of *Candidatus* Flavobacterium ascenisca sp. nov.

Candidatus Flavobacterium ascenisca (NL. fem. n. *ascenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003634825*. The type genome for the species is the GenBank assembly RS_GCF_003634825.1. The GC content of the type genome is 32.66 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Flavobacterium atlanifica sp. nov.

Candidatus Flavobacterium atlanifica (NL. fem. n. *atlanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903842575*. The type genome for the species is the GenBank assembly GCA_903842575.1. The GC content of the type genome is 33.91 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Flavobacterium bacifilenta sp. nov.

Candidatus Flavobacterium bacifilenta (NL. fem. n. *bacifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001874325*. The type genome for the species is the GenBank assembly GCA_001874325.1. The GC content of the type genome is 33.23 % and the genome length is 2.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Flavobacterium baropitica sp. nov.

Candidatus Flavobacterium baropitica (NL. fem. n. *baropitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013401995*. The type genome for the species is the GenBank assembly RS_GCF_013366395.1. The GC content of the type genome is 47.11 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Flavobacterium bicapitica sp. nov.

Candidatus Flavobacterium bicapitica (NL. fem. n. *bicapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002422095*. The type genome for the species is the GenBank assembly GCA_002422095.1. The GC content of the type genome is 32.43 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Flavobacterium bifisetta sp. nov.

Candidatus Flavobacterium bifisetta (NL. fem. n. *bifisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002862805*. The type genome for the species is the GenBank assembly GCA_002862805.1. The GC content of the type genome is 30.16 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Flavobacterium binocisca sp. nov.

Candidatus Flavobacterium binocisca (NL. fem. n. *binocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011392115*. The type genome for the species is the GenBank assembly RS_GCF_011392115.1. The GC content of the type genome is 31.6 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Flavobacterium bipalugo sp. nov.

Candidatus Flavobacterium bipalugo (NL. fem. n. *bipalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903879645*. The type genome for the species is the GenBank assembly GCA_903879645.1. The GC content of the type genome is 33.02 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Flavobacterium bipenitoga sp. nov.

Candidatus Flavobacterium bipenitoga (NL. fem. n. *bipenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004339525*. The type genome for the species is the GenBank assembly RS_GCF_003633785.1. The GC content of the type genome is 33.33 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Flavobacterium brabricella sp. nov.

Candidatus Flavobacterium brabricella (NL. fem. n. *brabricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000264055*. The type genome for the species is the GenBank assembly RS_GCF_000264055.1. The GC content of the type genome is 34.83 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water from a saline meromictic lagoon".

Description of *Candidatus* Flavobacterium bugiliforma sp. nov.

Candidatus Flavobacterium bugiliforma (NL. fem. n. *bugiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012932585*. The type genome for the species is the GenBank assembly RS_GCF_012932585.1. The GC content of the type genome is 38.85 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Flavobacterium camilitudo sp. nov.

Candidatus Flavobacterium camilitudo (NL. fem. n. *camilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011742145*. The type genome for the species is the GenBank assembly RS_GCF_011742145.1. The GC content of the type genome is 37.76 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Flavobacterium carecibula sp. nov.

Candidatus Flavobacterium carecibula (NL. fem. n. *carecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002754315*. The type genome for the species is the GenBank assembly RS_GCF_003633605.1. The GC content of the type genome is 34.32 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Flavobacterium carunitica sp. nov.

Candidatus Flavobacterium carunitica (NL. fem. n. *carunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002454195*. The type genome for the species is the GenBank assembly GCA_002454195.1. The GC content of the type genome is 33.45 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Flavobacterium catabivita sp. nov.

Candidatus Flavobacterium catabivita (NL. fem. n. *catabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002296885*. The type genome for the species is the GenBank assembly GCA_002296885.1. The GC content of the type genome is 36.51 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Flavobacterium catagatio sp. nov.

Candidatus Flavobacterium catagatio (NL. fem. n. *catagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012911605*. The type genome for the species is the GenBank assembly RS_GCF_012911605.1. The GC content of the type genome is 33.07 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Flavobacterium cerifessa sp. nov.

Candidatus Flavobacterium cerifessa (NL. fem. n. *cerifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007097145*. The type genome for the species is the GenBank assembly RS_GCF_007097145.1. The GC content of the type genome is 41.35 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Flavobacterium cibicentia sp. nov.

Candidatus Flavobacterium cibicentia (NL. fem. n. *cibicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004303025*. The type genome for the species is the GenBank assembly RS_GCF_004303025.1. The GC content of the type genome is 30.69 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Flavobacterium cicaricula sp. nov.

Candidatus Flavobacterium cicaricula (NL. fem. n. *cicaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009926065*. The type genome for the species is the GenBank assembly GCA_009926065.1. The GC content of the type genome is 31.8 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Flavobacterium cinipatica sp. nov.

Candidatus Flavobacterium cinipatica (NL. fem. n. *cinipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000439025*. The type genome for the species is the GenBank assembly GCA_000439025.2. The GC content of the type genome is 33.24 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Flavobacterium cobalitura sp. nov.

Candidatus Flavobacterium cobalitura (NL. fem. n. *cobalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004349315*. The type genome for the species is the GenBank assembly RS_GCF_004349315.1. The GC content of the type genome is 34.27 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Flavobacterium cocibatio sp. nov.

Candidatus Flavobacterium cocibatio (NL. fem. n. *cocibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp900129795*. The type genome for the species is the GenBank assembly RS_GCF_900129795.1. The GC content of the type genome is 33.56 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Flavobacterium cocibimonas sp. nov.

Candidatus Flavobacterium cocibimonas (NL. fem. n. *cocibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004119495*. The type genome for the species is the GenBank assembly RS_GCF_004119495.1. The GC content of the type genome is 33.48 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Flavobacterium colimilenta sp. nov.

Candidatus Flavobacterium colimilenta (NL. fem. n. *colimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903913315*. The type genome for the species is the GenBank assembly GCA_903950385.1. The GC content of the type genome is 33.17 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Flavobacterium conubago sp. nov.

Candidatus Flavobacterium conubago (NL. fem. n. *conubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002797935*. The type genome for the species is the GenBank assembly RS_GCF_002797935.1. The GC content of the type genome is 34.42 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Flavobacterium conubedo sp. nov.

Candidatus Flavobacterium conubedo (NL. fem. n. *conubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavobacterium sp009764685*. The type genome for the species is the GenBank assembly RS_GCF_009764685.1. The GC content of the type genome is 33.67 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Flavobacterium culilitoga sp. nov.

Candidatus Flavobacterium culilitoga (NL. fem. n. *culilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001422725*. The type genome for the species is the GenBank assembly RS_GCF_001422725.1. The GC content of the type genome is 33.35 % and the genome length is 5.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Flavobacterium cululicula sp. nov.

Candidatus Flavobacterium cululicula (NL. fem. n. *cululicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000812945*. The type genome for the species is the GenBank assembly RS_GCF_000812945.1. The GC content of the type genome is 33.57 % and the genome length is 3.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Flavobacterium daducitas sp. nov.

Candidatus Flavobacterium daducitas (NL. fem. n. *daducitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009826975*. The type genome for the species is the GenBank assembly RS_GCF_009826975.1. The GC content of the type genome is 34.36 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Flavobacterium decapax sp. nov.

Candidatus Flavobacterium decapax (NL. fem. n. *decapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp014305155*. The type genome for the species is the GenBank assembly RS_GCF_014305155.1. The GC content of the type genome is 34.51

% and the genome length is 4.16 Mbp.

Description of *Candidatus* Flavobacterium dececessa sp. nov.

Candidatus Flavobacterium dececessa (NL. fem. n. *dececessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011392075*. The type genome for the species is the GenBank assembly RS_GCF_011392075.1. The GC content of the type genome is 31.81 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Flavobacterium defesitia sp. nov.

Candidatus Flavobacterium defesitia (NL. fem. n. *defesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000813005*. The type genome for the species is the GenBank assembly RS_GCF_002156885.1. The GC content of the type genome is 32.54 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Flavobacterium defunibula sp. nov.

Candidatus Flavobacterium defunibula (NL. fem. n. *defunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004634195*. The type genome for the species is the GenBank assembly RS_GCF_004634195.1. The GC content of the type genome is 37.99 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Flavobacterium delucago sp. nov.

Candidatus Flavobacterium delucago (NL. fem. n. *delucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003312915*. The type genome for the species is the GenBank assembly RS_GCF_003312915.1. The GC content of the type genome is 33.87 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Flavobacterium demigimonas sp. nov.

Candidatus Flavobacterium demigimonas (NL. fem. n. *demigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002737105*. The type genome for the species is the GenBank assembly GCA_002737105.1. The GC content of the type genome is 31.84 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Flavobacterium demogicella sp. nov.

Candidatus Flavobacterium demogicella (NL. fem. n. *demogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002256285*. The type genome for the species is the GenBank assembly GCA_002256285.1. The GC content of the type genome is 43.38 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Flavobacterium denavax sp. nov.

Candidatus Flavobacterium denavax (NL. fem. n. *denavax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp014305095*. The type genome for the species is the GenBank assembly RS_GCF_014305095.1. The GC content of the type genome is 34.3 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Flavobacterium depubitas sp. nov.

Candidatus Flavobacterium depubitas (NL. fem. n. *depubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp006491645*. The type genome for the species is the GenBank assembly RS_GCF_006491645.1. The GC content of the type genome is 31.24 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Flavobacterium derunitio sp. nov.

Candidatus Flavobacterium derunitio (NL. fem. n. *derunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000169355*. The type genome for the species is the GenBank assembly RS_GCF_009495795.1. The GC content of the type genome is 31.3 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Flavobacterium desoritrix sp. nov.

Candidatus Flavobacterium desoritrix (NL. fem. n. *desoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007097285*. The type genome for the species is the GenBank assembly RS_GCF_007097285.1. The GC content of the type genome is 33.89 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Flavobacterium desuritica sp. nov.

Candidatus Flavobacterium desuritica (NL. fem. n. *desuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009495755*. The type genome for the species is the GenBank assembly RS_GCF_009495755.1. The GC content of the type genome is 32.12 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Flavobacterium detunifica sp. nov.

Candidatus Flavobacterium detunifica (NL. fem. n. *detunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003097655*. The type genome for the species is the GenBank assembly RS_GCF_003097655.1. The GC content of the type genome is 34.74 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Flavobacterium dibucitoga sp. nov.

Candidatus Flavobacterium dibucitoga (NL. fem. n. *dibucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002352205*. The type genome for the species is the GenBank assembly GCA_002352205.1. The GC content of the type genome is 33.76 %

and the genome length is 3.73 Mbp.

Description of *Candidatus* Flavobacterium diluvessa sp. nov.

Candidatus Flavobacterium diluvessa (NL. fem. n. *diluvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003968755*. The type genome for the species is the GenBank assembly RS_GCF_003970305.1. The GC content of the type genome is 34.91 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Flavobacterium diminisca sp. nov.

Candidatus Flavobacterium diminisca (NL. fem. n. *diminisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007097385*. The type genome for the species is the GenBank assembly RS_GCF_007097385.1. The GC content of the type genome is 34.36 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Flavobacterium diponitica sp. nov.

Candidatus Flavobacterium diponitica (NL. fem. n. *diponitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013822155*. The type genome for the species is the GenBank assembly GCA_013822155.1. The GC content of the type genome is 33.67 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Flavobacterium direpiforma sp. nov.

Candidatus Flavobacterium direpiforma (NL. fem. n. *direpiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004368785*. The type genome for the species is the GenBank assembly RS_GCF_004368785.1. The GC content of the type genome is 33.75 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Flavobacterium divorisca sp. nov.

Candidatus Flavobacterium divorisca (NL. fem. n. *divorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001507425*. The type genome for the species is the GenBank assembly RS_GCF_001507425.1. The GC content of the type genome is 33.22 % and the genome length is 5.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Flavobacterium ducilitas sp. nov.

Candidatus Flavobacterium ducilitas (NL. fem. n. *ducilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903839195*. The type genome for the species is the GenBank assembly GCA_903885685.1. The GC content of the type genome is 34.65 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Flavobacterium ecfunibra sp. nov.

Candidatus Flavobacterium ecfunibra (NL. fem. n. *ecfunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001464475*. The type genome for the species is the GenBank assembly GCA_001464475.1. The GC content of the type genome is 31.47 % and the genome length is 3.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Flavobacterium ectenitia sp. nov.

Candidatus Flavobacterium ectenitia (NL. fem. n. *ectenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003350375*. The type genome for the species is the GenBank assembly RS_GCF_003350375.1. The GC content of the type genome is 38.42 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Flavobacterium ensicicula sp. nov.

Candidatus Flavobacterium ensicicula (NL. fem. n. *ensicicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903920835*. The type genome for the species is the GenBank assembly GCA_903920835.1. The GC content of the type genome is 34.59 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Flavobacterium enuntilega sp. nov.

Candidatus Flavobacterium enuntilega (NL. fem. n. *enuntilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012270005*. The type genome for the species is the GenBank assembly GCA_012270005.1. The GC content of the type genome is 42.36 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Flavobacterium episcatio sp. nov.

Candidatus Flavobacterium episcatio (NL. fem. n. *episcatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009711165*. The type genome for the species is the GenBank assembly RS_GCF_009711165.1. The GC content of the type genome is 32.72 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Flavobacterium ermelago sp. nov.

Candidatus Flavobacterium ermelago (NL. fem. n. *ermelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004349195*. The type genome for the species is the GenBank assembly RS_GCF_004349195.1. The GC content of the type genome is 34.3 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Flavobacterium estovedo sp. nov.

Candidatus Flavobacterium estovedo (NL. fem. n. *estovedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009693635*. The type genome for the species is the GenBank assembly GCA_009693635.1. The GC content of the type genome is 32.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Flavobacterium excarago sp. nov.

Candidatus Flavobacterium excarago (NL. fem. n. *excarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003963025*. The type genome for the species is the GenBank assembly GCA_003963025.1. The GC content of the type genome is 32.37 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Flavobacterium excinedo sp. nov.

Candidatus Flavobacterium excinedo (NL. fem. n. *excinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013298525*. The type genome for the species is the GenBank assembly GCA_013298525.1. The GC content of the type genome is 31.29 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Flavobacterium exindiforma sp. nov.

Candidatus Flavobacterium exindiforma (NL. fem. n. *exindiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp010365135*. The type genome for the species is the GenBank assembly GCA_010365135.1. The GC content of the type genome is 34.79 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Flavobacterium exindilega sp. nov.

Candidatus Flavobacterium exindilega (NL. fem. n. *exindilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002303885*. The type genome for the species is the GenBank assembly RS_GCF_002303885.1. The GC content of the type genome is 33.76 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Flavobacterium extinilega sp. nov.

Candidatus Flavobacterium extinilega (NL. fem. n. *extinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903824755*. The type genome for the species is the GenBank assembly GCA_903824755.1. The GC content of the type genome is 33.34 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Flavobacterium fetutibula sp. nov.

Candidatus Flavobacterium fetutibula (NL. fem. n. *fetutibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp014377455*. The type genome for the species is the GenBank assembly GCA_014377455.1. The GC content of the type genome is 31.04 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Flavobacterium fetutilenta sp. nov.

Candidatus Flavobacterium fetutilenta (NL. fem. n. *fetutilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002210235*. The type genome for the species is the GenBank assembly RS_GCF_002210235.1. The GC content of the type genome is 33.63 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Flavobacterium filifessa sp. nov.

Candidatus Flavobacterium filifessa (NL. fem. n. *filifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013072765*. The type genome for the species is the GenBank assembly RS_GCF_013072765.1. The GC content of the type genome is 37.19 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Flavobacterium forinentia sp. nov.

Candidatus Flavobacterium forinentia (NL. fem. n. *forinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002754195*. The type genome for the species is the GenBank assembly RS_GCF_002754195.1. The GC content of the type genome is 33.18 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Flavobacterium fumacastra sp. nov.

Candidatus Flavobacterium fumacastra (NL. fem. n. *fumacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003105115*. The type genome for the species is the GenBank assembly RS_GCF_003105115.1. The GC content of the type genome is 34.72 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Flavobacterium gabinivita sp. nov.

Candidatus Flavobacterium gabinivita (NL. fem. n. *gabinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000745775*. The type genome for the species is the GenBank assembly RS_GCF_000745775.1. The GC content of the type genome is 33.43 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Flavobacterium gasomivita sp. nov.

Candidatus Flavobacterium gasomivita (NL. fem. n. *gasomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004362055*. The type genome for the species is the GenBank assembly RS_GCF_004362055.1. The GC content of the type genome is 33.65 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Flavobacterium halucugo sp. nov.

Candidatus Flavobacterium halucugo (NL. fem. n. *halucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavobacterium sp002413745*. The type genome for the species is the GenBank assembly GCA_002429185.1. The GC content of the type genome is 35.27 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Flavobacterium hecatigena sp. nov.

Candidatus Flavobacterium hecatigena (NL. fem. n. *hecatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001429765*. The type genome for the species is the GenBank assembly RS_GCF_004339485.1. The GC content of the type genome is 34.17 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Flavobacterium humecedo sp. nov.

Candidatus Flavobacterium humecedo (NL. fem. n. *humecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011392125*. The type genome for the species is the GenBank assembly RS_GCF_011392125.1. The GC content of the type genome is 41.49 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Flavobacterium idipsago sp. nov.

Candidatus Flavobacterium idipsago (NL. fem. n. *idipsago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002399805*. The type genome for the species is the GenBank assembly GCA_002399805.1. The GC content of the type genome is 33.39 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Flavobacterium immatugo sp. nov.

Candidatus Flavobacterium immatugo (NL. fem. n. *immatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903888655*. The type genome for the species is the GenBank assembly GCA_903888655.1. The GC content of the type genome is 32.69 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Flavobacterium incesedo sp. nov.

Candidatus Flavobacterium incesedo (NL. fem. n. *incesedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp005792865*. The type genome for the species is the GenBank assembly GCA_005792865.1. The GC content of the type genome is 53.22 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Flavobacterium inhumatio sp. nov.

Candidatus Flavobacterium inhumatio (NL. fem. n. *inhumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003525665*. The type genome for the species is the GenBank assembly GCA_003525665.1. The GC content of the type genome is 32.38 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Flavobacterium inmitibra sp. nov.

Candidatus Flavobacterium inmitibra (NL. fem. n. *inmitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000282055*. The type genome for the species is the GenBank assembly RS_GCF_000282055.1. The GC content of the type genome is 33.59 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Flavobacterium insorentia sp. nov.

Candidatus Flavobacterium insorentia (NL. fem. n. *insorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903837025*. The type genome for the species is the GenBank assembly GCA_903837025.1. The GC content of the type genome is 33.92 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Flavobacterium insurentia sp. nov.

Candidatus Flavobacterium insurentia (NL. fem. n. *insurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004959765*. The type genome for the species is the GenBank assembly RS_GCF_004959765.1. The GC content of the type genome is 34.25 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Flavobacterium irrefatica sp. nov.

Candidatus Flavobacterium irrefatica (NL. fem. n. *irrefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002304005*. The type genome for the species is the GenBank assembly RS_GCF_002304005.1. The GC content of the type genome is 33.76 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Flavobacterium irrelatica sp. nov.

Candidatus Flavobacterium irrelatica (NL. fem. n. *irrelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004295795*. The type genome for the species is the GenBank assembly GCA_004295795.1. The GC content of the type genome is 46.57 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Flavobacterium irreliforma sp. nov.

Candidatus Flavobacterium irreliforma (NL. fem. n. *irreliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002836475*. The type genome for the species is the GenBank assembly RS_GCF_002836475.1. The GC content of the type genome is 35.15 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Flavobacterium lacinibra sp. nov.

Candidatus Flavobacterium lacinibra (NL. fem. n. *lacinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavobacterium sp001027725*. The type genome for the species is the GenBank assembly RS_GCF_001027725.1. The GC content of the type genome is 35.12 % and the genome length is 5.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Flavobacterium lenimago sp. nov.

Candidatus Flavobacterium lenimago (NL. fem. n. *lenimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903838055*. The type genome for the species is the GenBank assembly GCA_903863075.1. The GC content of the type genome is 31.18 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Flavobacterium locelitura sp. nov.

Candidatus Flavobacterium locelitura (NL. fem. n. *locelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903889745*. The type genome for the species is the GenBank assembly GCA_903889745.1. The GC content of the type genome is 32.82 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Flavobacterium lugubitoga sp. nov.

Candidatus Flavobacterium lugubitoga (NL. fem. n. *lugubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013294025*. The type genome for the species is the GenBank assembly RS_GCF_013294025.1. The GC content of the type genome is 34.59 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Flavobacterium mahemilenta sp. nov.

Candidatus Flavobacterium mahemilenta (NL. fem. n. *mahemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001898245*. The type genome for the species is the GenBank assembly GCA_002379575.1. The GC content of the type genome is 39.61 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Flavobacterium manibessa sp. nov.

Candidatus Flavobacterium manibessa (NL. fem. n. *manibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002382495*. The type genome for the species is the GenBank assembly GCA_002382495.1. The GC content of the type genome is 34.97 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Flavobacterium melopitura sp. nov.

Candidatus Flavobacterium melopitura (NL. fem. n. *melopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002256385*. The type genome for the species is the GenBank assembly GCA_002256385.1. The GC content of the type genome is 40.03 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Flavobacterium menapedo sp. nov.

Candidatus Flavobacterium menapedo (NL. fem. n. *menapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003403075*. The type genome for the species is the GenBank assembly RS_GCF_003403075.1. The GC content of the type genome is 41.18 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Flavobacterium milififica sp. nov.

Candidatus Flavobacterium milififica (NL. fem. n. *milififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004801375*. The type genome for the species is the GenBank assembly RS_GCF_004801375.1. The GC content of the type genome is 39.17 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Flavobacterium mirabentia sp. nov.

Candidatus Flavobacterium mirabentia (NL. fem. n. *mirabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003096795*. The type genome for the species is the GenBank assembly RS_GCF_013284035.1. The GC content of the type genome is 34.54 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Flavobacterium momorastra sp. nov.

Candidatus Flavobacterium momorastra (NL. fem. n. *momorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002482945*. The type genome for the species is the GenBank assembly RS_GCF_003634615.1. The GC content of the type genome is 36.2 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Flavobacterium monocatica sp. nov.

Candidatus Flavobacterium monocatica (NL. fem. n. *monocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007097365*. The type genome for the species is the GenBank assembly RS_GCF_007097365.1. The GC content of the type genome is 34.18 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Flavobacterium monodentia sp. nov.

Candidatus Flavobacterium monodentia (NL. fem. n. *monodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009848495*. The type genome for the species is the GenBank assembly RS_GCF_009848495.1. The GC content of the type genome is 39.29 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Flavobacterium musulentia sp. nov.

Candidatus Flavobacterium musulentia (NL. fem. n. *musulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavobacterium sp014379405*. The type genome for the species is the GenBank assembly GCA_014379405.1. The GC content of the type genome is 35.43 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Flavobacterium mutabitio sp. nov.

Candidatus Flavobacterium mutabitio (NL. fem. n. *mutabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001529295*. The type genome for the species is the GenBank assembly RS_GCF_001529295.1. The GC content of the type genome is 34.36 % and the genome length is 3.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Flavobacterium navicetta sp. nov.

Candidatus Flavobacterium navicetta (NL. fem. n. *navicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002150205*. The type genome for the species is the GenBank assembly RS_GCF_002150205.1. The GC content of the type genome is 33.89 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Flavobacterium nosocitura sp. nov.

Candidatus Flavobacterium nosocitura (NL. fem. n. *nosocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp902506265*. The type genome for the species is the GenBank assembly RS_GCF_902506265.1. The GC content of the type genome is 30.11 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Flavobacterium obfenitas sp. nov.

Candidatus Flavobacterium obfenitas (NL. fem. n. *obfenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003449615*. The type genome for the species is the GenBank assembly GCA_003449615.1. The GC content of the type genome is 33.86 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Flavobacterium oblonigena sp. nov.

Candidatus Flavobacterium oblonigena (NL. fem. n. *oblonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009707955*. The type genome for the species is the GenBank assembly RS_GCF_009707955.1. The GC content of the type genome is 32.96 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Flavobacterium obnoxitrix sp. nov.

Candidatus Flavobacterium obnoxitrix (NL. fem. n. *obnoxitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013388355*. The type genome for the species is the GenBank assembly RS_GCF_013388355.1. The GC content of the type genome is 33.8 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Flavobacterium obtementia sp. nov.

Candidatus Flavobacterium obtementia (NL. fem. n. *obtementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003202405*. The type genome for the species is the GenBank assembly RS_GCF_003202405.1. The GC content of the type genome is 34.04 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Flavobacterium obtesitoga sp. nov.

Candidatus Flavobacterium obtesitoga (NL. fem. n. *obtesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004293165*. The type genome for the species is the GenBank assembly GCA_004293165.1. The GC content of the type genome is 31.87 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Flavobacterium octinax sp. nov.

Candidatus Flavobacterium octinax (NL. fem. n. *octinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004211145*. The type genome for the species is the GenBank assembly GCA_004211145.1. The GC content of the type genome is 47.33 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Flavobacterium octupitica sp. nov.

Candidatus Flavobacterium octupitica (NL. fem. n. *octupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013823965*. The type genome for the species is the GenBank assembly GCA_013823965.1. The GC content of the type genome is 36.8 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Flavobacterium omnifitas sp. nov.

Candidatus Flavobacterium omnifitas (NL. fem. n. *omnifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002813295*. The type genome for the species is the GenBank assembly RS_GCF_002813295.1. The GC content of the type genome is 32.54 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Flavobacterium panopitas sp. nov.

Candidatus Flavobacterium panopitas (NL. fem. n. *panopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp902506345*. The type genome for the species is the GenBank assembly RS_GCF_902506345.1. The GC content of the type genome is 35.2 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Flavobacterium paropitura sp. nov.

Candidatus Flavobacterium paropitura (NL. fem. n. *paropitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Flavobacterium sp011305415*. The type genome for the species is the GenBank assembly RS_GCF_011305415.1. The GC content of the type genome is 30.89 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Flavobacterium penicitia sp. nov.

Candidatus Flavobacterium penicitia (NL. fem. n. *penicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001427905*. The type genome for the species is the GenBank assembly RS_GCF_001427905.1. The GC content of the type genome is 34.13 % and the genome length is 5.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Flavobacterium pimenilenta sp. nov.

Candidatus Flavobacterium pimenilenta (NL. fem. n. *pimenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001429295*. The type genome for the species is the GenBank assembly RS_GCF_001429295.1. The GC content of the type genome is 33.58 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Flavobacterium pinifilega sp. nov.

Candidatus Flavobacterium pinifilega (NL. fem. n. *pinifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004293045*. The type genome for the species is the GenBank assembly GCA_004293045.1. The GC content of the type genome is 31.91 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Flavobacterium pragmifica sp. nov.

Candidatus Flavobacterium pragmifica (NL. fem. n. *pragmifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012837155*. The type genome for the species is the GenBank assembly GCA_012837155.1. The GC content of the type genome is 34.56 %

and the genome length is 3.1 Mbp.

Description of *Candidatus* Flavobacterium procrimonas sp. nov.

Candidatus Flavobacterium procrimonas (NL. fem. n. *procrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009664855*. The type genome for the species is the GenBank assembly GCA_009664855.1. The GC content of the type genome is 34.28 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Flavobacterium redunentia sp. nov.

Candidatus Flavobacterium redunentia (NL. fem. n. *redunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903861155*. The type genome for the species is the GenBank assembly GCA_903874215.1. The GC content of the type genome is 35.17 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Flavobacterium redunivita sp. nov.

Candidatus Flavobacterium redunivita (NL. fem. n. *redunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003688345*. The type genome for the species is the GenBank assembly RS_GCF_003688345.1. The GC content of the type genome is 33.8 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Flavobacterium refocicula sp. nov.

Candidatus Flavobacterium refocicula (NL. fem. n. *refocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002714575*. The type genome for the species is the GenBank assembly GCA_002714575.1. The GC content of the type genome is 41.47 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Flavobacterium relapedo sp. nov.

Candidatus Flavobacterium relapedo (NL. fem. n. *relapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903879875*. The type genome for the species is the GenBank assembly GCA_903879875.1. The GC content of the type genome is 33.47 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Flavobacterium repepatio sp. nov.

Candidatus Flavobacterium repepatio (NL. fem. n. *repepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003217415*. The type genome for the species is the GenBank assembly RS_GCF_003208535.1. The GC content of the type genome is 33.44 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Flavobacterium resulisca sp. nov.

Candidatus Flavobacterium resulisca (NL. fem. n. *resulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002428305*. The type genome for the species is the GenBank assembly GCA_002428305.1. The GC content of the type genome is 34.1 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Flavobacterium revecifica sp. nov.

Candidatus Flavobacterium revecifica (NL. fem. n. *revecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903902795*. The type genome for the species is the GenBank assembly GCA_903902795.1. The GC content of the type genome is 37.04 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Flavobacterium rorulibra sp. nov.

Candidatus Flavobacterium rorulibra (NL. fem. n. *rorulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp007097245*. The type genome for the species is the GenBank assembly RS_GCF_007097245.1. The GC content of the type genome is 35.74 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Flavobacterium sceptentia sp. nov.

Candidatus Flavobacterium sceptentia (NL. fem. n. *sceptentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004122165*. The type genome for the species is the GenBank assembly RS_GCF_004122165.1. The GC content of the type genome is 34.75 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Flavobacterium semapigena sp. nov.

Candidatus Flavobacterium semapigena (NL. fem. n. *semapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011751075*. The type genome for the species is the GenBank assembly RS_GCF_011751075.1. The GC content of the type genome is 35.68 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Flavobacterium semapitica sp. nov.

Candidatus Flavobacterium semapitica (NL. fem. n. *semapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp004362015*. The type genome for the species is the GenBank assembly RS_GCF_004362015.1. The GC content of the type genome is 33.43 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Flavobacterium semigugo sp. nov.

Candidatus Flavobacterium semigugo (NL. fem. n. *semigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003497625*. The type genome for the species is the GenBank assembly GCA_003497625.1. The GC content of the type genome is 32.68 %

and the genome length is 2.54 Mbp.

Description of *Candidatus* Flavobacterium semimifica sp. nov.

Candidatus Flavobacterium semimifica (NL. fem. n. *semimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp012911565*. The type genome for the species is the GenBank assembly RS_GCF_012911565.1. The GC content of the type genome is 44.29 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Flavobacterium senipatio sp. nov.

Candidatus Flavobacterium senipatio (NL. fem. n. *senipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009909155*. The type genome for the species is the GenBank assembly RS_GCF_009909155.2. The GC content of the type genome is 33.79 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Flavobacterium sicinax sp. nov.

Candidatus Flavobacterium sicinax (NL. fem. n. *sicinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002715085*. The type genome for the species is the GenBank assembly GCA_002715085.1. The GC content of the type genome is 31.54 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Flavobacterium sicubicula sp. nov.

Candidatus Flavobacterium sicubicula (NL. fem. n. *sicubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002421645*. The type genome for the species is the GenBank assembly GCA_002421645.1. The GC content of the type genome is 32.48 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Flavobacterium sifunibra sp. nov.

Candidatus Flavobacterium sifunibra (NL. fem. n. *sifunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000426145*. The type genome for the species is the GenBank assembly RS_GCF_000426145.1. The GC content of the type genome is 33.72 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Flavobacterium sotuligena sp. nov.

Candidatus Flavobacterium sotuligena (NL. fem. n. *sotuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001800945*. The type genome for the species is the GenBank assembly GCA_001800945.1. The GC content of the type genome is 31.33 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Flavobacterium subadisca sp. nov.

Candidatus Flavobacterium subadisca (NL. fem. n. *subadisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp010119235*. The type genome for the species is the GenBank assembly RS_GCF_010119235.1. The GC content of the type genome is 37.47 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Flavobacterium subucigena sp. nov.

Candidatus Flavobacterium subucigena (NL. fem. n. *subucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002786385*. The type genome for the species is the GenBank assembly GCA_013821805.1. The GC content of the type genome is 38.99 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Flavobacterium tiguribra sp. nov.

Candidatus Flavobacterium tiguribra (NL. fem. n. *tiguribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp902804475*. The type genome for the species is the GenBank assembly RS_GCF_902804475.1. The GC content of the type genome is 34.09 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Flavobacterium tirociforma sp. nov.

Candidatus Flavobacterium tirociforma (NL. fem. n. *tirociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001800905*. The type genome for the species is the GenBank assembly GCA_001800905.1. The GC content of the type genome is 35.13 % and the genome length is 2.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Flavobacterium tomogousia sp. nov.

Candidatus Flavobacterium tomogousia (NL. fem. n. *tomogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003946915*. The type genome for the species is the GenBank assembly RS_GCF_003946915.1. The GC content of the type genome is 34.17 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Flavobacterium tresvilega sp. nov.

Candidatus Flavobacterium tresvilega (NL. fem. n. *tresvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002482885*. The type genome for the species is the GenBank assembly GCA_002482885.1. The GC content of the type genome is 34.31 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Flavobacterium utilledo sp. nov.

Candidatus Flavobacterium utilledo (NL. fem. n. *utilledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp000967805*. The type genome for the species is the GenBank assembly RS_GCF_000967805.1. The GC content of the type genome is 29.3 % and the genome length is 3.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "brackish surface water".

Description of *Candidatus* Flavobacterium utralatio sp. nov.

Candidatus Flavobacterium utralatio (NL. fem. n. *utralatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp003202435*. The type genome for the species is the GenBank assembly RS_GCF_003202435.1. The GC content of the type genome is 34.07 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Flavobacterium vagabivita sp. nov.

Candidatus Flavobacterium vagabivita (NL. fem. n. *vagabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002482975*. The type genome for the species is the GenBank assembly GCA_002482975.1. The GC content of the type genome is 33.41 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Flavobacterium vavasedo sp. nov.

Candidatus Flavobacterium vavasedo (NL. fem. n. *vavasedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002280815*. The type genome for the species is the GenBank assembly GCA_002280815.1. The GC content of the type genome is 33.71 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Flavobacterium vehicitrix sp. nov.

Candidatus Flavobacterium vehicitrix (NL. fem. n. *vehicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009789235*. The type genome for the species is the

GenBank assembly RS_GCF_009789235.1. The GC content of the type genome is 34.79 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Flavobacterium velivicula sp. nov.

Candidatus Flavobacterium velivicula (NL. fem. n. *velivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp903819815*. The type genome for the species is the GenBank assembly GCA_903819815.1. The GC content of the type genome is 32.76 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Flavobacterium verecitica sp. nov.

Candidatus Flavobacterium verecitica (NL. fem. n. *verecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp011365745*. The type genome for the species is the GenBank assembly RS_GCF_014305215.1. The GC content of the type genome is 35.24 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Flavobacterium veridousia sp. nov.

Candidatus Flavobacterium veridousia (NL. fem. n. *veridousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009674775*. The type genome for the species is the GenBank assembly RS_GCF_009674775.1. The GC content of the type genome is 36.48 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Flavobacterium vinacimonas sp. nov.

Candidatus Flavobacterium vinacimonas (NL. fem. n. *vinacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002483285*. The type genome for the species is the GenBank assembly GCA_002483285.1. The GC content of the type genome is 45.4 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Flavobacterium virecitio sp. nov.

Candidatus Flavobacterium virecitio (NL. fem. n. *virecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp013294005*. The type genome for the species is the GenBank assembly RS_GCF_013294075.1. The GC content of the type genome is 32.8 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Flavobacterium vitigisca sp. nov.

Candidatus Flavobacterium vitigisca (NL. fem. n. *vitigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp014378065*. The type genome for the species is the GenBank assembly GCA_014378065.1. The GC content of the type genome is 38.55 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Flavobacterium vivifessa sp. nov.

Candidatus Flavobacterium vivifessa (NL. fem. n. *vivifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp002862755*. The type genome for the species is the GenBank assembly GCA_002862755.1. The GC content of the type genome is 31.49 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Flavobacterium vocamax sp. nov.

Candidatus Flavobacterium vocamax (NL. fem. n. *vocamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp009915155*. The type genome for the species is the GenBank assembly RS_GCF_009915155.1. The GC content of the type genome is 35.45 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Flavobacterium vocifibula sp. nov.

Candidatus Flavobacterium vocifibula (NL. fem. n. *vocifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavobacterium sp001428525*. The type genome for the species is the GenBank assembly RS_GCF_001428525.1. The GC content of the type genome is 33.74 % and the genome length is 5.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Flavonifractor admutitas sp. nov.

Candidatus Flavonifractor admutitas (NL. fem. n. *admutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp002159455*. The type genome for the species is the GenBank assembly RS_GCF_002159455.1. The GC content of the type genome is 59.12 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Flavonifractor bicipedo sp. nov.

Candidatus Flavonifractor bicipedo (NL. fem. n. *bicipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp900549795*. The type genome for the species is the GenBank assembly RS_GCF_014287895.1. The GC content of the type genome is 60.31 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Flavonifractor catobilenta sp. nov.

Candidatus Flavonifractor catobilenta (NL. fem. n. *catobilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp002161085*. The type genome for the species is the GenBank assembly RS_GCF_002161085.1. The GC content of the type genome is 59.29 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Flavonifractor delecitio sp. nov.

Candidatus Flavonifractor delecitio (NL. fem. n. *delecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp002159265*. The type genome for the species is the

GenBank assembly RS_GCF_002159265.1. The GC content of the type genome is 58.87 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Flavonifractor duponitura sp. nov.

Candidatus Flavonifractor duponitura (NL. fem. n. *duponitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp000508885*. The type genome for the species is the GenBank assembly RS_GCF_004345805.1. The GC content of the type genome is 60.35 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Flavonifractor locelugo sp. nov.

Candidatus Flavonifractor locelugo (NL. fem. n. *locelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flavonifractor sp002161215*. The type genome for the species is the GenBank assembly RS_GCF_002161215.1. The GC content of the type genome is 61.7 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Flectobacillus favilitia sp. nov.

Candidatus Flectobacillus favilitia (NL. fem. n. *favilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flectobacillus sp002270355*. The type genome for the species is the GenBank assembly RS_GCF_002270355.1. The GC content of the type genome is 37.51 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Flectobacillus inmemibula sp. nov.

Candidatus Flectobacillus inmemibula (NL. fem. n. *inmemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flectobacillus sp013298025*. The type genome for the species is the GenBank assembly GCA_013298025.1. The GC content of the type genome is 40.0 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Flectobacillus pepenitudo sp. nov.

Candidatus Flectobacillus pepenitudo (NL. fem. n. *pepenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flectobacillus sp009905545*. The type genome for the species is the GenBank assembly RS_GCF_009905545.1. The GC content of the type genome is 37.24 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Flexilinea abnepugo sp. nov.

Candidatus Flexilinea abnepugo (NL. fem. n. *abnepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp002407845*. The type genome for the species is the GenBank assembly GCA_002407845.1. The GC content of the type genome is 48.04 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Flexilinea celamiforma sp. nov.

Candidatus Flexilinea celamiforma (NL. fem. n. *celamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp002329625*. The type genome for the species is the GenBank assembly GCA_002329625.1. The GC content of the type genome is 43.2 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Flexilinea feficitoga sp. nov.

Candidatus Flexilinea feficitoga (NL. fem. n. *feficitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp902786265*. The type genome for the species is the GenBank assembly GCA_902786265.1. The GC content of the type genome is 48.41 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Flexilinea illibimonia sp. nov.

Candidatus Flexilinea illibimonia (NL. fem. n. *illibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp902774215*. The type genome for the species is the GenBank assembly GCA_902774215.1. The GC content of the type genome is 46.92 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Flexilinea mirifatica sp. nov.

Candidatus Flexilinea mirifatica (NL. fem. n. *mirifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp902791025*. The type genome for the species is the GenBank assembly GCA_902791025.1. The GC content of the type genome is 47.39 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Flexilinea omnipastra sp. nov.

Candidatus Flexilinea omnipastra (NL. fem. n. *omnipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp012799995*. The type genome for the species is the GenBank assembly GCA_012799995.1. The GC content of the type genome is 46.97 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Flexilinea pepenicula sp. nov.

Candidatus Flexilinea pepenicula (NL. fem. n. *pepenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp001717545*. The type genome for the species is the GenBank assembly RS_GCF_001717545.1. The GC content of the type genome is 54.86 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Curette".

Description of *Candidatus* Flexilinea rarefifica sp. nov.

Candidatus Flexilinea rarefifica (NL. fem. n. *rarefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexilinea sp902795255*. The type genome for the species is the

GenBank assembly GCA_902795255.1. The GC content of the type genome is 53.91 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Flexistipes inconilenta sp. nov.

Candidatus Flexistipes inconilenta (NL. fem. n. *inconilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexistipes sp002338145*. The type genome for the species is the GenBank assembly GCA_002338145.1. The GC content of the type genome is 36.87 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Flexivirga arilligena sp. nov.

Candidatus Flexivirga arilligena (NL. fem. n. *arilligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Flexivirga sp013002715*. The type genome for the species is the GenBank assembly RS_GCF_013002715.1. The GC content of the type genome is 69.8 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Fluviibacterium absegago sp. nov.

Candidatus Fluviibacterium absegago (NL. fem. n. *absegago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviibacterium sp003172915*. The type genome for the species is the GenBank assembly RS_GCF_003172915.1. The GC content of the type genome is 65.93 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Fluviibacterium obtecitio sp. nov.

Candidatus Fluviibacterium obtecitio (NL. fem. n. *obtecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviibacterium sp002119405*. The type genome for the species is the GenBank assembly RS_GCF_002119405.1. The GC content of the type genome is 60.16 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Fluviibacterium venunibula sp. nov.

Candidatus Fluviibacterium venunibula (NL. fem. n. *venunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviibacterium sp003254465*. The type genome for the species is the GenBank assembly RS_GCF_003254465.1. The GC content of the type genome is 66.96 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Fluviicola appicax sp. nov.

Candidatus Fluviicola appicax (NL. fem. n. *appicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviicola sp003856375*. The type genome for the species is the GenBank assembly RS_GCF_003856375.1. The GC content of the type genome is 40.81 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Fluviicola dicabibula sp. nov.

Candidatus Fluviicola dicabibula (NL. fem. n. *dicabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviicola sp902168135*. The type genome for the species is the GenBank assembly GCA_902168135.1. The GC content of the type genome is 41.64 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Fluviicola extinugo sp. nov.

