A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp013213785*. The type genome for the species is the GenBank assembly GCA_013213785.1. The GC content of the type genome is 54.95 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Henriciella redunitrix sp. nov.

Candidatus Henriciella redunitrix (NL. fem. n. *redunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Henriciella sp001854405*. The type genome for the species is the GenBank assembly RS_GCF_001854405.1. The GC content of the type genome is 58.14 % and the genome length is 3.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "non-axenic unialgal culture; shallow tropical waters; normally from coral reef substrate".

Description of *Candidatus* Herbaspirillum adpinitica sp. nov.

Candidatus Herbaspirillum adpinitica (NL. fem. n. *adpinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp000282575*. The type genome for the species is the GenBank assembly RS_GCF_000282575.1. The GC content of the type genome is 63.79 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Herbaspirillum cuferilenta sp. nov.

Candidatus Herbaspirillum cuferilenta (NL. fem. n. *cuferilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp014192645*. The type genome for the species is the GenBank assembly RS_GCF_014192615.1. The GC content of the type genome is 54.48 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Herbaspirillum derunitas sp. nov.

Candidatus Herbaspirillum derunitas (NL. fem. n. *derunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp002257565*. The type genome for the species is the GenBank assembly RS_GCF_002257565.1. The GC content of the type genome is 57.08 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Herbaspirillum enharetta sp. nov.

Candidatus Herbaspirillum enharetta (NL. fem. n. *enharetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp000282135*. The type genome for the species is the GenBank assembly RS_GCF_000282135.1. The GC content of the type genome is 59.75 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Herbaspirillum ermelitio sp. nov.

Candidatus Herbaspirillum ermelitio (NL. fem. n. *ermelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp000577615*. The type genome for the species is the GenBank assembly RS_GCF_000577615.1. The GC content of the type genome is 59.23 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Herbaspirillum inlepilega sp. nov.

Candidatus Herbaspirillum inlepilega (NL. fem. n. *inlepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp013426985*. The type genome for the species is the GenBank assembly RS_GCF_013426985.1. The GC content of the type genome is 63.0 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Herbaspirillum inrefitudo sp. nov.

Candidatus Herbaspirillum inrefitudo (NL. fem. n. *inrefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp004134995*. The type genome for the species is the GenBank assembly RS_GCF_004134995.1. The GC content of the type genome is 60.34 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Herbaspirillum monimitica sp. nov.

Candidatus Herbaspirillum monimitica (NL. fem. n. *monimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp004563925*. The type genome for the species is the GenBank assembly RS_GCF_003400355.1. The GC content of the type genome is 60.44 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Herbaspirillum subinitio sp. nov.

Candidatus Herbaspirillum subinitio (NL. fem. n. *subinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp000261365*. The type genome for the species is the GenBank assembly RS_GCF_000261365.1. The GC content of the type genome is 62.46 % and the genome length is 5.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizosphere soil".

Description of *Candidatus* Herbaspirillum totidivita sp. nov.

Candidatus Herbaspirillum totidivita (NL. fem. n. *totidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbaspirillum sp006715495*. The type genome for the species is the GenBank assembly RS_GCF_006715445.1. The GC content of the type genome is 63.11 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Herbiconiux cohuritrix sp. nov.

Candidatus Herbiconiux cohuritrix (NL. fem. n. *cohuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbiconiux sp005502775*. The type genome for the species is the

GenBank assembly RS_GCF_005503235.1. The GC content of the type genome is 69.91 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Herbiconiux rarefastra sp. nov.

Candidatus Herbiconiux rarefastra (NL. fem. n. *rarefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbiconiux sp013113715*. The type genome for the species is the GenBank assembly RS_GCF_013113715.1. The GC content of the type genome is 70.29 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Herbiconiux velifitura sp. nov.

Candidatus Herbiconiux velifitura (NL. fem. n. *velifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbiconiux sp004297105*. The type genome for the species is the GenBank assembly GCA_004297105.1. The GC content of the type genome is 68.63 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Herbinix acricitudo sp. nov.

Candidatus Herbinix acricitudo (NL. fem. n. *acricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012519905*. The type genome for the species is the GenBank assembly GCA_012519905.1. The GC content of the type genome is 36.64 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Herbinix alluvilega sp. nov.

Candidatus Herbinix alluvilega (NL. fem. n. *alluvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012839235*. The type genome for the species is the GenBank assembly GCA_012839235.1. The GC content of the type genome is 35.35 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Herbinix ampenibula sp. nov.

Candidatus Herbinix ampenibula (NL. fem. n. *ampenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012519565*. The type genome for the species is the GenBank assembly GCA_012519565.1. The GC content of the type genome is 34.87 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Herbinix apogrago sp. nov.

Candidatus Herbinix apogrago (NL. fem. n. *apogrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012839085*. The type genome for the species is the GenBank assembly GCA_012839085.1. The GC content of the type genome is 35.83 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Herbinix appiciforma sp. nov.

Candidatus Herbinix appiciforma (NL. fem. n. *appiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp004294845*. The type genome for the species is the GenBank assembly GCA_004294845.1. The GC content of the type genome is 36.99 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Herbinix bacifimonia sp. nov.

Candidatus Herbinix bacifimonia (NL. fem. n. *bacifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012839295*. The type genome for the species is the GenBank assembly GCA_012839295.1. The GC content of the type genome is 43.84 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Herbinix cadavimonas sp. nov.

Candidatus Herbinix cadavimonas (NL. fem. n. *cadavimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012519195*. The type genome for the species is the GenBank assembly GCA_012519195.1. The GC content of the type genome is 37.07 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Herbinix defuliforma sp. nov.

Candidatus Herbinix defuliforma (NL. fem. n. *defuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp014174405*. The type genome for the species is the GenBank assembly GCA_014174405.1. The GC content of the type genome is 38.47 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Herbinix dibapicella sp. nov.

Candidatus Herbinix dibapicella (NL. fem. n. *dibapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012520635*. The type genome for the species is the GenBank assembly GCA_012520635.1. The GC content of the type genome is 34.56 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Herbinix everbessa sp. nov.

Candidatus Herbinix everbessa (NL. fem. n. *everbessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp002307215*. The type genome for the species is the GenBank assembly GCA_002307215.1. The GC content of the type genome is 38.61 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Herbinix excucicella sp. nov.

Candidatus Herbinix excucicella (NL. fem. n. *excucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012523925*. The type genome for the species is the GenBank assembly GCA_012523925.1. The GC content of the type genome is 35.96 %

and the genome length is 2.77 Mbp.

Description of *Candidatus* Herbinix fatifisca sp. nov.

Candidatus Herbinix fatifisca (NL. fem. n. *fatifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012837605*. The type genome for the species is the GenBank assembly GCA_012837605.1. The GC content of the type genome is 37.97 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Herbinix immobitrix sp. nov.

Candidatus Herbinix immobitrix (NL. fem. n. *immobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012837865*. The type genome for the species is the GenBank assembly GCA_012837865.1. The GC content of the type genome is 30.25 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Herbinix locelifica sp. nov.

Candidatus Herbinix locelifica (NL. fem. n. *locelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012523775*. The type genome for the species is the GenBank assembly GCA_012523775.1. The GC content of the type genome is 39.02 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Herbinix nidifimonas sp. nov.

Candidatus Herbinix nidifimonas (NL. fem. n. *nidifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012518935*. The type genome for the species is the GenBank assembly GCA_012518935.1. The GC content of the type genome is 35.18 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Herbinix ossarousia sp. nov.

Candidatus Herbinix ossarousia (NL. fem. n. *ossarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp003519685*. The type genome for the species is the GenBank assembly GCA_003519685.1. The GC content of the type genome is 41.51 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Herbinix pragmimonas sp. nov.

Candidatus Herbinix pragmimonas (NL. fem. n. *pragmimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp002329645*. The type genome for the species is the GenBank assembly GCA_002329645.1. The GC content of the type genome is 43.24 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Herbinix relecitia sp. nov.

Candidatus Herbinix relecitia (NL. fem. n. *relecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012735495*. The type genome for the species is the GenBank assembly GCA_012735495.1. The GC content of the type genome is 44.85 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Herbinix repagugo sp. nov.

Candidatus Herbinix repagugo (NL. fem. n. *repagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012522735*. The type genome for the species is the GenBank assembly GCA_012522735.1. The GC content of the type genome is 37.3 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Herbinix vanititica sp. nov.

Candidatus Herbinix vanititica (NL. fem. n. *vanititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbinix sp012518975*. The type genome for the species is the GenBank assembly GCA_012518975.1. The GC content of the type genome is 35.43 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Herbivorax desupitia sp. nov.

Candidatus Herbivorax desupitia (NL. fem. n. *desupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbivorax sp012517995*. The type genome for the species is the GenBank assembly GCA_012517995.1. The GC content of the type genome is 33.54 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Herbivorax illibigena sp. nov.

Candidatus Herbivorax illibigena (NL. fem. n. *illibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herbivorax sp012841175*. The type genome for the species is the GenBank assembly GCA_012841175.1. The GC content of the type genome is 31.42 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Herinana documitica sp. nov.

Candidatus Herinana documitica (NL. fem. n. *documitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12079 sp001029775*. The type genome for the species is the GenBank assembly GCA_000990745.1. The GC content of the type genome is 34.71 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Herinana gen. nov.

Candidatus Herinana (NL. fem. n. *Herinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12079*. The type species for the genus is *Candidatus* Herinana documitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12079*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Herinanaceae.

Description of *Candidatus* Herinanaceae fam. nov.

Candidatus Herinanaceae (NL. fem. n. *Herinanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12079.* The type genus for the taxon is *Candidatus* Herinana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Herinana palifastra sp. nov.

Candidatus Herinana palifastra (NL. fem. n. *palifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12079 sp001774495*. The type genome for the species is the GenBank assembly GCA_001774495.1. The GC content of the type genome is 34.94 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Herinaria recucessa sp. nov.

Candidatus Herinaria recucessa (NL. fem. n. *recucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-81 sp001304015*. The type genome for the species is the GenBank assembly GCA_001304015.1. The GC content of the type genome is 52.83 % and the genome length is 3.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Herinaria gen. nov.

Candidatus Herinaria (NL. fem. n. *Herinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-81*. The type species for the genus is *Candidatus* Herinaria recucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-81*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Herinariaceae.

Description of *Candidatus* Herinariaceae fam. nov.

Candidatus Herinariaceae (NL. fem. n. *Herinariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-81.* The type genus for the taxon is *Candidatus* Herinaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-81*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Herinariales.

Description of *Candidatus* Herinariales ord. nov.

Candidatus Herinariales (NL. fem. n. *Herinariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-81.* The type genus for the taxon is *Candidatus* Herinaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *DG-26_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bucelidae.

Description of *Candidatus* Herinella cemenisca sp. nov.

Candidatus Herinella cemenisca (NL. fem. n. *cemenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-45-10 sp001777995*. The type genome for the species is the GenBank assembly GCA_001780235.1. The GC content of the type genome is 45.11 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Herinella gen. nov.

Candidatus Herinella (NL. fem. n. *Herinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-45-10*. The type species for the genus is *Candidatus* Herinella cemenisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-47-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacellaceae.

Description of *Candidatus* Herinella enuntitudo sp. nov.

Candidatus Herinella enuntitudo (NL. fem. n. *enuntitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-45-10 sp002773575*. The type genome for the species is the GenBank assembly GCA_002773575.1. The GC content of the type genome is 44.44 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Herinida recogimonia sp. nov.

Candidatus Herinida recogimonia (NL. fem. n. *recogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9554 sp003512825*. The type genome for the species is the GenBank assembly GCA_003485125.1. The GC content of the type genome is 59.21 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Herinida gen. nov.

Candidatus Herinida (NL. fem. n. *Herinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9554*. The type species for the genus is *Candidatus* Herinida recogimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Herinida turilitudo sp. nov.

Candidatus Herinida turilitudo (NL. fem. n. *turilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9554 sp009922885*. The type genome for the species is the GenBank assembly GCA_009922885.1. The GC content of the type genome is 60.65 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Herinosa masocugo sp. nov.

Candidatus Herinosa masocugo (NL. fem. n. *masocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHW01 sp007135955*. The type genome for the species is the GenBank assembly GCA_007117855.1. The GC content of the type genome is 44.17 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Herinosa gen. nov.

Candidatus Herinosa (NL. fem. n. *Herinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLHW01*. The type species for the genus is *Candidatus* Herinosa masocugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Herinosaceae.

Description of *Candidatus* Herinosaceae fam. nov.

Candidatus Herinosaceae (NL. fem. n. *Herinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLHW01*. The type genus for the taxon is *Candidatus* Herinosa .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Herinosa timefitura sp. nov.

Candidatus Herinosa timefitura (NL. fem. n. *timefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHW01 sp007132685*. The type genome for the species is the GenBank assembly GCA_007132685.1. The GC content of the type genome is 47.04 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Herinula gabinago sp. nov.

Candidatus Herinula gabinago (NL. fem. n. *gabinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1670 sp902406135*. The type genome for the species is the GenBank assembly GCA_902406135.1. The GC content of the type genome is 40.67 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Herinula gen. nov.

Candidatus Herinula (NL. fem. n. *Herinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1670*. The type species for the genus is *Candidatus* Herinula gabinago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Herinula minagigena sp. nov.

Candidatus Herinula minagigena (NL. fem. n. *minagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1670 sp900546215*. The type genome for the species is the GenBank assembly GCA_900546215.1. The GC content of the type genome is 40.82 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Herinula tenilago sp. nov.

Candidatus Herinula tenilago (NL. fem. n. *tenilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UMGS1670 sp900548595*. The type genome for the species is the GenBank assembly RS_GCF_900757895.1. The GC content of the type genome is 39.04 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Herinula triclimonas sp. nov.

Candidatus Herinula triclimonas (NL. fem. n. *triclimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1670 sp900553995*. The type genome for the species is the GenBank assembly GCA_900553995.1. The GC content of the type genome is 39.5 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Herminiimonas agripetta sp. nov.

Candidatus Herminiimonas agripetta (NL. fem. n. *agripetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herminiimonas sp001464355*. The type genome for the species is the GenBank assembly GCA_001464355.1. The GC content of the type genome is 51.83 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Herminiimonas dilogatica sp. nov.

Candidatus Herminiimonas dilogatica (NL. fem. n. *dilogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herminiimonas sp003852535*. The type genome for the species is the GenBank assembly RS_GCF_003852535.1. The GC content of the type genome is 54.01 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Herminiimonas exoscax sp. nov.

Candidatus Herminiimonas exoscax (NL. fem. n. *exoscax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herminiimonas sp000013625*. The type genome for the species is the GenBank assembly RS_GCF_000013625.1. The GC content of the type genome is 54.23

% and the genome length is 4.11 Mbp.

Description of *Candidatus* Herminiimonas recomitrix sp. nov.

Candidatus Herminiimonas recomitrix (NL. fem. n. *recomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herminiimonas sp903993245*. The type genome for the species is the GenBank assembly RS_GCF_903993245.1. The GC content of the type genome is 54.35 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Herminiimonas rorulax sp. nov.

Candidatus Herminiimonas rorulax (NL. fem. n. *rorulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Herminiimonas sp002384815*. The type genome for the species is the GenBank assembly GCA_002384815.1. The GC content of the type genome is 53.54 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Hexagana arcipessa sp. nov.

Candidatus Hexagana arcipessa (NL. fem. n. *arcipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp002393905*. The type genome for the species is the GenBank assembly GCA_002393905.1. The GC content of the type genome is 36.24 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Hexagana gen. nov.

Candidatus Hexagana (NL. fem. n. *Hexagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3207*. The type species for the genus is *Candidatus* Hexagana arcipessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Hexagana catafatio sp. nov.

Candidatus Hexagana catafatio (NL. fem. n. *catafatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp902796125*. The type genome for the species is the GenBank assembly GCA_902796125.1. The GC content of the type genome is 35.67 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Hexagana cuticitrix sp. nov.

Candidatus Hexagana cuticitrix (NL. fem. n. *cuticitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp902768335*. The type genome for the species is the GenBank assembly GCA_902768335.1. The GC content of the type genome is 35.56 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Hexagana decupibra sp. nov.

Candidatus Hexagana decupibra (NL. fem. n. *decupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp002395065*. The type genome for the species is the GenBank assembly GCA_002395065.1. The GC content of the type genome is 36.42 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Hexagana defetedo sp. nov.

Candidatus Hexagana defetedo (NL. fem. n. *defetedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp902787955*. The type genome for the species is the GenBank assembly GCA_902787955.1. The GC content of the type genome is 33.59 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Hexagana fidenousia sp. nov.

Candidatus Hexagana fidenousia (NL. fem. n. *fidenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp902774655*. The type genome for the species is the GenBank assembly GCA_902774655.1. The GC content of the type genome is 34.23 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Hexagana inoblentia sp. nov.

Candidatus Hexagana inoblentia (NL. fem. n. *inoblentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp002363735*. The type genome for the species is the GenBank assembly GCA_002363735.1. The GC content of the type genome is 34.65 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Hexagana lavabatio sp. nov.

Candidatus Hexagana lavabatio (NL. fem. n. *lavabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp002494205*. The type genome for the species is the GenBank assembly GCA_002494205.1. The GC content of the type genome is 33.83 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Hexagana nosocicula sp. nov.

Candidatus Hexagana nosocicula (NL. fem. n. *nosocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp003501485*. The type genome for the species is the GenBank assembly GCA_003501485.1. The GC content of the type genome is 30.65 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Hexagana obvolousia sp. nov.

Candidatus Hexagana obvolousia (NL. fem. n. *obvolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3207 sp902797855*. The type genome for the species is the GenBank assembly GCA_902797855.1. The GC content of the type genome is 34.15 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Hexagana podagago sp. nov.

Candidatus Hexagana podagago (NL. fem. n. *podagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3207 sp900314585*. The type genome for the species is the GenBank assembly GCA_902755175.1. The GC content of the type genome is 36.87 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Hexagaria desupentia sp. nov.

Candidatus Hexagaria desupentia (NL. fem. n. *desupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-18 sp001772615*. The type genome for the species is the GenBank assembly GCA_001772615.1. The GC content of the type genome is 40.47 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Hexagaria gen. nov.

Candidatus Hexagaria (NL. fem. n. *Hexagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-18*. The type species for the genus is *Candidatus* Hexagaria desupentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-41-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexagariaceae.

Description of *Candidatus* Hexagariaceae fam. nov.

Candidatus Hexagariaceae (NL. fem. n. *Hexagariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *2-01-FULL-41-18.* The type genus for the taxon is *Candidatus* Hexagaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA101185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deceniales.

Description of *Candidatus* Hexagella invetitrix sp. nov.

Candidatus Hexagella invetitrix (NL. fem. n. *invetitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBH01 sp005239795*. The type genome for the species is the GenBank assembly GCA_005239795.1. The GC content of the type genome is 63.24 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Hexagella gen. nov.

Candidatus Hexagella (NL. fem. n. *Hexagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBH01*. The type species for the genus is *Candidatus* Hexagella invetitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexagellaceae.

Description of *Candidatus* Hexagellaceae fam. nov.

Candidatus Hexagellaceae (NL. fem. n. *Hexagellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBH01.* The type genus for the taxon is *Candidatus* Hexagella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hexagellales.

Description of *Candidatus* Hexagellales ord. nov.

Candidatus Hexagellales (NL. fem. n. *Hexagellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBH01*. The type genus for the taxon is *Candidatus* Hexagella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SBBH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Hexagellae.

Description of *Candidatus* Hexagellae class. nov.

Candidatus Hexagellae (NL. fem. n. *c__Hexagellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBH01*. The type genus for the taxon is *Candidatus* Hexagella .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Hexagia bonitetta sp. nov.

Candidatus Hexagia bonitetta (NL. fem. n. *bonitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp002707915*. The type genome for the species is the GenBank assembly GCA_902582615.1. The GC content of the type genome is 36.09 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Hexagia gen. nov.

Candidatus Hexagia (NL. fem. n. *Hexagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707915*. The type species for the genus is *Candidatus* Hexagia bonitetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimulaceae.

Description of *Candidatus* Hexagia caravicella sp. nov.

Candidatus Hexagia caravicella (NL. fem. n. *caravicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902604855*. The type genome for the species is the GenBank assembly GCA_902604855.1. The GC content of the type genome is 35.86 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Hexagia catilugo sp. nov.

Candidatus Hexagia catilugo (NL. fem. n. *catilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp003212335*. The type genome for the species is the GenBank assembly GCA_902593995.1. The GC content of the type genome is 36.37 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Hexagia cotenilega sp. nov.

Candidatus Hexagia cotenilega (NL. fem. n. *cotenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902517565*. The type genome for the species is the GenBank assembly GCA_902517565.1. The GC content of the type genome is 36.24 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Hexagia denavivita sp. nov.

Candidatus Hexagia denavivita (NL. fem. n. *denavivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902594545*. The type genome for the species is the GenBank assembly GCA_902592425.1. The GC content of the type genome is 37.15 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Hexagia faviligena sp. nov.

Candidatus Hexagia faviligena (NL. fem. n. *faviligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902606175*. The type genome for the species is the GenBank assembly GCA_902606175.1. The GC content of the type genome is 35.77 %

and the genome length is 1.32 Mbp.

Description of *Candidatus* Hexagia ficedicula sp. nov.

Candidatus Hexagia ficedicula (NL. fem. n. *ficedicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp004214065*. The type genome for the species is the GenBank assembly GCA_902572975.1. The GC content of the type genome is 36.04 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Hexagia holisitio sp. nov.

Candidatus Hexagia holisitio (NL. fem. n. *holisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902620785*. The type genome for the species is the GenBank assembly GCA_902587485.1. The GC content of the type genome is 35.84 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Hexagia homoliforma sp. nov.

Candidatus Hexagia homoliforma (NL. fem. n. *homoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902574355*. The type genome for the species is the GenBank assembly GCA_902574355.1. The GC content of the type genome is 35.86 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Hexagia inexsivita sp. nov.

Candidatus Hexagia inexsivita (NL. fem. n. *inexsivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902630715*. The type genome for the species is the GenBank assembly GCA_902630715.1. The GC content of the type genome is 36.74 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Hexagia irrevimonas sp. nov.

Candidatus Hexagia irrevimonas (NL. fem. n. *irrevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902605935*. The type genome for the species is the GenBank assembly GCA_902605935.1. The GC content of the type genome is 35.73 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Hexagia metabatica sp. nov.

Candidatus Hexagia metabatica (NL. fem. n. *metabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902618945*. The type genome for the species is the GenBank assembly GCA_902611645.1. The GC content of the type genome is 35.88 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Hexagia tenemitura sp. nov.

Candidatus Hexagia tenemitura (NL. fem. n. *tenemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707915 sp902542325*. The type genome for the species is the GenBank assembly GCA_902542325.1. The GC content of the type genome is 35.8 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Hexagida vanidastra sp. nov.

Candidatus Hexagida vanidastra (NL. fem. n. *vanidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B21-G9 sp003641545*. The type genome for the species is the GenBank assembly GCA_003641545.1. The GC content of the type genome is 44.45 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Hexagida gen. nov.

Candidatus Hexagida (NL. fem. n. *Hexagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B21-G9*. The type species for the genus is *Candidatus* Hexagida vanidastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B21-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexagidaceae.

Description of *Candidatus* Hexagidaceae fam. nov.

Candidatus Hexagidaceae (NL. fem. n. *Hexagidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G9.* The type genus for the taxon is *Candidatus* Hexagida .

According to the original version of GTDB R06-RS202, this family belongs to the order *B21-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hexagidales.

Description of *Candidatus* Hexagidales ord. nov.

Candidatus Hexagidales (NL. fem. n. *Hexagidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G9.* The type genus for the taxon is *Candidatus* Hexagida .

According to the GTDB R06-RS202, this order belongs to the class *Thermotogae*.

Description of *Candidatus* Hexagosa alectiforma sp. nov.

Candidatus Hexagosa alectiforma (NL. fem. n. *alectiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB11 sp009920815*. The type genome for the species is the GenBank assembly GCA_009920815.1. The GC content of the type genome is 50.27 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Hexagosa gen. nov.

Candidatus Hexagosa (NL. fem. n. *Hexagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HIMB11*. The type species for the genus is *Candidatus* Hexagosa alectiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hexagosa avoncicella sp. nov.

Candidatus Hexagosa avoncicella (NL. fem. n. *avoncicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB11 sp009920225*. The type genome for the species is the GenBank assembly GCA_009920225.1. The GC content of the type genome is 52.34 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Hexagosa maciledo sp. nov.

Candidatus Hexagosa maciledo (NL. fem. n. *maciledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB11 sp000472185*. The type genome for the species is the GenBank assembly RS_GCF_000472185.1. The GC content of the type genome is 49.73 % and the genome length is 3.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Hexagosa ratifilega sp. nov.

Candidatus Hexagosa ratifilega (NL. fem. n. *ratifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB11 sp003486095*. The type genome for the species is the GenBank assembly GCA_010022345.1. The GC content of the type genome is 49.81 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Hexagula catalisca sp. nov.

Candidatus Hexagula catalisca (NL. fem. n. *catalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBH01 sp013694995*. The type genome for the species is the

GenBank assembly GCA_013694995.1. The GC content of the type genome is 44.6 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Hexagula gen. nov.

Candidatus Hexagula (NL. fem. n. *Hexagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBH01*. The type species for the genus is *Candidatus* Hexagula catalisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDBH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexagulaceae.

Description of *Candidatus* Hexagulaceae fam. nov.

Candidatus Hexagulaceae (NL. fem. n. *Hexagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDBH01.* The type genus for the taxon is *Candidatus* Hexagula .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Hexamana fecunatica sp. nov.

Candidatus Hexamana fecunatica (NL. fem. n. *fecunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4345 sp002362105*. The type genome for the species is the GenBank assembly GCA_002372195.1. The GC content of the type genome is 45.33 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Hexamana gen. nov.

Candidatus Hexamana (NL. fem. n. *Hexamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4345*. The type species for the genus is *Candidatus* Hexamana fecunatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hexamana monogimonia sp. nov.

Candidatus Hexamana monogimonia (NL. fem. n. *monogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4345 sp002396385*. The type genome for the species is the GenBank assembly GCA_002396385.1. The GC content of the type genome is 45.34 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Hexamaria reduvessa sp. nov.

Candidatus Hexamaria reduvessa (NL. fem. n. *reduvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-38-13 sp000993025*. The type genome for the species is the GenBank assembly GCA_000993025.1. The GC content of the type genome is 38.01 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Hexamaria gen. nov.

Candidatus Hexamaria (NL. fem. n. *Hexamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-38-13*. The type species for the genus is *Candidatus* Hexamaria reduvessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Hexamaria vilipifica sp. nov.

Candidatus Hexamaria vilipifica (NL. fem. n. *vilipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-38-13 sp000993685*. The type genome for the species is the GenBank assembly GCA_000993685.1. The GC content of the type genome is 38.98 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Hexamella depopimonia sp. nov.

Candidatus Hexamella depopimonia (NL. fem. n. *depopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQWC01 sp903875425*. The type genome for the species is the GenBank assembly GCA_903894185.1. The GC content of the type genome is 56.63 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Hexamella gen. nov.

Candidatus Hexamella (NL. fem. n. *Hexamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQWC01*. The type species for the genus is *Candidatus* Hexamella depopimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Hexamella domipousia sp. nov.

Candidatus Hexamella domipousia (NL. fem. n. *domipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQWC01 sp903825305*. The type genome for the species is the GenBank assembly GCA_903825305.1. The GC content of the type genome is 57.02 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Hexamia arnogiforma sp. nov.

Candidatus Hexamia arnogiforma (NL. fem. n. *arnogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp000513075*. The type genome for the species is the GenBank assembly GCA_000513075.1. The GC content of the type genome is 30.07 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Hexamia gen. nov.

Candidatus Hexamia (NL. fem. n. *Hexamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA240-E13*. The type species for the genus is *Candidatus* Hexamia arnogiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hexamia denomedo sp. nov.

Candidatus Hexamia denomedo (NL. fem. n. *denomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp000504625*. The type genome for the species is the GenBank assembly GCA_000504625.1. The GC content of the type genome is 28.97 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Hexamia detorilenta sp. nov.

Candidatus Hexamia detorilenta (NL. fem. n. *detorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp003211695*. The type genome for the species is the GenBank assembly GCA_902608355.1. The GC content of the type genome is 29.75 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Hexamia orgetilega sp. nov.

Candidatus Hexamia orgetilega (NL. fem. n. *orgetilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp000513055*. The type genome for the species is the GenBank assembly GCA_000513055.1. The GC content of the type genome is 29.14 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Hexamia utralicula sp. nov.

Candidatus Hexamia utralicula (NL. fem. n. *utralicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp000504605*. The type genome for the species is the GenBank assembly GCA_000504605.1. The GC content of the type genome is 29.0 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Hexamia vacilatica sp. nov.

Candidatus Hexamia vacilatica (NL. fem. n. *vacilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp003209225*. The type genome for the species is the GenBank assembly GCA_003209225.1. The GC content of the type genome is 29.44 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Hexamia vepaliforma sp. nov.

Candidatus Hexamia vepaliforma (NL. fem. n. *vepaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA240-E13 sp002690285*. The type genome for the species is the GenBank assembly GCA_002690285.1. The GC content of the type genome is 30.55 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Hexamida badititrix sp. nov.

Candidatus Hexamida badititrix (NL. fem. n. *badititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077527 sp003820645*. The type genome for the species is the GenBank assembly GCA_003820645.1. The GC content of the type genome is 62.91 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Hexamida gen. nov.

Candidatus Hexamida (NL. fem. n. *Hexamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077527*. The type species for the genus is *Candidatus* Hexamida badititrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Hexamida cucurivita sp. nov.

Candidatus Hexamida cucurivita (NL. fem. n. *cucurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077527 sp903933915*. The type genome for the species is the GenBank assembly GCA_903857965.1. The GC content of the type genome is 60.68 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Hexamida proscivita sp. nov.

Candidatus Hexamida proscivita (NL. fem. n. *proscivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077527 sp001464815*. The type genome for the species is the GenBank assembly GCA_001464815.1. The GC content of the type genome is 62.99 % and the genome length is 3.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Hexamida venucimonia sp. nov.

Candidatus Hexamida venucimonia (NL. fem. n. *venucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077527 sp903885665*. The type genome for the species is the GenBank assembly GCA_903885665.1. The GC content of the type genome is 46.6 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Hexamosa paralessa sp. nov.

Candidatus Hexamosa paralessa (NL. fem. n. *paralessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7488 sp002477185*. The type genome for the species is the

GenBank assembly GCA_002477185.1. The GC content of the type genome is 40.76 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Hexamosa gen. nov.

Candidatus Hexamosa (NL. fem. n. *Hexamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7488*. The type species for the genus is *Candidatus* Hexamosa paralessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3637*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracellaceae.

Description of *Candidatus* Hexamula viburatica sp. nov.

Candidatus Hexamula viburatica (NL. fem. n. *viburatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWQI01 sp003670885*. The type genome for the species is the GenBank assembly GCA_903917725.1. The GC content of the type genome is 52.15 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Hexamula gen. nov.

Candidatus Hexamula (NL. fem. n. *Hexamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QWQI01*. The type species for the genus is *Candidatus* Hexamula viburatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hexapana abindimonas sp. nov.

Candidatus Hexapana abindimonas (NL. fem. n. *abindimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009787835*. The type genome for the species is the GenBank assembly GCA_009787835.1. The GC content of the type genome is 43.13 %

and the genome length is 3.08 Mbp.

Description of *Candidatus* Hexapana gen. nov.

Candidatus Hexapana (NL. fem. n. *Hexapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXQ01*. The type species for the genus is *Candidatus* Hexapana abindimonas .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Hexapana adcumifica sp. nov.

Candidatus Hexapana adcumifica (NL. fem. n. *adcumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009777735*. The type genome for the species is the GenBank assembly GCA_009777735.1. The GC content of the type genome is 46.31 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Hexapana antipitia sp. nov.

Candidatus Hexapana antipitia (NL. fem. n. *antipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009778155*. The type genome for the species is the GenBank assembly GCA_009778155.1. The GC content of the type genome is 51.7 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Hexapana ascisastra sp. nov.

Candidatus Hexapana ascisastra (NL. fem. n. *ascisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009784775*. The type genome for the species is the GenBank assembly GCA_009784775.1. The GC content of the type genome is 48.03 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Hexapana assucatica sp. nov.

Candidatus Hexapana assucatica (NL. fem. n. *assucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009785215*. The type genome for the species is the GenBank assembly GCA_009785215.1. The GC content of the type genome is 38.91 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Hexapana bovicugo sp. nov.

Candidatus Hexapana bovicugo (NL. fem. n. *bovicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009784975*. The type genome for the species is the GenBank assembly GCA_009784975.1. The GC content of the type genome is 41.72 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Hexapana butubatio sp. nov.

Candidatus Hexapana butubatio (NL. fem. n. *butubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009787775*. The type genome for the species is the GenBank assembly GCA_009787775.1. The GC content of the type genome is 42.53 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Hexapana cemenetta sp. nov.

Candidatus Hexapana cemenetta (NL. fem. n. *cemenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009787285*. The type genome for the species is the GenBank assembly GCA_009787145.1. The GC content of the type genome is 42.42 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Hexapana cilicibra sp. nov.

Candidatus Hexapana cilicibra (NL. fem. n. *cilicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009786715*. The type genome for the species is the GenBank assembly GCA_009786715.1. The GC content of the type genome is 42.49 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Hexapana decacibra sp. nov.

Candidatus Hexapana decacibra (NL. fem. n. *decacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009786495*. The type genome for the species is the GenBank assembly GCA_009786495.1. The GC content of the type genome is 44.36 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Hexapana decititrix sp. nov.

Candidatus Hexapana decititrix (NL. fem. n. *decititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009786455*. The type genome for the species is the GenBank assembly GCA_009786455.1. The GC content of the type genome is 42.11 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Hexapana derelago sp. nov.

Candidatus Hexapana derelago (NL. fem. n. *derelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009784995*. The type genome for the species is the GenBank assembly GCA_009784995.1. The GC content of the type genome is 38.95 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Hexapana disiditia sp. nov.

Candidatus Hexapana disiditia (NL. fem. n. *disiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009778545*. The type genome for the species is the GenBank assembly GCA_009778545.1. The GC content of the type genome is 53.49 %

and the genome length is 1.99 Mbp.

Description of *Candidatus* Hexapana exsupax sp. nov.

Candidatus Hexapana exsupax (NL. fem. n. *exsupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009781475*. The type genome for the species is the GenBank assembly GCA_009781475.1. The GC content of the type genome is 36.71 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Hexapana hegumitica sp. nov.

Candidatus Hexapana hegumitica (NL. fem. n. *hegumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009786625*. The type genome for the species is the GenBank assembly GCA_009786625.1. The GC content of the type genome is 44.13 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Hexapana inurbetta sp. nov.

Candidatus Hexapana inurbetta (NL. fem. n. *inurbetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009781635*. The type genome for the species is the GenBank assembly GCA_009781635.1. The GC content of the type genome is 41.33 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Hexapana labecetta sp. nov.

Candidatus Hexapana labecetta (NL. fem. n. *labecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009787795*. The type genome for the species is the GenBank assembly GCA_009787885.1. The GC content of the type genome is 43.79 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Hexapana luceritura sp. nov.

Candidatus Hexapana luceritura (NL. fem. n. *luceritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009785545*. The type genome for the species is the GenBank assembly GCA_009785545.1. The GC content of the type genome is 41.28 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Hexapana malifetta sp. nov.

Candidatus Hexapana malifetta (NL. fem. n. *malifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009780285*. The type genome for the species is the GenBank assembly GCA_009780285.1. The GC content of the type genome is 58.79 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Hexapana nehaliforma sp. nov.

Candidatus Hexapana nehaliforma (NL. fem. n. *nehaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009788065*. The type genome for the species is the GenBank assembly GCA_009788065.1. The GC content of the type genome is 42.45 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Hexapana nicotibula sp. nov.

Candidatus Hexapana nicotibula (NL. fem. n. *nicotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009785045*. The type genome for the species is the GenBank assembly GCA_009785045.1. The GC content of the type genome is 41.54 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Hexapana omnimitas sp. nov.

Candidatus Hexapana omnimitas (NL. fem. n. *omnimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009784935*. The type genome for the species is the GenBank assembly GCA_009784935.1. The GC content of the type genome is 39.66 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Hexapana paropisca sp. nov.

Candidatus Hexapana paropisca (NL. fem. n. *paropisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009777535*. The type genome for the species is the GenBank assembly GCA_009777535.1. The GC content of the type genome is 46.62 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Hexapana plascicula sp. nov.

Candidatus Hexapana plascicula (NL. fem. n. *plascicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009776715*. The type genome for the species is the GenBank assembly GCA_009776715.1. The GC content of the type genome is 42.77 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Hexapana sicinedo sp. nov.

Candidatus Hexapana sicinedo (NL. fem. n. *sicinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009780545*. The type genome for the species is the GenBank assembly GCA_009780545.1. The GC content of the type genome is 59.59 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Hexapana utralitoga sp. nov.

Candidatus Hexapana utralitoga (NL. fem. n. *utralitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009787695*. The type genome for the species is the GenBank assembly GCA_009787695.1. The GC content of the type genome is 37.59 %

and the genome length is 2.82 Mbp.

Description of *Candidatus* Hexapana vilitibra sp. nov.

Candidatus Hexapana vilitibra (NL. fem. n. *vilitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXQ01 sp009786675*. The type genome for the species is the GenBank assembly GCA_009786675.1. The GC content of the type genome is 59.43 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Hexaparia artifitudo sp. nov.

Candidatus Hexaparia artifitudo (NL. fem. n. *artifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1062 sp001896555*. The type genome for the species is the GenBank assembly GCA_001896555.1. The GC content of the type genome is 57.7 % and the genome length is 3.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge from a mesophilic anaerobic wastewater digester enriched on phosphite and carbon dioxide".

Description of *Candidatus* Hexaparia gen. nov.

Candidatus Hexaparia (NL. fem. n. *Hexaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1062*. The type species for the genus is *Candidatus* Hexaparia artifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1062*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapariaceae.

Description of *Candidatus* Hexapariaceae fam. nov.

Candidatus Hexapariaceae (NL. fem. n. *Hexapariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1062.* The type genus for the taxon is *Candidatus* Hexaparia .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA1062. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hexapariales.

Description of *Candidatus* Hexapariales ord. nov.

Candidatus Hexapariales (NL. fem. n. *Hexapariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1062.* The type genus for the taxon is *Candidatus* Hexaparia .

According to the GTDB R06-RS202, this order belongs to the class *Desulfomonilia*.

Description of *Candidatus* Hexaparia labecitoga sp. nov.

Candidatus Hexaparia labecitoga (NL. fem. n. *labecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1062 sp002448235*. The type genome for the species is the GenBank assembly GCA_002448235.1. The GC content of the type genome is 54.49 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Hexaparia reduvisca sp. nov.

Candidatus Hexaparia reduvisca (NL. fem. n. *reduvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1062 sp002316295*. The type genome for the species is the GenBank assembly GCA_002068365.1. The GC content of the type genome is 58.17 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Hexapella desorimonas sp. nov.

Candidatus Hexapella desorimonas (NL. fem. n. *desorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3680 sp002372875*. The type genome for the species is the GenBank assembly GCA_002372875.1. The GC content of the type genome is 40.07 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Hexapella gen. nov.

Candidatus Hexapella (NL. fem. n. *Hexapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3680*. The type species for the genus is *Candidatus* Hexapella desorimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-274*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotulaceae.

Description of *Candidatus* Hexapia cerofago sp. nov.

Candidatus Hexapia cerofago (NL. fem. n. *cerofago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTA01 sp007122745*. The type genome for the species is the GenBank assembly GCA_007126985.1. The GC content of the type genome is 45.38 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Hexapia gen. nov.

Candidatus Hexapia (NL. fem. n. *Hexapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKTA01*. The type species for the genus is *Candidatus* Hexapia cerofago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Hexapia delubilega sp. nov.

Candidatus Hexapia delubilega (NL. fem. n. *delubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTA01 sp007123065*. The type genome for the species is the GenBank assembly GCA_007117335.1. The GC content of the type genome is 44.48 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Hexapia divolousia sp. nov.

Candidatus Hexapia divolousia (NL. fem. n. *divolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTA01 sp007125275*. The type genome for the species is the GenBank assembly GCA_007125275.1. The GC content of the type genome is 47.73 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Hexapia vilipilega sp. nov.

Candidatus Hexapia vilipilega (NL. fem. n. *vilipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTA01 sp007120085*. The type genome for the species is the GenBank assembly GCA_007131095.1. The GC content of the type genome is 46.66 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Hexapia volucago sp. nov.

Candidatus Hexapia volucago (NL. fem. n. *volucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTA01 sp007132825*. The type genome for the species is the GenBank assembly GCA_007125445.1. The GC content of the type genome is 44.62 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Hexapida luceribula sp. nov.

Candidatus Hexapida luceribula (NL. fem. n. *luceribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-40-14 sp001822815*. The type genome for the species is the GenBank assembly GCA_001822905.1. The GC content of the type genome is 43.12 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Hexapida gen. nov.

Candidatus Hexapida (NL. fem. n. *Hexapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-40-14*. The type species for the genus is *Candidatus* Hexapida luceribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-40-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapidaceae.

Description of *Candidatus* Hexapidaceae fam. nov.

Candidatus Hexapidaceae (NL. fem. n. *Hexapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-40-14.* The type genus for the taxon is *Candidatus* Hexapida .

According to GTDB R06-RS202, this family belongs to the order *Terrybacterales*.

Description of *Candidatus* Hexapida veridatica sp. nov.

Candidatus Hexapida veridatica (NL. fem. n. *veridatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-40-14 sp000996085*. The type genome for the species is the GenBank assembly GCA_001822895.1. The GC content of the type genome is 40.11 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Hexaposa cruppastra sp. nov.

Candidatus Hexaposa cruppastra (NL. fem. n. *cruppastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4151 sp002722845*. The type genome for the species is the GenBank assembly GCA_002722845.1. The GC content of the type genome is 60.66 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Hexaposa gen. nov.

Candidatus Hexaposa (NL. fem. n. *Hexaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4151*. The type species for the genus is *Candidatus* Hexaposa cruppastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexaposaceae.

Description of *Candidatus* Hexaposaceae fam. nov.

Candidatus Hexaposaceae (NL. fem. n. *Hexaposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4151.* The type genus for the taxon is *Candidatus* Hexaposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hexaposales.

Description of *Candidatus* Hexaposales ord. nov.

Candidatus Hexaposales (NL. fem. n. *Hexaposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4151.* The type genus for the taxon is *Candidatus* Hexaposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Minurellae.

Description of *Candidatus* Hexaposa sugiledo sp. nov.

Candidatus Hexaposa sugiledo (NL. fem. n. *sugiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4151 sp002696345*. The type genome for the species is the GenBank assembly GCA_003509265.1. The GC content of the type genome is 56.19 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Hexapula retunentia sp. nov.

Candidatus Hexapula retunentia (NL. fem. n. *retunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG350 sp900315995*. The type genome for the species is the GenBank assembly GCA_902751235.1. The GC content of the type genome is 41.3 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Hexapula gen. nov.

Candidatus Hexapula (NL. fem. n. *Hexapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG350*. The type species for the genus is *Candidatus* Hexapula retunentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG350*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapulaceae.

Description of *Candidatus* Hexapulaceae fam. nov.

Candidatus Hexapulaceae (NL. fem. n. *Hexapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG350.* The type genus for the taxon is *Candidatus* Hexapula .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Hibisana imbelitia sp. nov.

Candidatus Hibisana imbelitia (NL. fem. n. *imbelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-32-11 sp903913175*. The type genome for the species is the GenBank assembly GCA_903913175.1. The GC content of the type genome is 31.76 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Hibisana gen. nov.

Candidatus Hibisana (NL. fem. n. *Hibisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-FULL-32-11*. The type species for the genus is *Candidatus* Hibisana imbelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hibisana megaledo sp. nov.

Candidatus Hibisana megaledo (NL. fem. n. *megaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-32-11 sp903850725*. The type genome for the species is the GenBank assembly GCA_903850725.1. The GC content of the type genome is 32.99 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Hibisana revecilega sp. nov.

Candidatus Hibisana revecilega (NL. fem. n. *revecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-32-11 sp001820485*. The type genome for the species is the GenBank assembly GCA_001820485.1. The GC content of the type genome is 31.77 % and the genome length is 1.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Hibisana tenemimonia sp. nov.

Candidatus Hibisana tenemimonia (NL. fem. n. *tenemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-32-11 sp903854535*. The type genome for the species is the GenBank assembly GCA_903836565.1. The GC content of the type genome is 31.81 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Hibisaria papiletta sp. nov.

Candidatus Hibisaria papiletta (NL. fem. n. *papiletta* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1301 sp003141435*. The type genome for the species is the GenBank assembly GCA_003141435.1. The GC content of the type genome is 35.91 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Hibisaria gen. nov.

Candidatus Hibisaria (NL. fem. n. *Hibisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1301*. The type species for the genus is *Candidatus* Hibisaria papiletta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hibisella desoribula sp. nov.

Candidatus Hibisella desoribula (NL. fem. n. *desoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBWC01 sp006218035*. The type genome for the species is the GenBank assembly GCA_009773435.1. The GC content of the type genome is 59.23 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Hibisella gen. nov.

Candidatus Hibisella (NL. fem. n. *Hibisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBWC01*. The type species for the genus is *Candidatus* Hibisella desoribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VBWC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hibisellaceae.

Description of *Candidatus* Hibisellaceae fam. nov.

Candidatus Hibisellaceae (NL. fem. n. *Hibisellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VBWC01.* The type genus for the taxon is *Candidatus* Hibisella .

According to the original version of GTDB R06-RS202, this family belongs to the order *VBWC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hibisellales.

Description of *Candidatus* Hibisellales ord. nov.

Candidatus Hibisellales (NL. fem. n. *Hibisellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VBWC01.* The type genus for the taxon is *Candidatus* Hibisella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Hibisia vicatessa sp. nov.

Candidatus Hibisia vicatessa (NL. fem. n. *vicatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-40 sp001304425*. The type genome for the species is the GenBank assembly GCA_001304425.1. The GC content of the type genome is 60.33 % and the genome length is 2.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Hibisia gen. nov.

Candidatus Hibisia (NL. fem. n. *Hibisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-40*. The type species for the genus is *Candidatus* Hibisia vicatessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-40*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hibisiaceae.

Description of *Candidatus* Hibisiaceae fam. nov.

Candidatus Hibisiaceae (NL. fem. n. *Hibisiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-40.* The type genus for the taxon is *Candidatus* Hibisia .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Hibisida antiribra sp. nov.

Candidatus Hibisida antiribra (NL. fem. n. *antiribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp900753285*. The type genome for the species is the GenBank assembly RS_GCF_900753285.1. The GC content of the type genome is 48.63 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Hibisida gen. nov.

Candidatus Hibisida (NL. fem. n. *Hibisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1696*. The type species for the genus is *Candidatus* Hibisida antiribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Hibisida catobifica sp. nov.

Candidatus Hibisida catobifica (NL. fem. n. *catobifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902782445*. The type genome for the species is the GenBank assembly GCA_902782445.1. The GC content of the type genome is 60.36 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Hibisida fatiligena sp. nov.

Candidatus Hibisida fatiligena (NL. fem. n. *fatiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp900763885*. The type genome for the species is the GenBank assembly RS_GCF_900763885.1. The GC content of the type genome is 56.7 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Hibisida fetulitio sp. nov.

Candidatus Hibisida fetulitio (NL. fem. n. *fetulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp900554225*. The type genome for the species is the GenBank assembly GCA_900554225.1. The GC content of the type genome is 55.37 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Hibisida halucatio sp. nov.

Candidatus Hibisida halucatio (NL. fem. n. *halucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902783755*. The type genome for the species is the GenBank assembly GCA_902783755.1. The GC content of the type genome is 53.51 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Hibisida ludimicella sp. nov.

Candidatus Hibisida ludimicella (NL. fem. n. *ludimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902783705*. The type genome for the species is the GenBank assembly GCA_902790355.1. The GC content of the type genome is 61.31 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Hibisida mimogugo sp. nov.

Candidatus Hibisida mimogugo (NL. fem. n. *mimogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902778205*. The type genome for the species is the GenBank assembly GCA_902778205.1. The GC content of the type genome is 61.6 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Hibisida omnifisca sp. nov.

Candidatus Hibisida omnifisca (NL. fem. n. *omnifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902765885*. The type genome for the species is the GenBank assembly GCA_902765885.1. The GC content of the type genome is 43.63 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Hibisida podagibra sp. nov.

Candidatus Hibisida podagibra (NL. fem. n. *podagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902773525*. The type genome for the species is the GenBank assembly GCA_902767295.1. The GC content of the type genome is 60.66 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Hibisida tegimastra sp. nov.

Candidatus Hibisida tegimastra (NL. fem. n. *tegimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1696 sp902761695*. The type genome for the species is the GenBank assembly GCA_902761695.1. The GC content of the type genome is 61.56 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Hibisosa democitia sp. nov.

Candidatus Hibisosa democitia (NL. fem. n. *democitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6663 sp002455335*. The type genome for the species is the GenBank assembly GCA_002455335.1. The GC content of the type genome is 65.59 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Hibisosa gen. nov.

Candidatus Hibisosa (NL. fem. n. *Hibisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6663*. The type species for the genus is *Candidatus* Hibisosa democitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6663*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hibisosaceae.

Description of *Candidatus* Hibisosaceae fam. nov.

Candidatus Hibisosaceae (NL. fem. n. *Hibisosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6663.* The type genus for the taxon is *Candidatus* Hibisosa .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Hibisula debucimonia sp. nov.

Candidatus Hibisula debucimonia (NL. fem. n. *debucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11791 sp002714255*. The type genome for the species is the GenBank assembly GCA_002693245.1. The GC content of the type genome is 53.86 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Hibisula gen. nov.

Candidatus Hibisula (NL. fem. n. *Hibisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11791*. The type species for the genus is *Candidatus* Hibisula debucimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Hibisula idciricula sp. nov.

Candidatus Hibisula idciricula (NL. fem. n. *idciricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11791 sp012960345*. The type genome for the species is the GenBank assembly GCA_012960345.1. The GC content of the type genome is 53.36 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Hibisula volucibra sp. nov.

Candidatus Hibisula volucibra (NL. fem. n. *volucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11791 sp012965245*. The type genome for the species is the GenBank assembly GCA_012965245.1. The GC content of the type genome is 53.17 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Hippea eccisimonas sp. nov.

Candidatus Hippea eccisimonas (NL. fem. n. *eccisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hippea sp000526195*. The type genome for the species is the GenBank assembly RS_GCF_000526195.1. The GC content of the type genome is 42.85 % and the genome length is 1.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Hirschia vanititoga sp. nov.

Candidatus Hirschia vanititoga (NL. fem. n. *vanititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hirschia sp002709235*. The type genome for the species is the GenBank assembly GCA_002715175.1. The GC content of the type genome is 55.93 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Hirudana ablaciforma sp. nov.

Candidatus Hirudana ablaciforma (NL. fem. n. *ablaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002167945*. The type genome for the species is the GenBank assembly GCA_002167945.1. The GC content of the type genome is 38.58 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Hirudana gen. nov.

Candidatus Hirudana (NL. fem. n. *Hirudana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MS024-2A*. The type species for the genus is *Candidatus* Hirudana ablaciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hirudana abnoribra sp. nov.

Candidatus Hirudana abnoribra (NL. fem. n. *abnoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902606525*. The type genome for the species is the GenBank assembly GCA_902606525.1. The GC content of the type genome is 32.54 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Hirudana adhositica sp. nov.

Candidatus Hirudana adhositica (NL. fem. n. *adhositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902512755*. The type genome for the species is the GenBank assembly GCA_902512755.1. The GC content of the type genome is 32.9 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Hirudana ascalousia sp. nov.

Candidatus Hirudana ascalousia (NL. fem. n. *ascalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp008081175*. The type genome for the species is the GenBank assembly GCA_008081175.1. The GC content of the type genome is 38.25 %

and the genome length is 1.57 Mbp.

Description of *Candidatus* Hirudana cepurousia sp. nov.

Candidatus Hirudana cepurousia (NL. fem. n. *cepurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp000173095*. The type genome for the species is the GenBank assembly GCA_002389405.1. The GC content of the type genome is 35.74 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Hirudana ceromousia sp. nov.

Candidatus Hirudana ceromousia (NL. fem. n. *ceromousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902561795*. The type genome for the species is the GenBank assembly GCA_902561795.1. The GC content of the type genome is 31.56 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Hirudana cruppitica sp. nov.

Candidatus Hirudana cruppitica (NL. fem. n. *cruppitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902517245*. The type genome for the species is the GenBank assembly GCA_902517245.1. The GC content of the type genome is 32.48 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Hirudana cuticitica sp. nov.

Candidatus Hirudana cuticitica (NL. fem. n. *cuticitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002167525*. The type genome for the species is the GenBank assembly GCA_002167525.1. The GC content of the type genome is 31.21 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Hirudana demagessa sp. nov.

Candidatus Hirudana demagessa (NL. fem. n. *demagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp011525195*. The type genome for the species is the GenBank assembly GCA_011525195.1. The GC content of the type genome is 38.3 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Hirudana depasitudo sp. nov.

Candidatus Hirudana depasitudo (NL. fem. n. *depasitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp003130815*. The type genome for the species is the GenBank assembly GCA_003130815.1. The GC content of the type genome is 31.79 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Hirudana desoricella sp. nov.

Candidatus Hirudana desoricella (NL. fem. n. *desoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902546725*. The type genome for the species is the GenBank assembly GCA_902546725.1. The GC content of the type genome is 37.47 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Hirudana fatililenta sp. nov.

Candidatus Hirudana fatililenta (NL. fem. n. *fatililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002457295*. The type genome for the species is the GenBank assembly GCA_902612435.1. The GC content of the type genome is 35.85 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Hirudana gerunivita sp. nov.

Candidatus Hirudana gerunivita (NL. fem. n. *gerunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp010031465*. The type genome for the species is the GenBank assembly GCA_010031465.1. The GC content of the type genome is 38.75 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Hirudana inhoriforma sp. nov.

Candidatus Hirudana inhoriforma (NL. fem. n. *inhoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002705385*. The type genome for the species is the GenBank assembly GCA_002705385.1. The GC content of the type genome is 33.19 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Hirudana innupitrix sp. nov.

Candidatus Hirudana innupitrix (NL. fem. n. *innupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002169865*. The type genome for the species is the GenBank assembly GCA_002169865.1. The GC content of the type genome is 32.8 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Hirudana irradicula sp. nov.

Candidatus Hirudana irradicula (NL. fem. n. *irradicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp009886625*. The type genome for the species is the GenBank assembly GCA_009886625.1. The GC content of the type genome is 35.71 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Hirudana menapax sp. nov.

Candidatus Hirudana menapax (NL. fem. n. *menapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902618245*. The type genome for the species is the GenBank assembly GCA_902549355.1. The GC content of the type genome is 31.86 %

and the genome length is 1.38 Mbp.

Description of *Candidatus* Hirudana ossicatica sp. nov.

Candidatus Hirudana ossicatica (NL. fem. n. *ossicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902613595*. The type genome for the species is the GenBank assembly GCA_902613595.1. The GC content of the type genome is 31.98 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Hirudana palifatio sp. nov.

Candidatus Hirudana palifatio (NL. fem. n. *palifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002714815*. The type genome for the species is the GenBank assembly GCA_002714815.1. The GC content of the type genome is 32.22 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Hirudana plascitrix sp. nov.

Candidatus Hirudana plascitrix (NL. fem. n. *plascitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp902616905*. The type genome for the species is the GenBank assembly GCA_902616905.1. The GC content of the type genome is 30.97 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Hirudana rudecibra sp. nov.

Candidatus Hirudana rudecibra (NL. fem. n. *rudecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002292265*. The type genome for the species is the GenBank assembly GCA_002292265.1. The GC content of the type genome is 39.95 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Hirudana ulcisilenta sp. nov.

Candidatus Hirudana ulcisilenta (NL. fem. n. *ulcisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MS024-2A sp002384715*. The type genome for the species is the GenBank assembly GCA_002384715.1. The GC content of the type genome is 38.49 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Hirudaria bovicivita sp. nov.

Candidatus Hirudaria bovicivita (NL. fem. n. *bovicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPLT01 sp903865935*. The type genome for the species is the GenBank assembly GCA_903884565.1. The GC content of the type genome is 38.66 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Hirudaria gen. nov.

Candidatus Hirudaria (NL. fem. n. *Hirudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPLT01*. The type species for the genus is *Candidatus* Hirudaria bovicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIPLT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirudariaceae.

Description of *Candidatus* Hirudariaceae fam. nov.

Candidatus Hirudariaceae (NL. fem. n. *Hirudariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIPLT01.* The type genus for the taxon is *Candidatus* Hirudaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homulosales.

Description of *Candidatus* Hirudia bicapigena sp. nov.

Candidatus Hirudia bicapigena (NL. fem. n. *bicapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs118 sp903892045*. The type genome for the species is the GenBank assembly GCA_903860695.1. The GC content of the type genome is 70.55 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Hirudia gen. nov.

Candidatus Hirudia (NL. fem. n. *Hirudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-120-MAGs118*. The type species for the genus is *Candidatus* Hirudia bicapigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Hirudia epitrigena sp. nov.

Candidatus Hirudia epitrigena (NL. fem. n. *epitrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs118 sp005778045*. The type genome for the species is the GenBank assembly GCA_005778045.1. The GC content of the type genome is 69.82 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Hirudia futatitas sp. nov.

Candidatus Hirudia futatitas (NL. fem. n. *futatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs118 sp903928115*. The type genome for the species is the GenBank assembly GCA_903928115.1. The GC content of the type genome is 68.86 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Hirudia labecentia sp. nov.

Candidatus Hirudia labecentia (NL. fem. n. *labecentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs118 sp013360535*. The type genome for the species is the GenBank assembly GCA_013360535.1. The GC content of the type genome is 69.48 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Hirudida emortastra sp. nov.

Candidatus Hirudida emortastra (NL. fem. n. *emortastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMSB01 sp013202205*. The type genome for the species is the GenBank assembly GCA_013202205.1. The GC content of the type genome is 46.23 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Hirudida gen. nov.

Candidatus Hirudida (NL. fem. n. *Hirudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMSB01*. The type species for the genus is *Candidatus* Hirudida emortastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMSB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirudidaceae.

Description of *Candidatus* Hirudidaceae fam. nov.

Candidatus Hirudidaceae (NL. fem. n. *Hirudidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMSB01.* The type genus for the taxon is *Candidatus* Hirudida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMRJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Biparidales.

Description of *Candidatus* Hirudula malifitas sp. nov.

Candidatus Hirudula malifitas (NL. fem. n. *malifitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6099 sp002435745*. The type genome for the species is the GenBank assembly GCA_002435745.1. The GC content of the type genome is 56.14 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Hirudula gen. nov.

Candidatus Hirudula (NL. fem. n. *Hirudula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6099*. The type species for the genus is *Candidatus* Hirudula malifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirudulaceae.

Description of *Candidatus* Hirudulaceae fam. nov.

Candidatus Hirudulaceae (NL. fem. n. *Hirudulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6099.* The type genus for the taxon is *Candidatus* Hirudula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hirudulales.

Description of *Candidatus* Hirudulales ord. nov.

Candidatus Hirudulales (NL. fem. n. *Hirudulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6099.* The type genus for the taxon is *Candidatus* Hirudula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Hirudulae.

Description of *Candidatus* Hirudulae class. nov.

Candidatus Hirudulae (NL. fem. n. *c__Hirudulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6099.* The type genus for the taxon is *Candidatus* Hirudula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Manubariota.

Description of *Candidatus* Hirudula sitelitudo sp. nov.

Candidatus Hirudula sitelitudo (NL. fem. n. *sitelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6099 sp002069885*. The type genome for the species is the GenBank assembly GCA_002069885.1. The GC content of the type genome is 54.8 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Hirunana bicubigena sp. nov.

Candidatus Hirunana bicubigena (NL. fem. n. *bicubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp013001045*. The type genome for the species is the GenBank assembly GCA_013001045.1. The GC content of the type genome is 57.53 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Hirunana gen. nov.

Candidatus Hirunana (NL. fem. n. *Hirunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1847*. The type species for the genus is *Candidatus* Hirunana bicubigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hirunana catilax sp. nov.

Candidatus Hirunana catilax (NL. fem. n. *catilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp013043165*. The type genome for the species is the GenBank assembly GCA_013043165.1. The GC content of the type genome is 58.09 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Hirunana cerucousia sp. nov.

Candidatus Hirunana cerucousia (NL. fem. n. *cerucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp004282875*. The type genome for the species is the GenBank assembly GCA_004282875.1. The GC content of the type genome is 60.1 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Hirunana disidedo sp. nov.

Candidatus Hirunana disidedo (NL. fem. n. *disidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp002338605*. The type genome for the species is the GenBank assembly GCA_002338605.1. The GC content of the type genome is 56.22 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Hirunana holisugo sp. nov.

Candidatus Hirunana holisugo (NL. fem. n. *holisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp009937605*. The type genome for the species is the GenBank assembly GCA_009937605.1. The GC content of the type genome is 57.91 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Hirunana inambastra sp. nov.