Candidatus Fluviicola extinugo (NL. fem. n. *extinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviicola sp002483265*. The type genome for the species is the GenBank assembly GCA_002483265.1. The GC content of the type genome is 38.84 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Fluviicola faticitica sp. nov.

Candidatus Fluviicola faticitica (NL. fem. n. *faticitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviicola sp002432565*. The type genome for the species is the GenBank assembly GCA_002432565.1. The GC content of the type genome is 41.61 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Fluviicola xenodibra sp. nov.

Candidatus Fluviicola xenodibra (NL. fem. n. *xenodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviicola sp002432085*. The type genome for the species is the GenBank assembly GCA_002432085.1. The GC content of the type genome is 49.47 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Fluviispira funamedo sp. nov.

Candidatus Fluviispira funamedo (NL. fem. n. *funamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviispira sp014281055*. The type genome for the species is the GenBank assembly RS_GCF_014281055.1. The GC content of the type genome is 33.14 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Fluviispira monodibra sp. nov.

Candidatus Fluviispira monodibra (NL. fem. n. *monodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fluviispira sp004295685*. The type genome for the species is the GenBank assembly RS_GCF_004295685.1. The GC content of the type genome is 33.56 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Fodinibius genocibra sp. nov.

Candidatus Fodinibius genocibra (NL. fem. n. *genocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fodinibius sp002287075*. The type genome for the species is the GenBank assembly RS_GCF_002287075.1. The GC content of the type genome is 42.24

% and the genome length is 3.58 Mbp.

Description of *Candidatus* Fonsibacter affulitrix sp. nov.

Candidatus Fonsibacter affulitrix (NL. fem. n. *affulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000371845*. The type genome for the species is the GenBank assembly GCA_000371845.1. The GC content of the type genome is 29.56 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Fonsibacter alcibimonas sp. nov.

Candidatus Fonsibacter alcibimonas (NL. fem. n. *alcibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp009693745*. The type genome for the species is the GenBank assembly GCA_009693745.1. The GC content of the type genome is 29.39 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Fonsibacter bicubimonia sp. nov.

Candidatus Fonsibacter bicubimonia (NL. fem. n. *bicubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp903869725*. The type genome for the species is the GenBank assembly GCA_903854225.1. The GC content of the type genome is 29.14 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Fonsibacter fumifisca sp. nov.

Candidatus Fonsibacter fumifisca (NL. fem. n. *fumifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000371825*. The type genome for the species is the GenBank assembly GCA_000371825.1. The GC content of the type genome is 29.76 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Fonsibacter innoxentia sp. nov.

Candidatus Fonsibacter innoxentia (NL. fem. n. *innoxentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000371745*. The type genome for the species is the GenBank assembly GCA_000371745.1. The GC content of the type genome is 29.85 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Fonsibacter oscilifica sp. nov.

Candidatus Fonsibacter oscilifica (NL. fem. n. *oscilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000419485*. The type genome for the species is the GenBank assembly GCA_000419485.1. The GC content of the type genome is 29.11 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Fonsibacter rarefitrix sp. nov.

Candidatus Fonsibacter rarefitrix (NL. fem. n. *rarefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000419465*. The type genome for the species is the GenBank assembly GCA_000419465.1. The GC content of the type genome is 29.53 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Fonsibacter tabitibula sp. nov.

Candidatus Fonsibacter tabitibula (NL. fem. n. *tabitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000364545*. The type genome for the species is the GenBank assembly GCA_000364545.1. The GC content of the type genome is 29.61 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Fonsibacter vehemitas sp. nov.

Candidatus Fonsibacter vehemitas (NL. fem. n. *vehemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fonsibacter sp000510845*. The type genome for the species is the GenBank assembly GCA_000419505.1. The GC content of the type genome is 29.38 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Forabana curabugo sp. nov.

Candidatus Forabana curabugo (NL. fem. n. *curabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG708 sp900321625*. The type genome for the species is the GenBank assembly GCA_900321625.1. The GC content of the type genome is 46.73 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Forabana gen. nov.

Candidatus Forabana (NL. fem. n. *Forabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG708*. The type species for the genus is *Candidatus* Forabana curabugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Forabaria cerucibula sp. nov.

Candidatus Forabaria cerucibula (NL. fem. n. *cerucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZT01 sp007127235*. The type genome for the species is the GenBank assembly GCA_003558945.1. The GC content of the type genome is 44.66 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Forabaria gen. nov.

Candidatus Forabaria (NL. fem. n. *Forabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZT01*. The type species for the genus is *Candidatus* Forabaria cerucibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKZT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forabariaceae.

Description of *Candidatus* Forabariaceae fam. nov.

Candidatus Forabariaceae (NL. fem. n. *Forabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKZT01.* The type genus for the taxon is *Candidatus* Forabaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Forabaria defetifica sp. nov.

Candidatus Forabaria defetifica (NL. fem. n. *defetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZT01 sp011389745*. The type genome for the species is the GenBank assembly GCA_011389745.1. The GC content of the type genome is 44.38 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Forabella extoritia sp. nov.

Candidatus Forabella extoritia (NL. fem. n. *extoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4661 sp002405405*. The type genome for the species is the GenBank assembly GCA_002405405.1. The GC content of the type genome is 43.57 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Forabella gen. nov.

Candidatus Forabella (NL. fem. n. *Forabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4661*. The type species for the genus is *Candidatus* Forabella extoritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4661*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Forabellaceae.

Description of *Candidatus* Forabellaceae fam. nov.

Candidatus Forabellaceae (NL. fem. n. *Forabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4661.* The type genus for the taxon is *Candidatus* Forabella .

According to GTDB R06-RS202, this family belongs to the order *Kapabacteriales*.

Description of *Candidatus* Forabia cerucessa sp. nov.

Candidatus Forabia cerucessa (NL. fem. n. *cerucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-14 sp001787475*. The type genome for the species is the GenBank assembly GCA_001788715.1. The GC content of the type genome is 47.87 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Forabia gen. nov.

Candidatus Forabia (NL. fem. n. *Forabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-48-14*. The type species for the genus is *Candidatus* Forabia cerucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-48-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forabiaceae.

Description of *Candidatus* Forabiaceae fam. nov.

Candidatus Forabiaceae (NL. fem. n. *Forabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-48-14.* The type genus for the taxon is *Candidatus* Forabia .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA1369. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Forabida gemebitica sp. nov.

Candidatus Forabida gemebitica (NL. fem. n. *gemebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5852 sp002432195*. The type genome for the species is the GenBank assembly GCA_002432195.1. The GC content of the type genome is 66.56 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Forabida gen. nov.

Candidatus Forabida (NL. fem. n. *Forabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5852*. The type species for the genus is *Candidatus* Forabida gemebitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5852*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forabidaceae.

Description of *Candidatus* Forabidaceae fam. nov.

Candidatus Forabidaceae (NL. fem. n. *Forabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5852.* The type genus for the taxon is *Candidatus* Forabida .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Forabosa cicilax sp. nov.

Candidatus Forabosa cicilax (NL. fem. n. *cicilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKMD01 sp903828515*. The type genome for the species is the GenBank assembly GCA_903909615.1. The GC content of the type genome is 63.32 %

and the genome length is 4.8 Mbp.

Description of *Candidatus* Forabosa gen. nov.

Candidatus Forabosa (NL. fem. n. *Forabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKMD01*. The type species for the genus is *Candidatus* Forabosa cicilax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Forabosa dehisentia sp. nov.

Candidatus Forabosa dehisentia (NL. fem. n. *dehisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKMD01 sp903822185*. The type genome for the species is the GenBank assembly GCA_903886235.1. The GC content of the type genome is 61.02 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Forabula cunabatio sp. nov.

Candidatus Forabula cunabatio (NL. fem. n. *cunabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFGI01 sp012960105*. The type genome for the species is the GenBank assembly GCA_012960105.1. The GC content of the type genome is 38.91 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Forabula gen. nov.

Candidatus Forabula (NL. fem. n. *Forabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFGI01*. The type species for the genus is *Candidatus* Forabula cunabatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Forabula repudax sp. nov.

Candidatus Forabula repudax (NL. fem. n. *repudax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFGI01 sp013112535*. The type genome for the species is the GenBank assembly GCA_013112535.1. The GC content of the type genome is 38.6 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Foricana recomitica sp. nov.

Candidatus Foricana recomitica (NL. fem. n. *recomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RXIV01 sp903879705*. The type genome for the species is the GenBank assembly GCA_903879705.1. The GC content of the type genome is 57.6 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Foricana gen. nov.

Candidatus Foricana (NL. fem. n. *Foricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RXIV01*. The type species for the genus is *Candidatus* Foricana recomitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Foricana sicubisca sp. nov.

Candidatus Foricana sicubisca (NL. fem. n. *sicubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RXIV01 sp003989085*. The type genome for the species is the GenBank assembly GCA_003989085.1. The GC content of the type genome is 57.98 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Foricaria defenilega sp. nov.

Candidatus Foricaria defenilega (NL. fem. n. *defenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG730 sp900321865*. The type genome for the species is the GenBank assembly GCA_900321865.1. The GC content of the type genome is 25.46 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Foricaria gen. nov.

Candidatus Foricaria (NL. fem. n. *Foricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG730*. The type species for the genus is *Candidatus* Foricaria defenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG730*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foricariaceae.

Description of *Candidatus* Foricariaceae fam. nov.

Candidatus Foricariaceae (NL. fem. n. *Foricariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG730.* The type genus for the taxon is *Candidatus* Foricaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RUG730*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Foricariales.

Description of *Candidatus* Foricariales ord. nov.

Candidatus Foricariales (NL. fem. n. *Foricariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG730.* The type genus for the taxon is *Candidatus* Foricaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *RUG730*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Foricariae.

Description of *Candidatus* Foricariae class. nov.

Candidatus Foricariae (NL. fem. n. *c__Foricariae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG730.* The type genus for the taxon is *Candidatus* Foricaria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *RUG730*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Foricariota.

Description of *Candidatus* Foricariota phyl. nov.

Candidatus Foricariota (NL. fem. n. *Foricariota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG730.* The type genus for the taxon is *Candidatus* Foricaria .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Foricella adtemitio sp. nov.

Candidatus Foricella adtemitio (NL. fem. n. *adtemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AA152 sp003222305*. The type genome for the species is the GenBank assembly GCA_003222305.1. The GC content of the type genome is 63.42 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Foricella gen. nov.

Candidatus Foricella (NL. fem. n. *Foricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AA152*. The type species for the genus is *Candidatus* Foricella adtemitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AA152*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foricellaceae.

Description of *Candidatus* Foricellaceae fam. nov.

Candidatus Foricellaceae (NL. fem. n. *Foricellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AA152*. The type genus for the taxon is *Candidatus* Foricella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Gp22-AA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilibosales.

Description of *Candidatus* Foricida appugax sp. nov.

Candidatus Foricida appugax (NL. fem. n. *appugax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp002308495*. The type genome for the species is the GenBank assembly GCA_002308495.1. The GC content of the type genome is 39.7 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Foricida gen. nov.

Candidatus Foricida (NL. fem. n. *Foricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1254*. The type species for the genus is *Candidatus* Foricida appugax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Foricida arcipetta sp. nov.

Candidatus Foricida arcipetta (NL. fem. n. *arcipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp902797315*. The type genome for the species is the GenBank assembly GCA_902797315.1. The GC content of the type genome is 36.7 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Foricida capucitrix sp. nov.

Candidatus Foricida capucitrix (NL. fem. n. *capucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp902785935*. The type genome for the species is the GenBank assembly GCA_902785935.1. The GC content of the type genome is 39.5 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Foricida depacicula sp. nov.

Candidatus Foricida depacicula (NL. fem. n. *depacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp902767055*. The type genome for the species is the GenBank assembly GCA_902767055.1. The GC content of the type genome is 39.69 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Foricida depasastra sp. nov.

Candidatus Foricida depasastra (NL. fem. n. *depasastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp002372275*. The type genome for the species is the GenBank assembly GCA_002372275.1. The GC content of the type genome is 38.68 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Foricida monimentia sp. nov.

Candidatus Foricida monimentia (NL. fem. n. *monimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1254 sp900313355*. The type genome for the species is the GenBank assembly GCA_902759795.1. The GC content of the type genome is 38.98 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Foricida sicinitrix sp. nov.

Candidatus Foricida sicinitrix (NL. fem. n. *sicinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1254 sp003542415*. The type genome for the species is the GenBank assembly GCA_003542415.1. The GC content of the type genome is 39.82 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Foricosa desucousia sp. nov.

Candidatus Foricosa desucousia (NL. fem. n. *desucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002793575 sp002774055*. The type genome for the species is the GenBank assembly GCA_002774055.1. The GC content of the type genome is 40.59 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Foricosa gen. nov.

Candidatus Foricosa (NL. fem. n. *Foricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002793575*. The type species for the genus is *Candidatus* Foricosa desucousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Forinana devecatio sp. nov.

Candidatus Forinana devecatio (NL. fem. n. *devecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-43-26 sp001872735*. The type genome for the species is the GenBank assembly GCA_002322915.1. The GC content of the type genome is 43.37 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Forinana gen. nov.

Candidatus Forinana (NL. fem. n. *Forinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-43-26*. The type species for the genus is *Candidatus* Forinana devecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-43-26*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Forinanaceae.

Description of *Candidatus* Forinanaceae fam. nov.

Candidatus Forinanaceae (NL. fem. n. *Forinanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-43-26.* The type genus for the taxon is *Candidatus* Forinana .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Forinaria dimaditura sp. nov.

Candidatus Forinaria dimaditura (NL. fem. n. *dimaditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-40-15 sp001783185*. The type genome for the species is the GenBank assembly GCA_001784365.1. The GC content of the type genome is 40.59 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Forinaria gen. nov.

Candidatus Forinaria (NL. fem. n. *Forinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-40-15*. The type species for the genus is *Candidatus* Forinaria dimaditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Forinaria turificella sp. nov.

Candidatus Forinaria turificella (NL. fem. n. *turificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-40-15 sp001782825*. The type genome for the species is the

GenBank assembly GCA_001782825.1. The GC content of the type genome is 32.88 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Forinella alcedago sp. nov.

Candidatus Forinella alcedago (NL. fem. n. *alcedago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLW01 sp011375275*. The type genome for the species is the GenBank assembly GCA_011375275.1. The GC content of the type genome is 54.84 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Forinella gen. nov.

Candidatus Forinella (NL. fem. n. *Forinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRLW01*. The type species for the genus is *Candidatus* Forinella alcedago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRLW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinellaceae.

Description of *Candidatus* Forinellaceae fam. nov.

Candidatus Forinellaceae (NL. fem. n. *Forinellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRLW01.* The type genus for the taxon is *Candidatus* Forinella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRLW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Forinellales.

Description of *Candidatus* Forinellales ord. nov.

Candidatus Forinellales (NL. fem. n. *Forinellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DRLW01*. The type genus for the taxon is *Candidatus* Forinella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Renavosae.

Description of *Candidatus* Forinia adniletta sp. nov.

Candidatus Forinia adniletta (NL. fem. n. *adniletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU069 sp012730095*. The type genome for the species is the GenBank assembly GCA_012730095.1. The GC content of the type genome is 40.43 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Forinia gen. nov.

Candidatus Forinia (NL. fem. n. *Forinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU069*. The type species for the genus is *Candidatus* Forinia adniletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-8532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabidaceae.

Description of *Candidatus* Forinia fusifitia sp. nov.

Candidatus Forinia fusifitia (NL. fem. n. *fusifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU069 sp012516065*. The type genome for the species is the GenBank assembly GCA_012516065.1. The GC content of the type genome is 43.84 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Forinia xenodedo sp. nov.

Candidatus Forinia xenodedo (NL. fem. n. *xenodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU069 sp001512485*. The type genome for the species is the GenBank assembly GCA_012521075.1. The GC content of the type genome is 42.2 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Forinida offunitoga sp. nov.

Candidatus Forinida offunitoga (NL. fem. n. *offunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFE01 sp007124415*. The type genome for the species is the GenBank assembly GCA_007124415.1. The GC content of the type genome is 48.08 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Forinida gen. nov.

Candidatus Forinida (NL. fem. n. *Forinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLFE01*. The type species for the genus is *Candidatus* Forinida offunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLFE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinidaceae.

Description of *Candidatus* Forinidaceae fam. nov.

Candidatus Forinidaceae (NL. fem. n. *Forinidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLFE01.* The type genus for the taxon is *Candidatus* Forinida .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Forinosa adsigatio sp. nov.

Candidatus Forinosa adsigatio (NL. fem. n. *adsigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-61 sp013388675*. The type genome for the species is the

GenBank assembly GCA_013388675.1. The GC content of the type genome is 56.48 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Forinosa gen. nov.

Candidatus Forinosa (NL. fem. n. *Forinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-61*. The type species for the genus is *Candidatus* Forinosa adsigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinosaceae.

Description of *Candidatus* Forinosaceae fam. nov.

Candidatus Forinosaceae (NL. fem. n. *Forinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-61.* The type genus for the taxon is *Candidatus* Forinosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Forinosales.

Description of *Candidatus* Forinosales ord. nov.

Candidatus Forinosales (NL. fem. n. *Forinosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-61.* The type genus for the taxon is *Candidatus* Forinosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *SM23-61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Forinosae.

Description of *Candidatus* Forinosae class. nov.

Candidatus Forinosae (NL. fem. n. *c__Forinosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-61.* The type genus for the taxon is *Candidatus* Forinosa .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota*.

Description of *Candidatus* Forinosa incesicella sp. nov.

Candidatus Forinosa incesicella (NL. fem. n. *incesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-61 sp001304105*. The type genome for the species is the GenBank assembly GCA_001304105.1. The GC content of the type genome is 56.18 % and the genome length is 4.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Forinosa negotisca sp. nov.

Candidatus Forinosa negotisca (NL. fem. n. *negotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-61 sp003154025*. The type genome for the species is the GenBank assembly GCA_003154025.1. The GC content of the type genome is 56.46 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Forinula insusitoga sp. nov.

Candidatus Forinula insusitoga (NL. fem. n. *insusitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D1FN1-002 sp005774595*. The type genome for the species is the GenBank assembly GCA_005774595.1. The GC content of the type genome is 70.62 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Forinula gen. nov.

Candidatus Forinula (NL. fem. n. *Forinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D1FN1-002*. The type species for the genus is *Candidatus* Forinula insusitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family

D1FN1-002. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinulaceae.

Description of *Candidatus* Forinulaceae fam. nov.

Candidatus Forinulaceae (NL. fem. n. *Forinulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D1FN1-002.* The type genus for the taxon is *Candidatus* Forinula .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Formosa tomogetta sp. nov.

Candidatus Formosa tomogetta (NL. fem. n. *tomogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Formosa sp009796865*. The type genome for the species is the GenBank assembly RS_GCF_009796865.1. The GC content of the type genome is 32.22 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Fortiea invigilega sp. nov.

Candidatus Fortiea invigilega (NL. fem. n. *invigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fortiea sp000316575*. The type genome for the species is the GenBank assembly RS_GCF_000316575.1. The GC content of the type genome is 42.25 % and the genome length is 7.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sphagnum bog".

Description of *Candidatus* Fournierella accomousia sp. nov.

Candidatus Fournierella accomousia (NL. fem. n. *accomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fournierella sp002161595*. The type genome for the species is the

GenBank assembly RS_GCF_002161595.1. The GC content of the type genome is 58.69 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Fournierella affanentia sp. nov.

Candidatus Fournierella affanentia (NL. fem. n. *affanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fournierella sp002160145*. The type genome for the species is the GenBank assembly RS_GCF_002160145.1. The GC content of the type genome is 59.32 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Fournierella bipalibula sp. nov.

Candidatus Fournierella bipalibula (NL. fem. n. *bipalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fournierella sp002159185*. The type genome for the species is the GenBank assembly RS_GCF_002159185.1. The GC content of the type genome is 58.57 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Fournierella vehemedo sp. nov.

Candidatus Fournierella vehemedo (NL. fem. n. *vehemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fournierella sp900543285*. The type genome for the species is the GenBank assembly RS_GCF_900762745.1. The GC content of the type genome is 61.0 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Fournierella vitupedo sp. nov.

Candidatus Fournierella vitupedo (NL. fem. n. *vitupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fournierella sp004558145*. The type genome for the species is the GenBank assembly RS_GCF_900759365.1. The GC content of the type genome is 64.31 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Frackibacter cinipivita sp. nov.

Candidatus Frackibacter cinipivita (NL. fem. n. *cinipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frackibacter sp900114655*. The type genome for the species is the GenBank assembly RS_GCF_900114655.1. The GC content of the type genome is 33.44 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Fraglana melopisca sp. nov.

Candidatus Fraglana melopisca (NL. fem. n. *melopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGC01 sp013152695*. The type genome for the species is the GenBank assembly GCA_013152695.1. The GC content of the type genome is 54.0 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Fraglana gen. nov.

Candidatus Fraglana (NL. fem. n. *Fraglana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGC01*. The type species for the genus is *Candidatus* Fraglana melopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Fraglana utputitudo sp. nov.

Candidatus Fraglana utputitudo (NL. fem. n. *utputitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGC01 sp013152585*. The type genome for the species is the GenBank assembly GCA_013152585.1. The GC content of the type genome is 58.57 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Fraglella artifousia sp. nov.

Candidatus Fraglella artifousia (NL. fem. n. *artifousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAT01 sp014238615*. The type genome for the species is the GenBank assembly GCA_014238615.1. The GC content of the type genome is 64.02 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Fraglella gen. nov.

Candidatus Fraglella (NL. fem. n. *Fraglella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAT01*. The type species for the genus is *Candidatus* Fraglella artifousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6729*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fefelulaceae.

Description of *Candidatus* Fraglosa penuricella sp. nov.

Candidatus Fraglosa penuricella (NL. fem. n. *penuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2693325 sp002693325*. The type genome for the species is the GenBank assembly GCA_002693325.1. The GC content of the type genome is 41.14 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Fraglosa gen. nov.

Candidatus Fraglosa (NL. fem. n. *Fraglosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2693325*. The type species for the genus is *Candidatus* Fraglosa penuricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Fraglula amnigilenta sp. nov.

Candidatus Fraglula amnigilenta (NL. fem. n. *amnigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11867 sp902773365*. The type genome for the species is the GenBank assembly GCA_902773365.1. The GC content of the type genome is 30.21 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Fraglula gen. nov.

Candidatus Fraglula (NL. fem. n. *Fraglula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11867*. The type species for the genus is *Candidatus* Fraglula amnigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Fraglula ermelimonia sp. nov.

Candidatus Fraglula ermelimonia (NL. fem. n. *ermelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11867 sp902795215*. The type genome for the species is the GenBank assembly GCA_902795215.1. The GC content of the type genome is 27.24 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Fragmana ambiditia sp. nov.

Candidatus Fragmana ambiditia (NL. fem. n. *ambiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWJ01 sp902806365*. The type genome for the species is the GenBank assembly GCA_902806365.1. The GC content of the type genome is 65.39 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Fragmana gen. nov.

Candidatus Fragmana (NL. fem. n. *Fragmana* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWJ01*. The type species for the genus is *Candidatus* Fragmana ambiditia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Fragmaria voragousia sp. nov.

Candidatus Fragmaria voragousia (NL. fem. n. *voragousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDG01 sp009783525*. The type genome for the species is the GenBank assembly GCA_009783525.1. The GC content of the type genome is 49.03 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Fragmaria gen. nov.

Candidatus Fragmaria (NL. fem. n. *Fragmaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDG01*. The type species for the genus is *Candidatus* Fragmaria voragousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Fragmia turifitia sp. nov.

Candidatus Fragmia turifitia (NL. fem. n. *turifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOKD01 sp004376305*. The type genome for the species is the GenBank assembly GCA_004376305.1. The GC content of the type genome is 40.93 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Fragmia gen. nov.

Candidatus Fragmia (NL. fem. n. *Fragmia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOKD01*. The type species for the genus is *Candidatus* Fragmia turifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remedanaceae.

Description of *Candidatus* Fragmida cnestatica sp. nov.

Candidatus Fragmida cnestatica (NL. fem. n. *cnestatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTAK01 sp013139625*. The type genome for the species is the GenBank assembly GCA_013139625.1. The GC content of the type genome is 32.77 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Fragmida gen. nov.

Candidatus Fragmida (NL. fem. n. *Fragmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTAK01*. The type species for the genus is *Candidatus* Fragmida cnestatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecariaceae.

Description of *Candidatus* Fragmula genocatica sp. nov.

Candidatus Fragmula genocatica (NL. fem. n. *genocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSB01 sp013214715*. The type genome for the species is the GenBank assembly GCA_013214715.1. The GC content of the type genome is 60.09 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Fragmula gen. nov.

Candidatus Fragmula (NL. fem. n. *Fragmula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSB01*. The type species for the genus is *Candidatus* Fragmula genocatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Francisella alectatica sp. nov.

Candidatus Francisella alectatica (NL. fem. n. *alectatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Francisella sp008711465*. The type genome for the species is the GenBank assembly RS_GCF_008711465.1. The GC content of the type genome is 31.38 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Francisella cocibitica sp. nov.

Candidatus Francisella cocibitica (NL. fem. n. *cocibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Francisella sp000764555*. The type genome for the species is the GenBank assembly RS_GCF_000764555.1. The GC content of the type genome is 32.42 % and the genome length is 2.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lab culture Euplotes raikovi".

Description of *Candidatus* Francisella depelentia sp. nov.

Candidatus Francisella depelentia (NL. fem. n. *depelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Francisella sp002095075*. The type genome for the species is the GenBank assembly GCA_001753795.1. The GC content of the type genome is 31.67 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Frankia conamifica sp. nov.

Candidatus Frankia conamifica (NL. fem. n. *conamifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp001636565*. The type genome for the species is the GenBank assembly RS_GCF_001636565.1. The GC content of the type genome is 72.19 % and the genome length is 6.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "nodules".

Description of *Candidatus* Frankia demagentia sp. nov.

Candidatus Frankia demagentia (NL. fem. n. *demagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp902812705*. The type genome for the species is the GenBank assembly RS_GCF_902812705.1. The GC content of the type genome is 71.34 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Frankia fuligitudo sp. nov.

Candidatus Frankia fuligitudo (NL. fem. n. *fuligitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp001854655*. The type genome for the species is the GenBank assembly RS_GCF_001854655.1. The GC content of the type genome is 71.44 % and the genome length is 8.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "nodule".

Description of *Candidatus* Frankia incocatica sp. nov.

Candidatus Frankia incocatica (NL. fem. n. *incocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp902806485*. The type genome for the species is the GenBank assembly RS_GCF_902806485.1. The GC content of the type genome is 71.57 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Frankia intamatica sp. nov.

Candidatus Frankia intamatica (NL. fem. n. *intamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp000177675*. The type genome for the species is the GenBank assembly RS_GCF_000177675.1. The GC content of the type genome is 70.81 % and the genome length is 9.35 Mbp.

Description of *Candidatus* Frankia nucifisca sp. nov.

Candidatus Frankia nucifisca (NL. fem. n. *nucifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp000262465*. The type genome for the species is the GenBank assembly RS_GCF_000262465.1. The GC content of the type genome is 72.59 % and the genome length is 7.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Frankia teleficella sp. nov.

Candidatus Frankia teleficella (NL. fem. n. *teleficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp001854805*. The type genome for the species is the GenBank assembly RS_GCF_001854805.1. The GC content of the type genome is 71.26 % and the genome length is 11.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root nodule".

Description of *Candidatus* Frankia utputax sp. nov.

Candidatus Frankia utputax (NL. fem. n. *utputax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frankia sp000966285*. The type genome for the species is the GenBank assembly RS_GCF_000966285.1. The GC content of the type genome is 71.93 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Frateuria annifimonia sp. nov.

Candidatus Frateuria annifimonia (NL. fem. n. *annifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frateuria_A sp013362045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013362045.1. The GC content of the type genome is 69.25 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Frateuria assefisca sp. nov.

Candidatus Frateuria assefisca (NL. fem. n. *assefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frateuria_A sp001428405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428405.1. The GC content of the type genome is 68.96 % and the genome length is 4.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Frederiksenia perabago sp. nov.

Candidatus Frederiksenia perabago (NL. fem. n. *perabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frederiksenia sp011455275*. The type genome for the species is the GenBank assembly RS_GCF_011455275.1. The GC content of the type genome is 42.91 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Fretibacterium adcumiforma sp. nov.

Candidatus Fretibacterium adcumiforma (NL. fem. n. *adcumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fretibacterium sp012520235*. The type genome for the species is the GenBank assembly GCA_012520235.1. The GC content of the type genome is 57.34 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Fretibacterium bimotigena sp. nov.

Candidatus Fretibacterium bimotigena (NL. fem. n. *bimotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fretibacterium sp003860125*. The type genome for the species is the GenBank assembly RS_GCF_003860125.1. The GC content of the type genome is 62.82 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Fretibacterium impilugo sp. nov.

Candidatus Fretibacterium impilugo (NL. fem. n. *impilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fretibacterium sp009778055*. The type genome for the species is the GenBank assembly GCA_009778055.1. The GC content of the type genome is 55.07 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Frigdaria adessifica sp. nov.

Candidatus Frigdaria adessifica (NL. fem. n. *adessifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSYW01 sp011367345*. The type genome for the species is the GenBank assembly GCA_011367345.1. The GC content of the type genome is 67.09 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Frigdaria gen. nov.

Candidatus Frigdaria (NL. fem. n. *Frigdaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSYW01*. The type species for the genus is *Candidatus* Frigdaria adessifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Frigdella selibatica sp. nov.

Candidatus Frigdella selibatica (NL. fem. n. *selibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUAS01 sp903897205*. The type genome for the species is the GenBank assembly GCA_903897205.1. The GC content of the type genome is 39.56 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Frigdella gen. nov.

Candidatus Frigdella (NL. fem. n. *Frigdella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUAS01*. The type species for the genus is *Candidatus* Frigdella selibatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Frigdia ascelax sp. nov.

Candidatus Frigdia ascelax (NL. fem. n. *ascelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-11 sp001776335*. The type genome for the species is the GenBank assembly GCA_001776335.1. The GC content of the type genome is 41.3 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Frigdia gen. nov.

Candidatus Frigdia (NL. fem. n. *Frigdia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-11*. The type species for the genus is *Candidatus* Frigdia ascelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Frigdosa inergicula sp. nov.

Candidatus Frigdosa inergicula (NL. fem. n. *inergicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQIV01 sp903871905*. The type genome for the species is the GenBank assembly GCA_903871905.1. The GC content of the type genome is 58.78 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Frigdosa gen. nov.

Candidatus Frigdosa (NL. fem. n. *Frigdosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQIV01*. The type species for the genus is *Candidatus* Frigdosa inergicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Frigidibacter allapitia sp. nov.

Candidatus Frigidibacter allapitia (NL. fem. n. *allapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigidibacter sp003993775*. The type genome for the species is the GenBank assembly RS_GCF_003993775.1. The GC content of the type genome is 69.47 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Frigidibacter peropibra sp. nov.

Candidatus Frigidibacter peropibra (NL. fem. n. *peropibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigidibacter sp002423245*. The type genome for the species is the GenBank assembly GCA_014359755.1. The GC content of the type genome is 68.43 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Frigididesulfovibrio inregitrix sp. nov.

Candidatus Frigididesulfovibrio inregitrix (NL. fem. n. *inregitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigididesulfovibrio sp002293605*. The type genome for the species is the GenBank assembly GCA_002293605.1. The GC content of the type genome is 58.27 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Frigididesulfovibrio megalitura sp. nov.

Candidatus Frigididesulfovibrio megalitura (NL. fem. n. *megalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigididesulfovibrio sp009783025*. The type genome for the species is the GenBank assembly GCA_009783025.1. The GC content of the type genome is 58.0 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Frigoribacterium adsocax sp. nov.

Candidatus Frigoribacterium adsocax (NL. fem. n. *adsocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp013248995*. The type genome for the species is the GenBank assembly RS_GCF_013248995.1. The GC content of the type genome is 70.35 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Frigoribacterium colipisca sp. nov.

Candidatus Frigoribacterium colipisca (NL. fem. n. *colipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp003755185*. The type genome for the species is the GenBank assembly RS_GCF_003755185.1. The GC content of the type genome is 70.64 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Frigoribacterium colopitia sp. nov.

Candidatus Frigoribacterium colopitia (NL. fem. n. *colopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp007954365*. The type genome for the species is the GenBank assembly RS_GCF_007954365.1. The GC content of the type genome is 71.98 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Frigoribacterium dilibugo sp. nov.

Candidatus Frigoribacterium dilibugo (NL. fem. n. *dilibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp001422285*. The type genome for the species is the GenBank assembly RS_GCF_001424285.1. The GC content of the type genome is 71.2 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Frigoribacterium munifitudo sp. nov.

Candidatus Frigoribacterium munifitudo (NL. fem. n. *munifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp001421165*. The type genome for the species is the GenBank assembly RS_GCF_013204925.1. The GC content of the type genome is 71.34 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Frigoribacterium obnoximonia sp. nov.

Candidatus Frigoribacterium obnoximonia (NL. fem. n. *obnoximonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp001423905*. The type genome for the species is the GenBank assembly RS_GCF_001423905.1. The GC content of the type genome is 71.47 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Frigoribacterium obsorigena sp. nov.

Candidatus Frigoribacterium obsorigena (NL. fem. n. *obsorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp003751785*. The type genome for the species is the GenBank assembly RS_GCF_003751785.1. The GC content of the type genome is 72.99 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Frigoribacterium pavimastra sp. nov.

Candidatus Frigoribacterium pavimastra (NL. fem. n. *pavimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp000878135*. The type genome for the species is the GenBank assembly RS_GCF_001421865.1. The GC content of the type genome is 71.15 % and the genome length is 3.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Frigoribacterium regifedo sp. nov.

Candidatus Frigoribacterium regifedo (NL. fem. n. *regifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp004364285*. The type genome for the species is the GenBank assembly RS_GCF_003751515.1. The GC content of the type genome is 72.39 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Frigoribacterium turibimonas sp. nov.

Candidatus Frigoribacterium turibimonas (NL. fem. n. *turibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frigoribacterium sp001424645*. The type genome for the species is the GenBank assembly RS_GCF_001864945.1. The GC content of the type genome is 71.12 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Frischella semibitia sp. nov.

Candidatus Frischella semibitia (NL. fem. n. *semibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frischella sp014489845*. The type genome for the species is the GenBank assembly RS_GCF_014489845.1. The GC content of the type genome is 34.51 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Frisingicoccus codificella sp. nov.

Candidatus Frisingicoccus codificella (NL. fem. n. *codificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frisingicoccus sp009929615*. The type genome for the species is the GenBank assembly GCA_009929615.1. The GC content of the type genome is 41.17 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Frisingicoccus cucurimonia sp. nov.

Candidatus Frisingicoccus cucurimonia (NL. fem. n. *cucurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frisingicoccus sp900549105*. The type genome for the species is the GenBank assembly GCA_900549105.1. The GC content of the type genome is 44.54 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Frisingicoccus facunentia sp. nov.

Candidatus Frisingicoccus facunentia (NL. fem. n. *facunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frisingicoccus sp900753685*. The type genome for the species is the GenBank assembly RS_GCF_900753685.1. The GC content of the type genome is 45.22 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Frisingicoccus xeropicella sp. nov.

Candidatus Frisingicoccus xeropicella (NL. fem. n. *xeropicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frisingicoccus sp900757195*. The type genome for the species is the GenBank assembly RS_GCF_900757195.1. The GC content of the type genome is 46.17 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Frondihabitans adsifitica sp. nov.

Candidatus Frondihabitans adsifitica (NL. fem. n. *adsifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Frondihabitans sp002074055*. The type genome for the species is the GenBank assembly RS_GCF_002074055.1. The GC content of the type genome is 70.43 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Frondihabitans adviniforma sp. nov.

Candidatus Frondihabitans adviniforma (NL. fem. n. *adviniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frondihabitans sp001577365*. The type genome for the species is the GenBank assembly RS_GCF_001577365.1. The GC content of the type genome is 68.43 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Frondihabitans ensigax sp. nov.

Candidatus Frondihabitans ensigax (NL. fem. n. *ensigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frondihabitans sp003752365*. The type genome for the species is the GenBank assembly RS_GCF_003752365.1. The GC content of the type genome is 69.55 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Frondihabitans ficuletta sp. nov.

Candidatus Frondihabitans ficuletta (NL. fem. n. *ficuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Frondihabitans sp001423105*. The type genome for the species is the GenBank assembly RS_GCF_003814635.1. The GC content of the type genome is 67.3 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Fructobacillus colepentia sp. nov.

Candidatus Fructobacillus colepentia (NL. fem. n. *colepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fructobacillus sp001038455*. The type genome for the species is the GenBank assembly RS_GCF_001038455.1. The GC content of the type genome is 43.65 % and the genome length is 1.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "European foulbrood infected honey bee

larva".

Description of *Candidatus* Fuerstia inhabibula sp. nov.

Candidatus Fuerstia inhabibula (NL. fem. n. *inhabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fuerstia sp014238335*. The type genome for the species is the GenBank assembly GCA_014238335.1. The GC content of the type genome is 55.38 % and the genome length is 8.38 Mbp.

Description of *Candidatus* Fuligana demadax sp. nov.

Candidatus Fuligana demadax (NL. fem. n. *demadax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3569 sp002375895*. The type genome for the species is the GenBank assembly GCA_002376455.1. The GC content of the type genome is 62.23 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Fuligana gen. nov.

Candidatus Fuligana (NL. fem. n. *Fuligana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3569*. The type species for the genus is *Candidatus* Fuligana demadax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3569*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuliganaceae.

Description of *Candidatus* Fuliganaceae fam. nov.

Candidatus Fuliganaceae (NL. fem. n. *Fuliganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3569.* The type genus for the taxon is *Candidatus* Fuligana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3569*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fuliganales.

Description of *Candidatus* Fuliganales ord. nov.

Candidatus Fuliganales (NL. fem. n. *Fuliganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3569.* The type genus for the taxon is *Candidatus* Fuligana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3569*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fuliganae.

Description of *Candidatus* Fuliganae class. nov.

Candidatus Fuliganae (NL. fem. n. *c__Fuliganae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3569.* The type genus for the taxon is *Candidatus* Fuligana .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_E*.

Description of *Candidatus* Fuligaria defesibra sp. nov.

Candidatus Fuligaria defesibra (NL. fem. n. *defesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-45-9 sp001823215*. The type genome for the species is the GenBank assembly GCA_001823215.1. The GC content of the type genome is 45.07 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Fuligaria gen. nov.

Candidatus Fuligaria (NL. fem. n. *Fuligaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-45-9*. The type species for the genus is *Candidatus* Fuligaria defesibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Fuligella cohonimonas sp. nov.

Candidatus Fuligella cohonimonas (NL. fem. n. *cohonimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITQP01 sp903869975*. The type genome for the species is the GenBank assembly GCA_903869975.1. The GC content of the type genome is 48.6 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Fuligella gen. nov.

Candidatus Fuligella (NL. fem. n. *Fuligella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITQP01*. The type species for the genus is *Candidatus* Fuligella cohonimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Fuligella vinulimonas sp. nov.

Candidatus Fuligella vinulimonas (NL. fem. n. *vinulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITQP01 sp903894565*. The type genome for the species is the GenBank assembly GCA_903837185.1. The GC content of the type genome is 44.38 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Fuligia caravilega sp. nov.

Candidatus Fuligia caravilega (NL. fem. n. *caravilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6957 sp002707365*. The type genome for the species is the GenBank assembly GCA_002707365.1. The GC content of the type genome is 47.25 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Fuligia gen. nov.

Candidatus Fuligia (NL. fem. n. *Fuligia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6957*. The type species for the genus is *Candidatus* Fuligia caravilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fuligida ecfacitrix sp. nov.

Candidatus Fuligida ecfacitrix (NL. fem. n. *ecfacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRG01 sp013202935*. The type genome for the species is the GenBank assembly GCA_013202935.1. The GC content of the type genome is 41.13 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Fuligida gen. nov.

Candidatus Fuligida (NL. fem. n. *Fuligida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRG01*. The type species for the genus is *Candidatus* Fuligida ecfacitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligidaceae.

Description of *Candidatus* Fuligidaceae fam. nov.

Candidatus Fuligidaceae (NL. fem. n. *Fuligidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRG01.* The type genus for the taxon is *Candidatus* Fuligida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMRG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fuligidales.

Description of *Candidatus* Fuligidales ord. nov.

Candidatus Fuligidales (NL. fem. n. *Fuligidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRG01.* The type genus for the taxon is *Candidatus* Fuligida .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Fuligosa cobalatio sp. nov.

Candidatus Fuligosa cobalatio (NL. fem. n. *cobalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B26-G2 sp003647715*. The type genome for the species is the GenBank assembly GCA_003647745.1. The GC content of the type genome is 42.81 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Fuligosa gen. nov.

Candidatus Fuligosa (NL. fem. n. *Fuligosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B26-G2*. The type species for the genus is *Candidatus* Fuligosa cobalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B26-G2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligosaceae.

Description of *Candidatus* Fuligosaceae fam. nov.

Candidatus Fuligosaceae (NL. fem. n. *Fuligosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B26-G2.* The type genus for the taxon is *Candidatus* Fuligosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B26-G2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fuligosales.

Description of *Candidatus* Fuligosales ord. nov.

Candidatus Fuligosales (NL. fem. n. *Fuligosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B26-G2.* The type genus for the taxon is *Candidatus* Fuligosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *B26-G2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fuligosae.

Description of *Candidatus* Fuligosae class. nov.

Candidatus Fuligosae (NL. fem. n. *c__Fuligosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B26-G2.* The type genus for the taxon is *Candidatus* Fuligosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *RBG-13-66-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Resuliota.

Description of *Candidatus* Fulvivirga antevigena sp. nov.

Candidatus Fulvivirga antevigena (NL. fem. n. *antevigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fulvivirga sp007097395*. The type genome for the species is the GenBank assembly RS_GCF_007097395.1. The GC content of the type genome is 41.28 % and the genome length is 8.13 Mbp.

Description of *Candidatus* Fulvivirga culilitio sp. nov.

Candidatus Fulvivirga culilitio (NL. fem. n. *culilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fulvivirga sp001657315*. The type genome for the species is the GenBank assembly GCA_001657315.1. The GC content of the type genome is 45.37 % and the genome length is 8.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture inoculated with black band disease microbial mat".

Description of *Candidatus* Fulvivirga taxilitrix sp. nov.

Candidatus Fulvivirga taxilitrix (NL. fem. n. *taxilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fulvivirga sp002338655*. The type genome for the species is the GenBank assembly GCA_002338655.1. The GC content of the type genome is 38.39 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Fumacaria notabastra sp. nov.

Candidatus Fumacaria notabastra (NL. fem. n. *notabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-37-10 sp001771535*. The type genome for the species is the GenBank assembly GCA_001771455.1. The GC content of the type genome is 37.32 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Fumacaria gen. nov.

Candidatus Fumacaria (NL. fem. n. *Fumacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-37-10*. The type species for the genus is *Candidatus* Fumacaria notabastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-37-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumacariaceae.

Description of *Candidatus* Fumacariaceae fam. nov.

Candidatus Fumacariaceae (NL. fem. n. *Fumacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYC2-FULL-37-10.* The type genus for the taxon is *Candidatus* Fumacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYC2-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Domipidales.

Description of *Candidatus* Fumacella cenodicula sp. nov.

Candidatus Fumacella cenodicula (NL. fem. n. *cenodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCP01 sp013817465*. The type genome for the species is the GenBank assembly GCA_013817465.1. The GC content of the type genome is 63.64 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Fumacella gen. nov.

Candidatus Fumacella (NL. fem. n. *Fumacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCP01*. The type species for the genus is *Candidatus* Fumacella cenodicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDCP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumacellaceae.

Description of *Candidatus* Fumacellaceae fam. nov.

Candidatus Fumacellaceae (NL. fem. n. *Fumacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDCP01.* The type genus for the taxon is *Candidatus* Fumacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACDCP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fumacellales.

Description of *Candidatus* Fumacellales ord. nov.

Candidatus Fumacellales (NL. fem. n. *Fumacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDCP01.* The type genus for the taxon is *Candidatus* Fumacella .

According to the GTDB R06-RS202, this order belongs to the class

Gammaproteobacteria.

Description of *Candidatus* Fumacia tabitessa sp. nov.

Candidatus Fumacia tabitessa (NL. fem. n. *tabitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIY01 sp903970495*. The type genome for the species is the GenBank assembly GCA_903970495.1. The GC content of the type genome is 73.19 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Fumacia gen. nov.

Candidatus Fumacia (NL. fem. n. *Fumacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIY01*. The type species for the genus is *Candidatus* Fumacia tabitessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJCIY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumaciaceae.

Description of *Candidatus* Fumaciaceae fam. nov.

Candidatus Fumaciaceae (NL. fem. n. *Fumaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJCIY01*. The type genus for the taxon is *Candidatus* Fumacia .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Fumacida denecatica sp. nov.

Candidatus Fumacida denecatica (NL. fem. n. *denecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7878 sp002501205*. The type genome for the species is the GenBank assembly GCA_002306585.1. The GC content of the type genome is 43.67 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Fumacida gen. nov.

Candidatus Fumacida (NL. fem. n. *Fumacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7878*. The type species for the genus is *Candidatus* Fumacida denecatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fumacida infesimonas sp. nov.

Candidatus Fumacida infesimonas (NL. fem. n. *infesimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7878 sp014524565*. The type genome for the species is the GenBank assembly GCA_014524565.1. The GC content of the type genome is 43.23 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Fumacida rurigetta sp. nov.

Candidatus Fumacida rurigetta (NL. fem. n. *rurigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7878 sp003045865*. The type genome for the species is the GenBank assembly GCA_003045865.1. The GC content of the type genome is 41.03 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Fumacosa dicimousia sp. nov.

Candidatus Fumacosa dicimousia (NL. fem. n. *dicimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSG01 sp013214525*. The type genome for the species is the GenBank assembly GCA_013214525.1. The GC content of the type genome is 30.78 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Fumacosa gen. nov.

Candidatus Fumacosa (NL. fem. n. *Fumacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSG01*. The type species for the genus is *Candidatus* Fumacosa dicimousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABSSG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumacosaceae.

Description of *Candidatus* Fumacosaceae fam. nov.

Candidatus Fumacosaceae (NL. fem. n. *Fumacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSSG01*. The type genus for the taxon is *Candidatus* Fumacosa .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Fumacula addivimonas sp. nov.

Candidatus Fumacula addivimonas (NL. fem. n. *addivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2943 sp902764915*. The type genome for the species is the GenBank assembly GCA_902764915.1. The GC content of the type genome is 53.58 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Fumacula gen. nov.

Candidatus Fumacula (NL. fem. n. *Fumacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2943*. The type species for the genus is *Candidatus* Fumacula addivimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Fumacula dapifitica sp. nov.

Candidatus Fumacula dapifitica (NL. fem. n. *dapifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2943 sp002350845*. The type genome for the species is the GenBank assembly GCA_902781795.1. The GC content of the type genome is 53.93 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Fumacula desucastra sp. nov.

Candidatus Fumacula desucastra (NL. fem. n. *desucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2943 sp900321565*. The type genome for the species is the GenBank assembly GCA_902782765.1. The GC content of the type genome is 52.16 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Fumacula dilibago sp. nov.

Candidatus Fumacula dilibago (NL. fem. n. *dilibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2943 sp902774025*. The type genome for the species is the GenBank assembly GCA_902774025.1. The GC content of the type genome is 57.16 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Fumacula istiniforma sp. nov.

Candidatus Fumacula istiniforma (NL. fem. n. *istiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2943 sp902775835*. The type genome for the species is the GenBank assembly GCA_902775835.1. The GC content of the type genome is 55.96 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Fumacula pimenitia sp. nov.

Candidatus Fumacula pimenitia (NL. fem. n. *pimenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2943 sp900321295*. The type genome for the species is the GenBank assembly GCA_902760065.1. The GC content of the type genome is 51.76 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Fumifana decenitas sp. nov.

Candidatus Fumifana decenitas (NL. fem. n. *decenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3574 sp002375935*. The type genome for the species is the GenBank assembly GCA_002375935.1. The GC content of the type genome is 66.34 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Fumifana gen. nov.

Candidatus Fumifana (NL. fem. n. *Fumifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3574*. The type species for the genus is *Candidatus* Fumifana decenitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fumifaria detositoga sp. nov.

Candidatus Fumifaria detositoga (NL. fem. n. *detositoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6615 sp002937505*. The type genome for the species is the GenBank assembly GCA_002346765.1. The GC content of the type genome is 39.79 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Fumifaria gen. nov.

Candidatus Fumifaria (NL. fem. n. *Fumifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6615*. The type species for the genus is *Candidatus* Fumifaria detositoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Fumifariaceae fam. nov.

Candidatus Fumifariaceae (NL. fem. n. *Fumifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6615.* The type genus for the taxon is *Candidatus* Fumifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fumifariales.

Description of *Candidatus* Fumifariales ord. nov.

Candidatus Fumifariales (NL. fem. n. *Fumifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6615.* The type genus for the taxon is *Candidatus* Fumifaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Fumifella ludibicella sp. nov.

Candidatus Fumifella ludibicella (NL. fem. n. *ludibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-38-21 sp001782475*. The type genome for the species is the GenBank assembly GCA_001782475.1. The GC content of the type genome is 37.02 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Fumifella gen. nov.

Candidatus Fumifella (NL. fem. n. *Fumifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-38-21*. The type species for the genus is *Candidatus* Fumifella ludibicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA12049. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Fumifella semiditica sp. nov.

Candidatus Fumifella semiditica (NL. fem. n. *semiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-38-21 sp001782085*. The type genome for the species is the GenBank assembly GCA_001782085.1. The GC content of the type genome is 37.2 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Fumifia ellebetta sp. nov.

Candidatus Fumifia ellebetta (NL. fem. n. *ellebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SB21 sp008933615*. The type genome for the species is the GenBank assembly GCA_008933615.1. The GC content of the type genome is 43.74 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Fumifia gen. nov.

Candidatus Fumifia (NL. fem. n. *Fumifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SB21*. The type species for the genus is *Candidatus* Fumifia ellebetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SB21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifiaceae.

Description of *Candidatus* Fumifiaceae fam. nov.

Candidatus Fumifiaceae (NL. fem. n. *Fumifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SB21*. The type genus for the taxon is *Candidatus* Fumifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SB21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fumifiales.

Description of *Candidatus* Fumifiales ord. nov.

Candidatus Fumifiales (NL. fem. n. *Fumifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SB21*. The type genus for the taxon is *Candidatus* Fumifia .

According to the original version of GTDB R06-RS202, this family belongs to the class *CLD3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defacidae.

Description of *Candidatus* Fumifida adfabitrix sp. nov.

Candidatus Fumifida adfabitrix (NL. fem. n. *adfabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTFT01 sp011363065*. The type genome for the species is the GenBank assembly GCA_011363065.1. The GC content of the type genome is 44.04 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Fumifida gen. nov.

Candidatus Fumifida (NL. fem. n. *Fumifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTFT01*. The type species for the genus is *Candidatus* Fumifida adfabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTFT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifidaceae.

Description of *Candidatus* Fumifidaceae fam. nov.

Candidatus Fumifidaceae (NL. fem. n. *Fumifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DTFT01*. The type genus for the taxon is *Candidatus* Fumifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decunulales.

Description of *Candidatus* Fumifosa attesatica sp. nov.

Candidatus Fumifosa attesatica (NL. fem. n. *attesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp002903145*. The type genome for the species is the GenBank assembly RS_GCF_002903145.1. The GC content of the type genome is 36.45 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Fumifosa gen. nov.

Candidatus Fumifosa (NL. fem. n. *Fumifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DB6-IX*. The type species for the genus is *Candidatus* Fumifosa attesatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fumifosa desupatica sp. nov.

Candidatus Fumifosa desupatica (NL. fem. n. *desupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp000447795*. The type genome for the species is the GenBank assembly RS_GCF_000447795.1. The GC content of the type genome is 36.05 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Fumifosa devecitura sp. nov.

Candidatus Fumifosa devecitura (NL. fem. n. *devecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp002686115*. The type genome for the species is the

GenBank assembly GCA_002686115.1. The GC content of the type genome is 34.34 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Fumifosa domigigena sp. nov.

Candidatus Fumifosa domigigena (NL. fem. n. *domigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp001874305*. The type genome for the species is the GenBank assembly GCA_001874305.1. The GC content of the type genome is 35.67 % and the genome length is 3.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Fumifosa obtesessa sp. nov.

Candidatus Fumifosa obtesessa (NL. fem. n. *obtesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp000447775*. The type genome for the species is the GenBank assembly RS_GCF_000447775.1. The GC content of the type genome is 37.6 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Fumifosa palifibula sp. nov.

Candidatus Fumifosa palifibula (NL. fem. n. *palifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp002338505*. The type genome for the species is the GenBank assembly GCA_002338505.1. The GC content of the type genome is 35.66 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Fumifosa relenedo sp. nov.

Candidatus Fumifosa relenedo (NL. fem. n. *relenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp000443995*. The type genome for the species is the GenBank assembly RS_GCF_000443995.1. The GC content of the type genome is 36.47 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Fumifosa rorarivita sp. nov.

Candidatus Fumifosa rorarivita (NL. fem. n. *rorarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB6-IX sp003612895*. The type genome for the species is the GenBank assembly RS_GCF_003612895.1. The GC content of the type genome is 35.84 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Fumifula luculitia sp. nov.

Candidatus Fumifula luculitia (NL. fem. n. *luculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGT01 sp007376725*. The type genome for the species is the GenBank assembly GCA_007376725.1. The GC content of the type genome is 45.51 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Fumifula gen. nov.

Candidatus Fumifula (NL. fem. n. *Fumifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGT01*. The type species for the genus is *Candidatus* Fumifula luculitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMGT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifulaceae.

Description of *Candidatus* Fumifulaceae fam. nov.

Candidatus Fumifulaceae (NL. fem. n. *Fumifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMGT01.* The type genus for the taxon is *Candidatus* Fumifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Funamana proclitrix sp. nov.

Candidatus Funamana proclitrix (NL. fem. n. *proclitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2233 sp002347965*. The type genome for the species is the GenBank assembly GCA_002347965.1. The GC content of the type genome is 56.11 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Funamana gen. nov.

Candidatus Funamana (NL. fem. n. *Funamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2233*. The type species for the genus is *Candidatus* Funamana proclitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2233*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamanaceae.

Description of *Candidatus* Funamanaceae fam. nov.

Candidatus Funamanaceae (NL. fem. n. *Funamanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2233.* The type genus for the taxon is *Candidatus* Funamana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2233*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Funamanales.

Description of *Candidatus* Funamanales ord. nov.

Candidatus Funamanales (NL. fem. n. *Funamanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2233.* The type genus for the taxon is *Candidatus* Funamana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2233*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Funamanae.

Description of *Candidatus* Funamanae class. nov.

Candidatus Funamanae (NL. fem. n. *c__Funamanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2233.* The type genus for the taxon is *Candidatus* Funamana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA2233*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Funamanota.

Description of *Candidatus* Funamanota phyl. nov.

Candidatus Funamanota (NL. fem. n. *Funamanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2233.* The type genus for the taxon is *Candidatus* Funamana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Funamana sifunitica sp. nov.

Candidatus Funamana sifunitica (NL. fem. n. *sifunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2233 sp011620345*. The type genome for the species is the GenBank assembly GCA_011620345.1. The GC content of the type genome is 55.75 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Funamaria artolessa sp. nov.

Candidatus Funamaria artolessa (NL. fem. n. *artolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp903928615*. The type genome for the species is the GenBank assembly GCA_903928615.1. The GC content of the type genome is 71.74 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Funamaria gen. nov.

Candidatus Funamaria (NL. fem. n. *Funamaria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYFI01*. The type species for the genus is *Candidatus* Funamaria artolessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadurellaceae.

Description of *Candidatus* Funamaria celamibra sp. nov.

Candidatus Funamaria celamibra (NL. fem. n. *celamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp005800465*. The type genome for the species is the GenBank assembly GCA_005800465.1. The GC content of the type genome is 66.99 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Funamaria fefelifica sp. nov.

Candidatus Funamaria fefelifica (NL. fem. n. *fefelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp903943955*. The type genome for the species is the GenBank assembly GCA_903939585.1. The GC content of the type genome is 67.17 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Funamaria labecimonas sp. nov.

Candidatus Funamaria labecimonas (NL. fem. n. *labecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp005788075*. The type genome for the species is the GenBank assembly GCA_005788075.1. The GC content of the type genome is 71.8 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Funamaria linigentia sp. nov.

Candidatus Funamaria linigentia (NL. fem. n. *linigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp005792725*. The type genome for the species is the GenBank assembly GCA_005776805.1. The GC content of the type genome is 71.96 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Funamaria manomimonas sp. nov.

Candidatus Funamaria manomimonas (NL. fem. n. *manomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp903866425*. The type genome for the species is the GenBank assembly GCA_903866425.1. The GC content of the type genome is 68.53 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Funamaria morigitudo sp. nov.

Candidatus Funamaria morigitudo (NL. fem. n. *morigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFI01 sp009694365*. The type genome for the species is the GenBank assembly GCA_009694365.1. The GC content of the type genome is 68.14 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Funamella televiforma sp. nov.

Candidatus Funamella televiforma (NL. fem. n. *televiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-48-14 sp001822835*. The type genome for the species is the GenBank assembly GCA_001822935.1. The GC content of the type genome is 48.01 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Funamella gen. nov.

Candidatus Funamella (NL. fem. n. *Funamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-48-14*. The type species for the genus is *Candidatus* Funamella televiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-58-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicodidaceae.

Description of *Candidatus* Funamia cinipitica sp. nov.

Candidatus Funamia cinipitica (NL. fem. n. *cinipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7656 sp002483445*. The type genome for the species is the GenBank assembly GCA_002483445.1. The GC content of the type genome is 54.55 % and the genome length is 8.15 Mbp.

Description of *Candidatus* Funamia gen. nov.

Candidatus Funamia (NL. fem. n. *Funamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7656*. The type species for the genus is *Candidatus* Funamia cinipitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7656*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamiaceae.

Description of *Candidatus* Funamiaceae fam. nov.

Candidatus Funamiaceae (NL. fem. n. *Funamiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7656.* The type genus for the taxon is *Candidatus* Funamia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7656*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Funamiales.

Description of *Candidatus* Funamiales ord. nov.

Candidatus Funamiales (NL. fem. n. *Funamiales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7656.* The type genus for the taxon is *Candidatus* Funamia .

According to the GTDB R06-RS202, this order belongs to the class *Blastocatellia*.

Description of *Candidatus* Funamida casabitrix sp. nov.

Candidatus Funamida casabitrix (NL. fem. n. *casabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002713545*. The type genome for the species is the GenBank assembly GCA_002480725.1. The GC content of the type genome is 42.72 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Funamida gen. nov.

Candidatus Funamida (NL. fem. n. *Funamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MedAcidi-G1*. The type species for the genus is *Candidatus* Funamida casabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MedAcidi-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamidaceae.

Description of *Candidatus* Funamidaceae fam. nov.

Candidatus Funamidaceae (NL. fem. n. *Funamidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MedAcidi-G1.* The type genus for the taxon is *Candidatus* Funamida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Funamida colapifica sp. nov.

Candidatus Funamida colapifica (NL. fem. n. *colapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002299135*. The type genome for the species is the GenBank assembly GCA_002299135.1. The GC content of the type genome is 42.6 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Funamida demadicella sp. nov.

Candidatus Funamida demadicella (NL. fem. n. *demadicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp000817085*. The type genome for the species is the GenBank assembly GCA_002360055.1. The GC content of the type genome is 42.41 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Funamida derecimonia sp. nov.

Candidatus Funamida derecimonia (NL. fem. n. *derecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002716285*. The type genome for the species is the GenBank assembly GCA_002716285.1. The GC content of the type genome is 42.87 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Funamida giganessa sp. nov.

Candidatus Funamida giganessa (NL. fem. n. *giganessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002699555*. The type genome for the species is the GenBank assembly GCA_002699555.1. The GC content of the type genome is 41.2 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Funamida inhorastra sp. nov.

Candidatus Funamida inhorastra (NL. fem. n. *inhorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002721755*. The type genome for the species is the GenBank assembly GCA_002721755.1. The GC content of the type genome is 42.5 %

and the genome length is 1.55 Mbp.

Description of *Candidatus* Funamida negidicella sp. nov.

Candidatus Funamida negidicella (NL. fem. n. *negidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002294285*. The type genome for the species is the GenBank assembly GCA_002725355.1. The GC content of the type genome is 43.08 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Funamida nugigitura sp. nov.

Candidatus Funamida nugigitura (NL. fem. n. *nugigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002730515*. The type genome for the species is the GenBank assembly GCA_002730515.1. The GC content of the type genome is 41.84 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Funamida panifibra sp. nov.

Candidatus Funamida panifibra (NL. fem. n. *panifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp002729765*. The type genome for the species is the GenBank assembly GCA_002500585.1. The GC content of the type genome is 42.52 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Funamida vanidilega sp. nov.

Candidatus Funamida vanidilega (NL. fem. n. *vanidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G1 sp003214465*. The type genome for the species is the GenBank assembly GCA_003214465.1. The GC content of the type genome is 42.38 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Funamosa humecitica sp. nov.

Candidatus Funamosa humecitica (NL. fem. n. *humecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BuS5 sp000472805*. The type genome for the species is the GenBank assembly RS_GCF_000472805.1. The GC content of the type genome is 41.28 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Funamosa gen. nov.

Candidatus Funamosa (NL. fem. n. *Funamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BuS5*. The type species for the genus is *Candidatus* Funamosa humecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BuS5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamosaceae.

Description of *Candidatus* Funamosaceae fam. nov.

Candidatus Funamosaceae (NL. fem. n. *Funamosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BuS5.* The type genus for the taxon is *Candidatus* Funamosa .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Funamula appagitia sp. nov.

Candidatus Funamula appagitia (NL. fem. n. *appagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF1-51-8 sp013177895*. The type genome for the species is the GenBank assembly GCA_013177895.1. The GC content of the type genome is 49.57 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Funamula gen. nov.

Candidatus Funamula (NL. fem. n. *Funamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF1-51-8*. The type species for the genus is *Candidatus* Funamula appagitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF1-51-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamulaceae.

Description of *Candidatus* Funamulaceae fam. nov.

Candidatus Funamulaceae (NL. fem. n. *Funamulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF1-51-8.* The type genus for the taxon is *Candidatus* Funamula .

According to GTDB R06-RS202, this family belongs to the order *Brevinematales*.

Description of *Candidatus* Funamula cepulugo sp. nov.

Candidatus Funamula cepulugo (NL. fem. n. *cepulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF1-51-8 sp001829395*. The type genome for the species is the GenBank assembly GCA_001829395.1. The GC content of the type genome is 49.25 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.1 filter".

Description of *Candidatus* Funamula fecunimonia sp. nov.

Candidatus Funamula fecunimonia (NL. fem. n. *fecunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF1-51-8 sp001829415*. The type genome for the species is the GenBank assembly GCA_001829415.1. The GC content of the type genome is 50.89 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.1 filter".

Description of *Candidatus* Fundidesulfovibrio purulitudo sp. nov.

Candidatus Fundidesulfovibrio purulitudo (NL. fem. n. *purulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fundidesulfovibrio sp009773665*. The type genome for the species is the GenBank assembly GCA_009773665.1. The GC content of the type genome is 62.14 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Fundidesulfovibrio televilenta sp. nov.

Candidatus Fundidesulfovibrio televilenta (NL. fem. n. *televilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fundidesulfovibrio sp013019105*. The type genome for the species is the GenBank assembly RS_GCF_013019105.1. The GC content of the type genome is 67.54 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Funebana venefimonia sp. nov.

Candidatus Funebana venefimonia (NL. fem. n. *venefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002787375 sp002778965*. The type genome for the species is the GenBank assembly GCA_002787375.1. The GC content of the type genome is 37.15 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Funebana gen. nov.

Candidatus Funebana (NL. fem. n. *Funebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002787375*. The type species for the genus is *Candidatus* Funebana venefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodidaceae.

Description of *Candidatus* Funebaria biveritura sp. nov.

Candidatus Funebaria biveritura (NL. fem. n. *biveritura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1123 sp002313895*. The type genome for the species is the GenBank assembly GCA_002313895.1. The GC content of the type genome is 55.77 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Funebaria gen. nov.

Candidatus Funebaria (NL. fem. n. *Funebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1123*. The type species for the genus is *Candidatus* Funebaria biveritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Funebaria solifitica sp. nov.

Candidatus Funebaria solifitica (NL. fem. n. *solifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1123 sp002710885*. The type genome for the species is the GenBank assembly GCA_002710885.1. The GC content of the type genome is 55.39 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Funebella benivitio sp. nov.

Candidatus Funebella benivitio (NL. fem. n. *benivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQCK01 sp903870275*. The type genome for the species is the GenBank assembly GCA_903919265.1. The GC content of the type genome is 61.7 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Funebella gen. nov.

Candidatus Funebella (NL. fem. n. *Funebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQCK01*. The type species for the genus is *Candidatus* Funebella benivitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQCK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebellaceae.

Description of *Candidatus* Funebellaceae fam. nov.

Candidatus Funebellaceae (NL. fem. n. *Funebellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQCK01.* The type genus for the taxon is *Candidatus* Funebella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipalanales.

Description of *Candidatus* Funebia bicipatica sp. nov.

Candidatus Funebia bicipatica (NL. fem. n. *bicipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-16-A sp001828605*. The type genome for the species is the GenBank assembly GCA_001828385.1. The GC content of the type genome is 50.33 % and the genome length is 1.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Funebia gen. nov.

Candidatus Funebia (NL. fem. n. *Funebia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-50-16-A*. The type species for the genus is *Candidatus* Funebia bicipatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-50-16-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebiaceae.

Description of *Candidatus* Funebiaceae fam. nov.

Candidatus Funebiaceae (NL. fem. n. *Funebiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-50-16-A.* The type genus for the taxon is *Candidatus* Funebia .

According to GTDB R06-RS202, this family belongs to the order *Brocadiales*.

Description of *Candidatus* Funebida adsicastra sp. nov.

Candidatus Funebida adsicastra (NL. fem. n. *adsicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002704185 sp002704185*. The type genome for the species is the GenBank assembly GCA_002704185.1. The GC content of the type genome is 28.35 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Funebida gen. nov.

Candidatus Funebida (NL. fem. n. *Funebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002704185*. The type species for the genus is *Candidatus* Funebida adsicastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Funebida pecunivita sp. nov.

Candidatus Funebida pecunivita (NL. fem. n. *pecunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002704185 sp902517865*. The type genome for the species is the GenBank assembly GCA_902517865.1. The GC content of the type genome is 29.41 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Funebida televitoga sp. nov.

Candidatus Funebida televitoga (NL. fem. n. *televitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002704185 sp003280495*. The type genome for the species is the GenBank assembly GCA_902588515.1. The GC content of the type genome is 29.63 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Funebosa adpecago sp. nov.

Candidatus Funebosa adpecago (NL. fem. n. *adpecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp007571305*. The type genome for the species is the GenBank assembly GCA_007571305.1. The GC content of the type genome is 47.27 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Funebosa gen. nov.

Candidatus Funebosa (NL. fem. n. *Funebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WGA-3G*. The type species for the genus is *Candidatus* Funebosa adpecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WGA-3G*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebosaceae.

Description of *Candidatus* Funebosaceae fam. nov.

Candidatus Funebosaceae (NL. fem. n. *Funebosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WGA-3G.* The type genus for the taxon is *Candidatus* Funebosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *WGA-4E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demociales.

Description of *Candidatus* Funebosa annubicula sp. nov.

Candidatus Funebosa annubicula (NL. fem. n. *annubicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp012270875*. The type genome for the species is the GenBank assembly GCA_012270875.1. The GC content of the type genome is 47.5 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Funebosa cibaribra sp. nov.

Candidatus Funebosa cibaribra (NL. fem. n. *cibaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp009845545*. The type genome for the species is the GenBank assembly GCA_009838805.1. The GC content of the type genome is 47.62 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Funebosa cocodatica sp. nov.

Candidatus Funebosa cocodatica (NL. fem. n. *cocodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp003635195*. The type genome for the species is the GenBank assembly GCA_003635195.1. The GC content of the type genome is 47.26 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Funebosa decacetta sp. nov.

Candidatus Funebosa decacetta (NL. fem. n. *decacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp000406005*. The type genome for the species is the GenBank assembly GCA_000406005.1. The GC content of the type genome is 47.79 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Funebosa ecastastra sp. nov.

Candidatus Funebosa ecastastra (NL. fem. n. *ecastastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp007571355*. The type genome for the species is the GenBank assembly GCA_007571355.1. The GC content of the type genome is 48.27 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Funebosa eviscousia sp. nov.

Candidatus Funebosa eviscousia (NL. fem. n. *eviscousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp012270865*. The type genome for the species is the GenBank assembly GCA_012270865.1. The GC content of the type genome is 47.98 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Funebosa hemiditas sp. nov.

Candidatus Funebosa hemiditas (NL. fem. n. *hemiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp012271015*. The type genome for the species is the GenBank assembly GCA_012271015.1. The GC content of the type genome is 47.9 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Funebosa repuredo sp. nov.

Candidatus Funebosa repuredo (NL. fem. n. *repuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp009843785*. The type genome for the species is the GenBank assembly GCA_009839085.1. The GC content of the type genome is 47.99 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Funebosa serotax sp. nov.

Candidatus Funebosa serotax (NL. fem. n. *serotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp009839745*. The type genome for the species is the GenBank assembly GCA_009839745.1. The GC content of the type genome is 48.23 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Funebosa siligetta sp. nov.

Candidatus Funebosa siligetta (NL. fem. n. *siligetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp009841255*. The type genome for the species is the GenBank assembly GCA_009841255.1. The GC content of the type genome is 48.28 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Funebosa vinulatio sp. nov.

Candidatus Funebosa vinulatio (NL. fem. n. *vinulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp009835515*. The type genome for the species is the GenBank assembly GCA_009839665.1. The GC content of the type genome is 47.66 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Funebosa visifitio sp. nov.

Candidatus Funebosa visifitio (NL. fem. n. *visifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WGA-3G sp003635255*. The type genome for the species is the GenBank assembly GCA_003635255.1. The GC content of the type genome is 47.28 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Funebula defacitia sp. nov.

Candidatus Funebula defacitia (NL. fem. n. *defacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2689925 sp002689925*. The type genome for the species is the GenBank assembly GCA_002689925.1. The GC content of the type genome is 29.15 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Funebula gen. nov.

Candidatus Funebula (NL. fem. n. *Funebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2689925*. The type species for the genus is *Candidatus* Funebula defacitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Funivana benemitica sp. nov.

Candidatus Funivana benemitica (NL. fem. n. *benemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902538705*. The type genome for the species is the GenBank assembly GCA_902538705.1. The GC content of the type genome is 34.06 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Funivana gen. nov.

Candidatus Funivana (NL. fem. n. *Funivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACNXK01*. The type species for the genus is *Candidatus* Funivana benemitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Funivana cacomigena sp. nov.

Candidatus Funivana cacomigena (NL. fem. n. *cacomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902557575*. The type genome for the species is the GenBank assembly GCA_902557575.1. The GC content of the type genome is 34.26 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Funivana defacedo sp. nov.

Candidatus Funivana defacedo (NL. fem. n. *defacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902622845*. The type genome for the species is the GenBank assembly GCA_902599965.1. The GC content of the type genome is 34.11 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Funivana gemebivita sp. nov.

Candidatus Funivana gemebivita (NL. fem. n. *gemebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902518715*. The type genome for the species is the GenBank assembly GCA_902589515.1. The GC content of the type genome is 34.19 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Funivana inheribula sp. nov.

Candidatus Funivana inheribula (NL. fem. n. *inheribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902624425*. The type genome for the species is the GenBank assembly GCA_902624425.1. The GC content of the type genome is 34.41 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Funivana menapitura sp. nov.

Candidatus Funivana menapitura (NL. fem. n. *menapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902594005*. The type genome for the species is the GenBank assembly GCA_902594005.1. The GC content of the type genome is 34.3 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Funivana pimenatio sp. nov.

Candidatus Funivana pimenatio (NL. fem. n. *pimenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902541365*. The type genome for the species is the GenBank assembly GCA_902541365.1. The GC content of the type genome is 34.06 %

and the genome length is 1.02 Mbp.

Description of *Candidatus* Funivana sonipifica sp. nov.

Candidatus Funivana sonipifica (NL. fem. n. *sonipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXK01 sp902605165*. The type genome for the species is the GenBank assembly GCA_902518995.1. The GC content of the type genome is 34.07 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Funivaria monocedo sp. nov.

Candidatus Funivaria monocedo (NL. fem. n. *monocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-54-18 sp001797935*. The type genome for the species is the GenBank assembly GCA_001797935.1. The GC content of the type genome is 54.4 % and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Funivaria gen. nov.

Candidatus Funivaria (NL. fem. n. *Funivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-54-18*. The type species for the genus is *Candidatus* Funivaria monocedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-54-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funivariaceae.

Description of *Candidatus* Funivariaceae fam. nov.

Candidatus Funivariaceae (NL. fem. n. *Funivariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-54-18.* The type genus for the taxon is *Candidatus* Funivaria .

According to the original version of GTDB R06-RS202, this family belongs to the order

B13-G15. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panifiales.

Description of *Candidatus* Funivella antegilega sp. nov.

Candidatus Funivella antegilega (NL. fem. n. *antegilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTKD01 sp011524535*. The type genome for the species is the GenBank assembly GCA_011524535.1. The GC content of the type genome is 41.57 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Funivella gen. nov.

Candidatus Funivella (NL. fem. n. *Funivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTKD01*. The type species for the genus is *Candidatus* Funivella antegilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WTKD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funivellaceae.

Description of *Candidatus* Funivellaceae fam. nov.

Candidatus Funivellaceae (NL. fem. n. *Funivellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTKD01.* The type genus for the taxon is *Candidatus* Funivella .

According to the original version of GTDB R06-RS202, this family belongs to the order *WTKD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Funivellales.

Description of *Candidatus* Funivellales ord. nov.

Candidatus Funivellales (NL. fem. n. *Funivellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTKD01.* The type genus for the taxon is *Candidatus* Funivella .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Funivida cicilicula sp. nov.

Candidatus Funivida cicilicula (NL. fem. n. *cicilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2333 sp002344895*. The type genome for the species is the GenBank assembly GCA_002344895.1. The GC content of the type genome is 50.79 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Funivida gen. nov.

Candidatus Funivida (NL. fem. n. *Funivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2333*. The type species for the genus is *Candidatus* Funivida cicilicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Funivosa pedepastra sp. nov.

Candidatus Funivosa pedepastra (NL. fem. n. *pedepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-39-27 sp002786715*. The type genome for the species is the GenBank assembly GCA_002786715.1. The GC content of the type genome is 38.75 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Funivosa gen. nov.

Candidatus Funivosa (NL. fem. n. *Funivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-39-27*. The type species for the genus is *Candidatus* Funivosa pedepastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Funivula catecibula sp. nov.

Candidatus Funivula catecibula (NL. fem. n. *catecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJHM01 sp014192625*. The type genome for the species is the GenBank assembly GCA_009691935.1. The GC content of the type genome is 60.5 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Funivula gen. nov.

Candidatus Funivula (NL. fem. n. *Funivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJHM01*. The type species for the genus is *Candidatus* Funivula catecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifulaceae.

Description of *Candidatus* Furfurilactobacillus sonipitica sp. nov.

Candidatus Furfurilactobacillus sonipitica (NL. fem. n. *sonipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Furfurilactobacillus sp003482405*. The type genome for the species is the GenBank assembly GCA_002417945.1. The GC content of the type genome is 44.19 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Furibana desacimonia sp. nov.

Candidatus Furibana desacimonia (NL. fem. n. *desacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12438 sp902795725*. The type genome for the species is the GenBank assembly GCA_902795725.1. The GC content of the type genome is 26.71 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Furibana gen. nov.

Candidatus Furibana (NL. fem. n. *Furibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12438*. The type species for the genus is *Candidatus* Furibana desacimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Furibana inrefago sp. nov.

Candidatus Furibana inrefago (NL. fem. n. *inrefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12438 sp902779035*. The type genome for the species is the GenBank assembly GCA_902779035.1. The GC content of the type genome is 26.96 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Furibana monopetta sp. nov.

Candidatus Furibana monopetta (NL. fem. n. *monopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12438 sp902783215*. The type genome for the species is the GenBank assembly GCA_902783215.1. The GC content of the type genome is 25.49 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Furibana relapetta sp. nov.

Candidatus Furibana relapetta (NL. fem. n. *relapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12438 sp902801685*. The type genome for the species is the GenBank assembly GCA_902801975.1. The GC content of the type genome is 27.16 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Furibaria cinefousia sp. nov.

Candidatus Furibaria cinefousia (NL. fem. n. *cinefousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKUL01 sp007695365*. The type genome for the species is the GenBank assembly GCA_007695365.1. The GC content of the type genome is 49.32 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Furibaria gen. nov.

Candidatus Furibaria (NL. fem. n. *Furibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKUL01*. The type species for the genus is *Candidatus* Furibaria cinefousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Furibaria hemitessa sp. nov.

Candidatus Furibaria hemitessa (NL. fem. n. *hemitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKUL01 sp007129985*. The type genome for the species is the GenBank assembly GCA_007133755.1. The GC content of the type genome is 49.84 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Furibella foricivita sp. nov.

Candidatus Furibella foricivita (NL. fem. n. *foricivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1822 sp900545365*. The type genome for the species is the GenBank assembly GCA_900758645.1. The GC content of the type genome is 57.23 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Furibella gen. nov.

Candidatus Furibella (NL. fem. n. *Furibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1822*. The type species for the genus is *Candidatus* Furibella foricivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Furibella solivitrix sp. nov.

Candidatus Furibella solivitrix (NL. fem. n. *solivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1822 sp002314995*. The type genome for the species is the GenBank assembly GCA_900552355.1. The GC content of the type genome is 58.35 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Furibia colepitrix sp. nov.

Candidatus Furibia colepitrix (NL. fem. n. *colepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNW01 sp007120305*. The type genome for the species is the GenBank assembly GCA_007120305.1. The GC content of the type genome is 69.56 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Furibia gen. nov.

Candidatus Furibia (NL. fem. n. *Furibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKNW01*. The type species for the genus is *Candidatus* Furibia colepitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Furibia induvigena sp. nov.

Candidatus Furibia induvigena (NL. fem. n. *induvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SKNW01 sp007692665*. The type genome for the species is the GenBank assembly GCA_007692665.1. The GC content of the type genome is 69.66 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Furibida rarefitura sp. nov.

Candidatus Furibida rarefitura (NL. fem. n. *rarefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6266 sp002440765*. The type genome for the species is the GenBank assembly GCA_002440765.1. The GC content of the type genome is 42.64 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Furibida gen. nov.

Candidatus Furibida (NL. fem. n. *Furibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6266*. The type species for the genus is *Candidatus* Furibida rarefitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6266*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Furibidaceae.

Description of *Candidatus* Furibidaceae fam. nov.

Candidatus Furibidaceae (NL. fem. n. *Furibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6266.* The type genus for the taxon is *Candidatus* Furibida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6266*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Furibidales.

Description of *Candidatus* Furibidales ord. nov.

Candidatus Furibidales (NL. fem. n. *Furibidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6266.* The type genus for the taxon is *Candidatus* Furibida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6266*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Furibidae.

Description of *Candidatus* Furibidae class. nov.

Candidatus Furibidae (NL. fem. n. *c__Furibidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6266.* The type genus for the taxon is *Candidatus* Furibida .

According to GTDB R06-RS202, this class belongs to the phylum *Aureabacteria*.

Description of *Candidatus* Furibosa legififorma sp. nov.

Candidatus Furibosa legififorma (NL. fem. n. *legififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2775 sp002352445*. The type genome for the species is the GenBank assembly GCA_002352445.1. The GC content of the type genome is 45.03 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Furibosa gen. nov.

Candidatus Furibosa (NL. fem. n. *Furibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2775*. The type species for the genus is *Candidatus* Furibosa legififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Furibosa semifugo sp. nov.

Candidatus Furibosa semifugo (NL. fem. n. *semifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2775 sp001750925*. The type genome for the species is the GenBank assembly GCA_001751145.1. The GC content of the type genome is 44.8 % and the genome length is 3.46 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "combined push core samples #3730; #5133; and #5579 collected at Hydrate Ridge".

Description of *Candidatus* Furibula abantedo sp. nov.

Candidatus Furibula abantedo (NL. fem. n. *abantedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-40-8 sp001769925*. The type genome for the species is the GenBank assembly GCA_001769925.1. The GC content of the type genome is 40.1 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Furibula gen. nov.

Candidatus Furibula (NL. fem. n. *Furibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-40-8*. The type species for the genus is *Candidatus* Furibula abantedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Furibula refacitio sp. nov.

Candidatus Furibula refacitio (NL. fem. n. *refacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-40-8 sp903833275*. The type genome for the species is the GenBank assembly GCA_903898225.1. The GC content of the type genome is 48.59 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Fusibacter apperilenta sp. nov.

Candidatus Fusibacter apperilenta (NL. fem. n. *apperilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Fusibacter_A sp002452745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002452745.1. The GC content of the type genome is 40.19 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Fusibacter revecigena sp. nov.

Candidatus Fusibacter revecigena (NL. fem. n. *revecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusibacter_A sp001748365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001748365.1. The GC content of the type genome is 37.64 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Fusibacter bigarilega sp. nov.

Candidatus Fusibacter bigarilega (NL. fem. n. *bigarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusibacter_B sp004125825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013166675.1. The GC content of the type genome is 42.88 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Fusicatenibacter defosimonia sp. nov.

Candidatus Fusicatenibacter defosimonia (NL. fem. n. *defosimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusicatenibacter sp900543115*. The type genome for the species is the GenBank assembly GCA_900543115.1. The GC content of the type genome is 49.23 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Fusicatenibacter pavimessa sp. nov.

Candidatus Fusicatenibacter pavimessa (NL. fem. n. *pavimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusicatenibacter sp900772675*. The type genome for the species is the GenBank assembly RS_GCF_900772675.1. The GC content of the type genome is 48.29 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Fusifana bipinessa sp. nov.

Candidatus Fusifana bipinessa (NL. fem. n. *bipinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAACVY01 sp900661335*. The type genome for the species is the GenBank assembly GCA_900661335.1. The GC content of the type genome is 62.09 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Fusifana gen. nov.

Candidatus Fusifana (NL. fem. n. *Fusifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAACVY01*. The type species for the genus is *Candidatus* Fusifana bipinessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAACVY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifanaceae.

Description of *Candidatus* Fusifanaceae fam. nov.

Candidatus Fusifanaceae (NL. fem. n. *Fusifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAACVY01.* The type genus for the taxon is *Candidatus* Fusifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B70-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Retuniales.

Description of *Candidatus* Fusifaria malagimonia sp. nov.

Candidatus Fusifaria malagimonia (NL. fem. n. *malagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-900161835 sp900161835*. The type genome for the species is the GenBank assembly RS_GCF_900161835.1. The GC content of the type genome is 36.78 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Fusifaria gen. nov.

Candidatus Fusifaria (NL. fem. n. *Fusifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-900161835*. The type species for the genus is *Candidatus* Fusifaria malagimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fusifia arnogilenta sp. nov.

Candidatus Fusifia arnogilenta (NL. fem. n. *arnogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXMI01 sp903925745*. The type genome for the species is the GenBank assembly GCA_903925745.1. The GC content of the type genome is 71.49 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Fusifia gen. nov.

Candidatus Fusifia (NL. fem. n. *Fusifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXMI01*. The type species for the genus is *Candidatus* Fusifia arnogilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Fusifia caravilenta sp. nov.

Candidatus Fusifia caravilenta (NL. fem. n. *caravilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXMI01 sp005777415*. The type genome for the species is the

GenBank assembly GCA_005800085.1. The GC content of the type genome is 72.03 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Fusifia detepitoga sp. nov.