Candidatus Hirunana inambastra (NL. fem. n. *inambastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1847 sp009937445*. The type genome for the species is the GenBank assembly GCA_009937445.1. The GC content of the type genome is 54.75 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Hirunana maciletta sp. nov.

Candidatus Hirunana maciletta (NL. fem. n. *maciletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp013042375*. The type genome for the species is the GenBank assembly GCA_013003095.1. The GC content of the type genome is 63.48 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Hirunana sicubax sp. nov.

Candidatus Hirunana sicubax (NL. fem. n. *sicubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1847 sp002685275*. The type genome for the species is the GenBank assembly GCA_002685275.1. The GC content of the type genome is 36.44 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Hirunella ablepibula sp. nov.

Candidatus Hirunella ablepibula (NL. fem. n. *ablepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLZ01 sp012799075*. The type genome for the species is the GenBank assembly GCA_012799075.1. The GC content of the type genome is 56.26 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Hirunella gen. nov.

Candidatus Hirunella (NL. fem. n. *Hirunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLZ01*. The type species for the genus is *Candidatus* Hirunella ablepibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZLZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Hirunellaceae.

Description of *Candidatus* Hirunellaceae fam. nov.

Candidatus Hirunellaceae (NL. fem. n. *Hirunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZLZ01.* The type genus for the taxon is *Candidatus* Hirunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAZLZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hirunellales.

Description of *Candidatus* Hirunellales ord. nov.

Candidatus Hirunellales (NL. fem. n. *Hirunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZLZ01.* The type genus for the taxon is *Candidatus* Hirunella .

According to the GTDB R06-RS202, this order belongs to the class *Limnochordia*.

Description of *Candidatus* Hirunella bicinetta sp. nov.

Candidatus Hirunella bicinetta (NL. fem. n. *bicinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLZ01 sp012522085*. The type genome for the species is the GenBank assembly GCA_012522085.1. The GC content of the type genome is 57.38 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Hirunella lucelitas sp. nov.

Candidatus Hirunella lucelitas (NL. fem. n. *lucelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLZ01 sp012521755*. The type genome for the species is the GenBank assembly GCA_012521755.1. The GC content of the type genome is 58.13 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Hirunia acrolitio sp. nov.

Candidatus Hirunia acrolitio (NL. fem. n. *acrolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp009922705*. The type genome for the species is the GenBank assembly GCA_009922705.1. The GC content of the type genome is 54.95 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Hirunia gen. nov.

Candidatus Hirunia (NL. fem. n. *Hirunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HIMB30*. The type species for the genus is *Candidatus* Hirunia acrolitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hirunia acrolitoga sp. nov.

Candidatus Hirunia acrolitoga (NL. fem. n. *acrolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp003513265*. The type genome for the species is the GenBank assembly GCA_003513265.1. The GC content of the type genome is 48.31 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Hirunia affunicella sp. nov.

Candidatus Hirunia affunicella (NL. fem. n. *affunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp008087055*. The type genome for the species is the GenBank assembly RS_GCF_008087055.1. The GC content of the type genome is 48.57 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Hirunia camilibra sp. nov.

Candidatus Hirunia camilibra (NL. fem. n. *camilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp000227525*. The type genome for the species is the GenBank assembly RS_GCF_000227525.1. The GC content of the type genome is 49.86 % and the genome length is 2.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "South Kaneohe Bay; near MCBH; Oahu; Hawaii".

Description of *Candidatus* Hirunia cohonicella sp. nov.

Candidatus Hirunia cohonicella (NL. fem. n. *cohonicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002705795*. The type genome for the species is the GenBank assembly GCA_002705795.1. The GC content of the type genome is 50.6 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Hirunia conifitas sp. nov.

Candidatus Hirunia conifitas (NL. fem. n. *conifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp902558075*. The type genome for the species is the GenBank assembly GCA_902558075.1. The GC content of the type genome is 48.26 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Hirunia diminiforma sp. nov.

Candidatus Hirunia diminiforma (NL. fem. n. *diminiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002731015*. The type genome for the species is the GenBank assembly GCA_003455635.1. The GC content of the type genome is 48.48 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Hirunia futatago sp. nov.

Candidatus Hirunia futatago (NL. fem. n. *futatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002705325*. The type genome for the species is the GenBank assembly GCA_002705325.1. The GC content of the type genome is 49.83 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Hirunia intamitica sp. nov.

Candidatus Hirunia intamitica (NL. fem. n. *intamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp902541775*. The type genome for the species is the GenBank assembly GCA_902541775.1. The GC content of the type genome is 48.59 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Hirunia milipitoga sp. nov.

Candidatus Hirunia milipitoga (NL. fem. n. *milipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002714245*. The type genome for the species is the GenBank assembly GCA_003526775.1. The GC content of the type genome is 49.63 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Hirunia mimogago sp. nov.

Candidatus Hirunia mimogago (NL. fem. n. *mimogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002730235*. The type genome for the species is the GenBank assembly GCA_002730235.1. The GC content of the type genome is 47.5 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Hirunia mimogitica sp. nov.

Candidatus Hirunia mimogitica (NL. fem. n. *mimogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp902594275*. The type genome for the species is the GenBank assembly GCA_902594275.1. The GC content of the type genome is 48.63 %

and the genome length is 1.29 Mbp.

Description of *Candidatus* Hirunia nidifisca sp. nov.

Candidatus Hirunia nidifisca (NL. fem. n. *nidifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002717305*. The type genome for the species is the GenBank assembly GCA_002717305.1. The GC content of the type genome is 48.25 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Hirunia nocumitrix sp. nov.

Candidatus Hirunia nocumitrix (NL. fem. n. *nocumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp004213775*. The type genome for the species is the GenBank assembly GCA_902528165.1. The GC content of the type genome is 49.16 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Hirunia protritudo sp. nov.

Candidatus Hirunia protritudo (NL. fem. n. *protritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp902536515*. The type genome for the species is the GenBank assembly GCA_902536515.1. The GC content of the type genome is 48.63 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Hirunia semapastra sp. nov.

Candidatus Hirunia semapastra (NL. fem. n. *semapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp002691485*. The type genome for the species is the GenBank assembly GCA_003448275.1. The GC content of the type genome is 51.11 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Hirunia velivigena sp. nov.

Candidatus Hirunia velivigena (NL. fem. n. *velivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB30 sp010024125*. The type genome for the species is the GenBank assembly GCA_010023495.1. The GC content of the type genome is 49.82 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Hirunida adrenimonia sp. nov.

Candidatus Hirunida adrenimonia (NL. fem. n. *adrenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXTU01 sp009924135*. The type genome for the species is the GenBank assembly GCA_009924135.1. The GC content of the type genome is 62.83 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Hirunida gen. nov.

Candidatus Hirunida (NL. fem. n. *Hirunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXTU01*. The type species for the genus is *Candidatus* Hirunida adrenimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXTU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirunidaceae.

Description of *Candidatus* Hirunidaceae fam. nov.

Candidatus Hirunidaceae (NL. fem. n. *Hirunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXTU01.* The type genus for the taxon is *Candidatus* Hirunida .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Hirunida cicaribra sp. nov.

Candidatus Hirunida cicaribra (NL. fem. n. *cicaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXTU01 sp009773355*. The type genome for the species is the GenBank assembly GCA_008080695.1. The GC content of the type genome is 65.87 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Hirunida dilicitura sp. nov.

Candidatus Hirunida dilicitura (NL. fem. n. *dilicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXTU01 sp903863315*. The type genome for the species is the GenBank assembly GCA_903863315.1. The GC content of the type genome is 64.07 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Hirunida sonivifica sp. nov.

Candidatus Hirunida sonivifica (NL. fem. n. *sonivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXTU01 sp005791875*. The type genome for the species is the GenBank assembly GCA_005809165.1. The GC content of the type genome is 65.03 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Hirunida subadax sp. nov.

Candidatus Hirunida subadax (NL. fem. n. *subadax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXTU01 sp009922615*. The type genome for the species is the GenBank assembly GCA_009922615.1. The GC content of the type genome is 62.51 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Hirunida uberrivita sp. nov.

Candidatus Hirunida uberrivita (NL. fem. n. *uberrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SXTU01 sp009695395*. The type genome for the species is the GenBank assembly GCA_009695395.1. The GC content of the type genome is 64.34 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Hirunosa depecisca sp. nov.

Candidatus Hirunosa depecisca (NL. fem. n. *depecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-44-29 sp001778695*. The type genome for the species is the GenBank assembly GCA_001000005.1. The GC content of the type genome is 43.09 % and the genome length is 0.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Hirunosa gen. nov.

Candidatus Hirunosa (NL. fem. n. *Hirunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-44-29*. The type species for the genus is *Candidatus* Hirunosa depecisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametellaceae.

Description of *Candidatus* Hirunosa murilastra sp. nov.

Candidatus Hirunosa murilastra (NL. fem. n. *murilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-44-29 sp001001285*. The type genome for the species is the GenBank assembly GCA_000994865.1. The GC content of the type genome is 43.95 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Hirunula arcitessa sp. nov.

Candidatus Hirunula arcitessa (NL. fem. n. *arcitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSS01 sp012842495*. The type genome for the species is the GenBank assembly GCA_012842495.1. The GC content of the type genome is 57.0 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Hirunula gen. nov.

Candidatus Hirunula (NL. fem. n. *Hirunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSS01*. The type species for the genus is *Candidatus* Hirunula arcitessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUSS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirunulaceae.

Description of *Candidatus* Hirunulaceae fam. nov.

Candidatus Hirunulaceae (NL. fem. n. *Hirunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUSS01.* The type genus for the taxon is *Candidatus* Hirunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *D8A-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dinupiales.

Description of *Candidatus* Hoeflea adluvilega sp. nov.

Candidatus Hoeflea adluvilega (NL. fem. n. *adluvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp902498795*. The type genome for the species is the GenBank assembly RS_GCF_902498795.1. The GC content of the type genome is 61.33 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Hoeflea ecfacifica sp. nov.

Candidatus Hoeflea ecfacifica (NL. fem. n. *ecfacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp000961635*. The type genome for the species is the GenBank assembly GCA_000961635.1. The GC content of the type genome is 61.17 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Hoeflea epistousia sp. nov.

Candidatus Hoeflea epistousia (NL. fem. n. *epistousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp000759435*. The type genome for the species is the GenBank assembly RS_GCF_000759435.1. The GC content of the type genome is 65.37 % and the genome length is 5.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water".

Description of *Candidatus* Hoeflea impugastra sp. nov.

Candidatus Hoeflea impugastra (NL. fem. n. *impugastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp014359905*. The type genome for the species is the GenBank assembly GCA_014359905.1. The GC content of the type genome is 62.64 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Hoeflea offiritrix sp. nov.

Candidatus Hoeflea offiritrix (NL. fem. n. *offiritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp001011155*. The type genome for the species is the GenBank assembly RS_GCF_001011155.1. The GC content of the type genome is 58.84 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Coastal seawater".

Description of *Candidatus* Hoeflea renavitrix sp. nov.

Candidatus Hoeflea renavitrix (NL. fem. n. *renavitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoeflea sp002733955*. The type genome for the species is the GenBank assembly GCA_002733955.1. The GC content of the type genome is 61.11 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Holdemanella cerifitoga sp. nov.

Candidatus Holdemanella cerifitoga (NL. fem. n. *cerifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp003436425*. The type genome for the species is the GenBank assembly RS_GCF_003436425.1. The GC content of the type genome is 34.19 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Holdemanella cocodivita sp. nov.

Candidatus Holdemanella cocodivita (NL. fem. n. *cocodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp003458715*. The type genome for the species is the GenBank assembly GCA_900542855.1. The GC content of the type genome is 34.2 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Holdemanella linigitrix sp. nov.

Candidatus Holdemanella linigitrix (NL. fem. n. *linigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp002299315*. The type genome for the species is the GenBank assembly GCA_008680055.1. The GC content of the type genome is 34.67 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Holdemanella rutabitica sp. nov.

Candidatus Holdemanella rutabitica (NL. fem. n. *rutabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp900754615*. The type genome for the species is the GenBank assembly GCA_900754615.1. The GC content of the type genome is 33.85 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Holdemanella siticibula sp. nov.

Candidatus Holdemanella siticibula (NL. fem. n. *siticibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp900547815*. The type genome for the species is the GenBank assembly GCA_900759735.1. The GC content of the type genome is 33.44 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Holdemanella tirocax sp. nov.

Candidatus Holdemanella tirocax (NL. fem. n. *tirocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemanella sp900551285*. The type genome for the species is the GenBank assembly GCA_900551285.1. The GC content of the type genome is 34.22 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Holdemania decupifica sp. nov.

Candidatus Holdemania decupifica (NL. fem. n. *decupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holdemania sp900120005*. The type genome for the species is the GenBank assembly GCA_900546205.1. The GC content of the type genome is 51.38 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Holisaria xeramitas sp. nov.

Candidatus Holisaria xeramitas (NL. fem. n. *xeramitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC1-FULL-56-13 sp001783715*. The type genome for the species is the GenBank assembly GCA_001781945.1. The GC content of the type genome is 56.51 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Holisaria gen. nov.

Candidatus Holisaria (NL. fem. n. *Holisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC1-FULL-56-13*. The type species for the genus is *Candidatus* Holisaria xeramitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD2-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicomellaceae.

Description of *Candidatus* Holisella exhililega sp. nov.

Candidatus Holisella exhililega (NL. fem. n. *exhililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5760 sp002418895*. The type genome for the species is the GenBank assembly GCA_002418895.1. The GC content of the type genome is 50.67 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Holisella gen. nov.

Candidatus Holisella (NL. fem. n. *Holisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5760*. The type species for the genus is *Candidatus* Holisella exhililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Holisellaceae fam. nov.

Candidatus Holisellaceae (NL. fem. n. *Holisellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5760.* The type genus for the taxon is *Candidatus* Holisella .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Holisida adlicitio sp. nov.

Candidatus Holisida adlicitio (NL. fem. n. *adlicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp002304435*. The type genome for the species is the GenBank assembly GCA_002304435.1. The GC content of the type genome is 69.98 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Holisida gen. nov.

Candidatus Holisida (NL. fem. n. *Holisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ER46*. The type species for the genus is *Candidatus* Holisida adlicitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Holisida adlubifica sp. nov.

Candidatus Holisida adlubifica (NL. fem. n. *adlubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp003054705*. The type genome for the species is the GenBank assembly RS_GCF_003054705.1. The GC content of the type genome is 67.07 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Holisida antacitudo sp. nov.

Candidatus Holisida antacitudo (NL. fem. n. *antacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp011525695*. The type genome for the species is the GenBank assembly GCA_011525695.1. The GC content of the type genome is 64.44 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Holisida expenivita sp. nov.

Candidatus Holisida expenivita (NL. fem. n. *expenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp002288455*. The type genome for the species is the GenBank assembly GCA_002288455.1. The GC content of the type genome is 67.69 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Holisida noninousia sp. nov.

Candidatus Holisida noninousia (NL. fem. n. *noninousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp009695065*. The type genome for the species is the GenBank assembly GCA_009695065.1. The GC content of the type genome is 64.68 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Holisida obsurigena sp. nov.

Candidatus Holisida obsurigena (NL. fem. n. *obsurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp903848965*. The type genome for the species is the GenBank assembly GCA_903848965.1. The GC content of the type genome is 64.94 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Holisida pulegatica sp. nov.

Candidatus Holisida pulegatica (NL. fem. n. *pulegatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp903900845*. The type genome for the species is the GenBank assembly GCA_903900845.1. The GC content of the type genome is 67.63 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Holisida remulibula sp. nov.

Candidatus Holisida remulibula (NL. fem. n. *remulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp005786775*. The type genome for the species is the GenBank assembly GCA_005786775.1. The GC content of the type genome is 70.04 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Holisida subodilenta sp. nov.

Candidatus Holisida subodilenta (NL. fem. n. *subodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp005792355*. The type genome for the species is the GenBank assembly GCA_005779485.1. The GC content of the type genome is 64.83 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Holisida taxilugo sp. nov.

Candidatus Holisida taxilugo (NL. fem. n. *taxilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp903820035*. The type genome for the species is the GenBank assembly GCA_903835405.1. The GC content of the type genome is 65.02 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Holisida tomogimonas sp. nov.

Candidatus Holisida tomogimonas (NL. fem. n. *tomogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp903861185*. The type genome for the species is the GenBank assembly GCA_903861185.1. The GC content of the type genome is 69.4 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Holisida tranvessa sp. nov.

Candidatus Holisida tranvessa (NL. fem. n. *tranvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER46 sp903926425*. The type genome for the species is the GenBank assembly GCA_903926425.1. The GC content of the type genome is 64.46 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Holisosa bifarentia sp. nov.

Candidatus Holisosa bifarentia (NL. fem. n. *bifarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4874 sp002398065*. The type genome for the species is the GenBank assembly GCA_002398065.1. The GC content of the type genome is 49.06 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Holisosa gen. nov.

Candidatus Holisosa (NL. fem. n. *Holisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4874*. The type species for the genus is *Candidatus* Holisosa bifarentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Holisosa rubefitio sp. nov.

Candidatus Holisosa rubefitio (NL. fem. n. *rubefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4874 sp002399435*. The type genome for the species is the GenBank assembly GCA_002399435.1. The GC content of the type genome is 48.86 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Holophaga culililega sp. nov.

Candidatus Holophaga culililega (NL. fem. n. *culililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp002298155*. The type genome for the species is the GenBank assembly GCA_002298155.1. The GC content of the type genome is 67.83 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Holophaga decomilenta sp. nov.

Candidatus Holophaga decomilenta (NL. fem. n. *decomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp002068835*. The type genome for the species is the GenBank assembly GCA_002068835.1. The GC content of the type genome is 67.77 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Holophaga fatififorma sp. nov.

Candidatus Holophaga fatififorma (NL. fem. n. *fatififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp903868115*. The type genome for the species is the GenBank assembly GCA_903868115.1. The GC content of the type genome is 62.93 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Holophaga hirudicella sp. nov.

Candidatus Holophaga hirudicella (NL. fem. n. *hirudicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp002297665*. The type genome for the species is the GenBank assembly GCA_002297665.1. The GC content of the type genome is 69.06 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Holophaga inretitia sp. nov.

Candidatus Holophaga inretitia (NL. fem. n. *inretitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp003165415*. The type genome for the species is the GenBank assembly GCA_003165415.1. The GC content of the type genome is 66.97 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Holophaga subofedo sp. nov.

Candidatus Holophaga subofedo (NL. fem. n. *subofedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Holophaga sp002319925*. The type genome for the species is the GenBank assembly GCA_002319925.1. The GC content of the type genome is 61.22 %

and the genome length is 4.24 Mbp.

Description of *Candidatus* Holovana debucivita sp. nov.

Candidatus Holovana debucivita (NL. fem. n. *debucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-113 sp003136675*. The type genome for the species is the GenBank assembly GCA_003168955.1. The GC content of the type genome is 59.69 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Holovana gen. nov.

Candidatus Holovana (NL. fem. n. *Holovana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-113*. The type species for the genus is *Candidatus* Holovana debucivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Holovana fuligitia sp. nov.

Candidatus Holovana fuligitia (NL. fem. n. *fuligitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-113 sp903970205*. The type genome for the species is the GenBank assembly RS_GCF_903970205.1. The GC content of the type genome is 59.26 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Holovaria capucastra sp. nov.

Candidatus Holovaria capucastra (NL. fem. n. *capucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6894 sp903912515*. The type genome for the species is the GenBank assembly GCA_903929995.1. The GC content of the type genome is 54.82 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Holovaria gen. nov.

Candidatus Holovaria (NL. fem. n. *Holovaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6894*. The type species for the genus is *Candidatus* Holovaria capucastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Holovaria impigimonia sp. nov.

Candidatus Holovaria impigimonia (NL. fem. n. *impigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6894 sp003669555*. The type genome for the species is the GenBank assembly GCA_003669555.1. The GC content of the type genome is 59.65 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Holovaria rorifilenta sp. nov.

Candidatus Holovaria rorifilenta (NL. fem. n. *rorifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6894 sp002451275*. The type genome for the species is the GenBank assembly GCA_002331825.1. The GC content of the type genome is 62.06 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Holovella tibicatica sp. nov.

Candidatus Holovella tibicatica (NL. fem. n. *tibicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-217 sp004356805*. The type genome for the species is the GenBank assembly GCA_004356805.1. The GC content of the type genome is 60.32 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Holovella gen. nov.

Candidatus Holovella (NL. fem. n. *Holovella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-217*. The type species for the genus is *Candidatus* Holovella tibicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidosaceae.

Description of *Candidatus* Holovella vanidimonia sp. nov.

Candidatus Holovella vanidimonia (NL. fem. n. *vanidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-217 sp003230435*. The type genome for the species is the GenBank assembly GCA_003230435.1. The GC content of the type genome is 60.53 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Holovia adculivita sp. nov.

Candidatus Holovia adculivita (NL. fem. n. *adculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp902802365*. The type genome for the species is the GenBank assembly GCA_902802365.1. The GC content of the type genome is 52.99 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Holovia gen. nov.

Candidatus Holovia (NL. fem. n. *Holovia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA733*. The type species for the genus is *Candidatus* Holovia adculivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Holovia bulapastra sp. nov.

Candidatus Holovia bulapastra (NL. fem. n. *bulapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900317165*. The type genome for the species is the GenBank assembly GCA_900317165.1. The GC content of the type genome is 46.9 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Holovia bulapedo sp. nov.

Candidatus Holovia bulapedo (NL. fem. n. *bulapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900316365*. The type genome for the species is the GenBank assembly GCA_902757585.1. The GC content of the type genome is 48.9 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Holovia denecimonas sp. nov.

Candidatus Holovia denecimonas (NL. fem. n. *denecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp902803375*. The type genome for the species is the GenBank assembly GCA_902803375.1. The GC content of the type genome is 50.54 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Holovia depupifica sp. nov.

Candidatus Holovia depupifica (NL. fem. n. *depupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp902773005*. The type genome for the species is the GenBank assembly GCA_902773005.1. The GC content of the type genome is 50.63 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Holovia figilitrix sp. nov.

Candidatus Holovia figilitrix (NL. fem. n. *figilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA733 sp004561785*. The type genome for the species is the GenBank assembly GCA_902783865.1. The GC content of the type genome is 52.79 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Holovia irreditrix sp. nov.

Candidatus Holovia irreditrix (NL. fem. n. *irreditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900767825*. The type genome for the species is the GenBank assembly RS_GCF_900767825.1. The GC content of the type genome is 35.22 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Holovia laxitibra sp. nov.

Candidatus Holovia laxitibra (NL. fem. n. *laxitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900321535*. The type genome for the species is the GenBank assembly GCA_900321535.1. The GC content of the type genome is 46.48 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Holovia malivicula sp. nov.

Candidatus Holovia malivicula (NL. fem. n. *malivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp002321395*. The type genome for the species is the GenBank assembly GCA_002404805.1. The GC content of the type genome is 52.69 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Holovia podagitio sp. nov.

Candidatus Holovia podagitio (NL. fem. n. *podagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900539595*. The type genome for the species is the GenBank assembly GCA_900539595.1. The GC content of the type genome is 45.79 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Holovia renavimonas sp. nov.

Candidatus Holovia renavimonas (NL. fem. n. *renavimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp003512585*. The type genome for the species is the GenBank assembly GCA_003506235.1. The GC content of the type genome is 34.39 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Holovia scaccitudo sp. nov.

Candidatus Holovia scaccitudo (NL. fem. n. *scaccitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp002068375*. The type genome for the species is the GenBank assembly GCA_002068375.1. The GC content of the type genome is 51.36 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Holovia uberriforma sp. nov.

Candidatus Holovia uberriforma (NL. fem. n. *uberriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900767605*. The type genome for the species is the GenBank assembly RS_GCF_900767605.1. The GC content of the type genome is 46.1 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Holovia vagabitica sp. nov.

Candidatus Holovia vagabitica (NL. fem. n. *vagabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp002472275*. The type genome for the species is the GenBank assembly GCA_002472275.1. The GC content of the type genome is 53.95 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Holovia valefitio sp. nov.

Candidatus Holovia valefitio (NL. fem. n. *valefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900550795*. The type genome for the species is the GenBank assembly RS_GCF_900753385.1. The GC content of the type genome is 35.0 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Holovia vitigitica sp. nov.

Candidatus Holovia vitigitica (NL. fem. n. *vitigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA733 sp900317295*. The type genome for the species is the GenBank assembly GCA_902793785.1. The GC content of the type genome is 54.01 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Holovida direcifica sp. nov.

Candidatus Holovida direcifica (NL. fem. n. *direcifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5704 sp002420005*. The type genome for the species is the GenBank assembly GCA_002420005.1. The GC content of the type genome is 69.38 % and the genome length is 8.02 Mbp.

Description of *Candidatus* Holovida gen. nov.

Candidatus Holovida (NL. fem. n. *Holovida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5704*. The type species for the genus is *Candidatus* Holovida direcifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Holovidaceae fam. nov.

Candidatus Holovidaceae (NL. fem. n. *Holovidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5704.* The type genus for the taxon is *Candidatus* Holovida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Holovidales.

Description of *Candidatus* Holovidales ord. nov.

Candidatus Holovidales (NL. fem. n. *Holovidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5704.* The type genus for the taxon is *Candidatus* Holovida .

According to the GTDB R06-RS202, this order belongs to the class *Thermoanaerobaculia*.

Description of *Candidatus* Holovosa affabax sp. nov.

Candidatus Holovosa affabax (NL. fem. n. *affabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU087 sp012727675*. The type genome for the species is the GenBank assembly GCA_012727675.1. The GC content of the type genome is 52.43 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Holovosa gen. nov.

Candidatus Holovosa (NL. fem. n. *Holovosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU087*. The type species for the genus is *Candidatus* Holovosa affabax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Holovosaceae fam. nov.

Candidatus Holovosaceae (NL. fem. n. *Holovosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU087.* The type genus for the taxon is *Candidatus* Holovosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Holovosales.

Description of *Candidatus* Holovosales ord. nov.

Candidatus Holovosales (NL. fem. n. *Holovosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU087.* The type genus for the taxon is *Candidatus* Holovosa .

According to the GTDB R06-RS202, this order belongs to the class *Limnochordia*.

Description of *Candidatus* Holovosa decatastra sp. nov.

Candidatus Holovosa decatastra (NL. fem. n. *decatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU087 sp012839845*. The type genome for the species is the GenBank assembly GCA_012839845.1. The GC content of the type genome is 54.37 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Holovosa levidessa sp. nov.

Candidatus Holovosa levidessa (NL. fem. n. *levidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU087 sp012735435*. The type genome for the species is the GenBank assembly GCA_012735435.1. The GC content of the type genome is 52.96 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Holovosa rubicimonas sp. nov.

Candidatus Holovosa rubicimonas (NL. fem. n. *rubicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU087 sp001513495*. The type genome for the species is the

GenBank assembly GCA_012518545.1. The GC content of the type genome is 54.71 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Holovosa supelitudo sp. nov.

Candidatus Holovosa supelitudo (NL. fem. n. *supelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU087 sp012510855*. The type genome for the species is the GenBank assembly GCA_012510855.1. The GC content of the type genome is 52.75 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Holovula menapilega sp. nov.

Candidatus Holovula menapilega (NL. fem. n. *menapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701925 sp002701925*. The type genome for the species is the GenBank assembly GCA_002701925.2. The GC content of the type genome is 32.53 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Holovula gen. nov.

Candidatus Holovula (NL. fem. n. *Holovula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2701925*. The type species for the genus is *Candidatus* Holovula menapilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Homagana ruricousia sp. nov.

Candidatus Homagana ruricousia (NL. fem. n. *ruricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747955 sp002747955*. The type genome for the species is the GenBank assembly GCA_002747955.1. The GC content of the type genome is 30.03 %

and the genome length is 0.61 Mbp.

Description of *Candidatus* Homagana gen. nov.

Candidatus Homagana (NL. fem. n. *Homagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747955*. The type species for the genus is *Candidatus* Homagana ruricousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2747955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homaganaceae.

Description of *Candidatus* Homaganaceae fam. nov.

Candidatus Homaganaceae (NL. fem. n. *Homaganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747955.* The type genus for the taxon is *Candidatus* Homagana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Homagaria abantitas sp. nov.

Candidatus Homagaria abantitas (NL. fem. n. *abantitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-933 sp903927615*. The type genome for the species is the GenBank assembly GCA_903927615.1. The GC content of the type genome is 63.34 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Homagaria gen. nov.

Candidatus Homagaria (NL. fem. n. *Homagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-933*. The type species for the genus is *Candidatus* Homagaria abantitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homagaria homicetta sp. nov.

Candidatus Homagaria homicetta (NL. fem. n. *homicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-933 sp003165295*. The type genome for the species is the GenBank assembly GCA_003165295.1. The GC content of the type genome is 65.62 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Homagaria homilago sp. nov.

Candidatus Homagaria homilago (NL. fem. n. *homilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-933 sp903920145*. The type genome for the species is the GenBank assembly GCA_903903135.1. The GC content of the type genome is 58.71 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Homagella cilibedo sp. nov.

Candidatus Homagella cilibedo (NL. fem. n. *cilibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG039 sp900314875*. The type genome for the species is the GenBank assembly GCA_900314785.1. The GC content of the type genome is 47.94 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Homagella gen. nov.

Candidatus Homagella (NL. fem. n. *Homagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG039*. The type species for the genus is *Candidatus* Homagella cilibedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homagia rubefitudo sp. nov.

Candidatus Homagia rubefitudo (NL. fem. n. *rubefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha5-Bin7 sp002938195*. The type genome for the species is the GenBank assembly GCA_002937925.1. The GC content of the type genome is 28.09 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Homagia gen. nov.

Candidatus Homagia (NL. fem. n. *Homagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha5-Bin7*. The type species for the genus is *Candidatus* Homagia rubefitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Homagida artufilega sp. nov.

Candidatus Homagida artufilega (NL. fem. n. *artufilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-NZ sp013332095*. The type genome for the species is the GenBank assembly GCA_013332095.1. The GC content of the type genome is 29.09 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Homagida gen. nov.

Candidatus Homagida (NL. fem. n. *Homagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAG-NZ*. The type species for the genus is *Candidatus* Homagida artufilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MAG-NZ*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homagidaceae.

Description of *Candidatus* Homagidaceae fam. nov.

Candidatus Homagidaceae (NL. fem. n. *Homagidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MAG-NZ.* The type genus for the taxon is *Candidatus* Homagida .

According to the original version of GTDB R06-RS202, this family belongs to the order *MAG-NZ*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homagidales.

Description of *Candidatus* Homagidales ord. nov.

Candidatus Homagidales (NL. fem. n. *Homagidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MAG-NZ.* The type genus for the taxon is *Candidatus* Homagida .

According to the GTDB R06-RS202, this order belongs to the class *Bacilli*.

Description of *Candidatus* Homagosa venunastra sp. nov.

Candidatus Homagosa venunastra (NL. fem. n. *venunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXJ01 sp903824575*. The type genome for the species is the GenBank assembly GCA_903824575.1. The GC content of the type genome is 53.74 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Homagosa gen. nov.

Candidatus Homagosa (NL. fem. n. *Homagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJXJ01*. The type species for the genus is *Candidatus* Homagosa venunastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homagula cibarisca sp. nov.

Candidatus Homagula cibarisca (NL. fem. n. *cibarisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-56 sp002361955*. The type genome for the species is the GenBank assembly GCA_002494285.1. The GC content of the type genome is 51.8 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Homagula gen. nov.

Candidatus Homagula (NL. fem. n. *Homagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-56*. The type species for the genus is *Candidatus* Homagula cibarisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homagula defalentia sp. nov.

Candidatus Homagula defalentia (NL. fem. n. *defalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-56 sp004793585*. The type genome for the species is the GenBank assembly RS_GCF_004793585.1. The GC content of the type genome is 45.89 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Homagula immobago sp. nov.

Candidatus Homagula immobago (NL. fem. n. *immobago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-56 sp900762665*. The type genome for the species is the GenBank assembly GCA_900762665.1. The GC content of the type genome is 47.51 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Homagula supelisca sp. nov.

Candidatus Homagula supelisca (NL. fem. n. *supelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-56 sp900539525*. The type genome for the species is the GenBank assembly GCA_900758835.1. The GC content of the type genome is 47.45 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Homagula ulcisimonas sp. nov.

Candidatus Homagula ulcisimonas (NL. fem. n. *ulcisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-56 sp900752065*. The type genome for the species is the GenBank assembly RS_GCF_900752065.1. The GC content of the type genome is 48.38 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Homicana capilitas sp. nov.

Candidatus Homicana capilitas (NL. fem. n. *capilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYL01 sp007127935*. The type genome for the species is the GenBank assembly GCA_007127935.1. The GC content of the type genome is 66.39 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Homicana gen. nov.

Candidatus Homicana (NL. fem. n. *Homicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKYL01*. The type species for the genus is *Candidatus* Homicana capilitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homicana saxifastra sp. nov.

Candidatus Homicana saxifastra (NL. fem. n. *saxifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYL01 sp007121755*. The type genome for the species is the GenBank assembly GCA_007121755.1. The GC content of the type genome is 65.26 %

and the genome length is 2.21 Mbp.

Description of *Candidatus* Homicella coturedo sp. nov.

Candidatus Homicella coturedo (NL. fem. n. *coturedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2988 sp002346665*. The type genome for the species is the GenBank assembly GCA_002346665.1. The GC content of the type genome is 61.69 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Homicella gen. nov.

Candidatus Homicella (NL. fem. n. *Homicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2988*. The type species for the genus is *Candidatus* Homicella coturedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Homicosa capabimonia sp. nov.

Candidatus Homicosa capabimonia (NL. fem. n. *capabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1063 sp011338235*. The type genome for the species is the GenBank assembly GCA_011338235.1. The GC content of the type genome is 41.43 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Homicosa gen. nov.

Candidatus Homicosa (NL. fem. n. *Homicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1063*. The type species for the genus is *Candidatus* Homicosa capabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Homicosaceae.

Description of *Candidatus* Homicosaceae fam. nov.

Candidatus Homicosaceae (NL. fem. n. *Homicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1063.* The type genus for the taxon is *Candidatus* Homicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homicosales.

Description of *Candidatus* Homicosales ord. nov.

Candidatus Homicosales (NL. fem. n. *Homicosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1063.* The type genus for the taxon is *Candidatus* Homicosa .

According to the GTDB R06-RS202, this order belongs to the class *Hydrothermia*.

Description of *Candidatus* Homicosa cituvisca sp. nov.

Candidatus Homicosa cituvisca (NL. fem. n. *cituvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1063 sp002316275*. The type genome for the species is the GenBank assembly GCA_002316275.1. The GC content of the type genome is 40.33 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Homicosa lavabitia sp. nov.

Candidatus Homicosa lavabitia (NL. fem. n. *lavabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1063 sp011363785*. The type genome for the species is the GenBank assembly GCA_011363785.1. The GC content of the type genome is 39.46 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Homicosa luxurimonas sp. nov.

Candidatus Homicosa luxurimonas (NL. fem. n. *luxurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1063 sp002421425*. The type genome for the species is the GenBank assembly GCA_002421425.1. The GC content of the type genome is 41.77 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Homicula salubiforma sp. nov.

Candidatus Homicula salubiforma (NL. fem. n. *salubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6930 sp002450755*. The type genome for the species is the GenBank assembly GCA_002450755.1. The GC content of the type genome is 47.79 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Homicula gen. nov.

Candidatus Homicula (NL. fem. n. *Homicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6930*. The type species for the genus is *Candidatus* Homicula salubiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6930*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homiculaceae.

Description of *Candidatus* Homiculaceae fam. nov.

Candidatus Homiculaceae (NL. fem. n. *Homiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6930.* The type genus for the taxon is *Candidatus* Homicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifiales.

Description of *Candidatus* Homilana allobimonas sp. nov.

Candidatus Homilana allobimonas (NL. fem. n. *allobimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDE01 sp003566475*. The type genome for the species is the GenBank assembly GCA_003566475.1. The GC content of the type genome is 69.48 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Homilana gen. nov.

Candidatus Homilana (NL. fem. n. *Homilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXDE01*. The type species for the genus is *Candidatus* Homilana allobimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXDE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homilanaceae.

Description of *Candidatus* Homilanaceae fam. nov.

Candidatus Homilanaceae (NL. fem. n. *Homilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXDE01.* The type genus for the taxon is *Candidatus* Homilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SS1-B-03-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nutamidales.

Description of *Candidatus* Homilaria malogitudo sp. nov.

Candidatus Homilaria malogitudo (NL. fem. n. *malogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBCG01 sp005881895*. The type genome for the species is the GenBank assembly GCA_005881895.1. The GC content of the type genome is 62.38 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Homilaria gen. nov.

Candidatus Homilaria (NL. fem. n. *Homilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBCG01*. The type species for the genus is *Candidatus* Homilaria malogitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homilella repudimonia sp. nov.

Candidatus Homilella repudimonia (NL. fem. n. *repudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRI01 sp007118565*. The type genome for the species is the GenBank assembly GCA_007118565.1. The GC content of the type genome is 68.66 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Homilella gen. nov.

Candidatus Homilella (NL. fem. n. *Homilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKRI01*. The type species for the genus is *Candidatus* Homilella repudimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homilida cilicifica sp. nov.

Candidatus Homilida cilicifica (NL. fem. n. *cilicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-35 sp005884125*. The type genome for the species is the GenBank assembly GCA_005884125.1. The GC content of the type genome is 71.78 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Homilida gen. nov.

Candidatus Homilida (NL. fem. n. *Homilida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-35*. The type species for the genus is *Candidatus* Homilida cilicifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homilidaceae.

Description of *Candidatus* Homilidaceae fam. nov.

Candidatus Homilidaceae (NL. fem. n. *Homilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AC-35.* The type genus for the taxon is *Candidatus* Homilida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Homilosa attolitrix sp. nov.

Candidatus Homilosa attolitrix (NL. fem. n. *attolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPH01 sp903845065*. The type genome for the species is the GenBank assembly GCA_903845065.1. The GC content of the type genome is 67.7 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Homilosa gen. nov.

Candidatus Homilosa (NL. fem. n. *Homilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYPH01*. The type species for the genus is *Candidatus* Homilosa attolitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homilosa obnupitica sp. nov.

Candidatus Homilosa obnupitica (NL. fem. n. *obnupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPH01 sp903865895*. The type genome for the species is the GenBank assembly GCA_903865895.1. The GC content of the type genome is 67.67 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Homilosa pecunilenta sp. nov.

Candidatus Homilosa pecunilenta (NL. fem. n. *pecunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPH01 sp903928045*. The type genome for the species is the GenBank assembly GCA_903910565.1. The GC content of the type genome is 67.21 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Homilosa remedatica sp. nov.

Candidatus Homilosa remedatica (NL. fem. n. *remedatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPH01 sp903928895*. The type genome for the species is the GenBank assembly GCA_903886375.1. The GC content of the type genome is 67.45 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Homilula luceliforma sp. nov.

Candidatus Homilula luceliforma (NL. fem. n. *luceliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDB01 sp007125475*. The type genome for the species is the GenBank assembly GCA_007118635.1. The GC content of the type genome is 71.92 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Homilula gen. nov.

Candidatus Homilula (NL. fem. n. *Homilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDB01*. The type species for the genus is *Candidatus* Homilula luceliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homogana asporugo sp. nov.

Candidatus Homogana asporugo (NL. fem. n. *asporugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VENL01 sp009711605*. The type genome for the species is the GenBank assembly GCA_009711605.1. The GC content of the type genome is 30.85 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Homogana gen. nov.

Candidatus Homogana (NL. fem. n. *Homogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VENL01*. The type species for the genus is *Candidatus* Homogana asporugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VENL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homoganaceae.

Description of *Candidatus* Homoganaceae fam. nov.

Candidatus Homoganaceae (NL. fem. n. *Homoganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VENL01*. The type genus for the taxon is *Candidatus* Homogana .

According to GTDB R06-RS202, this family belongs to the order *Tissierellales*.

Description of *Candidatus* Homogaria depubitura sp. nov.

Candidatus Homogaria depubitura (NL. fem. n. *depubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXC01 sp012516115*. The type genome for the species is the GenBank assembly GCA_012516115.1. The GC content of the type genome is 60.44 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Homogaria gen. nov.

Candidatus Homogaria (NL. fem. n. *Homogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXC01*. The type species for the genus is *Candidatus* Homogaria depubitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYXC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homogariaceae.

Description of *Candidatus* Homogariaceae fam. nov.

Candidatus Homogariaceae (NL. fem. n. *Homogariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYXC01.* The type genus for the taxon is *Candidatus* Homogaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYXC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homogariales.

Description of *Candidatus* Homogariales ord. nov.

Candidatus Homogariales (NL. fem. n. *Homogariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYXC01.* The type genus for the taxon is *Candidatus* Homogaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4882*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lacinanae.

Description of *Candidatus* Homogella alembigena sp. nov.

Candidatus Homogella alembigena (NL. fem. n. *alembigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009841635*. The type genome for the species is the GenBank assembly GCA_009841635.1. The GC content of the type genome is 51.46 % and the

genome length is 2.9 Mbp.

Description of *Candidatus* Homogella gen. nov.

Candidatus Homogella (NL. fem. n. *Homogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin55*. The type species for the genus is *Candidatus* Homogella alembigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Homogella dehonigena sp. nov.

Candidatus Homogella dehonigena (NL. fem. n. *dehonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009840305*. The type genome for the species is the GenBank assembly GCA_009835715.1. The GC content of the type genome is 47.46 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Homogella egregilenta sp. nov.

Candidatus Homogella egregilenta (NL. fem. n. *egregilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp002238665*. The type genome for the species is the GenBank assembly GCA_002238665.1. The GC content of the type genome is 47.27 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Homogella fefelilenta sp. nov.

Candidatus Homogella fefelilenta (NL. fem. n. *fefelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp012267385*. The type genome for the species is the GenBank assembly GCA_012267385.1. The GC content of the type genome is 46.52 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Homogella legifentia sp. nov.

Candidatus Homogella legifentia (NL. fem. n. *legifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009840545*. The type genome for the species is the GenBank assembly GCA_009840545.1. The GC content of the type genome is 49.58 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Homogella offunatica sp. nov.

Candidatus Homogella offunatica (NL. fem. n. *offunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp011525295*. The type genome for the species is the GenBank assembly GCA_011525295.1. The GC content of the type genome is 46.78 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Homogella repeciforma sp. nov.

Candidatus Homogella repeciforma (NL. fem. n. *repeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009845835*. The type genome for the species is the GenBank assembly GCA_011523575.1. The GC content of the type genome is 44.22 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Homogella semilitoga sp. nov.

Candidatus Homogella semilitoga (NL. fem. n. *semilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009837185*. The type genome for the species is the GenBank assembly GCA_009837185.1. The GC content of the type genome is 47.01 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Homogella videlilega sp. nov.

Candidatus Homogella videlilega (NL. fem. n. *videlilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009841615*. The type genome for the species is the GenBank assembly GCA_009841615.1. The GC content of the type genome is 46.54 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Homogella visocatio sp. nov.

Candidatus Homogella visocatio (NL. fem. n. *visocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin55 sp009842245*. The type genome for the species is the GenBank assembly GCA_009842245.1. The GC content of the type genome is 47.42 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Homogia adtagitrix sp. nov.

Candidatus Homogia adtagitrix (NL. fem. n. *adtagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SbD1 sp900290365*. The type genome for the species is the GenBank assembly RS_GCF_900290365.1. The GC content of the type genome is 52.45 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Homogia gen. nov.

Candidatus Homogia (NL. fem. n. *Homogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SbD1*. The type species for the genus is *Candidatus* Homogia adtagitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homogia armidimonas sp. nov.

Candidatus Homogia armidimonas (NL. fem. n. *armidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SbD1 sp003165235*. The type genome for the species is the GenBank assembly GCA_003165235.1. The GC content of the type genome is 52.86 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Homogia seposivita sp. nov.

Candidatus Homogia seposivita (NL. fem. n. *seposivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SbD1 sp900290385*. The type genome for the species is the GenBank assembly RS_GCF_900290385.1. The GC content of the type genome is 53.27 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Homogosa aplesitica sp. nov.

Candidatus Homogosa aplesitica (NL. fem. n. *aplesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYHX01 sp009926245*. The type genome for the species is the GenBank assembly GCA_009926245.1. The GC content of the type genome is 53.23 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Homogosa gen. nov.

Candidatus Homogosa (NL. fem. n. *Homogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYHX01*. The type species for the genus is *Candidatus* Homogosa aplesitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubanaceae.

Description of *Candidatus* Homogosa arbavatio sp. nov.

Candidatus Homogosa arbavatio (NL. fem. n. *arbavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYHX01 sp009926405*. The type genome for the species is the

GenBank assembly GCA_009926405.1. The GC content of the type genome is 51.86 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Homogosa monimitia sp. nov.

Candidatus Homogosa monimitia (NL. fem. n. *monimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYHX01 sp005799025*. The type genome for the species is the GenBank assembly GCA_005799025.1. The GC content of the type genome is 48.68 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Homogosa semodimonia sp. nov.

Candidatus Homogosa semodimonia (NL. fem. n. *semodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYHX01 sp903856555*. The type genome for the species is the GenBank assembly GCA_903899585.1. The GC content of the type genome is 53.42 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Homogosa susicago sp. nov.

Candidatus Homogosa susicago (NL. fem. n. *susicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYHX01 sp009927485*. The type genome for the species is the GenBank assembly GCA_009927485.1. The GC content of the type genome is 50.95 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Homogula defarax sp. nov.

Candidatus Homogula defarax (NL. fem. n. *defarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA695 sp903928175*. The type genome for the species is the GenBank assembly GCA_903928175.1. The GC content of the type genome is 58.53 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Homogula gen. nov.

Candidatus Homogula (NL. fem. n. *Homogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA695*. The type species for the genus is *Candidatus* Homogula defarax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homogula desorastra sp. nov.

Candidatus Homogula desorastra (NL. fem. n. *desorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA695 sp903933715*. The type genome for the species is the GenBank assembly GCA_903933715.1. The GC content of the type genome is 57.92 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Homogula intamitas sp. nov.

Candidatus Homogula intamitas (NL. fem. n. *intamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA695 sp002298145*. The type genome for the species is the GenBank assembly GCA_002298145.1. The GC content of the type genome is 60.51 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Homolana domigousia sp. nov.

Candidatus Homolana domigousia (NL. fem. n. *domigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGA01 sp009787405*. The type genome for the species is the GenBank assembly GCA_009787405.1. The GC content of the type genome is 41.2 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Homolana gen. nov.

Candidatus Homolana (NL. fem. n. *Homolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGA01*. The type species for the genus is *Candidatus* Homolana domigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRGA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolanaceae.

Description of *Candidatus* Homolanaceae fam. nov.

Candidatus Homolanaceae (NL. fem. n. *Homolanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRGA01.* The type genus for the taxon is *Candidatus* Homolana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Homolaria ceracigena sp. nov.

Candidatus Homolaria ceracigena (NL. fem. n. *ceracigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp000438015*. The type genome for the species is the GenBank assembly GCA_000438015.1. The GC content of the type genome is 46.24 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Homolaria gen. nov.

Candidatus Homolaria (NL. fem. n. *Homolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-312*. The type species for the genus is *Candidatus* Homolaria ceracigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolariaceae.

Description of *Candidatus* Homolariaceae fam. nov.

Candidatus Homolariaceae (NL. fem. n. *Homolariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-312*. The type genus for the taxon is *Candidatus* Homolaria .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Homolaria detecitura sp. nov.

Candidatus Homolaria detecitura (NL. fem. n. *detecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900545715*. The type genome for the species is the GenBank assembly GCA_900545715.1. The GC content of the type genome is 49.31 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Homolaria endivitica sp. nov.

Candidatus Homolaria endivitica (NL. fem. n. *endivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900760055*. The type genome for the species is the GenBank assembly RS_GCF_900760055.1. The GC content of the type genome is 49.28 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Homolaria gerunibra sp. nov.

Candidatus Homolaria gerunibra (NL. fem. n. *gerunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp002437405*. The type genome for the species is the GenBank assembly GCA_002437055.1. The GC content of the type genome is 55.01 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Homolaria incivigena sp. nov.

Candidatus Homolaria incivigena (NL. fem. n. *incivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900760665*. The type genome for the species is the

GenBank assembly RS_GCF_900760665.1. The GC content of the type genome is 57.59 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Homolaria lanugilenta sp. nov.

Candidatus Homolaria lanugilenta (NL. fem. n. *lanugilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900546565*. The type genome for the species is the GenBank assembly GCA_900546565.1. The GC content of the type genome is 52.93 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Homolaria latibugo sp. nov.

Candidatus Homolaria latibugo (NL. fem. n. *latibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900548275*. The type genome for the species is the GenBank assembly GCA_900548275.1. The GC content of the type genome is 54.73 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Homolaria legifimonia sp. nov.

Candidatus Homolaria legifimonia (NL. fem. n. *legifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp001917305*. The type genome for the species is the GenBank assembly GCA_001917305.1. The GC content of the type genome is 57.8 % and the genome length is 2.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Homolaria practastra sp. nov.

Candidatus Homolaria practastra (NL. fem. n. *practastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp002405555*. The type genome for the species is the GenBank assembly GCA_002405555.1. The GC content of the type genome is 56.59 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Homolaria tubicicella sp. nov.

Candidatus Homolaria tubicicella (NL. fem. n. *tubicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-312 sp900545705*. The type genome for the species is the GenBank assembly GCA_900545705.1. The GC content of the type genome is 48.68 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Homolella acraticula sp. nov.

Candidatus Homolella acraticula (NL. fem. n. *acraticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU012 sp012840925*. The type genome for the species is the GenBank assembly GCA_012840925.1. The GC content of the type genome is 48.48 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Homolella gen. nov.

Candidatus Homolella (NL. fem. n. *Homolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU012*. The type species for the genus is *Candidatus* Homolella acraticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU012*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolellaceae.

Description of *Candidatus* Homolellaceae fam. nov.

Candidatus Homolellaceae (NL. fem. n. *Homolellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU012.* The type genus for the taxon is *Candidatus* Homolella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilidales.

Description of *Candidatus* Homolella enimvastra sp. nov.

Candidatus Homolella enimvastra (NL. fem. n. *enimvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU012 sp012520795*. The type genome for the species is the GenBank assembly GCA_012520795.1. The GC content of the type genome is 49.99 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Homolella hexagimonia sp. nov.

Candidatus Homolella hexagimonia (NL. fem. n. *hexagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU012 sp012837335*. The type genome for the species is the GenBank assembly GCA_012837335.1. The GC content of the type genome is 47.32 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Homolella inrematio sp. nov.

Candidatus Homolella inrematio (NL. fem. n. *inrematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU012 sp012521805*. The type genome for the species is the GenBank assembly GCA_012521805.1. The GC content of the type genome is 45.58 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Homolella lucelugo sp. nov.

Candidatus Homolella lucelugo (NL. fem. n. *lucelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU012 sp900019385*. The type genome for the species is the GenBank assembly GCA_900019385.1. The GC content of the type genome is 53.78 % and the genome length is 2.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "anaerobic digester metagenome".

Description of *Candidatus* Homolia mahemetta sp. nov.

Candidatus Homolia mahemetta (NL. fem. n. *mahemetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-171 sp002049895*. The type genome for the species is the GenBank assembly GCA_002049895.1. The GC content of the type genome is 39.09 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Homolia gen. nov.

Candidatus Homolia (NL. fem. n. *Homolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-171*. The type species for the genus is *Candidatus* Homolia mahemetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homoliaceae.

Description of *Candidatus* Homoliaceae fam. nov.

Candidatus Homoliaceae (NL. fem. n. *Homoliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-171.* The type genus for the taxon is *Candidatus* Homolia .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homoliales.

Description of *Candidatus* Homoliales ord. nov.

Candidatus Homoliales (NL. fem. n. *Homoliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-171.* The type genus for the taxon is *Candidatus* Homolia .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Homolida bimetax sp. nov.

Candidatus Homolida bimetax (NL. fem. n. *bimetax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4078 sp002419385*. The type genome for the species is the GenBank assembly GCA_002347465.1. The GC content of the type genome is 56.65 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Homolida gen. nov.

Candidatus Homolida (NL. fem. n. *Homolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4078*. The type species for the genus is *Candidatus* Homolida bimetax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homolida desometta sp. nov.

Candidatus Homolida desometta (NL. fem. n. *desometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4078 sp003314535*. The type genome for the species is the GenBank assembly GCA_003314535.1. The GC content of the type genome is 55.4 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Homolosa debucitica sp. nov.

Candidatus Homolosa debucitica (NL. fem. n. *debucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5394 sp002409725*. The type genome for the species is the GenBank assembly GCA_002409725.1. The GC content of the type genome is 58.35 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Homolosa gen. nov.

Candidatus Homolosa (NL. fem. n. *Homolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5394*. The type species for the genus is *Candidatus* Homolosa debucitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Homolosa decunugo sp. nov.

Candidatus Homolosa decunugo (NL. fem. n. *decunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5394 sp900542615*. The type genome for the species is the GenBank assembly GCA_900542615.1. The GC content of the type genome is 60.59 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Homolosa pedepatio sp. nov.

Candidatus Homolosa pedepatio (NL. fem. n. *pedepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5394 sp003150565*. The type genome for the species is the GenBank assembly GCA_900543475.1. The GC content of the type genome is 58.79 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Homoserinimonas penicessa sp. nov.

Candidatus Homoserinimonas penicessa (NL. fem. n. *penicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Homoserinimonas sp003065485*. The type genome for the species is the GenBank assembly RS_GCF_003065485.1. The GC content of the type genome is 64.1 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Homoserinimonas pimenedo sp. nov.

Candidatus Homoserinimonas pimenedo (NL. fem. n. *pimenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Homoserinimonas sp008001035*. The type genome for the species is the GenBank assembly RS_GCF_008017685.1. The GC content of the type genome is 67.5 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Homulana dehisedo sp. nov.

Candidatus Homulana dehisedo (NL. fem. n. *dehisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6879 sp002449135*. The type genome for the species is the GenBank assembly GCA_002449135.1. The GC content of the type genome is 27.46 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Homulana gen. nov.

Candidatus Homulana (NL. fem. n. *Homulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6879*. The type species for the genus is *Candidatus* Homulana dehisedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Homulana diponimonia sp. nov.

Candidatus Homulana diponimonia (NL. fem. n. *diponimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6879 sp902772915*. The type genome for the species is the GenBank assembly GCA_902772915.1. The GC content of the type genome is 32.92 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Homulella alcedivita sp. nov.

Candidatus Homulella alcedivita (NL. fem. n. *alcedivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-353 sp900768995*. The type genome for the species is the GenBank assembly RS_GCF_900768995.1. The GC content of the type genome is 46.57 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Homulella gen. nov.

Candidatus Homulella (NL. fem. n. *Homulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-353*. The type species for the genus is *Candidatus* Homulella alcedivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homulella cibicilenta sp. nov.

Candidatus Homulella cibicilenta (NL. fem. n. *cibicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-353 sp001941135*. The type genome for the species is the GenBank assembly GCA_001941135.1. The GC content of the type genome is 45.13 % and the genome length is 2.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Homulella homulisca sp. nov.

Candidatus Homulella homulisca (NL. fem. n. *homulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-353 sp002395525*. The type genome for the species is the GenBank assembly GCA_002395525.1. The GC content of the type genome is 51.51 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Homulella indifitura sp. nov.

Candidatus Homulella indifitura (NL. fem. n. *indifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-353 sp902782875*. The type genome for the species is the GenBank assembly GCA_902782875.1. The GC content of the type genome is 48.19 %

and the genome length is 2.3 Mbp.

Description of *Candidatus* Homulella pericax sp. nov.

Candidatus Homulella pericax (NL. fem. n. *pericax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-353 sp900066885*. The type genome for the species is the GenBank assembly RS_GCF_902363145.1. The GC content of the type genome is 46.51 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Homulia ecligago sp. nov.

Candidatus Homulia ecligago (NL. fem. n. *ecligago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINVO01 sp903854195*. The type genome for the species is the GenBank assembly GCA_903854195.1. The GC content of the type genome is 36.94 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Homulia gen. nov.

Candidatus Homulia (NL. fem. n. *Homulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINVO01*. The type species for the genus is *Candidatus* Homulia ecligago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAINVO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homuliaceae.

Description of *Candidatus* Homuliaceae fam. nov.

Candidatus Homuliaceae (NL. fem. n. *Homuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINVO01.* The type genus for the taxon is *Candidatus* Homulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Homulida nugivedo sp. nov.

Candidatus Homulida nugivedo (NL. fem. n. *nugivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHCA01 sp003244095*. The type genome for the species is the GenBank assembly GCA_003244095.1. The GC content of the type genome is 70.49 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Homulida gen. nov.

Candidatus Homulida (NL. fem. n. *Homulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHCA01*. The type species for the genus is *Candidatus* Homulida nugivedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulidaceae.

Description of *Candidatus* Homulidaceae fam. nov.

Candidatus Homulidaceae (NL. fem. n. *Homulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHCA01.* The type genus for the taxon is *Candidatus* Homulida .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Homulosa assubastra sp. nov.

Candidatus Homulosa assubastra (NL. fem. n. *assubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2258 sp903908785*. The type genome for the species is the GenBank assembly GCA_903908785.1. The GC content of the type genome is 62.52 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Homulosa gen. nov.

Candidatus Homulosa (NL. fem. n. *Homulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2258*. The type species for the genus is *Candidatus* Homulosa assubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Homulosaceae fam. nov.

Candidatus Homulosaceae (NL. fem. n. *Homulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2258.* The type genus for the taxon is *Candidatus* Homulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homulosales.

Description of *Candidatus* Homulosales ord. nov.

Candidatus Homulosales (NL. fem. n. *Homulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2258.* The type genus for the taxon is *Candidatus* Homulosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tigurariae.

Description of *Candidatus* Homulosa expecitura sp. nov.

Candidatus Homulosa expecitura (NL. fem. n. *expecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2258 sp002347155*. The type genome for the species is the GenBank assembly GCA_002347155.1. The GC content of the type genome is 62.62 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Homulula depubedo sp. nov.

Candidatus Homulula depubedo (NL. fem. n. *depubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN36 sp011053495*. The type genome for the species is the GenBank assembly GCA_011053915.1. The GC content of the type genome is 59.08 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Homulula gen. nov.

Candidatus Homulula (NL. fem. n. *Homulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN36*. The type species for the genus is *Candidatus* Homulula depubedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homululaceae.

Description of *Candidatus* Homululaceae fam. nov.

Candidatus Homululaceae (NL. fem. n. *Homululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN36.* The type genus for the taxon is *Candidatus* Homulula .

According to GTDB R06-RS202, this family belongs to the order *Gemmatales*.

Description of *Candidatus* Homulula vehicibra sp. nov.

Candidatus Homulula vehicibra (NL. fem. n. *vehicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN36 sp002898995*. The type genome for the species is the GenBank assembly GCA_002898995.1. The GC content of the type genome is 57.9 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Homunana semipitura sp. nov.

Candidatus Homunana semipitura (NL. fem. n. *semipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED69 sp002170535*. The type genome for the species is the GenBank assembly GCA_902603495.1. The GC content of the type genome is 38.03 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Homunana gen. nov.

Candidatus Homunana (NL. fem. n. *Homunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED69*. The type species for the genus is *Candidatus* Homunana semipitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosigiaceae.

Description of *Candidatus* Homunaria infacago sp. nov.

Candidatus Homunaria infacago (NL. fem. n. *infacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B129-G9 sp003644325*. The type genome for the species is the GenBank assembly GCA_003644325.1. The GC content of the type genome is 58.0 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Homunaria gen. nov.

Candidatus Homunaria (NL. fem. n. *Homunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B129-G9*. The type species for the genus is *Candidatus* Homunaria infacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B129-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homunariaceae.

Description of *Candidatus* Homunariaceae fam. nov.

Candidatus Homunariaceae (NL. fem. n. *Homunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B129-G9.* The type genus for the taxon is *Candidatus* Homunaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B129-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homunariales.

Description of *Candidatus* Homunariales ord. nov.

Candidatus Homunariales (NL. fem. n. *Homunariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B129-G9.* The type genus for the taxon is *Candidatus* Homunaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *B129-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Homunariae.

Description of *Candidatus* Homunariae class. nov.

Candidatus Homunariae (NL. fem. n. *c__Homunariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B129-G9.* The type genus for the taxon is *Candidatus* Homunaria .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Homunella gerunitrix sp. nov.

Candidatus Homunella gerunitrix (NL. fem. n. *gerunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS951 sp900547585*. The type genome for the species is the GenBank assembly RS_GCF_900755835.1. The GC content of the type genome is 41.28 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Homunella gen. nov.

Candidatus Homunella (NL. fem. n. *Homunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS951*. The type species for the genus is *Candidatus* Homunella gerunitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homunella lenocibra sp. nov.

Candidatus Homunella lenocibra (NL. fem. n. *lenocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS951 sp900547155*. The type genome for the species is the GenBank assembly RS_GCF_900755955.1. The GC content of the type genome is 41.51 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Homunia turifetta sp. nov.

Candidatus Homunia turifetta (NL. fem. n. *turifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEP01 sp011176535*. The type genome for the species is the GenBank assembly GCA_011176535.1. The GC content of the type genome is 64.21 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Homunia gen. nov.