Candidatus Fusifia detepitoga (NL. fem. n. *detepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXMI01 sp903873135*. The type genome for the species is the GenBank assembly GCA_903846395.1. The GC content of the type genome is 72.3 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Fusifia fumacicella sp. nov.

Candidatus Fusifia fumacicella (NL. fem. n. *fumacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXMI01 sp903852755*. The type genome for the species is the GenBank assembly GCA_903877695.1. The GC content of the type genome is 71.66 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Fusifia lupanivita sp. nov.

Candidatus Fusifia lupanivita (NL. fem. n. *lupanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXMI01 sp903953195*. The type genome for the species is the GenBank assembly GCA_903953195.1. The GC content of the type genome is 70.21 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Fusifida almucicella sp. nov.

Candidatus Fusifida almucicella (NL. fem. n. *almucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp011362695*. The type genome for the species is the GenBank assembly GCA_011362695.1. The GC content of the type genome is 53.08 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Fusifida gen. nov.

Candidatus Fusifida (NL. fem. n. *Fusifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12294*. The type species for the genus is *Candidatus* Fusifida almucicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Fusifida conopentia sp. nov.

Candidatus Fusifida conopentia (NL. fem. n. *conopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp002050275*. The type genome for the species is the GenBank assembly GCA_002050275.1. The GC content of the type genome is 52.62 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Fusifida conubugo sp. nov.

Candidatus Fusifida conubugo (NL. fem. n. *conubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp003577395*. The type genome for the species is the GenBank assembly GCA_003577395.1. The GC content of the type genome is 53.68 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Fusifida daducicella sp. nov.

Candidatus Fusifida daducicella (NL. fem. n. *daducicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp011331405*. The type genome for the species is the GenBank assembly GCA_011331405.1. The GC content of the type genome is 54.39 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Fusifida detepilenta sp. nov.

Candidatus Fusifida detepilenta (NL. fem. n. *detepilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp013388685*. The type genome for the species is the GenBank assembly GCA_013388685.1. The GC content of the type genome is 56.8 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Fusifida infabibula sp. nov.

Candidatus Fusifida infabibula (NL. fem. n. *infabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp003484265*. The type genome for the species is the GenBank assembly GCA_003484265.1. The GC content of the type genome is 50.28 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Fusifida nubigessa sp. nov.

Candidatus Fusifida nubigessa (NL. fem. n. *nubigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp002418205*. The type genome for the species is the GenBank assembly GCA_012026985.1. The GC content of the type genome is 54.88 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Fusifida nugacibula sp. nov.

Candidatus Fusifida nugacibula (NL. fem. n. *nugacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12294 sp013360875*. The type genome for the species is the GenBank assembly GCA_013360875.1. The GC content of the type genome is 56.84 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Fusifosa adrumedo sp. nov.

Candidatus Fusifosa adrumedo (NL. fem. n. *adrumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902793245*. The type genome for the species is the GenBank assembly GCA_902793245.1. The GC content of the type genome is 58.13 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Fusifosa gen. nov.

Candidatus Fusifosa (NL. fem. n. *Fusifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG563*. The type species for the genus is *Candidatus* Fusifosa adrumedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Fusifosa apsenago sp. nov.

Candidatus Fusifosa apsenago (NL. fem. n. *apsenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902773895*. The type genome for the species is the GenBank assembly GCA_902773895.1. The GC content of the type genome is 60.18 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Fusifosa categisca sp. nov.

Candidatus Fusifosa categisca (NL. fem. n. *categisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902788445*. The type genome for the species is the GenBank assembly GCA_902788445.1. The GC content of the type genome is 58.08 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Fusifosa detenitudo sp. nov.

Candidatus Fusifosa detenitudo (NL. fem. n. *detenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG563 sp902764565*. The type genome for the species is the GenBank assembly GCA_902764565.1. The GC content of the type genome is 58.47 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Fusifosa funebitia sp. nov.

Candidatus Fusifosa funebitia (NL. fem. n. *funebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp900320085*. The type genome for the species is the GenBank assembly GCA_902756175.1. The GC content of the type genome is 57.91 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Fusifosa pecunibra sp. nov.

Candidatus Fusifosa pecunibra (NL. fem. n. *pecunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902801765*. The type genome for the species is the GenBank assembly GCA_902781075.1. The GC content of the type genome is 57.38 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Fusifosa sanabitoga sp. nov.

Candidatus Fusifosa sanabitoga (NL. fem. n. *sanabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902795275*. The type genome for the species is the GenBank assembly GCA_902789635.1. The GC content of the type genome is 58.63 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Fusifosa venabitura sp. nov.

Candidatus Fusifosa venabitura (NL. fem. n. *venabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG563 sp902761755*. The type genome for the species is the GenBank assembly GCA_902761755.1. The GC content of the type genome is 61.57 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Fusifula amnenitudo sp. nov.

Candidatus Fusifula amnenitudo (NL. fem. n. *amnenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED113 sp002715445*. The type genome for the species is the GenBank assembly GCA_002715445.1. The GC content of the type genome is 28.61 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Fusifula gen. nov.

Candidatus Fusifula (NL. fem. n. *Fusifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED113*. The type species for the genus is *Candidatus* Fusifula amnenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Fusifulaceae fam. nov.

Candidatus Fusifulaceae (NL. fem. n. *Fusifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED113.* The type genus for the taxon is *Candidatus* Fusifula .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Fusifula rinocugo sp. nov.

Candidatus Fusifula rinocugo (NL. fem. n. *rinocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED113 sp002170235*. The type genome for the species is the GenBank assembly GCA_002170235.1. The GC content of the type genome is 29.89 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Fusobacterium forinetta sp. nov.

Candidatus Fusobacterium forinetta (NL. fem. n. *forinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium sp000235465*. The type genome for the species is the GenBank assembly RS_GCF_000235465.1. The GC content of the type genome is 27.5 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Fusobacterium artocitica sp. nov.

Candidatus Fusobacterium artocitica (NL. fem. n. *artocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900764925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900764925.1. The GC content of the type genome is 30.52 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Fusobacterium bifisicella sp. nov.

Candidatus Fusobacterium bifisicella (NL. fem. n. *bifisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900555845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900555845.1. The GC content of the type genome is 29.29 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Fusobacterium bucelibula sp. nov.

Candidatus Fusobacterium bucelibula (NL. fem. n. *bucelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900015295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_014337255.1. The GC content of the type genome is 29.05 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Fusobacterium depasax sp. nov.

Candidatus Fusobacterium depasax (NL. fem. n. *depasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900549465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900549465.1. The GC content of the type genome is 29.87 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Fusobacterium oblivetta sp. nov.

Candidatus Fusobacterium oblivetta (NL. fem. n. *oblivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900555485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900555485.1. The GC content of the type genome is 28.56 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Fusobacterium renavitia sp. nov.

Candidatus Fusobacterium renavitia (NL. fem. n. *renavitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_A sp900543175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900765315.1. The GC content of the type genome is 29.5 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Fusobacterium alembatio sp. nov.

Candidatus Fusobacterium alembatio (NL. fem. n. *alembatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp900542625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900542625.1. The GC content of the type genome is 31.49 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Fusobacterium apposicula sp. nov.

Candidatus Fusobacterium apposicula (NL. fem. n. *apposicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp900545035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900545035.1. The GC content of the type genome is 32.12 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Fusobacterium benivilega sp. nov.

Candidatus Fusobacterium benivilega (NL. fem. n. *benivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp900554355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900554355.1. The GC content of the type genome is 30.1 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Fusobacterium defunicula sp. nov.

Candidatus Fusobacterium defunicula (NL. fem. n. *defunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp012843705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012843705.1. The GC content of the type genome is 26.23 % and the genome

length is 2.08 Mbp.

Description of *Candidatus* Fusobacterium didacitrix sp. nov.

Candidatus Fusobacterium didacitrix (NL. fem. n. *didacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp010367435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010367435.1. The GC content of the type genome is 27.81 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Fusobacterium genocetta sp. nov.

Candidatus Fusobacterium genocetta (NL. fem. n. *genocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp900541465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541465.1. The GC content of the type genome is 30.65 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Fusobacterium rumifentia sp. nov.

Candidatus Fusobacterium rumifentia (NL. fem. n. *rumifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Fusobacterium_B sp900554885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900755635.1. The GC content of the type genome is 28.22 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Futatana abnocetta sp. nov.

Candidatus Futatana abnocetta (NL. fem. n. *abnocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp003486665*. The type genome for the species is the GenBank assembly GCA_003486665.1. The GC content of the type genome is 44.69 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Futatana gen. nov.

Candidatus Futatana (NL. fem. n. *Futatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-488*. The type species for the genus is *Candidatus* Futatana abnocetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Futatana bifaribra sp. nov.

Candidatus Futatana bifaribra (NL. fem. n. *bifaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp000434055*. The type genome for the species is the GenBank assembly GCA_004553365.1. The GC content of the type genome is 44.86 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Futatana funivimonia sp. nov.

Candidatus Futatana funivimonia (NL. fem. n. *funivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp000434915*. The type genome for the species is the GenBank assembly GCA_000434915.1. The GC content of the type genome is 44.31 % and the genome length is 2.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Futatana gemebugo sp. nov.

Candidatus Futatana gemebugo (NL. fem. n. *gemebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-488 sp900539465*. The type genome for the species is the GenBank assembly GCA_900539465.1. The GC content of the type genome is 44.04 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Futatana navicitica sp. nov.

Candidatus Futatana navicitica (NL. fem. n. *navicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp002449395*. The type genome for the species is the GenBank assembly GCA_002404725.1. The GC content of the type genome is 45.71 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Futatana semunitoga sp. nov.

Candidatus Futatana semunitoga (NL. fem. n. *semunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp002315505*. The type genome for the species is the GenBank assembly GCA_002315505.1. The GC content of the type genome is 40.23 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Futatana vitificella sp. nov.

Candidatus Futatana vitificella (NL. fem. n. *vitificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-488 sp900554995*. The type genome for the species is the GenBank assembly RS_GCF_900767395.1. The GC content of the type genome is 45.18 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Futataria adsicibula sp. nov.

Candidatus Futataria adsicibula (NL. fem. n. *adsicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-12 sp003598175*. The type genome for the species is the GenBank assembly GCA_003598175.1. The GC content of the type genome is 49.72 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Futataria gen. nov.

Candidatus Futataria (NL. fem. n. *Futataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-12*. The type species for the genus is *Candidatus* Futataria adsicibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Futatariaceae.

Description of *Candidatus* Futatariaceae fam. nov.

Candidatus Futatariaceae (NL. fem. n. *Futatariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-12.* The type genus for the taxon is *Candidatus* Futataria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Futatariales.

Description of *Candidatus* Futatariales ord. nov.

Candidatus Futatariales (NL. fem. n. *Futatariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-12.* The type genus for the taxon is *Candidatus* Futataria .

According to the original version of GTDB R06-RS202, this family belongs to the class *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehinanae.

Description of *Candidatus* Futatella saxopitas sp. nov.

Candidatus Futatella saxopitas (NL. fem. n. *saxopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5206 sp002412705*. The type genome for the species is the GenBank assembly GCA_002412705.1. The GC content of the type genome is 42.96 %

and the genome length is 3.84 Mbp.

Description of *Candidatus* Futatella gen. nov.

Candidatus Futatella (NL. fem. n. *Futatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5206*. The type species for the genus is *Candidatus* Futatella saxopitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Futatia deculax sp. nov.

Candidatus Futatia deculax (NL. fem. n. *deculax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5972 sp002430125*. The type genome for the species is the GenBank assembly GCA_013204485.1. The GC content of the type genome is 55.46 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Futatia gen. nov.

Candidatus Futatia (NL. fem. n. *Futatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5972*. The type species for the genus is *Candidatus* Futatia deculax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Futatia inpeletta sp. nov.

Candidatus Futatia inpeletta (NL. fem. n. *inpeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5972 sp013151335*. The type genome for the species is the GenBank assembly GCA_013151335.1. The GC content of the type genome is 56.24 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Futatia monacilega sp. nov.

Candidatus Futatia monacilega (NL. fem. n. *monacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5972 sp013151535*. The type genome for the species is the GenBank assembly GCA_013151535.1. The GC content of the type genome is 57.6 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Futatosa modifimonas sp. nov.

Candidatus Futatosa modifimonas (NL. fem. n. *modifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-15 sp003599475*. The type genome for the species is the GenBank assembly GCA_003599475.1. The GC content of the type genome is 54.29 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Futatosa gen. nov.

Candidatus Futatosa (NL. fem. n. *Futatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-15*. The type species for the genus is *Candidatus* Futatosa modifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Futatosaceae.

Description of *Candidatus* Futatosaceae fam. nov.

Candidatus Futatosaceae (NL. fem. n. *Futatosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-15.* The type genus for the taxon is *Candidatus* Futatosa .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Futatula colipicella sp. nov.

Candidatus Futatula colipicella (NL. fem. n. *colipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp903919065*. The type genome for the species is the GenBank assembly GCA_903919065.1. The GC content of the type genome is 45.04 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Futatula gen. nov.

Candidatus Futatula (NL. fem. n. *Futatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12481*. The type species for the genus is *Candidatus* Futatula colipicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12481*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Futatulaceae.

Description of *Candidatus* Futatulaceae fam. nov.

Candidatus Futatulaceae (NL. fem. n. *Futatulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12481.* The type genus for the taxon is *Candidatus* Futatula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Futatula depacatica sp. nov.

Candidatus Futatula depacatica (NL. fem. n. *depacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp012523435*. The type genome for the species is the GenBank assembly GCA_012523435.1. The GC content of the type genome is 47.87 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Futatula desupitoga sp. nov.

Candidatus Futatula desupitoga (NL. fem. n. *desupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp903832165*. The type genome for the species is the GenBank assembly GCA_903832165.1. The GC content of the type genome is 45.71 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Futatula lubenitura sp. nov.

Candidatus Futatula lubenitura (NL. fem. n. *lubenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp007280905*. The type genome for the species is the GenBank assembly GCA_007280905.1. The GC content of the type genome is 44.79 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Futatula musulessa sp. nov.

Candidatus Futatula musulessa (NL. fem. n. *musulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp903851365*. The type genome for the species is the GenBank assembly GCA_903844595.1. The GC content of the type genome is 44.53 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Futatula notabitia sp. nov.

Candidatus Futatula notabitia (NL. fem. n. *notabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12481 sp001769295*. The type genome for the species is the GenBank assembly GCA_003487905.1. The GC content of the type genome is 48.97 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Futatula vatilessa sp. nov.

Candidatus Futatula vatilessa (NL. fem. n. *vatilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA12481 sp903919925*. The type genome for the species is the GenBank assembly GCA_903919925.1. The GC content of the type genome is 44.02 % and the genome length is 7.01 Mbp.

Description of *Candidatus* GBChlB acrifibra sp. nov.

Candidatus GBChlB acrifibra (NL. fem. n. *acrifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *GBChlB sp000724175*. The type genome for the species is the GenBank assembly GCA_000724175.1. The GC content of the type genome is 50.89 % and the genome length is 3.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "microbial mat from hot spring".

Description of *Candidatus* GWF epitredo sp. nov.

Candidatus GWF epitredo (NL. fem. n. *epitredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *GWF sp003576945*. The type genome for the species is the GenBank assembly GCA_003576945.1. The GC content of the type genome is 44.44 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Gabinana accerousia sp. nov.

Candidatus Gabinana accerousia (NL. fem. n. *accerousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp902795965*. The type genome for the species is the GenBank assembly GCA_902795965.1. The GC content of the type genome is 36.44 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Gabinana gen. nov.

Candidatus Gabinana (NL. fem. n. *Gabinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Zag1*. The type species for the genus is *Candidatus* Gabinana accerousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gabinana baropisca sp. nov.

Candidatus Gabinana baropisca (NL. fem. n. *baropisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900769355*. The type genome for the species is the GenBank assembly RS_GCF_900769355.1. The GC content of the type genome is 35.19 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Gabinana calipibra sp. nov.

Candidatus Gabinana calipibra (NL. fem. n. *calipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp001765415*. The type genome for the species is the GenBank assembly GCA_000431115.1. The GC content of the type genome is 32.72 % and the genome length is 1.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Gabinana cosidax sp. nov.

Candidatus Gabinana cosidax (NL. fem. n. *cosidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900556295*. The type genome for the species is the GenBank assembly RS_GCF_900769685.1. The GC content of the type genome is 33.65 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Gabinana curabicula sp. nov.

Candidatus Gabinana curabicula (NL. fem. n. *curabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp902772945*. The type genome for the species is the GenBank assembly GCA_902772945.1. The GC content of the type genome is 32.77 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Gabinana desupitas sp. nov.

Candidatus Gabinana desupitas (NL. fem. n. *desupitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900555175*. The type genome for the species is the GenBank assembly GCA_900555175.1. The GC content of the type genome is 32.28 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Gabinana devecitio sp. nov.

Candidatus Gabinana devecitio (NL. fem. n. *devecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp000433095*. The type genome for the species is the GenBank assembly GCA_000433095.1. The GC content of the type genome is 34.36 % and the genome length is 2.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Gabinana mavoricula sp. nov.

Candidatus Gabinana mavoricula (NL. fem. n. *mavoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp001917115*. The type genome for the species is the GenBank assembly GCA_001899425.1. The GC content of the type genome is 34.12 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "human fecal sample".

Description of *Candidatus* Gabinana rubicibula sp. nov.

Candidatus Gabinana rubicibula (NL. fem. n. *rubicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp000437435*. The type genome for the species is the GenBank assembly GCA_000437435.1. The GC content of the type genome is 30.54 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Gabinana siminilenta sp. nov.

Candidatus Gabinana siminilenta (NL. fem. n. *siminilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900767135*. The type genome for the species is the GenBank assembly RS_GCF_900767135.1. The GC content of the type genome is 34.42 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Gabinana subucibra sp. nov.

Candidatus Gabinana subucibra (NL. fem. n. *subucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp000438175*. The type genome for the species is the GenBank assembly GCA_900554865.1. The GC content of the type genome is 34.6 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Gabinana tenebousia sp. nov.

Candidatus Gabinana tenebousia (NL. fem. n. *tenebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900752845*. The type genome for the species is the GenBank assembly RS_GCF_900752845.1. The GC content of the type genome is 34.03 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Gabinana vehemax sp. nov.

Candidatus Gabinana vehemax (NL. fem. n. *vehemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag1 sp900769645*. The type genome for the species is the GenBank assembly RS_GCF_900769645.1. The GC content of the type genome is 35.29 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Gabinana volucitia sp. nov.

Candidatus Gabinana volucitia (NL. fem. n. *volucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Zag1 sp900551675*. The type genome for the species is the GenBank assembly GCA_900551675.1. The GC content of the type genome is 35.03 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Gabinaria curacibula sp. nov.

Candidatus Gabinaria curacibula (NL. fem. n. *curacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11889 sp002708205*. The type genome for the species is the GenBank assembly GCA_002708205.1. The GC content of the type genome is 46.28 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Gabinaria gen. nov.

Candidatus Gabinaria (NL. fem. n. *Gabinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11889*. The type species for the genus is *Candidatus* Gabinaria curacibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Gabinaria decunitas sp. nov.

Candidatus Gabinaria decunitas (NL. fem. n. *decunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11889 sp002715785*. The type genome for the species is the GenBank assembly GCA_003509125.1. The GC content of the type genome is 53.16 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Gabinaria idipsax sp. nov.

Candidatus Gabinaria idipsax (NL. fem. n. *idipsax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11889 sp002313255*. The type genome for the species is the

GenBank assembly GCA_002313255.1. The GC content of the type genome is 53.34 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Gabinaria refulitrix sp. nov.

Candidatus Gabinaria refulitrix (NL. fem. n. *refulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11889 sp002719135*. The type genome for the species is the GenBank assembly GCA_002725075.1. The GC content of the type genome is 53.2 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Gabinella desomitudo sp. nov.

Candidatus Gabinella desomitudo (NL. fem. n. *desomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB6 sp001567175*. The type genome for the species is the GenBank assembly GCA_001567175.1. The GC content of the type genome is 49.74 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Gabinella gen. nov.

Candidatus Gabinella (NL. fem. n. *Gabinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB6*. The type species for the genus is *Candidatus* Gabinella desomitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gabinia cemenugo sp. nov.

Candidatus Gabinia cemenugo (NL. fem. n. *cemenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11164 sp002420085*. The type genome for the species is the

GenBank assembly GCA_003504955.1. The GC content of the type genome is 65.98 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Gabinia gen. nov.

Candidatus Gabinia (NL. fem. n. *Gabinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11164*. The type species for the genus is *Candidatus* Gabinia cemenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gabinida decucitudo sp. nov.

Candidatus Gabinida decucitudo (NL. fem. n. *decucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNZU01 sp003978405*. The type genome for the species is the GenBank assembly GCA_003978405.1. The GC content of the type genome is 34.39 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Gabinida gen. nov.

Candidatus Gabinida (NL. fem. n. *Gabinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNZU01*. The type species for the genus is *Candidatus* Gabinida decucitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNZT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomellaceae.

Description of *Candidatus* Gabinosa diminilega sp. nov.

Candidatus Gabinosa diminilega (NL. fem. n. *diminilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7879 sp002500565*. The type genome for the species is the GenBank assembly GCA_002500565.1. The GC content of the type genome is 40.54 %

and the genome length is 1.15 Mbp.

Description of *Candidatus* Gabinosa gen. nov.

Candidatus Gabinosa (NL. fem. n. *Gabinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7879*. The type species for the genus is *Candidatus* Gabinosa diminilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7879*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gabinosaceae.

Description of *Candidatus* Gabinosaceae fam. nov.

Candidatus Gabinosaceae (NL. fem. n. *Gabinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7879.* The type genus for the taxon is *Candidatus* Gabinosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7879*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gabinosales.

Description of *Candidatus* Gabinosales ord. nov.

Candidatus Gabinosales (NL. fem. n. *Gabinosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7879.* The type genus for the taxon is *Candidatus* Gabinosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Gabinosa refacitudo sp. nov.

Candidatus Gabinosa refacitudo (NL. fem. n. *refacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7879 sp002869105*. The type genome for the species is the GenBank assembly GCA_002869105.1. The GC content of the type genome is 42.85 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Gabinula vicecastra sp. nov.

Candidatus Gabinula vicecastra (NL. fem. n. *vicecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB13 sp001567485*. The type genome for the species is the GenBank assembly GCA_002050245.1. The GC content of the type genome is 62.76 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Gabinula gen. nov.

Candidatus Gabinula (NL. fem. n. *Gabinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB13*. The type species for the genus is *Candidatus* Gabinula vicecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Gabonibacter caduribra sp. nov.

Candidatus Gabonibacter caduribra (NL. fem. n. *caduribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gabonibacter sp900543425*. The type genome for the species is the GenBank assembly GCA_900543425.1. The GC content of the type genome is 41.01 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Gaiella altipitura sp. nov.

Candidatus Gaiella altipitura (NL. fem. n. *altipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gaiella sp009694305*. The type genome for the species is the GenBank assembly GCA_009694305.1. The GC content of the type genome is 66.93 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Gaiella infacitas sp. nov.

Candidatus Gaiella infacitas (NL. fem. n. *infacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gaiella sp013694685*. The type genome for the species is the GenBank assembly GCA_013694685.1. The GC content of the type genome is 69.89 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Galacana decupiforma sp. nov.

Candidatus Galacana decupiforma (NL. fem. n. *decupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXOD01 sp005776885*. The type genome for the species is the GenBank assembly GCA_005776885.1. The GC content of the type genome is 66.64 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Galacana gen. nov.

Candidatus Galacana (NL. fem. n. *Galacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXOD01*. The type species for the genus is *Candidatus* Galacana decupiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Galacaria vepalitura sp. nov.

Candidatus Galacaria vepalitura (NL. fem. n. *vepalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-02-FULL-42-9 sp001801405*. The type genome for the species is the GenBank assembly GCA_001801405.1. The GC content of the type genome is 42.06 % and the genome length is 1.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Galacaria gen. nov.

Candidatus Galacaria (NL. fem. n. *Galacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-02-FULL-42-9*. The type species for the genus is *Candidatus* Galacaria vepalitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenosaceae.

Description of *Candidatus* Galacella navicivita sp. nov.

Candidatus Galacella navicivita (NL. fem. n. *navicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga6A1 sp900102385*. The type genome for the species is the GenBank assembly GCA_902780475.1. The GC content of the type genome is 45.33 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Galacella gen. nov.

Candidatus Galacella (NL. fem. n. *Galacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga6A1*. The type species for the genus is *Candidatus* Galacella navicivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Galacida solacatio sp. nov.

Candidatus Galacida solacatio (NL. fem. n. *solacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-42-15 sp001784055*. The type genome for the species is the GenBank assembly GCA_001784055.1. The GC content of the type genome is 41.18 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Galacida gen. nov.

Candidatus Galacida (NL. fem. n. *Galacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-42-15*. The type species for the genus is *Candidatus* Galacida solacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Galacosa cinefilega sp. nov.

Candidatus Galacosa cinefilega (NL. fem. n. *cinefilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUCV01 sp903897805*. The type genome for the species is the GenBank assembly GCA_903860925.1. The GC content of the type genome is 44.93 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Galacosa gen. nov.

Candidatus Galacosa (NL. fem. n. *Galacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUCV01*. The type species for the genus is *Candidatus* Galacosa cinefilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IGHO2-01-FULL-4-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisulaceae.

Description of *Candidatus* Galacula bifisimonia sp. nov.

Candidatus Galacula bifisimonia (NL. fem. n. *bifisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW4 sp002732825*. The type genome for the species is the GenBank assembly GCA_002732825.1. The GC content of the type genome is 58.17 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Galacula gen. nov.

Candidatus Galacula (NL. fem. n. *Galacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW4*. The type species for the genus is *Candidatus* Galacula bifisimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gallibacterium lucerisca sp. nov.

Candidatus Gallibacterium lucerisca (NL. fem. n. *lucerisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallibacterium sp001678475*. The type genome for the species is the GenBank assembly RS_GCF_001678475.1. The GC content of the type genome is 36.63 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Gallibacterium navicedo sp. nov.

Candidatus Gallibacterium navicedo (NL. fem. n. *navicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallibacterium sp000771875*. The type genome for the species is the GenBank assembly RS_GCF_001678625.1. The GC content of the type genome is 38.3 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Gallionella almucetta sp. nov.

Candidatus Gallionella almucetta (NL. fem. n. *almucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp013043965*. The type genome for the species is the GenBank assembly GCA_013043965.1. The GC content of the type genome is 56.53 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Gallionella angipitura sp. nov.

Candidatus Gallionella angipitura (NL. fem. n. *angipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp003235435*. The type genome for the species is the GenBank assembly GCA_003235435.1. The GC content of the type genome is 54.22 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Gallionella catocentia sp. nov.

Candidatus Gallionella catocentia (NL. fem. n. *catocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801215*. The type genome for the species is the GenBank assembly GCA_001801215.1. The GC content of the type genome is 58.99 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Gallionella citivastra sp. nov.

Candidatus Gallionella citivastra (NL. fem. n. *citivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801175*. The type genome for the species is the GenBank assembly GCA_001801175.1. The GC content of the type genome is 56.77 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Gallionella decacitrix sp. nov.

Candidatus Gallionella decacitrix (NL. fem. n. *decacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp013044075*. The type genome for the species is the GenBank assembly GCA_013044075.1. The GC content of the type genome is 56.89 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Gallionella defesago sp. nov.

Candidatus Gallionella defesago (NL. fem. n. *defesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp903858965*. The type genome for the species is the GenBank assembly GCA_903928035.1. The GC content of the type genome is 55.19 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Gallionella dimidibra sp. nov.

Candidatus Gallionella dimidibra (NL. fem. n. *dimidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp903885165*. The type genome for the species is the GenBank assembly GCA_903853545.1. The GC content of the type genome is 52.26 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Gallionella famelitura sp. nov.

Candidatus Gallionella famelitura (NL. fem. n. *famelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp002381565*. The type genome for the species is the GenBank assembly GCA_002413725.1. The GC content of the type genome is 53.79 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Gallionella figilitudo sp. nov.

Candidatus Gallionella figilitudo (NL. fem. n. *figilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801105*. The type genome for the species is the GenBank assembly GCA_001801105.1. The GC content of the type genome is 61.2 % and the genome length is 2.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Gallionella homogetta sp. nov.

Candidatus Gallionella homogetta (NL. fem. n. *homogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp003153155*. The type genome for the species is the GenBank assembly GCA_003153155.1. The GC content of the type genome is 54.24 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Gallionella illapitudo sp. nov.

Candidatus Gallionella illapitudo (NL. fem. n. *illapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp013141315*. The type genome for the species is the GenBank assembly GCA_013141315.1. The GC content of the type genome is 48.84 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Gallionella impuditura sp. nov.

Candidatus Gallionella impuditura (NL. fem. n. *impuditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801055*. The type genome for the species is the GenBank assembly GCA_001801055.1. The GC content of the type genome is 55.19 % and the genome length is 1.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Gallionella incenugo sp. nov.

Candidatus Gallionella incenugo (NL. fem. n. *incenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp004298605*. The type genome for the species is the GenBank assembly GCA_004298605.1. The GC content of the type genome is 58.46 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Gallionella invinedo sp. nov.

Candidatus Gallionella invinedo (NL. fem. n. *invinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Gallionella sp903934275*. The type genome for the species is the GenBank assembly GCA_903934275.1. The GC content of the type genome is 53.44 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Gallionella lutulatica sp. nov.

Candidatus Gallionella lutulatica (NL. fem. n. *lutulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp002403995*. The type genome for the species is the GenBank assembly GCA_002403995.1. The GC content of the type genome is 55.72 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Gallionella mahelivita sp. nov.

Candidatus Gallionella mahelivita (NL. fem. n. *mahelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp903915035*. The type genome for the species is the GenBank assembly GCA_903902465.1. The GC content of the type genome is 50.82 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Gallionella minurilenta sp. nov.

Candidatus Gallionella minurilenta (NL. fem. n. *minurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp903861075*. The type genome for the species is the GenBank assembly GCA_903856785.1. The GC content of the type genome is 48.51 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Gallionella murililega sp. nov.

Candidatus Gallionella murililega (NL. fem. n. *murililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp903876685*. The type genome for the species is the GenBank assembly GCA_903876685.1. The GC content of the type genome is 50.43 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Gallionella recoritio sp. nov.

Candidatus Gallionella recoritio (NL. fem. n. *recoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801085*. The type genome for the species is the GenBank assembly GCA_003521785.1. The GC content of the type genome is 59.98 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Gallionella resacago sp. nov.

Candidatus Gallionella resacago (NL. fem. n. *resacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp002780675*. The type genome for the species is the GenBank assembly GCA_003530225.1. The GC content of the type genome is 54.46 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Gallionella robigetta sp. nov.

Candidatus Gallionella robigetta (NL. fem. n. *robigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp002414205*. The type genome for the species is the GenBank assembly GCA_002321645.1. The GC content of the type genome is 57.16 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Gallionella serotisca sp. nov.

Candidatus Gallionella serotisca (NL. fem. n. *serotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp003134595*. The type genome for the species is the GenBank assembly GCA_003134595.1. The GC content of the type genome is 54.46 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Gallionella solipigena sp. nov.

Candidatus Gallionella solipigena (NL. fem. n. *solipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp001801025*. The type genome for the species is the GenBank assembly GCA_003523045.1. The GC content of the type genome is 52.81 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Gallionella xeramago sp. nov.

Candidatus Gallionella xeramago (NL. fem. n. *xeramago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gallionella sp002429165*. The type genome for the species is the GenBank assembly GCA_002429165.1. The GC content of the type genome is 55.52 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Galliscardovia satacitia sp. nov.

Candidatus Galliscardovia satacitia (NL. fem. n. *satacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Galliscardovia sp010667695*. The type genome for the species is the GenBank assembly RS_GCF_010667695.1. The GC content of the type genome is 63.58 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Garciella mahelilega sp. nov.

Candidatus Garciella mahelilega (NL. fem. n. *mahelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Garciella sp900555725*. The type genome for the species is the GenBank assembly GCA_900555725.1. The GC content of the type genome is 34.52 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Gasifana gabinitica sp. nov.

Candidatus Gasifana gabinitica (NL. fem. n. *gabinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA11471 sp900542765*. The type genome for the species is the GenBank assembly GCA_900542765.1. The GC content of the type genome is 53.15 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Gasifana gen. nov.

Candidatus Gasifana (NL. fem. n. *Gasifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11471*. The type species for the genus is *Candidatus* Gasifana gabinitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11471*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifanaceae.

Description of *Candidatus* Gasifanaceae fam. nov.

Candidatus Gasifanaceae (NL. fem. n. *Gasifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11471*. The type genus for the taxon is *Candidatus* Gasifana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Gasifana labecigena sp. nov.

Candidatus Gasifana labecigena (NL. fem. n. *labecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11471 sp900547555*. The type genome for the species is the GenBank assembly GCA_900547555.1. The GC content of the type genome is 46.17 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Gasifana vehicessa sp. nov.

Candidatus Gasifana vehicessa (NL. fem. n. *vehicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11471 sp000434215*. The type genome for the species is the GenBank assembly GCA_000434215.1. The GC content of the type genome is 45.67 %

and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Gasifaria derecilenta sp. nov.

Candidatus Gasifaria derecilenta (NL. fem. n. *derecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBGR01 sp005880695*. The type genome for the species is the GenBank assembly GCA_005880435.1. The GC content of the type genome is 67.65 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Gasifaria gen. nov.

Candidatus Gasifaria (NL. fem. n. *Gasifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBGR01*. The type species for the genus is *Candidatus* Gasifaria derecilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gasifella nugacedo sp. nov.

Candidatus Gasifella nugacedo (NL. fem. n. *nugacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBNH01 sp903955385*. The type genome for the species is the GenBank assembly GCA_903875165.1. The GC content of the type genome is 67.36 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Gasifella gen. nov.

Candidatus Gasifella (NL. fem. n. *Gasifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBNH01*. The type species for the genus is *Candidatus* Gasifella nugacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Gasifia cilotatio sp. nov.

Candidatus Gasifia cilotatio (NL. fem. n. *cilotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *32-111 sp002441125*. The type genome for the species is the GenBank assembly GCA_011329265.1. The GC content of the type genome is 30.83 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Gasifia gen. nov.

Candidatus Gasifia (NL. fem. n. *Gasifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *32-111*. The type species for the genus is *Candidatus* Gasifia cilotatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *32-111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifiaceae.

Description of *Candidatus* Gasifiaceae fam. nov.

Candidatus Gasifiaceae (NL. fem. n. *Gasifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *32-111.* The type genus for the taxon is *Candidatus* Gasifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *32-111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gasifiales.

Description of *Candidatus* Gasifiales ord. nov.

Candidatus Gasifiales (NL. fem. n. *Gasifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *32-111.* The type genus for the taxon is *Candidatus* Gasifia .

According to the original version of GTDB R06-RS202, this family belongs to the class *32-111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Gasifiae.

Description of *Candidatus* Gasifiae class. nov.

Candidatus Gasifiae (NL. fem. n. *c__Gasifiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *32-111*. The type genus for the taxon is *Candidatus* Gasifia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Tigurariota.

Description of *Candidatus* Gasifia depelifica sp. nov.

Candidatus Gasifia depelifica (NL. fem. n. *depelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *32-111 sp001508335*. The type genome for the species is the GenBank assembly GCA_003485365.1. The GC content of the type genome is 31.64 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Gasifida dicabilenta sp. nov.

Candidatus Gasifida dicabilenta (NL. fem. n. *dicabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-4-69-16 sp001919865*. The type genome for the species is the GenBank assembly GCA_001919865.1. The GC content of the type genome is 69.18 % and the genome length is 2.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Gasifida gen. nov.

Candidatus Gasifida (NL. fem. n. *Gasifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20CM-4-69-16*. The type species for the genus is *Candidatus* Gasifida dicabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Gasifida dilicisca sp. nov.

Candidatus Gasifida dilicisca (NL. fem. n. *dilicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-4-69-16 sp003220935*. The type genome for the species is the GenBank assembly GCA_003220935.1. The GC content of the type genome is 68.73 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Gasifida disidilenta sp. nov.

Candidatus Gasifida disidilenta (NL. fem. n. *disidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-4-69-16 sp003220795*. The type genome for the species is the GenBank assembly GCA_003220795.1. The GC content of the type genome is 69.12 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Gasifida intenibula sp. nov.

Candidatus Gasifida intenibula (NL. fem. n. *intenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-4-69-16 sp001917665*. The type genome for the species is the GenBank assembly GCA_001917665.1. The GC content of the type genome is 69.58 % and the genome length is 2.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; pre rain".

Description of *Candidatus* Gasifida nutamitoga sp. nov.

Candidatus Gasifida nutamitoga (NL. fem. n. *nutamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-4-69-16 sp003222135*. The type genome for the species is the GenBank assembly GCA_003222135.1. The GC content of the type genome is 69.24 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Gasifosa triclicella sp. nov.

Candidatus Gasifosa triclicella (NL. fem. n. *triclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTYH01 sp012961955*. The type genome for the species is the GenBank assembly GCA_012961955.1. The GC content of the type genome is 45.78 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Gasifosa gen. nov.

Candidatus Gasifosa (NL. fem. n. *Gasifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTYH01*. The type species for the genus is *Candidatus* Gasifosa triclicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTYH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifosaceae.

Description of *Candidatus* Gasifosaceae fam. nov.

Candidatus Gasifosaceae (NL. fem. n. *Gasifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTYH01.* The type genus for the taxon is *Candidatus* Gasifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubidales.

Description of *Candidatus* Gasifula semunitica sp. nov.

Candidatus Gasifula semunitica (NL. fem. n. *semunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZEB01 sp012512505*. The type genome for the species is the GenBank assembly GCA_012512505.1. The GC content of the type genome is 69.13 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Gasifula gen. nov.

Candidatus Gasifula (NL. fem. n. *Gasifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZEB01*. The type species for the genus is *Candidatus* Gasifula semunitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZEB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifulaceae.

Description of *Candidatus* Gasifulaceae fam. nov.

Candidatus Gasifulaceae (NL. fem. n. *Gasifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZEB01.* The type genus for the taxon is *Candidatus* Gasifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAZEB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gasifulales.

Description of *Candidatus* Gasifulales ord. nov.

Candidatus Gasifulales (NL. fem. n. *Gasifulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZEB01.* The type genus for the taxon is *Candidatus* Gasifula .

According to the original version of GTDB R06-RS202, this family belongs to the class *SYMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipenariae.

Description of *Candidatus* Gasomana cucuratio sp. nov.

Candidatus Gasomana cucuratio (NL. fem. n. *cucuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWN01 sp012103575*. The type genome for the species is the GenBank assembly GCA_011088285.1. The GC content of the type genome is 43.65 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Gasomana gen. nov.

Candidatus Gasomana (NL. fem. n. *Gasomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWN01*. The type species for the genus is *Candidatus* Gasomana cucuratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WLWN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasomanaceae.

Description of *Candidatus* Gasomanaceae fam. nov.

Candidatus Gasomanaceae (NL. fem. n. *Gasomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WLWN01*. The type genus for the taxon is *Candidatus* Gasomana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Reveculales.

Description of *Candidatus* Gasomaria duponitudo sp. nov.

Candidatus Gasomaria duponitudo (NL. fem. n. *duponitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-52-35 sp001769805*. The type genome for the species is the GenBank assembly GCA_001769805.1. The GC content of the type genome is 52.23 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.1 filter".

Description of *Candidatus* Gasomaria gen. nov.

Candidatus Gasomaria (NL. fem. n. *Gasomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-52-35*. The type species for the genus is *Candidatus* Gasomaria duponitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Gasomella innasiforma sp. nov.

Candidatus Gasomella innasiforma (NL. fem. n. *innasiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5616 sp002423615*. The type genome for the species is the GenBank assembly GCA_002423615.1. The GC content of the type genome is 51.61 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Gasomella gen. nov.

Candidatus Gasomella (NL. fem. n. *Gasomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5616*. The type species for the genus is *Candidatus* Gasomella innasiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5616*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasomellaceae.

Description of *Candidatus* Gasomellaceae fam. nov.

Candidatus Gasomellaceae (NL. fem. n. *Gasomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5616.* The type genus for the taxon is *Candidatus* Gasomella .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Gasomia dimadibula sp. nov.

Candidatus Gasomia dimadibula (NL. fem. n. *dimadibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-55-31 sp001770175*. The type genome for the species is

the GenBank assembly GCA_001770075.1. The GC content of the type genome is 54.53 % and the genome length is 3.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point C".

Description of *Candidatus* Gasomia gen. nov.

Candidatus Gasomia (NL. fem. n. *Gasomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-55-31*. The type species for the genus is *Candidatus* Gasomia dimadibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Gasomosa arcelilega sp. nov.

Candidatus Gasomosa arcelilega (NL. fem. n. *arcelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6170 sp002842045*. The type genome for the species is the GenBank assembly GCA_002842045.1. The GC content of the type genome is 42.12 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Gasomosa gen. nov.

Candidatus Gasomosa (NL. fem. n. *Gasomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6170*. The type species for the genus is *Candidatus* Gasomosa arcelilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gasomosa bicipigena sp. nov.

Candidatus Gasomosa bicipigena (NL. fem. n. *bicipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6170 sp001899005*. The type genome for the species is the GenBank assembly GCA_001899005.1. The GC content of the type genome is 44.44 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Gasomosa octoditio sp. nov.

Candidatus Gasomosa octoditio (NL. fem. n. *octoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6170 sp002702705*. The type genome for the species is the GenBank assembly GCA_002702705.1. The GC content of the type genome is 41.37 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Gasomosa pragmentia sp. nov.

Candidatus Gasomosa pragmentia (NL. fem. n. *pragmentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6170 sp002841995*. The type genome for the species is the GenBank assembly GCA_002841995.1. The GC content of the type genome is 40.72 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Gasomosa tibicilega sp. nov.

Candidatus Gasomosa tibicilega (NL. fem. n. *tibicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6170 sp002840735*. The type genome for the species is the GenBank assembly GCA_002347375.1. The GC content of the type genome is 40.95 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Gasomosa vanitilega sp. nov.

Candidatus Gasomosa vanitilega (NL. fem. n. *vanitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6170 sp002840755*. The type genome for the species is the GenBank assembly GCA_002840755.1. The GC content of the type genome is 45.79 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Gasomula arcatitio sp. nov.

Candidatus Gasomula arcatitio (NL. fem. n. *arcatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFJ01 sp013152955*. The type genome for the species is the GenBank assembly GCA_013152955.1. The GC content of the type genome is 38.63 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Gasomula gen. nov.

Candidatus Gasomula (NL. fem. n. *Gasomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFJ01*. The type species for the genus is *Candidatus* Gasomula arcatitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADFJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasomulaceae.

Description of *Candidatus* Gasomulaceae fam. nov.

Candidatus Gasomulaceae (NL. fem. n. *Gasomulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFJ01.* The type genus for the taxon is *Candidatus* Gasomula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADFJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gasomulales.

Description of *Candidatus* Gasomulales ord. nov.

Candidatus Gasomulales (NL. fem. n. *Gasomulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFJ01.* The type genus for the taxon is *Candidatus* Gasomula .

According to the GTDB R06-RS202, this order belongs to the class *Desulfurellia*.

Description of *Candidatus* Geitlerinema adlacitio sp. nov.

Candidatus Geitlerinema adlacitio (NL. fem. n. *adlacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geitlerinema sp001657325*. The type genome for the species is the GenBank assembly GCA_001657325.1. The GC content of the type genome is 50.26 % and the genome length is 5.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture inoculated with black band disease microbial mat".

Description of *Candidatus* Geitlerinema inhosiforma sp. nov.

Candidatus Geitlerinema inhosiforma (NL. fem. n. *inhosiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geitlerinema sp000332355*. The type genome for the species is the GenBank assembly RS_GCF_000332355.1. The GC content of the type genome is 51.59 % and the genome length is 6.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "unialgal culture".

Description of *Candidatus* Gelidibacter denavitia sp. nov.

Candidatus Gelidibacter denavitia (NL. fem. n. *denavitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gelidibacter sp014062315*. The type genome for the species is the GenBank assembly RS_GCF_014062315.1. The GC content of the type genome is 37.77 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Gemebana bulapentia sp. nov.

Candidatus Gemebana bulapentia (NL. fem. n. *bulapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2030 sp002332755*. The type genome for the species is the GenBank assembly GCA_013178055.1. The GC content of the type genome is 42.83 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Gemebana gen. nov.

Candidatus Gemebana (NL. fem. n. *Gemebana* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2030*. The type species for the genus is *Candidatus* Gemebana bulapentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TTA-H9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinigiaceae.

Description of *Candidatus* Gemebaria genufedo sp. nov.

Candidatus Gemebaria genufedo (NL. fem. n. *genufedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAFBRK01 sp903231505*. The type genome for the species is the GenBank assembly RS_GCF_903231395.1. The GC content of the type genome is 54.22 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Gemebaria gen. nov.

Candidatus Gemebaria (NL. fem. n. *Gemebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAFBRK01*. The type species for the genus is *Candidatus* Gemebaria genufedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAFBRK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebariaceae.

Description of *Candidatus* Gemebariaceae fam. nov.

Candidatus Gemebariaceae (NL. fem. n. *Gemebariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAFBRK01*. The type genus for the taxon is *Candidatus* Gemebaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Gemebella penicitrix sp. nov.

Candidatus Gemebella penicitrix (NL. fem. n. *penicitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-5-72-10 sp003021615*. The type genome for the species is the GenBank assembly GCA_003021615.1. The GC content of the type genome is 72.29 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Gemebella gen. nov.

Candidatus Gemebella (NL. fem. n. *Gemebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QS-5-72-10*. The type species for the genus is *Candidatus* Gemebella penicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gemebia apogriforma sp. nov.

Candidatus Gemebia apogriforma (NL. fem. n. *apogriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9547 sp003476475*. The type genome for the species is the GenBank assembly GCA_003476475.1. The GC content of the type genome is 40.2 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Gemebia gen. nov.

Candidatus Gemebia (NL. fem. n. *Gemebia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9547*. The type species for the genus is *Candidatus* Gemebia apogriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebiaceae.

Description of *Candidatus* Gemebiaceae fam. nov.

Candidatus Gemebiaceae (NL. fem. n. *Gemebiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9547*. The type genus for the taxon is *Candidatus* Gemebia .

According to GTDB R06-RS202, this family belongs to the order *Cytophagales*.

Description of *Candidatus* Gemebia enimvatio sp. nov.

Candidatus Gemebia enimvatio (NL. fem. n. *enimvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9547 sp014376535*. The type genome for the species is the GenBank assembly GCA_014376535.1. The GC content of the type genome is 35.88 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Gemebida inabratio sp. nov.

Candidatus Gemebida inabratio (NL. fem. n. *inabratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRXL01 sp011373285*. The type genome for the species is the GenBank assembly GCA_011373285.1. The GC content of the type genome is 56.29 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Gemebida gen. nov.

Candidatus Gemebida (NL. fem. n. *Gemebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRXL01*. The type species for the genus is *Candidatus* Gemebida inabratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRXL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebidaceae.

Description of *Candidatus* Gemebidaceae fam. nov.

Candidatus Gemebidaceae (NL. fem. n. *Gemebidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DRXL01*. The type genus for the taxon is *Candidatus* Gemebida .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-55-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vicecosales.

Description of *Candidatus* Gemebosa astipimonia sp. nov.

Candidatus Gemebosa astipimonia (NL. fem. n. *astipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9088 sp003498085*. The type genome for the species is the GenBank assembly GCA_003498085.1. The GC content of the type genome is 35.73 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Gemebosa gen. nov.

Candidatus Gemebosa (NL. fem. n. *Gemebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9088*. The type species for the genus is *Candidatus* Gemebosa astipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebosaceae.

Description of *Candidatus* Gemebosaceae fam. nov.

Candidatus Gemebosaceae (NL. fem. n. *Gemebosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9088.* The type genus for the taxon is *Candidatus* Gemebosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gemebosales.

Description of *Candidatus* Gemebosales ord. nov.

Candidatus Gemebosales (NL. fem. n. *Gemebosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9088.* The type genus for the taxon is *Candidatus* Gemebosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Gemebosae.

Description of *Candidatus* Gemebosae class. nov.

Candidatus Gemebosae (NL. fem. n. *c__Gemebosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9088.* The type genus for the taxon is *Candidatus* Gemebosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Casigariota.

Description of *Candidatus* Gemebula velivifica sp. nov.

Candidatus Gemebula velivifica (NL. fem. n. *velivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFEL01 sp004557245*. The type genome for the species is the GenBank assembly GCA_004557245.1. The GC content of the type genome is 53.45 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Gemebula gen. nov.

Candidatus Gemebula (NL. fem. n. *Gemebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFEL01*. The type species for the genus is *Candidatus* Gemebula velivifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Gemella addivatio sp. nov.

Candidatus Gemella addivatio (NL. fem. n. *addivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemella sp900555985*. The type genome for the species is the GenBank assembly GCA_900555985.1. The GC content of the type genome is 28.83 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Gemella calipivita sp. nov.

Candidatus Gemella calipivita (NL. fem. n. *calipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemella sp900766305*. The type genome for the species is the GenBank assembly GCA_900766305.1. The GC content of the type genome is 30.73 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Gemella defaletta sp. nov.

Candidatus Gemella defaletta (NL. fem. n. *defaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemella sp002871655*. The type genome for the species is the GenBank assembly RS_GCF_001075645.1. The GC content of the type genome is 30.65 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Gemella petulastra sp. nov.

Candidatus Gemella petulastra (NL. fem. n. *petulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemella sp004570485*. The type genome for the species is the GenBank assembly RS_GCF_013415365.1. The GC content of the type genome is 30.25 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Gemella petulifica sp. nov.

Candidatus Gemella petulifica (NL. fem. n. *petulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Gemella sp013415425*. The type genome for the species is the GenBank assembly RS_GCF_013415425.1. The GC content of the type genome is 28.24 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Geminisphaera depocatica sp. nov.

Candidatus Geminisphaera depocatica (NL. fem. n. *depocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geminisphaera sp000242935*. The type genome for the species is the GenBank assembly RS_GCF_000242935.2. The GC content of the type genome is 63.45 % and the genome length is 7.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Geminocystis arcipitia sp. nov.

Candidatus Geminocystis arcipitia (NL. fem. n. *arcipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geminocystis sp001548095*. The type genome for the species is the GenBank assembly RS_GCF_001548095.1. The GC content of the type genome is 32.29 % and the genome length is 4.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Geminocystis desonousia sp. nov.

Candidatus Geminocystis desonousia (NL. fem. n. *desonousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geminocystis sp009993045*. The type genome for the species is the GenBank assembly GCA_009993045.1. The GC content of the type genome is 32.37 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Geminocystis fidenicula sp. nov.

Candidatus Geminocystis fidenicula (NL. fem. n. *fidenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geminocystis sp001548115*. The type genome for the species is the

GenBank assembly RS_GCF_001548115.1. The GC content of the type genome is 33.36 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Geminocystis miracatio sp. nov.

Candidatus Geminocystis miracatio (NL. fem. n. *miracatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geminocystis sp011088145*. The type genome for the species is the GenBank assembly GCA_011088145.1. The GC content of the type genome is 33.92 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Gemmata adsusicella sp. nov.

Candidatus Gemmata adsusicella (NL. fem. n. *adsusicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp005773755*. The type genome for the species is the GenBank assembly GCA_005773755.1. The GC content of the type genome is 67.44 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Gemmata assubitrix sp. nov.

Candidatus Gemmata assubitrix (NL. fem. n. *assubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp013823135*. The type genome for the species is the GenBank assembly GCA_013823135.1. The GC content of the type genome is 61.13 % and the genome length is 8.23 Mbp.

Description of *Candidatus* Gemmata delacibula sp. nov.

Candidatus Gemmata delacibula (NL. fem. n. *delacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp901538445*. The type genome for the species is the GenBank assembly RS_GCF_901538445.1. The GC content of the type genome is 69.87 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Gemmata dilicago sp. nov.

Candidatus Gemmata dilicago (NL. fem. n. *dilicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp005772955*. The type genome for the species is the GenBank assembly GCA_005800905.1. The GC content of the type genome is 63.65 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Gemmata inmitentia sp. nov.

Candidatus Gemmata inmitentia (NL. fem. n. *inmitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp013128195*. The type genome for the species is the GenBank assembly RS_GCF_013128195.1. The GC content of the type genome is 67.39 % and the genome length is 9.86 Mbp.

Description of *Candidatus* Gemmata invecitica sp. nov.

Candidatus Gemmata invecitica (NL. fem. n. *invecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmata sp013822345*. The type genome for the species is the GenBank assembly GCA_013822345.1. The GC content of the type genome is 72.81 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Gemmatimonas adnumastra sp. nov.

Candidatus Gemmatimonas adnumastra (NL. fem. n. *adnumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmatimonas sp013004105*. The type genome for the species is the GenBank assembly RS_GCF_013004105.1. The GC content of the type genome is 65.08 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Gemmatimonas ducilentia sp. nov.

Candidatus Gemmatimonas ducilentia (NL. fem. n. *ducilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmatimonas sp002737115*. The type genome for the species is the GenBank assembly GCA_903927125.1. The GC content of the type genome is 65.6 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Gemmatimonas inguritudo sp. nov.

Candidatus Gemmatimonas inguritudo (NL. fem. n. *inguritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmatimonas sp002331565*. The type genome for the species is the GenBank assembly GCA_002331565.1. The GC content of the type genome is 67.31 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Gemmatimonas lorarago sp. nov.

Candidatus Gemmatimonas lorarago (NL. fem. n. *lorarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmatimonas sp903894655*. The type genome for the species is the GenBank assembly GCA_903894655.1. The GC content of the type genome is 65.63 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Gemmatimonas redacetta sp. nov.

Candidatus Gemmatimonas redacetta (NL. fem. n. *redacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmatimonas sp002483225*. The type genome for the species is the GenBank assembly GCA_013822035.1. The GC content of the type genome is 66.03 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Gemmatimonas unetvugo sp. nov.

Candidatus Gemmatimonas unetvugo (NL. fem. n. *unetvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Gemmatimonas sp903900795*. The type genome for the species is the GenBank assembly GCA_903900795.1. The GC content of the type genome is 65.68 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Gemmiger baropatica sp. nov.

Candidatus Gemmiger baropatica (NL. fem. n. *baropatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900540775*. The type genome for the species is the GenBank assembly GCA_900540775.1. The GC content of the type genome is 58.84 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Gemmiger bicoribula sp. nov.

Candidatus Gemmiger bicoribula (NL. fem. n. *bicoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900539695*. The type genome for the species is the GenBank assembly GCA_008674315.1. The GC content of the type genome is 58.78 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Gemmiger catilitia sp. nov.

Candidatus Gemmiger catilitia (NL. fem. n. *catilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp004555405*. The type genome for the species is the GenBank assembly GCA_900548665.1. The GC content of the type genome is 55.91 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Gemmiger cicatitoga sp. nov.

Candidatus Gemmiger cicatitoga (NL. fem. n. *cicatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900554145*. The type genome for the species is the GenBank assembly GCA_900554145.1. The GC content of the type genome is 59.4 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Gemmiger colipicula sp. nov.

Candidatus Gemmiger colipicula (NL. fem. n. *colipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900548355*. The type genome for the species is the GenBank assembly GCA_900548355.1. The GC content of the type genome is 60.86 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Gemmiger coturousia sp. nov.

Candidatus Gemmiger coturousia (NL. fem. n. *coturousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp004561545*. The type genome for the species is the GenBank assembly GCA_004561545.1. The GC content of the type genome is 61.24 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Gemmiger delebentia sp. nov.

Candidatus Gemmiger delebentia (NL. fem. n. *delebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900545545*. The type genome for the species is the GenBank assembly GCA_004556315.1. The GC content of the type genome is 59.3 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Gemmiger ecfacigena sp. nov.

Candidatus Gemmiger ecfacigena (NL. fem. n. *ecfacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp002306375*. The type genome for the species is the GenBank assembly GCA_002306375.1. The GC content of the type genome is 63.96 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Gemmiger favilitoga sp. nov.

Candidatus Gemmiger favilitoga (NL. fem. n. *favilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900772715*. The type genome for the species is the GenBank assembly GCA_900772715.1. The GC content of the type genome is 57.85 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Gemmiger pacifitura sp. nov.

Candidatus Gemmiger pacifitura (NL. fem. n. *pacifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900540595*. The type genome for the species is the GenBank assembly GCA_900540595.1. The GC content of the type genome is 58.77 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Gemmiger unetvigena sp. nov.

Candidatus Gemmiger unetvigena (NL. fem. n. *unetvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger sp900556255*. The type genome for the species is the GenBank assembly GCA_900556255.1. The GC content of the type genome is 59.25 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Gemmiger effacitio sp. nov.

Candidatus Gemmiger effacitio (NL. fem. n. *effacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmiger_A sp002160955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002160955.1. The GC content of the type genome is 60.16 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Gemmobacter arrabugo sp. nov.

Candidatus Gemmobacter arrabugo (NL. fem. n. *arrabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter sp008973825*. The type genome for the species is the GenBank assembly RS_GCF_008973825.1. The GC content of the type genome is 63.68 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Gemmobacter catilicula sp. nov.

Candidatus Gemmobacter catilicula (NL. fem. n. *catilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter sp003509785*. The type genome for the species is the GenBank assembly GCA_001828835.1. The GC content of the type genome is 64.24 % and the genome length is 3.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m depth; 0.1 filter".

Description of *Candidatus* Gemmobacter amfitimonia sp. nov.

Candidatus Gemmobacter amfitimonia (NL. fem. n. *amfitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp013824045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013824045.1. The GC content of the type genome is 64.41 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Gemmobacter cobalousia sp. nov.

Candidatus Gemmobacter cobalousia (NL. fem. n. *cobalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp009908315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009908315.1. The GC content of the type genome is 66.21 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Gemmobacter ellipivita sp. nov.

Candidatus Gemmobacter ellipivita (NL. fem. n. *ellipivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp002256185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002256185.1. The GC content of the type genome is 63.36 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Gemmobacter immusibula sp. nov.

Candidatus Gemmobacter immusibula (NL. fem. n. *immusibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp003060865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003060865.1. The GC content of the type genome is 63.95 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Gemmobacter novilax sp. nov.

Candidatus Gemmobacter novilax (NL. fem. n. *novilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp011059185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011059185.1. The GC content of the type genome is 65.91 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Gemmobacter octupitura sp. nov.

Candidatus Gemmobacter octupitura (NL. fem. n. *octupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp009908265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009908265.1. The GC

content of the type genome is 66.18 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Gemmobacter ornititio sp. nov.

Candidatus Gemmobacter ornititio (NL. fem. n. *ornititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp000500915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000500915.1. The GC content of the type genome is 66.64 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "5 liters of water from the Tucurui Power Plant Reservoir; point M5 collected 50cm beneath the lake surface; then filtered by negative pressure for posterior culture in BG-11 medium".

Description of *Candidatus* Gemmobacter ruricugo sp. nov.

Candidatus Gemmobacter ruricugo (NL. fem. n. *ruricugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp014654775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014654775.1. The GC content of the type genome is 65.25 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Gemmobacter xeramilega sp. nov.

Candidatus Gemmobacter xeramilega (NL. fem. n. *xeramilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gemmobacter_B sp002855575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002855575.1. The GC content of the type genome is 66.01 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Genocana infatugo sp. nov.

Candidatus Genocana infatugo (NL. fem. n. *infatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVQK01 sp002067515*. The type genome for the species is the GenBank assembly GCA_002067515.1. The GC content of the type genome is 45.98 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Genocana gen. nov.

Candidatus Genocana (NL. fem. n. *Genocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVQK01*. The type species for the genus is *Candidatus* Genocana infatugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Genocana vatiletta sp. nov.

Candidatus Genocana vatiletta (NL. fem. n. *vatiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVQK01 sp002067395*. The type genome for the species is the GenBank assembly GCA_002067395.1. The GC content of the type genome is 47.2 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Genocaria cilicugo sp. nov.

Candidatus Genocaria cilicugo (NL. fem. n. *cilicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5862 sp002408105*. The type genome for the species is the GenBank assembly GCA_002408105.1. The GC content of the type genome is 62.18 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Genocaria gen. nov.

Candidatus Genocaria (NL. fem. n. *Genocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5862*. The type species for the genus is *Candidatus* Genocaria

cilicugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5862*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genocariaceae.

Description of *Candidatus* Genocariaceae fam. nov.

Candidatus Genocariaceae (NL. fem. n. *Genocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5862.* The type genus for the taxon is *Candidatus* Genocaria .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Genocella acrolax sp. nov.

Candidatus Genocella acrolax (NL. fem. n. *acrolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7597 sp900767195*. The type genome for the species is the GenBank assembly RS_GCF_900767195.1. The GC content of the type genome is 48.8 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Genocella gen. nov.

Candidatus Genocella (NL. fem. n. *Genocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7597*. The type species for the genus is *Candidatus* Genocella acrolax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Genocella delapitura sp. nov.

Candidatus Genocella delapitura (NL. fem. n. *delapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7597 sp900542935*. The type genome for the species is the GenBank assembly GCA_900542935.1. The GC content of the type genome is 49.99 %

and the genome length is 1.99 Mbp.

Description of *Candidatus* Genocella hexagitrix sp. nov.

Candidatus Genocella hexagitrix (NL. fem. n. *hexagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7597 sp003448195*. The type genome for the species is the GenBank assembly RS_GCF_900770475.1. The GC content of the type genome is 49.96 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Genocella inregivita sp. nov.

Candidatus Genocella inregivita (NL. fem. n. *inregivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7597 sp002474405*. The type genome for the species is the GenBank assembly GCA_002474405.1. The GC content of the type genome is 51.49 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Genocia capabessa sp. nov.

Candidatus Genocia capabessa (NL. fem. n. *capabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5518 sp903938575*. The type genome for the species is the GenBank assembly GCA_903938575.1. The GC content of the type genome is 65.21 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Genocia gen. nov.

Candidatus Genocia (NL. fem. n. *Genocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5518*. The type species for the genus is *Candidatus* Genocia capabessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5518*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genociaceae.

Description of *Candidatus* Genociaceae fam. nov.

Candidatus Genociaceae (NL. fem. n. *Genociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5518.* The type genus for the taxon is *Candidatus* Genocia .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Genocia faticicula sp. nov.

Candidatus Genocia faticicula (NL. fem. n. *faticicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5518 sp002396625*. The type genome for the species is the GenBank assembly GCA_002423785.1. The GC content of the type genome is 63.5 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Genocia lucelicula sp. nov.

Candidatus Genocia lucelicula (NL. fem. n. *lucelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5518 sp903921135*. The type genome for the species is the GenBank assembly GCA_903921135.1. The GC content of the type genome is 66.0 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Genocia manufivita sp. nov.

Candidatus Genocia manufivita (NL. fem. n. *manufivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5518 sp903928015*. The type genome for the species is the GenBank assembly GCA_903928015.1. The GC content of the type genome is 65.47 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Genocosa bonititoga sp. nov.

Candidatus Genocosa bonititoga (NL. fem. n. *bonititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708145 sp002728715*. The type genome for the species is the GenBank assembly GCA_002728715.1. The GC content of the type genome is 31.43 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Genocosa gen. nov.

Candidatus Genocosa (NL. fem. n. *Genocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002708145*. The type species for the genus is *Candidatus* Genocosa bonititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Genocosa nefarigena sp. nov.

Candidatus Genocosa nefarigena (NL. fem. n. *nefarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708145 sp002714425*. The type genome for the species is the GenBank assembly GCA_002714425.1. The GC content of the type genome is 31.58 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Genocosa recogatio sp. nov.

Candidatus Genocosa recogatio (NL. fem. n. *recogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708145 sp002712125*. The type genome for the species is the GenBank assembly GCA_002712125.1. The GC content of the type genome is 31.32 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Genocosa thapsiforma sp. nov.

Candidatus Genocosa thapsiforma (NL. fem. n. *thapsiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708145 sp002708145*. The type genome for the species is the GenBank assembly GCA_002708145.1. The GC content of the type genome is 31.84 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Genocula dedigisca sp. nov.

Candidatus Genocula dedigisca (NL. fem. n. *dedigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKW01 sp009885355*. The type genome for the species is the GenBank assembly GCA_009885355.1. The GC content of the type genome is 39.79 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Genocula gen. nov.

Candidatus Genocula (NL. fem. n. *Genocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKW01*. The type species for the genus is *Candidatus* Genocula dedigisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VFKW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genoculaceae.

Description of *Candidatus* Genoculaceae fam. nov.

Candidatus Genoculaceae (NL. fem. n. *Genoculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VFKW01.* The type genus for the taxon is *Candidatus* Genocula .

According to the original version of GTDB R06-RS202, this family belongs to the order *VFKW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Genoculales.

Description of *Candidatus* Genoculales ord. nov.

Candidatus Genoculales (NL. fem. n. *Genoculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *VFKW01*. The type genus for the taxon is *Candidatus* Genocula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Genufana decinitica sp. nov.

Candidatus Genufana decinitica (NL. fem. n. *decinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLA5 sp003576845*. The type genome for the species is the GenBank assembly GCA_003576845.1. The GC content of the type genome is 63.88 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Genufana gen. nov.

Candidatus Genufana (NL. fem. n. *Genufana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLA5*. The type species for the genus is *Candidatus* Genufana decinitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PLA5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufanaceae.

Description of *Candidatus* Genufanaceae fam. nov.

Candidatus Genufanaceae (NL. fem. n. *Genufanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PLA5*. The type genus for the taxon is *Candidatus* Genufana .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Genufaria feficetta sp. nov.

Candidatus Genufaria feficetta (NL. fem. n. *feficetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QNYK01 sp003973385*. The type genome for the species is the GenBank assembly GCA_003973385.1. The GC content of the type genome is 58.1 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Genufaria gen. nov.

Candidatus Genufaria (NL. fem. n. *Genufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNYK01*. The type species for the genus is *Candidatus* Genufaria feficetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenanaceae.

Description of *Candidatus* Genufaria utralicella sp. nov.

Candidatus Genufaria utralicella (NL. fem. n. *utralicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNYK01 sp014240375*. The type genome for the species is the GenBank assembly GCA_014240375.1. The GC content of the type genome is 57.75 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Genufaria vacilitrix sp. nov.

Candidatus Genufaria vacilitrix (NL. fem. n. *vacilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNYK01 sp012960845*. The type genome for the species is the GenBank assembly GCA_012960845.1. The GC content of the type genome is 57.85 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Genufella cerevimonas sp. nov.

Candidatus Genufella cerevimonas (NL. fem. n. *cerevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIRW01 sp004366205*. The type genome for the species is the

GenBank assembly GCA_004366205.1. The GC content of the type genome is 73.92 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Genufella gen. nov.

Candidatus Genufella (NL. fem. n. *Genufella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIRW01*. The type species for the genus is *Candidatus* Genufella cerevimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SIRW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufellaceae.

Description of *Candidatus* Genufellaceae fam. nov.

Candidatus Genufellaceae (NL. fem. n. *Genufellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SIRW01.* The type genus for the taxon is *Candidatus* Genufella .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Genufia nidifitoga sp. nov.

Candidatus Genufia nidifitoga (NL. fem. n. *nidifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRQ01 sp007130885*. The type genome for the species is the GenBank assembly GCA_007130885.1. The GC content of the type genome is 59.92 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Genufia gen. nov.

Candidatus Genufia (NL. fem. n. *Genufia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLRQ01*. The type species for the genus is *Candidatus* Genufia nidifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SLRQ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufiaceae.

Description of *Candidatus* Genufiaceae fam. nov.

Candidatus Genufiaceae (NL. fem. n. *Genufiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLRQ01*. The type genus for the taxon is *Candidatus* Genufia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLRQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Genufiales.

Description of *Candidatus* Genufiales ord. nov.

Candidatus Genufiales (NL. fem. n. *Genufiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLRQ01*. The type genus for the taxon is *Candidatus* Genufia .

According to the GTDB R06-RS202, this order belongs to the class *Myxococcia*.

Description of *Candidatus* Genufida apsegibula sp. nov.

Candidatus Genufida apsegibula (NL. fem. n. *apsegibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J090 sp003695065*. The type genome for the species is the GenBank assembly GCA_003695065.1. The GC content of the type genome is 60.67 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Genufida gen. nov.

Candidatus Genufida (NL. fem. n. *Genufida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J090*. The type species for the genus is *Candidatus* Genufida apsegibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

family *Candidatus* Genufidaceae.

Description of *Candidatus* Genufidaceae fam. nov.

Candidatus Genufidaceae (NL. fem. n. *Genufidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J090.* The type genus for the taxon is *Candidatus* Genufida .

According to GTDB R06-RS202, this family belongs to the order *Sphingomonadales*.

Description of *Candidatus* Genufula obmuritia sp. nov.

Candidatus Genufula obmuritia (NL. fem. n. *obmuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLA01 sp009777825*. The type genome for the species is the GenBank assembly GCA_009777825.1. The GC content of the type genome is 45.69 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Genufula gen. nov.

Candidatus Genufula (NL. fem. n. *Genufula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLA01*. The type species for the genus is *Candidatus* Genufula obmuritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRLA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufulaceae.

Description of *Candidatus* Genufulaceae fam. nov.

Candidatus Genufulaceae (NL. fem. n. *Genufulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRLA01.* The type genus for the taxon is *Candidatus* Genufula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Geobacillus conifitrix sp. nov.

Candidatus Geobacillus conifitrix (NL. fem. n. *conifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geobacillus sp002809955*. The type genome for the species is the GenBank assembly RS_GCF_002809955.1. The GC content of the type genome is 52.54 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Geobacillus odontitica sp. nov.

Candidatus Geobacillus odontitica (NL. fem. n. *odontitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geobacillus sp000445995*. The type genome for the species is the GenBank assembly RS_GCF_000445995.2. The GC content of the type genome is 52.79 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Geobacillus saburedo sp. nov.

Candidatus Geobacillus saburedo (NL. fem. n. *saburedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geobacillus sp002077765*. The type genome for the species is the GenBank assembly RS_GCF_002077765.1. The GC content of the type genome is 52.06 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Geobacter megalitio sp. nov.

Candidatus Geobacter megalitio (NL. fem. n. *megalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geobacter sp003712145*. The type genome for the species is the GenBank assembly GCA_003712145.1. The GC content of the type genome is 59.89 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Geodermatophilus abambilenta sp. nov.

Candidatus Geodermatophilus abambilenta (NL. fem. n. *abambilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp008124535*. The type genome for the species is the GenBank assembly RS_GCF_008124535.1. The GC content of the type genome is 75.17 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Geodermatophilus agrimimonas sp. nov.

Candidatus Geodermatophilus agrimimonas (NL. fem. n. *agrimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp003428645*. The type genome for the species is the GenBank assembly RS_GCF_003428645.1. The GC content of the type genome is 75.61 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Geodermatophilus argumitica sp. nov.

Candidatus Geodermatophilus argumitica (NL. fem. n. *argumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp900104025*. The type genome for the species is the GenBank assembly RS_GCF_900104025.1. The GC content of the type genome is 74.65 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Geodermatophilus cenobisca sp. nov.

Candidatus Geodermatophilus cenobisca (NL. fem. n. *cenobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp000701365*. The type genome for the species is the GenBank assembly RS_GCF_000701365.1. The GC content of the type genome is 74.0 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Geodermatophilus cimiticula sp. nov.

Candidatus Geodermatophilus cimiticula (NL. fem. n. *cimiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Geodermatophilus sp003319125*. The type genome for the species is the GenBank assembly RS_GCF_003319125.1. The GC content of the type genome is 74.22 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Geodermatophilus extunisca sp. nov.

Candidatus Geodermatophilus extunisca (NL. fem. n. *extunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp003319115*. The type genome for the species is the GenBank assembly RS_GCF_003319115.1. The GC content of the type genome is 74.73 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Geodermatophilus megalatica sp. nov.

Candidatus Geodermatophilus megalatica (NL. fem. n. *megalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geodermatophilus sp004571065*. The type genome for the species is the GenBank assembly RS_GCF_004571065.1. The GC content of the type genome is 73.92 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Geofilum arcipugo sp. nov.

Candidatus Geofilum arcipugo (NL. fem. n. *arcipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geofilum sp002412555*. The type genome for the species is the GenBank assembly GCA_002412555.1. The GC content of the type genome is 43.77 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Geofilum ceracitica sp. nov.

Candidatus Geofilum ceracitica (NL. fem. n. *ceracitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geofilum sp002411385*. The type genome for the species is the GenBank assembly GCA_002411385.1. The GC content of the type genome is 43.48 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Geofilum lanigitio sp. nov.

Candidatus Geofilum lanigitio (NL. fem. n. *lanigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geofilum sp012838865*. The type genome for the species is the GenBank assembly GCA_012838865.1. The GC content of the type genome is 50.9 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Geofilum turiciforma sp. nov.

Candidatus Geofilum turiciforma (NL. fem. n. *turiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geofilum sp002427105*. The type genome for the species is the GenBank assembly GCA_003513175.1. The GC content of the type genome is 42.89 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Geomonas decenilenta sp. nov.

Candidatus Geomonas decenilenta (NL. fem. n. *decenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp000023645*. The type genome for the species is the GenBank assembly RS_GCF_000023645.1. The GC content of the type genome is 60.47 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Geomonas denunifica sp. nov.

Candidatus Geomonas denunifica (NL. fem. n. *denunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp003499925*. The type genome for the species is the GenBank assembly GCA_001802135.1. The GC content of the type genome is 59.92 % and the genome length is 6.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Geomonas infunilega sp. nov.

Candidatus Geomonas infunilega (NL. fem. n. *infunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp014193515*. The type genome for the species is the GenBank assembly RS_GCF_014193515.1. The GC content of the type genome is 62.61 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Geomonas musulifica sp. nov.

Candidatus Geomonas musulifica (NL. fem. n. *musulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp014193585*. The type genome for the species is the GenBank assembly RS_GCF_014193585.1. The GC content of the type genome is 62.41 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Geomonas selibetta sp. nov.

Candidatus Geomonas selibetta (NL. fem. n. *selibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp000175115*. The type genome for the species is the GenBank assembly RS_GCF_000175115.2. The GC content of the type genome is 61.18 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Geomonas serotousia sp. nov.

Candidatus Geomonas serotousia (NL. fem. n. *serotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp903925075*. The type genome for the species is the GenBank assembly GCA_903925075.1. The GC content of the type genome is 60.72 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Geomonas terebitia sp. nov.

Candidatus Geomonas terebitia (NL. fem. n. *terebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp014193675*. The type genome for the species is the GenBank assembly RS_GCF_014193675.1. The GC content of the type genome is 61.82 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Geomonas vigenimonia sp. nov.

Candidatus Geomonas vigenimonia (NL. fem. n. *vigenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geomonas sp003490025*. The type genome for the species is the GenBank assembly GCA_003490025.1. The GC content of the type genome is 61.41 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Geopsychrobacter favonitia sp. nov.

Candidatus Geopsychrobacter favonitia (NL. fem. n. *favonitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geopsychrobacter sp012974425*. The type genome for the species is the GenBank assembly GCA_012974425.1. The GC content of the type genome is 55.24 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Geopsychrobacter semidilenta sp. nov.

Candidatus Geopsychrobacter semidilenta (NL. fem. n. *semidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geopsychrobacter sp009993495*. The type genome for the species is the GenBank assembly GCA_009993495.1. The GC content of the type genome is 53.83 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Georgenia derunilega sp. nov.

Candidatus Georgenia derunilega (NL. fem. n. *derunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Georgenia sp003991205*. The type genome for the species is the GenBank assembly RS_GCF_003991205.1. The GC content of the type genome is 73.1

% and the genome length is 4.28 Mbp.

Description of *Candidatus* Georgenia haricitia sp. nov.

Candidatus Georgenia haricitia (NL. fem. n. *haricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Georgenia sp006352065*. The type genome for the species is the GenBank assembly RS_GCF_007096345.1. The GC content of the type genome is 72.16 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Georhizobium diponago sp. nov.

Candidatus Georhizobium diponago (NL. fem. n. *diponago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Georhizobium sp902498825*. The type genome for the species is the GenBank assembly RS_GCF_902498825.1. The GC content of the type genome is 62.11 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Geothrix bigemibra sp. nov.

Candidatus Geothrix bigemibra (NL. fem. n. *bigemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903857495*. The type genome for the species is the GenBank assembly GCA_903843615.1. The GC content of the type genome is 67.77 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Geothrix bigemisca sp. nov.

Candidatus Geothrix bigemisca (NL. fem. n. *bigemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903886655*. The type genome for the species is the GenBank assembly GCA_903919275.1. The GC content of the type genome is 67.74 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Geothrix cetaricula sp. nov.

Candidatus Geothrix cetaricula (NL. fem. n. *cetaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp003158505*. The type genome for the species is the GenBank assembly GCA_003160655.1. The GC content of the type genome is 63.81 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Geothrix chalbitura sp. nov.

Candidatus Geothrix chalbitura (NL. fem. n. *chalbitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903839205*. The type genome for the species is the GenBank assembly GCA_903839205.1. The GC content of the type genome is 67.47 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Geothrix defenivita sp. nov.

Candidatus Geothrix defenivita (NL. fem. n. *defenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp003538615*. The type genome for the species is the GenBank assembly GCA_003538615.1. The GC content of the type genome is 68.63 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Geothrix denomax sp. nov.

Candidatus Geothrix denomax (NL. fem. n. *denomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp013334395*. The type genome for the species is the GenBank assembly GCA_013334395.1. The GC content of the type genome is 68.17 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Geothrix dimadentia sp. nov.

Candidatus Geothrix dimadentia (NL. fem. n. *dimadentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903843705*. The type genome for the species is the GenBank assembly GCA_903831225.1. The GC content of the type genome is 67.14 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Geothrix documicella sp. nov.

Candidatus Geothrix documicella (NL. fem. n. *documicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903890595*. The type genome for the species is the GenBank assembly GCA_903884175.1. The GC content of the type genome is 67.45 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Geothrix genocousia sp. nov.

Candidatus Geothrix genocousia (NL. fem. n. *genocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903884655*. The type genome for the species is the GenBank assembly GCA_903908045.1. The GC content of the type genome is 65.2 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Geothrix hariciforma sp. nov.

Candidatus Geothrix hariciforma (NL. fem. n. *hariciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903876615*. The type genome for the species is the GenBank assembly GCA_903876615.1. The GC content of the type genome is 67.61 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Geothrix maleditudo sp. nov.

Candidatus Geothrix maleditudo (NL. fem. n. *maleditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903873655*. The type genome for the species is the GenBank assembly GCA_903887115.1. The GC content of the type genome is 64.46 %

and the genome length is 3.21 Mbp.

Description of *Candidatus* Geothrix medimitoga sp. nov.

Candidatus Geothrix medimitoga (NL. fem. n. *medimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903880675*. The type genome for the species is the GenBank assembly GCA_903859585.1. The GC content of the type genome is 67.1 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Geothrix recomatica sp. nov.

Candidatus Geothrix recomatica (NL. fem. n. *recomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903927605*. The type genome for the species is the GenBank assembly GCA_903927605.1. The GC content of the type genome is 63.46 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Geothrix resuressa sp. nov.

Candidatus Geothrix resuressa (NL. fem. n. *resuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903913215*. The type genome for the species is the GenBank assembly GCA_903841555.1. The GC content of the type genome is 65.85 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Geothrix sotulugo sp. nov.

Candidatus Geothrix sotulugo (NL. fem. n. *sotulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903937385*. The type genome for the species is the GenBank assembly GCA_903893685.1. The GC content of the type genome is 66.82 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Geothrix subacimonia sp. nov.

Candidatus Geothrix subacimonia (NL. fem. n. *subacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903919165*. The type genome for the species is the GenBank assembly GCA_903821245.1. The GC content of the type genome is 63.56 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Geothrix subucivita sp. nov.

Candidatus Geothrix subucivita (NL. fem. n. *subucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903863195*. The type genome for the species is the GenBank assembly GCA_903925945.1. The GC content of the type genome is 68.0 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Geothrix susicastra sp. nov.

Candidatus Geothrix susicastra (NL. fem. n. *susicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp903840385*. The type genome for the species is the GenBank assembly GCA_903897625.1. The GC content of the type genome is 67.55 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Geothrix umbilifica sp. nov.

Candidatus Geothrix umbilifica (NL. fem. n. *umbilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geothrix sp013390615*. The type genome for the species is the GenBank assembly GCA_013390615.1. The GC content of the type genome is 67.57 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Geovibrio satacimonia sp. nov.

Candidatus Geovibrio satacimonia (NL. fem. n. *satacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Geovibrio sp001603805*. The type genome for the species is the GenBank assembly GCA_001603805.1. The GC content of the type genome is 44.38 % and the genome length is 2.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Gerunana amfitibra sp. nov.

Candidatus Gerunana amfitibra (NL. fem. n. *amfitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp902626505*. The type genome for the species is the GenBank assembly GCA_902626505.1. The GC content of the type genome is 29.22 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Gerunana gen. nov.

Candidatus Gerunana (NL. fem. n. *Gerunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G16*. The type species for the genus is *Candidatus* Gerunana amfitibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gerunana anatrugo sp. nov.

Candidatus Gerunana anatrugo (NL. fem. n. *anatrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp902636265*. The type genome for the species is the GenBank assembly GCA_902636265.1. The GC content of the type genome is 29.23 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Gerunana bifarimonia sp. nov.

Candidatus Gerunana bifarimonia (NL. fem. n. *bifarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002701745*. The type genome for the species is the GenBank assembly GCA_002701745.1. The GC content of the type genome is 29.51 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Gerunana decitifica sp. nov.

Candidatus Gerunana decitifica (NL. fem. n. *decitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002702205*. The type genome for the species is the GenBank assembly GCA_002702205.1. The GC content of the type genome is 31.4 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Gerunana incocimonas sp. nov.

Candidatus Gerunana incocimonas (NL. fem. n. *incocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002457315*. The type genome for the species is the GenBank assembly GCA_002457315.1. The GC content of the type genome is 29.6 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Gerunana indupitoga sp. nov.

Candidatus Gerunana indupitoga (NL. fem. n. *indupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002697405*. The type genome for the species is the GenBank assembly GCA_002697405.1. The GC content of the type genome is 29.35 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Gerunana medimibra sp. nov.

Candidatus Gerunana medimibra (NL. fem. n. *medimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp902633975*. The type genome for the species is the GenBank assembly GCA_902633975.1. The GC content of the type genome is 30.41 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Gerunana musulitia sp. nov.

Candidatus Gerunana musulitia (NL. fem. n. *musulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002696995*. The type genome for the species is the GenBank assembly GCA_002457035.1. The GC content of the type genome is 29.1 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Gerunana saxificula sp. nov.

Candidatus Gerunana saxificula (NL. fem. n. *saxificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp002692105*. The type genome for the species is the GenBank assembly GCA_002692105.1. The GC content of the type genome is 31.23 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Gerunana subucatica sp. nov.

Candidatus Gerunana subucatica (NL. fem. n. *subucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp902523065*. The type genome for the species is the GenBank assembly GCA_902549205.1. The GC content of the type genome is 31.34 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Gerunana tubicitoga sp. nov.

Candidatus Gerunana tubicitoga (NL. fem. n. *tubicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G16 sp902634135*. The type genome for the species is the GenBank assembly GCA_902634135.1. The GC content of the type genome is 28.96 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Gerunaria cepulessa sp. nov.

Candidatus Gerunaria cepulessa (NL. fem. n. *cepulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYU01 sp007127715*. The type genome for the species is the GenBank assembly GCA_007123115.1. The GC content of the type genome is 67.78 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Gerunaria gen. nov.

Candidatus Gerunaria (NL. fem. n. *Gerunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKYU01*. The type species for the genus is *Candidatus* Gerunaria cepulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWYM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalellaceae.

Description of *Candidatus* Gerunaria hecatiforma sp. nov.

Candidatus Gerunaria hecatiforma (NL. fem. n. *hecatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYU01 sp003567475*. The type genome for the species is the GenBank assembly GCA_007131765.1. The GC content of the type genome is 66.78 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Gerunaria peradago sp. nov.

Candidatus Gerunaria peradago (NL. fem. n. *peradago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYU01 sp007693855*. The type genome for the species is the GenBank assembly GCA_007693855.1. The GC content of the type genome is 67.12 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Gerunella solifitio sp. nov.