Candidatus Homunia (NL. fem. n. *Homunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEP01*. The type species for the genus is *Candidatus* Homunia turifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacanaceae.

Description of *Candidatus* Homunida desucitudo sp. nov.

Candidatus Homunida desucitudo (NL. fem. n. *desucitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYOY01 sp903927905*. The type genome for the species is the GenBank assembly GCA_903870385.1. The GC content of the type genome is 54.5 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Homunida gen. nov.

Candidatus Homunida (NL. fem. n. *Homunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYOY01*. The type species for the genus is *Candidatus* Homunida desucitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunulaceae.

Description of *Candidatus* Homunosa crastilenta sp. nov.

Candidatus Homunosa crastilenta (NL. fem. n. *crastilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAD01 sp903854335*. The type genome for the species is the GenBank assembly GCA_903854335.1. The GC content of the type genome is 54.8 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Homunosa gen. nov.

Candidatus Homunosa (NL. fem. n. *Homunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKAD01*. The type species for the genus is *Candidatus* Homunosa crastilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Homunosa nehaledo sp. nov.

Candidatus Homunosa nehaledo (NL. fem. n. *nehaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAD01 sp903822115*. The type genome for the species is the GenBank assembly GCA_903822115.1. The GC content of the type genome is 55.55 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Homunosa rudicetta sp. nov.

Candidatus Homunosa rudicetta (NL. fem. n. *rudicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAD01 sp903825315*. The type genome for the species is the GenBank assembly GCA_903825315.1. The GC content of the type genome is 55.71 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Homunula accomastra sp. nov.

Candidatus Homunula accomastra (NL. fem. n. *accomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2200 sp002070215*. The type genome for the species is the GenBank assembly GCA_002070215.1. The GC content of the type genome is 62.96 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Homunula gen. nov.

Candidatus Homunula (NL. fem. n. *Homunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2200*. The type species for the genus is *Candidatus* Homunula accomastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homunulaceae.

Description of *Candidatus* Homunulaceae fam. nov.

Candidatus Homunulaceae (NL. fem. n. *Homunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2200.* The type genus for the taxon is *Candidatus* Homunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homunulales.

Description of *Candidatus* Homunulales ord. nov.

Candidatus Homunulales (NL. fem. n. *Homunulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2200.* The type genus for the taxon is *Candidatus* Homunula .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Homunula frigdigena sp. nov.

Candidatus Homunula frigdigena (NL. fem. n. *frigdigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2200 sp002327925*. The type genome for the species is the GenBank assembly GCA_002327925.1. The GC content of the type genome is 62.09 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Hormoscilla demigilenta sp. nov.

Candidatus Hormoscilla demigilenta (NL. fem. n. *demigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hormoscilla sp005518235*. The type genome for the species is the GenBank assembly GCA_005518235.1. The GC content of the type genome is 47.52 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Hormoscilla feficessa sp. nov.

Candidatus Hormoscilla feficessa (NL. fem. n. *feficessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hormoscilla sp005518205*. The type genome for the species is the

GenBank assembly GCA_014323675.1. The GC content of the type genome is 47.74 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Hormoscilla rosaritas sp. nov.

Candidatus Hormoscilla rosaritas (NL. fem. n. *rosaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hormoscilla sp014324065*. The type genome for the species is the GenBank assembly GCA_014323895.1. The GC content of the type genome is 47.53 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Horomana utraritura sp. nov.

Candidatus Horomana utraritura (NL. fem. n. *utraritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2777 sp002352365*. The type genome for the species is the GenBank assembly GCA_002352365.1. The GC content of the type genome is 49.24 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Horomana gen. nov.

Candidatus Horomana (NL. fem. n. *Horomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2777*. The type species for the genus is *Candidatus* Horomana utraritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Horomanaceae.

Description of *Candidatus* Horomanaceae fam. nov.

Candidatus Horomanaceae (NL. fem. n. *Horomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2777.* The type genus for the taxon is *Candidatus* Horomana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Horomanales.

Description of *Candidatus* Horomanales ord. nov.

Candidatus Horomanales (NL. fem. n. *Horomanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2777*. The type genus for the taxon is *Candidatus* Horomana .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Horomaria faticousia sp. nov.

Candidatus Horomaria faticousia (NL. fem. n. *faticousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFY01 sp009839635*. The type genome for the species is the GenBank assembly GCA_009839635.1. The GC content of the type genome is 56.5 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Horomaria gen. nov.

Candidatus Horomaria (NL. fem. n. *Horomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTFY01*. The type species for the genus is *Candidatus* Horomaria faticousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paraciaceae.

Description of *Candidatus* Horomaria indupessa sp. nov.

Candidatus Horomaria indupessa (NL. fem. n. *indupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFY01 sp011523795*. The type genome for the species is the GenBank assembly GCA_011523795.1. The GC content of the type genome is 53.52 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Horomella vehemigena sp. nov.

Candidatus Horomella vehemigena (NL. fem. n. *vehemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFKM01 sp001779575*. The type genome for the species is the GenBank assembly GCA_001779575.1. The GC content of the type genome is 42.19 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Horomella gen. nov.

Candidatus Horomella (NL. fem. n. *Horomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFKM01*. The type species for the genus is *Candidatus* Horomella vehemigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFKM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Horomellaceae.

Description of *Candidatus* Horomellaceae fam. nov.

Candidatus Horomellaceae (NL. fem. n. *Horomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MFKM01*. The type genus for the taxon is *Candidatus* Horomella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Horomia prognedo sp. nov.

Candidatus Horomia prognedo (NL. fem. n. *prognedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-21 sp001805575*. The type genome for the species is the GenBank assembly GCA_001805575.1. The GC content of the type genome is 44.59

% and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Horomia gen. nov.

Candidatus Horomia (NL. fem. n. *Horomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-21*. The type species for the genus is *Candidatus* Horomia prognedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabellaceae.

Description of *Candidatus* Horomia televibula sp. nov.

Candidatus Horomia televibula (NL. fem. n. *televibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-21 sp001805845*. The type genome for the species is the GenBank assembly GCA_001805605.1. The GC content of the type genome is 45.77 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Horomida derecimonas sp. nov.

Candidatus Horomida derecimonas (NL. fem. n. *derecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXIP01 sp005772825*. The type genome for the species is the GenBank assembly GCA_005772825.1. The GC content of the type genome is 49.42 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Horomida gen. nov.

Candidatus Horomida (NL. fem. n. *Horomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SXIP01*. The type species for the genus is *Candidatus* Horomida derecimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Horomosa inregitudo sp. nov.

Candidatus Horomosa inregitudo (NL. fem. n. *inregitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *172606-1 sp010119975*. The type genome for the species is the GenBank assembly RS_GCF_010119975.1. The GC content of the type genome is 40.75 % and the genome length is 8.98 Mbp.

Description of *Candidatus* Horomosa gen. nov.

Candidatus Horomosa (NL. fem. n. *Horomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *172606-1*. The type species for the genus is *Candidatus* Horomosa inregitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *172606-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Horomosaceae.

Description of *Candidatus* Horomosaceae fam. nov.

Candidatus Horomosaceae (NL. fem. n. *Horomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *172606-1.* The type genus for the taxon is *Candidatus* Horomosa .

According to GTDB R06-RS202, this family belongs to the order *Cytophagales*.

Description of *Candidatus* Horomula vicecousia sp. nov.

Candidatus Horomula vicecousia (NL. fem. n. *vicecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-54-110 sp001789045*. The type genome for the species is the

GenBank assembly GCA_001787625.1. The GC content of the type genome is 54.32 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Horomula gen. nov.

Candidatus Horomula (NL. fem. n. *Horomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-54-110*. The type species for the genus is *Candidatus* Horomula vicecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Hoyosella antimilenta sp. nov.

Candidatus Hoyosella antimilenta (NL. fem. n. *antimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hoyosella sp008312885*. The type genome for the species is the GenBank assembly RS_GCF_008312885.1. The GC content of the type genome is 68.36 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Humecaria optabisca sp. nov.

Candidatus Humecaria optabisca (NL. fem. n. *optabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002772825 sp002772825*. The type genome for the species is the GenBank assembly GCA_002772825.1. The GC content of the type genome is 38.45 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Humecaria gen. nov.

Candidatus Humecaria (NL. fem. n. *Humecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002772825*. The type species for the genus is *Candidatus* Humecaria optabisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-002772825. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Humecariaceae.

Description of *Candidatus* Humecariaceae fam. nov.

Candidatus Humecariaceae (NL. fem. n. *Humecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002772825.* The type genus for the taxon is *Candidatus* Humecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Letifosales.

Description of *Candidatus* Humecella decitastra sp. nov.

Candidatus Humecella decitastra (NL. fem. n. *decitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-J23 sp003280245*. The type genome for the species is the GenBank assembly GCA_003280245.1. The GC content of the type genome is 39.1 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Humecella gen. nov.

Candidatus Humecella (NL. fem. n. *Humecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-J23*. The type species for the genus is *Candidatus* Humecella decitastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Humecella herinitica sp. nov.

Candidatus Humecella herinitica (NL. fem. n. *herinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-J23 sp003280095*. The type genome for the species is the

GenBank assembly GCA_003280095.1. The GC content of the type genome is 39.69 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Humecia homagedo sp. nov.

Candidatus Humecia homagedo (NL. fem. n. *homagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Abin09 sp002897915*. The type genome for the species is the GenBank assembly GCA_002897915.1. The GC content of the type genome is 45.96 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Humecia gen. nov.

Candidatus Humecia (NL. fem. n. *Humecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Abin09*. The type species for the genus is *Candidatus* Humecia homagedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Humecida cohoritia sp. nov.

Candidatus Humecida cohoritia (NL. fem. n. *cohoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-13 sp001778785*. The type genome for the species is the GenBank assembly GCA_001778785.1. The GC content of the type genome is 46.27 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Humecida gen. nov.

Candidatus Humecida (NL. fem. n. *Humecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-46-13*. The type species for the genus is *Candidatus*

Humecida cohoritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11713*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semidiaceae.

Description of *Candidatus* Humecida decinax sp. nov.

Candidatus Humecida decinax (NL. fem. n. *decinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-13 sp001778545*. The type genome for the species is the GenBank assembly GCA_001778815.1. The GC content of the type genome is 43.58 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; 10% subassembly".

Description of *Candidatus* Humecida faticicella sp. nov.

Candidatus Humecida faticicella (NL. fem. n. *faticicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-13 sp001780775*. The type genome for the species is the GenBank assembly GCA_001780775.1. The GC content of the type genome is 42.98 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Humecida refocisca sp. nov.

Candidatus Humecida refocisca (NL. fem. n. *refocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-13 sp001778905*. The type genome for the species is the GenBank assembly GCA_001780495.1. The GC content of the type genome is 43.89 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Humecosa allacastra sp. nov.

Candidatus Humecosa allacastra (NL. fem. n. *allacastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp902788555*. The type genome for the species is the GenBank assembly GCA_902788555.1. The GC content of the type genome is 37.18 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Humecosa gen. nov.

Candidatus Humecosa (NL. fem. n. *Humecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-127*. The type species for the genus is *Candidatus* Humecosa allacastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Humecosa annicilega sp. nov.

Candidatus Humecosa annicilega (NL. fem. n. *annicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp002369325*. The type genome for the species is the GenBank assembly GCA_002369325.1. The GC content of the type genome is 37.29 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Humecosa benifilega sp. nov.

Candidatus Humecosa benifilega (NL. fem. n. *benifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp002476495*. The type genome for the species is the GenBank assembly GCA_002476495.1. The GC content of the type genome is 38.69 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Humecosa colipifica sp. nov.

Candidatus Humecosa colipifica (NL. fem. n. *colipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp902800325*. The type genome for the species is the GenBank assembly GCA_902781715.1. The GC content of the type genome is 36.86 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Humecosa demogimonas sp. nov.

Candidatus Humecosa demogimonas (NL. fem. n. *demogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900539705*. The type genome for the species is the GenBank assembly GCA_900539705.1. The GC content of the type genome is 44.24 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Humecosa exadvetta sp. nov.

Candidatus Humecosa exadvetta (NL. fem. n. *exadvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp002404515*. The type genome for the species is the GenBank assembly GCA_002404515.1. The GC content of the type genome is 44.07 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Humecosa impigitura sp. nov.

Candidatus Humecosa impigitura (NL. fem. n. *impigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp002493625*. The type genome for the species is the GenBank assembly GCA_002493625.1. The GC content of the type genome is 40.75 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Humecosa innecisca sp. nov.

Candidatus Humecosa innecisca (NL. fem. n. *innecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900766925*. The type genome for the species is the GenBank assembly RS_GCF_900766925.1. The GC content of the type genome is 38.27 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Humecosa laculilega sp. nov.

Candidatus Humecosa laculilega (NL. fem. n. *laculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900321145*. The type genome for the species is the GenBank assembly GCA_900321145.1. The GC content of the type genome is 47.26 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Humecosa negidedo sp. nov.

Candidatus Humecosa negidedo (NL. fem. n. *negidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900767585*. The type genome for the species is the GenBank assembly RS_GCF_900767585.1. The GC content of the type genome is 44.35 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Humecosa nubecimonia sp. nov.

Candidatus Humecosa nubecimonia (NL. fem. n. *nubecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900553925*. The type genome for the species is the GenBank assembly GCA_900553925.1. The GC content of the type genome is 45.55 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Humecosa octiniforma sp. nov.

Candidatus Humecosa octiniforma (NL. fem. n. *octiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp902780405*. The type genome for the species is the GenBank assembly GCA_902780405.1. The GC content of the type genome is 49.88 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Humecosa recogitio sp. nov.

Candidatus Humecosa recogitio (NL. fem. n. *recogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp002431865*. The type genome for the species is the GenBank assembly GCA_002437385.1. The GC content of the type genome is 44.98 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Humecosa refacivita sp. nov.

Candidatus Humecosa refacivita (NL. fem. n. *refacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp902783015*. The type genome for the species is the GenBank assembly GCA_902783015.1. The GC content of the type genome is 51.58 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Humecosa relapousia sp. nov.

Candidatus Humecosa relapousia (NL. fem. n. *relapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp900319515*. The type genome for the species is the GenBank assembly GCA_014337155.1. The GC content of the type genome is 43.92 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Humecosa vaniditio sp. nov.

Candidatus Humecosa vaniditio (NL. fem. n. *vaniditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-127 sp902762955*. The type genome for the species is the GenBank assembly GCA_902762955.1. The GC content of the type genome is 37.31 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Humecula pinigibula sp. nov.

Candidatus Humecula pinigibula (NL. fem. n. *pinigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUMW01 sp012839765*. The type genome for the species is the GenBank assembly GCA_012839765.1. The GC content of the type genome is 54.3 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Humecula gen. nov.

Candidatus Humecula (NL. fem. n. *Humecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMW01*. The type species for the genus is *Candidatus* Humecula pinigibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Humeculaceae.

Description of *Candidatus* Humeculaceae fam. nov.

Candidatus Humeculaceae (NL. fem. n. *Humeculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMW01.* The type genus for the taxon is *Candidatus* Humecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUMW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Humeculales.

Description of *Candidatus* Humeculales ord. nov.

Candidatus Humeculales (NL. fem. n. *Humeculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMW01.* The type genus for the taxon is *Candidatus* Humecula .

According to the GTDB R06-RS202, this order belongs to the class *Limnochordia*.

Description of *Candidatus* Humibacter algebousia sp. nov.

Candidatus Humibacter algebousia (NL. fem. n. *algebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humibacter sp007859675*. The type genome for the species is the

GenBank assembly RS_GCF_007859675.1. The GC content of the type genome is 68.26 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Humibacter futatigena sp. nov.

Candidatus Humibacter futatigena (NL. fem. n. *futatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humibacter sp012985205*. The type genome for the species is the GenBank assembly RS_GCF_012985205.1. The GC content of the type genome is 67.48 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Humidesulfovibrio adoscatio sp. nov.

Candidatus Humidesulfovibrio adoscatio (NL. fem. n. *adoscatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humidesulfovibrio sp001871085*. The type genome for the species is the GenBank assembly GCA_001871085.1. The GC content of the type genome is 65.26 % and the genome length is 2.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Humidesulfovibrio bugilax sp. nov.

Candidatus Humidesulfovibrio bugilax (NL. fem. n. *bugilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humidesulfovibrio sp001799475*. The type genome for the species is the GenBank assembly GCA_001799475.1. The GC content of the type genome is 65.04 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Humidesulfovibrio desepibula sp. nov.

Candidatus Humidesulfovibrio desepibula (NL. fem. n. *desepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humidesulfovibrio sp002422505*. The type genome for the species is

the GenBank assembly GCA_002422505.1. The GC content of the type genome is 65.01 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Humidesulfovibrio habacatica sp. nov.

Candidatus Humidesulfovibrio habacatica (NL. fem. n. *habacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humidesulfovibrio sp002840405*. The type genome for the species is the GenBank assembly GCA_002840405.1. The GC content of the type genome is 65.16 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Humidesulfovibrio resulax sp. nov.

Candidatus Humidesulfovibrio resulax (NL. fem. n. *resulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Humidesulfovibrio sp903843965*. The type genome for the species is the GenBank assembly GCA_903837795.1. The GC content of the type genome is 65.95 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Hungateiclostridium biparentia sp. nov.

Candidatus Hungateiclostridium biparentia (NL. fem. n. *biparentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hungateiclostridium sp012523755*. The type genome for the species is the GenBank assembly GCA_012523755.1. The GC content of the type genome is 37.57 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Hungateiclostridium decomibula sp. nov.

Candidatus Hungateiclostridium decomibula (NL. fem. n. *decomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hungateiclostridium sp001512505*. The type genome for the species is the GenBank assembly GCA_001512505.1. The GC content of the type genome is 38.11 % and the genome length is 3.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors

for biogas production (methane)".

Description of *Candidatus* Hungateiclostridium milipisca sp. nov.

Candidatus Hungateiclostridium milipisca (NL. fem. n. *milipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hungateiclostridium sp012798835*. The type genome for the species is the GenBank assembly GCA_012798835.1. The GC content of the type genome is 38.65 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Hungatella tabifetta sp. nov.

Candidatus Hungatella tabifetta (NL. fem. n. *tabifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hungatella sp005845265*. The type genome for the species is the GenBank assembly RS_GCF_005845265.1. The GC content of the type genome is 48.52 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Hydrococcus dehonicula sp. nov.

Candidatus Hydrococcus dehonicula (NL. fem. n. *dehonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrococcus sp012031035*. The type genome for the species is the GenBank assembly GCA_012034135.1. The GC content of the type genome is 42.12 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Hydrogenedens alembago sp. nov.

Candidatus Hydrogenedens alembago (NL. fem. n. *alembago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenedens sp011338105*. The type genome for the species is the GenBank assembly GCA_011338105.1. The GC content of the type genome is 36.95 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Hydrogeniiclostridium apharitoga sp. nov.

Candidatus Hydrogeniiclostridium apharitoga (NL. fem. n. *apharitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogeniiclostridium sp002160025*. The type genome for the species is the GenBank assembly RS_GCF_002160025.1. The GC content of the type genome is 54.31 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Hydrogeniiclostridium momoritica sp. nov.

Candidatus Hydrogeniiclostridium momoritica (NL. fem. n. *momoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogeniiclostridium sp900550095*. The type genome for the species is the GenBank assembly GCA_900550095.1. The GC content of the type genome is 53.49 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Hydrogeniiclostridium obtecedo sp. nov.

Candidatus Hydrogeniiclostridium obtecedo (NL. fem. n. *obtecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogeniiclostridium sp900752115*. The type genome for the species is the GenBank assembly RS_GCF_900752115.1. The GC content of the type genome is 55.67 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Hydrogenimonas admuritia sp. nov.

Candidatus Hydrogenimonas admuritia (NL. fem. n. *admuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenimonas sp003945285*. The type genome for the species is the GenBank assembly GCA_003945285.1. The GC content of the type genome is 50.17 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Hydrogenimonas adsucisca sp. nov.

Candidatus Hydrogenimonas adsucisca (NL. fem. n. *adsucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenimonas sp003978765*. The type genome for the species is the GenBank assembly GCA_003978765.1. The GC content of the type genome is 41.38 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Hydrogenimonas modifitica sp. nov.

Candidatus Hydrogenimonas modifitica (NL. fem. n. *modifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenimonas sp013153475*. The type genome for the species is the GenBank assembly GCA_013153475.1. The GC content of the type genome is 55.61 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Hydrogenivirga redacitas sp. nov.

Candidatus Hydrogenivirga redacitas (NL. fem. n. *redacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenivirga sp013153495*. The type genome for the species is the GenBank assembly GCA_013153495.1. The GC content of the type genome is 47.46 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Hydrogenoanaerobacterium adnicifica sp. nov.

Candidatus Hydrogenoanaerobacterium adnicifica (NL. fem. n. *adnicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenoanaerobacterium sp014384885*. The type genome for the species is the GenBank assembly GCA_014384885.1. The GC content of the type genome is 57.03 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Hydrogenobaculum entomastra sp. nov.

Candidatus Hydrogenobaculum entomastra (NL. fem. n. *entomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenobaculum sp002341805*. The type genome for the species is the GenBank assembly GCA_002341805.1. The GC content of the type genome is 33.78

% and the genome length is 1.57 Mbp.

Description of *Candidatus* Hydrogenobaculum fiduciforma sp. nov.

Candidatus Hydrogenobaculum fiduciforma (NL. fem. n. *fiduciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenobaculum sp000213785*. The type genome for the species is the GenBank assembly RS_GCF_000215065.1. The GC content of the type genome is 34.75 % and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fresh water".

Description of *Candidatus* Hydrogenobaculum impavicella sp. nov.

Candidatus Hydrogenobaculum impavicella (NL. fem. n. *impavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenobaculum sp002878215*. The type genome for the species is the GenBank assembly GCA_002878215.1. The GC content of the type genome is 35.28 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Hydrogenobaculum tiguritrix sp. nov.

Candidatus Hydrogenobaculum tiguritrix (NL. fem. n. *tiguritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenobaculum sp000020785*. The type genome for the species is the GenBank assembly RS_GCF_000020785.1. The GC content of the type genome is 34.85 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Hydrogenophaga admulentia sp. nov.

Candidatus Hydrogenophaga admulentia (NL. fem. n. *admulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp002001205*. The type genome for the species is the GenBank assembly RS_GCF_002001205.1. The GC content of the type genome is 65.53 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Hydrogenophaga adselitas sp. nov.

Candidatus Hydrogenophaga adselitas (NL. fem. n. *adselitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp002840835*. The type genome for the species is the GenBank assembly GCA_002840835.1. The GC content of the type genome is 63.35 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Hydrogenophaga advecax sp. nov.

Candidatus Hydrogenophaga advecax (NL. fem. n. *advecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp011390835*. The type genome for the species is the GenBank assembly GCA_011390835.1. The GC content of the type genome is 64.73 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Hydrogenophaga ambifentia sp. nov.

Candidatus Hydrogenophaga ambifentia (NL. fem. n. *ambifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp013823485*. The type genome for the species is the GenBank assembly GCA_013823485.1. The GC content of the type genome is 68.94 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Hydrogenophaga arcelago sp. nov.

Candidatus Hydrogenophaga arcelago (NL. fem. n. *arcelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp001713375*. The type genome for the species is the GenBank assembly RS_GCF_001713375.1. The GC content of the type genome is 65.51 % and the genome length is 4.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chrysochromulina tobin phycosphere".

Description of *Candidatus* Hydrogenophaga artilimonia sp. nov.

Candidatus Hydrogenophaga artilimonia (NL. fem. n. *artilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp005503365*. The type genome for the species is the GenBank assembly RS_GCF_005503365.1. The GC content of the type genome is 65.61 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Hydrogenophaga bigaritica sp. nov.

Candidatus Hydrogenophaga bigaritica (NL. fem. n. *bigaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp011391495*. The type genome for the species is the GenBank assembly GCA_011391495.1. The GC content of the type genome is 66.5 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Hydrogenophaga desuratio sp. nov.

Candidatus Hydrogenophaga desuratio (NL. fem. n. *desuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp001770905*. The type genome for the species is the GenBank assembly GCA_001770905.1. The GC content of the type genome is 66.95 % and the genome length is 5.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Hydrogenophaga domicivita sp. nov.

Candidatus Hydrogenophaga domicivita (NL. fem. n. *domicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp006227785*. The type genome for the species is the GenBank assembly GCA_006227785.1. The GC content of the type genome is 65.88 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Hydrogenophaga exculugo sp. nov.

Candidatus Hydrogenophaga exculugo (NL. fem. n. *exculugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Hydrogenophaga sp003241965*. The type genome for the species is the GenBank assembly GCA_003241965.1. The GC content of the type genome is 64.93 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Hydrogenophaga exhorilenta sp. nov.

Candidatus Hydrogenophaga exhorilenta (NL. fem. n. *exhorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp013823505*. The type genome for the species is the GenBank assembly GCA_013823505.1. The GC content of the type genome is 65.06 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Hydrogenophaga forabatio sp. nov.

Candidatus Hydrogenophaga forabatio (NL. fem. n. *forabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp010104355*. The type genome for the species is the GenBank assembly RS_GCF_010104355.1. The GC content of the type genome is 65.27 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Hydrogenophaga incenatio sp. nov.

Candidatus Hydrogenophaga incenatio (NL. fem. n. *incenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp001428625*. The type genome for the species is the GenBank assembly RS_GCF_001428625.1. The GC content of the type genome is 65.11 % and the genome length is 5.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Hydrogenophaga indomicella sp. nov.

Candidatus Hydrogenophaga indomicella (NL. fem. n. *indomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp013823655*. The type genome for the species is the GenBank assembly GCA_013823655.1. The GC content of the type genome is 66.69 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Hydrogenophaga inmiticula sp. nov.

Candidatus Hydrogenophaga inmiticula (NL. fem. n. *inmiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp011388215*. The type genome for the species is the GenBank assembly RS_GCF_011388215.1. The GC content of the type genome is 69.42 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Hydrogenophaga inmobimonas sp. nov.

Candidatus Hydrogenophaga inmobimonas (NL. fem. n. *inmobimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp002842215*. The type genome for the species is the GenBank assembly GCA_002842215.1. The GC content of the type genome is 65.44 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Hydrogenophaga inoffibula sp. nov.

Candidatus Hydrogenophaga inoffibula (NL. fem. n. *inoffibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp002127265*. The type genome for the species is the GenBank assembly RS_GCF_002127265.1. The GC content of the type genome is 64.98 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Hydrogenophaga irrevessa sp. nov.

Candidatus Hydrogenophaga irrevessa (NL. fem. n. *irrevessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp011390855*. The type genome for the species is the GenBank assembly GCA_011390855.1. The GC content of the type genome is 62.38 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Hydrogenophaga masocitudo sp. nov.

Candidatus Hydrogenophaga masocitudo (NL. fem. n. *masocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp002127215*. The type genome for the species is the GenBank assembly RS_GCF_002127215.1. The GC content of the type genome is 68.73 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Hydrogenophaga mirabilega sp. nov.

Candidatus Hydrogenophaga mirabilega (NL. fem. n. *mirabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp006227825*. The type genome for the species is the GenBank assembly GCA_006227825.1. The GC content of the type genome is 68.54 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Hydrogenophaga monogatica sp. nov.

Candidatus Hydrogenophaga monogatica (NL. fem. n. *monogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp003509765*. The type genome for the species is the GenBank assembly GCA_003509765.1. The GC content of the type genome is 65.77 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Hydrogenophaga nicomugo sp. nov.

Candidatus Hydrogenophaga nicomugo (NL. fem. n. *nicomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp003599455*. The type genome for the species is the GenBank assembly GCA_003599455.1. The GC content of the type genome is 67.68 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Hydrogenophaga podagitudo sp. nov.

Candidatus Hydrogenophaga podagitudo (NL. fem. n. *podagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Hydrogenophaga sp011772445*. The type genome for the species is the GenBank assembly GCA_011771805.1. The GC content of the type genome is 69.18 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Hydrogenophaga repagilega sp. nov.

Candidatus Hydrogenophaga repagilega (NL. fem. n. *repagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp011391745*. The type genome for the species is the GenBank assembly GCA_011391745.1. The GC content of the type genome is 60.46 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Hydrogenophaga visifimonia sp. nov.

Candidatus Hydrogenophaga visifimonia (NL. fem. n. *visifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp009859475*. The type genome for the species is the GenBank assembly RS_GCF_009859475.1. The GC content of the type genome is 65.4 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Hydrogenophaga volucetta sp. nov.

Candidatus Hydrogenophaga volucetta (NL. fem. n. *volucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenophaga sp004795855*. The type genome for the species is the GenBank assembly RS_GCF_004795855.1. The GC content of the type genome is 61.89 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Hydrogenothermus casabastra sp. nov.

Candidatus Hydrogenothermus casabastra (NL. fem. n. *casabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenothermus sp012961365*. The type genome for the species is the GenBank assembly GCA_012961365.1. The GC content of the type genome is 29.67 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Hydrogenothermus ceraritudo sp. nov.

Candidatus Hydrogenothermus ceraritudo (NL. fem. n. *ceraritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenothermus sp003978675*. The type genome for the species is the GenBank assembly GCA_003978675.1. The GC content of the type genome is 30.22 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Hydrogenovibrio adsigitudo sp. nov.

Candidatus Hydrogenovibrio adsigitudo (NL. fem. n. *adsigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp001507555*. The type genome for the species is the GenBank assembly RS_GCF_001507555.1. The GC content of the type genome is 50.12 % and the genome length is 2.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Kebrit brine-seawater interface".

Description of *Candidatus* Hydrogenovibrio clancetta sp. nov.

Candidatus Hydrogenovibrio clancetta (NL. fem. n. *clancetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp002299585*. The type genome for the species is the GenBank assembly GCA_002299585.1. The GC content of the type genome is 34.48 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Hydrogenovibrio coninitrix sp. nov.

Candidatus Hydrogenovibrio coninitrix (NL. fem. n. *coninitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp001507535*. The type genome for the species is the GenBank assembly RS_GCF_001507535.1. The GC content of the type genome is 53.73 % and the genome length is 2.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Kebrit brine-seawater interface".

Description of *Candidatus* Hydrogenovibrio exforivita sp. nov.

Candidatus Hydrogenovibrio exforivita (NL. fem. n. *exforivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp002848135*. The type genome for the species is the GenBank assembly RS_GCF_002848135.1. The GC content of the type genome is 42.87 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Hydrogenovibrio inmitastra sp. nov.

Candidatus Hydrogenovibrio inmitastra (NL. fem. n. *inmitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp000744875*. The type genome for the species is the GenBank assembly RS_GCF_000744875.1. The GC content of the type genome is 43.95 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Hydrogenovibrio munimifica sp. nov.

Candidatus Hydrogenovibrio munimifica (NL. fem. n. *munimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp009296185*. The type genome for the species is the GenBank assembly RS_GCF_009296185.1. The GC content of the type genome is 44.56 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Hydrogenovibrio podagimonas sp. nov.

Candidatus Hydrogenovibrio podagimonas (NL. fem. n. *podagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hydrogenovibrio sp002779995*. The type genome for the species is the GenBank assembly GCA_002786735.1. The GC content of the type genome is 43.61 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Hyella refulago sp. nov.

Candidatus Hyella refulago (NL. fem. n. *refulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyella sp012932785*. The type genome for the species is the GenBank assembly RS_GCF_012932785.1. The GC content of the type genome is 35.35 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Hylemonella adnilatio sp. nov.

Candidatus Hylemonella adnilatio (NL. fem. n. *adnilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp002454975*. The type genome for the species is the GenBank assembly GCA_002454975.1. The GC content of the type genome is 60.01 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Hylemonella adpaniforma sp. nov.

Candidatus Hylemonella adpaniforma (NL. fem. n. *adpaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp003500955*. The type genome for the species is the GenBank assembly GCA_003500955.1. The GC content of the type genome is 66.59 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Hylemonella defanitica sp. nov.

Candidatus Hylemonella defanitica (NL. fem. n. *defanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp002633085*. The type genome for the species is the GenBank assembly GCA_002633085.1. The GC content of the type genome is 63.09 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Hylemonella effigugo sp. nov.

Candidatus Hylemonella effigugo (NL. fem. n. *effigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp001432305*. The type genome for the species is the GenBank assembly RS_GCF_001432305.1. The GC content of the type genome is 65.5

% and the genome length is 3.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "river water".

Description of *Candidatus* Hylemonella incucitas sp. nov.

Candidatus Hylemonella incucitas (NL. fem. n. *incucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp013334205*. The type genome for the species is the GenBank assembly RS_GCF_013334205.1. The GC content of the type genome is 65.56 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Hylemonella lapiletta sp. nov.

Candidatus Hylemonella lapiletta (NL. fem. n. *lapiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp001797315*. The type genome for the species is the GenBank assembly GCA_003537855.1. The GC content of the type genome is 64.15 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Hylemonella pudibago sp. nov.

Candidatus Hylemonella pudibago (NL. fem. n. *pudibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hylemonella sp002342165*. The type genome for the species is the GenBank assembly GCA_002342165.1. The GC content of the type genome is 55.5 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Hymenobacter adinvicella sp. nov.

Candidatus Hymenobacter adinvicella (NL. fem. n. *adinvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp001280305*. The type genome for the species is the GenBank assembly RS_GCF_001280305.1. The GC content of the type genome is 57.29 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Hymenobacter adlocitura sp. nov.

Candidatus Hymenobacter adlocitura (NL. fem. n. *adlocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp000801315*. The type genome for the species is the GenBank assembly RS_GCF_000801315.1. The GC content of the type genome is 57.54 % and the genome length is 4.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Hymenobacter advoratio sp. nov.

Candidatus Hymenobacter advoratio (NL. fem. n. *advoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013256425*. The type genome for the species is the GenBank assembly RS_GCF_013256425.1. The GC content of the type genome is 59.46 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Hymenobacter affulicella sp. nov.

Candidatus Hymenobacter affulicella (NL. fem. n. *affulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp012275535*. The type genome for the species is the GenBank assembly RS_GCF_012275535.1. The GC content of the type genome is 61.2 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Hymenobacter annucitia sp. nov.

Candidatus Hymenobacter annucitia (NL. fem. n. *annucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013377905*. The type genome for the species is the GenBank assembly RS_GCF_013377905.1. The GC content of the type genome is 59.9 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Hymenobacter apsegitia sp. nov.

Candidatus Hymenobacter apsegitia (NL. fem. n. *apsegitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013256625*. The type genome for the species is the GenBank assembly RS_GCF_013256625.1. The GC content of the type genome is 61.41 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Hymenobacter assicago sp. nov.

Candidatus Hymenobacter assicago (NL. fem. n. *assicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp007713685*. The type genome for the species is the GenBank assembly RS_GCF_007713685.1. The GC content of the type genome is 58.37 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Hymenobacter bacifitia sp. nov.

Candidatus Hymenobacter bacifitia (NL. fem. n. *bacifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp004355185*. The type genome for the species is the GenBank assembly RS_GCF_004355185.1. The GC content of the type genome is 54.26 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Hymenobacter caselatica sp. nov.

Candidatus Hymenobacter caselatica (NL. fem. n. *caselatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp004745825*. The type genome for the species is the GenBank assembly RS_GCF_004745825.1. The GC content of the type genome is 56.69 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Hymenobacter cenotitura sp. nov.

Candidatus Hymenobacter cenotitura (NL. fem. n. *cenotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp003417065*. The type genome for the species is the GenBank assembly RS_GCF_003417065.1. The GC content of the type genome is 59.65 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Hymenobacter cilotax sp. nov.

Candidatus Hymenobacter cilotax (NL. fem. n. *cilotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp002154225*. The type genome for the species is the GenBank assembly RS_GCF_002154225.1. The GC content of the type genome is 55.05 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Hymenobacter ciminimonas sp. nov.

Candidatus Hymenobacter ciminimonas (NL. fem. n. *ciminimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp014333585*. The type genome for the species is the GenBank assembly RS_GCF_014333585.1. The GC content of the type genome is 54.31 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Hymenobacter citocilenta sp. nov.

Candidatus Hymenobacter citocilenta (NL. fem. n. *citocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013137895*. The type genome for the species is the GenBank assembly RS_GCF_013137895.1. The GC content of the type genome is 56.15 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Hymenobacter cuferitica sp. nov.

Candidatus Hymenobacter cuferitica (NL. fem. n. *cuferitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp004684095*. The type genome for the species is the GenBank assembly RS_GCF_004684095.1. The GC content of the type genome is 60.66 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Hymenobacter decapilega sp. nov.

Candidatus Hymenobacter decapilega (NL. fem. n. *decapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp001596155*. The type genome for the species is the GenBank assembly RS_GCF_001596155.1. The GC content of the type genome is 60.93 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Hymenobacter depupessa sp. nov.

Candidatus Hymenobacter depupessa (NL. fem. n. *depupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp006352025*. The type genome for the species is the GenBank assembly RS_GCF_006352025.1. The GC content of the type genome is 59.6 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Hymenobacter derecugo sp. nov.

Candidatus Hymenobacter derecugo (NL. fem. n. *derecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp014333525*. The type genome for the species is the GenBank assembly RS_GCF_014333525.1. The GC content of the type genome is 59.58 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Hymenobacter endivago sp. nov.

Candidatus Hymenobacter endivago (NL. fem. n. *endivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013294115*. The type genome for the species is the GenBank assembly RS_GCF_013294115.1. The GC content of the type genome is 64.88 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Hymenobacter fidenedo sp. nov.

Candidatus Hymenobacter fidenedo (NL. fem. n. *fidenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp000715495*. The type genome for the species is the GenBank assembly RS_GCF_000715495.1. The GC content of the type genome is 60.69 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Fresh Water Lake L43 Ice Water Interface".

Description of *Candidatus* Hymenobacter galacitudo sp. nov.

Candidatus Hymenobacter galacitudo (NL. fem. n. *galacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp003944705*. The type genome for the species is the GenBank assembly RS_GCF_003944705.1. The GC content of the type genome is 59.84 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Hymenobacter haricitrix sp. nov.

Candidatus Hymenobacter haricitrix (NL. fem. n. *haricitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp004745645*. The type genome for the species is the GenBank assembly RS_GCF_004745645.1. The GC content of the type genome is 59.49 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Hymenobacter inlapilega sp. nov.

Candidatus Hymenobacter inlapilega (NL. fem. n. *inlapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp013377885*. The type genome for the species is the GenBank assembly RS_GCF_013377885.1. The GC content of the type genome is 60.48 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Hymenobacter insepitudo sp. nov.

Candidatus Hymenobacter insepitudo (NL. fem. n. *insepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp014333615*. The type genome for the species is the GenBank assembly RS_GCF_014333615.1. The GC content of the type genome is 57.27 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Hymenobacter intolitrix sp. nov.

Candidatus Hymenobacter intolitrix (NL. fem. n. *intolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp001562275*. The type genome for the species is the GenBank assembly RS_GCF_001562275.1. The GC content of the type genome is 63.08 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Hymenobacter macilessa sp. nov.

Candidatus Hymenobacter macilessa (NL. fem. n. *macilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp009755225*. The type genome for the species is the GenBank assembly RS_GCF_009755225.1. The GC content of the type genome is 59.27 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Hymenobacter necopago sp. nov.

Candidatus Hymenobacter necopago (NL. fem. n. *necopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp012927305*. The type genome for the species is the GenBank assembly RS_GCF_012927305.1. The GC content of the type genome is 62.82 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Hymenobacter nicotatica sp. nov.

Candidatus Hymenobacter nicotatica (NL. fem. n. *nicotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp014217645*. The type genome for the species is the GenBank assembly RS_GCF_014217645.1. The GC content of the type genome is 56.65

% and the genome length is 5.39 Mbp.

Description of *Candidatus* Hymenobacter nicotifica sp. nov.

Candidatus Hymenobacter nicotifica (NL. fem. n. *nicotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp003634355*. The type genome for the species is the GenBank assembly RS_GCF_003634355.1. The GC content of the type genome is 56.6 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Hymenobacter pericago sp. nov.

Candidatus Hymenobacter pericago (NL. fem. n. *pericago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp000737515*. The type genome for the species is the GenBank assembly RS_GCF_000737515.1. The GC content of the type genome is 61.84 % and the genome length is 5.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "silkworm feces".

Description of *Candidatus* Hymenobacter recoritoga sp. nov.

Candidatus Hymenobacter recoritoga (NL. fem. n. *recoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp012273015*. The type genome for the species is the GenBank assembly RS_GCF_012273015.1. The GC content of the type genome is 59.83 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Hymenobacter stercugo sp. nov.

Candidatus Hymenobacter stercugo (NL. fem. n. *stercugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp008728635*. The type genome for the species is the GenBank assembly RS_GCF_008728635.1. The GC content of the type genome is 59.78 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Hymenobacter ulcisivita sp. nov.

Candidatus Hymenobacter ulcisivita (NL. fem. n. *ulcisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hymenobacter sp014250515*. The type genome for the species is the GenBank assembly RS_GCF_014250515.1. The GC content of the type genome is 57.91 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Hyphobacterium aspilivita sp. nov.

Candidatus Hyphobacterium aspilivita (NL. fem. n. *aspilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphobacterium sp002783385*. The type genome for the species is the GenBank assembly GCA_002783385.1. The GC content of the type genome is 59.28 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Hyphobacterium macilibula sp. nov.

Candidatus Hyphobacterium macilibula (NL. fem. n. *macilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphobacterium sp014323565*. The type genome for the species is the GenBank assembly RS_GCF_014323565.1. The GC content of the type genome is 60.15 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Hyphobacterium sifunastra sp. nov.

Candidatus Hyphobacterium sifunastra (NL. fem. n. *sifunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphobacterium sp002692855*. The type genome for the species is the GenBank assembly GCA_002325265.1. The GC content of the type genome is 63.98 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Hyphomicrobium addubiforma sp. nov.

Candidatus Hyphomicrobium addubiforma (NL. fem. n. *addubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp002928955*. The type genome for the species is the GenBank assembly GCA_002928955.1. The GC content of the type genome is 62.45 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Hyphomicrobium adoscicula sp. nov.

Candidatus Hyphomicrobium adoscicula (NL. fem. n. *adoscicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp003987855*. The type genome for the species is the GenBank assembly GCA_003987855.1. The GC content of the type genome is 59.62 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Hyphomicrobium atricimonia sp. nov.

Candidatus Hyphomicrobium atricimonia (NL. fem. n. *atricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp902825785*. The type genome for the species is the GenBank assembly GCA_902825785.1. The GC content of the type genome is 61.82 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Hyphomicrobium decucisca sp. nov.

Candidatus Hyphomicrobium decucisca (NL. fem. n. *decucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp000384335*. The type genome for the species is the GenBank assembly RS_GCF_000384335.2. The GC content of the type genome is 59.54 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Hyphomicrobium desonibula sp. nov.

Candidatus Hyphomicrobium desonibula (NL. fem. n. *desonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp013141015*. The type genome for the species is the GenBank assembly GCA_013141015.1. The GC content of the type genome is 59.84 %

and the genome length is 3.94 Mbp.

Description of *Candidatus* Hyphomicrobium divoritica sp. nov.

Candidatus Hyphomicrobium divoritica (NL. fem. n. *divoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp002279935*. The type genome for the species is the GenBank assembly GCA_002279935.1. The GC content of the type genome is 61.61 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Hyphomicrobium ecnepitica sp. nov.

Candidatus Hyphomicrobium ecnepitica (NL. fem. n. *ecnepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp001464285*. The type genome for the species is the GenBank assembly GCA_001464285.1. The GC content of the type genome is 60.31 % and the genome length is 5.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Hyphomicrobium ineffilega sp. nov.

Candidatus Hyphomicrobium ineffilega (NL. fem. n. *ineffilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp900117455*. The type genome for the species is the GenBank assembly RS_GCF_900117455.1. The GC content of the type genome is 63.64 % and the genome length is 4.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Corroded Artesian Bore Well".

Description of *Candidatus* Hyphomicrobium luceressa sp. nov.

Candidatus Hyphomicrobium luceressa (NL. fem. n. *luceressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp003987725*. The type genome for the species is the GenBank assembly GCA_003987725.1. The GC content of the type genome is 59.94 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Hyphomicrobium pavicitrix sp. nov.

Candidatus Hyphomicrobium pavicitrix (NL. fem. n. *pavicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp002928735*. The type genome for the species is the GenBank assembly GCA_013821915.1. The GC content of the type genome is 62.18 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Hyphomicrobium petulatica sp. nov.

Candidatus Hyphomicrobium petulatica (NL. fem. n. *petulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp002928395*. The type genome for the species is the GenBank assembly GCA_002928395.1. The GC content of the type genome is 63.23 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Hyphomicrobium semunago sp. nov.

Candidatus Hyphomicrobium semunago (NL. fem. n. *semunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp902826555*. The type genome for the species is the GenBank assembly GCA_902826555.1. The GC content of the type genome is 64.28 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Hyphomicrobium sicunago sp. nov.

Candidatus Hyphomicrobium sicunago (NL. fem. n. *sicunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp002928515*. The type genome for the species is the GenBank assembly GCA_002928515.1. The GC content of the type genome is 55.04 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Hyphomicrobium telegisca sp. nov.

Candidatus Hyphomicrobium telegisca (NL. fem. n. *telegisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium sp000253295*. The type genome for the species is the GenBank assembly RS_GCF_000526135.1. The GC content of the type genome is 59.47 % and the genome length is 4.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Hyphomicrobium benivitoga sp. nov.

Candidatus Hyphomicrobium benivitoga (NL. fem. n. *benivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium_A sp009026145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009026145.1. The GC content of the type genome is 64.85 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Hyphomicrobium paracitudo sp. nov.

Candidatus Hyphomicrobium paracitudo (NL. fem. n. *paracitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium_A sp900117445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900117445.1. The GC content of the type genome is 62.8 % and the genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Coal seam gas extraction bore well".

Description of *Candidatus* Hyphomicrobium pinificula sp. nov.

Candidatus Hyphomicrobium pinificula (NL. fem. n. *pinificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomicrobium_A sp009708035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_009708035.1. The GC content of the type genome is 65.1 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Hyphomonas acceritura sp. nov.

Candidatus Hyphomonas acceritura (NL. fem. n. *acceritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp002695785*. The type genome for the species is the GenBank assembly GCA_002695785.1. The GC content of the type genome is 59.47 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Hyphomonas decucatio sp. nov.

Candidatus Hyphomonas decucatio (NL. fem. n. *decucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp000682775*. The type genome for the species is the GenBank assembly GCA_002375605.1. The GC content of the type genome is 58.5 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Hyphomonas fatifibula sp. nov.

Candidatus Hyphomonas fatifibula (NL. fem. n. *fatifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp002700305*. The type genome for the species is the GenBank assembly GCA_002700305.1. The GC content of the type genome is 61.57 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Hyphomonas nidifitura sp. nov.

Candidatus Hyphomonas nidifitura (NL. fem. n. *nidifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp002414505*. The type genome for the species is the GenBank assembly GCA_002695955.1. The GC content of the type genome is 60.18 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Hyphomonas nimiredo sp. nov.

Candidatus Hyphomonas nimiredo (NL. fem. n. *nimiredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp002841155*. The type genome for the species is the GenBank assembly GCA_002841155.1. The GC content of the type genome is 61.61 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Hyphomonas paralilega sp. nov.

Candidatus Hyphomonas paralilega (NL. fem. n. *paralilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp000682735*. The type genome for the species is the GenBank assembly RS_GCF_003263315.1. The GC content of the type genome is 60.7 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Hyphomonas plostitoga sp. nov.

Candidatus Hyphomonas plostitoga (NL. fem. n. *plostitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp013823385*. The type genome for the species is the GenBank assembly GCA_013823385.1. The GC content of the type genome is 62.92 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Hyphomonas recocilenta sp. nov.

Candidatus Hyphomonas recocilenta (NL. fem. n. *recocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp000961795*. The type genome for the species is the GenBank assembly GCA_000961795.1. The GC content of the type genome is 60.92 % and the genome length is 4.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Hyphomonas refacibra sp. nov.

Candidatus Hyphomonas refacibra (NL. fem. n. *refacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp002282565*. The type genome for the species is the GenBank assembly GCA_002282565.1. The GC content of the type genome is 61.93 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Hyphomonas remedibula sp. nov.

Candidatus Hyphomonas remedibula (NL. fem. n. *remedibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp013791775*. The type genome for the species is the GenBank assembly GCA_013791775.1. The GC content of the type genome is 63.8 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Hyphomonas tegumitura sp. nov.

Candidatus Hyphomonas tegumitura (NL. fem. n. *tegumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp001464545*. The type genome for the species is the GenBank assembly GCA_001464545.1. The GC content of the type genome is 64.44 % and the genome length is 3.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Hyphomonas timefibra sp. nov.

Candidatus Hyphomonas timefibra (NL. fem. n. *timefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp000961695*. The type genome for the species is the GenBank assembly GCA_000961695.1. The GC content of the type genome is 61.39 % and the genome length is 3.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Hyphomonas tubicitica sp. nov.

Candidatus Hyphomonas tubicitica (NL. fem. n. *tubicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Hyphomonas sp003486945*. The type genome for the species is the GenBank assembly GCA_003486945.1. The GC content of the type genome is 62.52 % and the genome length is 3.12 Mbp.

Description of *Candidatus* ISDg abluvigena sp. nov.

Candidatus ISDg abluvigena (NL. fem. n. *abluvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp902797475*. The type genome for the species is the GenBank assembly GCA_902797475.1. The GC content of the type genome is 51.93 % and the genome length is 1.65 Mbp.

Description of *Candidatus* ISDg adposilenta sp. nov.

Candidatus ISDg adposilenta (NL. fem. n. *adposilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp902798585*. The type genome for the species is the GenBank assembly GCA_902798585.1. The GC content of the type genome is 54.3 % and the genome length is 2.59 Mbp.

Description of *Candidatus* ISDg affabitas sp. nov.

Candidatus ISDg affabitas (NL. fem. n. *affabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp902783725*. The type genome for the species is the GenBank assembly GCA_902783725.1. The GC content of the type genome is 56.56 % and the genome length is 1.97 Mbp.

Description of *Candidatus* ISDg armiditas sp. nov.

Candidatus ISDg armiditas (NL. fem. n. *armiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp902795625*. The type genome for the species is the GenBank assembly GCA_902795625.1. The GC content of the type genome is 55.91 % and the genome length is 2.1 Mbp.

Description of *Candidatus* ISDg benevimonas sp. nov.

Candidatus ISDg benevimonas (NL. fem. n. *benevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp002479645*. The type genome for the species is the GenBank assembly GCA_002415425.1. The GC content of the type genome is 47.75 % and the genome length is 1.85 Mbp.

Description of *Candidatus* ISDg desonimonia sp. nov.

Candidatus ISDg desonimonia (NL. fem. n. *desonimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp902787715*. The type genome for the species is the GenBank assembly GCA_902775585.1. The GC content of the type genome is 54.74 % and the genome length is 2.44 Mbp.

Description of *Candidatus* ISDg levifitura sp. nov.

Candidatus ISDg levifitura (NL. fem. n. *levifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp002311665*. The type genome for the species is the GenBank assembly GCA_002311665.1. The GC content of the type genome is 55.69 % and the genome length is 2.8 Mbp.

Description of *Candidatus* ISDg taraxugo sp. nov.

Candidatus ISDg taraxugo (NL. fem. n. *taraxugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp002308955*. The type genome for the species is the GenBank assembly GCA_002308955.1. The GC content of the type genome is 52.05 % and the

genome length is 2.18 Mbp.

Description of *Candidatus* ISDg tenebugo sp. nov.

Candidatus ISDg tenebugo (NL. fem. n. *tenebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *ISDg sp002315495*. The type genome for the species is the GenBank assembly GCA_002315495.1. The GC content of the type genome is 46.42 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Ichthyenterobacterium dicimimonia sp. nov.

Candidatus Ichthyenterobacterium dicimimonia (NL. fem. n. *dicimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ichthyenterobacterium sp002162765*. The type genome for the species is the GenBank assembly GCA_002162765.1. The GC content of the type genome is 33.52 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Idcirana ambacedo sp. nov.

Candidatus Idcirana ambacedo (NL. fem. n. *ambacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRT01 sp011390935*. The type genome for the species is the GenBank assembly GCA_011390935.1. The GC content of the type genome is 67.37 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Idcirana gen. nov.

Candidatus Idcirana (NL. fem. n. *Idcirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRT01*. The type species for the genus is *Candidatus* Idcirana ambacedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Idcirana ficulibra sp. nov.

Candidatus Idcirana ficulibra (NL. fem. n. *ficulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRT01 sp011390885*. The type genome for the species is the GenBank assembly GCA_011390885.1. The GC content of the type genome is 70.84 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Idcirana valefastra sp. nov.

Candidatus Idcirana valefastra (NL. fem. n. *valefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRT01 sp011390805*. The type genome for the species is the GenBank assembly GCA_011390805.1. The GC content of the type genome is 61.92 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Idciraria almucastra sp. nov.

Candidatus Idciraria almucastra (NL. fem. n. *almucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUOQ01 sp012034795*. The type genome for the species is the GenBank assembly GCA_012034795.1. The GC content of the type genome is 48.64 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Idciraria gen. nov.

Candidatus Idciraria (NL. fem. n. *Idciraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUOQ01*. The type species for the genus is *Candidatus* Idciraria almucastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Idcirella monopousia sp. nov.

Candidatus Idcirella monopousia (NL. fem. n. *monopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ML27 sp009362845*. The type genome for the species is the GenBank assembly RS_GCF_009362845.1. The GC content of the type genome is 45.62 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Idcirella gen. nov.

Candidatus Idcirella (NL. fem. n. *Idcirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ML27*. The type species for the genus is *Candidatus* Idcirella monopousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Idciria avuncivita sp. nov.

Candidatus Idciria avuncivita (NL. fem. n. *avuncivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYPI01 sp005804005*. The type genome for the species is the GenBank assembly GCA_005804005.1. The GC content of the type genome is 65.28 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Idciria gen. nov.

Candidatus Idciria (NL. fem. n. *Idciria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYPI01*. The type species for the genus is *Candidatus* Idciria avuncivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Idciria bicapicella sp. nov.

Candidatus Idciria bicapicella (NL. fem. n. *bicapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYPI01 sp009692045*. The type genome for the species is the GenBank assembly GCA_009692045.1. The GC content of the type genome is 60.25 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Idcirida arrecivita sp. nov.

Candidatus Idcirida arrecivita (NL. fem. n. *arrecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-185 sp003228685*. The type genome for the species is the GenBank assembly GCA_003228685.1. The GC content of the type genome is 63.14 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Idcirida gen. nov.

Candidatus Idcirida (NL. fem. n. *Idcirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-185*. The type species for the genus is *Candidatus* Idcirida arrecivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-68-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tetenariaceae.

Description of *Candidatus* Ideonella aspiletta sp. nov.

Candidatus Ideonella aspiletta (NL. fem. n. *aspiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ideonella sp010499455*. The type genome for the species is the GenBank assembly RS_GCF_010499455.1. The GC content of the type genome is 70.01 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Ideonella ecfacivita sp. nov.

Candidatus Ideonella ecfacivita (NL. fem. n. *ecfacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Ideonella sp002255925*. The type genome for the species is the GenBank assembly GCA_002255925.1. The GC content of the type genome is 66.57 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Ideonella indivedo sp. nov.

Candidatus Ideonella indivedo (NL. fem. n. *indivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ideonella sp000333615*. The type genome for the species is the GenBank assembly RS_GCF_000333615.1. The GC content of the type genome is 68.71 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Ideonella pinacedo sp. nov.

Candidatus Ideonella pinacedo (NL. fem. n. *pinacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ideonella sp004359425*. The type genome for the species is the GenBank assembly GCA_004359425.1. The GC content of the type genome is 62.5 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Idiomarina dimacessa sp. nov.

Candidatus Idiomarina dimacessa (NL. fem. n. *dimacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Idiomarina sp002685255*. The type genome for the species is the GenBank assembly GCA_002364475.1. The GC content of the type genome is 47.6 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Idiomarina navicastra sp. nov.

Candidatus Idiomarina navicastra (NL. fem. n. *navicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Idiomarina sp002808045*. The type genome for the species is the GenBank assembly RS_GCF_002808045.1. The GC content of the type genome is 47.27 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Idiomarina panifigena sp. nov.

Candidatus Idiomarina panifigena (NL. fem. n. *panifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Idiomarina sp001870515*. The type genome for the species is the GenBank assembly RS_GCF_001870515.1. The GC content of the type genome is 47.47 % and the genome length is 2.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "solar salterns".

Description of *Candidatus* Idiomarina serotago sp. nov.

Candidatus Idiomarina serotago (NL. fem. n. *serotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Idiomarina sp002729675*. The type genome for the species is the GenBank assembly GCA_002732745.1. The GC content of the type genome is 48.72 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Idipsana gemebitio sp. nov.

Candidatus Idipsana gemebitio (NL. fem. n. *gemebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPR01 sp013202385*. The type genome for the species is the GenBank assembly GCA_013202385.1. The GC content of the type genome is 44.24 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Idipsana gen. nov.

Candidatus Idipsana (NL. fem. n. *Idipsana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPR01*. The type species for the genus is *Candidatus* Idipsana gemebitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8477*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogosaceae.

Description of *Candidatus* Idipsana mahemitas sp. nov.

Candidatus Idipsana mahemitas (NL. fem. n. *mahemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPR01 sp013203185*. The type genome for the species is the GenBank assembly GCA_013203185.1. The GC content of the type genome is 44.07 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Idipsana omnivibula sp. nov.

Candidatus Idipsana omnivibula (NL. fem. n. *omnivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPR01 sp013202495*. The type genome for the species is the GenBank assembly GCA_013202495.1. The GC content of the type genome is 43.45 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Idipsana pinifitudo sp. nov.

Candidatus Idipsana pinifitudo (NL. fem. n. *pinifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPR01 sp013202895*. The type genome for the species is the GenBank assembly GCA_013202895.1. The GC content of the type genome is 43.06 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Idipsana sicunilega sp. nov.

Candidatus Idipsana sicunilega (NL. fem. n. *sicunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPR01 sp014382565*. The type genome for the species is the GenBank assembly GCA_014382565.1. The GC content of the type genome is 44.0 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Idipsaria ammodedo sp. nov.

Candidatus Idipsaria ammodedo (NL. fem. n. *ammodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CV81 sp003506635*. The type genome for the species is the GenBank assembly GCA_003506635.1. The GC content of the type genome is 64.51 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Idipsaria gen. nov.

Candidatus Idipsaria (NL. fem. n. *Idipsaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CV81*. The type species for the genus is *Candidatus* Idipsaria ammodedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Idipsaria catapiforma sp. nov.

Candidatus Idipsaria catapiforma (NL. fem. n. *catapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CV81 sp902826095*. The type genome for the species is the GenBank assembly GCA_902826095.1. The GC content of the type genome is 62.91 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Idipsaria invetugo sp. nov.

Candidatus Idipsaria invetugo (NL. fem. n. *invetugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CV81 sp013389125*. The type genome for the species is the GenBank assembly GCA_013389125.1. The GC content of the type genome is 64.14 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Idipsaria tirocousia sp. nov.

Candidatus Idipsaria tirocousia (NL. fem. n. *tirocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CV81 sp001767925*. The type genome for the species is the GenBank assembly GCA_001767925.1. The GC content of the type genome is 63.17 % and the genome length is 3.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Idipsida scaccimonia sp. nov.

Candidatus Idipsida scaccimonia (NL. fem. n. *scaccimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REBX01 sp007692505*. The type genome for the species is the GenBank assembly GCA_007692505.1. The GC content of the type genome is 70.46 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Idipsida gen. nov.

Candidatus Idipsida (NL. fem. n. *Idipsida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REBX01*. The type species for the genus is *Candidatus* Idipsida scaccimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Idipsosa decitivita sp. nov.

Candidatus Idipsosa decitivita (NL. fem. n. *decitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-14 sp000990355*. The type genome for the species is the GenBank assembly GCA_000990355.1. The GC content of the type genome is 36.23 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Idipsosa gen. nov.

Candidatus Idipsosa (NL. fem. n. *Idipsosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-37-14*. The type species for the genus is *Candidatus* Idipsosa decitivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Idipsula ascalibra sp. nov.

Candidatus Idipsula ascalibra (NL. fem. n. *ascalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REEE01 sp007695245*. The type genome for the species is the GenBank assembly GCA_007695245.1. The GC content of the type genome is 63.34 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Idipsula gen. nov.

Candidatus Idipsula (NL. fem. n. *Idipsula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REEE01*. The type species for the genus is *Candidatus* Idipsula ascalibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignatzschineria utrinitio sp. nov.

Candidatus Ignatzschineria utrinitio (NL. fem. n. *utrinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ignatzschineria sp002252045*. The type genome for the species is the GenBank assembly RS_GCF_002252045.1. The GC content of the type genome is 41.55 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Ignavibacterium catapatio sp. nov.

Candidatus Ignavibacterium catapatio (NL. fem. n. *catapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ignavibacterium sp900696555*. The type genome for the species is the GenBank assembly GCA_013285425.1. The GC content of the type genome is 33.47 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Ignavibacterium forinago sp. nov.

Candidatus Ignavibacterium forinago (NL. fem. n. *forinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ignavibacterium sp003538625*. The type genome for the species is the GenBank assembly GCA_003538625.1. The GC content of the type genome is 33.58 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Ignavibacterium metabivita sp. nov.