Candidatus Gerunella solifitio (NL. fem. n. *solifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002779465 sp002771315*. The type genome for the species is the GenBank assembly GCA_002771315.1. The GC content of the type genome is 52.32 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Gerunella gen. nov.

Candidatus Gerunella (NL. fem. n. *Gerunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002779465*. The type species for the genus is *Candidatus* Gerunella solifitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coniganaceae.

Description of *Candidatus* Gerunida hexagibra sp. nov.

Candidatus Gerunida hexagibra (NL. fem. n. *hexagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1346 sp003170085*. The type genome for the species is the GenBank assembly GCA_003170085.1. The GC content of the type genome is 66.03 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Gerunida gen. nov.

Candidatus Gerunida (NL. fem. n. *Gerunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1346*. The type species for the genus is *Candidatus* Gerunida hexagibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gerunidaceae.

Description of *Candidatus* Gerunidaceae fam. nov.

Candidatus Gerunidaceae (NL. fem. n. *Gerunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1346.* The type genus for the taxon is *Candidatus* Gerunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *FEN-1346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gerunidales.

Description of *Candidatus* Gerunidales ord. nov.

Candidatus Gerunidales (NL. fem. n. *Gerunidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1346.* The type genus for the taxon is *Candidatus* Gerunida .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Gerunosa cisorilenta sp. nov.

Candidatus Gerunosa cisorilenta (NL. fem. n. *cisorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c54 sp002770955*. The type genome for the species is the GenBank assembly GCA_002788275.1. The GC content of the type genome is 31.75 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Gerunosa gen. nov.

Candidatus Gerunosa (NL. fem. n. *Gerunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRH-c54*. The type species for the genus is *Candidatus* Gerunosa cisorilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gerunosa demagigena sp. nov.

Candidatus Gerunosa demagigena (NL. fem. n. *demagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BRH-c54 sp000961845*. The type genome for the species is the GenBank assembly GCA_000961845.1. The GC content of the type genome is 32.22 % and the genome length is 2.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Gerunosa socagicella sp. nov.

Candidatus Gerunosa socagicella (NL. fem. n. *socagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c54 sp002841035*. The type genome for the species is the GenBank assembly GCA_002841035.1. The GC content of the type genome is 32.29 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Gerunosa vicatibula sp. nov.

Candidatus Gerunosa vicatibula (NL. fem. n. *vicatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c54 sp002359215*. The type genome for the species is the GenBank assembly GCA_002415035.1. The GC content of the type genome is 32.01 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Gerunula nugivilenta sp. nov.

Candidatus Gerunula nugivilenta (NL. fem. n. *nugivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCH01 sp013694495*. The type genome for the species is the GenBank assembly GCA_013694495.1. The GC content of the type genome is 72.35 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Gerunula gen. nov.

Candidatus Gerunula (NL. fem. n. *Gerunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCH01*. The type species for the genus is *Candidatus* Gerunula nugivilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDCH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gerunulaceae.

Description of *Candidatus* Gerunulaceae fam. nov.

Candidatus Gerunulaceae (NL. fem. n. *Gerunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDCH01.* The type genus for the taxon is *Candidatus* Gerunula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Ghiorsea locelax sp. nov.

Candidatus Ghiorsea locelax (NL. fem. n. *locelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ghiorsea sp002323245*. The type genome for the species is the GenBank assembly GCA_002323245.1. The GC content of the type genome is 46.4 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Ghiorsea octusiforma sp. nov.

Candidatus Ghiorsea octusiforma (NL. fem. n. *octusiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ghiorsea sp002401135*. The type genome for the species is the GenBank assembly GCA_002401135.1. The GC content of the type genome is 43.6 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Giesbergeria adcesilenta sp. nov.

Candidatus Giesbergeria adcesilenta (NL. fem. n. *adcesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp903882725*. The type genome for the species is the GenBank assembly GCA_903882725.1. The GC content of the type genome is 60.46 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Giesbergeria cunabessa sp. nov.

Candidatus Giesbergeria cunabessa (NL. fem. n. *cunabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp003096555*. The type genome for the species is the GenBank assembly RS_GCF_003387115.1. The GC content of the type genome is 63.08 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Giesbergeria nicoticella sp. nov.

Candidatus Giesbergeria nicoticella (NL. fem. n. *nicoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp001770955*. The type genome for the species is the GenBank assembly GCA_003516715.1. The GC content of the type genome is 65.71 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Giesbergeria peropivita sp. nov.

Candidatus Giesbergeria peropivita (NL. fem. n. *peropivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp001724785*. The type genome for the species is the GenBank assembly GCA_001724785.1. The GC content of the type genome is 67.74 % and the genome length is 2.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Giesbergeria semunicula sp. nov.

Candidatus Giesbergeria semunicula (NL. fem. n. *semunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp010020825*. The type genome for the species is the GenBank assembly RS_GCF_010020825.1. The GC content of the type genome is 65.41 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Giesbergeria solacugo sp. nov.

Candidatus Giesbergeria solacugo (NL. fem. n. *solacugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Giesbergeria sp012932145*. The type genome for the species is the GenBank assembly RS_GCF_012931925.1. The GC content of the type genome is 66.65 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Giganana bipinilenta sp. nov.

Candidatus Giganana bipinilenta (NL. fem. n. *bipinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9630 sp003482885*. The type genome for the species is the GenBank assembly GCA_003450775.1. The GC content of the type genome is 37.67 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Giganana gen. nov.

Candidatus Giganana (NL. fem. n. *Giganana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9630*. The type species for the genus is *Candidatus* Giganana bipinilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Giganana bucolitio sp. nov.

Candidatus Giganana bucolitio (NL. fem. n. *bucolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9630 sp903842445*. The type genome for the species is the GenBank assembly GCA_903842445.1. The GC content of the type genome is 37.88 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Giganana resacastra sp. nov.

Candidatus Giganana resacastra (NL. fem. n. *resacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9630 sp903937035*. The type genome for the species is the GenBank assembly GCA_903824765.1. The GC content of the type genome is 40.11 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Giganaria cilotitrix sp. nov.

Candidatus Giganaria cilotitrix (NL. fem. n. *cilotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5946 sp002434045*. The type genome for the species is the GenBank assembly GCA_002434045.1. The GC content of the type genome is 51.14 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Giganaria gen. nov.

Candidatus Giganaria (NL. fem. n. *Giganaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5946*. The type species for the genus is *Candidatus* Giganaria cilotitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Giganella inpenibra sp. nov.

Candidatus Giganella inpenibra (NL. fem. n. *inpenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSYF01 sp011367605*. The type genome for the species is the GenBank assembly GCA_011367605.1. The GC content of the type genome is 66.12 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Giganella gen. nov.

Candidatus Giganella (NL. fem. n. *Giganella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSYF01*. The type species for the genus is *Candidatus* Giganella

inpenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSYF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Giganellaceae.

Description of *Candidatus* Giganellaceae fam. nov.

Candidatus Giganellaceae (NL. fem. n. *Giganellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSYF01.* The type genus for the taxon is *Candidatus* Giganella .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Gigania adordessa sp. nov.

Candidatus Gigania adordessa (NL. fem. n. *adordessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2110 sp002331465*. The type genome for the species is the GenBank assembly GCA_002331465.1. The GC content of the type genome is 54.35 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Gigania gen. nov.

Candidatus Gigania (NL. fem. n. *Gigania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2110*. The type species for the genus is *Candidatus* Gigania adordessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Gigania detumilenta sp. nov.

Candidatus Gigania detumilenta (NL. fem. n. *detumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2110 sp002719335*. The type genome for the species is the GenBank assembly GCA_002726525.1. The GC content of the type genome is 54.94 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Gigania excamitia sp. nov.

Candidatus Gigania excamitia (NL. fem. n. *excamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2110 sp002388005*. The type genome for the species is the GenBank assembly GCA_002388005.1. The GC content of the type genome is 55.27 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Gigania imbeledo sp. nov.

Candidatus Gigania imbeledo (NL. fem. n. *imbeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2110 sp012960315*. The type genome for the species is the GenBank assembly GCA_012960315.1. The GC content of the type genome is 54.37 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Gigania satacousia sp. nov.

Candidatus Gigania satacousia (NL. fem. n. *satacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2110 sp014239555*. The type genome for the species is the GenBank assembly GCA_014239555.1. The GC content of the type genome is 54.3 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Gigania scaccessa sp. nov.

Candidatus Gigania scaccessa (NL. fem. n. *scaccessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2110 sp002705305*. The type genome for the species is the GenBank assembly GCA_002705305.1. The GC content of the type genome is 55.01 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Giganida diminitoga sp. nov.

Candidatus Giganida diminitoga (NL. fem. n. *diminitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU063 sp001512695*. The type genome for the species is the GenBank assembly GCA_002386075.1. The GC content of the type genome is 42.3 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Giganida gen. nov.

Candidatus Giganida (NL. fem. n. *Giganida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU063*. The type species for the genus is *Candidatus* Giganida diminitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Giganida ossaratica sp. nov.

Candidatus Giganida ossaratica (NL. fem. n. *ossaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU063 sp012842445*. The type genome for the species is the GenBank assembly GCA_012842445.1. The GC content of the type genome is 38.68 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Giganosa camilatica sp. nov.

Candidatus Giganosa camilatica (NL. fem. n. *camilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMFV01 sp903840435*. The type genome for the species is the GenBank assembly GCA_903945585.1. The GC content of the type genome is 60.58 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Giganosa gen. nov.

Candidatus Giganosa (NL. fem. n. *Giganosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMFV01*. The type species for the genus is *Candidatus* Giganosa camilatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Giganosa cinefibula sp. nov.

Candidatus Giganosa cinefibula (NL. fem. n. *cinefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMFV01 sp903884425*. The type genome for the species is the GenBank assembly GCA_903843275.1. The GC content of the type genome is 69.04 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Giganosa defesastra sp. nov.

Candidatus Giganosa defesastra (NL. fem. n. *defesastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMFV01 sp903874895*. The type genome for the species is the GenBank assembly GCA_903874895.1. The GC content of the type genome is 68.02 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Giganosa doxolago sp. nov.

Candidatus Giganosa doxolago (NL. fem. n. *doxolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMFV01 sp903851655*. The type genome for the species is the GenBank assembly GCA_903851655.1. The GC content of the type genome is 69.55 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Giganosa idciratica sp. nov.

Candidatus Giganosa idciratica (NL. fem. n. *idciratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIMFV01 sp903858685*. The type genome for the species is the GenBank assembly GCA_903858685.1. The GC content of the type genome is 63.65 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Giganosa remedousia sp. nov.

Candidatus Giganosa remedousia (NL. fem. n. *remedousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMFV01 sp903903715*. The type genome for the species is the GenBank assembly GCA_903903715.1. The GC content of the type genome is 65.1 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Giganula decitatio sp. nov.

Candidatus Giganula decitatio (NL. fem. n. *decitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4767 sp002403385*. The type genome for the species is the GenBank assembly GCA_002328145.1. The GC content of the type genome is 45.92 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Giganula gen. nov.

Candidatus Giganula (NL. fem. n. *Giganula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4767*. The type species for the genus is *Candidatus* Giganula decitatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Giganulaceae.

Description of *Candidatus* Giganulaceae fam. nov.

Candidatus Giganulaceae (NL. fem. n. *Giganulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4767.* The type genus for the taxon is *Candidatus* Giganula .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Gilliamella cotenitio sp. nov.

Candidatus Gilliamella cotenitio (NL. fem. n. *cotenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilliamella sp002142215*. The type genome for the species is the GenBank assembly RS_GCF_002142215.1. The GC content of the type genome is 34.38 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Gilliamella exheritoga sp. nov.

Candidatus Gilliamella exheritoga (NL. fem. n. *exheritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilliamella sp009795885*. The type genome for the species is the GenBank assembly RS_GCF_009795885.1. The GC content of the type genome is 35.37 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Gilliamella nehalitrix sp. nov.

Candidatus Gilliamella nehalitrix (NL. fem. n. *nehalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilliamella sp009795805*. The type genome for the species is the GenBank assembly RS_GCF_009795865.1. The GC content of the type genome is 34.87 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Gilliamella repagago sp. nov.

Candidatus Gilliamella repagago (NL. fem. n. *repagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilliamella sp009795845*. The type genome for the species is the GenBank assembly RS_GCF_009795895.1. The GC content of the type genome is 34.89 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Gillisia desonitio sp. nov.

Candidatus Gillisia desonitio (NL. fem. n. *desonitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gillisia sp002364325*. The type genome for the species is the GenBank assembly GCA_002364325.1. The GC content of the type genome is 34.44 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Gillisia detecivita sp. nov.

Candidatus Gillisia detecivita (NL. fem. n. *detecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gillisia sp900104765*. The type genome for the species is the GenBank assembly RS_GCF_000744275.1. The GC content of the type genome is 34.3 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Gillisia esculilenta sp. nov.

Candidatus Gillisia esculilenta (NL. fem. n. *esculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gillisia sp007993795*. The type genome for the species is the GenBank assembly RS_GCF_007993795.1. The GC content of the type genome is 39.77 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Gillisia siminastra sp. nov.

Candidatus Gillisia siminastra (NL. fem. n. *siminastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gillisia sp007827275*. The type genome for the species is the GenBank assembly RS_GCF_007827275.1. The GC content of the type genome is 36.98 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Gillisia venefastra sp. nov.

Candidatus Gillisia venefastra (NL. fem. n. *venefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Gillisia sp000403785*. The type genome for the species is the GenBank assembly RS_GCF_000403785.1. The GC content of the type genome is 33.9 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Gilvibacter desacedo sp. nov.

Candidatus Gilvibacter desacedo (NL. fem. n. *desacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilvibacter sp003229235*. The type genome for the species is the GenBank assembly GCA_003229235.1. The GC content of the type genome is 38.3 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Gilvibacter inherugo sp. nov.

Candidatus Gilvibacter inherugo (NL. fem. n. *inherugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilvibacter sp013214815*. The type genome for the species is the GenBank assembly GCA_013214815.1. The GC content of the type genome is 43.55 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Gilvibacter resurivita sp. nov.

Candidatus Gilvibacter resurivita (NL. fem. n. *resurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gilvibacter sp002163875*. The type genome for the species is the GenBank assembly RS_GCF_002163875.1. The GC content of the type genome is 43.63 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Gimesia adlubigena sp. nov.

Candidatus Gimesia adlubigena (NL. fem. n. *adlubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007744675*. The type genome for the species is the GenBank assembly RS_GCF_007744675.1. The GC content of the type genome is 49.58 % and the genome length is 7.77 Mbp.

Description of *Candidatus* Gimesia benepitrix sp. nov.

Candidatus Gimesia benepitrix (NL. fem. n. *benepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007754425*. The type genome for the species is the GenBank assembly RS_GCF_007754425.1. The GC content of the type genome is 49.49 % and the genome length is 7.7 Mbp.

Description of *Candidatus* Gimesia cacopibra sp. nov.

Candidatus Gimesia cacopibra (NL. fem. n. *cacopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007748195*. The type genome for the species is the GenBank assembly RS_GCF_007748175.1. The GC content of the type genome is 45.08 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Gimesia curacitura sp. nov.

Candidatus Gimesia curacitura (NL. fem. n. *curacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007748135*. The type genome for the species is the GenBank assembly RS_GCF_007748135.1. The GC content of the type genome is 52.91 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Gimesia deforibra sp. nov.

Candidatus Gimesia deforibra (NL. fem. n. *deforibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007746795*. The type genome for the species is the GenBank assembly RS_GCF_007746795.1. The GC content of the type genome is 50.16 % and the genome length is 7.93 Mbp.

Description of *Candidatus* Gimesia denavitio sp. nov.

Candidatus Gimesia denavitio (NL. fem. n. *denavitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp002724985*. The type genome for the species is the GenBank assembly RS_GCF_007744075.1. The GC content of the type genome is 52.81 % and the genome length is 8.29 Mbp.

Description of *Candidatus* Gimesia vanidibula sp. nov.

Candidatus Gimesia vanidibula (NL. fem. n. *vanidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp007748015*. The type genome for the species is the GenBank assembly RS_GCF_007748015.1. The GC content of the type genome is 53.58 % and the genome length is 7.98 Mbp.

Description of *Candidatus* Gimesia venabisca sp. nov.

Candidatus Gimesia venabisca (NL. fem. n. *venabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gimesia sp002706765*. The type genome for the species is the GenBank assembly GCA_002415975.1. The GC content of the type genome is 51.08 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Glaciecola adpugicula sp. nov.

Candidatus Glaciecola adpugicula (NL. fem. n. *adpugicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciecola sp002338515*. The type genome for the species is the GenBank assembly GCA_002338515.1. The GC content of the type genome is 37.89 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Glaciecola cibicastra sp. nov.

Candidatus Glaciecola cibicastra (NL. fem. n. *cibicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Glaciecola sp000155775*. The type genome for the species is the GenBank assembly RS_GCF_000155775.1. The GC content of the type genome is 40.72 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Glaciecola coninicula sp. nov.

Candidatus Glaciecola coninicula (NL. fem. n. *coninicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciecola sp002292215*. The type genome for the species is the GenBank assembly GCA_002292215.1. The GC content of the type genome is 41.62 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Glaciecola defesedo sp. nov.

Candidatus Glaciecola defesedo (NL. fem. n. *defesedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciecola sp002836745*. The type genome for the species is the GenBank assembly RS_GCF_002836745.1. The GC content of the type genome is 41.28 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Glaciecola excamibula sp. nov.

Candidatus Glaciecola excamibula (NL. fem. n. *excamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciecola sp003203515*. The type genome for the species is the GenBank assembly RS_GCF_003203515.1. The GC content of the type genome is 41.22 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Glaciecola ridibicella sp. nov.

Candidatus Glaciecola ridibicella (NL. fem. n. *ridibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciecola sp002340325*. The type genome for the species is the GenBank assembly GCA_002340325.1. The GC content of the type genome is 41.98 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Glaciimonas direcilega sp. nov.

Candidatus Glaciimonas direcilega (NL. fem. n. *direcilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciimonas sp009497155*. The type genome for the species is the GenBank assembly RS_GCF_009497155.1. The GC content of the type genome is 49.15 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Glaciimonas lucifilega sp. nov.

Candidatus Glaciimonas lucifilega (NL. fem. n. *lucifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciimonas sp014377145*. The type genome for the species is the GenBank assembly GCA_014377145.1. The GC content of the type genome is 46.4 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Glaciimonas resacimonas sp. nov.

Candidatus Glaciimonas resacimonas (NL. fem. n. *resacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glaciimonas sp003056055*. The type genome for the species is the GenBank assembly RS_GCF_003056055.1. The GC content of the type genome is 51.12 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Gleimia altipessa sp. nov.

Candidatus Gleimia altipessa (NL. fem. n. *altipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gleimia sp012837655*. The type genome for the species is the GenBank assembly GCA_012837655.1. The GC content of the type genome is 56.98 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Globicatella defarago sp. nov.

Candidatus Globicatella defarago (NL. fem. n. *defarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Globicatella sp010892315*. The type genome for the species is the GenBank assembly RS_GCF_010892315.1. The GC content of the type genome is 35.8 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Gloeocapsa eclecago sp. nov.

Candidatus Gloeocapsa eclecago (NL. fem. n. *eclecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gloeocapsa sp007693955*. The type genome for the species is the GenBank assembly GCA_007693955.1. The GC content of the type genome is 38.05 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Gloeocapsa molecentia sp. nov.

Candidatus Gloeocapsa molecentia (NL. fem. n. *molecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gloeocapsa sp000332035*. The type genome for the species is the GenBank assembly RS_GCF_000332035.1. The GC content of the type genome is 41.11 % and the genome length is 4.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sphagnum bog".

Description of *Candidatus* Gluconacetobacter bipenedo sp. nov.

Candidatus Gluconacetobacter bipenedo (NL. fem. n. *bipenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gluconacetobacter sp014174165*. The type genome for the species is the GenBank assembly RS_GCF_014174205.1. The GC content of the type genome is 64.65 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Gluconobacter haricago sp. nov.

Candidatus Gluconobacter haricago (NL. fem. n. *haricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gluconobacter sp009547075*. The type genome for the species is the GenBank assembly RS_GCF_009547075.1. The GC content of the type genome is 60.27 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Gluconobacter taraxedo sp. nov.

Candidatus Gluconobacter taraxedo (NL. fem. n. *taraxedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gluconobacter_A sp014132155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014132155.1. The GC content of the type genome is 56.12 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Glutamicibacter anancousia sp. nov.

Candidatus Glutamicibacter anancousia (NL. fem. n. *anancousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp004320535*. The type genome for the species is the GenBank assembly RS_GCF_004320535.1. The GC content of the type genome is 55.69 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Glutamicibacter bipinatica sp. nov.

Candidatus Glutamicibacter bipinatica (NL. fem. n. *bipinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp009805585*. The type genome for the species is the GenBank assembly RS_GCF_009805585.1. The GC content of the type genome is 55.57 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Glutamicibacter cerofitio sp. nov.

Candidatus Glutamicibacter cerofitio (NL. fem. n. *cerofitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp900094805*. The type genome for the species is the

GenBank assembly RS_GCF_900094805.1. The GC content of the type genome is 56.09 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Glutamicibacter defanax sp. nov.

Candidatus Glutamicibacter defanax (NL. fem. n. *defanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp002979865*. The type genome for the species is the GenBank assembly RS_GCF_002979815.1. The GC content of the type genome is 61.07 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Glutamicibacter fetifitura sp. nov.

Candidatus Glutamicibacter fetifitura (NL. fem. n. *fetifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp002975405*. The type genome for the species is the GenBank assembly RS_GCF_002979925.1. The GC content of the type genome is 60.83 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Glutamicibacter inrecicula sp. nov.

Candidatus Glutamicibacter inrecicula (NL. fem. n. *inrecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp002979915*. The type genome for the species is the GenBank assembly RS_GCF_002979915.1. The GC content of the type genome is 55.79 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Glutamicibacter semilessa sp. nov.

Candidatus Glutamicibacter semilessa (NL. fem. n. *semilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glutamicibacter sp003486025*. The type genome for the species is the GenBank assembly GCA_003486025.1. The GC content of the type genome is 57.51 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Glycocaulis depicisca sp. nov.

Candidatus Glycocaulis depicisca (NL. fem. n. *depicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glycocaulis sp000744995*. The type genome for the species is the GenBank assembly RS_GCF_000744995.1. The GC content of the type genome is 63.0 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Glycomyces adfulitrix sp. nov.

Candidatus Glycomyces adfulitrix (NL. fem. n. *adfulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glycomyces sp003933745*. The type genome for the species is the GenBank assembly RS_GCF_003933745.1. The GC content of the type genome is 72.27 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Glycomyces pulegisca sp. nov.

Candidatus Glycomyces pulegisca (NL. fem. n. *pulegisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Glycomyces sp000719515*. The type genome for the species is the GenBank assembly RS_GCF_000719515.1. The GC content of the type genome is 70.52 % and the genome length is 4.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Gordonia adtagatica sp. nov.

Candidatus Gordonia adtagatica (NL. fem. n. *adtagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp012933505*. The type genome for the species is the GenBank assembly RS_GCF_012933505.1. The GC content of the type genome is 66.1 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Gordonia antimetta sp. nov.

Candidatus Gordonia antimetta (NL. fem. n. *antimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp002414845*. The type genome for the species is the GenBank assembly GCA_002414845.1. The GC content of the type genome is 67.64 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Gordonia bulapilega sp. nov.

Candidatus Gordonia bulapilega (NL. fem. n. *bulapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp014530585*. The type genome for the species is the GenBank assembly GCA_014530585.1. The GC content of the type genome is 66.95 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Gordonia buxanicula sp. nov.

Candidatus Gordonia buxanicula (NL. fem. n. *buxanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp003797825*. The type genome for the species is the GenBank assembly RS_GCF_003797825.1. The GC content of the type genome is 67.29 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Gordonia cerevibra sp. nov.

Candidatus Gordonia cerevibra (NL. fem. n. *cerevibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp000143885*. The type genome for the species is the GenBank assembly RS_GCF_001418765.1. The GC content of the type genome is 67.83 % and the genome length is 5.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge".

Description of *Candidatus* Gordonia cibaritura sp. nov.

Candidatus Gordonia cibaritura (NL. fem. n. *cibaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp014041935*. The type genome for the species is the

GenBank assembly GCA_014041935.1. The GC content of the type genome is 67.56 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Gordonia embamedo sp. nov.

Candidatus Gordonia embamedo (NL. fem. n. *embamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp009862785*. The type genome for the species is the GenBank assembly RS_GCF_009862785.1. The GC content of the type genome is 66.63 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Gordonia fiducedo sp. nov.

Candidatus Gordonia fiducedo (NL. fem. n. *fiducedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp003797185*. The type genome for the species is the GenBank assembly RS_GCF_003797185.1. The GC content of the type genome is 66.29 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Gordonia fuligicula sp. nov.

Candidatus Gordonia fuligicula (NL. fem. n. *fuligicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp010548645*. The type genome for the species is the GenBank assembly RS_GCF_010548645.1. The GC content of the type genome is 66.68 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Gordonia infanousia sp. nov.

Candidatus Gordonia infanousia (NL. fem. n. *infanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp009828195*. The type genome for the species is the GenBank assembly RS_GCF_009828195.1. The GC content of the type genome is 66.99 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Gordonia malogibula sp. nov.

Candidatus Gordonia malogibula (NL. fem. n. *malogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp002009645*. The type genome for the species is the GenBank assembly RS_GCF_001456905.1. The GC content of the type genome is 67.93 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Gordonia semodicella sp. nov.

Candidatus Gordonia semodicella (NL. fem. n. *semodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp012515855*. The type genome for the species is the GenBank assembly GCA_012515855.1. The GC content of the type genome is 67.83 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Gordonia tigurousia sp. nov.

Candidatus Gordonia tigurousia (NL. fem. n. *tigurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp002700145*. The type genome for the species is the GenBank assembly GCA_002700145.1. The GC content of the type genome is 66.49 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Gordonia vanidedo sp. nov.

Candidatus Gordonia vanidedo (NL. fem. n. *vanidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp004353055*. The type genome for the species is the GenBank assembly RS_GCF_007559005.1. The GC content of the type genome is 66.95 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Gordonia xeramisca sp. nov.

Candidatus Gordonia xeramisca (NL. fem. n. *xeramisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonia sp002477755*. The type genome for the species is the GenBank assembly GCA_002477755.1. The GC content of the type genome is 67.63 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Gordonibacter penicitica sp. nov.

Candidatus Gordonibacter penicitica (NL. fem. n. *penicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gordonibacter sp003339845*. The type genome for the species is the GenBank assembly RS_GCF_902387185.1. The GC content of the type genome is 65.04 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Gorillibacterium bicapugo sp. nov.

Candidatus Gorillibacterium bicapugo (NL. fem. n. *bicapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gorillibacterium sp014380705*. The type genome for the species is the GenBank assembly GCA_014380705.1. The GC content of the type genome is 45.37 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Gottfriedia absegitas sp. nov.

Candidatus Gottfriedia absegitas (NL. fem. n. *absegitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002574545*. The type genome for the species is the GenBank assembly RS_GCF_002574545.1. The GC content of the type genome is 33.1 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Gottfriedia ascenilega sp. nov.

Candidatus Gottfriedia ascenilega (NL. fem. n. *ascenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp004340305*. The type genome for the species is the GenBank assembly RS_GCF_004340305.1. The GC content of the type genome is 32.71

% and the genome length is 4.28 Mbp.

Description of *Candidatus* Gottfriedia attubimonas sp. nov.

Candidatus Gottfriedia attubimonas (NL. fem. n. *attubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002559405*. The type genome for the species is the GenBank assembly RS_GCF_002559405.1. The GC content of the type genome is 33.12 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Gottfriedia bovicimonia sp. nov.

Candidatus Gottfriedia bovicimonia (NL. fem. n. *bovicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002564465*. The type genome for the species is the GenBank assembly RS_GCF_002566505.1. The GC content of the type genome is 33.12 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Gottfriedia exhilitas sp. nov.

Candidatus Gottfriedia exhilitas (NL. fem. n. *exhilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002577195*. The type genome for the species is the GenBank assembly RS_GCF_002577195.1. The GC content of the type genome is 33.12 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Gottfriedia octobitoga sp. nov.

Candidatus Gottfriedia octobitoga (NL. fem. n. *octobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp001420605*. The type genome for the species is the GenBank assembly RS_GCF_001420605.1. The GC content of the type genome is 33.0 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Gottfriedia podagisca sp. nov.

Candidatus Gottfriedia podagisca (NL. fem. n. *podagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp003053645*. The type genome for the species is the GenBank assembly RS_GCF_003053645.1. The GC content of the type genome is 32.98 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Gottfriedia valefessa sp. nov.

Candidatus Gottfriedia valefessa (NL. fem. n. *valefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002156875*. The type genome for the species is the GenBank assembly RS_GCF_002156875.1. The GC content of the type genome is 33.06 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Gottfriedia vepalatica sp. nov.

Candidatus Gottfriedia vepalatica (NL. fem. n. *vepalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gottfriedia sp002556365*. The type genome for the species is the GenBank assembly RS_GCF_013200995.1. The GC content of the type genome is 33.37 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Gracilibacillus adrumitio sp. nov.

Candidatus Gracilibacillus adrumitio (NL. fem. n. *adrumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gracilibacillus sp009498735*. The type genome for the species is the GenBank assembly RS_GCF_009498735.1. The GC content of the type genome is 37.51 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Gracilibacillus arancugo sp. nov.

Candidatus Gracilibacillus arancugo (NL. fem. n. *arancugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gracilibacillus sp010993965*. The type genome for the species is the GenBank assembly RS_GCF_010993965.1. The GC content of the type genome is 36.47 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Gracilibacillus totiditia sp. nov.

Candidatus Gracilibacillus totiditia (NL. fem. n. *totiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gracilibacillus sp002797295*. The type genome for the species is the GenBank assembly RS_GCF_009650095.1. The GC content of the type genome is 36.67 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Gracilibacter vitabitio sp. nov.

Candidatus Gracilibacter vitabitio (NL. fem. n. *vitabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gracilibacter sp001516055*. The type genome for the species is the GenBank assembly GCA_001516055.1. The GC content of the type genome is 39.52 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Gracilimonas forabitas sp. nov.

Candidatus Gracilimonas forabitas (NL. fem. n. *forabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gracilimonas sp002694685*. The type genome for the species is the GenBank assembly GCA_002694685.1. The GC content of the type genome is 41.31 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Gracilimonas lucelibra sp. nov.

Candidatus Gracilimonas lucelibra (NL. fem. n. *lucelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Gracilimonas sp002696035*. The type genome for the species is the GenBank assembly GCA_002696035.1. The GC content of the type genome is 43.36 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Grallana sanabetta sp. nov.

Candidatus Grallana sanabetta (NL. fem. n. *sanabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMAH01 sp014132615*. The type genome for the species is the GenBank assembly GCA_014132615.1. The GC content of the type genome is 37.54 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Grallana gen. nov.

Candidatus Grallana (NL. fem. n. *Grallana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMAH01*. The type species for the genus is *Candidatus* Grallana sanabetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Grallella induvivita sp. nov.

Candidatus Grallella induvivita (NL. fem. n. *induvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-36-16 sp002794035*. The type genome for the species is the GenBank assembly GCA_002794035.1. The GC content of the type genome is 36.11 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Grallella gen. nov.

Candidatus Grallella (NL. fem. n. *Grallella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-36-16*. The type species for the genus is *Candidatus* Grallella induvivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IGHO2-01-FULL-4-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisulaceae.

Description of *Candidatus* Grallia utralilega sp. nov.

Candidatus Grallia utralilega (NL. fem. n. *utralilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9647 sp003519375*. The type genome for the species is the GenBank assembly GCA_003519375.1. The GC content of the type genome is 54.21 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Grallia gen. nov.

Candidatus Grallia (NL. fem. n. *Grallia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9647*. The type species for the genus is *Candidatus* Grallia utralilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Grallida cerificella sp. nov.

Candidatus Grallida cerificella (NL. fem. n. *cerificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686465 sp002686465*. The type genome for the species is the GenBank assembly GCA_002686465.1. The GC content of the type genome is 42.24 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Grallida gen. nov.

Candidatus Grallida (NL. fem. n. *Grallida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686465*. The type species for the genus is *Candidatus* Grallida

cerificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulanaceae.

Description of *Candidatus* Grallosa demagetta sp. nov.

Candidatus Grallosa demagetta (NL. fem. n. *demagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *55-13 sp001898035*. The type genome for the species is the GenBank assembly GCA_001898035.1. The GC content of the type genome is 55.49 % and the genome length is 4.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Grallosa gen. nov.

Candidatus Grallosa (NL. fem. n. *Grallosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *55-13*. The type species for the genus is *Candidatus* Grallosa demagetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Grallosa obsoribula sp. nov.

Candidatus Grallosa obsoribula (NL. fem. n. *obsoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *55-13 sp014380605*. The type genome for the species is the GenBank assembly GCA_014380605.1. The GC content of the type genome is 55.45 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Grallula ecfunousia sp. nov.

Candidatus Grallula ecfunousia (NL. fem. n. *ecfunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACCTU01 sp013812235*. The type genome for the species is the GenBank assembly GCA_013812235.1. The GC content of the type genome is 69.54 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Grallula gen. nov.

Candidatus Grallula (NL. fem. n. *Grallula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTU01*. The type species for the genus is *Candidatus* Grallula ecfunousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Gramella aciscifica sp. nov.

Candidatus Gramella aciscifica (NL. fem. n. *aciscifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gramella sp009735695*. The type genome for the species is the GenBank assembly RS_GCF_009735695.1. The GC content of the type genome is 41.44 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Gramella obnupiforma sp. nov.

Candidatus Gramella obnupiforma (NL. fem. n. *obnupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gramella sp004332155*. The type genome for the species is the GenBank assembly RS_GCF_004332155.1. The GC content of the type genome is 39.94 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Gramella recorigena sp. nov.

Candidatus Gramella recorigena (NL. fem. n. *recorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gramella sp900105135*. The type genome for the species is the GenBank assembly RS_GCF_900105135.1. The GC content of the type genome is 37.07 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Gramella refocilenta sp. nov.

Candidatus Gramella refocilenta (NL. fem. n. *refocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gramella sp006714895*. The type genome for the species is the GenBank assembly RS_GCF_006714895.1. The GC content of the type genome is 38.21 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Granulicatella abluviforma sp. nov.

Candidatus Granulicatella abluviforma (NL. fem. n. *abluviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicatella sp001071995*. The type genome for the species is the GenBank assembly RS_GCF_001071995.1. The GC content of the type genome is 39.25 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Granulicatella bicinimonas sp. nov.

Candidatus Granulicatella bicinimonas (NL. fem. n. *bicinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicatella sp001058355*. The type genome for the species is the GenBank assembly GCA_001058355.1. The GC content of the type genome is 39.06 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Granulicatella codifago sp. nov.

Candidatus Granulicatella codifago (NL. fem. n. *codifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicatella sp900551535*. The type genome for the species is the GenBank assembly GCA_900551535.1. The GC content of the type genome is 39.13 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Granulicella attegago sp. nov.

Candidatus Granulicella attegago (NL. fem. n. *attegago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicella_A sp009766105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009766105.1. The GC content of the type genome is 57.27 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Granulicella nocenugo sp. nov.

Candidatus Granulicella nocenugo (NL. fem. n. *nocenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicella_C sp009914315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009914315.1. The GC content of the type genome is 60.66 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Granulicella noninatio sp. nov.

Candidatus Granulicella noninatio (NL. fem. n. *noninatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicella_C sp903970285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903970285.1. The GC content of the type genome is 63.13 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Granulicella proprivita sp. nov.

Candidatus Granulicella proprivita (NL. fem. n. *proprivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulicella_C sp903642265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_903642265.1. The GC content of the type genome is 57.76 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Granulosicoccus cenotilenta sp. nov.

Candidatus Granulosicoccus cenotilenta (NL. fem. n. *cenotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulosicoccus sp002746645*. The type genome for the species is the GenBank assembly GCA_002746645.1. The GC content of the type genome is 62.22 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Granulosicoccus venabilega sp. nov.

Candidatus Granulosicoccus venabilega (NL. fem. n. *venabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Granulosicoccus sp013002205*. The type genome for the species is the GenBank assembly GCA_013002205.1. The GC content of the type genome is 57.58 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Gryllotalpicola navicigena sp. nov.

Candidatus Gryllotalpicola navicigena (NL. fem. n. *navicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gryllotalpicola sp009780695*. The type genome for the species is the GenBank assembly GCA_009779305.1. The GC content of the type genome is 70.99 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Gsub hiruditia sp. nov.

Candidatus Gsub hiruditia (NL. fem. n. *hiruditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gsub sp002007405*. The type genome for the species is the GenBank assembly GCA_002007405.1. The GC content of the type genome is 38.18 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Gulosibacter antefitrix sp. nov.

Candidatus Gulosibacter antefitrix (NL. fem. n. *antefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gulosibacter sp900626105*. The type genome for the species is the GenBank assembly RS_GCF_900626105.1. The GC content of the type genome is 67.17 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Gulosibacter assudatio sp. nov.

Candidatus Gulosibacter assudatio (NL. fem. n. *assudatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gulosibacter sp900163695*. The type genome for the species is the GenBank assembly RS_GCF_900163695.1. The GC content of the type genome is 70.72 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Gulosibacter dilicessa sp. nov.

Candidatus Gulosibacter dilicessa (NL. fem. n. *dilicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gulosibacter sp012719255*. The type genome for the species is the GenBank assembly GCA_012719255.1. The GC content of the type genome is 73.49 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Gulosibacter dupunatica sp. nov.

Candidatus Gulosibacter dupunatica (NL. fem. n. *dupunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Gulosibacter sp003865375*. The type genome for the species is the GenBank assembly RS_GCF_003865375.1. The GC content of the type genome is 64.36 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Guyparkeria exsufitas sp. nov.

Candidatus Guyparkeria exsufitas (NL. fem. n. *exsufitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Guyparkeria sp011380105*. The type genome for the species is the GenBank assembly GCA_011380105.1. The GC content of the type genome is 52.38 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Guyparkeria fuligentia sp. nov.

Candidatus Guyparkeria fuligentia (NL. fem. n. *fuligentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Guyparkeria sp001641825*. The type genome for the species is the GenBank assembly RS_GCF_001641825.1. The GC content of the type genome is 66.19 % and the genome length is 2.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "saline-alkaline soil".

Description of *Candidatus* Guyparkeria inabrentia sp. nov.

Candidatus Guyparkeria inabrentia (NL. fem. n. *inabrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Guyparkeria sp003932495*. The type genome for the species is the GenBank assembly RS_GCF_003932495.1. The GC content of the type genome is 64.7 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Guyparkeria liceniforma sp. nov.

Candidatus Guyparkeria liceniforma (NL. fem. n. *liceniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Guyparkeria sp011389965*. The type genome for the species is the GenBank assembly GCA_011389965.1. The GC content of the type genome is 63.91 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Habacana bulapessa sp. nov.

Candidatus Habacana bulapessa (NL. fem. n. *bulapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-140 sp003567805*. The type genome for the species is the GenBank assembly GCA_003567805.1. The GC content of the type genome is 50.48 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Habacana gen. nov.

Candidatus Habacana (NL. fem. n. *Habacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-140*. The type species for the genus is *Candidatus* Habacana bulapessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupellaceae.

Description of *Candidatus* Habacana colipousia sp. nov.

Candidatus Habacana colipousia (NL. fem. n. *colipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-140 sp007129405*. The type genome for the species is the GenBank assembly GCA_007129405.1. The GC content of the type genome is 51.73 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Habacana ignifatica sp. nov.

Candidatus Habacana ignifatica (NL. fem. n. *ignifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-140 sp003567005*. The type genome for the species is the GenBank assembly GCA_003567005.1. The GC content of the type genome is 51.65 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Habacana indifentia sp. nov.

Candidatus Habacana indifentia (NL. fem. n. *indifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-140 sp007126175*. The type genome for the species is the GenBank assembly GCA_007126175.1. The GC content of the type genome is 56.42 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Habacaria angipitica sp. nov.

Candidatus Habacaria angipitica (NL. fem. n. *angipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLM01 sp011375345*. The type genome for the species is the GenBank assembly GCA_011375345.1. The GC content of the type genome is 63.16 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Habacaria gen. nov.

Candidatus Habacaria (NL. fem. n. *Habacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRLM01*. The type species for the genus is *Candidatus* Habacaria angipitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRLM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacariaceae.

Description of *Candidatus* Habacariaceae fam. nov.

Candidatus Habacariaceae (NL. fem. n. *Habacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRLM01.* The type genus for the taxon is *Candidatus* Habacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRLM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Habacariales.

Description of *Candidatus* Habacariales ord. nov.

Candidatus Habacariales (NL. fem. n. *Habacariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRLM01.* The type genus for the taxon is *Candidatus* Habacaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Habacella cementrix sp. nov.

Candidatus Habacella cemenitrix (NL. fem. n. *cemenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp002313925*. The type genome for the species is the GenBank assembly GCA_002295045.1. The GC content of the type genome is 52.72 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Habacella gen. nov.

Candidatus Habacella (NL. fem. n. *Habacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1138*. The type species for the genus is *Candidatus* Habacella cemenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Habacella delacilenta sp. nov.

Candidatus Habacella delacilenta (NL. fem. n. *delacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp012960225*. The type genome for the species is the GenBank assembly GCA_012960225.1. The GC content of the type genome is 52.78 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Habacella diminitio sp. nov.

Candidatus Habacella diminitio (NL. fem. n. *diminitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp002724575*. The type genome for the species is the GenBank assembly GCA_002724575.1. The GC content of the type genome is 51.69 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Habacella hirudetta sp. nov.

Candidatus Habacella hirudetta (NL. fem. n. *hirudetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp009937285*. The type genome for the species is the GenBank assembly GCA_009937285.1. The GC content of the type genome is 61.53 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Habacella mutabibra sp. nov.

Candidatus Habacella mutabibra (NL. fem. n. *mutabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp003447875*. The type genome for the species is the GenBank assembly GCA_002311435.1. The GC content of the type genome is 64.07 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Habacella resacedo sp. nov.

Candidatus Habacella resacedo (NL. fem. n. *resacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp002311875*. The type genome for the species is the GenBank assembly GCA_012965305.1. The GC content of the type genome is 55.37 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Habacella subacivita sp. nov.

Candidatus Habacella subacivita (NL. fem. n. *subacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1138 sp002501085*. The type genome for the species is the GenBank assembly GCA_002501085.1. The GC content of the type genome is 52.55 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Habacia carunivita sp. nov.

Candidatus Habacia carunivita (NL. fem. n. *carunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFOM01 sp009918675*. The type genome for the species is the GenBank assembly GCA_009918675.1. The GC content of the type genome is 49.3 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Habacia gen. nov.

Candidatus Habacia (NL. fem. n. *Habacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFOM01*. The type species for the genus is *Candidatus* Habacia carunivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Habacia ecastiforma sp. nov.

Candidatus Habacia ecastiforma (NL. fem. n. *ecastiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFOM01 sp009926615*. The type genome for the species is the GenBank assembly GCA_009926615.1. The GC content of the type genome is 52.22 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Habacia xeropimonas sp. nov.

Candidatus Habacia xeropimonas (NL. fem. n. *xeropimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFOM01 sp903933385*. The type genome for the species is the GenBank assembly GCA_903922025.1. The GC content of the type genome is 48.39 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Habacida adhoretta sp. nov.

Candidatus Habacida adhoretta (NL. fem. n. *adhoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4823 sp002402275*. The type genome for the species is the GenBank assembly GCA_002402275.1. The GC content of the type genome is 43.09 %

and the genome length is 2.48 Mbp.

Description of *Candidatus* Habacida gen. nov.

Candidatus Habacida (NL. fem. n. *Habacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4823*. The type species for the genus is *Candidatus* Habacida adhoretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Habacidaceae fam. nov.

Candidatus Habacidaceae (NL. fem. n. *Habacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4823.* The type genus for the taxon is *Candidatus* Habacida .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Habacosa exforisca sp. nov.

Candidatus Habacosa exforisca (NL. fem. n. *exforisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-54-10 sp001767075*. The type genome for the species is the GenBank assembly GCA_001767075.1. The GC content of the type genome is 53.9 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Habacosa gen. nov.

Candidatus Habacosa (NL. fem. n. *Habacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-54-10*. The type species for the genus is *Candidatus* Habacosa exforisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-54-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacosaceae.

Description of *Candidatus* Habacosaceae fam. nov.

Candidatus Habacosaceae (NL. fem. n. *Habacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-54-10.* The type genus for the taxon is *Candidatus* Habacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-54-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Habacosales.

Description of *Candidatus* Habacosales ord. nov.

Candidatus Habacosales (NL. fem. n. *Habacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-54-10.* The type genus for the taxon is *Candidatus* Habacosa .

According to the GTDB R06-RS202, this order belongs to the class *Acidobacteriae*.

Description of *Candidatus* Habacula lanugessa sp. nov.

Candidatus Habacula lanugessa (NL. fem. n. *lanugessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRZ01 sp013202315*. The type genome for the species is the GenBank assembly GCA_013202315.1. The GC content of the type genome is 45.96 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Habacula gen. nov.

Candidatus Habacula (NL. fem. n. *Habacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRZ01*. The type species for the genus is *Candidatus* Habacula

lanugessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habaculaceae.

Description of *Candidatus* Habaculaceae fam. nov.

Candidatus Habaculaceae (NL. fem. n. *Habaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRZ01.* The type genus for the taxon is *Candidatus* Habacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMRZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Habaculales.

Description of *Candidatus* Habaculales ord. nov.

Candidatus Habaculales (NL. fem. n. *Habaculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRZ01.* The type genus for the taxon is *Candidatus* Habacula .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABMRZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Habaculae.

Description of *Candidatus* Habaculae class. nov.

Candidatus Habaculae (NL. fem. n. *c__Habaculae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRZ01.* The type genus for the taxon is *Candidatus* Habacula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Desonellota.

Description of *Candidatus* Haematobacter tabifago sp. nov.

Candidatus Haematobacter tabifago (NL. fem. n. *tabifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haematobacter sp002196855*. The type genome for the species is the GenBank assembly RS_GCF_002196855.1. The GC content of the type genome is 65.35 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Haematospirillum decacedo sp. nov.

Candidatus Haematospirillum decacedo (NL. fem. n. *decacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haematospirillum sp012102705*. The type genome for the species is the GenBank assembly RS_GCF_012102705.1. The GC content of the type genome is 55.77 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Haematospirillum masocilega sp. nov.

Candidatus Haematospirillum masocilega (NL. fem. n. *masocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haematospirillum sp012102745*. The type genome for the species is the GenBank assembly RS_GCF_012102665.1. The GC content of the type genome is 55.94 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Haemophilus demulimonas sp. nov.

Candidatus Haemophilus demulimonas (NL. fem. n. *demulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus sp002998595*. The type genome for the species is the GenBank assembly RS_GCF_001679495.1. The GC content of the type genome is 38.26 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum".

Description of *Candidatus* Haemophilus nugigessa sp. nov.

Candidatus Haemophilus nugigessa (NL. fem. n. *nugigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus sp001276515*. The type genome for the species is the

GenBank assembly RS_GCF_003493125.1. The GC content of the type genome is 38.29 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Haemophilus bipatousia sp. nov.

Candidatus Haemophilus bipatousia (NL. fem. n. *bipatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp001815355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001914055.1. The GC content of the type genome is 39.55 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Infant 1 DOL 23 oral".

Description of *Candidatus* Haemophilus fidenifica sp. nov.

Candidatus Haemophilus fidenifica (NL. fem. n. *fidenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp900756155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756155.1. The GC content of the type genome is 39.46 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Haemophilus irremessa sp. nov.

Candidatus Haemophilus irremessa (NL. fem. n. *irremessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp900755445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900755445.1. The GC content of the type genome is 39.58 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Haemophilus labecatio sp. nov.

Candidatus Haemophilus labecatio (NL. fem. n. *labecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp900756875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756875.1. The GC content of the type genome is 39.55 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Haemophilus maligibula sp. nov.

Candidatus Haemophilus maligibula (NL. fem. n. *maligibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp001679485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001279145.1. The GC content of the type genome is 39.52 % and the genome length is 1.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Oropharynx".

Description of *Candidatus* Haemophilus practentia sp. nov.

Candidatus Haemophilus practentia (NL. fem. n. *practentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haemophilus_D sp900764435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900764435.1. The GC content of the type genome is 39.52 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Hahella dehinugo sp. nov.

Candidatus Hahella dehinugo (NL. fem. n. *dehinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hahella sp004135205*. The type genome for the species is the GenBank assembly RS_GCF_004014695.1. The GC content of the type genome is 53.91 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Hahella lenimigena sp. nov.

Candidatus Hahella lenimigena (NL. fem. n. *lenimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hahella sp002260525*. The type genome for the species is the GenBank assembly RS_GCF_002260525.1. The GC content of the type genome is 49.77 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Halanaerobium inlacedo sp. nov.

Candidatus Halanaerobium inlacedo (NL. fem. n. *inlacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halanaerobium sp003070825*. The type genome for the species is the GenBank assembly GCA_003070825.1. The GC content of the type genome is 36.6 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Halarcobacter bipatiforma sp. nov.

Candidatus Halarcobacter bipatiforma (NL. fem. n. *bipatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp001895145*. The type genome for the species is the GenBank assembly RS_GCF_001895145.1. The GC content of the type genome is 27.9 % and the genome length is 3.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut of abalone".

Description of *Candidatus* Halarcobacter capabitica sp. nov.

Candidatus Halarcobacter capabitica (NL. fem. n. *capabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp005771535*. The type genome for the species is the GenBank assembly RS_GCF_005771535.1. The GC content of the type genome is 28.14 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Halarcobacter hexapago sp. nov.

Candidatus Halarcobacter hexapago (NL. fem. n. *hexapago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp013373175*. The type genome for the species is the GenBank assembly GCA_013373175.1. The GC content of the type genome is 28.43 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Halarcobacter lubenimonia sp. nov.

Candidatus Halarcobacter lubenimonia (NL. fem. n. *lubenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp004116455*. The type genome for the species is the GenBank assembly RS_GCF_004116455.1. The GC content of the type genome is 29.06 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Halarcobacter tametitura sp. nov.

Candidatus Halarcobacter tametitura (NL. fem. n. *tametitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp002869565*. The type genome for the species is the GenBank assembly GCA_002869565.1. The GC content of the type genome is 28.1 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Halarcobacter terebitura sp. nov.

Candidatus Halarcobacter terebitura (NL. fem. n. *terebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp003252105*. The type genome for the species is the GenBank assembly GCA_003252105.1. The GC content of the type genome is 27.99 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Halarcobacter uberritrix sp. nov.

Candidatus Halarcobacter uberritrix (NL. fem. n. *uberritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halarcobacter sp004118855*. The type genome for the species is the GenBank assembly RS_GCF_004118855.1. The GC content of the type genome is 28.12 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Haliea laxititia sp. nov.

Candidatus Haliea laxititia (NL. fem. n. *laxititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haliea sp002414665*. The type genome for the species is the GenBank assembly GCA_002384925.1. The GC content of the type genome is 61.65 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Haliea revecitia sp. nov.

Candidatus Haliea revecitia (NL. fem. n. *revecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haliea sp002416125*. The type genome for the species is the GenBank assembly GCA_002416125.1. The GC content of the type genome is 62.91 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Halioglobus adpagimonas sp. nov.

Candidatus Halioglobus adpagimonas (NL. fem. n. *adpagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp009937575*. The type genome for the species is the GenBank assembly GCA_009937575.1. The GC content of the type genome is 59.69 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Halioglobus agravastra sp. nov.

Candidatus Halioglobus agravastra (NL. fem. n. *agravastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp002862985*. The type genome for the species is the GenBank assembly GCA_002862985.1. The GC content of the type genome is 52.87 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Halioglobus ambifatica sp. nov.

Candidatus Halioglobus ambifatica (NL. fem. n. *ambifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp004354085*. The type genome for the species is the GenBank assembly RS_GCF_004354085.1. The GC content of the type genome is 59.87 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Halioglobus ceracousia sp. nov.

Candidatus Halioglobus ceracousia (NL. fem. n. *ceracousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp003646415*. The type genome for the species is the GenBank assembly GCA_003646415.1. The GC content of the type genome is 55.83 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Halioglobus denecitura sp. nov.

Candidatus Halioglobus denecitura (NL. fem. n. *denecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp002699145*. The type genome for the species is the GenBank assembly GCA_002699145.1. The GC content of the type genome is 64.69 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Halioglobus desulimonia sp. nov.

Candidatus Halioglobus desulimonia (NL. fem. n. *desulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp013214285*. The type genome for the species is the GenBank assembly GCA_013214285.1. The GC content of the type genome is 55.03 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Halioglobus dilibitrix sp. nov.

Candidatus Halioglobus dilibitrix (NL. fem. n. *dilibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp008370495*. The type genome for the species is the GenBank assembly RS_GCF_008370495.1. The GC content of the type genome is 60.12 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Halioglobus indilivita sp. nov.

Candidatus Halioglobus indilivita (NL. fem. n. *indilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp002862465*. The type genome for the species is the GenBank assembly GCA_002862465.1. The GC content of the type genome is 50.46 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Halioglobus lapicibula sp. nov.

Candidatus Halioglobus lapicibula (NL. fem. n. *lapicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp000156295*. The type genome for the species is the GenBank assembly RS_GCF_000156295.1. The GC content of the type genome is 52.96 % and the genome length is 4.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "10 m water depth from station NH15".

Description of *Candidatus* Halioglobus obnupedo sp. nov.

Candidatus Halioglobus obnupedo (NL. fem. n. *obnupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp004745945*. The type genome for the species is the GenBank assembly RS_GCF_004745945.1. The GC content of the type genome is 65.12 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Halioglobus offunastra sp. nov.

Candidatus Halioglobus offunastra (NL. fem. n. *offunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halioglobus sp003646405*. The type genome for the species is the GenBank assembly GCA_003646405.1. The GC content of the type genome is 56.4 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Haliscomenobacter xenopimonas sp. nov.

Candidatus Haliscomenobacter xenopimonas (NL. fem. n. *xenopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haliscomenobacter sp013299105*. The type genome for the species is the GenBank assembly GCA_013299105.1. The GC content of the type genome is 47.35 % and the genome length is 7.67 Mbp.

Description of *Candidatus* Haloactinobacterium attesibula sp. nov.

Candidatus Haloactinobacterium attesibula (NL. fem. n. *attesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloactinobacterium sp009805705*. The type genome for the species is the GenBank assembly RS_GCF_009805705.1. The GC content of the type genome is 68.35 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Halobacillus inmobitudo sp. nov.

Candidatus Halobacillus inmobitudo (NL. fem. n. *inmobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacillus sp004078665*. The type genome for the species is the GenBank assembly GCA_004078665.1. The GC content of the type genome is 44.79 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Halobacillus manupiforma sp. nov.

Candidatus Halobacillus manupiforma (NL. fem. n. *manupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacillus sp001592845*. The type genome for the species is the GenBank assembly RS_GCF_000328325.1. The GC content of the type genome is 46.84 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "soil".

Description of *Candidatus* Halobacillus adverugo sp. nov.

Candidatus Halobacillus adverugo (NL. fem. n. *adverugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacillus_A sp902809865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902809865.1. The GC content of the type genome is 42.33 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Halobacillus amercimonas sp. nov.

Candidatus Halobacillus amercimonas (NL. fem. n. *amercimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacillus_A sp900240285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900240285.1. The GC content of the type genome is 41.31 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Halobacillus categitas sp. nov.

Candidatus Halobacillus categitas (NL. fem. n. *categitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacillus_A sp902726645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902726645.1. The GC content of the type genome is 41.18 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Halobacteriovorax accenitudo sp. nov.

Candidatus Halobacteriovorax accenitudo (NL. fem. n. *accenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Halobacteriovorax sp004006665*. The type genome for the species is the GenBank assembly RS_GCF_004006665.1. The GC content of the type genome is 35.13 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Halobacteriovorax arrecisca sp. nov.

Candidatus Halobacteriovorax arrecisca (NL. fem. n. *arrecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacteriovorax sp002753895*. The type genome for the species is the GenBank assembly GCA_002753895.1. The GC content of the type genome is 36.08 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Halobacteriovorax turicitica sp. nov.

Candidatus Halobacteriovorax turicitica (NL. fem. n. *turicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halobacteriovorax sp002366565*. The type genome for the species is the GenBank assembly GCA_002366565.1. The GC content of the type genome is 34.52 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Halocella menapivita sp. nov.

Candidatus Halocella menapivita (NL. fem. n. *menapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halocella sp003953885*. The type genome for the species is the GenBank assembly RS_GCF_003953885.1. The GC content of the type genome is 35.09 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Halochromatium culilitura sp. nov.

Candidatus Halochromatium culilitura (NL. fem. n. *culilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halochromatium sp010912705*. The type genome for the species is the GenBank assembly GCA_010912705.1. The GC content of the type genome is 60.85 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Halochromatium encomifica sp. nov.

Candidatus Halochromatium encomifica (NL. fem. n. *encomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halochromatium sp009908845*. The type genome for the species is the GenBank assembly GCA_009908845.1. The GC content of the type genome is 64.43 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Halochromatium repudilega sp. nov.

Candidatus Halochromatium repudilega (NL. fem. n. *repudilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halochromatium sp007693535*. The type genome for the species is the GenBank assembly GCA_007693535.1. The GC content of the type genome is 67.23 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Halochromatium rudicibula sp. nov.

Candidatus Halochromatium rudicibula (NL. fem. n. *rudicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halochromatium sp003562815*. The type genome for the species is the GenBank assembly GCA_007120455.1. The GC content of the type genome is 64.66 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Halocynthiibacter bipinifica sp. nov.

Candidatus Halocynthiibacter bipinifica (NL. fem. n. *bipinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halocynthiibacter sp011326755*. The type genome for the species is the GenBank assembly RS_GCF_011326755.1. The GC content of the type genome is 50.89 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Halocynthiibacter derunivita sp. nov.

Candidatus Halocynthiibacter derunivita (NL. fem. n. *derunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halocynthiibacter sp003031585*. The type genome for the species is the GenBank assembly RS_GCF_003031585.1. The GC content of the type genome is 55.14 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Halodesulfovibrio abnorimonia sp. nov.

Candidatus Halodesulfovibrio abnorimonia (NL. fem. n. *abnorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halodesulfovibrio sp003252375*. The type genome for the species is the GenBank assembly GCA_003252375.1. The GC content of the type genome is 60.9 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Halodesulfovibrio amnigitio sp. nov.

Candidatus Halodesulfovibrio amnigitio (NL. fem. n. *amnigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halodesulfovibrio sp013340285*. The type genome for the species is the GenBank assembly RS_GCF_013340285.1. The GC content of the type genome is 56.66 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Halodesulfovibrio cacopicella sp. nov.

Candidatus Halodesulfovibrio cacopicella (NL. fem. n. *cacopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halodesulfovibrio sp009914765*. The type genome for the species is the GenBank assembly RS_GCF_009914765.1. The GC content of the type genome is 45.03 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Haloechinothrix admutitudo sp. nov.

Candidatus Haloechinothrix admutitudo (NL. fem. n. *admutitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Haloechinothrix sp013450155*. The type genome for the species is the GenBank assembly RS_GCF_013450155.1. The GC content of the type genome is 69.11 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Haloferula bicoretta sp. nov.

Candidatus Haloferula bicoretta (NL. fem. n. *bicoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloferula sp004293445*. The type genome for the species is the GenBank assembly GCA_004293445.1. The GC content of the type genome is 61.51 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Haloferula extunedo sp. nov.

Candidatus Haloferula extunedo (NL. fem. n. *extunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloferula sp002304315*. The type genome for the species is the GenBank assembly GCA_002304315.1. The GC content of the type genome is 63.94 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Haloferula illapugo sp. nov.

Candidatus Haloferula illapugo (NL. fem. n. *illapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloferula sp012913485*. The type genome for the species is the GenBank assembly RS_GCF_012913485.1. The GC content of the type genome is 60.98 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Haloferula insubifica sp. nov.

Candidatus Haloferula insubifica (NL. fem. n. *insubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloferula sp000739615*. The type genome for the species is the GenBank assembly RS_GCF_000739615.1. The GC content of the type genome is 62.49 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Haloimpatiens facunitrix sp. nov.

Candidatus Haloimpatiens facunitrix (NL. fem. n. *facunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Haloimpatiens sp000744935*. The type genome for the species is the GenBank assembly RS_GCF_000744935.1. The GC content of the type genome is 30.52 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Halomicronema impilisca sp. nov.

Candidatus Halomicronema impilisca (NL. fem. n. *impilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomicronema_A sp010671905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_010671905.1. The GC content of the type genome is 51.86 % and the genome length is 8.34 Mbp.

Description of *Candidatus* Halomonas adcelousia sp. nov.

Candidatus Halomonas adcelousia (NL. fem. n. *adcelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp013112225*. The type genome for the species is the GenBank assembly RS_GCF_013112225.1. The GC content of the type genome is 55.37 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Halomonas adsucugo sp. nov.

Candidatus Halomonas adsucugo (NL. fem. n. *adsucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp014263395*. The type genome for the species is the GenBank assembly RS_GCF_014263395.1. The GC content of the type genome is 56.94 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Halomonas ambecitica sp. nov.

Candidatus Halomonas ambecitica (NL. fem. n. *ambecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002813215*. The type genome for the species is the GenBank assembly RS_GCF_002813215.1. The GC content of the type genome is 54.66 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Halomonas bimotitudo sp. nov.

Candidatus Halomonas bimotitudo (NL. fem. n. *bimotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp001507855*. The type genome for the species is the GenBank assembly GCA_003444515.1. The GC content of the type genome is 54.78 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Halomonas carecilenta sp. nov.

Candidatus Halomonas carecilenta (NL. fem. n. *carecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003990195*. The type genome for the species is the GenBank assembly RS_GCF_003989805.1. The GC content of the type genome is 55.0 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Halomonas cerebitudo sp. nov.

Candidatus Halomonas cerebitudo (NL. fem. n. *cerebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp902500215*. The type genome for the species is the GenBank assembly RS_GCF_902500215.1. The GC content of the type genome is 64.8 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Halomonas cerifilenta sp. nov.

Candidatus Halomonas cerifilenta (NL. fem. n. *cerifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp001651035*. The type genome for the species is the GenBank assembly RS_GCF_001651035.1. The GC content of the type genome is 54.46 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Halomonas cululimonia sp. nov.

Candidatus Halomonas cululimonia (NL. fem. n. *cululimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003031405*. The type genome for the species is the GenBank assembly RS_GCF_002009255.1. The GC content of the type genome is 52.71 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Halomonas decenitoga sp. nov.

Candidatus Halomonas decenitoga (NL. fem. n. *decenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp001882345*. The type genome for the species is the GenBank assembly RS_GCF_001882345.1. The GC content of the type genome is 54.65 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake water".

Description of *Candidatus* Halomonas decunigena sp. nov.

Candidatus Halomonas decunigena (NL. fem. n. *decunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003202205*. The type genome for the species is the GenBank assembly RS_GCF_003202205.1. The GC content of the type genome is 66.38 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Halomonas denigisca sp. nov.

Candidatus Halomonas denigisca (NL. fem. n. *denigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Halomonas sp900086985*. The type genome for the species is the GenBank assembly GCA_001314745.1. The GC content of the type genome is 56.39 % and the genome length is 3.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Halomonas depecago sp. nov.

Candidatus Halomonas depecago (NL. fem. n. *depecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp000219565*. The type genome for the species is the GenBank assembly RS_GCF_000219565.1. The GC content of the type genome is 52.57 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Halomonas desacousia sp. nov.

Candidatus Halomonas desacousia (NL. fem. n. *desacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp004347715*. The type genome for the species is the GenBank assembly RS_GCF_009901955.1. The GC content of the type genome is 64.0 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Halomonas dibapetta sp. nov.

Candidatus Halomonas dibapetta (NL. fem. n. *dibapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp011050415*. The type genome for the species is the GenBank assembly GCA_011050415.1. The GC content of the type genome is 52.92 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Halomonas dicabentia sp. nov.

Candidatus Halomonas dicabentia (NL. fem. n. *dicabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp900163645*. The type genome for the species is the

GenBank assembly GCA_003531285.1. The GC content of the type genome is 54.16 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Halomonas dimidiforma sp. nov.

Candidatus Halomonas dimidiforma (NL. fem. n. *dimidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003182195*. The type genome for the species is the GenBank assembly RS_GCF_013000985.1. The GC content of the type genome is 67.75 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Halomonas domipicella sp. nov.

Candidatus Halomonas domipicella (NL. fem. n. *domipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp006228115*. The type genome for the species is the GenBank assembly RS_GCF_006228115.1. The GC content of the type genome is 58.33 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Halomonas dupunessa sp. nov.

Candidatus Halomonas dupunessa (NL. fem. n. *dupunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003336675*. The type genome for the species is the GenBank assembly RS_GCF_003336675.1. The GC content of the type genome is 62.87 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Halomonas enuntisca sp. nov.

Candidatus Halomonas enuntisca (NL. fem. n. *enuntisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003560175*. The type genome for the species is the GenBank assembly GCA_003560175.1. The GC content of the type genome is 65.19 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Halomonas ficeditrix sp. nov.

Candidatus Halomonas ficeditrix (NL. fem. n. *ficeditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002966495*. The type genome for the species is the GenBank assembly RS_GCF_000236625.2. The GC content of the type genome is 53.93 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Halomonas immematio sp. nov.

Candidatus Halomonas immematio (NL. fem. n. *immematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp007692655*. The type genome for the species is the GenBank assembly GCA_007692655.1. The GC content of the type genome is 53.93 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Halomonas inmenentia sp. nov.

Candidatus Halomonas inmenentia (NL. fem. n. *inmenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002119345*. The type genome for the species is the GenBank assembly RS_GCF_002119345.1. The GC content of the type genome is 56.88 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Halomonas malagugo sp. nov.

Candidatus Halomonas malagugo (NL. fem. n. *malagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp008329985*. The type genome for the species is the GenBank assembly RS_GCF_008329985.1. The GC content of the type genome is 57.02 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Halomonas malifousia sp. nov.

Candidatus Halomonas malifousia (NL. fem. n. *malifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp008297955*. The type genome for the species is the GenBank assembly RS_GCF_008297955.1. The GC content of the type genome is 63.55 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Halomonas manupitrix sp. nov.

Candidatus Halomonas manupitrix (NL. fem. n. *manupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003553625*. The type genome for the species is the GenBank assembly GCA_003550545.1. The GC content of the type genome is 66.19 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Halomonas modifitrix sp. nov.

Candidatus Halomonas modifitrix (NL. fem. n. *modifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003339685*. The type genome for the species is the GenBank assembly RS_GCF_003339685.1. The GC content of the type genome is 62.22 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Halomonas monopentia sp. nov.

Candidatus Halomonas monopentia (NL. fem. n. *monopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp000686925*. The type genome for the species is the GenBank assembly RS_GCF_000686925.1. The GC content of the type genome is 58.98 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Halomonas negotivita sp. nov.

Candidatus Halomonas negotivita (NL. fem. n. *negotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp007116835*. The type genome for the species is the GenBank assembly GCA_007122835.1. The GC content of the type genome is 53.63 %

and the genome length is 2.03 Mbp.

Description of *Candidatus* Halomonas nicotugo sp. nov.

Candidatus Halomonas nicotugo (NL. fem. n. *nicotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp007129225*. The type genome for the species is the GenBank assembly GCA_007129225.1. The GC content of the type genome is 63.71 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Halomonas oblivago sp. nov.

Candidatus Halomonas oblivago (NL. fem. n. *oblivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp011742165*. The type genome for the species is the GenBank assembly RS_GCF_011742165.1. The GC content of the type genome is 63.63 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Halomonas papilibra sp. nov.

Candidatus Halomonas papilibra (NL. fem. n. *papilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp007625055*. The type genome for the species is the GenBank assembly GCA_007625055.1. The GC content of the type genome is 56.79 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Halomonas paralisca sp. nov.

Candidatus Halomonas paralisca (NL. fem. n. *paralisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp009793355*. The type genome for the species is the GenBank assembly RS_GCF_009793355.1. The GC content of the type genome is 57.14 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Halomonas podagicula sp. nov.

Candidatus Halomonas podagicula (NL. fem. n. *podagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp009834345*. The type genome for the species is the GenBank assembly RS_GCF_009834345.1. The GC content of the type genome is 63.93 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Halomonas recucitia sp. nov.

Candidatus Halomonas recucitia (NL. fem. n. *recucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002332255*. The type genome for the species is the GenBank assembly RS_GCF_002332255.1. The GC content of the type genome is 53.9 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Halomonas relenentia sp. nov.

Candidatus Halomonas relenentia (NL. fem. n. *relenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002364315*. The type genome for the species is the GenBank assembly GCA_002364315.1. The GC content of the type genome is 54.48 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Halomonas renavitoga sp. nov.

Candidatus Halomonas renavitoga (NL. fem. n. *renavitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp000246875*. The type genome for the species is the GenBank assembly RS_GCF_000246875.1. The GC content of the type genome is 64.09 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Halomonas ridibitura sp. nov.

Candidatus Halomonas ridibitura (NL. fem. n. *ridibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp010994375*. The type genome for the species is the GenBank assembly RS_GCF_010994375.1. The GC content of the type genome is 66.6 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Halomonas rosacitrix sp. nov.

Candidatus Halomonas rosacitrix (NL. fem. n. *rosacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002696125*. The type genome for the species is the GenBank assembly GCA_002696125.1. The GC content of the type genome is 58.97 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Halomonas socagimonia sp. nov.

Candidatus Halomonas socagimonia (NL. fem. n. *socagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002366715*. The type genome for the species is the GenBank assembly GCA_002366715.1. The GC content of the type genome is 54.92 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Halomonas totidax sp. nov.

Candidatus Halomonas totidax (NL. fem. n. *totidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp002082565*. The type genome for the species is the GenBank assembly RS_GCF_002082565.1. The GC content of the type genome is 52.11 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Halomonas tumefitio sp. nov.

Candidatus Halomonas tumefitio (NL. fem. n. *tumefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003336665*. The type genome for the species is the GenBank assembly RS_GCF_003336665.1. The GC content of the type genome is 57.24

% and the genome length is 4.47 Mbp.

Description of *Candidatus* Halomonas valefifica sp. nov.

Candidatus Halomonas valefifica (NL. fem. n. *valefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp010993975*. The type genome for the species is the GenBank assembly RS_GCF_010993975.1. The GC content of the type genome is 64.47 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Halomonas valefitica sp. nov.

Candidatus Halomonas valefitica (NL. fem. n. *valefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp003552795*. The type genome for the species is the GenBank assembly GCA_003552795.1. The GC content of the type genome is 67.48 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Halomonas vigenibra sp. nov.

Candidatus Halomonas vigenibra (NL. fem. n. *vigenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp009363755*. The type genome for the species is the GenBank assembly RS_GCF_009363755.1. The GC content of the type genome is 68.38 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Halomonas virecifica sp. nov.

Candidatus Halomonas virecifica (NL. fem. n. *virecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp013371085*. The type genome for the species is the GenBank assembly RS_GCF_013371085.1. The GC content of the type genome is 54.39 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Halomonas vivifedo sp. nov.

Candidatus Halomonas vivifedo (NL. fem. n. *vivifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas sp000235725*. The type genome for the species is the GenBank assembly RS_GCF_000235725.1. The GC content of the type genome is 54.13 % and the genome length is 4.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil of a gold mine".

Description of *Candidatus* Halomonas dereletta sp. nov.

Candidatus Halomonas dereletta (NL. fem. n. *dereletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_B sp002286975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002286975.1. The GC content of the type genome is 63.83 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Halomonas dicibatica sp. nov.

Candidatus Halomonas dicibatica (NL. fem. n. *dicibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_B sp001971685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001971685.1. The GC content of the type genome is 65.32 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Halomonas robigicella sp. nov.

Candidatus Halomonas robigicella (NL. fem. n. *robigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_B sp013009075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013009075.1. The GC

content of the type genome is 61.7 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Halomonas avoncigena sp. nov.

Candidatus Halomonas avoncigena (NL. fem. n. *avoncigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_C sp001577635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001577635.1. The GC content of the type genome is 67.13 % and the genome length is 3.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hydraulically fractured well fluid at Timepoint_82".

Description of *Candidatus* Halomonas benevivita sp. nov.

Candidatus Halomonas benevivita (NL. fem. n. *benevivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_C sp001039575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001039575.1. The GC content of the type genome is 57.53 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Halomonas nubifitas sp. nov.

Candidatus Halomonas nubifitas (NL. fem. n. *nubifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_C sp900961225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900961225.1. The GC content of the type genome is 64.85 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Halomonas nugiviforma sp. nov.

Candidatus Halomonas nugiviforma (NL. fem. n. *nugiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_C sp010993675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010993675.1. The GC content of the type genome is 67.26 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Halomonas acculiforma sp. nov.

Candidatus Halomonas acculiforma (NL. fem. n. *acculiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halomonas_E sp012062845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012062845.1. The GC content of the type genome is 61.01 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Halorhodospira coticimonas sp. nov.

Candidatus Halorhodospira coticimonas (NL. fem. n. *coticimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halorhodospira sp003552625*. The type genome for the species is the GenBank assembly GCA_003552625.1. The GC content of the type genome is 66.02 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Halorhodospira navicatio sp. nov.

Candidatus Halorhodospira navicatio (NL. fem. n. *navicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halorhodospira sp003552345*. The type genome for the species is the GenBank assembly GCA_003552345.1. The GC content of the type genome is 69.12 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Halospina adnicimonia sp. nov.

Candidatus Halospina adnicimonia (NL. fem. n. *adnicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halospina sp002286965*. The type genome for the species is the GenBank assembly RS_GCF_002286965.1. The GC content of the type genome is 62.1 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Halospina dimacimonia sp. nov.

Candidatus Halospina dimacimonia (NL. fem. n. *dimacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halospina sp007135745*. The type genome for the species is the GenBank assembly GCA_007135745.1. The GC content of the type genome is 58.86 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Halothece adnunatio sp. nov.

Candidatus Halothece adnunatio (NL. fem. n. *adnunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halothece sp003021905*. The type genome for the species is the GenBank assembly GCA_003021905.1. The GC content of the type genome is 44.37 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Halothece catilibula sp. nov.

Candidatus Halothece catilibula (NL. fem. n. *catilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halothece sp009909085*. The type genome for the species is the GenBank assembly GCA_009909085.1. The GC content of the type genome is 43.83 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Halothece fetutitia sp. nov.

Candidatus Halothece fetutitia (NL. fem. n. *fetutitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Halothece sp000317635*. The type genome for the species is the GenBank assembly RS_GCF_000317635.1. The GC content of the type genome is 42.92 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Water; lake; Solar lake".

Description of *Candidatus* Halothiobacillus bicorago sp. nov.

Candidatus Halothiobacillus bicorago (NL. fem. n. *bicorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halothiobacillus sp002282715*. The type genome for the species is the GenBank assembly GCA_002279175.1. The GC content of the type genome is 55.44 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Halothiobacillus malivivita sp. nov.

Candidatus Halothiobacillus malivivita (NL. fem. n. *malivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halothiobacillus sp001663815*. The type genome for the species is the GenBank assembly RS_GCF_001663815.1. The GC content of the type genome is 60.73 % and the genome length is 2.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Pearl River surface water".

Description of *Candidatus* Halothiobacillus monimousia sp. nov.

Candidatus Halothiobacillus monimousia (NL. fem. n. *monimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halothiobacillus sp002281295*. The type genome for the species is the GenBank assembly GCA_002281295.1. The GC content of the type genome is 53.52 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Halovulum alcalitudo sp. nov.

Candidatus Halovulum alcalitudo (NL. fem. n. *alcalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Halovulum sp009931615*. The type genome for the species is the GenBank assembly RS_GCF_009931615.1. The GC content of the type genome is 61.51

% and the genome length is 3.99 Mbp.

Description of *Candidatus* Halucana bipinicella sp. nov.

Candidatus Halucana bipinicella (NL. fem. n. *bipinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2700365 sp002700365*. The type genome for the species is the GenBank assembly GCA_002700365.1. The GC content of the type genome is 48.66 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Halucana gen. nov.

Candidatus Halucana (NL. fem. n. *Halucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2700365*. The type species for the genus is *Candidatus* Halucana bipinicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Halucaria defesivita sp. nov.

Candidatus Halucaria defesivita (NL. fem. n. *defesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXNF01 sp009835395*. The type genome for the species is the GenBank assembly GCA_009844215.1. The GC content of the type genome is 69.79 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Halucaria gen. nov.

Candidatus Halucaria (NL. fem. n. *Halucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXNF01*. The type species for the genus is *Candidatus* Halucaria defesivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin134*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monacanaceae.

Description of *Candidatus* Halucaria visifatica sp. nov.

Candidatus Halucaria visifatica (NL. fem. n. *visifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXNF01 sp009840735*. The type genome for the species is the GenBank assembly GCA_009837005.1. The GC content of the type genome is 69.99 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Halucella abantisca sp. nov.

Candidatus Halucella abantisca (NL. fem. n. *abantisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp002839495*. The type genome for the species is the GenBank assembly GCA_002839495.1. The GC content of the type genome is 45.52 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Halucella gen. nov.

Candidatus Halucella (NL. fem. n. *Halucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12454*. The type species for the genus is *Candidatus* Halucella abantisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12454*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucellaceae.

Description of *Candidatus* Halucellaceae fam. nov.

Candidatus Halucellaceae (NL. fem. n. *Halucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12454.* The type genus for the taxon is *Candidatus* Halucella .

According to GTDB R06-RS202, this family belongs to the order *Sedimentisphaerales*.

Description of *Candidatus* Halucella celumivita sp. nov.

Candidatus Halucella celumivita (NL. fem. n. *celumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp003142595*. The type genome for the species is the GenBank assembly GCA_003142595.1. The GC content of the type genome is 44.04 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Halucella defulatica sp. nov.

Candidatus Halucella defulatica (NL. fem. n. *defulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp903847315*. The type genome for the species is the GenBank assembly GCA_903821845.1. The GC content of the type genome is 44.76 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Halucella desepitura sp. nov.

Candidatus Halucella desepitura (NL. fem. n. *desepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp001825665*. The type genome for the species is the GenBank assembly GCA_001825665.1. The GC content of the type genome is 41.04 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Halucella diluvicella sp. nov.

Candidatus Halucella diluvicella (NL. fem. n. *diluvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp002068635*. The type genome for the species is the GenBank assembly GCA_002068635.1. The GC content of the type genome is 43.37 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Halucella semoditas sp. nov.

Candidatus Halucella semoditas (NL. fem. n. *semoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12454 sp001825675*. The type genome for the species is the GenBank assembly GCA_001825675.1. The GC content of the type genome is 42.03 % and the genome length is 4.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Halucia denigugo sp. nov.

Candidatus Halucia denigugo (NL. fem. n. *denigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIM01 sp903866395*. The type genome for the species is the GenBank assembly GCA_903836645.1. The GC content of the type genome is 63.37 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Halucia gen. nov.

Candidatus Halucia (NL. fem. n. *Halucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYIM01*. The type species for the genus is *Candidatus* Halucia denigugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Halucia homunugo sp. nov.

Candidatus Halucia homunugo (NL. fem. n. *homunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIM01 sp903907905*. The type genome for the species is the GenBank assembly GCA_903907905.1. The GC content of the type genome is 65.11 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Halucia licenitoga sp. nov.

Candidatus Halucia licenitoga (NL. fem. n. *licenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIM01 sp009921765*. The type genome for the species is the GenBank assembly GCA_009921765.1. The GC content of the type genome is 63.88 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Halucia semimivita sp. nov.

Candidatus Halucia semimivita (NL. fem. n. *semimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIM01 sp005798775*. The type genome for the species is the GenBank assembly GCA_005798775.1. The GC content of the type genome is 63.01 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Halucida adnaredo sp. nov.

Candidatus Halucida adnaredo (NL. fem. n. *adnaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKM01 sp012522415*. The type genome for the species is the GenBank assembly GCA_012522415.1. The GC content of the type genome is 52.93 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Halucida gen. nov.

Candidatus Halucida (NL. fem. n. *Halucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYKM01*. The type species for the genus is *Candidatus* Halucida adnaredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYKM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucidaceae.

Description of *Candidatus* Halucidaceae fam. nov.

Candidatus Halucidaceae (NL. fem. n. *Halucidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *JAAYKM01*. The type genus for the taxon is *Candidatus* Halucida .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Halucula exaggax sp. nov.

Candidatus Halucula exaggax (NL. fem. n. *exaggax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-121 sp005880615*. The type genome for the species is the GenBank assembly GCA_005880615.1. The GC content of the type genome is 66.73 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Halucula gen. nov.

Candidatus Halucula (NL. fem. n. *Halucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-121*. The type species for the genus is *Candidatus* Halucula exaggax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-121*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haluculaceae.

Description of *Candidatus* Haluculaceae fam. nov.

Candidatus Haluculaceae (NL. fem. n. *Haluculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CF-121*. The type genus for the taxon is *Candidatus* Halucula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CF-121*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Haluculales.

Description of *Candidatus* Haluculales ord. nov.

Candidatus Haluculales (NL. fem. n. *Haluculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CF-121*. The type genus for the taxon is *Candidatus* Halucula .

According to the GTDB R06-RS202, this order belongs to the class *Dormibacteria*.

Description of *Candidatus* Hamadaea cerimibula sp. nov.

Candidatus Hamadaea cerimibula (NL. fem. n. *cerimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hamadaea sp013361475*. The type genome for the species is the GenBank assembly GCA_013362565.1. The GC content of the type genome is 70.1 % and the genome length is 7.3 Mbp.

Description of *Candidatus* Hamadaea vilipatio sp. nov.

Candidatus Hamadaea vilipatio (NL. fem. n. *vilipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hamadaea sp013362815*. The type genome for the species is the GenBank assembly GCA_013362815.1. The GC content of the type genome is 69.07 % and the genome length is 7.45 Mbp.

Description of *Candidatus* Hansschlegelia aggubibra sp. nov.

Candidatus Hansschlegelia aggubibra (NL. fem. n. *aggubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hansschlegelia sp003241695*. The type genome for the species is the GenBank assembly GCA_003241695.1. The GC content of the type genome is 68.29 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Hansschlegelia exsupitio sp. nov.

Candidatus Hansschlegelia exsupitio (NL. fem. n. *exsupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hansschlegelia sp902168115*. The type genome for the species is the GenBank assembly GCA_902168115.1. The GC content of the type genome is 69.04 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Hansschlegelia infisilenta sp. nov.

Candidatus Hansschlegelia infisilenta (NL. fem. n. *infisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hansschlegelia sp000384475*. The type genome for the species is the GenBank assembly RS_GCF_000384475.1. The GC content of the type genome is 67.98 % and the genome length is 4.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Hansschlegelia octopicula sp. nov.

Candidatus Hansschlegelia octopicula (NL. fem. n. *octopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hansschlegelia sp004310425*. The type genome for the species is the GenBank assembly RS_GCF_004310425.1. The GC content of the type genome is 67.04 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Haricana manomedo sp. nov.

Candidatus Haricana manomedo (NL. fem. n. *manomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2210 sp002327865*. The type genome for the species is the GenBank assembly GCA_002327865.1. The GC content of the type genome is 48.11 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Haricana gen. nov.

Candidatus Haricana (NL. fem. n. *Haricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2210*. The type species for the genus is *Candidatus* Haricana manomedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2210*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haricanaceae.

Description of *Candidatus* Haricanaceae fam. nov.

Candidatus Haricanaceae (NL. fem. n. *Haricanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2210.* The type genus for the taxon is *Candidatus* Haricana .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Haricaria adnicigena sp. nov.

Candidatus Haricaria adnicigena (NL. fem. n. *adnicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp004560915*. The type genome for the species is the GenBank assembly GCA_004560915.1. The GC content of the type genome is 26.4 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Haricaria gen. nov.

Candidatus Haricaria (NL. fem. n. *Haricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1000*. The type species for the genus is *Candidatus* Haricaria adnicigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Haricaria adnumitica sp. nov.