Candidatus Ignavibacterium metabivita (NL. fem. n. *metabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ignavibacterium sp002050295*. The type genome for the species is the GenBank assembly GCA_002050295.1. The GC content of the type genome is 33.01 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Ignicana cisalago sp. nov.

Candidatus Ignicana cisalago (NL. fem. n. *cisalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4096 sp002422605*. The type genome for the species is the GenBank assembly GCA_002422605.1. The GC content of the type genome is 40.74 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Ignicana gen. nov.

Candidatus Ignicana (NL. fem. n. *Ignicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4096*. The type species for the genus is *Candidatus* Ignicana cisalago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignicana conigibula sp. nov.

Candidatus Ignicana conigibula (NL. fem. n. *conigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4096 sp002381945*. The type genome for the species is the GenBank assembly GCA_002381945.1. The GC content of the type genome is 40.69 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Ignicana inguratio sp. nov.

Candidatus Ignicana inguratio (NL. fem. n. *inguratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4096 sp002381765*. The type genome for the species is the GenBank assembly GCA_002381765.1. The GC content of the type genome is 41.75 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Ignicana lenuniforma sp. nov.

Candidatus Ignicana lenuniforma (NL. fem. n. *lenuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4096 sp002482685*. The type genome for the species is the GenBank assembly GCA_002482685.1. The GC content of the type genome is 41.25 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Ignicana vepalousia sp. nov.

Candidatus Ignicana vepalousia (NL. fem. n. *vepalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4096 sp005791855*. The type genome for the species is the GenBank assembly GCA_005791855.1. The GC content of the type genome is 60.58 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ignicella obnupicula sp. nov.

Candidatus Ignicella obnupicula (NL. fem. n. *obnupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1572 sp900553045*. The type genome for the species is the GenBank assembly GCA_900553045.1. The GC content of the type genome is 30.73 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Ignicella gen. nov.

Candidatus Ignicella (NL. fem. n. *Ignicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1572*. The type species for the genus is *Candidatus* Ignicella obnupicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ignicia affunibra sp. nov.

Candidatus Ignicia affunibra (NL. fem. n. *affunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFT01 sp007376195*. The type genome for the species is the GenBank assembly GCA_007376195.1. The GC content of the type genome is 45.97 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Ignicia gen. nov.

Candidatus Ignicia (NL. fem. n. *Ignicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFT01*. The type species for the genus is *Candidatus* Ignicia affunibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-48-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifariaceae.

Description of *Candidatus* Ignicida adtilivita sp. nov.

Candidatus Ignicida adtilivita (NL. fem. n. *adtilivita* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0074137 sp001464715*. The type genome for the species is the GenBank assembly GCA_001464715.1. The GC content of the type genome is 51.07 % and the genome length is 3.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Ignicida gen. nov.

Candidatus Ignicida (NL. fem. n. *Ignicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0074137*. The type species for the genus is *Candidatus* Ignicida adtilivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignifana palififorma sp. nov.

Candidatus Ignifana palififorma (NL. fem. n. *palififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-42-12 sp002787695*. The type genome for the species is the GenBank assembly GCA_002787695.1. The GC content of the type genome is 41.83 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Ignifana gen. nov.

Candidatus Ignifana (NL. fem. n. *Ignifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-42-12*. The type species for the genus is *Candidatus* Ignifana palififorma .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Ignifaria effemilenta sp. nov.

Candidatus Ignifaria effemilenta (NL. fem. n. *effemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA696 sp002298165*. The type genome for the species is the GenBank assembly GCA_002298165.1. The GC content of the type genome is 52.03 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Ignifaria gen. nov.

Candidatus Ignifaria (NL. fem. n. *Ignifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA696*. The type species for the genus is *Candidatus* Ignifaria effemilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignifaria entomitica sp. nov.

Candidatus Ignifaria entomitica (NL. fem. n. *entomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA696 sp002298995*. The type genome for the species is the GenBank assembly GCA_002298995.1. The GC content of the type genome is 53.8 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Ignifia abinvitrix sp. nov.

Candidatus Ignifia abinvitrix (NL. fem. n. *abinvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S5133MH16 sp004193595*. The type genome for the species is the GenBank assembly GCA_004193595.1. The GC content of the type genome is 43.72 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Ignifia gen. nov.

Candidatus Ignifia (NL. fem. n. *Ignifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S5133MH16*. The type species for the genus is *Candidatus* Ignifia

abinvitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11574*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momoranaceae.

Description of *Candidatus* Ignifia bisulicula sp. nov.

Candidatus Ignifia bisulicula (NL. fem. n. *bisulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S5133MH16 sp001751005*. The type genome for the species is the GenBank assembly GCA_001751005.1. The GC content of the type genome is 43.59 % and the genome length is 3.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sample #5133; Elevator 3A push core 47; collected at Hydrate Ridge North during Jason II dive J2-593 from an area of active seepage marked by bubble ebullition and surface expression of white microbial mat".

Description of *Candidatus* Ignifida exadvilenta sp. nov.

Candidatus Ignifida exadvilenta (NL. fem. n. *exadvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHD01 sp013821265*. The type genome for the species is the GenBank assembly GCA_013821265.1. The GC content of the type genome is 42.92 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Ignifida gen. nov.

Candidatus Ignifida (NL. fem. n. *Ignifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHD01*. The type species for the genus is *Candidatus* Ignifida exadvilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignifula adsifatica sp. nov.

Candidatus Ignifula adsifatica (NL. fem. n. *adsifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-9228 sp001870905*. The type genome for the species is the GenBank assembly RS_GCF_001870905.1. The GC content of the type genome is 48.82 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Ignifula gen. nov.

Candidatus Ignifula (NL. fem. n. *Ignifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-9228*. The type species for the genus is *Candidatus* Ignifula adsifatica .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Ignigana acrocicella sp. nov.

Candidatus Ignigana acrocicella (NL. fem. n. *acrocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5348 sp012837765*. The type genome for the species is the GenBank assembly GCA_012837765.1. The GC content of the type genome is 28.28 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Ignigana gen. nov.

Candidatus Ignigana (NL. fem. n. *Ignigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5348*. The type species for the genus is *Candidatus* Ignigana acrocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ignigana defasedo sp. nov.

Candidatus Ignigana defasedo (NL. fem. n. *defasedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5348 sp012841205*. The type genome for the species is the GenBank assembly GCA_012841205.1. The GC content of the type genome is 29.39 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Ignigana rubecisca sp. nov.

Candidatus Ignigana rubecisca (NL. fem. n. *rubecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5348 sp002411005*. The type genome for the species is the GenBank assembly GCA_002411005.1. The GC content of the type genome is 29.24 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Ignigaria illepedo sp. nov.

Candidatus Ignigaria illepedo (NL. fem. n. *illepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSA5 sp013414685*. The type genome for the species is the GenBank assembly GCA_013414685.1. The GC content of the type genome is 38.29 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Ignigaria gen. nov.

Candidatus Ignigaria (NL. fem. n. *Ignigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSA5*. The type species for the genus is *Candidatus* Ignigaria illepedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignigella cimelatio sp. nov.

Candidatus Ignigella cimelatio (NL. fem. n. *cimelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKO01 sp012799795*. The type genome for the species is the GenBank assembly GCA_012799795.1. The GC content of the type genome is 35.21 %

and the genome length is 0.73 Mbp.

Description of *Candidatus* Ignigella gen. nov.

Candidatus Ignigella (NL. fem. n. *Ignigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZKO01*. The type species for the genus is *Candidatus* Ignigella cimelatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Ignigella luculisca sp. nov.

Candidatus Ignigella luculisca (NL. fem. n. *luculisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKO01 sp012515515*. The type genome for the species is the GenBank assembly GCA_012515515.1. The GC content of the type genome is 37.01 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Ignigia democatica sp. nov.

Candidatus Ignigia democatica (NL. fem. n. *democatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBC01 sp013360695*. The type genome for the species is the GenBank assembly GCA_013360695.1. The GC content of the type genome is 66.47 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Ignigia gen. nov.

Candidatus Ignigia (NL. fem. n. *Ignigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBC01*. The type species for the genus is *Candidatus* Ignigia democatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Ignigida delucax sp. nov.

Candidatus Ignigida delucax (NL. fem. n. *delucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRT-SC02 sp001321855*. The type genome for the species is the GenBank assembly GCA_001321855.1. The GC content of the type genome is 29.43 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single cell amplified by MDA; hadopelagic water column of the Puerto Rico Trench at 8200 m depth".

Description of *Candidatus* Ignigida gen. nov.

Candidatus Ignigida (NL. fem. n. *Ignigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRT-SC02*. The type species for the genus is *Candidatus* Ignigida delucax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignigida pinifitoga sp. nov.

Candidatus Ignigida pinifitoga (NL. fem. n. *pinifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRT-SC02 sp902572695*. The type genome for the species is the GenBank assembly GCA_902572695.1. The GC content of the type genome is 29.74 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Ignigosa ascelessa sp. nov.

Candidatus Ignigosa ascelessa (NL. fem. n. *ascelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRGS01 sp011053245*. The type genome for the species is the GenBank assembly GCA_011053245.1. The GC content of the type genome is 47.44 %

and the genome length is 2.65 Mbp.

Description of *Candidatus* Ignigosa gen. nov.

Candidatus Ignigosa (NL. fem. n. *Ignigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRGS01*. The type species for the genus is *Candidatus* Ignigosa ascelessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignipana pecunimonia sp. nov.

Candidatus Ignipana pecunimonia (NL. fem. n. *pecunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSHD01 sp011058515*. The type genome for the species is the GenBank assembly GCA_011058515.1. The GC content of the type genome is 74.8 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Ignipana gen. nov.

Candidatus Ignipana (NL. fem. n. *Ignipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSHD01*. The type species for the genus is *Candidatus* Ignipana pecunimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Igniparia adrecilega sp. nov.

Candidatus Igniparia adrecilega (NL. fem. n. *adrecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-55-46_A sp001797415*. The type genome for the species is the GenBank assembly GCA_001797415.1. The GC content of the type genome is 55.63 % and the genome length is 2.24 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Igniparia gen. nov.

Candidatus Igniparia (NL. fem. n. *Igniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-55-46_A*. The type species for the genus is *Candidatus* Igniparia adrecilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifellaceae.

Description of *Candidatus* Ignipella bisulugo sp. nov.

Candidatus Ignipella bisulugo (NL. fem. n. *bisulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUD01 sp004297335*. The type genome for the species is the GenBank assembly GCA_004297335.1. The GC content of the type genome is 67.92 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Ignipella gen. nov.

Candidatus Ignipella (NL. fem. n. *Ignipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUD01*. The type species for the genus is *Candidatus* Ignipella bisulugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignipella infisisca sp. nov.

Candidatus Ignipella infisisca (NL. fem. n. *infisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUD01 sp009692245*. The type genome for the species is the GenBank assembly GCA_009692245.1. The GC content of the type genome is 64.31 %

and the genome length is 1.62 Mbp.

Description of *Candidatus* Ignipida acertilega sp. nov.

Candidatus Ignipida acertilega (NL. fem. n. *acertilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LX47W sp014042345*. The type genome for the species is the GenBank assembly RS_GCF_014042345.1. The GC content of the type genome is 65.58 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Ignipida gen. nov.

Candidatus Ignipida (NL. fem. n. *Ignipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LX47W*. The type species for the genus is *Candidatus* Ignipida acertilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignipida bipinilega sp. nov.

Candidatus Ignipida bipinilega (NL. fem. n. *bipinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LX47W sp014042365*. The type genome for the species is the GenBank assembly RS_GCF_014042365.1. The GC content of the type genome is 65.24 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Ignipida valeficula sp. nov.

Candidatus Ignipida valeficula (NL. fem. n. *valeficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LX47W sp014042355*. The type genome for the species is the GenBank assembly RS_GCF_014042355.1. The GC content of the type genome is 64.35 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Igniposa illepetta sp. nov.

Candidatus Igniposa illepetta (NL. fem. n. *illepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCQ01 sp013360195*. The type genome for the species is the GenBank assembly GCA_013360195.1. The GC content of the type genome is 52.43 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Igniposa gen. nov.

Candidatus Igniposa (NL. fem. n. *Igniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCQ01*. The type species for the genus is *Candidatus* Igniposa illepetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RPQS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifidaceae.

Description of *Candidatus* Ignipula gabinisca sp. nov.

Candidatus Ignipula gabinisca (NL. fem. n. *gabinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKQ01 sp012799755*. The type genome for the species is the GenBank assembly GCA_012799755.1. The GC content of the type genome is 58.83 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Ignipula gen. nov.

Candidatus Ignipula (NL. fem. n. *Ignipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZKQ01*. The type species for the genus is *Candidatus* Ignipula gabinisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Ignobella lucubisca sp. nov.

Candidatus Ignobella lucubisca (NL. fem. n. *lucubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VKGY01 sp008080685*. The type genome for the species is the GenBank assembly GCA_008080685.1. The GC content of the type genome is 55.8 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Ignobella gen. nov.

Candidatus Ignobella (NL. fem. n. *Ignobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VKGY01*. The type species for the genus is *Candidatus* Ignobella lucubisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponosaceae.

Description of *Candidatus* Ignobida recocimonas sp. nov.

Candidatus Ignobida recocimonas (NL. fem. n. *recocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYYY01 sp012515125*. The type genome for the species is the GenBank assembly GCA_012515125.1. The GC content of the type genome is 64.94 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Ignobida gen. nov.

Candidatus Ignobida (NL. fem. n. *Ignobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYYY01*. The type species for the genus is *Candidatus* Ignobida recocimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignobosa abinvugo sp. nov.

Candidatus Ignobosa abinvugo (NL. fem. n. *abinvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-183 sp003567255*. The type genome for the species is the GenBank assembly GCA_003567255.1. The GC content of the type genome is 54.95 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Ignobosa gen. nov.

Candidatus Ignobosa (NL. fem. n. *Ignobosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-183*. The type species for the genus is *Candidatus* Ignobosa abinvugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Ignobula socagiforma sp. nov.

Candidatus Ignobula socagiforma (NL. fem. n. *socagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWOD01 sp003557545*. The type genome for the species is the GenBank assembly GCA_003557545.1. The GC content of the type genome is 46.12 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Ignobula gen. nov.

Candidatus Ignobula (NL. fem. n. *Ignobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWOD01*. The type species for the genus is *Candidatus* Ignobula socagiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T1Sed10-126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracanaceae.

Description of *Candidatus* Ignomana adnuledo sp. nov.

Candidatus Ignomana adnuledo (NL. fem. n. *adnuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRMK01 sp011322575*. The type genome for the species is the GenBank assembly GCA_011322575.1. The GC content of the type genome is 62.78 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Ignomana gen. nov.

Candidatus Ignomana (NL. fem. n. *Ignomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRMK01*. The type species for the genus is *Candidatus* Ignomana adnuledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignomaria inambago sp. nov.

Candidatus Ignomaria inambago (NL. fem. n. *inambago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-46-13 sp001820875*. The type genome for the species is the GenBank assembly GCA_001820875.1. The GC content of the type genome is 45.45 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Ignomaria gen. nov.

Candidatus Ignomaria (NL. fem. n. *Ignomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-46-13*. The type species for the genus is *Candidatus* Ignomaria inambago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Ignomaria intolatica sp. nov.

Candidatus Ignomaria intolatica (NL. fem. n. *intolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-46-13 sp001821015*. The type genome for the species is the GenBank assembly GCA_001821015.1. The GC content of the type genome is 45.74 % and the genome length is 0.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ignomella catabax sp. nov.

Candidatus Ignomella catabax (NL. fem. n. *catabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYP01 sp009930275*. The type genome for the species is the GenBank assembly GCA_009930275.1. The GC content of the type genome is 42.2 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Ignomella gen. nov.

Candidatus Ignomella (NL. fem. n. *Ignomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZYP01*. The type species for the genus is *Candidatus* Ignomella catabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignomella divulisca sp. nov.

Candidatus Ignomella divulisca (NL. fem. n. *divulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYP01 sp012517145*. The type genome for the species is the GenBank assembly GCA_012517145.1. The GC content of the type genome is 41.17 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Ignomia armidilega sp. nov.

Candidatus Ignomia armidilega (NL. fem. n. *armidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYX01 sp013696265*. The type genome for the species is the GenBank assembly GCA_013696265.1. The GC content of the type genome is 64.84 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Ignomia gen. nov.

Candidatus Ignomia (NL. fem. n. *Ignomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYX01*. The type species for the genus is *Candidatus* Ignomia armidilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Ignomia incomilenta sp. nov.

Candidatus Ignomia incomilenta (NL. fem. n. *incomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYX01 sp013698495*. The type genome for the species is the GenBank assembly GCA_013698495.1. The GC content of the type genome is 61.69 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Ignomida oppanisca sp. nov.

Candidatus Ignomida oppanisca (NL. fem. n. *oppanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTZ01 sp012031225*. The type genome for the species is the GenBank assembly GCA_012031225.1. The GC content of the type genome is 60.16 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Ignomida gen. nov.

Candidatus Ignomida (NL. fem. n. *Ignomida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTZ01*. The type species for the genus is *Candidatus* Ignomida oppanisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignomosa impilitudo sp. nov.

Candidatus Ignomosa impilitudo (NL. fem. n. *impilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NC2004 sp000621905*. The type genome for the species is the GenBank assembly RS_GCF_000621905.1. The GC content of the type genome is 39.37 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Ignomosa gen. nov.

Candidatus Ignomosa (NL. fem. n. *Ignomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NC2004*. The type species for the genus is *Candidatus* Ignomosa impilitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosana labecax sp. nov.

Candidatus Ignosana labecax (NL. fem. n. *labecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIP01 sp013003675*. The type genome for the species is the GenBank assembly GCA_013003675.1. The GC content of the type genome is 67.74 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Ignosana gen. nov.

Candidatus Ignosana (NL. fem. n. *Ignosana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDIP01*. The type species for the genus is *Candidatus* Ignosana labecax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosaria obsolastra sp. nov.

Candidatus Ignosaria obsolastra (NL. fem. n. *obsolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRPG01 sp011376105*. The type genome for the species is the GenBank assembly GCA_011376105.1. The GC content of the type genome is 70.36 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Ignosaria gen. nov.

Candidatus Ignosaria (NL. fem. n. *Ignosaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRPG01*. The type species for the genus is *Candidatus* Ignosaria obsolastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Ignosella scorbitia sp. nov.

Candidatus Ignosella scorbitia (NL. fem. n. *scorbitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-07484 sp003963515*. The type genome for the species is the GenBank assembly RS_GCF_003963515.1. The GC content of the type genome is 56.17 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Ignosella gen. nov.

Candidatus Ignosella (NL. fem. n. *Ignosella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SCSIO-07484*. The type species for the genus is *Candidatus* Ignosella scorbitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosia dimadimonas sp. nov.

Candidatus Ignosia dimadimonas (NL. fem. n. *dimadimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JS7-9 sp004329715*. The type genome for the species is the GenBank assembly RS_GCF_004329715.1. The GC content of the type genome is 49.9 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Ignosia gen. nov.

Candidatus Ignosia (NL. fem. n. *Ignosia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JS7-9*. The type species for the genus is *Candidatus* Ignosia dimadimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosida accumastra sp. nov.

Candidatus Ignosida accumastra (NL. fem. n. *accumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1907 sp013333405*. The type genome for the species is the GenBank assembly GCA_013333405.2. The GC content of the type genome is 35.8 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Ignosida gen. nov.

Candidatus Ignosida (NL. fem. n. *Ignosida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1907*. The type species for the genus is *Candidatus* Ignosida accumastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosida carecitrix sp. nov.

Candidatus Ignosida carecitrix (NL. fem. n. *carecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1907 sp004151455*. The type genome for the species is the GenBank assembly RS_GCF_004151455.1. The GC content of the type genome is 32.34 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Ignosida delubentia sp. nov.

Candidatus Ignosida delubentia (NL. fem. n. *delubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1907 sp900555945*. The type genome for the species is the GenBank assembly GCA_900555945.1. The GC content of the type genome is 35.4 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Ignosida extunitas sp. nov.

Candidatus Ignosida extunitas (NL. fem. n. *extunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1907 sp900556165*. The type genome for the species is the GenBank assembly GCA_900556165.1. The GC content of the type genome is 36.09 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Ignososa exsoretta sp. nov.

Candidatus Ignososa exsoretta (NL. fem. n. *exsoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2685935 sp002685935*. The type genome for the species is the GenBank assembly GCA_002685935.1. The GC content of the type genome is 62.87 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Ignososa gen. nov.

Candidatus Ignososa (NL. fem. n. *Ignososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2685935*. The type species for the genus is *Candidatus* Ignososa exsoretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ignosula fumacitica sp. nov.

Candidatus Ignosula fumacitica (NL. fem. n. *fumacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BCD1 sp008501835*. The type genome for the species is the GenBank assembly GCA_008501835.1. The GC content of the type genome is 41.36 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Ignosula gen. nov.

Candidatus Ignosula (NL. fem. n. *Ignosula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BCD1*. The type species for the genus is *Candidatus* Ignosula fumacitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illaparia adnepastra sp. nov.

Candidatus Illaparia adnepastra (NL. fem. n. *adnepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013812695*. The type genome for the species is the GenBank assembly GCA_013812695.1. The GC content of the type genome is 69.55 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Illaparia gen. nov.

Candidatus Illaparia (NL. fem. n. *Illaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDDX01*. The type species for the genus is *Candidatus* Illaparia adnepastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Illaparia cepulax sp. nov.

Candidatus Illaparia cepulax (NL. fem. n. *cepulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013813435*. The type genome for the species is the GenBank assembly GCA_013813435.1. The GC content of the type genome is 63.76 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Illaparia frigdimonas sp. nov.

Candidatus Illaparia frigdimonas (NL. fem. n. *frigdimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013813675*. The type genome for the species is the GenBank assembly GCA_013813675.1. The GC content of the type genome is 68.66 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Illaparia recucibra sp. nov.

Candidatus Illaparia recucibra (NL. fem. n. *recucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013816685*. The type genome for the species is the GenBank assembly GCA_013816685.1. The GC content of the type genome is 68.58 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Illaparia refulibra sp. nov.

Candidatus Illaparia refulibra (NL. fem. n. *refulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013820855*. The type genome for the species is the GenBank assembly GCA_013820855.1. The GC content of the type genome is 69.53 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Illaparia telefousia sp. nov.

Candidatus Illaparia telefousia (NL. fem. n. *telefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013813875*. The type genome for the species is the GenBank assembly GCA_013813875.1. The GC content of the type genome is 67.55 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Illaparia tetenax sp. nov.

Candidatus Illaparia tetenax (NL. fem. n. *tetenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDX01 sp013813145*. The type genome for the species is the GenBank assembly GCA_013813145.1. The GC content of the type genome is 68.9 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Illapella cenodatica sp. nov.

Candidatus Illapella cenodatica (NL. fem. n. *cenodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEZ01 sp903847905*. The type genome for the species is the GenBank assembly GCA_903847905.1. The GC content of the type genome is 34.05 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Illapella gen. nov.

Candidatus Illapella (NL. fem. n. *Illapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINEZ01*. The type species for the genus is *Candidatus* Illapella cenodatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-32-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadosaceae.

Description of *Candidatus* Illapella dicabitoga sp. nov.

Candidatus Illapella dicabitoga (NL. fem. n. *dicabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEZ01 sp013334735*. The type genome for the species is the GenBank assembly GCA_013334735.1. The GC content of the type genome is 33.57 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Illapella scellax sp. nov.

Candidatus Illapella scellax (NL. fem. n. *scellax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEZ01 sp903889915*. The type genome for the species is the GenBank assembly GCA_903889915.1. The GC content of the type genome is 38.06 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Illapia artifugo sp. nov.

Candidatus Illapia artifugo (NL. fem. n. *artifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBRF01 sp902796975*. The type genome for the species is the GenBank assembly GCA_902796975.1. The GC content of the type genome is 56.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Illapia gen. nov.

Candidatus Illapia (NL. fem. n. *Illapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBRF01*. The type species for the genus is *Candidatus* Illapia artifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

QAMH01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decuniaceae.

Description of *Candidatus* Illaposa colubentia sp. nov.

Candidatus Illaposa colubentia (NL. fem. n. *colubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZYX01 sp014239435*. The type genome for the species is the GenBank assembly GCA_014239435.1. The GC content of the type genome is 43.08 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Illaposa gen. nov.

Candidatus Illaposa (NL. fem. n. *Illaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZYX01*. The type species for the genus is *Candidatus* Illaposa colubentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Illapula nucificula sp. nov.

Candidatus Illapula nucificula (NL. fem. n. *nucificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZEE01 sp903931835*. The type genome for the species is the GenBank assembly GCA_903931835.1. The GC content of the type genome is 61.19 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Illapula gen. nov.

Candidatus Illapula (NL. fem. n. *Illapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZEE01*. The type species for the genus is *Candidatus* Illapula nucificula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illepana admuliforma sp. nov.

Candidatus Illepana admuliforma (NL. fem. n. *admuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCN01 sp013288125*. The type genome for the species is the GenBank assembly GCA_013288125.1. The GC content of the type genome is 36.98 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Illepana gen. nov.

Candidatus Illepana (NL. fem. n. *Illepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCN01*. The type species for the genus is *Candidatus* Illepana admuliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Illepana semidousia sp. nov.

Candidatus Illepana semidousia (NL. fem. n. *semidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCN01 sp013287745*. The type genome for the species is the GenBank assembly GCA_013287745.1. The GC content of the type genome is 40.23 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Illeparia adcomitia sp. nov.

Candidatus Illeparia adcomitia (NL. fem. n. *adcomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-014117445 sp014117445*. The type genome for the species is the GenBank assembly RS_GCF_014117445.1. The GC content of the type genome is 67.65

% and the genome length is 3.36 Mbp.

Description of *Candidatus* Illeparia gen. nov.

Candidatus Illeparia (NL. fem. n. *Illeparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-014117445*. The type species for the genus is *Candidatus* Illeparia adcomitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illepella locupilega sp. nov.

Candidatus Illepella locupilega (NL. fem. n. *locupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMEH01 sp903839975*. The type genome for the species is the GenBank assembly GCA_903839975.1. The GC content of the type genome is 44.27 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Illepella gen. nov.

Candidatus Illepella (NL. fem. n. *Illepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMEH01*. The type species for the genus is *Candidatus* Illepella locupilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defunellaceae.

Description of *Candidatus* Illeposa egregatio sp. nov.

Candidatus Illeposa egregatio (NL. fem. n. *egregatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSXY01 sp009773565*. The type genome for the species is the GenBank assembly GCA_009773565.1. The GC content of the type genome is 62.74 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Illeposa gen. nov.

Candidatus Illeposa (NL. fem. n. *Illeposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSXY01*. The type species for the genus is *Candidatus* Illeposa egregatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Illepula sicarimonas sp. nov.

Candidatus Illepula sicarimonas (NL. fem. n. *sicarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LB2 sp014467015*. The type genome for the species is the GenBank assembly GCA_014467015.1. The GC content of the type genome is 36.2 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Illepula gen. nov.

Candidatus Illepula (NL. fem. n. *Illepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LB2*. The type species for the genus is *Candidatus* Illepula sicarimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illibana arrecigena sp. nov.

Candidatus Illibana arrecigena (NL. fem. n. *arrecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-52-12 sp001724175*. The type genome for the species is the GenBank assembly GCA_001724175.1. The GC content of the type genome is 52.17 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Illibana gen. nov.

Candidatus Illibana (NL. fem. n. *Illibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-52-12*. The type species for the genus is *Candidatus* Illibana arrecigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illibia penicibra sp. nov.

Candidatus Illibia penicibra (NL. fem. n. *penicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11890 sp902773675*. The type genome for the species is the GenBank assembly GCA_902773675.1. The GC content of the type genome is 24.79 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Illibia gen. nov.

Candidatus Illibia (NL. fem. n. *Illibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11890*. The type species for the genus is *Candidatus* Illibia penicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Illibida refinax sp. nov.

Candidatus Illibida refinax (NL. fem. n. *refinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOJ01 sp012838895*. The type genome for the species is the GenBank assembly GCA_012838895.1. The GC content of the type genome is 47.2 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Illibida gen. nov.

Candidatus Illibida (NL. fem. n. *Illibida* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOJ01*. The type species for the genus is *Candidatus* Illibida refinax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illibosa lanigilega sp. nov.

Candidatus Illibosa lanigilega (NL. fem. n. *lanigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRB01 sp011391185*. The type genome for the species is the GenBank assembly GCA_011391185.1. The GC content of the type genome is 66.03 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Illibosa gen. nov.

Candidatus Illibosa (NL. fem. n. *Illibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRB01*. The type species for the genus is *Candidatus* Illibosa lanigilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Illibula lanifibra sp. nov.

Candidatus Illibula lanifibra (NL. fem. n. *lanifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2232 sp002348045*. The type genome for the species is the GenBank assembly GCA_002348045.1. The GC content of the type genome is 60.18 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Illibula gen. nov.

Candidatus Illibula (NL. fem. n. *Illibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2232*. The type species for the genus is *Candidatus* Illibula lanifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homunulaceae.

Description of *Candidatus* Illunana cacopetta sp. nov.

Candidatus Illunana cacopetta (NL. fem. n. *cacopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUU01 sp012517535*. The type genome for the species is the GenBank assembly GCA_012517535.1. The GC content of the type genome is 52.01 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Illunana gen. nov.

Candidatus Illunana (NL. fem. n. *Illunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUU01*. The type species for the genus is *Candidatus* Illunana cacopetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illunaria ciminisca sp. nov.

Candidatus Illunaria ciminisca (NL. fem. n. *ciminisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQN01 sp013203045*. The type genome for the species is the GenBank assembly GCA_013203045.1. The GC content of the type genome is 46.92 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Illunaria gen. nov.

Candidatus Illunaria (NL. fem. n. *Illunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQN01*. The type species for the genus is *Candidatus* Illunaria ciminisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-899*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunosaceae.

Description of *Candidatus* Illunella egritousia sp. nov.

Candidatus Illunella egritousia (NL. fem. n. *egritousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAR01 sp012719235*. The type genome for the species is the GenBank assembly GCA_012719235.1. The GC content of the type genome is 54.82 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Illunella gen. nov.

Candidatus Illunella (NL. fem. n. *Illunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAR01*. The type species for the genus is *Candidatus* Illunella egritousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illunida obsatimonia sp. nov.

Candidatus Illunida obsatimonia (NL. fem. n. *obsatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PJMG01 sp003173895*. The type genome for the species is the GenBank assembly GCA_003173895.1. The GC content of the type genome is 30.77 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Illunida gen. nov.

Candidatus Illunida (NL. fem. n. *Illunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PJMG01*. The type species for the genus is *Candidatus* Illunida obsatimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Illunosa inargisca sp. nov.

Candidatus Illunosa inargisca (NL. fem. n. *inargisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3384 sp002358935*. The type genome for the species is the GenBank assembly GCA_002358935.1. The GC content of the type genome is 27.62 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Illunosa gen. nov.

Candidatus Illunosa (NL. fem. n. *Illunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3384*. The type species for the genus is *Candidatus* Illunosa inargisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illunula dapifatio sp. nov.

Candidatus Illunula dapifatio (NL. fem. n. *dapifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J050 sp003696865*. The type genome for the species is the GenBank assembly GCA_003696865.1. The GC content of the type genome is 58.91 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Illunula gen. nov.

Candidatus Illunula (NL. fem. n. *Illunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J050*. The type species for the genus is *Candidatus* Illunula dapifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HR10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desupariaceae.

Description of *Candidatus* Illuvaria opuscimonia sp. nov.

Candidatus Illuvaria opuscimonia (NL. fem. n. *opuscimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M269 sp004353515*. The type genome for the species is the GenBank assembly RS_GCF_004353515.1. The GC content of the type genome is 42.13 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Illuvaria gen. nov.

Candidatus Illuvaria (NL. fem. n. *Illuvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M269*. The type species for the genus is *Candidatus* Illuvaria opuscimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illuvella anamnibula sp. nov.

Candidatus Illuvella anamnibula (NL. fem. n. *anamnibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCWM01 sp013697635*. The type genome for the species is the GenBank assembly GCA_013697635.1. The GC content of the type genome is 62.71 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Illuvella gen. nov.

Candidatus Illuvella (NL. fem. n. *Illuvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCWM01*. The type species for the genus is *Candidatus* Illuvella anamnibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illuvida tomogitica sp. nov.

Candidatus Illuvida tomogitica (NL. fem. n. *tomogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726205 sp002726205*. The type genome for the species is the GenBank assembly GCA_002726205.1. The GC content of the type genome is 62.5 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Illuvida gen. nov.

Candidatus Illuvida (NL. fem. n. *Illuvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2726205*. The type species for the genus is *Candidatus* Illuvida tomogitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illuvosa exsusitudo sp. nov.

Candidatus Illuvosa exsusitudo (NL. fem. n. *exsusitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G116 sp902578815*. The type genome for the species is the GenBank assembly GCA_902578815.1. The GC content of the type genome is 49.4 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Illuvosa gen. nov.

Candidatus Illuvosa (NL. fem. n. *Illuvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G116*. The type species for the genus is *Candidatus* Illuvosa exsusitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Illuvosa immedatio sp. nov.

Candidatus Illuvosa immedatio (NL. fem. n. *immedatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G116 sp902596655*. The type genome for the species is the GenBank assembly GCA_902596655.1. The GC content of the type genome is 49.49 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Illuvosa ininnago sp. nov.

Candidatus Illuvosa ininnago (NL. fem. n. *ininnago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G116 sp004212735*. The type genome for the species is the GenBank assembly GCA_004212735.1. The GC content of the type genome is 54.41 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Illuvosa nutamimonia sp. nov.

Candidatus Illuvosa nutamimonia (NL. fem. n. *nutamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G116 sp902547925*. The type genome for the species is the GenBank assembly GCA_902547925.1. The GC content of the type genome is 51.2 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Illuvosa rudecitoga sp. nov.

Candidatus Illuvosa rudecitoga (NL. fem. n. *rudecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G116 sp902623185*. The type genome for the species is the GenBank assembly GCA_902623185.1. The GC content of the type genome is 47.4 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Illuvula demigitio sp. nov.

Candidatus Illuvula demigitio (NL. fem. n. *demigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJT01 sp011370485*. The type genome for the species is the GenBank assembly GCA_011370485.1. The GC content of the type genome is 31.46 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Illuvula gen. nov.

Candidatus Illuvula (NL. fem. n. *Illuvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJT01*. The type species for the genus is *Candidatus* Illuvula demigitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucidaceae.

Description of *Candidatus* Ilumatobacter detotitrix sp. nov.

Candidatus Ilumatobacter detotitrix (NL. fem. n. *detotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ilumatobacter sp002698945*. The type genome for the species is the GenBank assembly GCA_002698945.1. The GC content of the type genome is 68.13 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Ilumatobacter defanisca sp. nov.

Candidatus Ilumatobacter defanisca (NL. fem. n. *defanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ilumatobacter_A sp013002175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013002175.1. The GC content of the type genome is 69.21 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Ilumatobacter repurugo sp. nov.

Candidatus Ilumatobacter repurugo (NL. fem. n. *repurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ilumatobacter_A sp002711735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002711735.1. The GC content of the type genome is 59.28 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Imbecana conibimonia sp. nov.

Candidatus Imbecana conibimonia (NL. fem. n. *conibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8670 sp003539375*. The type genome for the species is the GenBank assembly GCA_003539375.1. The GC content of the type genome is 31.84 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Imbecana gen. nov.

Candidatus Imbecana (NL. fem. n. *Imbecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8670*. The type species for the genus is *Candidatus* Imbecana conibimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Imbecana sicinifica sp. nov.

Candidatus Imbecana sicinifica (NL. fem. n. *sicinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8670 sp011390775*. The type genome for the species is the GenBank assembly GCA_011390775.1. The GC content of the type genome is 30.46 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Imbecaria munifetta sp. nov.

Candidatus Imbecaria munifetta (NL. fem. n. *munifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWY01 sp011373495*. The type genome for the species is the GenBank assembly GCA_011373495.1. The GC content of the type genome is 59.69 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Imbecaria gen. nov.

Candidatus Imbecaria (NL. fem. n. *Imbecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWY01*. The type species for the genus is *Candidatus* Imbecaria munifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRbin24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadellaceae.

Description of *Candidatus* Imbecella delacousia sp. nov.

Candidatus Imbecella delacousia (NL. fem. n. *delacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B70-G16 sp003644385*. The type genome for the species is the GenBank assembly GCA_003644385.1. The GC content of the type genome is 40.25 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Imbecella gen. nov.

Candidatus Imbecella (NL. fem. n. *Imbecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B70-G16*. The type species for the genus is *Candidatus* Imbecella delacousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Imbecia hexapisca sp. nov.

Candidatus Imbecia hexapisca (NL. fem. n. *hexapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVO01 sp011368315*. The type genome for the species is the GenBank assembly GCA_011368315.1. The GC content of the type genome is 61.8 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Imbecia gen. nov.

Candidatus Imbecia (NL. fem. n. *Imbecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVO01*. The type species for the genus is *Candidatus* Imbecia hexapisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabidaceae.

Description of *Candidatus* Imbecida vilipicula sp. nov.

Candidatus Imbecida vilipicula (NL. fem. n. *vilipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-583 sp011367385*. The type genome for the species is the GenBank assembly GCA_011367385.1. The GC content of the type genome is 69.46 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Imbecida gen. nov.

Candidatus Imbecida (NL. fem. n. *Imbecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-583*. The type species for the genus is *Candidatus* Imbecida vilipicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6663*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hibisosaceae.

Description of *Candidatus* Imbecosa taraxentia sp. nov.

Candidatus Imbecosa taraxentia (NL. fem. n. *taraxentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRF01 sp007131065*. The type genome for the species is the GenBank assembly GCA_007131065.1. The GC content of the type genome is 47.16 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Imbecosa gen. nov.

Candidatus Imbecosa (NL. fem. n. *Imbecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLRF01*. The type species for the genus is *Candidatus* Imbecosa taraxentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QS-5-54-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilipidaceae.

Description of *Candidatus* Imbecula agratibula sp. nov.

Candidatus Imbecula agratibula (NL. fem. n. *agratibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDE01 sp013287775*. The type genome for the species is the GenBank assembly GCA_013287775.1. The GC content of the type genome is 44.39 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Imbecula gen. nov.

Candidatus Imbecula (NL. fem. n. *Imbecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDE01*. The type species for the genus is *Candidatus* Imbecula agratibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1388*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabulaceae.

Description of *Candidatus* Imbelana pudibitrix sp. nov.

Candidatus Imbelana pudibitrix (NL. fem. n. *pudibitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3774 sp902783095*. The type genome for the species is the GenBank assembly GCA_902783095.1. The GC content of the type genome is 60.61 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Imbelana gen. nov.

Candidatus Imbelana (NL. fem. n. *Imbelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3774*. The type species for the genus is *Candidatus* Imbelana pudibitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Imbelana semunitrix sp. nov.

Candidatus Imbelana semunitrix (NL. fem. n. *semunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3774 sp002369255*. The type genome for the species is the GenBank assembly GCA_002369255.1. The GC content of the type genome is 46.99 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Imbelella extinisca sp. nov.

Candidatus Imbelella extinisca (NL. fem. n. *extinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCXN01 sp902806695*. The type genome for the species is the GenBank assembly RS_GCF_902806695.1. The GC content of the type genome is 47.21 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Imbelella gen. nov.

Candidatus Imbelella (NL. fem. n. *Imbelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CADCXN01*. The type species for the genus is *Candidatus* Imbelella extinisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Imbelia ludibivita sp. nov.

Candidatus Imbelia ludibivita (NL. fem. n. *ludibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-46-36 sp002772995*. The type genome for the species is the GenBank assembly GCA_002772995.1. The GC content of the type genome is 45.78 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Imbelia gen. nov.

Candidatus Imbelia (NL. fem. n. *Imbelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-46-36*. The type species for the genus is *Candidatus* Imbelia ludibivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-42-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culigidaceae.

Description of *Candidatus* Imbelida indiressa sp. nov.

Candidatus Imbelida indiressa (NL. fem. n. *indiressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-43-11 sp001817805*. The type genome for the species is the GenBank assembly GCA_001817805.1. The GC content of the type genome is 43.07 % and the genome length is 0.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Imbelida gen. nov.

Candidatus Imbelida (NL. fem. n. *Imbelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-43-11*. The type species for the genus is *Candidatus* Imbelida indiressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Imbelula domabugo sp. nov.

Candidatus Imbelula domabugo (NL. fem. n. *domabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJX01 sp013003245*. The type genome for the species is the GenBank assembly GCA_013003245.1. The GC content of the type genome is 57.46 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Imbelula gen. nov.

Candidatus Imbelula (NL. fem. n. *Imbelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJX01*. The type species for the genus is *Candidatus* Imbelula domabugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immacana accogitrix sp. nov.

Candidatus Immacana accogitrix (NL. fem. n. *accogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J031 sp003696975*. The type genome for the species is the GenBank assembly GCA_003696975.1. The GC content of the type genome is 53.77 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Immacana gen. nov.

Candidatus Immacana (NL. fem. n. *Immacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J031*. The type species for the genus is *Candidatus* Immacana accogitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Immacaria bucolax sp. nov.

Candidatus Immacaria bucolax (NL. fem. n. *bucolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-47 sp002011415*. The type genome for the species is the GenBank assembly GCA_002011415.1. The GC content of the type genome is 63.85 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Immacaria gen. nov.

Candidatus Immacaria (NL. fem. n. *Immacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-47*. The type species for the genus is *Candidatus* Immacaria bucolax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immacella aranciforma sp. nov.

Candidatus Immacella aranciforma (NL. fem. n. *aranciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVJW01 sp903906315*. The type genome for the species is the GenBank assembly GCA_903906315.1. The GC content of the type genome is 73.07 % and the genome length is 8.79 Mbp.

Description of *Candidatus* Immacella gen. nov.

Candidatus Immacella (NL. fem. n. *Immacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVJW01*. The type species for the genus is *Candidatus* Immacella aranciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immacosa asporitica sp. nov.

Candidatus Immacosa asporitica (NL. fem. n. *asporitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5454 sp012512335*. The type genome for the species is the GenBank assembly GCA_012512335.1. The GC content of the type genome is 38.58 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Immacosa gen. nov.

Candidatus Immacosa (NL. fem. n. *Immacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5454*. The type species for the genus is *Candidatus* Immacosa asporitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Immacosa xenoditrix sp. nov.

Candidatus Immacosa xenoditrix (NL. fem. n. *xenoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5454 sp002426555*. The type genome for the species is the GenBank assembly GCA_002426555.1. The GC content of the type genome is 41.82 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Immacula inhorifica sp. nov.

Candidatus Immacula inhorifica (NL. fem. n. *inhorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWZ01 sp011373475*. The type genome for the species is the GenBank assembly GCA_011373475.1. The GC content of the type genome is 34.48 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Immacula gen. nov.

Candidatus Immacula (NL. fem. n. *Immacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWZ01*. The type species for the genus is *Candidatus* Immacula inhorifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immadana antepilenta sp. nov.

Candidatus Immadana antepilenta (NL. fem. n. *antepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TP-CH-4 sp009371985*. The type genome for the species is the GenBank assembly RS_GCF_009371985.2. The GC content of the type genome is 44.51 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Immadana gen. nov.

Candidatus Immadana (NL. fem. n. *Immadana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TP-CH-4*. The type species for the genus is *Candidatus* Immadana antepilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immadula supelicella sp. nov.

Candidatus Immadula supelicella (NL. fem. n. *supelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYY01 sp009780995*. The type genome for the species is the GenBank assembly GCA_009780995.1. The GC content of the type genome is 41.45 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Immadula gen. nov.

Candidatus Immadula (NL. fem. n. *Immadula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQYY01*. The type species for the genus is *Candidatus* Immadula supelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immatana octupatio sp. nov.

Candidatus Immatana octupatio (NL. fem. n. *octupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOH01 sp012838955*. The type genome for the species is the GenBank assembly GCA_012838955.1. The GC content of the type genome is 48.19 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Immatana gen. nov.

Candidatus Immatana (NL. fem. n. *Immatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOH01*. The type species for the genus is *Candidatus* Immatana octupatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Immatia leviditas sp. nov.

Candidatus Immatia leviditas (NL. fem. n. *leviditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCA01 sp013359345*. The type genome for the species is the GenBank assembly GCA_013359345.1. The GC content of the type genome is 42.53 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Immatia gen. nov.

Candidatus Immatia (NL. fem. n. *Immatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCA01*. The type species for the genus is *Candidatus* Immatia leviditas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immatosa dilicitas sp. nov.

Candidatus Immatosa dilicitas (NL. fem. n. *dilicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKJH01 sp007116005*. The type genome for the species is the GenBank assembly GCA_007116005.1. The GC content of the type genome is 25.91 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Immatosa gen. nov.

Candidatus Immatosa (NL. fem. n. *Immatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKJH01*. The type species for the genus is *Candidatus* Immatosa dilicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Immatula antecivita sp. nov.

Candidatus Immatula antecivita (NL. fem. n. *antecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKS01 sp012522285*. The type genome for the species is the GenBank assembly GCA_012522285.1. The GC content of the type genome is 59.2 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Immatula gen. nov.

Candidatus Immatula (NL. fem. n. *Immatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAYKS01*. The type species for the genus is *Candidatus* Immatula antecivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Immedana facunibula sp. nov.

Candidatus Immedana facunibula (NL. fem. n. *facunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716765 sp002716765*. The type genome for the species is the GenBank assembly GCA_002716765.1. The GC content of the type genome is 37.08 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Immedana gen. nov.

Candidatus Immedana (NL. fem. n. *Immedana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716765*. The type species for the genus is *Candidatus* Immedana facunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Immedella modifilega sp. nov.

Candidatus Immedella modifilega (NL. fem. n. *modifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU106 sp014384545*. The type genome for the species is the GenBank assembly GCA_014384545.1. The GC content of the type genome is 52.53 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Immedella gen. nov.

Candidatus Immedella (NL. fem. n. *Immedella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU106*. The type species for the genus is *Candidatus* Immedella modifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6624*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicidaceae.

Description of *Candidatus* Immedosa ruricitio sp. nov.

Candidatus Immedosa ruricitio (NL. fem. n. *ruricitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUUJ01 sp012030715*. The type genome for the species is the GenBank assembly GCA_012030715.1. The GC content of the type genome is 52.65 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Immedosa gen. nov.

Candidatus Immedosa (NL. fem. n. *Immedosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUUJ01*. The type species for the genus is *Candidatus* Immedosa ruricitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JA-3-3Ab*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolariaceae.

Description of *Candidatus* Immemana ignobitura sp. nov.

Candidatus Immemana ignobitura (NL. fem. n. *ignobitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM1919 sp010993985*. The type genome for the species is the GenBank assembly RS_GCF_010993985.1. The GC content of the type genome is 42.58 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Immemana gen. nov.

Candidatus Immemana (NL. fem. n. *Immemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM1919*. The type species for the genus is *Candidatus* Immemana ignobitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immemaria resalibra sp. nov.

Candidatus Immemaria resalibra (NL. fem. n. *resalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGM01 sp013152375*. The type genome for the species is the GenBank assembly GCA_013152375.1. The GC content of the type genome is 48.28 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Immemaria gen. nov.

Candidatus Immemaria (NL. fem. n. *Immemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGM01*. The type species for the genus is *Candidatus* Immemaria resalibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMOW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracariaceae.

Description of *Candidatus* Immemella nitelitica sp. nov.

Candidatus Immemella nitelitica (NL. fem. n. *nitelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-45-16 sp002787535*. The type genome for the species is the GenBank assembly GCA_002787535.1. The GC content of the type genome is 44.79 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Immemella gen. nov.

Candidatus Immemella (NL. fem. n. *Immemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-45-16*. The type species for the genus is *Candidatus* Immemella nitelitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeroposaceae.

Description of *Candidatus* Immemia xeropitrix sp. nov.

Candidatus Immemia xeropitrix (NL. fem. n. *xeropitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6824 sp002452155*. The type genome for the species is the GenBank assembly GCA_002452155.1. The GC content of the type genome is 50.31 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Immemia gen. nov.

Candidatus Immemia (NL. fem. n. *Immemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6824*. The type species for the genus is *Candidatus* Immemia xeropitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categiaceae.

Description of *Candidatus* Immemida bigemitura sp. nov.

Candidatus Immemida bigemitura (NL. fem. n. *bigemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISDA01 sp903884005*. The type genome for the species is the GenBank assembly GCA_903884005.1. The GC content of the type genome is 53.67 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Immemida gen. nov.

Candidatus Immemida (NL. fem. n. *Immemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISDA01*. The type species for the genus is *Candidatus* Immemida bigemitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigellaceae.

Description of *Candidatus* Immemosa ancepitoga sp. nov.

Candidatus Immemosa ancepitoga (NL. fem. n. *ancepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W1P29-020 sp004555175*. The type genome for the species is the GenBank assembly GCA_004555175.1. The GC content of the type genome is 63.47 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Immemosa gen. nov.

Candidatus Immemosa (NL. fem. n. *Immemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W1P29-020*. The type species for the genus is *Candidatus* Immemosa ancepitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Immemosa arrecitica sp. nov.

Candidatus Immemosa arrecitica (NL. fem. n. *arrecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W1P29-020 sp900771325*. The type genome for the species is the GenBank assembly RS_GCF_900771325.1. The GC content of the type genome is 64.97 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Immemula expenitudo sp. nov.

Candidatus Immemula expenitudo (NL. fem. n. *expenitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZK01 sp013349495*. The type genome for the species is the GenBank assembly GCA_013349495.1. The GC content of the type genome is 48.4 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Immemula gen. nov.

Candidatus Immemula (NL. fem. n. *Immemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUZK01*. The type species for the genus is *Candidatus* Immemula expenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Futatosaceae.

Description of *Candidatus* Immigana semigiforma sp. nov.

Candidatus Immigana semigiforma (NL. fem. n. *semigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNOJ01 sp013824755*. The type genome for the species is the GenBank assembly GCA_013824755.1. The GC content of the type genome is 71.72 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Immigana gen. nov.

Candidatus Immigana (NL. fem. n. *Immigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNOJ01*. The type species for the genus is *Candidatus* Immigana semigiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LZORAL124-64-63*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolellaceae.

Description of *Candidatus* Immigaria domicatio sp. nov.

Candidatus Immigaria domicatio (NL. fem. n. *domicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFMC01 sp009704985*. The type genome for the species is the GenBank assembly GCA_009704985.1. The GC content of the type genome is 71.24 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Immigaria gen. nov.

Candidatus Immigaria (NL. fem. n. *Immigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFMC01*. The type species for the genus is *Candidatus* Immigaria domicatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immigaria vilitivita sp. nov.

Candidatus Immigaria vilitivita (NL. fem. n. *vilitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFMC01 sp006515795*. The type genome for the species is the GenBank assembly GCA_006515795.1. The GC content of the type genome is 67.76 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Immigella solivifica sp. nov.

Candidatus Immigella solivifica (NL. fem. n. *solivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWTL01 sp903915555*. The type genome for the species is the GenBank assembly GCA_903915555.1. The GC content of the type genome is 68.58 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Immigella gen. nov.

Candidatus Immigella (NL. fem. n. *Immigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWTL01*. The type species for the genus is *Candidatus* Immigella solivifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2699445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunanaceae.

Description of *Candidatus* Immigia visibessa sp. nov.

Candidatus Immigia visibessa (NL. fem. n. *visibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCIO01 sp004000235*. The type genome for the species is the GenBank assembly RS_GCF_004000235.1. The GC content of the type genome is 62.08 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Immigia gen. nov.

Candidatus Immigia (NL. fem. n. *Immigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RCIO01*. The type species for the genus is *Candidatus* Immigia visibessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immigida recocentia sp. nov.

Candidatus Immigida recocentia (NL. fem. n. *recocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLIZ01 sp007135395*. The type genome for the species is the GenBank assembly GCA_007135395.1. The GC content of the type genome is 61.5 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Immigida gen. nov.

Candidatus Immigida (NL. fem. n. *Immigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SLIZ01*. The type species for the genus is *Candidatus* Immigida recocentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immobana bisacilenta sp. nov.

Candidatus Immobana bisacilenta (NL. fem. n. *bisacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUWA01 sp012840755*. The type genome for the species is the GenBank assembly GCA_012840755.1. The GC content of the type genome is 26.32 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Immobana gen. nov.

Candidatus Immobana (NL. fem. n. *Immobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUWA01*. The type species for the genus is *Candidatus* Immobana bisacilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Immobaria ignifitura sp. nov.

Candidatus Immobaria ignifitura (NL. fem. n. *ignifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-56 sp005884985*. The type genome for the species is the GenBank assembly GCA_005884985.1. The GC content of the type genome is 69.57 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Immobaria gen. nov.

Candidatus Immobaria (NL. fem. n. *Immobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-56*. The type species for the genus is *Candidatus* Immobaria

ignifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Immobella feculicella sp. nov.

Candidatus Immobella feculicella (NL. fem. n. *feculicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WREE01 sp009779515*. The type genome for the species is the GenBank assembly GCA_009779515.1. The GC content of the type genome is 50.78 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Immobella gen. nov.

Candidatus Immobella (NL. fem. n. *Immobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WREE01*. The type species for the genus is *Candidatus* Immobella feculicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRDA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilibariaceae.

Description of *Candidatus* Immobia obsolilega sp. nov.

Candidatus Immobia obsolilega (NL. fem. n. *obsolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRUS01 sp011388535*. The type genome for the species is the GenBank assembly GCA_011388535.1. The GC content of the type genome is 66.74 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Immobia gen. nov.

Candidatus Immobia (NL. fem. n. *Immobia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DRUS01*. The type species for the genus is *Candidatus* Immobia obsolilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTKN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonipanaceae.

Description of *Candidatus* Immobida excocitia sp. nov.

Candidatus Immobida excocitia (NL. fem. n. *excocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HMF7056 sp009834915*. The type genome for the species is the GenBank assembly RS_GCF_009834915.1. The GC content of the type genome is 50.54 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Immobida gen. nov.

Candidatus Immobida (NL. fem. n. *Immobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HMF7056*. The type species for the genus is *Candidatus* Immobida excocitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immobula arundousia sp. nov.

Candidatus Immobula arundousia (NL. fem. n. *arundousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1251 sp900549995*. The type genome for the species is the GenBank assembly GCA_900549995.1. The GC content of the type genome is 43.77 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Immobula gen. nov.

Candidatus Immobula (NL. fem. n. *Immobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1251*. The type species for the genus is *Candidatus* Immobula

arundousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immodana tegimedo sp. nov.

Candidatus Immodana tegimedo (NL. fem. n. *tegimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C176 sp009649225*. The type genome for the species is the GenBank assembly RS_GCF_009649225.1. The GC content of the type genome is 54.12 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Immodana gen. nov.

Candidatus Immodana (NL. fem. n. *Immodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C176*. The type species for the genus is *Candidatus* Immodana tegimedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immodaria noninitas sp. nov.

Candidatus Immodaria noninitas (NL. fem. n. *noninitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIG01 sp013203195*. The type genome for the species is the GenBank assembly GCA_013203195.1. The GC content of the type genome is 46.26 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Immodaria gen. nov.

Candidatus Immodaria (NL. fem. n. *Immodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNIG01*. The type species for the genus is *Candidatus* Immodaria noninitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA11574. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momoranaceae.

Description of *Candidatus* Immodaria rumifivita sp. nov.

Candidatus Immodaria rumifivita (NL. fem. n. *rumifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIG01 sp014383215*. The type genome for the species is the GenBank assembly GCA_014383215.1. The GC content of the type genome is 45.86 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Immodella labecitas sp. nov.

Candidatus Immodella labecitas (NL. fem. n. *labecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCHO01 sp903970145*. The type genome for the species is the GenBank assembly GCA_903970145.1. The GC content of the type genome is 61.91 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Immodella gen. nov.

Candidatus Immodella (NL. fem. n. *Immodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCHO01*. The type species for the genus is *Candidatus* Immodella labecitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immodia gemebax sp. nov.

Candidatus Immodia gemebax (NL. fem. n. *gemebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJG01 sp013002595*. The type genome for the species is the GenBank assembly GCA_013002595.1. The GC content of the type genome is 58.73 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Immodia gen. nov.

Candidatus Immodia (NL. fem. n. *Immodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJG01*. The type species for the genus is *Candidatus* Immodia gemebax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immodida depecicula sp. nov.

Candidatus Immodida depecicula (NL. fem. n. *depecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYY01 sp009692555*. The type genome for the species is the GenBank assembly GCA_009692555.1. The GC content of the type genome is 70.26 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Immodida gen. nov.

Candidatus Immodida (NL. fem. n. *Immodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYY01*. The type species for the genus is *Candidatus* Immodida depecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Effigidaceae.

Description of *Candidatus* Immundisolibacter defesitrix sp. nov.

Candidatus Immundisolibacter defesitrix (NL. fem. n. *defesitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Immundisolibacter sp003526065*. The type genome for the species is the GenBank assembly GCA_003526065.1. The GC content of the type genome is 67.81 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Immundisolibacter exsupisca sp. nov.

Candidatus Immundisolibacter exsupisca (NL. fem. n. *exsupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Immundisolibacter sp014359565*. The type genome for the species is the GenBank assembly GCA_014359565.1. The GC content of the type genome is 68.07 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Immurella eviscilenta sp. nov.

Candidatus Immurella eviscilenta (NL. fem. n. *eviscilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIS01 sp004375965*. The type genome for the species is the GenBank assembly GCA_004375965.1. The GC content of the type genome is 37.67 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Immurella gen. nov.

Candidatus Immurella (NL. fem. n. *Immurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOIS01*. The type species for the genus is *Candidatus* Immurella eviscilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remedanaceae.

Description of *Candidatus* Immuria sonipitura sp. nov.

Candidatus Immuria sonipitura (NL. fem. n. *sonipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Io17-Chloro-G2 sp002816875*. The type genome for the species is the GenBank assembly GCA_002816875.1. The GC content of the type genome is 58.71 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Immuria gen. nov.

Candidatus Immuria (NL. fem. n. *Immuria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Io17-Chloro-G2*. The type species for the genus is *Candidatus* Immuria sonipitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Immurida apogrilega sp. nov.

Candidatus Immurida apogrilega (NL. fem. n. *apogrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MnB-11 sp012027035*. The type genome for the species is the GenBank assembly GCA_012027035.1. The GC content of the type genome is 41.47 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Immurida gen. nov.

Candidatus Immurida (NL. fem. n. *Immurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MnB-11*. The type species for the genus is *Candidatus* Immurida apogrilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immurosa chancessa sp. nov.

Candidatus Immurosa chancessa (NL. fem. n. *chancessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VJOY01 sp007109405*. The type genome for the species is the GenBank assembly RS_GCF_007109405.1. The GC content of the type genome is 67.64 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Immurosa gen. nov.

Candidatus Immurosa (NL. fem. n. *Immurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VJOY01*. The type species for the genus is *Candidatus* Immurosa chancessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immusella gen. nov.

Candidatus Immusella (NL. fem. n. *Immusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPE01*. The type species for the genus is *Candidatus* Immusella lauensis_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immusia adcogitica sp. nov.

Candidatus Immusia adcogitica (NL. fem. n. *adcogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-179 sp003229735*. The type genome for the species is the GenBank assembly GCA_003229735.1. The GC content of the type genome is 47.41 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Immusia gen. nov.

Candidatus Immusia (NL. fem. n. *Immusia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-179*. The type species for the genus is *Candidatus* Immusia adcogitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolidaceae.

Description of *Candidatus* Immusula ellipicella sp. nov.

Candidatus Immusula ellipicella (NL. fem. n. *ellipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSO01 sp012521405*. The type genome for the species is the GenBank assembly GCA_012521405.1. The GC content of the type genome is 44.91 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Immusula gen. nov.

Candidatus Immusula (NL. fem. n. *Immusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSO01*. The type species for the genus is *Candidatus* Immusula ellipicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Immusula illunifica sp. nov.

Candidatus Immusula illunifica (NL. fem. n. *illunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSO01 sp012523945*. The type genome for the species is the GenBank assembly GCA_012523945.1. The GC content of the type genome is 45.08 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Impacana fuligessa sp. nov.

Candidatus Impacana fuligessa (NL. fem. n. *fuligessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12998 sp900756495*. The type genome for the species is the GenBank assembly GCA_900756495.1. The GC content of the type genome is 57.27 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Impacana gen. nov.

Candidatus Impacana (NL. fem. n. *Impacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12998*. The type species for the genus is *Candidatus* Impacana fuligessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impacaria pereximonia sp. nov.

Candidatus Impacaria pereximonia (NL. fem. n. *pereximonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQS01 sp013202525*. The type genome for the species is the GenBank assembly GCA_013202525.1. The GC content of the type genome is 47.68 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Impacaria gen. nov.

Candidatus Impacaria (NL. fem. n. *Impacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQS01*. The type species for the genus is *Candidatus* Impacaria pereximonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligidaceae.

Description of *Candidatus* Impacella milipilega sp. nov.

Candidatus Impacella milipilega (NL. fem. n. *milipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZM01 sp012514835*. The type genome for the species is the GenBank assembly GCA_012514835.1. The GC content of the type genome is 72.33 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Impacella gen. nov.

Candidatus Impacella (NL. fem. n. *Impacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZM01*. The type species for the genus is *Candidatus* Impacella milipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impacia denicessa sp. nov.

Candidatus Impacia denicessa (NL. fem. n. *denicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKD01 sp009885735*. The type genome for the species is the GenBank assembly GCA_009885735.1. The GC content of the type genome is 60.13 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Impacia gen. nov.

Candidatus Impacia (NL. fem. n. *Impacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKD01*. The type species for the genus is *Candidatus* Impacia denicessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Impacosa decucibula sp. nov.

Candidatus Impacosa decucibula (NL. fem. n. *decucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9650 sp003518205*. The type genome for the species is the GenBank assembly GCA_003518205.1. The GC content of the type genome is 42.26 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Impacosa gen. nov.

Candidatus Impacosa (NL. fem. n. *Impacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9650*. The type species for the genus is *Candidatus* Impacosa decucibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Impavana bicoratio sp. nov.

Candidatus Impavana bicoratio (NL. fem. n. *bicoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIN01 sp012800855*. The type genome for the species is the GenBank assembly GCA_012800855.1. The GC content of the type genome is 59.8 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Impavana gen. nov.

Candidatus Impavana (NL. fem. n. *Impavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIN01*. The type species for the genus is *Candidatus* Impavana bicoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Impavana fibicicella sp. nov.

Candidatus Impavana fibicicella (NL. fem. n. *fibicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIN01 sp012510625*. The type genome for the species is the GenBank assembly GCA_012510625.1. The GC content of the type genome is 55.43 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Impavaria detumicella sp. nov.

Candidatus Impavaria detumicella (NL. fem. n. *detumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ap0902 sp009835005*. The type genome for the species is the GenBank assembly RS_GCF_009835005.1. The GC content of the type genome is 34.46 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Impavaria gen. nov.

Candidatus Impavaria (NL. fem. n. *Impavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ap0902*. The type species for the genus is *Candidatus* Impavaria detumicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impavella hexapentia sp. nov.

Candidatus Impavella hexapentia (NL. fem. n. *hexapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIYW01 sp014359745*. The type genome for the species is the GenBank assembly GCA_014359745.1. The GC content of the type genome is 64.56 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Impavella gen. nov.

Candidatus Impavella (NL. fem. n. *Impavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIYW01*. The type species for the genus is *Candidatus* Impavella hexapentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impavia semimigena sp. nov.

Candidatus Impavia semimigena (NL. fem. n. *semimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR9 sp003221435*. The type genome for the species is the GenBank assembly GCA_003221435.1. The GC content of the type genome is 68.69 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Impavia gen. nov.

Candidatus Impavia (NL. fem. n. *Impavia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR9*. The type species for the genus is *Candidatus* Impavia semimigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Impavosa asporedo sp. nov.

Candidatus Impavosa asporedo (NL. fem. n. *asporedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ARS98 sp002685655*. The type genome for the species is the GenBank assembly GCA_002685655.1. The GC content of the type genome is 56.9 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Impavosa gen. nov.

Candidatus Impavosa (NL. fem. n. *Impavosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ARS98*. The type species for the genus is *Candidatus* Impavosa asporedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impavula pinifitura sp. nov.

Candidatus Impavula pinifitura (NL. fem. n. *pinifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747035 sp002747035*. The type genome for the species is the GenBank assembly GCA_002747035.1. The GC content of the type genome is 60.15 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Impavula gen. nov.

Candidatus Impavula (NL. fem. n. *Impavula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747035*. The type species for the genus is *Candidatus* Impavula pinifitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Imperialibacter detorimonas sp. nov.

Candidatus Imperialibacter detorimonas (NL. fem. n. *detorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Imperialibacter sp902498805*. The type genome for the species is the GenBank assembly RS_GCF_902498805.1. The GC content of the type genome is 46.6 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Impigana benevitia sp. nov.

Candidatus Impigana benevitia (NL. fem. n. *benevitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHV01 sp013297655*. The type genome for the species is the GenBank assembly GCA_013297655.1. The GC content of the type genome is 67.83 % and the genome length is 9.92 Mbp.

Description of *Candidatus* Impigana gen. nov.

Candidatus Impigana (NL. fem. n. *Impigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHV01*. The type species for the genus is *Candidatus* Impigana benevitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impigaria conifitura sp. nov.

Candidatus Impigaria conifitura (NL. fem. n. *conifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVG01 sp011358025*. The type genome for the species is the

GenBank assembly GCA_011358025.1. The GC content of the type genome is 34.84 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Impigaria gen. nov.

Candidatus Impigaria (NL. fem. n. *Impigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVG01*. The type species for the genus is *Candidatus* Impigaria conifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Impigaria expalilenta sp. nov.

Candidatus Impigaria expalilenta (NL. fem. n. *expalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVG01 sp012517285*. The type genome for the species is the GenBank assembly GCA_012517285.1. The GC content of the type genome is 33.96 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Impigella apogrimonia sp. nov.

Candidatus Impigella apogrimonia (NL. fem. n. *apogrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACHRU01 sp902582345*. The type genome for the species is the GenBank assembly GCA_902582345.1. The GC content of the type genome is 29.74 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Impigella gen. nov.

Candidatus Impigella (NL. fem. n. *Impigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACHRU01*. The type species for the genus is *Candidatus* Impigella apogrimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impigella luculibra sp. nov.

Candidatus Impigella luculibra (NL. fem. n. *luculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACHRU01 sp902581775*. The type genome for the species is the GenBank assembly GCA_902581775.1. The GC content of the type genome is 29.29 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Impigia adpinugo sp. nov.

Candidatus Impigia adpinugo (NL. fem. n. *adpinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXZL01 sp009845505*. The type genome for the species is the GenBank assembly GCA_009845505.1. The GC content of the type genome is 48.16 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Impigia gen. nov.

Candidatus Impigia (NL. fem. n. *Impigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXZL01*. The type species for the genus is *Candidatus* Impigia adpinugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WGA-3G*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebosaceae.

Description of *Candidatus* Impigosa xenodastra sp. nov.

Candidatus Impigosa xenodastra (NL. fem. n. *xenodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12789 sp900766585*. The type genome for the species is the GenBank assembly RS_GCF_900766585.1. The GC content of the type genome is 59.3 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Impigosa gen. nov.

Candidatus Impigosa (NL. fem. n. *Impigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12789*. The type species for the genus is *Candidatus* Impigosa xenodastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impilana biveribula sp. nov.

Candidatus Impilana biveribula (NL. fem. n. *biveribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUCZ01 sp903897785*. The type genome for the species is the GenBank assembly GCA_903897785.1. The GC content of the type genome is 45.39 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Impilana gen. nov.

Candidatus Impilana (NL. fem. n. *Impilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUCZ01*. The type species for the genus is *Candidatus* Impilana biveribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuriaceae.

Description of *Candidatus* Impilella accorax sp. nov.

Candidatus Impilella accorax (NL. fem. n. *accorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMCP01 sp008081305*. The type genome for the species is the GenBank assembly GCA_008081305.1. The GC content of the type genome is 40.05 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Impilella gen. nov.

Candidatus Impilella (NL. fem. n. *Impilella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMCP01*. The type species for the genus is *Candidatus* Impilella accorax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Impilella acrifilega sp. nov.

Candidatus Impilella acrifilega (NL. fem. n. *acrifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMCP01 sp903879775*. The type genome for the species is the GenBank assembly GCA_903879775.1. The GC content of the type genome is 36.13 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Impilida malivibula sp. nov.

Candidatus Impilida malivibula (NL. fem. n. *malivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFKE01 sp013298215*. The type genome for the species is the GenBank assembly GCA_013298215.1. The GC content of the type genome is 48.95 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Impilida gen. nov.

Candidatus Impilida (NL. fem. n. *Impilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFKE01*. The type species for the genus is *Candidatus* Impilida malivibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impilosa defulimonas sp. nov.

Candidatus Impilosa defulimonas (NL. fem. n. *defulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KBS-83 sp000381585*. The type genome for the species is the GenBank assembly RS_GCF_000381585.1. The GC content of the type genome is 59.15 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Impilosa gen. nov.

Candidatus Impilosa (NL. fem. n. *Impilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KBS-83*. The type species for the genus is *Candidatus* Impilosa defulimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impinana acropifica sp. nov.

Candidatus Impinana acropifica (NL. fem. n. *acropifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH-chloro-G1 sp003670575*. The type genome for the species is the GenBank assembly GCA_003670575.1. The GC content of the type genome is 66.44 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Impinana gen. nov.

Candidatus Impinana (NL. fem. n. *Impinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RH-chloro-G1*. The type species for the genus is *Candidatus* Impinana acropifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Impinana diponisca sp. nov.

Candidatus Impinana diponisca (NL. fem. n. *diponisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH-chloro-G1 sp003670735*. The type genome for the species is the GenBank assembly GCA_003670735.1. The GC content of the type genome is 66.67 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Impinaria domipifica sp. nov.

Candidatus Impinaria domipifica (NL. fem. n. *domipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXNE01 sp009840715*. The type genome for the species is the GenBank assembly GCA_009840715.1. The GC content of the type genome is 68.66 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Impinaria gen. nov.

Candidatus Impinaria (NL. fem. n. *Impinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXNE01*. The type species for the genus is *Candidatus* Impinaria domipifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Impinella enigmimonia sp. nov.

Candidatus Impinella enigmimonia (NL. fem. n. *enigmimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-477 sp902727985*. The type genome for the species is the GenBank assembly GCA_902727985.1. The GC content of the type genome is 42.87 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Impinella gen. nov.

Candidatus Impinella (NL. fem. n. *Impinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HyVt-477*. The type species for the genus is *Candidatus* Impinella enigmimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impinella trocliforma sp. nov.

Candidatus Impinella trocliforma (NL. fem. n. *trocliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-477 sp011375245*. The type genome for the species is the GenBank assembly GCA_011375245.1. The GC content of the type genome is 39.39 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Impinia denixiforma sp. nov.

Candidatus Impinia denixiforma (NL. fem. n. *denixiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKC01 sp013822275*. The type genome for the species is the GenBank assembly GCA_013822275.1. The GC content of the type genome is 66.08 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Impinia gen. nov.

Candidatus Impinia (NL. fem. n. *Impinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNKC01*. The type species for the genus is *Candidatus* Impinia denixiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Impinida noninitudo sp. nov.

Candidatus Impinida noninitudo (NL. fem. n. *noninitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SKFT01 sp007117865*. The type genome for the species is the GenBank assembly GCA_007117865.1. The GC content of the type genome is 52.59 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Impinida gen. nov.

Candidatus Impinida (NL. fem. n. *Impinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKFT01*. The type species for the genus is *Candidatus* Impinida noninitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Impinosa innabessa sp. nov.

Candidatus Impinosa innabessa (NL. fem. n. *innabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICQ01 sp009691385*. The type genome for the species is the GenBank assembly GCA_009691385.1. The GC content of the type genome is 47.67 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Impinosa gen. nov.

Candidatus Impinosa (NL. fem. n. *Impinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICQ01*. The type species for the genus is *Candidatus* Impinosa innabessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-47-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatanaceae.

Description of *Candidatus* Impinula viripiforma sp. nov.

Candidatus Impinula viripiforma (NL. fem. n. *viripiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-65-29 sp001767435*. The type genome for the species is the GenBank assembly GCA_001767435.1. The GC content of the type genome is 65.5 % and the genome length is 5.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Impinula gen. nov.

Candidatus Impinula (NL. fem. n. *Impinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-65-29*. The type species for the genus is *Candidatus* Impinula viripiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Impiraria vocamicula sp. nov.

Candidatus Impiraria vocamicula (NL. fem. n. *vocamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDU01 sp013816845*. The type genome for the species is the GenBank assembly GCA_013816845.1. The GC content of the type genome is 38.59 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Impiraria gen. nov.

Candidatus Impiraria (NL. fem. n. *Impiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDDU01*. The type species for the genus is *Candidatus* Impiraria vocamicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Impirella capilax sp. nov.

Candidatus Impirella capilax (NL. fem. n. *capilax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-63-20 sp004297215*. The type genome for the species is the GenBank assembly GCA_004297215.1. The GC content of the type genome is 63.41 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Impirella gen. nov.

Candidatus Impirella (NL. fem. n. *Impirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-63-20*. The type species for the genus is *Candidatus* Impirella capilax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Impirella fetifitica sp. nov.

Candidatus Impirella fetifitica (NL. fem. n. *fetifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-63-20 sp001791045*. The type genome for the species is the GenBank assembly GCA_001791045.1. The GC content of the type genome is 63.88 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Impirosa rubicitura sp. nov.

Candidatus Impirosa rubicitura (NL. fem. n. *rubicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J065 sp003695625*. The type genome for the species is the GenBank assembly GCA_003695625.1. The GC content of the type genome is 72.83 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Impirosa gen. nov.

Candidatus Impirosa (NL. fem. n. *Impirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J065*. The type species for the genus is *Candidatus* Impirosa rubicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direculaceae.

Description of *Candidatus* Impolana adlenax sp. nov.

Candidatus Impolana adlenax (NL. fem. n. *adlenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683135 sp002683135*. The type genome for the species is the GenBank assembly GCA_002683135.1. The GC content of the type genome is 62.53 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Impolana gen. nov.

Candidatus Impolana (NL. fem. n. *Impolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2683135*. The type species for the genus is *Candidatus* Impolana adlenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobellaceae.

Description of *Candidatus* Impolana bicipilenta sp. nov.

Candidatus Impolana bicipilenta (NL. fem. n. *bicipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683135 sp013213915*. The type genome for the species is the GenBank assembly GCA_013213915.1. The GC content of the type genome is 65.65 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Impolella figilitio sp. nov.

Candidatus Impolella figilitio (NL. fem. n. *figilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBP01 sp013360445*. The type genome for the species is the GenBank assembly GCA_013360445.1. The GC content of the type genome is 54.28 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Impolella gen. nov.

Candidatus Impolella (NL. fem. n. *Impolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBP01*. The type species for the genus is *Candidatus* Impolella figilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diluvidaceae.

Description of *Candidatus* Impolella semipitia sp. nov.

Candidatus Impolella semipitia (NL. fem. n. *semipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBP01 sp011526015*. The type genome for the species is the GenBank assembly GCA_011526015.1. The GC content of the type genome is 53.81 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Impolia prognatica sp. nov.

Candidatus Impolia prognatica (NL. fem. n. *prognatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724505 sp002724505*. The type genome for the species is the GenBank assembly GCA_002724505.1. The GC content of the type genome is 46.42 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Impolia gen. nov.

Candidatus Impolia (NL. fem. n. *Impolia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2724505*. The type species for the genus is *Candidatus* Impolia prognatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Impolula insopitoga sp. nov.

Candidatus Impolula insopitoga (NL. fem. n. *insopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9312 sp003527965*. The type genome for the species is the GenBank assembly GCA_003527965.1. The GC content of the type genome is 41.95 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Impolula gen. nov.

Candidatus Impolula (NL. fem. n. *Impolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9312*. The type species for the genus is *Candidatus* Impolula insopitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunellaceae.

Description of *Candidatus* Impudana arancax sp. nov.

Candidatus Impudana arancax (NL. fem. n. *arancax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIVM01 sp902590115*. The type genome for the species is the GenBank assembly GCA_902590115.1. The GC content of the type genome is 29.63 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Impudana gen. nov.

Candidatus Impudana (NL. fem. n. *Impudana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIVM01*. The type species for the genus is *Candidatus* Impudana arancax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impudaria crastastra sp. nov.

Candidatus Impudaria crastastra (NL. fem. n. *crastastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-112 sp002254285*. The type genome for the species is the GenBank assembly GCA_002254285.1. The GC content of the type genome is 33.67 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Impudaria gen. nov.

Candidatus Impudaria (NL. fem. n. *Impudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-112*. The type species for the genus is *Candidatus* Impudaria crastastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1556*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depopellaceae.

Description of *Candidatus* Impudaria manibago sp. nov.

Candidatus Impudaria manibago (NL. fem. n. *manibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-112 sp003648395*. The type genome for the species is the GenBank assembly GCA_003648395.1. The GC content of the type genome is 31.7 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Impudella depacetta sp. nov.

Candidatus Impudella depacetta (NL. fem. n. *depacetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718585 sp002707765*. The type genome for the species is the GenBank assembly GCA_002707765.1. The GC content of the type genome is 29.15 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Impudella gen. nov.

Candidatus Impudella (NL. fem. n. *Impudella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002718585*. The type species for the genus is *Candidatus* Impudella depacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002707645*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipiaceae.

Description of *Candidatus* Impudella innulessa sp. nov.

Candidatus Impudella innulessa (NL. fem. n. *innulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718585 sp002718585*. The type genome for the species is the GenBank assembly GCA_002718585.1. The GC content of the type genome is 28.07 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Impudia dehisousia sp. nov.

Candidatus Impudia dehisousia (NL. fem. n. *dehisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753275 sp002753275*. The type genome for the species is the GenBank assembly GCA_002753275.1. The GC content of the type genome is 47.58 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Impudia gen. nov.

Candidatus Impudia (NL. fem. n. *Impudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2753275*. The type species for the genus is *Candidatus* Impudia dehisousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impudida intabicella sp. nov.

Candidatus Impudida intabicella (NL. fem. n. *intabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIE01 sp009782875*. The type genome for the species is the GenBank assembly GCA_009782875.1. The GC content of the type genome is 46.11 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Impudida gen. nov.

Candidatus Impudida (NL. fem. n. *Impudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRIE01*. The type species for the genus is *Candidatus* Impudida intabicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impudosa panopimonia sp. nov.

Candidatus Impudosa panopimonia (NL. fem. n. *panopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10890 sp900769965*. The type genome for the species is the GenBank assembly RS_GCF_900769965.1. The GC content of the type genome is 34.44 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Impudosa gen. nov.

Candidatus Impudosa (NL. fem. n. *Impudosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10890*. The type species for the genus is *Candidatus* Impudosa

panopimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Impugana incivisca sp. nov.

Candidatus Impugana incivisca (NL. fem. n. *incivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYR01 sp002839765*. The type genome for the species is the GenBank assembly GCA_002839765.1. The GC content of the type genome is 34.06 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Impugana gen. nov.

Candidatus Impugana (NL. fem. n. *Impugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYR01*. The type species for the genus is *Candidatus* Impugana incivisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Impugaria colepigena sp. nov.

Candidatus Impugaria colepigena (NL. fem. n. *colepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXF01 sp009693435*. The type genome for the species is the GenBank assembly GCA_009693435.1. The GC content of the type genome is 62.36 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Impugaria gen. nov.

Candidatus Impugaria (NL. fem. n. *Impugaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SHXF01*. The type species for the genus is *Candidatus* Impugaria colepigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Impugella biparitia sp. nov.

Candidatus Impugella biparitia (NL. fem. n. *biparitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2400975 sp012965955*. The type genome for the species is the GenBank assembly GCA_012965955.1. The GC content of the type genome is 44.27 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Impugella gen. nov.

Candidatus Impugella (NL. fem. n. *Impugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2400975*. The type species for the genus is *Candidatus* Impugella biparitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NORP154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinariaceae.

Description of *Candidatus* Impugella ininnitia sp. nov.

Candidatus Impugella ininnitia (NL. fem. n. *ininnitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2400975 sp002400975*. The type genome for the species is the GenBank assembly GCA_002400975.1. The GC content of the type genome is 43.63 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Impugia adpicousia sp. nov.

Candidatus Impugia adpicousia (NL. fem. n. *adpicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-448 sp003249225*. The type genome for the species is the GenBank assembly GCA_003249225.1. The GC content of the type genome is 40.98 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Impugia gen. nov.

Candidatus Impugia (NL. fem. n. *Impugia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-448*. The type species for the genus is *Candidatus* Impugia adpicousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impugia cerucatica sp. nov.

Candidatus Impugia cerucatica (NL. fem. n. *cerucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-448 sp003252135*. The type genome for the species is the GenBank assembly GCA_003252135.1. The GC content of the type genome is 42.24 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Impugida camilousia sp. nov.

Candidatus Impugida camilousia (NL. fem. n. *camilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA929 sp002293625*. The type genome for the species is the GenBank assembly GCA_002293625.1. The GC content of the type genome is 55.5 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Impugida gen. nov.

Candidatus Impugida (NL. fem. n. *Impugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA929*. The type species for the genus is *Candidatus* Impugida camilousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impugida exaggivita sp. nov.

Candidatus Impugida exaggivita (NL. fem. n. *exaggivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA929 sp009782215*. The type genome for the species is the GenBank assembly GCA_009782215.1. The GC content of the type genome is 58.21 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Impugida inrecibra sp. nov.

Candidatus Impugida inrecibra (NL. fem. n. *inrecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA929 sp009777475*. The type genome for the species is the GenBank assembly GCA_009777475.1. The GC content of the type genome is 47.03 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Impugida maxumicella sp. nov.

Candidatus Impugida maxumicella (NL. fem. n. *maxumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA929 sp009782475*. The type genome for the species is the GenBank assembly GCA_009782475.1. The GC content of the type genome is 54.13 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Impugosa licenigena sp. nov.

Candidatus Impugosa licenigena (NL. fem. n. *licenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VSOB01 sp009774625*. The type genome for the species is the GenBank assembly GCA_009774625.1. The GC content of the type genome is 48.29 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Impugosa gen. nov.

Candidatus Impugosa (NL. fem. n. *Impugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VSOB01*. The type species for the genus is *Candidatus* Impugosa licenigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Impugula omnivugo sp. nov.

Candidatus Impugula omnivugo (NL. fem. n. *omnivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHD01 sp013152075*. The type genome for the species is the GenBank assembly GCA_013152075.1. The GC content of the type genome is 50.0 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Impugula gen. nov.

Candidatus Impugula (NL. fem. n. *Impugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHD01*. The type species for the genus is *Candidatus* Impugula omnivugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Inabrana adgubago sp. nov.

Candidatus Inabrana adgubago (NL. fem. n. *adgubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002402085 sp002402085*. The type genome for the species is the GenBank assembly GCA_002402085.1. The GC content of the type genome is 46.03 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Inabrana gen. nov.

Candidatus Inabrana (NL. fem. n. *Inabrana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002402085*. The type species for the genus is *Candidatus* Inabrana adgubago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Molecidaceae.

Description of *Candidatus* Inabrana masocicula sp. nov.

Candidatus Inabrana masocicula (NL. fem. n. *masocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002402085 sp002401525*. The type genome for the species is the GenBank assembly GCA_002401525.1. The GC content of the type genome is 45.33 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Inabraria argitousia sp. nov.

Candidatus Inabraria argitousia (NL. fem. n. *argitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIP01 sp009782665*. The type genome for the species is the GenBank assembly GCA_009782665.1. The GC content of the type genome is 42.55 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Inabraria gen. nov.

Candidatus Inabraria (NL. fem. n. *Inabraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRIP01*. The type species for the genus is *Candidatus* Inabraria argitousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inabraria sicunitas sp. nov.

Candidatus Inabraria sicunitas (NL. fem. n. *sicunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIP01 sp012520915*. The type genome for the species is the GenBank assembly GCA_012520915.1. The GC content of the type genome is 42.38 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Inabrosa cataficula sp. nov.

Candidatus Inabrosa cataficula (NL. fem. n. *cataficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KM106-2 sp009731425*. The type genome for the species is the GenBank assembly RS_GCF_009731425.1. The GC content of the type genome is 36.58 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Inabrosa gen. nov.

Candidatus Inabrosa (NL. fem. n. *Inabrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KM106-2*. The type species for the genus is *Candidatus* Inabrosa cataficula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inabrula pudibatica sp. nov.

Candidatus Inabrula pudibatica (NL. fem. n. *pudibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ISCAR-4553 sp011682235*. The type genome for the species is the GenBank assembly RS_GCF_011682235.1. The GC content of the type genome is 67.17 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Inabrula gen. nov.

Candidatus Inabrula (NL. fem. n. *Inabrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ISCAR-4553*. The type species for the genus is *Candidatus* Inabrula

pudibatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inabsaria andabigena sp. nov.

Candidatus Inabsaria andabigena (NL. fem. n. *andabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMNN01 sp903842845*. The type genome for the species is the GenBank assembly GCA_903842845.1. The GC content of the type genome is 57.02 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Inabsaria gen. nov.

Candidatus Inabsaria (NL. fem. n. *Inabsaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMNN01*. The type species for the genus is *Candidatus* Inabsaria andabigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inabsella catafisca sp. nov.

Candidatus Inabsella catafisca (NL. fem. n. *catafisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1004 sp011333645*. The type genome for the species is the GenBank assembly GCA_011333645.1. The GC content of the type genome is 50.28 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Inabsella gen. nov.

Candidatus Inabsella (NL. fem. n. *Inabsella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-1004*. The type species for the genus is *Candidatus* Inabsella catafisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA5620. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Inabsella selecicella sp. nov.

Candidatus Inabsella selecicella (NL. fem. n. *selecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1004 sp011371865*. The type genome for the species is the GenBank assembly GCA_011371865.1. The GC content of the type genome is 52.64 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Inabsia adgenivita sp. nov.

Candidatus Inabsia adgenivita (NL. fem. n. *adgenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJR01 sp013298815*. The type genome for the species is the GenBank assembly GCA_013298815.1. The GC content of the type genome is 49.83 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Inabsia gen. nov.

Candidatus Inabsia (NL. fem. n. *Inabsia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJR01*. The type species for the genus is *Candidatus* Inabsia adgenivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inabsia effunax sp. nov.

Candidatus Inabsia effunax (NL. fem. n. *effunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJR01 sp013298945*. The type genome for the species is the GenBank assembly GCA_013298945.1. The GC content of the type genome is 50.13 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Inabsosa adremimonas sp. nov.

Candidatus Inabsosa adremimonas (NL. fem. n. *adremimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-601 sp003250865*. The type genome for the species is the GenBank assembly GCA_003250865.1. The GC content of the type genome is 46.62 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Inabsosa gen. nov.

Candidatus Inabsosa (NL. fem. n. *Inabsosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-601*. The type species for the genus is *Candidatus* Inabsosa adremimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2720935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulidaceae.

Description of *Candidatus* Inabsula inredicella sp. nov.

Candidatus Inabsula inredicella (NL. fem. n. *inredicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNOM01 sp013824835*. The type genome for the species is the GenBank assembly GCA_013824835.1. The GC content of the type genome is 46.91 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Inabsula gen. nov.

Candidatus Inabsula (NL. fem. n. *Inabsula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNOM01*. The type species for the genus is *Candidatus* Inabsula inredicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaccana nicomiforma sp. nov.

Candidatus Inaccana nicomiforma (NL. fem. n. *nicomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3566 sp002376065*. The type genome for the species is the GenBank assembly GCA_002376065.1. The GC content of the type genome is 33.84 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Inaccana gen. nov.

Candidatus Inaccana (NL. fem. n. *Inaccana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3566*. The type species for the genus is *Candidatus* Inaccana nicomiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaccaria abmatitas sp. nov.

Candidatus Inaccaria abmatitas (NL. fem. n. *abmatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1363 sp013816485*. The type genome for the species is the GenBank assembly GCA_013816485.1. The GC content of the type genome is 63.9 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Inaccaria gen. nov.

Candidatus Inaccaria (NL. fem. n. *Inaccaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1363*. The type species for the genus is *Candidatus* Inaccaria abmatitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Inaccaria accoratica sp. nov.

Candidatus Inaccaria accoratica (NL. fem. n. *accoratica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1363 sp003136555*. The type genome for the species is the GenBank assembly GCA_003136555.1. The GC content of the type genome is 66.79 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Inaccaria inremedo sp. nov.

Candidatus Inaccaria inremedo (NL. fem. n. *inremedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1363 sp013821615*. The type genome for the species is the GenBank assembly GCA_013821615.1. The GC content of the type genome is 68.91 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Inaccaria pulegitura sp. nov.

Candidatus Inaccaria pulegitura (NL. fem. n. *pulegitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1363 sp005801395*. The type genome for the species is the GenBank assembly GCA_005801395.1. The GC content of the type genome is 49.23 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Inaccella accapatica sp. nov.

Candidatus Inaccella accapatica (NL. fem. n. *accapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYX01 sp012519975*. The type genome for the species is the GenBank assembly GCA_012519975.1. The GC content of the type genome is 36.02 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Inaccella gen. nov.

Candidatus Inaccella (NL. fem. n. *Inaccella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RZYX01*. The type species for the genus is *Candidatus* Inaccella accapatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaccella imbeliforma sp. nov.

Candidatus Inaccella imbeliforma (NL. fem. n. *imbeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYX01 sp009930155*. The type genome for the species is the GenBank assembly GCA_009930155.1. The GC content of the type genome is 36.11 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Inaccia embamitas sp. nov.

Candidatus Inaccia embamitas (NL. fem. n. *embamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCWP01 sp013697585*. The type genome for the species is the GenBank assembly GCA_013697585.1. The GC content of the type genome is 70.41 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Inaccia gen. nov.

Candidatus Inaccia (NL. fem. n. *Inaccia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCWP01*. The type species for the genus is *Candidatus* Inaccia embamitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaccida caduritoga sp. nov.

Candidatus Inaccida caduritoga (NL. fem. n. *caduritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3 sp001689445*. The type genome for the species is the GenBank assembly GCA_001689445.1. The GC content of the type genome is 54.71 % and the

genome length is 2.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Inaccida gen. nov.

Candidatus Inaccida (NL. fem. n. *Inaccida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M3*. The type species for the genus is *Candidatus* Inaccida caduritoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaccosa mutabitas sp. nov.

Candidatus Inaccosa mutabitas (NL. fem. n. *mutabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIE01 sp013151495*. The type genome for the species is the GenBank assembly GCA_013151495.1. The GC content of the type genome is 43.39 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Inaccosa gen. nov.

Candidatus Inaccosa (NL. fem. n. *Inaccosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIE01*. The type species for the genus is *Candidatus* Inaccosa mutabitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-85*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepiaceae.

Description of *Candidatus* Inaccula effinessa sp. nov.

Candidatus Inaccula effinessa (NL. fem. n. *effinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXU01 sp013177805*. The type genome for the species is the GenBank assembly GCA_013177805.1. The GC content of the type genome is 56.59 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Inaccula gen. nov.

Candidatus Inaccula (NL. fem. n. *Inaccula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXU01*. The type species for the genus is *Candidatus* Inaccula effinessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Futatariaceae.

Description of *Candidatus* Inadfana dehonugo sp. nov.

Candidatus Inadfana dehonugo (NL. fem. n. *dehonugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W-Firmicutes-14 sp002840275*. The type genome for the species is the GenBank assembly GCA_002840275.1. The GC content of the type genome is 46.54 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Inadfana gen. nov.

Candidatus Inadfana (NL. fem. n. *Inadfana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W-Firmicutes-14*. The type species for the genus is *Candidatus* Inadfana dehonugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefanaceae.

Description of *Candidatus* Inadfaria desonitoga sp. nov.

Candidatus Inadfaria desonitoga (NL. fem. n. *desonitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5399 sp003510345*. The type genome for the species is the GenBank assembly GCA_003510345.1. The GC content of the type genome is 53.41 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Inadfaria gen. nov.

Candidatus Inadfaria (NL. fem. n. *Inadfaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5399*. The type species for the genus is *Candidatus* Inadfaria desonitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inadfaria medimigena sp. nov.

Candidatus Inadfaria medimigena (NL. fem. n. *medimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5399 sp002407725*. The type genome for the species is the GenBank assembly GCA_002407725.1. The GC content of the type genome is 52.14 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Inadfella innasax sp. nov.

Candidatus Inadfella innasax (NL. fem. n. *innasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXFB01 sp903918595*. The type genome for the species is the GenBank assembly GCA_903918595.1. The GC content of the type genome is 57.77 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Inadfella gen. nov.

Candidatus Inadfella (NL. fem. n. *Inadfella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXFB01*. The type species for the genus is *Candidatus* Inadfella innasax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Inadfia locelisca sp. nov.

Candidatus Inadfia locelisca (NL. fem. n. *locelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM-2324 sp900299495*. The type genome for the species is the GenBank assembly GCA_900299495.1. The GC content of the type genome is 37.43 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Inadfia gen. nov.

Candidatus Inadfia (NL. fem. n. *Inadfia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AM-2324*. The type species for the genus is *Candidatus* Inadfia locelisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inadfida buxanastra sp. nov.

Candidatus Inadfida buxanastra (NL. fem. n. *buxanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEOV01 sp009886125*. The type genome for the species is the GenBank assembly GCA_009886125.1. The GC content of the type genome is 51.71 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Inadfida gen. nov.

Candidatus Inadfida (NL. fem. n. *Inadfida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEOV01*. The type species for the genus is *Candidatus* Inadfida buxanastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inadfida irremitia sp. nov.

Candidatus Inadfida irremitia (NL. fem. n. *irremitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEOV01 sp012026855*. The type genome for the species is the GenBank assembly GCA_012026855.1. The GC content of the type genome is 55.41 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Inadfida lutuletta sp. nov.

Candidatus Inadfida lutuletta (NL. fem. n. *lutuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEOV01 sp013377075*. The type genome for the species is the GenBank assembly GCA_013377075.1. The GC content of the type genome is 50.36 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Inadfosa turilastra sp. nov.

Candidatus Inadfosa turilastra (NL. fem. n. *turilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-46-13 sp001791995*. The type genome for the species is the GenBank assembly GCA_001791995.1. The GC content of the type genome is 46.74 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Inadfosa gen. nov.

Candidatus Inadfosa (NL. fem. n. *Inadfosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-46-13*. The type species for the genus is *Candidatus* Inadfosa turilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Inadfula adtubicula sp. nov.

Candidatus Inadfula adtubicula (NL. fem. n. *adtubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5009 sp002396665*. The type genome for the species is the GenBank assembly GCA_002396665.1. The GC content of the type genome is 40.39 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Inadfula gen. nov.

Candidatus Inadfula (NL. fem. n. *Inadfula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5009*. The type species for the genus is *Candidatus* Inadfula adtubicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inambana dilicitoga sp. nov.

Candidatus Inambana dilicitoga (NL. fem. n. *dilicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUL01 sp013811855*. The type genome for the species is the GenBank assembly GCA_013811855.1. The GC content of the type genome is 70.98 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Inambana gen. nov.

Candidatus Inambana (NL. fem. n. *Inambana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCUL01*. The type species for the genus is *Candidatus* Inambana dilicitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inambaria arcipitas sp. nov.

Candidatus Inambaria arcipitas (NL. fem. n. *arcipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMES01 sp007375655*. The type genome for the species is the

GenBank assembly GCA_007375655.1. The GC content of the type genome is 52.77 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Inambaria gen. nov.

Candidatus Inambaria (NL. fem. n. *Inambaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMES01*. The type species for the genus is *Candidatus* Inambaria arcipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Inambia incesago sp. nov.

Candidatus Inambia incesago (NL. fem. n. *incesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDYZ01 sp004293855*. The type genome for the species is the GenBank assembly GCA_004293855.1. The GC content of the type genome is 53.56 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Inambia gen. nov.

Candidatus Inambia (NL. fem. n. *Inambia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDYZ01*. The type species for the genus is *Candidatus* Inambia incesago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inambia induvimonia sp. nov.

Candidatus Inambia induvimonia (NL. fem. n. *induvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDYZ01 sp011390275*. The type genome for the species is the GenBank assembly GCA_011390275.1. The GC content of the type genome is 53.61 %

and the genome length is 4.28 Mbp.

Description of *Candidatus* Inambia oscilago sp. nov.

Candidatus Inambia oscilago (NL. fem. n. *oscilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDYZ01 sp012033105*. The type genome for the species is the GenBank assembly GCA_012033105.1. The GC content of the type genome is 53.48 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Inambida cucurugo sp. nov.

Candidatus Inambida cucurugo (NL. fem. n. *cucurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYRG01 sp903928515*. The type genome for the species is the GenBank assembly GCA_903928515.1. The GC content of the type genome is 60.86 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Inambida gen. nov.

Candidatus Inambida (NL. fem. n. *Inambida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYRG01*. The type species for the genus is *Candidatus* Inambida cucurugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inambida gerunicula sp. nov.

Candidatus Inambida gerunicula (NL. fem. n. *gerunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYRG01 sp903862715*. The type genome for the species is the GenBank assembly GCA_903862715.1. The GC content of the type genome is 60.37 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Inambida halucax sp. nov.

Candidatus Inambida halucax (NL. fem. n. *halucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYRG01 sp009693985*. The type genome for the species is the GenBank assembly GCA_009693985.1. The GC content of the type genome is 62.95 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Inambosa doxolitura sp. nov.

Candidatus Inambosa doxolitura (NL. fem. n. *doxolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM524 sp002869315*. The type genome for the species is the GenBank assembly GCA_002869315.1. The GC content of the type genome is 33.9 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Inambosa gen. nov.

Candidatus Inambosa (NL. fem. n. *Inambosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM524*. The type species for the genus is *Candidatus* Inambosa doxolitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Inambosa habacitio sp. nov.

Candidatus Inambosa habacitio (NL. fem. n. *habacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM524 sp002869365*. The type genome for the species is the GenBank assembly GCA_002869365.1. The GC content of the type genome is 34.12 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Inambosa insuribula sp. nov.

Candidatus Inambosa insuribula (NL. fem. n. *insuribula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM524 sp013151215*. The type genome for the species is the GenBank assembly GCA_013151215.1. The GC content of the type genome is 41.04 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Inardaria peripitrix sp. nov.

Candidatus Inardaria peripitrix (NL. fem. n. *peripitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAE01 sp014238905*. The type genome for the species is the GenBank assembly GCA_014238905.1. The GC content of the type genome is 49.3 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Inardaria gen. nov.

Candidatus Inardaria (NL. fem. n. *Inardaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAE01*. The type species for the genus is *Candidatus* Inardaria peripitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inardella rorifimonas sp. nov.

Candidatus Inardella rorifimonas (NL. fem. n. *rorifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTM01 sp012031455*. The type genome for the species is the GenBank assembly GCA_012031455.1. The GC content of the type genome is 55.49 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Inardella gen. nov.

Candidatus Inardella (NL. fem. n. *Inardella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAUTM01*. The type species for the genus is *Candidatus* Inardella rorifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inardida pavimiforma sp. nov.

Candidatus Inardida pavimiforma (NL. fem. n. *pavimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHL01 sp009783245*. The type genome for the species is the GenBank assembly GCA_009783245.1. The GC content of the type genome is 57.11 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Inardida gen. nov.

Candidatus Inardida (NL. fem. n. *Inardida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHL01*. The type species for the genus is *Candidatus* Inardida pavimiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Inardula effacugo sp. nov.

Candidatus Inardula effacugo (NL. fem. n. *effacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-95 sp002011835*. The type genome for the species is the GenBank assembly GCA_002011835.1. The GC content of the type genome is 68.22 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Inardula gen. nov.

Candidatus Inardula (NL. fem. n. *Inardula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-95*. The type species for the genus is *Candidatus* Inardula

effacugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inargana adpinigena sp. nov.

Candidatus Inargana adpinigena (NL. fem. n. *adpinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-62 sp014334055*. The type genome for the species is the GenBank assembly RS_GCF_014334055.1. The GC content of the type genome is 58.6 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Inargana gen. nov.

Candidatus Inargana (NL. fem. n. *Inargana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-62*. The type species for the genus is *Candidatus* Inargana adpinigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inargaria infatatio sp. nov.

Candidatus Inargaria infatatio (NL. fem. n. *infatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBD01 sp013360685*. The type genome for the species is the GenBank assembly GCA_013360685.1. The GC content of the type genome is 63.95 % and the genome length is 8.0 Mbp.

Description of *Candidatus* Inargaria gen. nov.

Candidatus Inargaria (NL. fem. n. *Inargaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBD01*. The type species for the genus is *Candidatus* Inargaria infatatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inargaria pomifitoga sp. nov.

Candidatus Inargaria pomifitoga (NL. fem. n. *pomifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBD01 sp012728855*. The type genome for the species is the GenBank assembly GCA_012728855.1. The GC content of the type genome is 61.9 % and the genome length is 11.31 Mbp.

Description of *Candidatus* Inargella adgenetta sp. nov.

Candidatus Inargella adgenetta (NL. fem. n. *adgenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ULC077BIN1 sp003249025*. The type genome for the species is the GenBank assembly GCA_003249025.1. The GC content of the type genome is 48.17 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Inargella gen. nov.

Candidatus Inargella (NL. fem. n. *Inargella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ULC077BIN1*. The type species for the genus is *Candidatus* Inargella adgenetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inargia linigitura sp. nov.

Candidatus Inargia linigitura (NL. fem. n. *linigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6149 sp002423155*. The type genome for the species is the GenBank assembly GCA_002423155.1. The GC content of the type genome is 41.97 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Inargia gen. nov.

Candidatus Inargia (NL. fem. n. *Inargia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6149*. The type species for the genus is *Candidatus* Inargia linigitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA998*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifariaceae.

Description of *Candidatus* Inargida crabrimonas sp. nov.

Candidatus Inargida crabrimonas (NL. fem. n. *crabrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C9LFEB sp903970445*. The type genome for the species is the GenBank assembly GCA_903970445.1. The GC content of the type genome is 57.91 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Inargida gen. nov.

Candidatus Inargida (NL. fem. n. *Inargida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Tous-C9LFEB*. The type species for the genus is *Candidatus* Inargida crabrimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaspana tranvibra sp. nov.

Candidatus Inaspana tranvibra (NL. fem. n. *tranvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGAU01 sp009919975*. The type genome for the species is the GenBank assembly GCA_009919975.1. The GC content of the type genome is 65.37 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Inaspana gen. nov.

Candidatus Inaspana (NL. fem. n. *Inaspana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGAU01*. The type species for the genus is *Candidatus* Inaspana tranvibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Inasparia depubugo sp. nov.

Candidatus Inasparia depubugo (NL. fem. n. *depubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA933 sp002293545*. The type genome for the species is the GenBank assembly GCA_002293545.1. The GC content of the type genome is 41.94 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Inasparia gen. nov.

Candidatus Inasparia (NL. fem. n. *Inasparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA933*. The type species for the genus is *Candidatus* Inasparia depubugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaspella adhinitio sp. nov.

Candidatus Inaspella adhinitio (NL. fem. n. *adhinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSCAC1 sp902810445*. The type genome for the species is the GenBank assembly GCA_902810445.1. The GC content of the type genome is 37.01 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Inaspella gen. nov.

Candidatus Inaspella (NL. fem. n. *Inaspella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *NSCAC1*. The type species for the genus is *Candidatus* Inaspella adhinitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaspia senacibula sp. nov.

Candidatus Inaspia senacibula (NL. fem. n. *senacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTM01 sp004297485*. The type genome for the species is the GenBank assembly GCA_004297485.1. The GC content of the type genome is 59.99 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Inaspia gen. nov.

Candidatus Inaspia (NL. fem. n. *Inaspia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTM01*. The type species for the genus is *Candidatus* Inaspia senacibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaspida delebetta sp. nov.

Candidatus Inaspida delebetta (NL. fem. n. *delebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-57-27 sp002281735*. The type genome for the species is the GenBank assembly GCA_002281735.1. The GC content of the type genome is 56.83 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Inaspida gen. nov.

Candidatus Inaspida (NL. fem. n. *Inaspida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *28-57-27*. The type species for the genus is *Candidatus* Inaspida delebetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inaspida ossucimonia sp. nov.

Candidatus Inaspida ossucimonia (NL. fem. n. *ossucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-57-27 sp006212015*. The type genome for the species is the GenBank assembly GCA_006212015.1. The GC content of the type genome is 65.45 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Inasposa adnumatica sp. nov.

Candidatus Inasposa adnumatica (NL. fem. n. *adnumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733415 sp013214625*. The type genome for the species is the GenBank assembly GCA_013214625.1. The GC content of the type genome is 31.83 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Inasposa gen. nov.

Candidatus Inasposa (NL. fem. n. *Inasposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2733415*. The type species for the genus is *Candidatus* Inasposa adnumatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inasposa pinififica sp. nov.

Candidatus Inasposa pinififica (NL. fem. n. *pinififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733415 sp002733415*. The type genome for the species is the GenBank assembly GCA_002733415.1. The GC content of the type genome is 32.44 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Inaspula thapsitudo sp. nov.

Candidatus Inaspula thapsitudo (NL. fem. n. *thapsitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVN01 sp012517155*. The type genome for the species is the GenBank assembly GCA_012517155.1. The GC content of the type genome is 39.27 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Inaspula gen. nov.

Candidatus Inaspula (NL. fem. n. *Inaspula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVN01*. The type species for the genus is *Candidatus* Inaspula thapsitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbecana dimacibula sp. nov.

Candidatus Inbecana dimacibula (NL. fem. n. *dimacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBV01 sp012513605*. The type genome for the species is the GenBank assembly GCA_012513605.1. The GC content of the type genome is 42.62 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Inbecana gen. nov.

Candidatus Inbecana (NL. fem. n. *Inbecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBV01*. The type species for the genus is *Candidatus* Inbecana dimacibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifulaceae.

Description of *Candidatus* Inbecaria defanentia sp. nov.

Candidatus Inbecaria defanentia (NL. fem. n. *defanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J130 sp003694235*. The type genome for the species is the GenBank assembly GCA_003694235.1. The GC content of the type genome is 61.56 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Inbecaria gen. nov.

Candidatus Inbecaria (NL. fem. n. *Inbecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J130*. The type species for the genus is *Candidatus* Inbecaria defanentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11858*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifellaceae.

Description of *Candidatus* Inbecella inlecessa sp. nov.

Candidatus Inbecella inlecessa (NL. fem. n. *inlecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JC658 sp011634775*. The type genome for the species is the GenBank assembly RS_GCF_011634775.1. The GC content of the type genome is 54.63 % and the genome length is 7.36 Mbp.

Description of *Candidatus* Inbecella gen. nov.

Candidatus Inbecella (NL. fem. n. *Inbecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JC658*. The type species for the genus is *Candidatus* Inbecella inlecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbecia bovicigena sp. nov.

Candidatus Inbecia bovicigena (NL. fem. n. *bovicigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-21 sp003598015*. The type genome for the species is the GenBank assembly GCA_003598015.1. The GC content of the type genome is 61.06 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Inbecia gen. nov.

Candidatus Inbecia (NL. fem. n. *Inbecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-21*. The type species for the genus is *Candidatus* Inbecia bovicigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-55-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubiaceae.

Description of *Candidatus* Inbecosa paropifica sp. nov.

Candidatus Inbecosa paropifica (NL. fem. n. *paropifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0029 sp006227875*. The type genome for the species is the GenBank assembly GCA_006227875.1. The GC content of the type genome is 63.65 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Inbecosa gen. nov.

Candidatus Inbecosa (NL. fem. n. *Inbecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0029*. The type species for the genus is *Candidatus* Inbecosa paropifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Inbecula penurilega sp. nov.

Candidatus Inbecula penurilega (NL. fem. n. *penurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBMC01 sp902795635*. The type genome for the species is the GenBank assembly GCA_902795635.1. The GC content of the type genome is 67.54 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Inbecula gen. nov.

Candidatus Inbecula (NL. fem. n. *Inbecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBMC01*. The type species for the genus is *Candidatus* Inbecula penurilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbelana rudicilenta sp. nov.

Candidatus Inbelana rudicilenta (NL. fem. n. *rudicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11682 sp003455945*. The type genome for the species is the GenBank assembly GCA_003455945.1. The GC content of the type genome is 66.13 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Inbelana gen. nov.

Candidatus Inbelana (NL. fem. n. *Inbelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11682*. The type species for the genus is *Candidatus* Inbelana rudicilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbelaria annucatica sp. nov.

Candidatus Inbelaria annucatica (NL. fem. n. *annucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1384 sp900551265*. The type genome for the species is the GenBank assembly GCA_900551265.1. The GC content of the type genome is 50.59 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Inbelaria gen. nov.

Candidatus Inbelaria (NL. fem. n. *Inbelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1384*. The type species for the genus is *Candidatus* Inbelaria annucatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbelella chancicula sp. nov.

Candidatus Inbelella chancicula (NL. fem. n. *chancicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAANAU01 sp011089965*. The type genome for the species is the GenBank assembly GCA_011089965.1. The GC content of the type genome is 56.76 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Inbelella gen. nov.

Candidatus Inbelella (NL. fem. n. *Inbelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAANAU01*. The type species for the genus is *Candidatus* Inbelella chancicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbelia agravitoga sp. nov.

Candidatus Inbelia agravitoga (NL. fem. n. *agravitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMS01 sp009782505*. The type genome for the species is the

GenBank assembly GCA_009782505.1. The GC content of the type genome is 57.86 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Inbelia gen. nov.

Candidatus Inbelia (NL. fem. n. *Inbelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMS01*. The type species for the genus is *Candidatus* Inbelia agravitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficellaceae.

Description of *Candidatus* Inbelia indevimonia sp. nov.

Candidatus Inbelia indevimonia (NL. fem. n. *indevimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMS01 sp009776595*. The type genome for the species is the GenBank assembly GCA_009776595.1. The GC content of the type genome is 53.25 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Inbelia manufitica sp. nov.

Candidatus Inbelia manufitica (NL. fem. n. *manufitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMS01 sp009777025*. The type genome for the species is the GenBank assembly GCA_009777025.1. The GC content of the type genome is 52.71 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Inbelida gen. nov.

Candidatus Inbelida (NL. fem. n. *Inbelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGT01*. The type species for the genus is *Candidatus* Inbelida tiedjei_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inbelosa imbecilenta sp. nov.

Candidatus Inbelosa imbecilenta (NL. fem. n. *imbecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707695 sp002707695*. The type genome for the species is the GenBank assembly GCA_002707695.1. The GC content of the type genome is 43.48 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Inbelosa gen. nov.

Candidatus Inbelosa (NL. fem. n. *Inbelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707695*. The type species for the genus is *Candidatus* Inbelosa imbecilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenosaceae.

Description of *Candidatus* Inbelula tigurax sp. nov.

Candidatus Inbelula tigurax (NL. fem. n. *tigurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *73-13 sp001898855*. The type genome for the species is the GenBank assembly GCA_001898855.1. The GC content of the type genome is 72.52 % and the genome length is 2.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Inbelula gen. nov.

Candidatus Inbelula (NL. fem. n. *Inbelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *73-13*. The type species for the genus is *Candidatus* Inbelula tigurax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incenana dupunimonas sp. nov.

Candidatus Incenana dupunimonas (NL. fem. n. *dupunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-7 sp002085285*. The type genome for the species is the GenBank assembly GCA_002085285.1. The GC content of the type genome is 50.94 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Incenana gen. nov.

Candidatus Incenana (NL. fem. n. *Incenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-7*. The type species for the genus is *Candidatus* Incenana dupunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incenaria abrumatica sp. nov.

Candidatus Incenaria abrumatica (NL. fem. n. *abrumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUL01 sp004297205*. The type genome for the species is the GenBank assembly GCA_004297205.1. The GC content of the type genome is 64.54 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Incenaria gen. nov.

Candidatus Incenaria (NL. fem. n. *Incenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUL01*. The type species for the genus is *Candidatus* Incenaria abrumatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-57-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacomanaceae.

Description of *Candidatus* Incenella altivibra sp. nov.

Candidatus Incenella altivibra (NL. fem. n. *altivibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746605 sp002746605*. The type genome for the species is the GenBank assembly GCA_002746605.1. The GC content of the type genome is 30.45 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Incenella gen. nov.

Candidatus Incenella (NL. fem. n. *Incenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746605*. The type species for the genus is *Candidatus* Incenella altivibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incenia maliventia sp. nov.

Candidatus Incenia maliventia (NL. fem. n. *maliventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSQX01 sp013215615*. The type genome for the species is the GenBank assembly GCA_013215615.1. The GC content of the type genome is 68.26 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Incenia gen. nov.

Candidatus Incenia (NL. fem. n. *Incenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSQX01*. The type species for the genus is *Candidatus* Incenia maliventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penicellaceae.

Description of *Candidatus* Incenida faviliforma sp. nov.

Candidatus Incenida faviliforma (NL. fem. n. *faviliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1313 sp001873075*. The type genome for the species is the GenBank assembly GCA_001873075.1. The GC content of the type genome is 44.78 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Incenida gen. nov.

Candidatus Incenida (NL. fem. n. *Incenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1313*. The type species for the genus is *Candidatus* Incenida faviliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incenida ludibibula sp. nov.

Candidatus Incenida ludibibula (NL. fem. n. *ludibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1313 sp002307115*. The type genome for the species is the GenBank assembly GCA_002307115.1. The GC content of the type genome is 45.07 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Incesana semodiforma sp. nov.

Candidatus Incesana semodiforma (NL. fem. n. *semodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4660 sp002405435*. The type genome for the species is the GenBank assembly GCA_002405435.1. The GC content of the type genome is 54.4 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Incesana gen. nov.

Candidatus Incesana (NL. fem. n. *Incesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4660*. The type species for the genus is *Candidatus* Incesana semodiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Incesaria innasatio sp. nov.

Candidatus Incesaria innasatio (NL. fem. n. *innasatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SACF01 sp009928665*. The type genome for the species is the GenBank assembly GCA_009928665.1. The GC content of the type genome is 46.78 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Incesaria gen. nov.

Candidatus Incesaria (NL. fem. n. *Incesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SACF01*. The type species for the genus is *Candidatus* Incesaria innasatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepariaceae.

Description of *Candidatus* Incesella giganatio sp. nov.

Candidatus Incesella giganatio (NL. fem. n. *giganatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9904 sp003513845*. The type genome for the species is the GenBank assembly GCA_003513845.1. The GC content of the type genome is 34.04 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Incesella gen. nov.

Candidatus Incesella (NL. fem. n. *Incesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9904*. The type species for the genus is *Candidatus* Incesella giganatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *34-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefosaceae.

Description of *Candidatus* Incesosa abindibula sp. nov.

Candidatus Incesosa abindibula (NL. fem. n. *abindibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4781 sp002403105*. The type genome for the species is the GenBank assembly GCA_002403105.1. The GC content of the type genome is 43.72 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Incesosa gen. nov.

Candidatus Incesosa (NL. fem. n. *Incesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4781*. The type species for the genus is *Candidatus* Incesosa abindibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incesosa accumitrix sp. nov.

Candidatus Incesosa accumitrix (NL. fem. n. *accumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4781 sp003446605*. The type genome for the species is the GenBank assembly GCA_003446605.1. The GC content of the type genome is 44.85 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Incesosa dilecigena sp. nov.

Candidatus Incesosa dilecigena (NL. fem. n. *dilecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4781 sp012797975*. The type genome for the species is the GenBank assembly GCA_012797975.1. The GC content of the type genome is 48.36 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Incesosa exturicula sp. nov.

Candidatus Incesosa exturicula (NL. fem. n. *exturicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4781 sp012797815*. The type genome for the species is the GenBank assembly GCA_012797815.1. The GC content of the type genome is 47.94 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Incesosa octoditura sp. nov.

Candidatus Incesosa octoditura (NL. fem. n. *octoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4781 sp012798455*. The type genome for the species is the GenBank assembly GCA_012798455.1. The GC content of the type genome is 46.1 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Incivana monopitura sp. nov.

Candidatus Incivana monopitura (NL. fem. n. *monopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6080 sp002436025*. The type genome for the species is the GenBank assembly GCA_002436025.1. The GC content of the type genome is 58.87 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Incivana gen. nov.

Candidatus Incivana (NL. fem. n. *Incivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6080*. The type species for the genus is *Candidatus* Incivana monopitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incivaria bucolago sp. nov.

Candidatus Incivaria bucolago (NL. fem. n. *bucolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2697345 sp002697345*. The type genome for the species is the GenBank assembly GCA_002697345.1. The GC content of the type genome is 38.78 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Incivaria gen. nov.

Candidatus Incivaria (NL. fem. n. *Incivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2697345*. The type species for the genus is *Candidatus* Incivaria bucolago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incivella infacicella sp. nov.

Candidatus Incivella infacicella (NL. fem. n. *infacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOH01 sp007132595*. The type genome for the species is the GenBank assembly GCA_007132595.1. The GC content of the type genome is 44.34 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Incivella gen. nov.

Candidatus Incivella (NL. fem. n. *Incivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOH01*. The type species for the genus is *Candidatus* Incivella infacicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incivia medimicula sp. nov.

Candidatus Incivia medimicula (NL. fem. n. *medimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-457 sp003161575*. The type genome for the species is the GenBank assembly GCA_003161575.1. The GC content of the type genome is 66.66 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Incivia gen. nov.

Candidatus Incivia (NL. fem. n. *Incivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-457*. The type species for the genus is *Candidatus* Incivia medimicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Incivida sitelitia sp. nov.

Candidatus Incivida sitelitia (NL. fem. n. *sitelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748425 sp002748425*. The type genome for the species is the GenBank assembly GCA_002748425.1. The GC content of the type genome is 49.58 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Incivida gen. nov.

Candidatus Incivida (NL. fem. n. *Incivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748425*. The type species for the genus is *Candidatus* Incivida sitelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incivula occumentia sp. nov.

Candidatus Incivula occumentia (NL. fem. n. *occumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALA01 sp003343565*. The type genome for the species is the GenBank assembly GCA_003343565.1. The GC content of the type genome is 55.93 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Incivula gen. nov.

Candidatus Incivula (NL. fem. n. *Incivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QALA01*. The type species for the genus is *Candidatus* Incivula occumentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolariaceae.

Description of *Candidatus* Incocana extunitrix sp. nov.

Candidatus Incocana extunitrix (NL. fem. n. *extunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLJ01 sp009777685*. The type genome for the species is the GenBank assembly GCA_009777685.1. The GC content of the type genome is 62.76 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Incocana gen. nov.

Candidatus Incocana (NL. fem. n. *Incocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLJ01*. The type species for the genus is *Candidatus* Incocana extunitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incocula divolitura sp. nov.

Candidatus Incocula divolitura (NL. fem. n. *divolitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1757 sp002315625*. The type genome for the species is the GenBank assembly GCA_002315625.1. The GC content of the type genome is 50.3 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Incocula gen. nov.

Candidatus Incocula (NL. fem. n. *Incocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1757*. The type species for the genus is *Candidatus* Incocula divolitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimidaceae.

Description of *Candidatus* Incomana curaciforma sp. nov.

Candidatus Incomana curaciforma (NL. fem. n. *curaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDE01 sp009783605*. The type genome for the species is the GenBank assembly GCA_009783605.1. The GC content of the type genome is 55.53 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Incomana gen. nov.

Candidatus Incomana (NL. fem. n. *Incomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDE01*. The type species for the genus is *Candidatus* Incomana curaciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incomaria insubastra sp. nov.

Candidatus Incomaria insubastra (NL. fem. n. *insubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYB2-FULL-48-7-A sp001771615*. The type genome for the species is the GenBank assembly GCA_001771615.1. The GC content of the type genome is 48.24 % and the genome length is 1.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Incomaria gen. nov.

Candidatus Incomaria (NL. fem. n. *Incomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYB2-FULL-48-7-A*. The type species for the genus is *Candidatus* Incomaria insubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-48-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogiaceae.

Description of *Candidatus* Incomia adfirugo sp. nov.

Candidatus Incomia adfirugo (NL. fem. n. *adfirugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAE01 sp013289325*. The type genome for the species is the GenBank assembly GCA_013289325.1. The GC content of the type genome is 40.88 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Incomia gen. nov.

Candidatus Incomia (NL. fem. n. *Incomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDAE01*. The type species for the genus is *Candidatus* Incomia adfirugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incomosa cucuretta sp. nov.

Candidatus Incomosa cucuretta (NL. fem. n. *cucuretta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J005 sp003695905*. The type genome for the species is the GenBank assembly GCA_003695905.1. The GC content of the type genome is 56.86 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Incomosa gen. nov.

Candidatus Incomosa (NL. fem. n. *Incomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J005*. The type species for the genus is *Candidatus* Incomosa cucuretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incomosa octusitio sp. nov.

Candidatus Incomosa octusitio (NL. fem. n. *octusitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J005 sp003696795*. The type genome for the species is the GenBank assembly GCA_003696795.1. The GC content of the type genome is 60.87 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Incomula anaplimonas sp. nov.

Candidatus Incomula anaplimonas (NL. fem. n. *anaplimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISIP01 sp903885415*. The type genome for the species is the GenBank assembly GCA_903885415.1. The GC content of the type genome is 64.21 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Incomula gen. nov.

Candidatus Incomula (NL. fem. n. *Incomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISIP01*. The type species for the genus is *Candidatus* Incomula

anaplimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inconana exhonilenta sp. nov.

Candidatus Inconana exhonilenta (NL. fem. n. *exhonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACECR01 sp902558105*. The type genome for the species is the GenBank assembly GCA_902558105.1. The GC content of the type genome is 35.64 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Inconana gen. nov.

Candidatus Inconana (NL. fem. n. *Inconana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACECR01*. The type species for the genus is *Candidatus* Inconana exhonilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA817*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Calipidaceae.

Description of *Candidatus* Inconaria nugigetta sp. nov.

Candidatus Inconaria nugigetta (NL. fem. n. *nugigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHF01 sp009783415*. The type genome for the species is the GenBank assembly GCA_009783415.1. The GC content of the type genome is 46.56 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Inconaria gen. nov.

Candidatus Inconaria (NL. fem. n. *Inconaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHF01*. The type species for the genus is *Candidatus* Inconaria nugigetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulosaceae.