Candidatus Haricaria adnumitica (NL. fem. n. *adnumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp900768345*. The type genome for the species is the GenBank assembly RS_GCF_900768345.1. The GC content of the type genome is 26.61 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Haricaria albogedo sp. nov.

Candidatus Haricaria albogedo (NL. fem. n. *albogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp902775285*. The type genome for the species is the GenBank assembly GCA_902775285.1. The GC content of the type genome is 24.45 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Haricaria apsoriforma sp. nov.

Candidatus Haricaria apsoriforma (NL. fem. n. *apsoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp902778125*. The type genome for the species is the GenBank assembly GCA_902778125.1. The GC content of the type genome is 26.13 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Haricaria bicipitio sp. nov.

Candidatus Haricaria bicipitio (NL. fem. n. *bicipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp004552445*. The type genome for the species is the GenBank assembly RS_GCF_900769155.1. The GC content of the type genome is 25.89 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Haricaria decinilega sp. nov.

Candidatus Haricaria decinilega (NL. fem. n. *decinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp000436975*. The type genome for the species is the GenBank assembly GCA_000436975.1. The GC content of the type genome is 26.26 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Haricaria denecitrix sp. nov.

Candidatus Haricaria denecitrix (NL. fem. n. *denecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp900313815*. The type genome for the species is the GenBank assembly GCA_900313815.1. The GC content of the type genome is 25.89 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Haricaria dibucitudo sp. nov.

Candidatus Haricaria dibucitudo (NL. fem. n. *dibucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp900556025*. The type genome for the species is the GenBank assembly RS_GCF_900771945.1. The GC content of the type genome is 25.81 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Haricaria divulimonas sp. nov.

Candidatus Haricaria divulimonas (NL. fem. n. *divulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp012512795*. The type genome for the species is the GenBank assembly GCA_012512795.1. The GC content of the type genome is 25.87 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Haricaria fumifitas sp. nov.

Candidatus Haricaria fumifitas (NL. fem. n. *fumifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp900772435*. The type genome for the species is the GenBank assembly RS_GCF_900772435.1. The GC content of the type genome is 26.3 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Haricaria immeditrix sp. nov.

Candidatus Haricaria immeditrix (NL. fem. n. *immeditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp900761555*. The type genome for the species is the GenBank assembly RS_GCF_900761555.1. The GC content of the type genome is 25.56 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Haricaria invigastra sp. nov.

Candidatus Haricaria invigastra (NL. fem. n. *invigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp902761685*. The type genome for the species is the GenBank assembly GCA_902761685.1. The GC content of the type genome is 24.87 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Haricaria lavabimonia sp. nov.

Candidatus Haricaria lavabimonia (NL. fem. n. *lavabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp000434555*. The type genome for the species is the GenBank assembly GCA_900549035.1. The GC content of the type genome is 25.48 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Haricaria penuricula sp. nov.

Candidatus Haricaria penuricula (NL. fem. n. *penuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1000 sp902764145*. The type genome for the species is the GenBank assembly GCA_902764145.1. The GC content of the type genome is 25.26 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Haricella arundibra sp. nov.

Candidatus Haricella arundibra (NL. fem. n. *arundibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9634 sp003450815*. The type genome for the species is the GenBank assembly GCA_003450815.1. The GC content of the type genome is 50.94 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Haricella gen. nov.

Candidatus Haricella (NL. fem. n. *Haricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9634*. The type species for the genus is *Candidatus* Haricella arundibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Haricella fetutibra sp. nov.

Candidatus Haricella fetutibra (NL. fem. n. *fetutibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9634 sp001799565*. The type genome for the species is the GenBank assembly GCA_001799915.1. The GC content of the type genome is 51.49 % and the genome length is 2.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Haricia diritax sp. nov.

Candidatus Haricia diritax (NL. fem. n. *diritax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1161 sp002311745*. The type genome for the species is the GenBank assembly GCA_002311745.1. The GC content of the type genome is 62.7 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Haricia gen. nov.

Candidatus Haricia (NL. fem. n. *Haricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1161*. The type species for the genus is *Candidatus* Haricia diritax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Hariciaceae fam. nov.

Candidatus Hariciaceae (NL. fem. n. *Hariciaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1161*. The type genus for the taxon is *Candidatus* Haricia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hariciales.

Description of *Candidatus* Hariciales ord. nov.

Candidatus Hariciales (NL. fem. n. *Hariciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1161*. The type genus for the taxon is *Candidatus* Haricia .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Haricida adsocilenta sp. nov.

Candidatus Haricida adsocilenta (NL. fem. n. *adsocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp002422045*. The type genome for the species is the GenBank assembly GCA_002422045.1. The GC content of the type genome is 41.18 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Haricida gen. nov.

Candidatus Haricida (NL. fem. n. *Haricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2284*. The type species for the genus is *Candidatus* Haricida adsocilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Haricida agratessa sp. nov.

Candidatus Haricida agratessa (NL. fem. n. *agratessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp003605085*. The type genome for the species is the GenBank assembly GCA_003605085.1. The GC content of the type genome is 37.81 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Haricida bicalifica sp. nov.

Candidatus Haricida bicalifica (NL. fem. n. *bicalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp002839095*. The type genome for the species is the GenBank assembly GCA_002839095.1. The GC content of the type genome is 33.74 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Haricida obsolago sp. nov.

Candidatus Haricida obsolago (NL. fem. n. *obsolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp006226985*. The type genome for the species is the GenBank assembly GCA_006226985.1. The GC content of the type genome is 33.65 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Haricida recucicula sp. nov.

Candidatus Haricida recucicula (NL. fem. n. *recucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp001830045*. The type genome for the species is the GenBank assembly GCA_001830945.1. The GC content of the type genome is 34.65 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Haricida revecitica sp. nov.

Candidatus Haricida revecitica (NL. fem. n. *revecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2284 sp002418725*. The type genome for the species is the GenBank assembly GCA_002418725.1. The GC content of the type genome is 37.65 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Haricida rumifetta sp. nov.

Candidatus Haricida rumifetta (NL. fem. n. *rumifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp002345705*. The type genome for the species is the GenBank assembly GCA_002345705.1. The GC content of the type genome is 33.81 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Haricida tabifivita sp. nov.

Candidatus Haricida tabifivita (NL. fem. n. *tabifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp003249785*. The type genome for the species is the GenBank assembly GCA_003249785.1. The GC content of the type genome is 37.4 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Haricida timefigena sp. nov.

Candidatus Haricida timefigena (NL. fem. n. *timefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp003518475*. The type genome for the species is the GenBank assembly GCA_003499865.1. The GC content of the type genome is 38.05 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Haricida viburago sp. nov.

Candidatus Haricida viburago (NL. fem. n. *viburago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2284 sp002424575*. The type genome for the species is the GenBank assembly GCA_002424575.1. The GC content of the type genome is 39.11 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Haricosa decatetta sp. nov.

Candidatus Haricosa decatetta (NL. fem. n. *decatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Abin05 sp002898015*. The type genome for the species is the GenBank assembly GCA_002898015.1. The GC content of the type genome is 46.4 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Haricosa gen. nov.

Candidatus Haricosa (NL. fem. n. *Haricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Abin05*. The type species for the genus is *Candidatus* Haricosa decatetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Abin05*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haricosaceae.

Description of *Candidatus* Haricosaceae fam. nov.

Candidatus Haricosaceae (NL. fem. n. *Haricosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Abin05.* The type genus for the taxon is *Candidatus* Haricosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogidales.

Description of *Candidatus* Haricosa xenodatica sp. nov.

Candidatus Haricosa xenodatica (NL. fem. n. *xenodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Abin05 sp013151735*. The type genome for the species is the GenBank assembly GCA_013151735.1. The GC content of the type genome is 47.96 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Haricula benemetta sp. nov.

Candidatus Haricula benemetta (NL. fem. n. *benemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5615 sp002382075*. The type genome for the species is the GenBank assembly GCA_002382075.1. The GC content of the type genome is 38.15 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Haricula gen. nov.

Candidatus Haricula (NL. fem. n. *Haricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5615*. The type species for the genus is *Candidatus* Haricula benemetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Hassallia nefanilega sp. nov.

Candidatus Hassallia nefanilega (NL. fem. n. *nefanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hassallia sp002218085*. The type genome for the species is the GenBank assembly RS_GCF_002218085.1. The GC content of the type genome is 41.8 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Hathewaya octinessa sp. nov.

Candidatus Hathewaya octinessa (NL. fem. n. *octinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hathewaya sp003288255*. The type genome for the species is the GenBank assembly RS_GCF_003288255.1. The GC content of the type genome is 27.83 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Hecatana vanidugo sp. nov.

Candidatus Hecatana vanidugo (NL. fem. n. *vanidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVWV01 sp011773845*. The type genome for the species is the GenBank assembly GCA_011771445.1. The GC content of the type genome is 66.73 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Hecatana gen. nov.

Candidatus Hecatana (NL. fem. n. *Hecatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVWV01*. The type species for the genus is *Candidatus* Hecatana vanidugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Hecataria femeliforma sp. nov.

Candidatus Hecataria femeliforma (NL. fem. n. *femeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRF01 sp005792635*. The type genome for the species is the GenBank assembly GCA_005779685.1. The GC content of the type genome is 46.08 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Hecataria gen. nov.

Candidatus Hecataria (NL. fem. n. *Hecataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXRF01*. The type species for the genus is *Candidatus* Hecataria femeliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXRF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatariaceae.

Description of *Candidatus* Hecatariaceae fam. nov.

Candidatus Hecatariaceae (NL. fem. n. *Hecatariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXRF01*. The type genus for the taxon is *Candidatus* Hecataria .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Hecatella absocitudo sp. nov.

Candidatus Hecatella absocitudo (NL. fem. n. *absocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp002417685*. The type genome for the species is the GenBank assembly GCA_002417685.1. The GC content of the type genome is 49.21 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Hecatella gen. nov.

Candidatus Hecatella (NL. fem. n. *Hecatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *49-20*. The type species for the genus is *Candidatus* Hecatella absocitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hecatella anxifivita sp. nov.

Candidatus Hecatella anxifivita (NL. fem. n. *anxifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp003445715*. The type genome for the species is the GenBank assembly GCA_003445715.1. The GC content of the type genome is 49.82 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Hecatella celamitura sp. nov.

Candidatus Hecatella celamitura (NL. fem. n. *celamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp012517865*. The type genome for the species is the GenBank assembly GCA_012517865.1. The GC content of the type genome is 55.75 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Hecatella exaspentia sp. nov.

Candidatus Hecatella exaspentia (NL. fem. n. *exaspentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp012797215*. The type genome for the species is the GenBank assembly GCA_012797215.1. The GC content of the type genome is 54.53 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Hecatella momorisca sp. nov.

Candidatus Hecatella momorisca (NL. fem. n. *momorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp002436085*. The type genome for the species is the GenBank assembly GCA_002436085.1. The GC content of the type genome is 54.89 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Hecatella utrolitio sp. nov.

Candidatus Hecatella utrolitio (NL. fem. n. *utrolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *49-20 sp003499715*. The type genome for the species is the GenBank assembly GCA_003499715.1. The GC content of the type genome is 48.55 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Hecatia bimetiforma sp. nov.

Candidatus Hecatia bimetiforma (NL. fem. n. *bimetiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CSP1-4 sp001443375*. The type genome for the species is the GenBank assembly GCA_001443375.1. The GC content of the type genome is 71.85 % and the genome length is 2.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Hecatia gen. nov.

Candidatus Hecatia (NL. fem. n. *Hecatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-4*. The type species for the genus is *Candidatus* Hecatia bimetiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Hecatiaceae fam. nov.

Candidatus Hecatiaceae (NL. fem. n. *Hecatiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-4.* The type genus for the taxon is *Candidatus* Hecatia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatiales.

Description of *Candidatus* Hecatiales ord. nov.

Candidatus Hecatiales (NL. fem. n. *Hecatiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-4.* The type genus for the taxon is *Candidatus* Hecatia .

According to the original version of GTDB R06-RS202, this family belongs to the class *Ellin6529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Remedellae.

Description of *Candidatus* Hecatida artilugo sp. nov.

Candidatus Hecatida artilugo (NL. fem. n. *artilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACJXQ01 sp902551695*. The type genome for the species is the GenBank assembly GCA_902551695.1. The GC content of the type genome is 42.55 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Hecatida gen. nov.

Candidatus Hecatida (NL. fem. n. *Hecatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACJXQ01*. The type species for the genus is *Candidatus* Hecatida artilugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACJXQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatidaceae.

Description of *Candidatus* Hecatidaceae fam. nov.

Candidatus Hecatidaceae (NL. fem. n. *Hecatidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACJXQ01*. The type genus for the taxon is *Candidatus* Hecatida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CACJXQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatidales.

Description of *Candidatus* Hecatidales ord. nov.

Candidatus Hecatidales (NL. fem. n. *Hecatidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACJXQ01*. The type genus for the taxon is *Candidatus* Hecatida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Hecatida indevilega sp. nov.

Candidatus Hecatida indevilega (NL. fem. n. *indevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACJXQ01 sp902597385*. The type genome for the species is the GenBank assembly GCA_902597385.1. The GC content of the type genome is 42.47 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Hecatosa cohoniforma sp. nov.

Candidatus Hecatosa cohoniforma (NL. fem. n. *cohoniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-28-2 sp001303545*. The type genome for the species is the GenBank assembly GCA_001303545.1. The GC content of the type genome is 63.75 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Hecatosa gen. nov.

Candidatus Hecatosa (NL. fem. n. *Hecatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-28-2*. The type species for the genus is *Candidatus* Hecatosa cohoniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-28-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatosaceae.

Description of *Candidatus* Hecatosaceae fam. nov.

Candidatus Hecatosaceae (NL. fem. n. *Hecatosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-28-2.* The type genus for the taxon is *Candidatus* Hecatosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-28-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatosales.

Description of *Candidatus* Hecatosales ord. nov.

Candidatus Hecatosales (NL. fem. n. *Hecatosales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-28-2.* The type genus for the taxon is *Candidatus* Hecatosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Hecatula vinolitio sp. nov.

Candidatus Hecatula vinolitio (NL. fem. n. *vinolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2143 sp002685955*. The type genome for the species is the GenBank assembly GCA_002328955.1. The GC content of the type genome is 36.24 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Hecatula gen. nov.

Candidatus Hecatula (NL. fem. n. *Hecatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2143*. The type species for the genus is *Candidatus* Hecatula vinolitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2143*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatulaceae.

Description of *Candidatus* Hecatulaceae fam. nov.

Candidatus Hecatulaceae (NL. fem. n. *Hecatulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2143.* The type genus for the taxon is *Candidatus* Hecatula .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Hegumana curotugo sp. nov.

Candidatus Hegumana curotugo (NL. fem. n. *curotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp003452275*. The type genome for the species is the GenBank assembly GCA_003452275.1. The GC content of the type genome is 48.18 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Hegumana gen. nov.

Candidatus Hegumana (NL. fem. n. *Hegumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1573*. The type species for the genus is *Candidatus* Hegumana curotugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hegumana dimiditio sp. nov.

Candidatus Hegumana dimiditio (NL. fem. n. *dimiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp002425415*. The type genome for the species is the GenBank assembly GCA_002344755.1. The GC content of the type genome is 44.99 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Hegumana labecicella sp. nov.

Candidatus Hegumana labecicella (NL. fem. n. *labecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp002421905*. The type genome for the species is the GenBank assembly GCA_002421905.1. The GC content of the type genome is 46.48 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Hegumana roraritudo sp. nov.

Candidatus Hegumana roraritudo (NL. fem. n. *roraritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp003245575*. The type genome for the species is the

GenBank assembly GCA_003245575.1. The GC content of the type genome is 46.13 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Hegumana rosacisca sp. nov.

Candidatus Hegumana rosacisca (NL. fem. n. *rosacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp001767915*. The type genome for the species is the GenBank assembly GCA_001767915.1. The GC content of the type genome is 45.89 % and the genome length is 2.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Hegumana videlicula sp. nov.

Candidatus Hegumana videlicula (NL. fem. n. *videlicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1573 sp001871905*. The type genome for the species is the GenBank assembly GCA_001871905.1. The GC content of the type genome is 46.68 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Hegumaria homulimonia sp. nov.

Candidatus Hegumaria homulimonia (NL. fem. n. *homulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXH01 sp903829565*. The type genome for the species is the GenBank assembly GCA_903830195.1. The GC content of the type genome is 63.85 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Hegumaria gen. nov.

Candidatus Hegumaria (NL. fem. n. *Hegumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXXH01*. The type species for the genus is *Candidatus* Hegumaria homulimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Hegumaria subadousia sp. nov.

Candidatus Hegumaria subadousia (NL. fem. n. *subadousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXH01 sp005789645*. The type genome for the species is the GenBank assembly GCA_005789645.1. The GC content of the type genome is 69.95 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Hegumella anxificella sp. nov.

Candidatus Hegumella anxificella (NL. fem. n. *anxificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1375 sp900551235*. The type genome for the species is the GenBank assembly GCA_900551235.1. The GC content of the type genome is 44.57 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Hegumella gen. nov.

Candidatus Hegumella (NL. fem. n. *Hegumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1375*. The type species for the genus is *Candidatus* Hegumella anxificella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hegumella cosigatio sp. nov.

Candidatus Hegumella cosigatio (NL. fem. n. *cosigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1375 sp900066615*. The type genome for the species is the GenBank assembly GCA_000434575.1. The GC content of the type genome is 44.67 %

and the genome length is 2.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Hegumia prospitas sp. nov.

Candidatus Hegumia prospitas (NL. fem. n. *prospitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BY39 sp003327435*. The type genome for the species is the GenBank assembly GCA_003327435.1. The GC content of the type genome is 33.93 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Hegumia gen. nov.

Candidatus Hegumia (NL. fem. n. *Hegumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BY39*. The type species for the genus is *Candidatus* Hegumia prospitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BY39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumiaceae.

Description of *Candidatus* Hegumiaceae fam. nov.

Candidatus Hegumiaceae (NL. fem. n. *Hegumiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BY39*. The type genus for the taxon is *Candidatus* Hegumia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vagabanales.

Description of *Candidatus* Hegumida nocumax sp. nov.

Candidatus Hegumida nocumax (NL. fem. n. *nocumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J025 sp003696645*. The type genome for the species is the GenBank assembly GCA_003696645.1. The GC content of the type genome is 51.52 % and the

genome length is 3.27 Mbp.

Description of *Candidatus* Hegumida gen. nov.

Candidatus Hegumida (NL. fem. n. *Hegumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J025*. The type species for the genus is *Candidatus* Hegumida nocumax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumidaceae.

Description of *Candidatus* Hegumidaceae fam. nov.

Candidatus Hegumidaceae (NL. fem. n. *Hegumidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J025.* The type genus for the taxon is *Candidatus* Hegumida .

According to the original version of GTDB R06-RS202, this family belongs to the order *J025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hegumidales.

Description of *Candidatus* Hegumidales ord. nov.

Candidatus Hegumidales (NL. fem. n. *Hegumidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J025.* The type genus for the taxon is *Candidatus* Hegumida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Hegumosa recumilenta sp. nov.

Candidatus Hegumosa recumilenta (NL. fem. n. *recumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA828 sp002296185*. The type genome for the species is the GenBank assembly GCA_002296185.1. The GC content of the type genome is 38.69 %

and the genome length is 1.61 Mbp.

Description of *Candidatus* Hegumosa gen. nov.

Candidatus Hegumosa (NL. fem. n. *Hegumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA828*. The type species for the genus is *Candidatus* Hegumosa recumilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Hegumosaceae fam. nov.

Candidatus Hegumosaceae (NL. fem. n. *Hegumosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA828.* The type genus for the taxon is *Candidatus* Hegumosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hegumosales.

Description of *Candidatus* Hegumosales ord. nov.

Candidatus Hegumosales (NL. fem. n. *Hegumosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA828.* The type genus for the taxon is *Candidatus* Hegumosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Hegumula famelivita sp. nov.

Candidatus Hegumula famelivita (NL. fem. n. *famelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AB-629-J13 sp002346675*. The type genome for the species is the GenBank assembly GCA_002717875.1. The GC content of the type genome is 36.0 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Hegumula gen. nov.

Candidatus Hegumula (NL. fem. n. *Hegumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AB-629-J13*. The type species for the genus is *Candidatus* Hegumula famelivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilellaceae.

Description of *Candidatus* Helicobacter volucedo sp. nov.

Candidatus Helicobacter volucedo (NL. fem. n. *volucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_A sp003364195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003364195.1. The GC content of the type genome is 31.6 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Helicobacter tegumitio sp. nov.

Candidatus Helicobacter tegumitio (NL. fem. n. *tegumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_B sp001854545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902387275.1. The GC content of the type genome is 45.16 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Helicobacter adlecitas sp. nov.

Candidatus Helicobacter adlecitas (NL. fem. n. *adlecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_C sp000765665*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000765665.2. The GC content of the type genome is 37.71 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cecum".

Description of *Candidatus* Helicobacter adgubastra sp. nov.

Candidatus Helicobacter adgubastra (NL. fem. n. *adgubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_D sp900770765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900770765.1. The GC content of the type genome is 34.79 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Helicobacter inergastra sp. nov.

Candidatus Helicobacter inergastra (NL. fem. n. *inergastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_D sp000765695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000765695.2. The GC content of the type genome is 34.55 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Helicobacter obsecatica sp. nov.

Candidatus Helicobacter obsecatica (NL. fem. n. *obsecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_D sp000765675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000765675.1. The GC content of the type genome is 38.07 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Helicobacter prosciforma sp. nov.

Candidatus Helicobacter prosciforma (NL. fem. n. *prosciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_D sp003288905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003288905.1. The GC content of the type genome is 34.07 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Helicobacter antiratio sp. nov.

Candidatus Helicobacter antiratio (NL. fem. n. *antiratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_E sp003660395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003660395.1. The GC content of the type genome is 47.87 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Helicobacter conaribra sp. nov.

Candidatus Helicobacter conaribra (NL. fem. n. *conaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_E sp003660385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003660265.1. The GC content of the type genome is 45.78 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Helicobacter vocifitrix sp. nov.

Candidatus Helicobacter vocifitrix (NL. fem. n. *vocifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_E sp003660355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_003660355.1. The GC content of the type genome is 47.36 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Helicobacter minuredo sp. nov.

Candidatus Helicobacter minuredo (NL. fem. n. *minuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_F sp003364115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003364115.1. The GC content of the type genome is 41.41 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Helicobacter nefanitoga sp. nov.

Candidatus Helicobacter nefanitoga (NL. fem. n. *nefanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_F sp002287135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002287135.1. The GC content of the type genome is 37.8 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Helicobacter octacifica sp. nov.

Candidatus Helicobacter octacifica (NL. fem. n. *octacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_F sp003288805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003288805.1. The GC content of the type genome is 38.5 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Helicobacter faticitoga sp. nov.

Candidatus Helicobacter faticitoga (NL. fem. n. *faticitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_G sp001693335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001693335.1. The GC content of the type genome is 40.79 % and the genome length is 1.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Stomach".

Description of *Candidatus* Helicobacter velivicella sp. nov.

Candidatus Helicobacter velivicella (NL. fem. n. *velivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_H sp900199585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900199535.1. The GC content of the type genome is 32.38 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Helicobacter hemidedo sp. nov.

Candidatus Helicobacter hemidedo (NL. fem. n. *hemidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_I sp002272925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272925.1. The GC content of the type genome is 34.72 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Helicobacter sacopitica sp. nov.

Candidatus Helicobacter sacopitica (NL. fem. n. *sacopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_I sp002272875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272875.1. The GC content of the type genome is 35.71 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Helicobacter ambifibra sp. nov.

Candidatus Helicobacter ambifibra (NL. fem. n. *ambifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272835.1. The GC content of the type genome is 33.75 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Helicobacter conipilega sp. nov.

Candidatus Helicobacter conipilega (NL. fem. n. *conipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272865.1. The GC content of the type genome is 41.36 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Helicobacter exsurisca sp. nov.

Candidatus Helicobacter exsurisca (NL. fem. n. *exsurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272895.1. The GC content of the type genome is 34.98 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Helicobacter inhumitica sp. nov.

Candidatus Helicobacter inhumitica (NL. fem. n. *inhumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272785*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272785.1. The GC content of the type genome is 32.55 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Helicobacter opercugo sp. nov.

Candidatus Helicobacter opercugo (NL. fem. n. *opercugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272795.1. The GC content of the type genome is 33.49 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Helicobacter verecimonia sp. nov.

Candidatus Helicobacter verecimonia (NL. fem. n. *verecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Helicobacter_J sp002272825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002272825.1. The GC content of the type genome is 41.39 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Hemidaria cerimitoga sp. nov.

Candidatus Hemidaria cerimitoga (NL. fem. n. *cerimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp900542395*. The type genome for the species is the GenBank assembly GCA_900542395.1. The GC content of the type genome is 60.37 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Hemidaria gen. nov.

Candidatus Hemidaria (NL. fem. n. *Hemidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SFFH01*. The type species for the genus is *Candidatus* Hemidaria cerimitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Hemidaria direpax sp. nov.

Candidatus Hemidaria direpax (NL. fem. n. *direpax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp004555535*. The type genome for the species is the GenBank assembly GCA_004555535.1. The GC content of the type genome is 63.74 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Hemidaria excaniforma sp. nov.

Candidatus Hemidaria excaniforma (NL. fem. n. *excaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp004556985*. The type genome for the species is the GenBank assembly GCA_004556985.1. The GC content of the type genome is 63.71 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Hemidaria genocago sp. nov.

Candidatus Hemidaria genocago (NL. fem. n. *genocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp900542445*. The type genome for the species is the GenBank assembly GCA_900542445.1. The GC content of the type genome is 57.14 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Hemidaria inrevimonas sp. nov.

Candidatus Hemidaria inrevimonas (NL. fem. n. *inrevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SFFH01 sp902767305*. The type genome for the species is the GenBank assembly GCA_902767305.1. The GC content of the type genome is 50.12 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Hemidaria lenocentia sp. nov.

Candidatus Hemidaria lenocentia (NL. fem. n. *lenocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp900548125*. The type genome for the species is the GenBank assembly RS_GCF_900761605.1. The GC content of the type genome is 55.03 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Hemidaria negidisca sp. nov.

Candidatus Hemidaria negidisca (NL. fem. n. *negidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp004557905*. The type genome for the species is the GenBank assembly GCA_004557905.1. The GC content of the type genome is 62.22 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Hemidaria repagitio sp. nov.

Candidatus Hemidaria repagitio (NL. fem. n. *repagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp002395225*. The type genome for the species is the GenBank assembly GCA_002395225.1. The GC content of the type genome is 52.91 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Hemidaria toluticula sp. nov.

Candidatus Hemidaria toluticula (NL. fem. n. *toluticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp900313545*. The type genome for the species is the GenBank assembly GCA_902772995.1. The GC content of the type genome is 58.39 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Hemidaria vanitax sp. nov.

Candidatus Hemidaria vanitax (NL. fem. n. *vanitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFH01 sp902781095*. The type genome for the species is the GenBank assembly GCA_902781095.1. The GC content of the type genome is 61.21 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Hemidella osciledo sp. nov.

Candidatus Hemidella osciledo (NL. fem. n. *osciledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIFEU01 sp903789505*. The type genome for the species is the GenBank assembly GCA_903789505.1. The GC content of the type genome is 69.46 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Hemidella gen. nov.

Candidatus Hemidella (NL. fem. n. *Hemidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIFEU01*. The type species for the genus is *Candidatus* Hemidella osciledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS124*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recocanaceae.

Description of *Candidatus* Hemidella tametastra sp. nov.

Candidatus Hemidella tametastra (NL. fem. n. *tametastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIFEU01 sp902783515*. The type genome for the species is the GenBank assembly GCA_902783515.1. The GC content of the type genome is 68.74 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Hemidida aseptessa sp. nov.

Candidatus Hemidida aseptessa (NL. fem. n. *aseptessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp004124535*. The type genome for the species is the GenBank assembly RS_GCF_004124535.1. The GC content of the type genome is 41.61 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Hemidida gen. nov.

Candidatus Hemidida (NL. fem. n. *Hemidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2126*. The type species for the genus is *Candidatus* Hemidida aseptessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Hemidida canacitrix sp. nov.

Candidatus Hemidida canacitrix (NL. fem. n. *canacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp002730315*. The type genome for the species is the GenBank assembly GCA_002730315.1. The GC content of the type genome is 42.0 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Hemidida defanilenta sp. nov.

Candidatus Hemidida defanilenta (NL. fem. n. *defanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp003503735*. The type genome for the species is the GenBank assembly GCA_003503735.1. The GC content of the type genome is 42.93 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Hemidida detenivita sp. nov.

Candidatus Hemidida detenivita (NL. fem. n. *detenivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp002436185*. The type genome for the species is the GenBank assembly GCA_002685605.1. The GC content of the type genome is 39.11 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Hemidida luceritia sp. nov.

Candidatus Hemidida luceritia (NL. fem. n. *luceritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp014381755*. The type genome for the species is the GenBank assembly GCA_014381755.1. The GC content of the type genome is 38.48 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Hemidida maxilicula sp. nov.

Candidatus Hemidida maxilicula (NL. fem. n. *maxilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp004124385*. The type genome for the species is the GenBank assembly RS_GCF_004124385.1. The GC content of the type genome is 38.12 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Hemidida notacitio sp. nov.

Candidatus Hemidida notacitio (NL. fem. n. *notacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp002713385*. The type genome for the species is the GenBank assembly GCA_002713385.1. The GC content of the type genome is 40.9 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Hemidida semidifica sp. nov.

Candidatus Hemidida semidifica (NL. fem. n. *semidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp002256485*. The type genome for the species is the GenBank assembly GCA_002256485.1. The GC content of the type genome is 37.79 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Hemidida siticousia sp. nov.

Candidatus Hemidida siticousia (NL. fem. n. *siticousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2126 sp012964125*. The type genome for the species is the GenBank assembly GCA_012964125.1. The GC content of the type genome is 41.31 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Hemidosa invigentia sp. nov.

Candidatus Hemidosa invigentia (NL. fem. n. *invigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-38 sp003233095*. The type genome for the species is the GenBank assembly GCA_003233095.1. The GC content of the type genome is 55.37 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Hemidosa gen. nov.

Candidatus Hemidosa (NL. fem. n. *Hemidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-38*. The type species for the genus is *Candidatus* Hemidosa invigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hemidosaceae.

Description of *Candidatus* Hemidosaceae fam. nov.

Candidatus Hemidosaceae (NL. fem. n. *Hemidosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-38.* The type genus for the taxon is *Candidatus* Hemidosa .

According to GTDB R06-RS202, this family belongs to the order *Xanthomonadales*.

Description of *Candidatus* Hemitana mutabugo sp. nov.

Candidatus Hemitana mutabugo (NL. fem. n. *mutabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3903 sp002391625*. The type genome for the species is the GenBank assembly GCA_002391625.1. The GC content of the type genome is 38.1 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Hemitana gen. nov.

Candidatus Hemitana (NL. fem. n. *Hemitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3903*. The type species for the genus is *Candidatus* Hemitana mutabugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hemitaria myalgivita sp. nov.

Candidatus Hemitaria myalgivita (NL. fem. n. *myalgivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-49 sp002085265*. The type genome for the species is the GenBank assembly GCA_002085265.1. The GC content of the type genome is 39.49 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Hemitaria gen. nov.

Candidatus Hemitaria (NL. fem. n. *Hemitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-49*. The type species for the genus is *Candidatus* Hemitaria myalgivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-49*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hemitariaceae.

Description of *Candidatus* Hemitariaceae fam. nov.

Candidatus Hemitariaceae (NL. fem. n. *Hemitariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-49.* The type genus for the taxon is *Candidatus* Hemitaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-49*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hemitariales.

Description of *Candidatus* Hemitariales ord. nov.

Candidatus Hemitariales (NL. fem. n. *Hemitariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-49.* The type genus for the taxon is *Candidatus* Hemitaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Hemitella ammixitura sp. nov.

Candidatus Hemitella ammixitura (NL. fem. n. *ammixitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp007123695*. The type genome for the species is the GenBank assembly GCA_007123695.1. The GC content of the type genome is 66.91 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Hemitella gen. nov.

Candidatus Hemitella (NL. fem. n. *Hemitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Arctic95D-9*. The type species for the genus is *Candidatus* Hemitella ammixitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Hemitella annucicula sp. nov.

Candidatus Hemitella annucicula (NL. fem. n. *annucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002396885*. The type genome for the species is the GenBank assembly GCA_002396885.1. The GC content of the type genome is 62.1 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Hemitella calipicella sp. nov.

Candidatus Hemitella calipicella (NL. fem. n. *calipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002323995*. The type genome for the species is the GenBank assembly GCA_002291675.1. The GC content of the type genome is 51.7 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Hemitella carucitas sp. nov.

Candidatus Hemitella carucitas (NL. fem. n. *carucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002344525*. The type genome for the species is the GenBank assembly GCA_002344525.1. The GC content of the type genome is 65.38 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Hemitella derecedo sp. nov.

Candidatus Hemitella derecedo (NL. fem. n. *derecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002344215*. The type genome for the species is the GenBank assembly GCA_002344215.1. The GC content of the type genome is 58.1 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Hemitella diponicella sp. nov.

Candidatus Hemitella diponicella (NL. fem. n. *diponicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002726915*. The type genome for the species is the GenBank assembly GCA_002726915.1. The GC content of the type genome is 51.74 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Hemitella oppugago sp. nov.

Candidatus Hemitella oppugago (NL. fem. n. *oppugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002422425*. The type genome for the species is the GenBank assembly GCA_002422425.1. The GC content of the type genome is 60.28 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Hemitella scaccatio sp. nov.

Candidatus Hemitella scaccatio (NL. fem. n. *scaccatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002288445*. The type genome for the species is the GenBank assembly GCA_002288445.1. The GC content of the type genome is 61.72 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Hemitella siligitica sp. nov.

Candidatus Hemitella siligitica (NL. fem. n. *siligitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp012719225*. The type genome for the species is the GenBank assembly GCA_012719225.1. The GC content of the type genome is 62.71 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Hemitella sotulibula sp. nov.

Candidatus Hemitella sotulibula (NL. fem. n. *sotulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Arctic95D-9 sp013213905*. The type genome for the species is the GenBank assembly GCA_013213905.1. The GC content of the type genome is 56.18 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Hemitella turilago sp. nov.

Candidatus Hemitella turilago (NL. fem. n. *turilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002862135*. The type genome for the species is the GenBank assembly GCA_002862135.1. The GC content of the type genome is 54.52 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Hemitella uberribula sp. nov.

Candidatus Hemitella uberribula (NL. fem. n. *uberribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic95D-9 sp002698785*. The type genome for the species is the GenBank assembly GCA_002698785.1. The GC content of the type genome is 52.73 % and the genome length is 7.02 Mbp.

Description of *Candidatus* Hemitia diponitura sp. nov.

Candidatus Hemitia diponitura (NL. fem. n. *diponitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLNW01 sp009699605*. The type genome for the species is the GenBank assembly GCA_009700635.1. The GC content of the type genome is 67.18 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Hemitia gen. nov.

Candidatus Hemitia (NL. fem. n. *Hemitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLNW01*. The type species for the genus is *Candidatus* Hemitia diponitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WLNW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Hemitiaceae.

Description of *Candidatus* Hemitiaceae fam. nov.

Candidatus Hemitiaceae (NL. fem. n. *Hemitiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WLNW01*. The type genus for the taxon is *Candidatus* Hemitia .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Hemitida immadicula sp. nov.

Candidatus Hemitida immadicula (NL. fem. n. *immadicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Z2-YC6860 sp001579845*. The type genome for the species is the GenBank assembly RS_GCF_001579845.1. The GC content of the type genome is 63.53 % and the genome length is 8.19 Mbp.

Description of *Candidatus* Hemitida gen. nov.

Candidatus Hemitida (NL. fem. n. *Hemitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Z2-YC6860*. The type species for the genus is *Candidatus* Hemitida immadicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hemitida maxumentia sp. nov.

Candidatus Hemitida maxumentia (NL. fem. n. *maxumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Z2-YC6860 sp003169835*. The type genome for the species is the GenBank assembly GCA_003169835.1. The GC content of the type genome is 60.5 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Hemitida vivifitia sp. nov.

Candidatus Hemitida vivifitia (NL. fem. n. *vivifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Z2-YC6860 sp009694215*. The type genome for the species is the GenBank assembly GCA_009694215.1. The GC content of the type genome is 65.45 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Hemitosa cerifago sp. nov.

Candidatus Hemitosa cerifago (NL. fem. n. *cerifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002695445*. The type genome for the species is the GenBank assembly GCA_902564105.1. The GC content of the type genome is 32.84 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Hemitosa gen. nov.

Candidatus Hemitosa (NL. fem. n. *Hemitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8316*. The type species for the genus is *Candidatus* Hemitosa cerifago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hemitosa cisalitura sp. nov.

Candidatus Hemitosa cisalitura (NL. fem. n. *cisalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp902584445*. The type genome for the species is the GenBank assembly GCA_902584445.1. The GC content of the type genome is 33.62 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Hemitosa cocibitura sp. nov.

Candidatus Hemitosa cocibitura (NL. fem. n. *cocibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002716845*. The type genome for the species is the GenBank assembly GCA_002716845.1. The GC content of the type genome is 38.87 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Hemitosa demogastra sp. nov.

Candidatus Hemitosa demogastra (NL. fem. n. *demogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp902515395*. The type genome for the species is the GenBank assembly GCA_902560975.1. The GC content of the type genome is 33.48 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Hemitosa denecatio sp. nov.

Candidatus Hemitosa denecatio (NL. fem. n. *denecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp003538555*. The type genome for the species is the GenBank assembly GCA_003538555.1. The GC content of the type genome is 40.73 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Hemitosa dimadessa sp. nov.

Candidatus Hemitosa dimadessa (NL. fem. n. *dimadessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002687665*. The type genome for the species is the GenBank assembly GCA_002687665.1. The GC content of the type genome is 37.04 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Hemitosa enimvimonas sp. nov.

Candidatus Hemitosa enimvimonas (NL. fem. n. *enimvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp009936675*. The type genome for the species is the GenBank assembly GCA_009936675.1. The GC content of the type genome is 40.55 %

and the genome length is 1.73 Mbp.

Description of *Candidatus* Hemitosa excetifica sp. nov.

Candidatus Hemitosa excetifica (NL. fem. n. *excetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp902619315*. The type genome for the species is the GenBank assembly GCA_902619315.1. The GC content of the type genome is 36.68 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Hemitosa fefelimonia sp. nov.

Candidatus Hemitosa fefelimonia (NL. fem. n. *fefelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002711215*. The type genome for the species is the GenBank assembly GCA_002170965.1. The GC content of the type genome is 35.82 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Hemitosa rarefitas sp. nov.

Candidatus Hemitosa rarefitas (NL. fem. n. *rarefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp902590705*. The type genome for the species is the GenBank assembly GCA_902590705.1. The GC content of the type genome is 33.59 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Hemitosa recomax sp. nov.

Candidatus Hemitosa recomax (NL. fem. n. *recomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002171295*. The type genome for the species is the GenBank assembly GCA_002171295.2. The GC content of the type genome is 34.02 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Hemitosa retecimonia sp. nov.

Candidatus Hemitosa retecimonia (NL. fem. n. *retecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002390455*. The type genome for the species is the GenBank assembly GCA_002168005.2. The GC content of the type genome is 39.16 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Hemitosa satacibula sp. nov.

Candidatus Hemitosa satacibula (NL. fem. n. *satacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002364535*. The type genome for the species is the GenBank assembly GCA_002364535.1. The GC content of the type genome is 39.18 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Hemitosa valefibula sp. nov.

Candidatus Hemitosa valefibula (NL. fem. n. *valefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp902609035*. The type genome for the species is the GenBank assembly GCA_902609035.1. The GC content of the type genome is 35.89 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Hemitosa vigenilega sp. nov.

Candidatus Hemitosa vigenilega (NL. fem. n. *vigenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8316 sp002336305*. The type genome for the species is the GenBank assembly GCA_002336305.1. The GC content of the type genome is 36.83 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Hemitula exadvitrix sp. nov.

Candidatus Hemitula exadvitrix (NL. fem. n. *exadvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBX01 sp009784335*. The type genome for the species is the GenBank assembly GCA_009784335.1. The GC content of the type genome is 43.34 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Hemitula gen. nov.

Candidatus Hemitula (NL. fem. n. *Hemitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBX01*. The type species for the genus is *Candidatus* Hemitula exadvitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hemitulaceae.

Description of *Candidatus* Hemitulaceae fam. nov.

Candidatus Hemitulaceae (NL. fem. n. *Hemitulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRBX01.* The type genus for the taxon is *Candidatus* Hemitula .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales*.

Description of *Candidatus* Henriciella abveriforma sp. nov.

Candidatus Henriciella abveriforma (NL. fem. n. *abveriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp012960415*. The type genome for the species is the GenBank assembly GCA_012960415.1. The GC content of the type genome is 59.91 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Henriciella demogax sp. nov.

Candidatus Henriciella demogax (NL. fem. n. *demogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Henriciella sp003576285*. The type genome for the species is the GenBank assembly RS_GCF_003576295.1. The GC content of the type genome is 61.27 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Henriciella excetousia sp. nov.

Candidatus Henriciella excetousia (NL. fem. n. *excetousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp013214545*. The type genome for the species is the GenBank assembly GCA_013214545.1. The GC content of the type genome is 57.49 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Henriciella ingurugo sp. nov.

Candidatus Henriciella ingurugo (NL. fem. n. *ingurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp013213825*. The type genome for the species is the GenBank assembly GCA_013213825.1. The GC content of the type genome is 54.8 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Henriciella locupimonia sp. nov.

Candidatus Henriciella locupimonia (NL. fem. n. *locupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp002172915*. The type genome for the species is the GenBank assembly GCA_002172915.1. The GC content of the type genome is 54.68 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Henriciella mahelibula sp. nov.

Candidatus Henriciella mahelibula (NL. fem. n. *mahelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp002733705*. The type genome for the species is the GenBank assembly GCA_002733705.1. The GC content of the type genome is 61.36 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Henriciella opercatio sp. nov.

Candidatus Henriciella opercatio (NL. fem. n. *opercatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