Description of *Candidatus* Inconella annicitoga sp. nov.

Candidatus Inconella annicitoga (NL. fem. n. *annicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-743 sp003151955*. The type genome for the species is the GenBank assembly GCA_003151955.1. The GC content of the type genome is 71.8 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Inconella gen. nov.

Candidatus Inconella (NL. fem. n. *Inconella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-743*. The type species for the genus is *Candidatus* Inconella annicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegosaceae.

Description of *Candidatus* Inconula inbelatica sp. nov.

Candidatus Inconula inbelatica (NL. fem. n. *inbelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGA01 sp900696425*. The type genome for the species is the GenBank assembly GCA_900696425.1. The GC content of the type genome is 67.28 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Inconula gen. nov.

Candidatus Inconula (NL. fem. n. *Inconula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGA01*. The type species for the genus is *Candidatus* Inconula

inbelatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Incoraria deculibula sp. nov.

Candidatus Incoraria deculibula (NL. fem. n. *deculibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGN01 sp007117415*. The type genome for the species is the GenBank assembly GCA_007117415.1. The GC content of the type genome is 27.7 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Incoraria gen. nov.

Candidatus Incoraria (NL. fem. n. *Incoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKGN01*. The type species for the genus is *Candidatus* Incoraria deculibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Incoria omnipitudo sp. nov.

Candidatus Incoria omnipitudo (NL. fem. n. *omnipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVA01 sp009691195*. The type genome for the species is the GenBank assembly GCA_009691195.1. The GC content of the type genome is 69.85 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Incoria gen. nov.

Candidatus Incoria (NL. fem. n. *Incoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SHVA01*. The type species for the genus is *Candidatus* Incoria omnipitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Incorida panifitia sp. nov.

Candidatus Incorida panifitia (NL. fem. n. *panifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1150 sp003139415*. The type genome for the species is the GenBank assembly GCA_003139415.1. The GC content of the type genome is 69.02 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Incorida gen. nov.

Candidatus Incorida (NL. fem. n. *Incorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1150*. The type species for the genus is *Candidatus* Incorida panifitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incorida semigax sp. nov.

Candidatus Incorida semigax (NL. fem. n. *semigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1150 sp003153495*. The type genome for the species is the GenBank assembly GCA_003153495.1. The GC content of the type genome is 70.37 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Incorosa immodatica sp. nov.

Candidatus Incorosa immodatica (NL. fem. n. *immodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACMQM01 sp014376985*. The type genome for the species is the GenBank assembly GCA_014376985.1. The GC content of the type genome is 39.43 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Incorosa gen. nov.

Candidatus Incorosa (NL. fem. n. *Incorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMQM01*. The type species for the genus is *Candidatus* Incorosa immodatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incorula agrimifica sp. nov.

Candidatus Incorula agrimifica (NL. fem. n. *agrimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXX01 sp011367745*. The type genome for the species is the GenBank assembly GCA_011367745.1. The GC content of the type genome is 36.73 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Incorula gen. nov.

Candidatus Incorula (NL. fem. n. *Incorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXX01*. The type species for the genus is *Candidatus* Incorula agrimifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifellaceae.

Description of *Candidatus* Incucana hemititia sp. nov.

Candidatus Incucana hemititia (NL. fem. n. *hemititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKIC01 sp007116685*. The type genome for the species is the

GenBank assembly GCA_007116685.1. The GC content of the type genome is 40.94 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Incucana gen. nov.

Candidatus Incucana (NL. fem. n. *Incucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKIC01*. The type species for the genus is *Candidatus* Incucana hemititia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Incucaria facunessa sp. nov.

Candidatus Incucaria facunessa (NL. fem. n. *facunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-935 sp003165275*. The type genome for the species is the GenBank assembly GCA_003165275.1. The GC content of the type genome is 68.31 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Incucaria gen. nov.

Candidatus Incucaria (NL. fem. n. *Incucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-935*. The type species for the genus is *Candidatus* Incucaria facunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incucella peracimonia sp. nov.

Candidatus Incucella peracimonia (NL. fem. n. *peracimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J021 sp003696665*. The type genome for the species is the GenBank assembly GCA_003696665.1. The GC content of the type genome is 51.47 % and the

genome length is 2.97 Mbp.

Description of *Candidatus* Incucella gen. nov.

Candidatus Incucella (NL. fem. n. *Incucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J021*. The type species for the genus is *Candidatus* Incucella peracimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002770795*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conoposaceae.

Description of *Candidatus* Incucia accapibula sp. nov.

Candidatus Incucia accapibula (NL. fem. n. *accapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAO01 sp007126835*. The type genome for the species is the GenBank assembly GCA_007126835.1. The GC content of the type genome is 70.71 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Incucia gen. nov.

Candidatus Incucia (NL. fem. n. *Incucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAO01*. The type species for the genus is *Candidatus* Incucia accapibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incucia assefimonas sp. nov.

Candidatus Incucia assefimonas (NL. fem. n. *assefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAO01 sp007120845*. The type genome for the species is the GenBank assembly GCA_007120845.1. The GC content of the type genome is 70.85 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Incucida funivago sp. nov.

Candidatus Incucida funivago (NL. fem. n. *funivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRHN01 sp011049595*. The type genome for the species is the GenBank assembly GCA_011049595.1. The GC content of the type genome is 44.67 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Incucida gen. nov.

Candidatus Incucida (NL. fem. n. *Incucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRHN01*. The type species for the genus is *Candidatus* Incucida funivago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B62-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenocellaceae.

Description of *Candidatus* Incucosa vecoritica sp. nov.

Candidatus Incucosa vecoritica (NL. fem. n. *vecoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-65-60-17 sp002787815*. The type genome for the species is the GenBank assembly GCA_002787815.1. The GC content of the type genome is 59.75 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Incucosa gen. nov.

Candidatus Incucosa (NL. fem. n. *Incucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-65-60-17*. The type species for the genus is *Candidatus* Incucosa vecoritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Incucula solacessa sp. nov.

Candidatus Incucula solacessa (NL. fem. n. *solacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3535 sp002376845*. The type genome for the species is the GenBank assembly GCA_002376845.1. The GC content of the type genome is 41.85 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Incucula gen. nov.

Candidatus Incucula (NL. fem. n. *Incucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3535*. The type species for the genus is *Candidatus* Incucula solacessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA840*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hemidanaceae.

Description of *Candidatus* Inculia penecilenta sp. nov.

Candidatus Inculia penecilenta (NL. fem. n. *penecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCI01 sp012729855*. The type genome for the species is the GenBank assembly GCA_012729855.1. The GC content of the type genome is 60.36 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Inculia gen. nov.

Candidatus Inculia (NL. fem. n. *Inculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCI01*. The type species for the genus is *Candidatus* Inculia penecilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inculida fefelilega sp. nov.

Candidatus Inculida fefelilega (NL. fem. n. *fefelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0074130 sp001464495*. The type genome for the species is the GenBank assembly GCA_001464495.1. The GC content of the type genome is 56.57 % and the genome length is 2.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Inculida gen. nov.

Candidatus Inculida (NL. fem. n. *Inculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0074130*. The type species for the genus is *Candidatus* Inculida fefelilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incunana pinacitoga sp. nov.

Candidatus Incunana pinacitoga (NL. fem. n. *pinacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLK101 sp007134695*. The type genome for the species is the GenBank assembly GCA_007134695.1. The GC content of the type genome is 50.15 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Incunana gen. nov.

Candidatus Incunana (NL. fem. n. *Incunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLK101*. The type species for the genus is *Candidatus* Incunana pinacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incunaria intamitia sp. nov.

Candidatus Incunaria intamitia (NL. fem. n. *intamitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDFU01 sp013815585*. The type genome for the species is the GenBank assembly GCA_013815585.1. The GC content of the type genome is 68.41 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Incunaria gen. nov.

Candidatus Incunaria (NL. fem. n. *Incunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDFU01*. The type species for the genus is *Candidatus* Incunaria intamitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Incunella alembax sp. nov.

Candidatus Incunella alembax (NL. fem. n. *alembax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTO01 sp902805585*. The type genome for the species is the GenBank assembly GCA_902805585.1. The GC content of the type genome is 69.69 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Incunella gen. nov.

Candidatus Incunella (NL. fem. n. *Incunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTO01*. The type species for the genus is *Candidatus* Incunella alembax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Incunia adsicitudo sp. nov.

Candidatus Incunia adsicitudo (NL. fem. n. *adsicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFUP01 sp001785735*. The type genome for the species is the GenBank assembly GCA_001785735.1. The GC content of the type genome is 32.88 % and the genome length is 0.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Incunia gen. nov.

Candidatus Incunia (NL. fem. n. *Incunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFUP01*. The type species for the genus is *Candidatus* Incunia adsicitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973_B*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Necubiaceae.

Description of *Candidatus* Incunula demigatio sp. nov.

Candidatus Incunula demigatio (NL. fem. n. *demigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDZ01 sp013153635*. The type genome for the species is the GenBank assembly GCA_013153635.1. The GC content of the type genome is 33.48 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Incunula gen. nov.

Candidatus Incunula (NL. fem. n. *Incunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDZ01*. The type species for the genus is *Candidatus* Incunula demigatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indecaria enigmilega sp. nov.

Candidatus Indecaria enigmilega (NL. fem. n. *enigmilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIU01 sp014380985*. The type genome for the species is the GenBank assembly GCA_014380985.1. The GC content of the type genome is 59.37 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Indecaria gen. nov.

Candidatus Indecaria (NL. fem. n. *Indecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMIU01*. The type species for the genus is *Candidatus* Indecaria enigmilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indecaria innupibula sp. nov.

Candidatus Indecaria innupibula (NL. fem. n. *innupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIU01 sp014381035*. The type genome for the species is the GenBank assembly GCA_014381035.1. The GC content of the type genome is 58.4 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Indecaria mavoritudo sp. nov.

Candidatus Indecaria mavoritudo (NL. fem. n. *mavoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIU01 sp014379275*. The type genome for the species is the GenBank assembly GCA_014379275.1. The GC content of the type genome is 59.81 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Indecia incenigena sp. nov.

Candidatus Indecia incenigena (NL. fem. n. *incenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDV01 sp013153795*. The type genome for the species is the GenBank assembly GCA_013153795.1. The GC content of the type genome is 31.34 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Indecia gen. nov.

Candidatus Indecia (NL. fem. n. *Indecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDV01*. The type species for the genus is *Candidatus* Indecia incenigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indecida dilemilenta sp. nov.

Candidatus Indecida dilemilenta (NL. fem. n. *dilemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMDK01 sp008080835*. The type genome for the species is the GenBank assembly GCA_008080835.1. The GC content of the type genome is 47.04 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Indecida gen. nov.

Candidatus Indecida (NL. fem. n. *Indecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMDK01*. The type species for the genus is *Candidatus* Indecida dilemilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Indecosa assudigena sp. nov.

Candidatus Indecosa assudigena (NL. fem. n. *assudigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAXUU01 sp013335845*. The type genome for the species is the GenBank assembly GCA_013335845.1. The GC content of the type genome is 53.01 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Indecosa gen. nov.

Candidatus Indecosa (NL. fem. n. *Indecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXUU01*. The type species for the genus is *Candidatus* Indecosa assudigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG844*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicuniaceae.

Description of *Candidatus* Indecula carunilenta sp. nov.

Candidatus Indecula carunilenta (NL. fem. n. *carunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1219 sp011054615*. The type genome for the species is the GenBank assembly GCA_011054615.1. The GC content of the type genome is 67.72 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Indecula gen. nov.

Candidatus Indecula (NL. fem. n. *Indecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1219*. The type species for the genus is *Candidatus* Indecula carunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecariaceae.

Description of *Candidatus* Indecula deculitia sp. nov.

Candidatus Indecula deculitia (NL. fem. n. *deculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1219 sp003155415*. The type genome for the species is the GenBank assembly GCA_003155415.1. The GC content of the type genome is 64.61 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Indepana dehonilega sp. nov.

Candidatus Indepana dehonilega (NL. fem. n. *dehonilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM250 sp008014345*. The type genome for the species is the GenBank assembly RS_GCF_008014345.1. The GC content of the type genome is 64.78 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Indepana gen. nov.

Candidatus Indepana (NL. fem. n. *Indepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM250*. The type species for the genus is *Candidatus* Indepana dehonilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6910*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibicellaceae.

Description of *Candidatus* Indeparia octacicula sp. nov.

Candidatus Indeparia octacicula (NL. fem. n. *octacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748575 sp002748575*. The type genome for the species is the GenBank assembly GCA_002748575.1. The GC content of the type genome is 47.58 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Indeparia gen. nov.

Candidatus Indeparia (NL. fem. n. *Indeparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748575*. The type species for the genus is *Candidatus* Indeparia

octacicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indepella pecunicella sp. nov.

Candidatus Indepella pecunicella (NL. fem. n. *pecunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDEC01 sp013816645*. The type genome for the species is the GenBank assembly GCA_013816645.1. The GC content of the type genome is 68.63 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Indepella gen. nov.

Candidatus Indepella (NL. fem. n. *Indepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDEC01*. The type species for the genus is *Candidatus* Indepella pecunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Indepia effemimonia sp. nov.

Candidatus Indepia effemimonia (NL. fem. n. *effemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1532 sp900552605*. The type genome for the species is the GenBank assembly GCA_900552605.1. The GC content of the type genome is 43.94 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Indepia gen. nov.

Candidatus Indepia (NL. fem. n. *Indepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1532*. The type species for the genus is *Candidatus* Indepia effemimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indepida recucatio sp. nov.

Candidatus Indepida recucatio (NL. fem. n. *recucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCPY01 sp004299495*. The type genome for the species is the GenBank assembly GCA_004299495.1. The GC content of the type genome is 47.34 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Indepida gen. nov.

Candidatus Indepida (NL. fem. n. *Indepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCPY01*. The type species for the genus is *Candidatus* Indepida recucatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabellaceae.

Description of *Candidatus* Indeposa affuligena sp. nov.

Candidatus Indeposa affuligena (NL. fem. n. *affuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDM01 sp013287605*. The type genome for the species is the GenBank assembly GCA_013287605.1. The GC content of the type genome is 50.78 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Indeposa gen. nov.

Candidatus Indeposa (NL. fem. n. *Indeposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDM01*. The type species for the genus is *Candidatus* Indeposa affuligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family

Palsa-1295. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Antegiaceae.

Description of *Candidatus* Indepula illepitica sp. nov.

Candidatus Indepula illepitica (NL. fem. n. *illepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNQ01 sp009784305*. The type genome for the species is the GenBank assembly GCA_009784305.1. The GC content of the type genome is 44.12 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Indepula gen. nov.

Candidatus Indepula (NL. fem. n. *Indepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRNQ01*. The type species for the genus is *Candidatus* Indepula illepitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indepula immacago sp. nov.

Candidatus Indepula immacago (NL. fem. n. *immacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNQ01 sp009776565*. The type genome for the species is the GenBank assembly GCA_009776565.1. The GC content of the type genome is 43.5 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Indepula selibousia sp. nov.

Candidatus Indepula selibousia (NL. fem. n. *selibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNQ01 sp009783355*. The type genome for the species is the GenBank assembly GCA_009783355.1. The GC content of the type genome is 45.52 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Indevana agnomicula sp. nov.

Candidatus Indevana agnomicula (NL. fem. n. *agnomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-82 sp005879815*. The type genome for the species is the GenBank assembly GCA_005879815.1. The GC content of the type genome is 68.45 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Indevana gen. nov.

Candidatus Indevana (NL. fem. n. *Indevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-82*. The type species for the genus is *Candidatus* Indevana agnomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHBO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefariaceae.

Description of *Candidatus* Indevana expanilenta sp. nov.

Candidatus Indevana expanilenta (NL. fem. n. *expanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-82 sp005882055*. The type genome for the species is the GenBank assembly GCA_005882055.1. The GC content of the type genome is 68.61 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Indevana incocilega sp. nov.

Candidatus Indevana incocilega (NL. fem. n. *incocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-82 sp005880165*. The type genome for the species is the GenBank assembly GCA_005880165.1. The GC content of the type genome is 68.33 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Indevaria exsativita sp. nov.

Candidatus Indevaria exsativita (NL. fem. n. *exsativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXO01 sp014360385*. The type genome for the species is the GenBank assembly GCA_014360385.1. The GC content of the type genome is 35.84 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Indevaria gen. nov.

Candidatus Indevaria (NL. fem. n. *Indevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIXO01*. The type species for the genus is *Candidatus* Indevaria exsativita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefulaceae.

Description of *Candidatus* Indevosa remulessa sp. nov.

Candidatus Indevosa remulessa (NL. fem. n. *remulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1226 sp003142435*. The type genome for the species is the GenBank assembly GCA_003142435.1. The GC content of the type genome is 36.53 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Indevosa gen. nov.

Candidatus Indevosa (NL. fem. n. *Indevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1226*. The type species for the genus is *Candidatus* Indevosa remulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9339*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutanaceae.

Description of *Candidatus* Indevula ingigimonia sp. nov.

Candidatus Indevula ingigimonia (NL. fem. n. *ingigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFVL01 sp013362805*. The type genome for the species is the GenBank assembly GCA_013362805.1. The GC content of the type genome is 58.48 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Indevula gen. nov.

Candidatus Indevula (NL. fem. n. *Indevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFVL01*. The type species for the genus is *Candidatus* Indevula ingigimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacidaceae.

Description of *Candidatus* Indidana tabifitoga sp. nov.

Candidatus Indidana tabifitoga (NL. fem. n. *tabifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVJ01 sp009694295*. The type genome for the species is the GenBank assembly GCA_009694295.1. The GC content of the type genome is 66.96 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Indidana gen. nov.

Candidatus Indidana (NL. fem. n. *Indidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVJ01*. The type species for the genus is *Candidatus* Indidana tabifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilulaceae.

Description of *Candidatus* Indidaria occalitudo sp. nov.

Candidatus Indidaria occalitudo (NL. fem. n. *occalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-73-18 sp001794945*. The type genome for the species is the GenBank assembly GCA_001794945.1. The GC content of the type genome is 73.11 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Indidaria gen. nov.

Candidatus Indidaria (NL. fem. n. *Indidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-73-18*. The type species for the genus is *Candidatus* Indidaria occalitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Indidella admigentia sp. nov.

Candidatus Indidella admigentia (NL. fem. n. *admigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRP01 sp007130845*. The type genome for the species is the GenBank assembly GCA_007130845.1. The GC content of the type genome is 51.59 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Indidella gen. nov.

Candidatus Indidella (NL. fem. n. *Indidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLRP01*. The type species for the genus is *Candidatus* Indidella admigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Reveculaceae.

Description of *Candidatus* Indidia accumivita sp. nov.

Candidatus Indidia accumivita (NL. fem. n. *accumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1419 sp002305585*. The type genome for the species is the GenBank assembly GCA_002305585.1. The GC content of the type genome is 52.55 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Indidia gen. nov.

Candidatus Indidia (NL. fem. n. *Indidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1419*. The type species for the genus is *Candidatus* Indidia accumivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Indidia leviditio sp. nov.

Candidatus Indidia leviditio (NL. fem. n. *leviditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1419 sp012515495*. The type genome for the species is the GenBank assembly GCA_012515495.1. The GC content of the type genome is 51.57 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Indidida appacugo sp. nov.

Candidatus Indidida appacugo (NL. fem. n. *appacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WMHbin3 sp002753185*. The type genome for the species is the GenBank assembly GCA_002753185.1. The GC content of the type genome is 61.61 %

and the genome length is 4.6 Mbp.

Description of *Candidatus* Indididа gen. nov.

Candidatus Indididа (NL. fem. n. *Indididа* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WMHbin3*. The type species for the genus is *Candidatus* Indididа appacugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indidosa refunilenta sp. nov.

Candidatus Indidosa refunilenta (NL. fem. n. *refunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Plut-88865 sp012267425*. The type genome for the species is the GenBank assembly GCA_012267425.1. The GC content of the type genome is 58.23 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Indidosa gen. nov.

Candidatus Indidosa (NL. fem. n. *Indidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Plut-88865*. The type species for the genus is *Candidatus* Indidosa refunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecanaceae.

Description of *Candidatus* Indidula morigousia sp. nov.

Candidatus Indidula morigousia (NL. fem. n. *morigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RXOA01 sp003979035*. The type genome for the species is the GenBank assembly GCA_003979035.1. The GC content of the type genome is 60.52 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Indidula gen. nov.

Candidatus Indidula (NL. fem. n. *Indidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RXOA01*. The type species for the genus is *Candidatus* Indidula morigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodosaceae.

Description of *Candidatus* Indifana inlepifica sp. nov.

Candidatus Indifana inlepifica (NL. fem. n. *inlepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BIGb0124 sp003752175*. The type genome for the species is the GenBank assembly RS_GCF_003752175.1. The GC content of the type genome is 65.74 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Indifana gen. nov.

Candidatus Indifana (NL. fem. n. *Indifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BIGb0124*. The type species for the genus is *Candidatus* Indifana inlepifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indifaria lametitrix sp. nov.

Candidatus Indifaria lametitrix (NL. fem. n. *lametitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1200 sp002309765*. The type genome for the species is the GenBank assembly GCA_002309765.1. The GC content of the type genome is 57.03 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Indifaria gen. nov.

Candidatus Indifaria (NL. fem. n. *Indifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1200*. The type species for the genus is *Candidatus* Indifaria lametitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Indifella resuligena sp. nov.

Candidatus Indifella resuligena (NL. fem. n. *resuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMO-BIN1 sp003123965*. The type genome for the species is the GenBank assembly GCA_003123965.1. The GC content of the type genome is 46.28 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Indifella gen. nov.

Candidatus Indifella (NL. fem. n. *Indifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMO-BIN1*. The type species for the genus is *Candidatus* Indifella resuligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indifida nubigibula sp. nov.

Candidatus Indifida nubigibula (NL. fem. n. *nubigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXRL01 sp903921835*. The type genome for the species is the GenBank assembly GCA_903921835.1. The GC content of the type genome is 70.38 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Indifida gen. nov.

Candidatus Indifida (NL. fem. n. *Indifida* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXRL01*. The type species for the genus is *Candidatus* Indifida nubigibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Indifosa minuricula sp. nov.

Candidatus Indifosa minuricula (NL. fem. n. *minuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13279 sp902787475*. The type genome for the species is the GenBank assembly GCA_902787475.1. The GC content of the type genome is 62.37 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Indifosa gen. nov.

Candidatus Indifosa (NL. fem. n. *Indifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13279*. The type species for the genus is *Candidatus* Indifosa minuricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Indiicoccus adselugo sp. nov.

Candidatus Indiicoccus adselugo (NL. fem. n. *adselugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Indiicoccus sp001999905*. The type genome for the species is the GenBank assembly RS_GCF_001999905.1. The GC content of the type genome is 48.32 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Indilana innabifica sp. nov.

Candidatus Indilana innabifica (NL. fem. n. *innabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *A52C2 sp900110915*. The type genome for the species is the GenBank assembly RS_GCF_900110915.1. The GC content of the type genome is 65.71 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Indilana gen. nov.

Candidatus Indilana (NL. fem. n. *Indilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *A52C2*. The type species for the genus is *Candidatus* Indilana innabifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indilana irredousia sp. nov.

Candidatus Indilana irredousia (NL. fem. n. *irredousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *A52C2 sp013812985*. The type genome for the species is the GenBank assembly GCA_013812985.1. The GC content of the type genome is 65.54 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Indilana remulatica sp. nov.

Candidatus Indilana remulatica (NL. fem. n. *remulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *A52C2 sp009866965*. The type genome for the species is the GenBank assembly RS_GCF_009866965.1. The GC content of the type genome is 69.03 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Indilaria detosax sp. nov.

Candidatus Indilaria detosax (NL. fem. n. *detosax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-38-12b sp001820175*. The type genome for the species is the GenBank assembly GCA_001820175.1. The GC content of the type genome is 41.82 % and the genome length is 0.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Indilaria gen. nov.

Candidatus Indilaria (NL. fem. n. *Indilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-38-12b*. The type species for the genus is *Candidatus* Indilaria detosax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indilaria mavorimonas sp. nov.

Candidatus Indilaria mavorimonas (NL. fem. n. *mavorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-38-12b sp001820255*. The type genome for the species is the GenBank assembly GCA_001820255.1. The GC content of the type genome is 38.06 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Indilella excalicella sp. nov.

Candidatus Indilella excalicella (NL. fem. n. *excalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHX01 sp012735215*. The type genome for the species is the GenBank assembly GCA_012735215.1. The GC content of the type genome is 35.2 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Indilella gen. nov.

Candidatus Indilella (NL. fem. n. *Indilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHX01*. The type species for the genus is *Candidatus* Indilella excalicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indilia cenodilega sp. nov.

Candidatus Indilia cenodilega (NL. fem. n. *cenodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13618 sp900753975*. The type genome for the species is the GenBank assembly RS_GCF_900753975.1. The GC content of the type genome is 31.24 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Indilia gen. nov.

Candidatus Indilia (NL. fem. n. *Indilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13618*. The type species for the genus is *Candidatus* Indilia cenodilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1234*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desucellaceae.

Description of *Candidatus* Indilida armigitio sp. nov.

Candidatus Indilida armigitio (NL. fem. n. *armigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AE-B3B sp005223085*. The type genome for the species is the GenBank assembly GCA_005223085.1. The GC content of the type genome is 43.1 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Indilida gen. nov.

Candidatus Indilida (NL. fem. n. *Indilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AE-B3B*. The type species for the genus is *Candidatus* Indilida armigitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AE-B3A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ciminariaceae.

Description of *Candidatus* Indilula adpagitia sp. nov.

Candidatus Indilula adpagitia (NL. fem. n. *adpagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBR01 sp013694825*. The type genome for the species is the GenBank assembly GCA_013694825.1. The GC content of the type genome is 70.11 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Indilula gen. nov.

Candidatus Indilula (NL. fem. n. *Indilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBR01*. The type species for the genus is *Candidatus* Indilula adpagitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Indipia viragastra sp. nov.

Candidatus Indipia viragastra (NL. fem. n. *viragastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WAJ17 sp014174515*. The type genome for the species is the GenBank assembly RS_GCF_014174515.1. The GC content of the type genome is 68.01 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Indipia gen. nov.

Candidatus Indipia (NL. fem. n. *Indipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WAJ17*. The type species for the genus is *Candidatus* Indipia viragastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indipida esculitas sp. nov.

Candidatus Indipida esculitas (NL. fem. n. *esculitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYB2-FULL-32-7 sp001787465*. The type genome for the species is the GenBank assembly GCA_001787465.1. The GC content of the type genome is 31.39 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Indipida gen. nov.

Candidatus Indipida (NL. fem. n. *Indipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYB2-FULL-32-7*. The type species for the genus is *Candidatus* Indipida esculitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-33-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticosaceae.

Description of *Candidatus* Indiposa admoribula sp. nov.

Candidatus Indiposa admoribula (NL. fem. n. *admoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-41-16 sp000996695*. The type genome for the species is the GenBank assembly GCA_000996695.1. The GC content of the type genome is 41.17 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Indiposa gen. nov.

Candidatus Indiposa (NL. fem. n. *Indiposa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-41-16*. The type species for the genus is *Candidatus* Indiposa admoribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indiposa anancilenta sp. nov.

Candidatus Indiposa anancilenta (NL. fem. n. *anancilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-41-16 sp903831405*. The type genome for the species is the GenBank assembly GCA_903831405.1. The GC content of the type genome is 37.98 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Indipula necopitio sp. nov.

Candidatus Indipula necopitio (NL. fem. n. *necopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NHYN01 sp003288845*. The type genome for the species is the GenBank assembly RS_GCF_003288845.1. The GC content of the type genome is 35.33 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Indipula gen. nov.

Candidatus Indipula (NL. fem. n. *Indipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NHYN01*. The type species for the genus is *Candidatus* Indipula necopitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indiraria excaredo sp. nov.

Candidatus Indiraria excaredo (NL. fem. n. *excaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTX01 sp002069975*. The type genome for the species is the GenBank assembly GCA_002069975.1. The GC content of the type genome is 33.92 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Indiraria gen. nov.

Candidatus Indiraria (NL. fem. n. *Indiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQTX01*. The type species for the genus is *Candidatus* Indiraria excaredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Veridariaceae.

Description of *Candidatus* Indiraria invesitura sp. nov.

Candidatus Indiraria invesitura (NL. fem. n. *invesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTX01 sp009786075*. The type genome for the species is the GenBank assembly GCA_009786075.1. The GC content of the type genome is 38.95 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Indirella anactentia sp. nov.

Candidatus Indirella anactentia (NL. fem. n. *anactentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFKA01 sp013299115*. The type genome for the species is the GenBank assembly GCA_013299115.1. The GC content of the type genome is 38.52 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Indirella gen. nov.

Candidatus Indirella (NL. fem. n. *Indirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAFKA01*. The type species for the genus is *Candidatus* Indirella anactentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indiria feficibula sp. nov.

Candidatus Indiria feficibula (NL. fem. n. *feficibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUU01 sp009781925*. The type genome for the species is the GenBank assembly GCA_009781925.1. The GC content of the type genome is 57.91 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Indiria gen. nov.

Candidatus Indiria (NL. fem. n. *Indiria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQUU01*. The type species for the genus is *Candidatus* Indiria feficibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indirosa vinulimonia sp. nov.

Candidatus Indirosa vinulimonia (NL. fem. n. *vinulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB21 sp001567305*. The type genome for the species is the GenBank assembly GCA_001567305.1. The GC content of the type genome is 38.46 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Indirosa gen. nov.

Candidatus Indirosa (NL. fem. n. *Indirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *OLB21*. The type species for the genus is *Candidatus* Indirosa vinulimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nutamiaceae.

Description of *Candidatus* Indirula perexatio sp. nov.

Candidatus Indirula perexatio (NL. fem. n. *perexatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2561 sp002340355*. The type genome for the species is the GenBank assembly GCA_002340355.1. The GC content of the type genome is 34.32 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Indirula gen. nov.

Candidatus Indirula (NL. fem. n. *Indirula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2561*. The type species for the genus is *Candidatus* Indirula perexatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indivana cobalentia sp. nov.

Candidatus Indivana cobalentia (NL. fem. n. *cobalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBK01 sp009695205*. The type genome for the species is the GenBank assembly GCA_009695205.1. The GC content of the type genome is 58.32 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Indivana gen. nov.

Candidatus Indivana (NL. fem. n. *Indivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBK01*. The type species for the genus is *Candidatus* Indivana

cobalentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Indivaria antecatica sp. nov.

Candidatus Indivaria antecatica (NL. fem. n. *antecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVK01 sp011328795*. The type genome for the species is the GenBank assembly GCA_011328795.1. The GC content of the type genome is 47.09 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Indivaria gen. nov.

Candidatus Indivaria (NL. fem. n. *Indivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVK01*. The type species for the genus is *Candidatus* Indivaria antecatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYCZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemellaceae.

Description of *Candidatus* Indivella aprugisca sp. nov.

Candidatus Indivella aprugisca (NL. fem. n. *aprugisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-49 sp007116605*. The type genome for the species is the GenBank assembly GCA_007116605.1. The GC content of the type genome is 35.81 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Indivella gen. nov.

Candidatus Indivella (NL. fem. n. *Indivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CSBR16-49*. The type species for the genus is *Candidatus* Indivella aprugisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indivosa agricitura sp. nov.

Candidatus Indivosa agricitura (NL. fem. n. *agricitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2727315 sp002727315*. The type genome for the species is the GenBank assembly GCA_002727315.1. The GC content of the type genome is 63.15 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Indivosa gen. nov.

Candidatus Indivosa (NL. fem. n. *Indivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2727315*. The type species for the genus is *Candidatus* Indivosa agricitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Indivula ermelitas sp. nov.

Candidatus Indivula ermelitas (NL. fem. n. *ermelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSG01 sp007130545*. The type genome for the species is the GenBank assembly GCA_007130545.1. The GC content of the type genome is 53.28 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Indivula gen. nov.

Candidatus Indivula (NL. fem. n. *Indivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSG01*. The type species for the genus is *Candidatus* Indivula

ermelitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Indivula offuledo sp. nov.

Candidatus Indivula offuledo (NL. fem. n. *offuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSG01 sp007132865*. The type genome for the species is the GenBank assembly GCA_007132865.1. The GC content of the type genome is 52.48 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Indomella encolax sp. nov.

Candidatus Indomella encolax (NL. fem. n. *encolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1353 sp003153655*. The type genome for the species is the GenBank assembly GCA_003153655.1. The GC content of the type genome is 57.02 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Indomella gen. nov.

Candidatus Indomella (NL. fem. n. *Indomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1353*. The type species for the genus is *Candidatus* Indomella encolax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Indomia ingurax sp. nov.

Candidatus Indomia ingurax (NL. fem. n. *ingurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-55 sp003232855*. The type genome for the species is the GenBank assembly GCA_003232855.1. The GC content of the type genome is 60.1 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Indomia gen. nov.

Candidatus Indomia (NL. fem. n. *Indomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-55*. The type species for the genus is *Candidatus* Indomia ingurax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Indomida inrevatio sp. nov.

Candidatus Indomida inrevatio (NL. fem. n. *inrevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-41 sp003233075*. The type genome for the species is the GenBank assembly GCA_003233075.1. The GC content of the type genome is 38.71 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Indomida gen. nov.

Candidatus Indomida (NL. fem. n. *Indomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-41*. The type species for the genus is *Candidatus* Indomida inrevatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipulaceae.

Description of *Candidatus* Indomosa butubitoga sp. nov.

Candidatus Indomosa butubitoga (NL. fem. n. *butubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTL01 sp011390735*. The type genome for the species is the GenBank assembly GCA_011390735.1. The GC content of the type genome is 74.0 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Indomosa gen. nov.

Candidatus Indomosa (NL. fem. n. *Indomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTL01*. The type species for the genus is *Candidatus* Indomosa butubitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indomosa inheritia sp. nov.

Candidatus Indomosa inheritia (NL. fem. n. *inheritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTL01 sp011389865*. The type genome for the species is the GenBank assembly GCA_011389865.1. The GC content of the type genome is 73.27 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Indomosa petulatio sp. nov.

Candidatus Indomosa petulatio (NL. fem. n. *petulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTL01 sp011390455*. The type genome for the species is the GenBank assembly GCA_011390455.1. The GC content of the type genome is 73.31 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Indomosa retunax sp. nov.

Candidatus Indomosa retunax (NL. fem. n. *retunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTL01 sp011390675*. The type genome for the species is the

GenBank assembly GCA_011390675.1. The GC content of the type genome is 72.91 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Indomula rutabetta sp. nov.

Candidatus Indomula rutabetta (NL. fem. n. *rutabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXIZ01 sp005779525*. The type genome for the species is the GenBank assembly GCA_005779525.1. The GC content of the type genome is 44.87 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Indomula gen. nov.

Candidatus Indomula (NL. fem. n. *Indomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXIZ01*. The type species for the genus is *Candidatus* Indomula rutabetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indomula vicatax sp. nov.

Candidatus Indomula vicatax (NL. fem. n. *vicatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXIZ01 sp013141155*. The type genome for the species is the GenBank assembly GCA_013141155.1. The GC content of the type genome is 44.79 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Indotana alticedo sp. nov.

Candidatus Indotana alticedo (NL. fem. n. *alticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBMRC-2046 sp009826895*. The type genome for the species is the GenBank assembly RS_GCF_009826895.1. The GC content of the type genome is 60.82 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Indotana gen. nov.

Candidatus Indotana (NL. fem. n. *Indotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GBMRC-2046*. The type species for the genus is *Candidatus* Indotana alticedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indotana decatitia sp. nov.

Candidatus Indotana decatitia (NL. fem. n. *decatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBMRC-2046 sp013266695*. The type genome for the species is the GenBank assembly RS_GCF_013266695.1. The GC content of the type genome is 60.77 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Indotana menapetta sp. nov.

Candidatus Indotana menapetta (NL. fem. n. *menapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBMRC-2046 sp014050225*. The type genome for the species is the GenBank assembly RS_GCF_014050225.1. The GC content of the type genome is 63.31 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Indotaria visibentia sp. nov.

Candidatus Indotaria visibentia (NL. fem. n. *visibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIL01 sp011334485*. The type genome for the species is the GenBank assembly GCA_011334485.1. The GC content of the type genome is 39.08 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Indotaria gen. nov.

Candidatus Indotaria (NL. fem. n. *Indotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIL01*. The type species for the genus is *Candidatus* Indotaria visibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Indotia benivitudo sp. nov.

Candidatus Indotia benivitudo (NL. fem. n. *benivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMME01 sp013817545*. The type genome for the species is the GenBank assembly GCA_013817545.1. The GC content of the type genome is 60.78 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Indotia gen. nov.

Candidatus Indotia (NL. fem. n. *Indotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMME01*. The type species for the genus is *Candidatus* Indotia benivitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indotia linigilenta sp. nov.

Candidatus Indotia linigilenta (NL. fem. n. *linigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMME01 sp014379205*. The type genome for the species is the GenBank assembly GCA_014379205.1. The GC content of the type genome is 60.31 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Indotida canacisca sp. nov.

Candidatus Indotida canacisca (NL. fem. n. *canacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZC01 sp009692505*. The type genome for the species is the GenBank assembly GCA_009692505.1. The GC content of the type genome is 67.24 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Indotida gen. nov.

Candidatus Indotida (NL. fem. n. *Indotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZC01*. The type species for the genus is *Candidatus* Indotida canacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democellaceae.

Description of *Candidatus* Indotula arnogitura sp. nov.

Candidatus Indotula arnogitura (NL. fem. n. *arnogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QFNR01 sp003248485*. The type genome for the species is the GenBank assembly GCA_003248485.1. The GC content of the type genome is 39.83 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Indotula gen. nov.

Candidatus Indotula (NL. fem. n. *Indotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QFNR01*. The type species for the genus is *Candidatus* Indotula arnogitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indubana adtiligena sp. nov.

Candidatus Indubana adtiligena (NL. fem. n. *adtiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1155 sp002067405*. The type genome for the species is the GenBank assembly GCA_002067405.1. The GC content of the type genome is 53.82 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Indubana gen. nov.

Candidatus Indubana (NL. fem. n. *Indubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1155*. The type species for the genus is *Candidatus* Indubana adtiligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefellaceae.

Description of *Candidatus* Indubana immigimonas sp. nov.

Candidatus Indubana immigimonas (NL. fem. n. *immigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1155 sp003165115*. The type genome for the species is the GenBank assembly GCA_003165115.1. The GC content of the type genome is 58.82 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Indubaria allobessa sp. nov.

Candidatus Indubaria allobessa (NL. fem. n. *allobessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBA01 sp013360745*. The type genome for the species is the GenBank assembly GCA_013360745.1. The GC content of the type genome is 62.95 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Indubaria gen. nov.

Candidatus Indubaria (NL. fem. n. *Indubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBA01*. The type species for the genus is *Candidatus* Indubaria

allobessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Indubella selibisca sp. nov.

Candidatus Indubella selibisca (NL. fem. n. *selibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CHKCI001 sp900045905*. The type genome for the species is the GenBank assembly RS_GCF_900045905.1. The GC content of the type genome is 35.75 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Indubella gen. nov.

Candidatus Indubella (NL. fem. n. *Indubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CHKCI001*. The type species for the genus is *Candidatus* Indubella selibisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indubia spastitas sp. nov.

Candidatus Indubia spastitas (NL. fem. n. *spastitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLOWO2-02-64-14 sp001770325*. The type genome for the species is the GenBank assembly GCA_001770325.1. The GC content of the type genome is 64.19 % and the genome length is 3.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; 10% subassembly".

Description of *Candidatus* Indubia gen. nov.

Candidatus Indubia (NL. fem. n. *Indubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PLOWO2-02-64-14*. The type species for the genus is *Candidatus* Indubia spastitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Indubida admuletta sp. nov.

Candidatus Indubida admuletta (NL. fem. n. *admuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12871 sp902783445*. The type genome for the species is the GenBank assembly GCA_902783445.1. The GC content of the type genome is 38.71 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Indubida gen. nov.

Candidatus Indubida (NL. fem. n. *Indubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12871*. The type species for the genus is *Candidatus* Indubida admuletta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indubosa inculitoga sp. nov.

Candidatus Indubosa inculitoga (NL. fem. n. *inculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W-Chloroflexi-9 sp002840675*. The type genome for the species is the GenBank assembly GCA_002840675.1. The GC content of the type genome is 69.66 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Indubosa gen. nov.

Candidatus Indubosa (NL. fem. n. *Indubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W-Chloroflexi-9*. The type species for the genus is *Candidatus* Indubosa

inculitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Indupana ducilitura sp. nov.

Candidatus Indupana ducilitura (NL. fem. n. *ducilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFNH01 sp001781995*. The type genome for the species is the GenBank assembly GCA_001781995.1. The GC content of the type genome is 35.34 % and the genome length is 1.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Indupana gen. nov.

Candidatus Indupana (NL. fem. n. *Indupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFNH01*. The type species for the genus is *Candidatus* Indupana ducilitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Indupella arundicula sp. nov.

Candidatus Indupella arundicula (NL. fem. n. *arundicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRVL01 sp011374065*. The type genome for the species is the GenBank assembly GCA_011374065.1. The GC content of the type genome is 32.83 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Indupella gen. nov.

Candidatus Indupella (NL. fem. n. *Indupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRVL01*. The type species for the genus is *Candidatus* Indupella arundicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABLXN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunidaceae.

Description of *Candidatus* Indupia venunisca sp. nov.

Candidatus Indupia venunisca (NL. fem. n. *venunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-A19 sp003216155*. The type genome for the species is the GenBank assembly GCA_003216155.1. The GC content of the type genome is 40.15 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Indupia gen. nov.

Candidatus Indupia (NL. fem. n. *Indupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-A19*. The type species for the genus is *Candidatus* Indupia venunisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Indupida inhosilenta sp. nov.

Candidatus Indupida inhosilenta (NL. fem. n. *inhosilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKH01 sp011333545*. The type genome for the species is the GenBank assembly GCA_011333545.1. The GC content of the type genome is 39.49 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Indupida gen. nov.

Candidatus Indupida (NL. fem. n. *Indupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKH01*. The type species for the genus is *Candidatus* Indupida inhosilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Indupula excinilega sp. nov.

Candidatus Indupula excinilega (NL. fem. n. *excinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBS01 sp012718855*. The type genome for the species is the GenBank assembly GCA_012718855.1. The GC content of the type genome is 41.3 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Indupula gen. nov.

Candidatus Indupula (NL. fem. n. *Indupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBS01*. The type species for the genus is *Candidatus* Indupula excinilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Induvana abindugo sp. nov.

Candidatus Induvana abindugo (NL. fem. n. *abindugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED165 sp002171035*. The type genome for the species is the GenBank assembly GCA_002171035.2. The GC content of the type genome is 28.79 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Induvana gen. nov.

Candidatus Induvana (NL. fem. n. *Induvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *TMED165*. The type species for the genus is *Candidatus* Induvana abindugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Induvaria cenoditoga sp. nov.

Candidatus Induvaria cenoditoga (NL. fem. n. *cenoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M2408 sp006226425*. The type genome for the species is the GenBank assembly GCA_006226425.1. The GC content of the type genome is 42.94 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Induvaria gen. nov.

Candidatus Induvaria (NL. fem. n. *Induvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M2408*. The type species for the genus is *Candidatus* Induvaria cenoditoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Induvella bipalicula sp. nov.

Candidatus Induvella bipalicula (NL. fem. n. *bipalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FL481 sp006508105*. The type genome for the species is the GenBank assembly GCA_006508105.1. The GC content of the type genome is 66.13 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Induvella gen. nov.

Candidatus Induvella (NL. fem. n. *Induvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FL481*. The type species for the genus is *Candidatus* Induvella bipalicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Induvosa viragitrix sp. nov.

Candidatus Induvosa viragitrix (NL. fem. n. *viragitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQM01 sp903873945*. The type genome for the species is the GenBank assembly GCA_903873945.1. The GC content of the type genome is 57.56 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Induvosa gen. nov.

Candidatus Induvosa (NL. fem. n. *Induvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQQM01*. The type species for the genus is *Candidatus* Induvosa viragitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Induvula remulicula sp. nov.

Candidatus Induvula remulicula (NL. fem. n. *remulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-270 sp003132825*. The type genome for the species is the GenBank assembly GCA_003132825.1. The GC content of the type genome is 59.88 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Induvula gen. nov.

Candidatus Induvula (NL. fem. n. *Induvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-270*. The type species for the genus is *Candidatus* Induvula remulicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inediibacterium daduciforma sp. nov.

Candidatus Inediibacterium daduciforma (NL. fem. n. *daduciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Inediibacterium sp004138215*. The type genome for the species is the GenBank assembly RS_GCF_004138215.1. The GC content of the type genome is 29.42 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Ineffana enharitudo sp. nov.

Candidatus Ineffana enharitudo (NL. fem. n. *enharitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRO6 sp003576765*. The type genome for the species is the GenBank assembly GCA_003576765.1. The GC content of the type genome is 67.02 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Ineffana gen. nov.

Candidatus Ineffana (NL. fem. n. *Ineffana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRO6*. The type species for the genus is *Candidatus* Ineffana enharitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ineffella cilicitudo sp. nov.

Candidatus Ineffella cilicitudo (NL. fem. n. *cilicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-64-23 sp001770575*. The type genome for the species is the GenBank assembly GCA_001770575.1. The GC content of the type genome is 63.83 % and the genome length is 3.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Ineffella gen. nov.

Candidatus Ineffella (NL. fem. n. *Ineffella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-64-23*. The type species for the genus is *Candidatus* Ineffella cilicitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Ineffella infirilenta sp. nov.

Candidatus Ineffella infirilenta (NL. fem. n. *infirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-64-23 sp004298385*. The type genome for the species is the GenBank assembly GCA_004298385.1. The GC content of the type genome is 62.95 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Ineffella pacifitrix sp. nov.

Candidatus Ineffella pacifitrix (NL. fem. n. *pacifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-64-23 sp012274205*. The type genome for the species is the GenBank assembly GCA_012274205.1. The GC content of the type genome is 64.78 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Ineffella rosacitica sp. nov.

Candidatus Ineffella rosacitica (NL. fem. n. *rosacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-64-23 sp007280315*. The type genome for the species is the GenBank assembly GCA_007280315.1. The GC content of the type genome is 62.15 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Ineffida egregibula sp. nov.

Candidatus Ineffida egregibula (NL. fem. n. *egregibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2286 sp004348925*. The type genome for the species is the GenBank assembly GCA_004348925.1. The GC content of the type genome is 64.85 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Ineffida gen. nov.

Candidatus Ineffida (NL. fem. n. *Ineffida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2286*. The type species for the genus is *Candidatus* Ineffida egregibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Ineffida laculitio sp. nov.

Candidatus Ineffida laculitio (NL. fem. n. *laculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2286 sp002841355*. The type genome for the species is the GenBank assembly GCA_002841355.1. The GC content of the type genome is 64.4 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Ineffida rubefousia sp. nov.

Candidatus Ineffida rubefousia (NL. fem. n. *rubefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2286 sp002345925*. The type genome for the species is the GenBank assembly GCA_002345925.1. The GC content of the type genome is 61.86 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Ineffida telegago sp. nov.

Candidatus Ineffida telegago (NL. fem. n. *telegago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2286 sp002841295*. The type genome for the species is the GenBank assembly GCA_002841295.1. The GC content of the type genome is 62.15 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Ineffosa coninifica sp. nov.

Candidatus Ineffosa coninifica (NL. fem. n. *coninifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTV01 sp009377535*. The type genome for the species is the GenBank assembly GCA_009377535.1. The GC content of the type genome is 67.36 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Ineffosa gen. nov.

Candidatus Ineffosa (NL. fem. n. *Ineffosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTV01*. The type species for the genus is *Candidatus* Ineffosa coninifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ineffula colopugo sp. nov.

Candidatus Ineffula colopugo (NL. fem. n. *colopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5851 sp002431635*. The type genome for the species is the GenBank assembly GCA_002431635.1. The GC content of the type genome is 37.33 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Ineffula gen. nov.

Candidatus Ineffula (NL. fem. n. *Ineffula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5851*. The type species for the genus is *Candidatus* Ineffula

colopugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergana amnigousia sp. nov.

Candidatus Inergana amnigousia (NL. fem. n. *amnigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKY01 sp011333485*. The type genome for the species is the GenBank assembly GCA_011333485.1. The GC content of the type genome is 58.8 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Inergana gen. nov.

Candidatus Inergana (NL. fem. n. *Inergana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKY01*. The type species for the genus is *Candidatus* Inergana amnigousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergaria illuvastra sp. nov.

Candidatus Inergaria illuvastra (NL. fem. n. *illuvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1487 sp900552225*. The type genome for the species is the GenBank assembly GCA_900552225.1. The GC content of the type genome is 61.32 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Inergaria gen. nov.

Candidatus Inergaria (NL. fem. n. *Inergaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1487*. The type species for the genus is *Candidatus* Inergaria illuvastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergella adnepibula sp. nov.

Candidatus Inergella adnepibula (NL. fem. n. *adnepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-394 sp011370245*. The type genome for the species is the GenBank assembly GCA_011370245.1. The GC content of the type genome is 61.41 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Inergella gen. nov.

Candidatus Inergella (NL. fem. n. *Inergella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-394*. The type species for the genus is *Candidatus* Inergella adnepibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludidaceae.

Description of *Candidatus* Inergia proclousia sp. nov.

Candidatus Inergia proclousia (NL. fem. n. *proclousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REEB01 sp007695295*. The type genome for the species is the GenBank assembly GCA_007695295.1. The GC content of the type genome is 65.12 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Inergia gen. nov.

Candidatus Inergia (NL. fem. n. *Inergia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REEB01*. The type species for the genus is *Candidatus* Inergia proclousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergida ecastilega sp. nov.

Candidatus Inergida ecastilega (NL. fem. n. *ecastilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXR01 sp013696915*. The type genome for the species is the GenBank assembly GCA_013696915.1. The GC content of the type genome is 72.86 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Inergida gen. nov.

Candidatus Inergida (NL. fem. n. *Inergida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXR01*. The type species for the genus is *Candidatus* Inergida ecastilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergosa nimirivita sp. nov.

Candidatus Inergosa nimirivita (NL. fem. n. *nimirivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9676 sp003541285*. The type genome for the species is the GenBank assembly GCA_003541285.1. The GC content of the type genome is 69.68 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Inergosa gen. nov.

Candidatus Inergosa (NL. fem. n. *Inergosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9676*. The type species for the genus is *Candidatus* Inergosa nimirivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergula anamnastra sp. nov.

Candidatus Inergula anamnastra (NL. fem. n. *anamnastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7672 sp903831255*. The type genome for the species is the GenBank assembly GCA_903831255.1. The GC content of the type genome is 61.99 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Inergula gen. nov.

Candidatus Inergula (NL. fem. n. *Inergula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7672*. The type species for the genus is *Candidatus* Inergula anamnastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inergula aplesimonas sp. nov.

Candidatus Inergula aplesimonas (NL. fem. n. *aplesimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7672 sp002280725*. The type genome for the species is the GenBank assembly GCA_002280725.1. The GC content of the type genome is 64.37 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Inergula cenotatica sp. nov.

Candidatus Inergula cenotatica (NL. fem. n. *cenotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7672 sp903831485*. The type genome for the species is the GenBank assembly GCA_903831485.1. The GC content of the type genome is 65.0 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Inergula desulifica sp. nov.

Candidatus Inergula desulifica (NL. fem. n. *desulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7672 sp903842595*. The type genome for the species is the

GenBank assembly GCA_903842595.1. The GC content of the type genome is 63.65 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Inergula fraglitas sp. nov.

Candidatus Inergula fraglitas (NL. fem. n. *fraglitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7672 sp002483135*. The type genome for the species is the GenBank assembly GCA_002483135.1. The GC content of the type genome is 63.81 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Inexcana illuvago sp. nov.

Candidatus Inexcana illuvago (NL. fem. n. *illuvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWBJ01 sp002069525*. The type genome for the species is the GenBank assembly GCA_002069525.1. The GC content of the type genome is 33.67 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Inexcana gen. nov.

Candidatus Inexcana (NL. fem. n. *Inexcana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWBJ01*. The type species for the genus is *Candidatus* Inexcana illuvago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomulaceae.

Description of *Candidatus* Inexcaria opercivita sp. nov.

Candidatus Inexcaria opercivita (NL. fem. n. *opercivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZE01 sp902812465*. The type genome for the species is the GenBank assembly RS_GCF_902812465.1. The GC content of the type genome is 61.75

% and the genome length is 3.92 Mbp.

Description of *Candidatus* Inexcaria gen. nov.

Candidatus Inexcaria (NL. fem. n. *Inexcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZE01*. The type species for the genus is *Candidatus* Inexcaria opercivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Inexcella clancax sp. nov.

Candidatus Inexcella clancax (NL. fem. n. *clancax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14240 sp902797125*. The type genome for the species is the GenBank assembly GCA_902797125.1. The GC content of the type genome is 51.81 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Inexcella gen. nov.

Candidatus Inexcella (NL. fem. n. *Inexcella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14240*. The type species for the genus is *Candidatus* Inexcella clancax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Inexcia tranvisca sp. nov.

Candidatus Inexcia tranvisca (NL. fem. n. *tranvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMNT01 sp013203595*. The type genome for the species is the

GenBank assembly GCA_013203595.1. The GC content of the type genome is 56.69 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Inexcia gen. nov.

Candidatus Inexcia (NL. fem. n. *Inexcia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMNT01*. The type species for the genus is *Candidatus* Inexcia tranvisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Inexcosa vinulax sp. nov.

Candidatus Inexcosa vinulax (NL. fem. n. *vinulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin14 sp004377355*. The type genome for the species is the GenBank assembly GCA_004377355.1. The GC content of the type genome is 36.22 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Inexcosa gen. nov.

Candidatus Inexcosa (NL. fem. n. *Inexcosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E29-bin14*. The type species for the genus is *Candidatus* Inexcosa vinulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogosaceae.

Description of *Candidatus* Inexcula crabrastra sp. nov.

Candidatus Inexcula crabrastra (NL. fem. n. *crabrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADDYR01 sp902810765*. The type genome for the species is the GenBank assembly RS_GCF_902810765.1. The GC content of the type genome is 67.42 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Inexcula gen. nov.

Candidatus Inexcula (NL. fem. n. *Inexcula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYR01*. The type species for the genus is *Candidatus* Inexcula crabrastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexpana cinipilega sp. nov.

Candidatus Inexpana cinipilega (NL. fem. n. *cinipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PMG-095 sp004193285*. The type genome for the species is the GenBank assembly GCA_004193285.1. The GC content of the type genome is 67.1 % and the genome length is 8.66 Mbp.

Description of *Candidatus* Inexpana gen. nov.

Candidatus Inexpana (NL. fem. n. *Inexpana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PMG-095*. The type species for the genus is *Candidatus* Inexpana cinipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexpana refulax sp. nov.

Candidatus Inexpana refulax (NL. fem. n. *refulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PMG-095 sp903642325*. The type genome for the species is the GenBank assembly RS_GCF_903642325.1. The GC content of the type genome is 63.72 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Inexparia seposessa sp. nov.

Candidatus Inexparia seposessa (NL. fem. n. *seposessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-000287335 sp000287335*. The type genome for the species is the GenBank assembly RS_GCF_000287335.1. The GC content of the type genome is 43.29 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Inexparia gen. nov.

Candidatus Inexparia (NL. fem. n. *Inexparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-000287335*. The type species for the genus is *Candidatus* Inexparia seposessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexpella infacifica sp. nov.

Candidatus Inexpella infacifica (NL. fem. n. *infacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J075 sp003695285*. The type genome for the species is the GenBank assembly GCA_003695285.1. The GC content of the type genome is 43.5 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Inexpella gen. nov.

Candidatus Inexpella (NL. fem. n. *Inexpella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J075*. The type species for the genus is *Candidatus* Inexpella infacifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diluvidaceae.

Description of *Candidatus* Inexpia ermelitica sp. nov.

Candidatus Inexpia ermelitica (NL. fem. n. *ermelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBR01 sp013360405*. The type genome for the species is the GenBank assembly GCA_013360405.1. The GC content of the type genome is 50.15 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Inexpia gen. nov.

Candidatus Inexpia (NL. fem. n. *Inexpia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBR01*. The type species for the genus is *Candidatus* Inexpia ermelitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexpida defenastra sp. nov.

Candidatus Inexpida defenastra (NL. fem. n. *defenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1934 sp002068855*. The type genome for the species is the GenBank assembly GCA_002068855.1. The GC content of the type genome is 58.96 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Inexpida gen. nov.

Candidatus Inexpida (NL. fem. n. *Inexpida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1934*. The type species for the genus is *Candidatus* Inexpida defenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexpida utputifica sp. nov.

Candidatus Inexpida utputifica (NL. fem. n. *utputifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1934 sp002337055*. The type genome for the species is the GenBank assembly GCA_002337055.1. The GC content of the type genome is 60.85 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Inexsana lenunivita sp. nov.

Candidatus Inexsana lenunivita (NL. fem. n. *lenunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11540 sp003445125*. The type genome for the species is the GenBank assembly GCA_003445125.1. The GC content of the type genome is 52.06 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Inexsana gen. nov.

Candidatus Inexsana (NL. fem. n. *Inexsana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11540*. The type species for the genus is *Candidatus* Inexsana lenunivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexsaria sifunifica sp. nov.

Candidatus Inexsaria sifunifica (NL. fem. n. *sifunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2749205 sp002749205*. The type genome for the species is the GenBank assembly GCA_002749205.1. The GC content of the type genome is 36.25 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Inexsaria gen. nov.

Candidatus Inexsaria (NL. fem. n. *Inexsaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2749205*. The type species for the genus is *Candidatus* Inexsaria sifunifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inexsella biparilega sp. nov.

Candidatus Inexsella biparilega (NL. fem. n. *biparilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHAD01 sp002841595*. The type genome for the species is the GenBank assembly GCA_002841595.1. The GC content of the type genome is 38.81 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Inexsella gen. nov.

Candidatus Inexsella (NL. fem. n. *Inexsella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHAD01*. The type species for the genus is *Candidatus* Inexsella biparilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRI-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Latibellaceae.

Description of *Candidatus* Inexsia fumacitura sp. nov.

Candidatus Inexsia fumacitura (NL. fem. n. *fumacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPJV01 sp006844765*. The type genome for the species is the GenBank assembly GCA_006844765.1. The GC content of the type genome is 56.75 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Inexsia gen. nov.

Candidatus Inexsia (NL. fem. n. *Inexsia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPJV01*. The type species for the genus is *Candidatus* Inexsia fumacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-2696645. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubecidaceae.

Description of *Candidatus* Inexsida defaniforma sp. nov.

Candidatus Inexsida defaniforma (NL. fem. n. *defaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEB01 sp011176655*. The type genome for the species is the GenBank assembly GCA_011176655.1. The GC content of the type genome is 57.36 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Inexsida gen. nov.

Candidatus Inexsida (NL. fem. n. *Inexsida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEB01*. The type species for the genus is *Candidatus* Inexsida defaniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Inexsula delapax sp. nov.

Candidatus Inexsula delapax (NL. fem. n. *delapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDY01 sp013287365*. The type genome for the species is the GenBank assembly GCA_013287365.1. The GC content of the type genome is 47.34 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Inexsula gen. nov.

Candidatus Inexsula (NL. fem. n. *Inexsula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDY01*. The type species for the genus is *Candidatus* Inexsula delapax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infabana pocilousia sp. nov.

Candidatus Infabana pocilousia (NL. fem. n. *pocilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077526 sp001464765*. The type genome for the species is the GenBank assembly GCA_001464765.1. The GC content of the type genome is 66.1 % and the genome length is 6.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Infabana gen. nov.

Candidatus Infabana (NL. fem. n. *Infabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077526*. The type species for the genus is *Candidatus* Infabana pocilousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077523*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turifiaceae.

Description of *Candidatus* Infabana rorulugo sp. nov.

Candidatus Infabana rorulugo (NL. fem. n. *rorulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077526 sp001464895*. The type genome for the species is the GenBank assembly GCA_001464895.1. The GC content of the type genome is 67.01 % and the genome length is 4.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Infabaria excanilega sp. nov.

Candidatus Infabaria excanilega (NL. fem. n. *excanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFT01 sp902826685*. The type genome for the species is the GenBank assembly GCA_902826685.1. The GC content of the type genome is 63.1 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Infabaria gen. nov.

Candidatus Infabaria (NL. fem. n. *Infabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFT01*. The type species for the genus is *Candidatus* Infabaria excanilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infabella ignicitia sp. nov.

Candidatus Infabella ignicitia (NL. fem. n. *ignicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHLJ01 sp003712055*. The type genome for the species is the GenBank assembly GCA_003712055.1. The GC content of the type genome is 39.92 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Infabella gen. nov.

Candidatus Infabella (NL. fem. n. *Infabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHLJ01*. The type species for the genus is *Candidatus* Infabella ignicitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infabia enharibra sp. nov.

Candidatus Infabia enharibra (NL. fem. n. *enharibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWX01 sp011368065*. The type genome for the species is the

GenBank assembly GCA_011368065.1. The GC content of the type genome is 56.59 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Infabia gen. nov.

Candidatus Infabia (NL. fem. n. *Infabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWX01*. The type species for the genus is *Candidatus* Infabia enharibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabidaceae.

Description of *Candidatus* Infabida ridibilenta sp. nov.

Candidatus Infabida ridibilenta (NL. fem. n. *ridibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQZE01 sp009780875*. The type genome for the species is the GenBank assembly GCA_009780875.1. The GC content of the type genome is 44.18 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Infabida gen. nov.

Candidatus Infabida (NL. fem. n. *Infabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQZE01*. The type species for the genus is *Candidatus* Infabida ridibilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Infabosa dilacibra sp. nov.

Candidatus Infabosa dilacibra (NL. fem. n. *dilacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAADFB01 sp013153095*. The type genome for the species is the GenBank assembly GCA_013153095.1. The GC content of the type genome is 36.58 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Infabosa gen. nov.

Candidatus Infabosa (NL. fem. n. *Infabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFB01*. The type species for the genus is *Candidatus* Infabosa dilacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infabula attubago sp. nov.

Candidatus Infabula attubago (NL. fem. n. *attubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJR01 sp014382495*. The type genome for the species is the GenBank assembly GCA_014382495.1. The GC content of the type genome is 33.62 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Infabula gen. nov.

Candidatus Infabula (NL. fem. n. *Infabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJR01*. The type species for the genus is *Candidatus* Infabula attubago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetanaceae.

Description of *Candidatus* Infacana sicubatio sp. nov.

Candidatus Infacana sicubatio (NL. fem. n. *sicubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFF01 sp012511845*. The type genome for the species is the

GenBank assembly GCA_012511845.1. The GC content of the type genome is 46.83 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Infacana gen. nov.

Candidatus Infacana (NL. fem. n. *Infacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFF01*. The type species for the genus is *Candidatus* Infacana sicubatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3636*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuliaceae.

Description of *Candidatus* Infacella agnicedo sp. nov.

Candidatus Infacella agnicedo (NL. fem. n. *agnicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAN01 sp013695385*. The type genome for the species is the GenBank assembly GCA_013695385.1. The GC content of the type genome is 68.08 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Infacella gen. nov.

Candidatus Infacella (NL. fem. n. *Infacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAN01*. The type species for the genus is *Candidatus* Infacella agnicedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infacosa cerofentia sp. nov.

Candidatus Infacosa cerofentia (NL. fem. n. *cerofentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2634385 sp002634385*. The type genome for the species is the GenBank assembly GCA_002634385.1. The GC content of the type genome is 55.93 %

and the genome length is 4.31 Mbp.

Description of *Candidatus* Infacosa gen. nov.

Candidatus Infacosa (NL. fem. n. *Infacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2634385*. The type species for the genus is *Candidatus* Infacosa cerofentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Infacula acricitia sp. nov.

Candidatus Infacula acricitia (NL. fem. n. *acricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699105 sp002699105*. The type genome for the species is the GenBank assembly GCA_002699105.1. The GC content of the type genome is 53.07 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Infacula gen. nov.

Candidatus Infacula (NL. fem. n. *Infacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699105*. The type species for the genus is *Candidatus* Infacula acricitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinariaceae.

Description of *Candidatus* Infanana oblivitudo sp. nov.

Candidatus Infanana oblivitudo (NL. fem. n. *oblivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTKG01 sp011524475*. The type genome for the species is the

GenBank assembly GCA_011524475.1. The GC content of the type genome is 57.92 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Infanana gen. nov.

Candidatus Infanana (NL. fem. n. *Infanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTKG01*. The type species for the genus is *Candidatus* Infanana oblivitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infanaria ignicigena sp. nov.

Candidatus Infanaria ignicigena (NL. fem. n. *ignicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747105 sp002747105*. The type genome for the species is the GenBank assembly GCA_002747105.1. The GC content of the type genome is 33.27 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Infanaria gen. nov.

Candidatus Infanaria (NL. fem. n. *Infanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747105*. The type species for the genus is *Candidatus* Infanaria ignicigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infania tenilitas sp. nov.

Candidatus Infania tenilitas (NL. fem. n. *tenilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G107 sp004213155*. The type genome for the species is the GenBank assembly GCA_004213155.1. The GC content of the type genome is 27.9 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Infania gen. nov.

Candidatus Infania (NL. fem. n. *Infania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G107*. The type species for the genus is *Candidatus* Infania tenilitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infanida dibucisca sp. nov.

Candidatus Infanida dibucisca (NL. fem. n. *dibucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQU01 sp012519055*. The type genome for the species is the GenBank assembly GCA_012519055.1. The GC content of the type genome is 35.65 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Infanida gen. nov.

Candidatus Infanida (NL. fem. n. *Infanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQU01*. The type species for the genus is *Candidatus* Infanida dibucisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infanosa manupessa sp. nov.

Candidatus Infanosa manupessa (NL. fem. n. *manupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCT01 sp013287985*. The type genome for the species is the GenBank assembly GCA_013287985.1. The GC content of the type genome is 49.4 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Infanosa gen. nov.

Candidatus Infanosa (NL. fem. n. *Infanosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCT01*. The type species for the genus is *Candidatus* Infanosa manupessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infanula ephipitoga sp. nov.

Candidatus Infanula ephipitoga (NL. fem. n. *ephipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-43-14 sp001771735*. The type genome for the species is the GenBank assembly GCA_001771735.1. The GC content of the type genome is 42.98 % and the genome length is 1.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Infanula gen. nov.

Candidatus Infanula (NL. fem. n. *Infanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-43-14*. The type species for the genus is *Candidatus* Infanula ephipitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Infatana exorbilenta sp. nov.

Candidatus Infatana exorbilenta (NL. fem. n. *exorbilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACHNP01 sp902581285*. The type genome for the species is the GenBank assembly GCA_902581285.1. The GC content of the type genome is 40.73 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Infatana gen. nov.

Candidatus Infatana (NL. fem. n. *Infatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACHNP01*. The type species for the genus is *Candidatus* Infatana exorbilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infataria adtemibra sp. nov.

Candidatus Infataria adtemibra (NL. fem. n. *adtemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1038 sp012512355*. The type genome for the species is the GenBank assembly GCA_012512355.1. The GC content of the type genome is 48.0 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Infataria gen. nov.

Candidatus Infataria (NL. fem. n. *Infataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1038*. The type species for the genus is *Candidatus* Infataria adtemibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Infataria catabatio sp. nov.

Candidatus Infataria catabatio (NL. fem. n. *catabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1038 sp012513645*. The type genome for the species is the GenBank assembly GCA_012513645.1. The GC content of the type genome is 62.76 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Infataria telegastra sp. nov.

Candidatus Infataria telegastra (NL. fem. n. *telegastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1038 sp002305755*. The type genome for the species is the GenBank assembly GCA_002305755.1. The GC content of the type genome is 61.36 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Infataria tomacicella sp. nov.

Candidatus Infataria tomacicella (NL. fem. n. *tomacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1038 sp012513735*. The type genome for the species is the GenBank assembly GCA_012513735.1. The GC content of the type genome is 59.69 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Infatella favilimonas sp. nov.

Candidatus Infatella favilimonas (NL. fem. n. *favilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-6312 sp000316685*. The type genome for the species is the GenBank assembly RS_GCF_000316685.1. The GC content of the type genome is 48.5 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fresh water".

Description of *Candidatus* Infatella gen. nov.

Candidatus Infatella (NL. fem. n. *Infatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-6312*. The type species for the genus is *Candidatus* Infatella favilimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infatula apsuretta sp. nov.

Candidatus Infatula apsuretta (NL. fem. n. *apsuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-672 sp003158705*. The type genome for the species is the GenBank assembly GCA_003158705.1. The GC content of the type genome is 68.09 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Infatula gen. nov.

Candidatus Infatula (NL. fem. n. *Infatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-672*. The type species for the genus is *Candidatus* Infatula apsuretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Infelana decunatio sp. nov.

Candidatus Infelana decunatio (NL. fem. n. *decunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6251 sp002441285*. The type genome for the species is the GenBank assembly GCA_002441285.1. The GC content of the type genome is 33.55 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Infelana gen. nov.

Candidatus Infelana (NL. fem. n. *Infelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6251*. The type species for the genus is *Candidatus* Infelana decunatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *34-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefosaceae.

Description of *Candidatus* Infelaria defasivita sp. nov.

Candidatus Infelaria defasivita (NL. fem. n. *defasivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIB01 sp012744295*. The type genome for the species is the GenBank assembly GCA_012744295.1. The GC content of the type genome is 49.82 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Infelaria gen. nov.

Candidatus Infelaria (NL. fem. n. *Infelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYIB01*. The type species for the genus is *Candidatus* Infelaria defasivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infelia taraxiforma sp. nov.

Candidatus Infelia taraxiforma (NL. fem. n. *taraxiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXN01 sp009784815*. The type genome for the species is the GenBank assembly GCA_009784815.1. The GC content of the type genome is 49.33 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Infelia gen. nov.

Candidatus Infelia (NL. fem. n. *Infelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXN01*. The type species for the genus is *Candidatus* Infelia taraxiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapiaceae.

Description of *Candidatus* Infelida utpotugo sp. nov.

Candidatus Infelida utpotugo (NL. fem. n. *utpotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13077 sp902785485*. The type genome for the species is the GenBank assembly GCA_902785485.1. The GC content of the type genome is 52.25 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Infelida gen. nov.

Candidatus Infelida (NL. fem. n. *Infelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13077*. The type species for the genus is *Candidatus* Infelida utpotugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Infelosa lapilitas sp. nov.

Candidatus Infelosa lapilitas (NL. fem. n. *lapilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2194 sp013388435*. The type genome for the species is the GenBank assembly GCA_013388435.1. The GC content of the type genome is 34.57 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Infelosa gen. nov.

Candidatus Infelosa (NL. fem. n. *Infelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2194*. The type species for the genus is *Candidatus* Infelosa lapilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridulaceae.

Description of *Candidatus* Infelosa monogitas sp. nov.

Candidatus Infelosa monogitas (NL. fem. n. *monogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2194 sp011367585*. The type genome for the species is the GenBank assembly GCA_011367585.1. The GC content of the type genome is 50.01 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Infelosa venabicula sp. nov.

Candidatus Infelosa venabicula (NL. fem. n. *venabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2194 sp002328665*. The type genome for the species is the GenBank assembly GCA_002328665.1. The GC content of the type genome is 47.95 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Infenaria deforessa sp. nov.

Candidatus Infenaria deforessa (NL. fem. n. *deforessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2690215 sp002690215*. The type genome for the species is the GenBank assembly GCA_002690215.1. The GC content of the type genome is 63.92 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Infenaria gen. nov.

Candidatus Infenaria (NL. fem. n. *Infenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2690215*. The type species for the genus is *Candidatus* Infenaria deforessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2966*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinuposaceae.

Description of *Candidatus* Infenella adbelitica sp. nov.

Candidatus Infenella adbelitica (NL. fem. n. *adbelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTM01 sp009377755*. The type genome for the species is the GenBank assembly GCA_009377755.1. The GC content of the type genome is 64.84 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Infenella gen. nov.

Candidatus Infenella (NL. fem. n. *Infenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTM01*. The type species for the genus is *Candidatus* Infenella adbelitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infenia occumitas sp. nov.

Candidatus Infenia occumitas (NL. fem. n. *occumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401155 sp002401155*. The type genome for the species is the GenBank assembly GCA_002401155.1. The GC content of the type genome is 49.4 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Infenia gen. nov.

Candidatus Infenia (NL. fem. n. *Infenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401155*. The type species for the genus is *Candidatus* Infenia occumitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infenida lutulousia sp. nov.

Candidatus Infenida lutulousia (NL. fem. n. *lutulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5186 sp002413095*. The type genome for the species is the

GenBank assembly GCA_002413095.1. The GC content of the type genome is 69.55 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Infenida gen. nov.

Candidatus Infenida (NL. fem. n. *Infenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5186*. The type species for the genus is *Candidatus* Infenida lutulousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infenosa everbigena sp. nov.

Candidatus Infenosa everbigena (NL. fem. n. *everbigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QIAJ01 sp003225495*. The type genome for the species is the GenBank assembly GCA_003225495.1. The GC content of the type genome is 56.64 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Infenosa gen. nov.

Candidatus Infenosa (NL. fem. n. *Infenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QIAJ01*. The type species for the genus is *Candidatus* Infenosa everbigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infenula adlicitudo sp. nov.

Candidatus Infenula adlicitudo (NL. fem. n. *adlicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIFEB01 sp903789375*. The type genome for the species is the GenBank assembly GCA_903789375.1. The GC content of the type genome is 64.59 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Infenula gen. nov.

Candidatus Infenula (NL. fem. n. *Infenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIFEB01*. The type species for the genus is *Candidatus* Infenula adlicitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infesella redacimonia sp. nov.

Candidatus Infesella redacimonia (NL. fem. n. *redacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R33 sp009901585*. The type genome for the species is the GenBank assembly RS_GCF_009901585.1. The GC content of the type genome is 44.48 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Infesella gen. nov.

Candidatus Infesella (NL. fem. n. *Infesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R33*. The type species for the genus is *Candidatus* Infesella redacimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infesida pavimicula sp. nov.

Candidatus Infesida pavimicula (NL. fem. n. *pavimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBW01 sp012729975*. The type genome for the species is the GenBank assembly GCA_012729975.1. The GC content of the type genome is 50.72 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Infesida gen. nov.

Candidatus Infesida (NL. fem. n. *Infesida* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBW01*. The type species for the genus is *Candidatus* Infesida pavimicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infesosa irrecicula sp. nov.

Candidatus Infesosa irrecicula (NL. fem. n. *irrecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGK01 sp007376535*. The type genome for the species is the GenBank assembly GCA_007376535.1. The GC content of the type genome is 39.95 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Infesosa gen. nov.

Candidatus Infesosa (NL. fem. n. *Infesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGK01*. The type species for the genus is *Candidatus* Infesosa irrecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-39-44*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Femelulaceae.

Description of *Candidatus* Infesula agrapousia sp. nov.

Candidatus Infesula agrapousia (NL. fem. n. *agrapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14891 sp902803685*. The type genome for the species is the GenBank assembly GCA_902803685.1. The GC content of the type genome is 28.78 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Infesula gen. nov.

Candidatus Infesula (NL. fem. n. *Infesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14891*. The type species for the genus is *Candidatus* Infesula agrapousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Infinana hexagitoga sp. nov.

Candidatus Infinana hexagitoga (NL. fem. n. *hexagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWCT01 sp903911225*. The type genome for the species is the GenBank assembly GCA_903911225.1. The GC content of the type genome is 50.5 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Infinana gen. nov.

Candidatus Infinana (NL. fem. n. *Infinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWCT01*. The type species for the genus is *Candidatus* Infinana hexagitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRTM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagulaceae.

Description of *Candidatus* Infinaria catafitura sp. nov.

Candidatus Infinaria catafitura (NL. fem. n. *catafitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P3160 sp900162725*. The type genome for the species is the GenBank assembly RS_GCF_900162725.1. The GC content of the type genome is 43.07 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Infinaria gen. nov.

Candidatus Infinaria (NL. fem. n. *Infinaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Marseille-P3160*. The type species for the genus is *Candidatus* Infinaria catafitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infinella fumacedo sp. nov.

Candidatus Infinella fumacedo (NL. fem. n. *fumacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYD01 sp009781445*. The type genome for the species is the GenBank assembly GCA_009781445.1. The GC content of the type genome is 42.22 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Infinella gen. nov.

Candidatus Infinella (NL. fem. n. *Infinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQYD01*. The type species for the genus is *Candidatus* Infinella fumacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Infinida ocissitio sp. nov.

Candidatus Infinida ocissitio (NL. fem. n. *ocissitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJU01 sp014382375*. The type genome for the species is the GenBank assembly GCA_014382375.1. The GC content of the type genome is 54.01 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Infinida gen. nov.

Candidatus Infinida (NL. fem. n. *Infinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJU01*. The type species for the genus is *Candidatus* Infinida ocissitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-58-16_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bulapanaceae.

Description of *Candidatus* Infinosa verifisca sp. nov.

Candidatus Infinosa verifisca (NL. fem. n. *verifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-49-17 sp002778575*. The type genome for the species is the GenBank assembly GCA_002778575.1. The GC content of the type genome is 49.11 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Infinosa gen. nov.

Candidatus Infinosa (NL. fem. n. *Infinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-49-17*. The type species for the genus is *Candidatus* Infinosa verifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Infinula evangisca sp. nov.

Candidatus Infinula evangisca (NL. fem. n. *evangisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXOA01 sp005778405*. The type genome for the species is the GenBank assembly GCA_005778405.1. The GC content of the type genome is 59.89 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Infinula gen. nov.

Candidatus Infinula (NL. fem. n. *Infinula* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXOA01*. The type species for the genus is *Candidatus* Infinula evangisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infirana denigilega sp. nov.

Candidatus Infirana denigilega (NL. fem. n. *denigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZOH01 sp012797845*. The type genome for the species is the GenBank assembly GCA_012797845.1. The GC content of the type genome is 36.68 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Infirana gen. nov.

Candidatus Infirana (NL. fem. n. *Infirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZOH01*. The type species for the genus is *Candidatus* Infirana denigilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1449*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagariaceae.

Description of *Candidatus* Infiraria depocisca sp. nov.

Candidatus Infiraria depocisca (NL. fem. n. *depocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVE01 sp013698285*. The type genome for the species is the GenBank assembly GCA_013698285.1. The GC content of the type genome is 69.47 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Infiraria gen. nov.

Candidatus Infiraria (NL. fem. n. *Infiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCVE01*. The type species for the genus is *Candidatus* Infiraria depocisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Infiraria inlaciforma sp. nov.

Candidatus Infiraria inlaciforma (NL. fem. n. *inlaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVE01 sp902806395*. The type genome for the species is the GenBank assembly GCA_902806395.1. The GC content of the type genome is 68.25 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Infirella demadicula sp. nov.

Candidatus Infirella demadicula (NL. fem. n. *demadicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2239 sp002347615*. The type genome for the species is the GenBank assembly GCA_002347615.1. The GC content of the type genome is 64.31 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Infirella gen. nov.

Candidatus Infirella (NL. fem. n. *Infirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2239*. The type species for the genus is *Candidatus* Infirella demadicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infirida apraredo sp. nov.

Candidatus Infirida apraredo (NL. fem. n. *apraredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DDPF01 sp013289415*. The type genome for the species is the GenBank assembly GCA_013289415.1. The GC content of the type genome is 41.55 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Infirida gen. nov.

Candidatus Infirida (NL. fem. n. *Infirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DDPF01*. The type species for the genus is *Candidatus* Infirida apraredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infirida exsolilega sp. nov.

Candidatus Infirida exsolilega (NL. fem. n. *exsolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DDPF01 sp003507515*. The type genome for the species is the GenBank assembly GCA_003507515.1. The GC content of the type genome is 46.24 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Infirosa immuritrix sp. nov.

Candidatus Infirosa immuritrix (NL. fem. n. *immuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDLO01 sp013002995*. The type genome for the species is the GenBank assembly GCA_013002995.1. The GC content of the type genome is 38.42 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Infirosa gen. nov.

Candidatus Infirosa (NL. fem. n. *Infirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDLO01*. The type species for the genus is *Candidatus* Infirosa immuritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infirula teniligena sp. nov.

Candidatus Infirula teniligena (NL. fem. n. *teniligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-20-56-8 sp002796165*. The type genome for the species is the GenBank assembly GCA_002796165.1. The GC content of the type genome is 55.68 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Infirula gen. nov.

Candidatus Infirula (NL. fem. n. *Infirula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-20-56-8*. The type species for the genus is *Candidatus* Infirula teniligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infisaria lanugatio sp. nov.

Candidatus Infisaria lanugatio (NL. fem. n. *lanugatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXDB01 sp903918125*. The type genome for the species is the GenBank assembly GCA_903918125.1. The GC content of the type genome is 48.36 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Infisaria gen. nov.

Candidatus Infisaria (NL. fem. n. *Infisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXDB01*. The type species for the genus is *Candidatus* Infisaria lanugatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infisella senipugo sp. nov.

Candidatus Infisella senipugo (NL. fem. n. *senipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1304 sp002307295*. The type genome for the species is the GenBank assembly GCA_002307295.1. The GC content of the type genome is 36.88 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Infisella gen. nov.

Candidatus Infisella (NL. fem. n. *Infisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1304*. The type species for the genus is *Candidatus* Infisella senipugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infisia infelicella sp. nov.

Candidatus Infisia infelicella (NL. fem. n. *infelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUPO01 sp012033095*. The type genome for the species is the GenBank assembly GCA_012033095.1. The GC content of the type genome is 43.43 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Infisia gen. nov.

Candidatus Infisia (NL. fem. n. *Infisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUPO01*. The type species for the genus is *Candidatus* Infisia infelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infisida allobicula sp. nov.

Candidatus Infisida allobicula (NL. fem. n. *allobicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOHW01 sp903858195*. The type genome for the species is the GenBank assembly GCA_903858195.1. The GC content of the type genome is 60.79 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Infisida gen. nov.

Candidatus Infisida (NL. fem. n. *Infisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOHW01*. The type species for the genus is *Candidatus* Infisida allobicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Infisosa omnigousia sp. nov.

Candidatus Infisosa omnigousia (NL. fem. n. *omnigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-34 sp001801495*. The type genome for the species is the GenBank assembly GCA_001801495.1. The GC content of the type genome is 37.39 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Infisosa gen. nov.

Candidatus Infisosa (NL. fem. n. *Infisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-37-34*. The type species for the genus is *Candidatus* Infisosa omnigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Infisosa tabifastra sp. nov.

Candidatus Infisosa tabifastra (NL. fem. n. *tabifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-34 sp001801485*. The type genome for the species is the GenBank assembly GCA_001801485.1. The GC content of the type genome is 37.04 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Inforana cerebibula sp. nov.

Candidatus Inforana cerebibula (NL. fem. n. *cerebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SACC01 sp009928745*. The type genome for the species is the GenBank assembly GCA_009928745.1. The GC content of the type genome is 41.24 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Inforana gen. nov.

Candidatus Inforana (NL. fem. n. *Inforana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SACC01*. The type species for the genus is *Candidatus* Inforana cerebibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-1252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenunulaceae.

Description of *Candidatus* Inforaria rorulimonia sp. nov.

Candidatus Inforaria rorulimonia (NL. fem. n. *rorulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3107 sp001483205*. The type genome for the species is the GenBank assembly GCA_001483205.1. The GC content of the type genome is 63.6 % and the genome length is 2.17 Mbp. The isolation source for the NCBI BioSample associated

with the type genome is descibed as "sea water".

Description of *Candidatus* Inforaria gen. nov.

Candidatus Inforaria (NL. fem. n. *Inforaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *3107*. The type species for the genus is *Candidatus* Inforaria rorulimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inforella induvitrix sp. nov.

Candidatus Inforella induvitrix (NL. fem. n. *induvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLZ01 sp009777365*. The type genome for the species is the GenBank assembly GCA_009777365.1. The GC content of the type genome is 47.79 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Inforella gen. nov.

Candidatus Inforella (NL. fem. n. *Inforella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLZ01*. The type species for the genus is *Candidatus* Inforella induvitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inforosa agripentia sp. nov.

Candidatus Inforosa agripentia (NL. fem. n. *agripentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQX01 sp004298545*. The type genome for the species is the GenBank assembly GCA_004298545.1. The GC content of the type genome is 63.25 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Inforosa gen. nov.

Candidatus Inforosa (NL. fem. n. *Inforosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCQX01*. The type species for the genus is *Candidatus* Inforosa agripentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inforula aciscimonia sp. nov.

Candidatus Inforula aciscimonia (NL. fem. n. *aciscimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AB-137-C09 sp000379225*. The type genome for the species is the GenBank assembly GCA_000379225.1. The GC content of the type genome is 47.66 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Inforula gen. nov.

Candidatus Inforula (NL. fem. n. *Inforula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AB-137-C09*. The type species for the genus is *Candidatus* Inforula aciscimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infucana arcitifica sp. nov.

Candidatus Infucana arcitifica (NL. fem. n. *arcitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-278 sp003133505*. The type genome for the species is the GenBank assembly GCA_003133505.1. The GC content of the type genome is 56.78 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Infucana gen. nov.

Candidatus Infucana (NL. fem. n. *Infucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-278*. The type species for the genus is *Candidatus* Infucana arcitifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Infucaria cilotastra sp. nov.

Candidatus Infucaria cilotastra (NL. fem. n. *cilotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMJI01 sp900299315*. The type genome for the species is the GenBank assembly GCA_900299315.1. The GC content of the type genome is 62.13 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Infucaria gen. nov.

Candidatus Infucaria (NL. fem. n. *Infucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMJI01*. The type species for the genus is *Candidatus* Infucaria cilotastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Infucella serotentia sp. nov.

Candidatus Infucella serotentia (NL. fem. n. *serotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4655 sp002405515*. The type genome for the species is the GenBank assembly GCA_002405515.1. The GC content of the type genome is 68.04 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Infucella gen. nov.

Candidatus Infucella (NL. fem. n. *Infucella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4655*. The type species for the genus is *Candidatus* Infucella serotentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Infucia bipalago sp. nov.

Candidatus Infucia bipalago (NL. fem. n. *bipalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RJJX01 sp003996985*. The type genome for the species is the GenBank assembly RS_GCF_003996985.1. The GC content of the type genome is 35.73 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Infucia gen. nov.

Candidatus Infucia (NL. fem. n. *Infucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RJJX01*. The type species for the genus is *Candidatus* Infucia bipalago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infunana excocitura sp. nov.

Candidatus Infunana excocitura (NL. fem. n. *excocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PH2015 sp014654705*. The type genome for the species is the GenBank assembly GCA_014654705.1. The GC content of the type genome is 48.47 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Infunana gen. nov.

Candidatus Infunana (NL. fem. n. *Infunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PH2015*. The type species for the genus is *Candidatus* Infunana excocitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4661*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forabellaceae.

Description of *Candidatus* Infunana inlusentia sp. nov.

Candidatus Infunana inlusentia (NL. fem. n. *inlusentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PH2015 sp004292595*. The type genome for the species is the GenBank assembly GCA_004292595.1. The GC content of the type genome is 48.32 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Infunana inretitoga sp. nov.

Candidatus Infunana inretitoga (NL. fem. n. *inretitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PH2015 sp013298775*. The type genome for the species is the GenBank assembly GCA_013298775.1. The GC content of the type genome is 48.16 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Infunana salubitrix sp. nov.

Candidatus Infunana salubitrix (NL. fem. n. *salubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PH2015 sp013298375*. The type genome for the species is the GenBank assembly GCA_013298375.1. The GC content of the type genome is 48.33 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Infunaria cocolisca sp. nov.

Candidatus Infunaria cocolisca (NL. fem. n. *cocolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CP2-2F sp003695215*. The type genome for the species is the GenBank assembly GCA_003695215.1. The GC content of the type genome is 59.6 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Infunaria gen. nov.

Candidatus Infunaria (NL. fem. n. *Infunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CP2-2F*. The type species for the genus is *Candidatus* Infunaria cocolisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubellaceae.

Description of *Candidatus* Infunaria defenilenta sp. nov.

Candidatus Infunaria defenilenta (NL. fem. n. *defenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CP2-2F sp002794705*. The type genome for the species is the GenBank assembly GCA_002794705.1. The GC content of the type genome is 58.87 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Infunella dilibousia sp. nov.

Candidatus Infunella dilibousia (NL. fem. n. *dilibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR44 sp003221455*. The type genome for the species is the GenBank assembly GCA_003221455.1. The GC content of the type genome is 70.03 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Infunella gen. nov.

Candidatus Infunella (NL. fem. n. *Infunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AR44*. The type species for the genus is *Candidatus* Infunella dilibousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Infunida decitedo sp. nov.

Candidatus Infunida decitedo (NL. fem. n. *decitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWY01 sp013334745*. The type genome for the species is the GenBank assembly GCA_013334745.1. The GC content of the type genome is 65.06 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Infunida gen. nov.

Candidatus Infunida (NL. fem. n. *Infunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWY01*. The type species for the genus is *Candidatus* Infunida decitedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXUF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Menaposaceae.

Description of *Candidatus* Infunosa peridatica sp. nov.

Candidatus Infunosa peridatica (NL. fem. n. *peridatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683405 sp002683405*. The type genome for the species is the GenBank assembly GCA_002683405.1. The GC content of the type genome is 64.07 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Infunosa gen. nov.

Candidatus Infunosa (NL. fem. n. *Infunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2683405*. The type species for the genus is *Candidatus* Infunosa peridatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Infunula ammodibra sp. nov.

Candidatus Infunula ammodibra (NL. fem. n. *ammodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2687515 sp013204125*. The type genome for the species is the GenBank assembly GCA_013204125.1. The GC content of the type genome is 54.82 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Infunula gen. nov.

Candidatus Infunula (NL. fem. n. *Infunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2687515*. The type species for the genus is *Candidatus* Infunula ammodibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Infunula momorigena sp. nov.

Candidatus Infunula momorigena (NL. fem. n. *momorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2687515 sp002687515*. The type genome for the species is the GenBank assembly GCA_002687515.1. The GC content of the type genome is 60.19 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Ingigana bigemicula sp. nov.

Candidatus Ingigana bigemicula (NL. fem. n. *bigemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCQS01 sp013814015*. The type genome for the species is the GenBank assembly GCA_013814015.1. The GC content of the type genome is 67.16 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Ingigana gen. nov.

Candidatus Ingigana (NL. fem. n. *Ingigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCQS01*. The type species for the genus is *Candidatus* Ingigana bigemicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ingigana coninetta sp. nov.

Candidatus Ingigana coninetta (NL. fem. n. *coninetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCQS01 sp013811975*. The type genome for the species is the GenBank assembly GCA_013811975.1. The GC content of the type genome is 66.96 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Ingigana innumentia sp. nov.

Candidatus Ingigana innumentia (NL. fem. n. *innumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCQS01 sp013812385*. The type genome for the species is the GenBank assembly GCA_013812385.1. The GC content of the type genome is 67.23 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Ingigana levifentia sp. nov.

Candidatus Ingigana levifentia (NL. fem. n. *levifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCQS01 sp013811805*. The type genome for the species is the GenBank assembly GCA_013811805.1. The GC content of the type genome is 67.42 %

and the genome length is 3.28 Mbp.

Description of *Candidatus* Ingigella aciscigena sp. nov.

Candidatus Ingigella aciscigena (NL. fem. n. *aciscigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA646 sp003650285*. The type genome for the species is the GenBank assembly GCA_003650285.1. The GC content of the type genome is 36.51 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Ingigella gen. nov.

Candidatus Ingigella (NL. fem. n. *Ingigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA646*. The type species for the genus is *Candidatus* Ingigella aciscigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ingigella exsusousia sp. nov.

Candidatus Ingigella exsusousia (NL. fem. n. *exsusousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA646 sp002299965*. The type genome for the species is the GenBank assembly GCA_002299965.1. The GC content of the type genome is 36.41 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Ingigida ceromatio sp. nov.

Candidatus Ingigida ceromatio (NL. fem. n. *ceromatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746885 sp002746885*. The type genome for the species is the GenBank assembly GCA_002746885.1. The GC content of the type genome is 50.96 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Ingigida gen. nov.

Candidatus Ingigida (NL. fem. n. *Ingigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746885*. The type species for the genus is *Candidatus* Ingigida ceromatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Ingigosa adbelicella sp. nov.

Candidatus Ingigosa adbelicella (NL. fem. n. *adbelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-224 sp003139735*. The type genome for the species is the GenBank assembly GCA_003139735.1. The GC content of the type genome is 63.18 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Ingigosa gen. nov.

Candidatus Ingigosa (NL. fem. n. *Ingigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-224*. The type species for the genus is *Candidatus* Ingigosa adbelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ingigosa gasomitica sp. nov.

Candidatus Ingigosa gasomitica (NL. fem. n. *gasomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-224 sp903882645*. The type genome for the species is the GenBank assembly GCA_903882645.1. The GC content of the type genome is 64.29 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Ingigosa inpinisca sp. nov.

Candidatus Ingigosa inpinisca (NL. fem. n. *inpinisca* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-224 sp903925975*. The type genome for the species is the GenBank assembly GCA_903925975.1. The GC content of the type genome is 62.45 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Ingigula recucentia sp. nov.

Candidatus Ingigula recucentia (NL. fem. n. *recucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKHV01 sp007116765*. The type genome for the species is the GenBank assembly GCA_007116765.1. The GC content of the type genome is 39.92 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Ingigula gen. nov.

Candidatus Ingigula (NL. fem. n. *Ingigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKHV01*. The type species for the genus is *Candidatus* Ingigula recucentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ingigula sotulibra sp. nov.

Candidatus Ingigula sotulibra (NL. fem. n. *sotulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKHV01 sp012719495*. The type genome for the species is the GenBank assembly GCA_012719495.1. The GC content of the type genome is 40.05 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Ingurana depopugo sp. nov.

Candidatus Ingurana depopugo (NL. fem. n. *depopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9971 sp003499955*. The type genome for the species is the GenBank assembly GCA_003499955.1. The GC content of the type genome is 33.72 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ingurana gen. nov.

Candidatus Ingurana (NL. fem. n. *Ingurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9971*. The type species for the genus is *Candidatus* Ingurana depopugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibariaceae.

Description of *Candidatus* Ingurana exsuratica sp. nov.

Candidatus Ingurana exsuratica (NL. fem. n. *exsuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9971 sp001784535*. The type genome for the species is the GenBank assembly GCA_001784535.1. The GC content of the type genome is 33.27 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Inguraria metabitas sp. nov.

Candidatus Inguraria metabitas (NL. fem. n. *metabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1477 sp900761525*. The type genome for the species is the GenBank assembly RS_GCF_900761525.1. The GC content of the type genome is 31.57 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Inguraria gen. nov.

Candidatus Inguraria (NL. fem. n. *Inguraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1477*. The type species for the genus is *Candidatus* Inguraria metabitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inguraria vavasilenta sp. nov.

Candidatus Inguraria vavasilenta (NL. fem. n. *vavasilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1477 sp900552205*. The type genome for the species is the GenBank assembly GCA_900552205.1. The GC content of the type genome is 30.55 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Inguraria viginicula sp. nov.

Candidatus Inguraria viginicula (NL. fem. n. *viginicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1477 sp900553845*. The type genome for the species is the GenBank assembly GCA_900553845.1. The GC content of the type genome is 29.67 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Ingurella funamago sp. nov.

Candidatus Ingurella funamago (NL. fem. n. *funamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14199 sp902796675*. The type genome for the species is the GenBank assembly GCA_902796675.1. The GC content of the type genome is 54.85 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ingurella gen. nov.

Candidatus Ingurella (NL. fem. n. *Ingurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14199*. The type species for the genus is *Candidatus* Ingurella funamago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Ingurella pinigisca sp. nov.

Candidatus Ingurella pinigisca (NL. fem. n. *pinigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14199 sp902797495*. The type genome for the species is the GenBank assembly GCA_902797495.1. The GC content of the type genome is 54.15 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Ingurida armicitura sp. nov.

Candidatus Ingurida armicitura (NL. fem. n. *armicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-11-A sp001818435*. The type genome for the species is the GenBank assembly GCA_001818435.1. The GC content of the type genome is 47.21 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ingurida gen. nov.

Candidatus Ingurida (NL. fem. n. *Ingurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-48-11-A*. The type species for the genus is *Candidatus* Ingurida armicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacosaceae.

Description of *Candidatus* Ingurosa decupitia sp. nov.

Candidatus Ingurosa decupitia (NL. fem. n. *decupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1404 sp002305075*. The type genome for the species is the GenBank assembly GCA_002305075.1. The GC content of the type genome is 57.32 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Ingurosa gen. nov.

Candidatus Ingurosa (NL. fem. n. *Ingurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1404*. The type species for the genus is *Candidatus* Ingurosa decupitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhabaria insenicula sp. nov.

Candidatus Inhabaria insenicula (NL. fem. n. *insenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXM01 sp013177815*. The type genome for the species is the GenBank assembly GCA_013177815.1. The GC content of the type genome is 56.14 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Inhabaria gen. nov.

Candidatus Inhabaria (NL. fem. n. *Inhabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXM01*. The type species for the genus is *Candidatus* Inhabaria insenicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhabella cisoritica sp. nov.

Candidatus Inhabella cisoritica (NL. fem. n. *cisoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIO01 sp012800805*. The type genome for the species is the

GenBank assembly GCA_012800805.1. The GC content of the type genome is 44.34 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Inhabella gen. nov.

Candidatus Inhabella (NL. fem. n. *Inhabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIO01*. The type species for the genus is *Candidatus* Inhabella cisoritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Inhabida telegilenta sp. nov.

Candidatus Inhabida telegilenta (NL. fem. n. *telegilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC7113 sp000317515*. The type genome for the species is the GenBank assembly RS_GCF_000317515.1. The GC content of the type genome is 46.21 % and the genome length is 7.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "orchid house soil".

Description of *Candidatus* Inhabida gen. nov.

Candidatus Inhabida (NL. fem. n. *Inhabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC7113*. The type species for the genus is *Candidatus* Inhabida telegilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhabosa anaplax sp. nov.

Candidatus Inhabosa anaplax (NL. fem. n. *anaplax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J020 sp003696725*. The type genome for the species is the GenBank

assembly GCA_003696725.1. The GC content of the type genome is 72.36 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Inhabosa gen. nov.

Candidatus Inhabosa (NL. fem. n. *Inhabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J020*. The type species for the genus is *Candidatus* Inhabosa anaplax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Inheraria direpimonia sp. nov.

Candidatus Inheraria direpimonia (NL. fem. n. *direpimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-333 sp011054565*. The type genome for the species is the GenBank assembly GCA_011054565.1. The GC content of the type genome is 42.87 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Inheraria gen. nov.

Candidatus Inheraria (NL. fem. n. *Inheraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-333*. The type species for the genus is *Candidatus* Inheraria direpimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigellaceae.

Description of *Candidatus* Inherida recorimonia sp. nov.

Candidatus Inherida recorimonia (NL. fem. n. *recorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5364 sp002410935*. The type genome for the species is the

GenBank assembly GCA_002410935.1. The GC content of the type genome is 27.74 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Inherida gen. nov.

Candidatus Inherida (NL. fem. n. *Inherida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5364*. The type species for the genus is *Candidatus* Inherida recorimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Inherosa ossucilega sp. nov.

Candidatus Inherosa ossucilega (NL. fem. n. *ossucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG612 sp900320605*. The type genome for the species is the GenBank assembly GCA_900320605.1. The GC content of the type genome is 51.56 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Inherosa gen. nov.

Candidatus Inherosa (NL. fem. n. *Inherosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG612*. The type species for the genus is *Candidatus* Inherosa ossucilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inherula crastatio sp. nov.

Candidatus Inherula crastatio (NL. fem. n. *crastatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFC01 sp009779015*. The type genome for the species is the GenBank assembly GCA_009779015.1. The GC content of the type genome is 60.75 %

and the genome length is 1.11 Mbp.

Description of *Candidatus* Inherula gen. nov.

Candidatus Inherula (NL. fem. n. *Inherula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFC01*. The type species for the genus is *Candidatus* Inherula crastatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Inhonana gasomastra sp. nov.

Candidatus Inhonana gasomastra (NL. fem. n. *gasomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12826 sp902783025*. The type genome for the species is the GenBank assembly GCA_902783025.1. The GC content of the type genome is 50.37 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Inhonana gen. nov.

Candidatus Inhonana (NL. fem. n. *Inhonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12826*. The type species for the genus is *Candidatus* Inhonana gasomastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Inhonaria epitrimonia sp. nov.

Candidatus Inhonaria epitrimonia (NL. fem. n. *epitrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVN01 sp009785795*. The type genome for the species is the

GenBank assembly GCA_009785795.1. The GC content of the type genome is 47.1 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Inhonaria gen. nov.

Candidatus Inhonaria (NL. fem. n. *Inhonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVN01*. The type species for the genus is *Candidatus* Inhonaria epitrimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQUG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecidaceae.

Description of *Candidatus* Inhonaria vitigitas sp. nov.

Candidatus Inhonaria vitigitas (NL. fem. n. *vitigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVN01 sp009779395*. The type genome for the species is the GenBank assembly GCA_009779395.1. The GC content of the type genome is 52.86 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Inhonella bimotago sp. nov.

Candidatus Inhonella bimotago (NL. fem. n. *bimotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11412 sp900770185*. The type genome for the species is the GenBank assembly RS_GCF_900770185.1. The GC content of the type genome is 45.1 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Inhonella gen. nov.

Candidatus Inhonella (NL. fem. n. *Inhonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11412*. The type species for the genus is *Candidatus* Inhonella bimotago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhonia octoditica sp. nov.

Candidatus Inhonia octoditica (NL. fem. n. *octoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DDH964 sp001611275*. The type genome for the species is the GenBank assembly RS_GCF_001611275.1. The GC content of the type genome is 62.23 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "terrestrial subsurface brine".

Description of *Candidatus* Inhonia gen. nov.

Candidatus Inhonia (NL. fem. n. *Inhonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DDH964*. The type species for the genus is *Candidatus* Inhonia octoditica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhonida redacitia sp. nov.

Candidatus Inhonida redacitia (NL. fem. n. *redacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2421 sp002343075*. The type genome for the species is the GenBank assembly GCA_002343075.1. The GC content of the type genome is 59.57 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Inhonida gen. nov.

Candidatus Inhonida (NL. fem. n. *Inhonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2421*. The type species for the genus is *Candidatus* Inhonida redacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Inhonosa filifatio sp. nov.

Candidatus Inhonosa filifatio (NL. fem. n. *filifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *17J80-11 sp014349105*. The type genome for the species is the GenBank assembly RS_GCF_014349105.1. The GC content of the type genome is 70.64 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Inhonosa gen. nov.

Candidatus Inhonosa (NL. fem. n. *Inhonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *17J80-11*. The type species for the genus is *Candidatus* Inhonosa filifatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhonosa papilitia sp. nov.

Candidatus Inhonosa papilitia (NL. fem. n. *papilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *17J80-11 sp010975005*. The type genome for the species is the GenBank assembly RS_GCF_010975005.1. The GC content of the type genome is 70.61 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Inhonula cimelitio sp. nov.

Candidatus Inhonula cimelitio (NL. fem. n. *cimelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCY01 sp013287855*. The type genome for the species is the GenBank assembly GCA_013287855.1. The GC content of the type genome is 39.95 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Inhonula gen. nov.

Candidatus Inhonula (NL. fem. n. *Inhonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCY01*. The type species for the genus is *Candidatus* Inhonula cimelitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhorana adfulifica sp. nov.

Candidatus Inhorana adfulifica (NL. fem. n. *adfulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B137-G9 sp003647825*. The type genome for the species is the GenBank assembly GCA_003647825.1. The GC content of the type genome is 36.73 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Inhorana gen. nov.

Candidatus Inhorana (NL. fem. n. *Inhorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B137-G9*. The type species for the genus is *Candidatus* Inhorana adfulifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Inhoraria monocitica sp. nov.

Candidatus Inhoraria monocitica (NL. fem. n. *monocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKF01 sp012522535*. The type genome for the species is the GenBank assembly GCA_012522535.1. The GC content of the type genome is 35.4 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Inhoraria gen. nov.

Candidatus Inhoraria (NL. fem. n. *Inhoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYKF01*. The type species for the genus is *Candidatus* Inhoraria monocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Inhorida metapibula sp. nov.

Candidatus Inhorida metapibula (NL. fem. n. *metapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVU01 sp009691105*. The type genome for the species is the GenBank assembly GCA_009691105.1. The GC content of the type genome is 63.88 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Inhorida gen. nov.

Candidatus Inhorida (NL. fem. n. *Inhorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVU01*. The type species for the genus is *Candidatus* Inhorida metapibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-67-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susiculaceae.

Description of *Candidatus* Inhorosa arcelitia sp. nov.

Candidatus Inhorosa arcelitia (NL. fem. n. *arcelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTA01 sp011390075*. The type genome for the species is the GenBank assembly GCA_011390075.1. The GC content of the type genome is 38.19 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Inhorosa gen. nov.

Candidatus Inhorosa (NL. fem. n. *Inhorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTA01*. The type species for the genus is *Candidatus* Inhorosa arcelitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigariaceae.

Description of *Candidatus* Inhorula horomifica sp. nov.

Candidatus Inhorula horomifica (NL. fem. n. *horomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGD01 sp009787355*. The type genome for the species is the GenBank assembly GCA_009787355.1. The GC content of the type genome is 28.58 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Inhorula gen. nov.

Candidatus Inhorula (NL. fem. n. *Inhorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGD01*. The type species for the genus is *Candidatus* Inhorula horomifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Inhosaria caselax sp. nov.

Candidatus Inhosaria caselax (NL. fem. n. *caselax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMNR01 sp013203465*. The type genome for the species is the GenBank assembly GCA_013203465.1. The GC content of the type genome is 64.37 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Inhosaria gen. nov.

Candidatus Inhosaria (NL. fem. n. *Inhosaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMNR01*. The type species for the genus is *Candidatus* Inhosaria caselax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhosida anastago sp. nov.

Candidatus Inhosida anastago (NL. fem. n. *anastago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REAG01 sp004293915*. The type genome for the species is the GenBank assembly GCA_004293915.1. The GC content of the type genome is 32.18 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Inhosida gen. nov.

Candidatus Inhosida (NL. fem. n. *Inhosida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REAG01*. The type species for the genus is *Candidatus* Inhosida anastago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebiaceae.

Description of *Candidatus* Inhosida exsolitia sp. nov.

Candidatus Inhosida exsolitia (NL. fem. n. *exsolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REAG01 sp013297755*. The type genome for the species is the GenBank assembly GCA_013297755.1. The GC content of the type genome is 32.04 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Inhosida mimogentia sp. nov.

Candidatus Inhosida mimogentia (NL. fem. n. *mimogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REAG01 sp004294265*. The type genome for the species is the GenBank assembly GCA_004294265.1. The GC content of the type genome is 29.81 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Inhososa ecfunitudo sp. nov.

Candidatus Inhososa ecfunitudo (NL. fem. n. *ecfunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *K478 sp011250645*. The type genome for the species is the GenBank assembly RS_GCF_011250645.1. The GC content of the type genome is 74.15 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Inhososa gen. nov.

Candidatus Inhososa (NL. fem. n. *Inhososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *K478*. The type species for the genus is *Candidatus* Inhososa ecfunitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhososa nugivibula sp. nov.

Candidatus Inhososa nugivibula (NL. fem. n. *nugivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *K478 sp011250635*. The type genome for the species is the GenBank assembly RS_GCF_011250635.1. The GC content of the type genome is 73.66 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Inhosula acropousia sp. nov.

Candidatus Inhosula acropousia (NL. fem. n. *acropousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYZI01 sp012514925*. The type genome for the species is the GenBank assembly GCA_012514925.1. The GC content of the type genome is 50.19 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Inhosula gen. nov.

Candidatus Inhosula (NL. fem. n. *Inhosula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZI01*. The type species for the genus is *Candidatus* Inhosula acropousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXSY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemidaceae.

Description of *Candidatus* Inhumella xeropago sp. nov.

Candidatus Inhumella xeropago (NL. fem. n. *xeropago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-108 sp013214075*. The type genome for the species is the GenBank assembly GCA_013214075.1. The GC content of the type genome is 34.8 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Inhumella gen. nov.

Candidatus Inhumella (NL. fem. n. *Inhumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-108*. The type species for the genus is *Candidatus* Inhumella xeropago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhumia odontitas sp. nov.

Candidatus Inhumia odontitas (NL. fem. n. *odontitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNZR01 sp003978475*. The type genome for the species is the

GenBank assembly GCA_003978475.1. The GC content of the type genome is 44.34 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Inhumia gen. nov.

Candidatus Inhumia (NL. fem. n. *Inhumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNZR01*. The type species for the genus is *Candidatus* Inhumia odontitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhumida amnigimonas sp. nov.

Candidatus Inhumida amnigimonas (NL. fem. n. *amnigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6814 sp002452635*. The type genome for the species is the GenBank assembly GCA_002452635.1. The GC content of the type genome is 68.98 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Inhumida gen. nov.

Candidatus Inhumida (NL. fem. n. *Inhumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6814*. The type species for the genus is *Candidatus* Inhumida amnigimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhumosa depasisca sp. nov.

Candidatus Inhumosa depasisca (NL. fem. n. *depasisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11808 sp900757025*. The type genome for the species is the GenBank assembly RS_GCF_900757025.1. The GC content of the type genome is 37.6 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Inhumosa gen. nov.

Candidatus Inhumosa (NL. fem. n. *Inhumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11808*. The type species for the genus is *Candidatus* Inhumosa depasisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inhumula latibimonas sp. nov.

Candidatus Inhumula latibimonas (NL. fem. n. *latibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11525 sp900770405*. The type genome for the species is the GenBank assembly RS_GCF_900770405.1. The GC content of the type genome is 52.06 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Inhumula gen. nov.

Candidatus Inhumula (NL. fem. n. *Inhumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11525*. The type species for the genus is *Candidatus* Inhumula latibimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Ininnana admigibra sp. nov.

Candidatus Ininnana admigibra (NL. fem. n. *admigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXM01 sp013698055*. The type genome for the species is the GenBank assembly GCA_013698055.1. The GC content of the type genome is 54.95 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Ininnana gen. nov.

Candidatus Ininnana (NL. fem. n. *Ininnana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHXM01*. The type species for the genus is *Candidatus* Ininnana admigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ininnana proslitudo sp. nov.

Candidatus Ininnana proslitudo (NL. fem. n. *proslitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXM01 sp003222945*. The type genome for the species is the GenBank assembly GCA_003222945.1. The GC content of the type genome is 53.46 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Ininnaria obvalicella sp. nov.

Candidatus Ininnaria obvalicella (NL. fem. n. *obvalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-444 sp003246805*. The type genome for the species is the GenBank assembly GCA_003246805.1. The GC content of the type genome is 36.9 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Ininnaria gen. nov.

Candidatus Ininnaria (NL. fem. n. *Ininnaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-444*. The type species for the genus is *Candidatus* Ininnaria obvalicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ininnella bucolitrix sp. nov.

Candidatus Ininnella bucolitrix (NL. fem. n. *bucolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-J19 sp003215635*. The type genome for the species is the GenBank assembly GCA_003215635.1. The GC content of the type genome is 38.73 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Ininnella gen. nov.

Candidatus Ininnella (NL. fem. n. *Ininnella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-J19*. The type species for the genus is *Candidatus* Ininnella bucolitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ininnia megalitoga sp. nov.

Candidatus Ininnia megalitoga (NL. fem. n. *megalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKB01 sp009778295*. The type genome for the species is the GenBank assembly GCA_009778295.1. The GC content of the type genome is 55.36 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Ininnia gen. nov.

Candidatus Ininnia (NL. fem. n. *Ininnia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKB01*. The type species for the genus is *Candidatus* Ininnia megalitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ininnida onocrilenta sp. nov.

Candidatus Ininnida onocrilenta (NL. fem. n. *onocrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13862 sp900760825*. The type genome for the species is the

GenBank assembly RS_GCF_900760825.1. The GC content of the type genome is 47.56 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Ininnida gen. nov.

Candidatus Ininnida (NL. fem. n. *Ininnida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13862*. The type species for the genus is *Candidatus* Ininnida onocrilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulosaceae.

Description of *Candidatus* Ininnida sacomifica sp. nov.

Candidatus Ininnida sacomifica (NL. fem. n. *sacomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13862 sp012515255*. The type genome for the species is the GenBank assembly GCA_012515255.1. The GC content of the type genome is 55.43 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Ininnosa appagitas sp. nov.

Candidatus Ininnosa appagitas (NL. fem. n. *appagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch61 sp013314715*. The type genome for the species is the GenBank assembly GCA_013314715.1. The GC content of the type genome is 33.23 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ininnosa gen. nov.

Candidatus Ininnosa (NL. fem. n. *Ininnosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch61*. The type species for the genus is *Candidatus* Ininnosa appagitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-32-17*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Domigidaceae.

Description of *Candidatus* Ininnula filifimonas sp. nov.

Candidatus Ininnula filifimonas (NL. fem. n. *filifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-109M sp003566505*. The type genome for the species is the GenBank assembly GCA_003566505.1. The GC content of the type genome is 31.84 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Ininnula gen. nov.

Candidatus Ininnula (NL. fem. n. *Ininnula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED10-109M*. The type species for the genus is *Candidatus* Ininnula filifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ininnula melopitio sp. nov.

Candidatus Ininnula melopitio (NL. fem. n. *melopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-109M sp003560455*. The type genome for the species is the GenBank assembly GCA_003560455.1. The GC content of the type genome is 32.96 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Ininnula peribicula sp. nov.

Candidatus Ininnula peribicula (NL. fem. n. *peribicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-109M sp003559495*. The type genome for the species is the GenBank assembly GCA_003559495.1. The GC content of the type genome is 31.6 %

and the genome length is 0.57 Mbp.

Description of *Candidatus* Inlacana exhilitica sp. nov.

Candidatus Inlacana exhilitica (NL. fem. n. *exhilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQY01 sp013202975*. The type genome for the species is the GenBank assembly GCA_013202975.1. The GC content of the type genome is 40.57 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Inlacana gen. nov.

Candidatus Inlacana (NL. fem. n. *Inlacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQY01*. The type species for the genus is *Candidatus* Inlacana exhilitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domipidaceae.

Description of *Candidatus* Inlacaria allibicula sp. nov.

Candidatus Inlacaria allibicula (NL. fem. n. *allibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMJK01 sp900299325*. The type genome for the species is the GenBank assembly GCA_900299325.1. The GC content of the type genome is 61.53 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Inlacaria gen. nov.

Candidatus Inlacaria (NL. fem. n. *Inlacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMJK01*. The type species for the genus is *Candidatus* Inlacaria allibicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlacia octusedo sp. nov.

Candidatus Inlacia octusedo (NL. fem. n. *octusedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686995 sp002686995*. The type genome for the species is the GenBank assembly GCA_002686995.1. The GC content of the type genome is 66.53 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Inlacia gen. nov.

Candidatus Inlacia (NL. fem. n. *Inlacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686995*. The type species for the genus is *Candidatus* Inlacia octusedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlacula defalitrix sp. nov.

Candidatus Inlacula defalitrix (NL. fem. n. *defalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4441 sp002390425*. The type genome for the species is the GenBank assembly GCA_002390425.1. The GC content of the type genome is 39.89 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Inlacula gen. nov.

Candidatus Inlacula (NL. fem. n. *Inlacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4441*. The type species for the genus is *Candidatus* Inlacula defalitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlapana hexapitas sp. nov.

Candidatus Inlapana hexapitas (NL. fem. n. *hexapitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBC036 sp902826945*. The type genome for the species is the GenBank assembly GCA_902826945.1. The GC content of the type genome is 75.46 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Inlapana gen. nov.

Candidatus Inlapana (NL. fem. n. *Inlapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBC036*. The type species for the genus is *Candidatus* Inlapana hexapitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Inlaparia abluvitio sp. nov.

Candidatus Inlaparia abluvitio (NL. fem. n. *abluvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W589 sp011170375*. The type genome for the species is the GenBank assembly GCA_011170375.1. The GC content of the type genome is 51.7 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Inlaparia gen. nov.

Candidatus Inlaparia (NL. fem. n. *Inlaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W589*. The type species for the genus is *Candidatus* Inlaparia abluvitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1064*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifidaceae.

Description of *Candidatus* Inlaparia totidisca sp. nov.

Candidatus Inlaparia totidisca (NL. fem. n. *totidisca* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W589 sp011171075*. The type genome for the species is the GenBank assembly GCA_011171075.1. The GC content of the type genome is 52.62 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Inlapella vicatatio sp. nov.

Candidatus Inlapella vicatatio (NL. fem. n. *vicatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBCK01 sp005882215*. The type genome for the species is the GenBank assembly GCA_005882215.1. The GC content of the type genome is 65.67 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Inlapella gen. nov.

Candidatus Inlapella (NL. fem. n. *Inlapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBCK01*. The type species for the genus is *Candidatus* Inlapella vicatatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlapia femelifica sp. nov.

Candidatus Inlapia femelifica (NL. fem. n. *femelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077553 sp009697495*. The type genome for the species is the GenBank assembly GCA_009697495.1. The GC content of the type genome is 60.01 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Inlapia gen. nov.

Candidatus Inlapia (NL. fem. n. *Inlapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Ga0077553*. The type species for the genus is *Candidatus* Inlapia femelifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlapia homolugo sp. nov.

Candidatus Inlapia homolugo (NL. fem. n. *homolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077553 sp001464575*. The type genome for the species is the GenBank assembly GCA_001464575.1. The GC content of the type genome is 62.7 % and the genome length is 6.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Inlaposa cisorax sp. nov.

Candidatus Inlaposa cisorax (NL. fem. n. *cisorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABQG01 sp011391155*. The type genome for the species is the GenBank assembly GCA_011391155.1. The GC content of the type genome is 65.03 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Inlaposa gen. nov.

Candidatus Inlaposa (NL. fem. n. *Inlaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABQG01*. The type species for the genus is *Candidatus* Inlaposa cisorax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlaposa prospicella sp. nov.

Candidatus Inlaposa prospicella (NL. fem. n. *prospicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAABQG01 sp011391595*. The type genome for the species is the GenBank assembly GCA_011391595.1. The GC content of the type genome is 64.29 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Inlapula inbecousia sp. nov.

Candidatus Inlapula inbecousia (NL. fem. n. *inbecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4732 sp002404095*. The type genome for the species is the GenBank assembly GCA_002404095.1. The GC content of the type genome is 62.45 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Inlapula gen. nov.

Candidatus Inlapula (NL. fem. n. *Inlapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4732*. The type species for the genus is *Candidatus* Inlapula inbecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlecana insemousia sp. nov.

Candidatus Inlecana insemousia (NL. fem. n. *insemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTFZ01 sp011335035*. The type genome for the species is the GenBank assembly GCA_011335035.1. The GC content of the type genome is 54.24 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Inlecana gen. nov.

Candidatus Inlecana (NL. fem. n. *Inlecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTFZ01*. The type species for the genus is *Candidatus* Inlecana insemousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-584*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Senacosaceae.

Description of *Candidatus* Inlecaria agratigena sp. nov.

Candidatus Inlecaria agratigena (NL. fem. n. *agratigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7317 sp002474345*. The type genome for the species is the GenBank assembly GCA_002474345.1. The GC content of the type genome is 35.68 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Inlecaria gen. nov.

Candidatus Inlecaria (NL. fem. n. *Inlecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7317*. The type species for the genus is *Candidatus* Inlecaria agratigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlecaria metapousia sp. nov.

Candidatus Inlecaria metapousia (NL. fem. n. *metapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7317 sp002715375*. The type genome for the species is the GenBank assembly GCA_002715375.1. The GC content of the type genome is 35.14 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Inlecella refinatica sp. nov.

Candidatus Inlecella refinatica (NL. fem. n. *refinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch130 sp013177945*. The type genome for the species is the GenBank assembly GCA_013177945.1. The GC content of the type genome is 55.76 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Inlecella gen. nov.

Candidatus Inlecella (NL. fem. n. *Inlecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch130*. The type species for the genus is *Candidatus* Inlecella refinatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlecia viragedo sp. nov.

Candidatus Inlecia viragedo (NL. fem. n. *viragedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYP01 sp009692725*. The type genome for the species is the GenBank assembly GCA_009692725.1. The GC content of the type genome is 72.5 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Inlecia gen. nov.

Candidatus Inlecia (NL. fem. n. *Inlecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYP01*. The type species for the genus is *Candidatus* Inlecia viragedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Inlecida invecimonia sp. nov.

Candidatus Inlecida invecimonia (NL. fem. n. *invecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An2-A sp002160065*. The type genome for the species is the GenBank assembly RS_GCF_002160065.1. The GC content of the type genome is 62.39 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Inlecida gen. nov.

Candidatus Inlecida (NL. fem. n. *Inlecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An2-A*. The type species for the genus is *Candidatus* Inlecida invecimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlecosa direcatica sp. nov.

Candidatus Inlecosa direcatica (NL. fem. n. *direcatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7477 sp001940995*. The type genome for the species is the GenBank assembly GCA_001940995.1. The GC content of the type genome is 44.73 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Inlecosa gen. nov.

Candidatus Inlecosa (NL. fem. n. *Inlecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7477*. The type species for the genus is *Candidatus* Inlecosa direcatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlecosa viripitura sp. nov.

Candidatus Inlecosa viripitura (NL. fem. n. *viripitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7477 sp002479715*. The type genome for the species is the GenBank assembly GCA_002479715.1. The GC content of the type genome is 47.99 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Inlepella bisacilega sp. nov.

Candidatus Inlepella bisacilega (NL. fem. n. *bisacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRT01 sp013813355*. The type genome for the species is the GenBank assembly GCA_013813355.1. The GC content of the type genome is 66.9 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Inlepella gen. nov.

Candidatus Inlepella (NL. fem. n. *Inlepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRT01*. The type species for the genus is *Candidatus* Inlepella bisacilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Inlepia bicapibra sp. nov.

Candidatus Inlepia bicapibra (NL. fem. n. *bicapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCJ01 sp013817655*. The type genome for the species is the GenBank assembly GCA_013817655.1. The GC content of the type genome is 68.4 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Inlepia gen. nov.

Candidatus Inlepia (NL. fem. n. *Inlepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCJ01*. The type species for the genus is *Candidatus* Inlepia bicapibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Inlepia defanibra sp. nov.

Candidatus Inlepia defanibra (NL. fem. n. *defanibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCJ01 sp013816105*. The type genome for the species is the GenBank assembly GCA_013816105.1. The GC content of the type genome is 68.35 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Inleposa subaditoga sp. nov.

Candidatus Inleposa subaditoga (NL. fem. n. *subaditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMSE01 sp013204645*. The type genome for the species is the GenBank assembly GCA_013204645.1. The GC content of the type genome is 42.53 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Inleposa gen. nov.

Candidatus Inleposa (NL. fem. n. *Inleposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMSE01*. The type species for the genus is *Candidatus* Inleposa subaditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-12-FULL-45-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligariaceae.

Description of *Candidatus* Inlepula hemitivita sp. nov.

Candidatus Inlepula hemitivita (NL. fem. n. *hemitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPP01 sp012838265*. The type genome for the species is the GenBank assembly GCA_012838265.1. The GC content of the type genome is 37.61 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Inlepula gen. nov.

Candidatus Inlepula (NL. fem. n. *Inlepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPP01*. The type species for the genus is *Candidatus* Inlepula hemitivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibana adcumimonas sp. nov.

Candidatus Inlibana adcumimonas (NL. fem. n. *adcumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDE01 sp007693635*. The type genome for the species is the GenBank assembly GCA_007693635.1. The GC content of the type genome is 43.16 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Inlibana gen. nov.

Candidatus Inlibana (NL. fem. n. *Inlibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDE01*. The type species for the genus is *Candidatus* Inlibana adcumimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibaria adlubatica sp. nov.

Candidatus Inlibaria adlubatica (NL. fem. n. *adlubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLM01 sp011333295*. The type genome for the species is the GenBank assembly GCA_011333295.1. The GC content of the type genome is 54.94 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Inlibaria gen. nov.

Candidatus Inlibaria (NL. fem. n. *Inlibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLM01*. The type species for the genus is *Candidatus* Inlibaria

adlubatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibia attolitudo sp. nov.

Candidatus Inlibia attolitudo (NL. fem. n. *attolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TWA4 sp000875945*. The type genome for the species is the GenBank assembly RS_GCF_000875945.1. The GC content of the type genome is 33.65 % and the genome length is 3.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "foregut sample".

Description of *Candidatus* Inlibia gen. nov.

Candidatus Inlibia (NL. fem. n. *Inlibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TWA4*. The type species for the genus is *Candidatus* Inlibia attolitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibida tribrimonas sp. nov.

Candidatus Inlibida tribrimonas (NL. fem. n. *tribrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRH01 sp003175915*. The type genome for the species is the GenBank assembly GCA_003175915.1. The GC content of the type genome is 50.62 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Inlibida gen. nov.

Candidatus Inlibida (NL. fem. n. *Inlibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRH01*. The type species for the genus is *Candidatus* Inlibida tribrimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibosa adbelitudo sp. nov.

Candidatus Inlibosa adbelitudo (NL. fem. n. *adbelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEPB01 sp012026715*. The type genome for the species is the GenBank assembly GCA_012026715.1. The GC content of the type genome is 62.74 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Inlibosa gen. nov.

Candidatus Inlibosa (NL. fem. n. *Inlibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEPB01*. The type species for the genus is *Candidatus* Inlibosa adbelitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlibula facunousia sp. nov.

Candidatus Inlibula facunousia (NL. fem. n. *facunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PKWO01 sp003132085*. The type genome for the species is the GenBank assembly GCA_003132085.1. The GC content of the type genome is 55.57 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Inlibula gen. nov.

Candidatus Inlibula (NL. fem. n. *Inlibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PKWO01*. The type species for the genus is *Candidatus* Inlibula facunousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlocana malogilega sp. nov.

Candidatus Inlocana malogilega (NL. fem. n. *malogilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3003 sp006226375*. The type genome for the species is the GenBank assembly GCA_006226375.1. The GC content of the type genome is 53.8 % and the genome length is 10.21 Mbp.

Description of *Candidatus* Inlocana gen. nov.

Candidatus Inlocana (NL. fem. n. *Inlocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M3003*. The type species for the genus is *Candidatus* Inlocana malogilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peradosaceae.

Description of *Candidatus* Inlocaria sitelicula sp. nov.

Candidatus Inlocaria sitelicula (NL. fem. n. *sitelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHZM01 sp003224665*. The type genome for the species is the GenBank assembly GCA_003224665.1. The GC content of the type genome is 60.33 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Inlocaria gen. nov.

Candidatus Inlocaria (NL. fem. n. *Inlocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHZM01*. The type species for the genus is *Candidatus* Inlocaria sitelicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Inlocella asporentia sp. nov.

Candidatus Inlocella asporentia (NL. fem. n. *asporentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *18JY21-1 sp004344915*. The type genome for the species is the GenBank assembly RS_GCF_004344915.1. The GC content of the type genome is 42.17 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Inlocella gen. nov.

Candidatus Inlocella (NL. fem. n. *Inlocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *18JY21-1*. The type species for the genus is *Candidatus* Inlocella asporentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlocia assicitas sp. nov.

Candidatus Inlocia assicitas (NL. fem. n. *assicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B28-G16 sp003644175*. The type genome for the species is the GenBank assembly GCA_003644175.1. The GC content of the type genome is 53.61 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Inlocia gen. nov.

Candidatus Inlocia (NL. fem. n. *Inlocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B28-G16*. The type species for the genus is *Candidatus* Inlocia assicitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlocosa excanimonas sp. nov.

Candidatus Inlocosa excanimonas (NL. fem. n. *excanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Glo-17 sp003353795*. The type genome for the species is the GenBank assembly GCA_003353795.1. The GC content of the type genome is 66.68 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Inlocosa gen. nov.

Candidatus Inlocosa (NL. fem. n. *Inlocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Glo-17*. The type species for the genus is *Candidatus* Inlocosa excanimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LZORAL124-64-63*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolellaceae.

Description of *Candidatus* Inlumaria accoritio sp. nov.

Candidatus Inlumaria accoritio (NL. fem. n. *accoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QZKY01 sp003605115*. The type genome for the species is the GenBank assembly GCA_003605115.1. The GC content of the type genome is 53.03 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Inlumaria gen. nov.

Candidatus Inlumaria (NL. fem. n. *Inlumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QZKY01*. The type species for the genus is *Candidatus* Inlumaria accoritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlumella armicibra sp. nov.

Candidatus Inlumella armicibra (NL. fem. n. *armicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACBWF01 sp902526175*. The type genome for the species is the GenBank assembly GCA_902526175.1. The GC content of the type genome is 29.35 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Inlumella gen. nov.

Candidatus Inlumella (NL. fem. n. *Inlumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACBWF01*. The type species for the genus is *Candidatus* Inlumella armicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Inlumella delubatica sp. nov.

Candidatus Inlumella delubatica (NL. fem. n. *delubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACBWF01 sp902542925*. The type genome for the species is the GenBank assembly GCA_902542925.1. The GC content of the type genome is 29.48 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Inlumia adtolivita sp. nov.

Candidatus Inlumia adtolivita (NL. fem. n. *adtolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTYO01 sp012961845*. The type genome for the species is the GenBank assembly GCA_012961845.1. The GC content of the type genome is 50.84 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Inlumia gen. nov.

Candidatus Inlumia (NL. fem. n. *Inlumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTYO01*. The type species for the genus is *Candidatus* Inlumia

adtolivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3076*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapiaceae.

Description of *Candidatus* Inlumosa abambivita sp. nov.

Candidatus Inlumosa abambivita (NL. fem. n. *abambivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNEE01 sp003645085*. The type genome for the species is the GenBank assembly GCA_003645085.1. The GC content of the type genome is 49.81 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Inlumosa gen. nov.

Candidatus Inlumosa (NL. fem. n. *Inlumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNEE01*. The type species for the genus is *Candidatus* Inlumosa abambivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehemidaceae.

Description of *Candidatus* Inlumula advigousia sp. nov.

Candidatus Inlumula advigousia (NL. fem. n. *advigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6544 sp002724555*. The type genome for the species is the GenBank assembly GCA_002724555.1. The GC content of the type genome is 49.48 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Inlumula gen. nov.

Candidatus Inlumula (NL. fem. n. *Inlumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA6544*. The type species for the genus is *Candidatus* Inlumula advigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenellaceae.

Description of *Candidatus* Inlumula culilastra sp. nov.

Candidatus Inlumula culilastra (NL. fem. n. *culilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6544 sp002716125*. The type genome for the species is the GenBank assembly GCA_002716125.1. The GC content of the type genome is 57.41 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Inlumula selecatio sp. nov.

Candidatus Inlumula selecatio (NL. fem. n. *selecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6544 sp002434595*. The type genome for the species is the GenBank assembly GCA_002434595.1. The GC content of the type genome is 56.11 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Inlusana cepulilenta sp. nov.

Candidatus Inlusana cepulilenta (NL. fem. n. *cepulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4581 sp002387565*. The type genome for the species is the GenBank assembly GCA_002387565.1. The GC content of the type genome is 40.14 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Inlusana gen. nov.

Candidatus Inlusana (NL. fem. n. *Inlusana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4581*. The type species for the genus is *Candidatus* Inlusana

cepulilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlusana depetentia sp. nov.

Candidatus Inlusana depetentia (NL. fem. n. *depetentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4581 sp002386905*. The type genome for the species is the GenBank assembly GCA_002386905.1. The GC content of the type genome is 38.44 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Inlusaria ecastibula sp. nov.

Candidatus Inlusaria ecastibula (NL. fem. n. *ecastibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-58843 sp009650215*. The type genome for the species is the GenBank assembly RS_GCF_009650215.1. The GC content of the type genome is 72.56 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Inlusaria gen. nov.

Candidatus Inlusaria (NL. fem. n. *Inlusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSIO-58843*. The type species for the genus is *Candidatus* Inlusaria ecastibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetulaceae.

Description of *Candidatus* Inlusella miracimonia sp. nov.

Candidatus Inlusella miracimonia (NL. fem. n. *miracimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXF01 sp009784985*. The type genome for the species is the

GenBank assembly GCA_009784985.1. The GC content of the type genome is 55.7 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Inlusella gen. nov.

Candidatus Inlusella (NL. fem. n. *Inlusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXF01*. The type species for the genus is *Candidatus* Inlusella miracimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Inlusia asporimonia sp. nov.

Candidatus Inlusia asporimonia (NL. fem. n. *asporimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRGJ01 sp008636105*. The type genome for the species is the GenBank assembly GCA_008636105.1. The GC content of the type genome is 38.25 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Inlusia gen. nov.

Candidatus Inlusia (NL. fem. n. *Inlusia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRGJ01*. The type species for the genus is *Candidatus* Inlusia asporimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inlusia ludibitura sp. nov.

Candidatus Inlusia ludibitura (NL. fem. n. *ludibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRGJ01 sp011050115*. The type genome for the species is the GenBank assembly GCA_011050115.1. The GC content of the type genome is 38.24 %

and the genome length is 2.96 Mbp.

Description of *Candidatus* Inlusida inmolessa sp. nov.

Candidatus Inlusida inmolessa (NL. fem. n. *inmolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLW01 sp012799135*. The type genome for the species is the GenBank assembly GCA_012799135.1. The GC content of the type genome is 50.34 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Inlusida gen. nov.

Candidatus Inlusida (NL. fem. n. *Inlusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLW01*. The type species for the genus is *Candidatus* Inlusida inmolessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Inlusosa proslousia sp. nov.

Candidatus Inlusosa proslousia (NL. fem. n. *proslousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWBO01 sp002071685*. The type genome for the species is the GenBank assembly GCA_002071685.1. The GC content of the type genome is 42.31 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Inlusosa gen. nov.

Candidatus Inlusosa (NL. fem. n. *Inlusosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWBO01*. The type species for the genus is *Candidatus* Inlusosa proslousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Sifunidaceae.

Description of *Candidatus* Inlusula arcubicula sp. nov.

Candidatus Inlusula arcubicula (NL. fem. n. *arcubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-10-A sp001804165*. The type genome for the species is the GenBank assembly GCA_001804165.1. The GC content of the type genome is 45.16 % and the genome length is 1.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Inlusula gen. nov.

Candidatus Inlusula (NL. fem. n. *Inlusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-10-A*. The type species for the genus is *Candidatus* Inlusula arcubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanulaceae.

Description of *Candidatus* Inmacana immacicula sp. nov.

Candidatus Inmacana immacicula (NL. fem. n. *immacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-43-13 sp001819295*. The type genome for the species is the GenBank assembly GCA_001819295.1. The GC content of the type genome is 42.92 % and the genome length is 0.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Inmacana gen. nov.

Candidatus Inmacana (NL. fem. n. *Inmacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-43-13*. The type species for the genus is *Candidatus* Inmacana immacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MHMH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifiaceae.

Description of *Candidatus* Inmacaria gabinigena sp. nov.

Candidatus Inmacaria gabinigena (NL. fem. n. *gabinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12657 sp900760575*. The type genome for the species is the GenBank assembly RS_GCF_900760575.1. The GC content of the type genome is 46.57 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Inmacaria gen. nov.

Candidatus Inmacaria (NL. fem. n. *Inmacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12657*. The type species for the genus is *Candidatus* Inmacaria gabinigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Inmacella revulicula sp. nov.

Candidatus Inmacella revulicula (NL. fem. n. *revulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-533 sp003250375*. The type genome for the species is the GenBank assembly GCA_003250375.1. The GC content of the type genome is 40.98 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Inmacella gen. nov.

Candidatus Inmacella (NL. fem. n. *Inmacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-533*. The type species for the genus is *Candidatus* Inmacella revulicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Inmacosa abnepibula sp. nov.

Candidatus Inmacosa abnepibula (NL. fem. n. *abnepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWME01 sp003559235*. The type genome for the species is the GenBank assembly GCA_003559235.1. The GC content of the type genome is 41.8 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Inmacosa gen. nov.

Candidatus Inmacosa (NL. fem. n. *Inmacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWME01*. The type species for the genus is *Candidatus* Inmacosa abnepibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmacula tenebago sp. nov.

Candidatus Inmacula tenebago (NL. fem. n. *tenebago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZL01 sp009692275*. The type genome for the species is the GenBank assembly GCA_009692275.1. The GC content of the type genome is 57.86 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Inmacula gen. nov.

Candidatus Inmacula (NL. fem. n. *Inmacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZL01*. The type species for the genus is *Candidatus* Inmacula tenebago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Inmemana admigitia sp. nov.

Candidatus Inmemana admigitia (NL. fem. n. *admigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MGR-bin340 sp013816805*. The type genome for the species is the GenBank assembly GCA_013816805.1. The GC content of the type genome is 39.17 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Inmemana gen. nov.

Candidatus Inmemana (NL. fem. n. *Inmemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MGR-bin340*. The type species for the genus is *Candidatus* Inmemana admigitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vereciaceae.

Description of *Candidatus* Inmemaria inabsago sp. nov.

Candidatus Inmemaria inabsago (NL. fem. n. *inabsago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJL01 sp014380625*. The type genome for the species is the GenBank assembly GCA_014380625.1. The GC content of the type genome is 31.76 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Inmemaria gen. nov.

Candidatus Inmemaria (NL. fem. n. *Inmemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJL01*. The type species for the genus is *Candidatus* Inmemaria inabsago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmemida desucisca sp. nov.

Candidatus Inmemida desucisca (NL. fem. n. *desucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NCEH01 sp002257205*. The type genome for the species is the GenBank assembly GCA_002257205.1. The GC content of the type genome is 65.72 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Inmemida gen. nov.

Candidatus Inmemida (NL. fem. n. *Inmemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NCEH01*. The type species for the genus is *Candidatus* Inmemida desucisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmemida voragivita sp. nov.

Candidatus Inmemida voragivita (NL. fem. n. *voragivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NCEH01 sp002304505*. The type genome for the species is the GenBank assembly GCA_002304505.1. The GC content of the type genome is 66.26 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Inmemosa attolatica sp. nov.

Candidatus Inmemosa attolatica (NL. fem. n. *attolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PSRN01 sp003176075*. The type genome for the species is the GenBank assembly GCA_003176075.1. The GC content of the type genome is 52.44 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Inmemosa gen. nov.

Candidatus Inmemosa (NL. fem. n. *Inmemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRN01*. The type species for the genus is *Candidatus* Inmemosa attolatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmenana intemago sp. nov.

Candidatus Inmenana intemago (NL. fem. n. *intemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBL01 sp011526565*. The type genome for the species is the GenBank assembly GCA_011526565.1. The GC content of the type genome is 72.83 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Inmenana gen. nov.

Candidatus Inmenana (NL. fem. n. *Inmenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBL01*. The type species for the genus is *Candidatus* Inmenana intemago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Exsanellaceae.

Description of *Candidatus* Inmenaria adpugimonas sp. nov.

Candidatus Inmenaria adpugimonas (NL. fem. n. *adpugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYW01 sp903897985*. The type genome for the species is the

GenBank assembly GCA_903897985.1. The GC content of the type genome is 57.1 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Inmenaria gen. nov.

Candidatus Inmenaria (NL. fem. n. *Inmenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYYW01*. The type species for the genus is *Candidatus* Inmenaria adpugimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifariaceae.

Description of *Candidatus* Inmenaria occenatio sp. nov.

Candidatus Inmenaria occenatio (NL. fem. n. *occenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYW01 sp903930515*. The type genome for the species is the GenBank assembly GCA_903930515.1. The GC content of the type genome is 55.33 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Inmenella latibitoga sp. nov.

Candidatus Inmenella latibitoga (NL. fem. n. *latibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OEMS01 sp900199405*. The type genome for the species is the GenBank assembly RS_GCF_900199405.1. The GC content of the type genome is 60.76 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Inmenella gen. nov.

Candidatus Inmenella (NL. fem. n. *Inmenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OEMS01*. The type species for the genus is *Candidatus* Inmenella latibitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAG-74. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Inmenida inmititudo sp. nov.

Candidatus Inmenida inmititudo (NL. fem. n. *inmititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXI01 sp004292795*. The type genome for the species is the GenBank assembly GCA_004292795.1. The GC content of the type genome is 42.6 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Inmenida gen. nov.

Candidatus Inmenida (NL. fem. n. *Inmenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXI01*. The type species for the genus is *Candidatus* Inmenida inmititudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmenida insibimonia sp. nov.

Candidatus Inmenida insibimonia (NL. fem. n. *insibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXI01 sp013298105*. The type genome for the species is the GenBank assembly GCA_013298105.1. The GC content of the type genome is 40.54 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Inmenosa antepitia sp. nov.

Candidatus Inmenosa antepitia (NL. fem. n. *antepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WREQ01 sp009779255*. The type genome for the species is the GenBank assembly GCA_009779255.1. The GC content of the type genome is 53.44 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Inmenosa gen. nov.

Candidatus Inmenosa (NL. fem. n. *Inmenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WREQ01*. The type species for the genus is *Candidatus* Inmenosa antepitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacidaceae.

Description of *Candidatus* Inmenula delapitia sp. nov.

Candidatus Inmenula delapitia (NL. fem. n. *delapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PPFX01 sp002898515*. The type genome for the species is the GenBank assembly RS_GCF_002898515.1. The GC content of the type genome is 59.23 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Inmenula gen. nov.

Candidatus Inmenula (NL. fem. n. *Inmenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PPFX01*. The type species for the genus is *Candidatus* Inmenula delapitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmenula herinilenta sp. nov.

Candidatus Inmenula herinilenta (NL. fem. n. *herinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PPFX01 sp002093115*. The type genome for the species is the GenBank assembly RS_GCF_002093115.1. The GC content of the type genome is 59.39 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Inmitana offirimonas sp. nov.

Candidatus Inmitana offirimonas (NL. fem. n. *offirimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCVW01 sp902806235*. The type genome for the species is the GenBank assembly GCA_902806235.1. The GC content of the type genome is 70.54 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Inmitana gen. nov.

Candidatus Inmitana (NL. fem. n. *Inmitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCVW01*. The type species for the genus is *Candidatus* Inmitana offirimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmitaria vitabago sp. nov.

Candidatus Inmitaria vitabago (NL. fem. n. *vitabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZAI01 sp012514445*. The type genome for the species is the GenBank assembly GCA_012514445.1. The GC content of the type genome is 66.2 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Inmitaria gen. nov.

Candidatus Inmitaria (NL. fem. n. *Inmitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZAI01*. The type species for the genus is *Candidatus* Inmitaria vitabago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3636*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuliaceae.

Description of *Candidatus* Inmitella incunitas sp. nov.

Candidatus Inmitella incunitas (NL. fem. n. *incunitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2688105 sp002688105*. The type genome for the species is the GenBank assembly GCA_002688105.1. The GC content of the type genome is 48.36 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Inmitella gen. nov.

Candidatus Inmitella (NL. fem. n. *Inmitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2688105*. The type species for the genus is *Candidatus* Inmitella incunitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Inmitida fefelitrix sp. nov.

Candidatus Inmitida fefelitrix (NL. fem. n. *fefelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZAW01 sp012514125*. The type genome for the species is the GenBank assembly GCA_012514125.1. The GC content of the type genome is 50.09 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Inmitida gen. nov.

Candidatus Inmitida (NL. fem. n. *Inmitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZAW01*. The type species for the genus is *Candidatus* Inmitida fefelitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYCJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denixulaceae.

Description of *Candidatus* Inmitula oppanousia sp. nov.

Candidatus Inmitula oppanousia (NL. fem. n. *oppanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADCS01 sp013153965*. The type genome for the species is the GenBank assembly GCA_013153965.1. The GC content of the type genome is 58.23 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Inmitula gen. nov.

Candidatus Inmitula (NL. fem. n. *Inmitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADCS01*. The type species for the genus is *Candidatus* Inmitula oppanousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LBFQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemellaceae.

Description of *Candidatus* Inmitula siligitudo sp. nov.

Candidatus Inmitula siligitudo (NL. fem. n. *siligitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADCS01 sp013154295*. The type genome for the species is the GenBank assembly GCA_013154295.1. The GC content of the type genome is 48.62 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Inmobana vagabitoga sp. nov.

Candidatus Inmobana vagabitoga (NL. fem. n. *vagabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAC01 sp014238965*. The type genome for the species is the GenBank assembly GCA_014238965.1. The GC content of the type genome is 56.95 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Inmobana gen. nov.

Candidatus Inmobana (NL. fem. n. *Inmobana* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAC01*. The type species for the genus is *Candidatus* Inmobana vagabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Inmobaria nocenicella sp. nov.

Candidatus Inmobaria nocenicella (NL. fem. n. *nocenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1623 sp900553525*. The type genome for the species is the GenBank assembly GCA_900553525.1. The GC content of the type genome is 54.63 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Inmobaria gen. nov.

Candidatus Inmobaria (NL. fem. n. *Inmobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1623*. The type species for the genus is *Candidatus* Inmobaria nocenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmobella megalicella sp. nov.

Candidatus Inmobella megalicella (NL. fem. n. *megalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVP01 sp011368305*. The type genome for the species is the GenBank assembly GCA_011368305.1. The GC content of the type genome is 45.6 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Inmobella gen. nov.

Candidatus Inmobella (NL. fem. n. *Inmobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVP01*. The type species for the genus is *Candidatus* Inmobella megalicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Inmobella subacitudo sp. nov.

Candidatus Inmobella subacitudo (NL. fem. n. *subacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVP01 sp011330905*. The type genome for the species is the GenBank assembly GCA_011330905.1. The GC content of the type genome is 47.02 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Inmobia acrobicula sp. nov.

Candidatus Inmobia acrobicula (NL. fem. n. *acrobicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFI01 sp013286595*. The type genome for the species is the GenBank assembly GCA_013286595.1. The GC content of the type genome is 42.92 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Inmobia gen. nov.

Candidatus Inmobia (NL. fem. n. *Inmobia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFI01*. The type species for the genus is *Candidatus* Inmobia acrobicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmobida fetuticula sp. nov.

Candidatus Inmobida fetuticula (NL. fem. n. *fetuticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J124 sp003694355*. The type genome for the species is the GenBank assembly GCA_003694355.1. The GC content of the type genome is 40.31 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Inmobida gen. nov.

Candidatus Inmobida (NL. fem. n. *Inmobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J124*. The type species for the genus is *Candidatus* Inmobida fetuticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Inmobosa cerevatica sp. nov.

Candidatus Inmobosa cerevatica (NL. fem. n. *cerevatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCJG01 sp903970625*. The type genome for the species is the GenBank assembly GCA_903970625.1. The GC content of the type genome is 67.03 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Inmobosa gen. nov.

Candidatus Inmobosa (NL. fem. n. *Inmobosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCJG01*. The type species for the genus is *Candidatus* Inmobosa cerevatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmodana apporitica sp. nov.

Candidatus Inmodana apporitica (NL. fem. n. *apporitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACTMU01 sp014584465*. The type genome for the species is the GenBank assembly GCA_014584465.1. The GC content of the type genome is 46.85 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Inmodana gen. nov.

Candidatus Inmodana (NL. fem. n. *Inmodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACTMU01*. The type species for the genus is *Candidatus* Inmodana apporitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG-bin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabulaceae.

Description of *Candidatus* Inmodella ingigax sp. nov.

Candidatus Inmodella ingigax (NL. fem. n. *ingigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEPF01 sp012027055*. The type genome for the species is the GenBank assembly GCA_012027055.1. The GC content of the type genome is 70.44 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Inmodella gen. nov.

Candidatus Inmodella (NL. fem. n. *Inmodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEPF01*. The type species for the genus is *Candidatus* Inmodella ingigax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatulaceae.

Description of *Candidatus* Inmodia anaplitia sp. nov.

Candidatus Inmodia anaplitia (NL. fem. n. *anaplitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8290 sp003497445*. The type genome for the species is the GenBank assembly GCA_003497445.1. The GC content of the type genome is 33.31 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Inmodia gen. nov.

Candidatus Inmodia (NL. fem. n. *Inmodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8290*. The type species for the genus is *Candidatus* Inmodia anaplitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmodida inordimonia sp. nov.

Candidatus Inmodida inordimonia (NL. fem. n. *inordimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGL01 sp900696525*. The type genome for the species is the GenBank assembly GCA_900696525.1. The GC content of the type genome is 69.81 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Inmodida gen. nov.

Candidatus Inmodida (NL. fem. n. *Inmodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGL01*. The type species for the genus is *Candidatus* Inmodida inordimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibariaceae.

Description of *Candidatus* Inmodula allubimonia sp. nov.

Candidatus Inmodula allubimonia (NL. fem. n. *allubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SpSt-398 sp011331725*. The type genome for the species is the GenBank assembly GCA_011331725.1. The GC content of the type genome is 43.49 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Inmodula gen. nov.

Candidatus Inmodula (NL. fem. n. *Inmodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-398*. The type species for the genus is *Candidatus* Inmodula allubimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmolana scombetta sp. nov.

Candidatus Inmolana scombetta (NL. fem. n. *scombetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13222 sp900757485*. The type genome for the species is the GenBank assembly RS_GCF_900757485.1. The GC content of the type genome is 42.75 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Inmolana gen. nov.

Candidatus Inmolana (NL. fem. n. *Inmolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13222*. The type species for the genus is *Candidatus* Inmolana scombetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmolaria acistitudo sp. nov.

Candidatus Inmolaria acistitudo (NL. fem. n. *acistitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITJF01 sp903892645*. The type genome for the species is the GenBank assembly GCA_903892645.1. The GC content of the type genome is 55.27 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Inmolaria gen. nov.

Candidatus Inmolaria (NL. fem. n. *Inmolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITJF01*. The type species for the genus is *Candidatus* Inmolaria acistitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmolaria luculastra sp. nov.

Candidatus Inmolaria luculastra (NL. fem. n. *luculastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITJF01 sp903873725*. The type genome for the species is the GenBank assembly GCA_903873725.1. The GC content of the type genome is 52.68 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Inmolella ossicicula sp. nov.

Candidatus Inmolella ossicicula (NL. fem. n. *ossicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPBY01 sp903863425*. The type genome for the species is the GenBank assembly GCA_903863425.1. The GC content of the type genome is 39.63 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Inmolella gen. nov.

Candidatus Inmolella (NL. fem. n. *Inmolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPBY01*. The type species for the genus is *Candidatus* Inmolella ossicicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapiaceae.

Description of *Candidatus* Inmolia insusousia sp. nov.

Candidatus Inmolia insusousia (NL. fem. n. *insusousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *9FT-COMBO-55-16 sp001795335*. The type genome for the species is the GenBank assembly GCA_001795335.1. The GC content of the type genome is 54.96 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Inmolia gen. nov.

Candidatus Inmolia (NL. fem. n. *Inmolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *9FT-COMBO-55-16*. The type species for the genus is *Candidatus* Inmolia insusousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Inmolida absorago sp. nov.

Candidatus Inmolida absorago (NL. fem. n. *absorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS577 sp900543525*. The type genome for the species is the GenBank assembly GCA_900543525.1. The GC content of the type genome is 57.94 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Inmolida gen. nov.

Candidatus Inmolida (NL. fem. n. *Inmolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS577*. The type species for the genus is *Candidatus* Inmolida absorago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmolosa apharetta sp. nov.

Candidatus Inmolosa apharetta (NL. fem. n. *apharetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDET01 sp013816255*. The type genome for the species is the GenBank assembly GCA_013816255.1. The GC content of the type genome is 39.65 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Inmolosa gen. nov.

Candidatus Inmolosa (NL. fem. n. *Inmolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDET01*. The type species for the genus is *Candidatus* Inmolosa apharetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Inmolula abagmimonia sp. nov.

Candidatus Inmolula abagmimonia (NL. fem. n. *abagmimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *N075bin59 sp004357655*. The type genome for the species is the GenBank assembly GCA_004357655.1. The GC content of the type genome is 69.62 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Inmolula gen. nov.

Candidatus Inmolula (NL. fem. n. *Inmolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *N075bin59*. The type species for the genus is *Candidatus* Inmolula abagmimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Inmoraria andabax sp. nov.

Candidatus Inmoraria andabax (NL. fem. n. *andabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRY01 sp013817115*. The type genome for the species is the GenBank assembly GCA_013817115.1. The GC content of the type genome is 38.32 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Inmoraria gen. nov.

Candidatus Inmoraria (NL. fem. n. *Inmoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRY01*. The type species for the genus is *Candidatus* Inmoraria andabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmoraria dilecifica sp. nov.

Candidatus Inmoraria dilecifica (NL. fem. n. *dilecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRY01 sp013813265*. The type genome for the species is the GenBank assembly GCA_013813265.1. The GC content of the type genome is 38.3 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Inmorella adlapitoga sp. nov.

Candidatus Inmorella adlapitoga (NL. fem. n. *adlapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B10-G4 sp003647065*. The type genome for the species is the GenBank assembly GCA_003647065.1. The GC content of the type genome is 67.57 % and the genome length is 7.08 Mbp.

Description of *Candidatus* Inmorella gen. nov.

Candidatus Inmorella (NL. fem. n. *Inmorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B10-G4*. The type species for the genus is *Candidatus* Inmorella adlapitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Inmoria cacopimonia sp. nov.

Candidatus Inmoria cacopimonia (NL. fem. n. *cacopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNU01 sp011047125*. The type genome for the species is the GenBank assembly GCA_011047125.1. The GC content of the type genome is 52.83 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Inmoria gen. nov.

Candidatus Inmoria (NL. fem. n. *Inmoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNU01*. The type species for the genus is *Candidatus* Inmoria cacopimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QEVD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogellaceae.

Description of *Candidatus* Inmorida intemisca sp. nov.

Candidatus Inmorida intemisca (NL. fem. n. *intemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718845 sp002718845*. The type genome for the species is the GenBank assembly GCA_002718845.1. The GC content of the type genome is 32.15 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Inmorida gen. nov.

Candidatus Inmorida (NL. fem. n. *Inmorida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718845*. The type species for the genus is *Candidatus* Inmorida intemisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Inmorosa adfabago sp. nov.

Candidatus Inmorosa adfabago (NL. fem. n. *adfabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXM01 sp011332595*. The type genome for the species is the GenBank assembly GCA_011332595.1. The GC content of the type genome is 63.21 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Inmorosa gen. nov.

Candidatus Inmorosa (NL. fem. n. *Inmorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXM01*. The type species for the genus is *Candidatus* Inmorosa adfabago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficariaceae.

Description of *Candidatus* Inmutana papavilega sp. nov.

Candidatus Inmutana papavilega (NL. fem. n. *papavilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOU01 sp011054545*. The type genome for the species is the GenBank assembly GCA_011054545.1. The GC content of the type genome is 63.83 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Inmutana gen. nov.

Candidatus Inmutana (NL. fem. n. *Inmutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOU01*. The type species for the genus is *Candidatus* Inmutana papavilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmutaria antegitas sp. nov.

Candidatus Inmutaria antegitas (NL. fem. n. *antegitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712985 sp002712985*. The type genome for the species is the GenBank assembly GCA_002712985.1. The GC content of the type genome is 47.49 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Inmutaria gen. nov.

Candidatus Inmutaria (NL. fem. n. *Inmutaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712985*. The type species for the genus is *Candidatus* Inmutaria antegitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulariaceae.

Description of *Candidatus* Inmutia adposimonia sp. nov.

Candidatus Inmutia adposimonia (NL. fem. n. *adposimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-22 sp013151565*. The type genome for the species is the GenBank assembly GCA_013151565.1. The GC content of the type genome is 35.63 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Inmutia gen. nov.

Candidatus Inmutia (NL. fem. n. *Inmutia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-22*. The type species for the genus is *Candidatus* Inmutia adposimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inmutia excetitia sp. nov.

Candidatus Inmutia excetitia (NL. fem. n. *excetitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-22 sp003233295*. The type genome for the species is the GenBank assembly GCA_003233295.1. The GC content of the type genome is 35.99 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Inmutida advecicula sp. nov.

Candidatus Inmutida advecicula (NL. fem. n. *advecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5893 sp002308915*. The type genome for the species is the GenBank assembly GCA_002308915.1. The GC content of the type genome is 31.0 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Inmutida gen. nov.

Candidatus Inmutida (NL. fem. n. *Inmutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5893*. The type species for the genus is *Candidatus* Inmutida advecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Inmutida retunetta sp. nov.

Candidatus Inmutida retunetta (NL. fem. n. *retunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5893 sp002431905*. The type genome for the species is the GenBank assembly GCA_002431905.1. The GC content of the type genome is 31.18 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Inmutula oblanicella sp. nov.

Candidatus Inmutula oblanicella (NL. fem. n. *oblanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2684605 sp002684605*. The type genome for the species is the GenBank assembly GCA_002684605.1. The GC content of the type genome is 29.67 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Inmutula gen. nov.

Candidatus Inmutula (NL. fem. n. *Inmutula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2684605*. The type species for the genus is *Candidatus* Inmutula oblanicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifariaceae.

Description of *Candidatus* Innabana utricisca sp. nov.

Candidatus Innabana utricisca (NL. fem. n. *utricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZON01 sp012797725*. The type genome for the species is the GenBank assembly GCA_012797725.1. The GC content of the type genome is 41.98 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Innabana gen. nov.

Candidatus Innabana (NL. fem. n. *Innabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZON01*. The type species for the genus is *Candidatus* Innabana utricisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuciaceae.

Description of *Candidatus* Innabaria monodimonia sp. nov.

Candidatus Innabaria monodimonia (NL. fem. n. *monodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alg240-R148 sp900537185*. The type genome for the species is the GenBank assembly GCA_900537185.1. The GC content of the type genome is 38.79 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Innabaria gen. nov.

Candidatus Innabaria (NL. fem. n. *Innabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Alg240-R148*. The type species for the genus is *Candidatus* Innabaria monodimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innabella adcomibula sp. nov.

Candidatus Innabella adcomibula (NL. fem. n. *adcomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLID01 sp007135805*. The type genome for the species is the GenBank assembly GCA_007135805.1. The GC content of the type genome is 49.06 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Innabella gen. nov.

Candidatus Innabella (NL. fem. n. *Innabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SLID01*. The type species for the genus is *Candidatus* Innabella adcomibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKK-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepellaceae.

Description of *Candidatus* Innabia adperitudo sp. nov.

Candidatus Innabia adperitudo (NL. fem. n. *adperitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTL01 sp009695195*. The type genome for the species is the GenBank assembly GCA_009695195.1. The GC content of the type genome is 60.78 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Innabia gen. nov.

Candidatus Innabia (NL. fem. n. *Innabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTL01*. The type species for the genus is *Candidatus* Innabia adperitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11358*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loceliaceae.

Description of *Candidatus* Innabia antimibula sp. nov.

Candidatus Innabia antimibula (NL. fem. n. *antimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTL01 sp004297495*. The type genome for the species is the GenBank assembly GCA_004297495.1. The GC content of the type genome is 59.59 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Innabia epistitio sp. nov.

Candidatus Innabia epistitio (NL. fem. n. *epistitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTL01 sp013140495*. The type genome for the species is the GenBank assembly GCA_013140495.1. The GC content of the type genome is 56.56 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Innabia inrecitudo sp. nov.

Candidatus Innabia inrecitudo (NL. fem. n. *inrecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTL01 sp008933055*. The type genome for the species is the GenBank assembly GCA_008933055.1. The GC content of the type genome is 54.52 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Innabosa intenigena sp. nov.

Candidatus Innabosa intenigena (NL. fem. n. *intenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFY01 sp005799745*. The type genome for the species is the GenBank assembly GCA_005799745.1. The GC content of the type genome is 56.9 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Innabosa gen. nov.

Candidatus Innabosa (NL. fem. n. *Innabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYFY01*. The type species for the genus is *Candidatus* Innabosa intenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Innabula arnacifica sp. nov.

Candidatus Innabula arnacifica (NL. fem. n. *arnacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA701 sp002298125*. The type genome for the species is the GenBank assembly GCA_002298125.1. The GC content of the type genome is 36.2 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Innabula gen. nov.

Candidatus Innabula (NL. fem. n. *Innabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA701*. The type species for the genus is *Candidatus* Innabula arnacifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innasana lacinitas sp. nov.

Candidatus Innasana lacinitas (NL. fem. n. *lacinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10425 sp003499545*. The type genome for the species is the GenBank assembly GCA_003499545.1. The GC content of the type genome is 65.16 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Innasana gen. nov.

Candidatus Innasana (NL. fem. n. *Innasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10425*. The type species for the genus is *Candidatus* Innasana lacinitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innasaria faticitio sp. nov.

Candidatus Innasaria faticitio (NL. fem. n. *faticitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-561 sp003249935*. The type genome for the species is the GenBank assembly GCA_003249935.1. The GC content of the type genome is 41.51 %

and the genome length is 4.27 Mbp.

Description of *Candidatus* Innasaria gen. nov.

Candidatus Innasaria (NL. fem. n. *Innasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-561*. The type species for the genus is *Candidatus* Innasaria faticitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametariaceae.

Description of *Candidatus* Innasella papilitica sp. nov.

Candidatus Innasella papilitica (NL. fem. n. *papilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOL01 sp012838875*. The type genome for the species is the GenBank assembly GCA_012838875.1. The GC content of the type genome is 36.52 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Innasella gen. nov.

Candidatus Innasella (NL. fem. n. *Innasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOL01*. The type species for the genus is *Candidatus* Innasella papilitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Innasia sicinitoga sp. nov.

Candidatus Innasia sicinitoga (NL. fem. n. *sicinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-10802 sp000332335*. The type genome for the species is the

GenBank assembly RS_GCF_000332335.1. The GC content of the type genome is 54.1 % and the genome length is 8.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Innasia gen. nov.

Candidatus Innasia (NL. fem. n. *Innasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-10802*. The type species for the genus is *Candidatus* Innasia sicinitoga .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Innasida delacisca sp. nov.

Candidatus Innasida delacisca (NL. fem. n. *delacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWC01 sp013335175*. The type genome for the species is the GenBank assembly GCA_013335175.1. The GC content of the type genome is 39.8 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Innasida gen. nov.

Candidatus Innasida (NL. fem. n. *Innasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWC01*. The type species for the genus is *Candidatus* Innasida delacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Innasosa appicisca sp. nov.

Candidatus Innasosa appicisca (NL. fem. n. *appicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1140 sp013153055*. The type genome for the species is the GenBank assembly GCA_013153055.1. The GC content of the type genome is 31.84 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Innasosa gen. nov.

Candidatus Innasosa (NL. fem. n. *Innasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1140*. The type species for the genus is *Candidatus* Innasosa appicisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innasosa bulapitrix sp. nov.

Candidatus Innasosa bulapitrix (NL. fem. n. *bulapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp006212005*. The type genome for the species is the GenBank assembly GCA_006212005.1. The GC content of the type genome is 33.88 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Innasosa cacalicula sp. nov.

Candidatus Innasosa cacalicula (NL. fem. n. *cacalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp902727915*. The type genome for the species is the GenBank assembly GCA_902727915.1. The GC content of the type genome is 32.82 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Innasosa excocetta sp. nov.

Candidatus Innasosa excocetta (NL. fem. n. *excocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp902727905*. The type genome for the species is the GenBank assembly GCA_902727905.1. The GC content of the type genome is 32.99 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Innasosa impiritio sp. nov.

Candidatus Innasosa impiritio (NL. fem. n. *impiritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp902727895*. The type genome for the species is the GenBank assembly GCA_902727895.1. The GC content of the type genome is 33.01 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Innasosa lucubitudo sp. nov.

Candidatus Innasosa lucubitudo (NL. fem. n. *lucubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp902727935*. The type genome for the species is the GenBank assembly GCA_902727935.1. The GC content of the type genome is 34.18 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Innasosa menapousia sp. nov.

Candidatus Innasosa menapousia (NL. fem. n. *menapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp902727995*. The type genome for the species is the GenBank assembly GCA_902727995.1. The GC content of the type genome is 33.03 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Innasosa repecilenta sp. nov.

Candidatus Innasosa repecilenta (NL. fem. n. *repecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp010892395*. The type genome for the species is the GenBank assembly RS_GCF_010892395.1. The GC content of the type genome is 36.21 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Innasosa resulago sp. nov.

Candidatus Innasosa resulago (NL. fem. n. *resulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp003978395*. The type genome for the species is the GenBank assembly GCA_003978395.1. The GC content of the type genome is 32.52 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Innasosa thapsilenta sp. nov.

Candidatus Innasosa thapsilenta (NL. fem. n. *thapsilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp002311915*. The type genome for the species is the GenBank assembly GCA_002311915.1. The GC content of the type genome is 36.2 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Innasosa viragitudo sp. nov.

Candidatus Innasosa viragitudo (NL. fem. n. *viragitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1140 sp013153825*. The type genome for the species is the GenBank assembly GCA_013153825.1. The GC content of the type genome is 36.7 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Innasula turilitia sp. nov.

Candidatus Innasula turilitia (NL. fem. n. *turilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ORNL1 sp012971745*. The type genome for the species is the GenBank assembly RS_GCF_012971745.1. The GC content of the type genome is 66.06 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Innasula gen. nov.

Candidatus Innasula (NL. fem. n. *Innasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ORNL1*. The type species for the genus is *Candidatus* Innasula turilitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innecaria repuditura sp. nov.

Candidatus Innecaria repuditura (NL. fem. n. *repuditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1177 sp003140895*. The type genome for the species is the GenBank assembly GCA_003140895.1. The GC content of the type genome is 52.65 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Innecaria gen. nov.

Candidatus Innecaria (NL. fem. n. *Innecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1177*. The type species for the genus is *Candidatus* Innecaria repuditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodosaceae.

Description of *Candidatus* Innecella binocetta sp. nov.

Candidatus Innecella binocetta (NL. fem. n. *binocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W260 sp013213875*. The type genome for the species is the GenBank assembly GCA_013213875.1. The GC content of the type genome is 61.0 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Innecella gen. nov.

Candidatus Innecella (NL. fem. n. *Innecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W260*. The type species for the genus is *Candidatus* Innecella binocetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Innecella illuvivita sp. nov.

Candidatus Innecella illuvivita (NL. fem. n. *illuvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W260 sp008725655*. The type genome for the species is the GenBank assembly RS_GCF_008725655.1. The GC content of the type genome is 64.45 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Innecia verifousia sp. nov.

Candidatus Innecia verifousia (NL. fem. n. *verifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin52 sp004375875*. The type genome for the species is the GenBank assembly GCA_004375875.1. The GC content of the type genome is 35.41 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Innecia gen. nov.

Candidatus Innecia (NL. fem. n. *Innecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin52*. The type species for the genus is *Candidatus* Innecia verifousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innecula novilessa sp. nov.

Candidatus Innecula novilessa (NL. fem. n. *novilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FLUQ01 sp900079685*. The type genome for the species is the GenBank assembly GCA_900079685.1. The GC content of the type genome is 60.09 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Innecula gen. nov.

Candidatus Innecula (NL. fem. n. *Innecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FLUQ01*. The type species for the genus is *Candidatus* Innecula novilessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innoxaria cituvax sp. nov.

Candidatus Innoxaria cituvax (NL. fem. n. *cituvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M2410 sp006226305*. The type genome for the species is the GenBank assembly GCA_006226305.1. The GC content of the type genome is 55.89 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Innoxaria gen. nov.

Candidatus Innoxaria (NL. fem. n. *Innoxaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M2410*. The type species for the genus is *Candidatus* Innoxaria cituvax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludifosaceae.

Description of *Candidatus* Innoxaria dilogitas sp. nov.

Candidatus Innoxaria dilogitas (NL. fem. n. *dilogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M2410 sp006226415*. The type genome for the species is the GenBank assembly GCA_006226415.1. The GC content of the type genome is 56.48 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Innoxida chernitio sp. nov.

Candidatus Innoxida chernitio (NL. fem. n. *chernitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHN01 sp013298415*. The type genome for the species is the GenBank assembly GCA_013298415.1. The GC content of the type genome is 60.86 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Innoxida gen. nov.

Candidatus Innoxida (NL. fem. n. *Innoxida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHN01*. The type species for the genus is *Candidatus* Innoxida chernitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innoxula desonastra sp. nov.

Candidatus Innoxula desonastra (NL. fem. n. *desonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-934 sp003164305*. The type genome for the species is the GenBank assembly GCA_003164305.1. The GC content of the type genome is 64.35 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Innoxula gen. nov.

Candidatus Innoxula (NL. fem. n. *Innoxula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-934*. The type species for the genus is *Candidatus* Innoxula desonastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innoxula lugubicula sp. nov.

Candidatus Innoxula lugubicula (NL. fem. n. *lugubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-934 sp009693865*. The type genome for the species is the GenBank assembly GCA_009693865.1. The GC content of the type genome is 63.55 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Innulana tubiciforma sp. nov.

Candidatus Innulana tubiciforma (NL. fem. n. *tubiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J108 sp003694825*. The type genome for the species is the GenBank assembly GCA_003694825.1. The GC content of the type genome is 65.52 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Innulana gen. nov.

Candidatus Innulana (NL. fem. n. *Innulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J108*. The type species for the genus is *Candidatus* Innulana tubiciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innularia inmutastra sp. nov.

Candidatus Innularia inmutastra (NL. fem. n. *inmutastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJXG01 sp903644035*. The type genome for the species is the GenBank assembly RS_GCF_903644035.1. The GC content of the type genome is 69.51 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Innularia gen. nov.

Candidatus Innularia (NL. fem. n. *Innularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAHJXG01*. The type species for the genus is *Candidatus* Innularia inmutastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innulella vilitilenta sp. nov.

Candidatus Innulella vilitilenta (NL. fem. n. *vilitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMOV01 sp013203145*. The type genome for the species is the GenBank assembly GCA_013203145.1. The GC content of the type genome is 37.98 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Innulella gen. nov.

Candidatus Innulella (NL. fem. n. *Innulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMOV01*. The type species for the genus is *Candidatus* Innulella vilitilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabiaceae.

Description of *Candidatus* Innulula adbelastra sp. nov.

Candidatus Innulula adbelastra (NL. fem. n. *adbelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HMF7647 sp009834875*. The type genome for the species is the GenBank assembly RS_GCF_009834875.1. The GC content of the type genome is 42.32 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Innulula gen. nov.

Candidatus Innulula (NL. fem. n. *Innulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HMF7647*. The type species for the genus is *Candidatus* Innulula adbelastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innumana rosacedo sp. nov.

Candidatus Innumana rosacedo (NL. fem. n. *rosacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZC01 sp902812365*. The type genome for the species is the GenBank assembly RS_GCF_902812365.1. The GC content of the type genome is 62.82 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Innumana gen. nov.

Candidatus Innumana (NL. fem. n. *Innumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZC01*. The type species for the genus is *Candidatus* Innumana rosacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Innumaria apogrivita sp. nov.

Candidatus Innumaria apogrivita (NL. fem. n. *apogrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHBSTW-00994 sp013782625*. The type genome for the species is the GenBank assembly RS_GCF_013782625.1. The GC content of the type genome is 51.94 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Innumaria gen. nov.

Candidatus Innumaria (NL. fem. n. *Innumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHBSTW-00994*. The type species for the genus is *Candidatus* Innumaria apogrivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innumella immatigena sp. nov.

Candidatus Innumella immatigena (NL. fem. n. *immatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLA01 sp014379815*. The type genome for the species is the GenBank assembly GCA_014379815.1. The GC content of the type genome is 56.99 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Innumella gen. nov.

Candidatus Innumella (NL. fem. n. *Innumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMLA01*. The type species for the genus is *Candidatus* Innumella immatigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innumida obnunugo sp. nov.

Candidatus Innumida obnunugo (NL. fem. n. *obnunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTRS01 sp012965765*. The type genome for the species is the GenBank assembly GCA_012965765.1. The GC content of the type genome is 61.33 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Innumida gen. nov.

Candidatus Innumida (NL. fem. n. *Innumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTRS01*. The type species for the genus is *Candidatus* Innumida obnunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenanaceae.

Description of *Candidatus* Innupana adlecax sp. nov.

Candidatus Innupana adlecax (NL. fem. n. *adlecax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYT01 sp002839805*. The type genome for the species is the GenBank assembly GCA_002839805.1. The GC content of the type genome is 34.87 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Innupana gen. nov.

Candidatus Innupana (NL. fem. n. *Innupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYT01*. The type species for the genus is *Candidatus* Innupana adlecax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Innupia notacisca sp. nov.

Candidatus Innupia notacisca (NL. fem. n. *notacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTH01 sp013812505*. The type genome for the species is the GenBank assembly GCA_013812505.1. The GC content of the type genome is 62.6 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Innupia gen. nov.

Candidatus Innupia (NL. fem. n. *Innupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTH01*. The type species for the genus is *Candidatus* Innupia notacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidosaceae.

Description of *Candidatus* Innupida facunicula sp. nov.

Candidatus Innupida facunicula (NL. fem. n. *facunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-38 sp013214975*. The type genome for the species is the GenBank assembly GCA_013214975.1. The GC content of the type genome is 36.04 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Innupida gen. nov.

Candidatus Innupida (NL. fem. n. *Innupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-38*. The type species for the genus is *Candidatus* Innupida facunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NORP154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinariaceae.

Description of *Candidatus* Innupida inaspimonas sp. nov.

Candidatus Innupida inaspimonas (NL. fem. n. *inaspimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-38 sp013214205*. The type genome for the species is the GenBank assembly GCA_013214205.1. The GC content of the type genome is 37.32 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Innuposa nefaribra sp. nov.

Candidatus Innuposa nefaribra (NL. fem. n. *nefaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718415 sp002718415*. The type genome for the species is the GenBank assembly GCA_002718415.1. The GC content of the type genome is 31.91 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Innuposa gen. nov.

Candidatus Innuposa (NL. fem. n. *Innuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718415*. The type species for the genus is *Candidatus* Innuposa nefaribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Innupula depocedo sp. nov.

Candidatus Innupula depocedo (NL. fem. n. *depocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHC01 sp012735535*. The type genome for the species is the GenBank assembly GCA_012735535.1. The GC content of the type genome is 53.43 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Innupula gen. nov.

Candidatus Innupula (NL. fem. n. *Innupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHC01*. The type species for the genus is *Candidatus* Innupula depocedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5301*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululanaceae.

Description of *Candidatus* Inoblella selibitas sp. nov.

Candidatus Inoblella selibitas (NL. fem. n. *selibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITSH01 sp903895005*. The type genome for the species is the GenBank assembly GCA_903895005.1. The GC content of the type genome is 61.14 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Inoblella gen. nov.

Candidatus Inoblella (NL. fem. n. *Inoblella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITSH01*. The type species for the genus is *Candidatus* Inoblella selibitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Inoblia armifentia sp. nov.

Candidatus Inoblia armifentia (NL. fem. n. *armifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEXD01 sp009391235*. The type genome for the species is the GenBank assembly GCA_009391235.1. The GC content of the type genome is 41.49 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Inoblia gen. nov.

Candidatus Inoblia (NL. fem. n. *Inoblia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEXD01*. The type species for the genus is *Candidatus* Inoblia armifentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2712585*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonipariaceae.

Description of *Candidatus* Inoblosa denupedo sp. nov.

Candidatus Inoblosa denupedo (NL. fem. n. *denupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXQW01 sp903921675*. The type genome for the species is the GenBank assembly GCA_903921675.1. The GC content of the type genome is 33.55 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Inoblosa gen. nov.

Candidatus Inoblosa (NL. fem. n. *Inoblosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXQW01*. The type species for the genus is *Candidatus* Inoblosa denupedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inoblula vocifugo sp. nov.

Candidatus Inoblula vocifugo (NL. fem. n. *vocifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKMC01 sp902601155*. The type genome for the species is the GenBank assembly RS_GCF_902601155.1. The GC content of the type genome is 43.87 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Inoblula gen. nov.

Candidatus Inoblula (NL. fem. n. *Inoblula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACKMC01*. The type species for the genus is *Candidatus* Inoblula vocifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA729*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedifiaceae.

Description of *Candidatus* Inobrana abluvastra sp. nov.

Candidatus Inobrana abluvastra (NL. fem. n. *abluvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFWF01 sp004560045*. The type genome for the species is the GenBank assembly GCA_004560045.1. The GC content of the type genome is 48.21 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Inobrana gen. nov.

Candidatus Inobrana (NL. fem. n. *Inobrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFWF01*. The type species for the genus is *Candidatus* Inobrana abluvastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inobrana exsufitica sp. nov.

Candidatus Inobrana exsufitica (NL. fem. n. *exsufitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFWF01 sp900769775*. The type genome for the species is the GenBank assembly RS_GCF_900769775.1. The GC content of the type genome is 44.36 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Inobraria ambiditura sp. nov.

Candidatus Inobraria ambiditura (NL. fem. n. *ambiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52915 sp902806055*. The type genome for the species is the GenBank assembly GCA_902806055.1. The GC content of the type genome is 62.19 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Inobraria gen. nov.

Candidatus Inobraria (NL. fem. n. *Inobraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSIO-52915*. The type species for the genus is *Candidatus* Inobraria ambiditura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inobraria ardifatio sp. nov.

Candidatus Inobraria ardifatio (NL. fem. n. *ardifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SCSIO-52915 sp902806075*. The type genome for the species is the GenBank assembly GCA_902806075.1. The GC content of the type genome is 63.45 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Inobraria bicodibra sp. nov.

Candidatus Inobraria bicodibra (NL. fem. n. *bicodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52915 sp902806105*. The type genome for the species is the GenBank assembly GCA_902806105.1. The GC content of the type genome is 67.32 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Inobraria laxitilega sp. nov.

Candidatus Inobraria laxitilega (NL. fem. n. *laxitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52915 sp011492965*. The type genome for the species is the GenBank assembly RS_GCF_011492965.1. The GC content of the type genome is 69.11 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Inobraria obambiforma sp. nov.

Candidatus Inobraria obambiforma (NL. fem. n. *obambiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52915 sp902806065*. The type genome for the species is the GenBank assembly GCA_902806065.1. The GC content of the type genome is 61.9 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Inobrella furibessa sp. nov.

Candidatus Inobrella furibessa (NL. fem. n. *furibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-875 sp003153125*. The type genome for the species is the GenBank assembly GCA_003153125.1. The GC content of the type genome is 68.55 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Inobrella gen. nov.

Candidatus Inobrella (NL. fem. n. *Inobrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-875*. The type species for the genus is *Candidatus* Inobrella furibessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Inobrella unetvitudo sp. nov.

Candidatus Inobrella unetvitudo (NL. fem. n. *unetvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-875 sp003244045*. The type genome for the species is the GenBank assembly GCA_003244045.1. The GC content of the type genome is 69.16 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Inobrida pinacago sp. nov.

Candidatus Inobrida pinacago (NL. fem. n. *pinacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VKM-B-2647 sp000829455*. The type genome for the species is the GenBank assembly RS_GCF_000829455.1. The GC content of the type genome is 55.02 % and the genome length is 6.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "frozen volcanic ash".

Description of *Candidatus* Inobrida gen. nov.

Candidatus Inobrida (NL. fem. n. *Inobrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VKM-B-2647*. The type species for the genus is *Candidatus* Inobrida pinacago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inobrosa effigitas sp. nov.

Candidatus Inobrosa effigitas (NL. fem. n. *effigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6057 sp002428995*. The type genome for the species is the GenBank assembly GCA_002428995.1. The GC content of the type genome is 49.15 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Inobrosa gen. nov.

Candidatus Inobrosa (NL. fem. n. *Inobrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6057*. The type species for the genus is *Candidatus* Inobrosa effigitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inobrula agnicigena sp. nov.

Candidatus Inobrula agnicigena (NL. fem. n. *agnicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HY038 sp014117425*. The type genome for the species is the GenBank assembly RS_GCF_014117425.1. The GC content of the type genome is 40.4 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Inobrula gen. nov.

Candidatus Inobrula (NL. fem. n. *Inobrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HY038*. The type species for the genus is *Candidatus* Inobrula agnicigena .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Inobsaria desacibra sp. nov.

Candidatus Inobsaria desacibra (NL. fem. n. *desacibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMSU01 sp013792005*. The type genome for the species is the GenBank assembly GCA_013792005.1. The GC content of the type genome is 50.34 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Inobsaria gen. nov.

Candidatus Inobsaria (NL. fem. n. *Inobsaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMSU01*. The type species for the genus is *Candidatus* Inobsaria desacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inobsosa sceptugo sp. nov.

Candidatus Inobsosa sceptugo (NL. fem. n. *sceptugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBZ01 sp013359335*. The type genome for the species is the GenBank assembly GCA_013359335.1. The GC content of the type genome is 45.59 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Inobsosa gen. nov.

Candidatus Inobsosa (NL. fem. n. *Inobsosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBZ01*. The type species for the genus is *Candidatus* Inobsosa sceptugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SB21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifiaceae.

Description of *Candidatus* Inobsula bucolugo sp. nov.

Candidatus Inobsula bucolugo (NL. fem. n. *bucolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRVI01 sp011374075*. The type genome for the species is the GenBank assembly GCA_011374075.1. The GC content of the type genome is 63.49 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Inobsula gen. nov.

Candidatus Inobsula (NL. fem. n. *Inobsula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRVI01*. The type species for the genus is *Candidatus* Inobsula bucolugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Inoccana antevilega sp. nov.

Candidatus Inoccana antevilega (NL. fem. n. *antevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVL01 sp013696365*. The type genome for the species is the GenBank assembly GCA_013696365.1. The GC content of the type genome is 69.18 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Inoccana gen. nov.

Candidatus Inoccana (NL. fem. n. *Inoccana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCVL01*. The type species for the genus is *Candidatus* Inoccana antevilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inoccana defalisca sp. nov.

Candidatus Inoccana defalisca (NL. fem. n. *defalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVL01 sp013698185*. The type genome for the species is the GenBank assembly GCA_013698185.1. The GC content of the type genome is 71.13 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Inoccaria depupicula sp. nov.

Candidatus Inoccaria depupicula (NL. fem. n. *depupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHE01 sp012271065*. The type genome for the species is the GenBank assembly GCA_012271065.1. The GC content of the type genome is 59.56 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Inoccaria gen. nov.

Candidatus Inoccaria (NL. fem. n. *Inoccaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHE01*. The type species for the genus is *Candidatus* Inoccaria depupicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2709665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coninulaceae.

Description of *Candidatus* Inoccella affuliforma sp. nov.

Candidatus Inoccella affuliforma (NL. fem. n. *affuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTL01 sp009377435*. The type genome for the species is the GenBank assembly GCA_009377435.1. The GC content of the type genome is 65.03 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Inoccella gen. nov.

Candidatus Inoccella (NL. fem. n. *Inoccella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WHTL01*. The type species for the genus is *Candidatus* Inoccella affuliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidosaceae.

Description of *Candidatus* Inoccella exadvedo sp. nov.

Candidatus Inoccella exadvedo (NL. fem. n. *exadvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTL01 sp009377735*. The type genome for the species is the GenBank assembly GCA_009377735.1. The GC content of the type genome is 61.65 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Inoccia impudilega sp. nov.

Candidatus Inoccia impudilega (NL. fem. n. *impudilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZH01 sp013696045*. The type genome for the species is the GenBank assembly GCA_013696045.1. The GC content of the type genome is 59.8 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Inoccia gen. nov.

Candidatus Inoccia (NL. fem. n. *Inoccia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZH01*. The type species for the genus is *Candidatus* Inoccia impudilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CFX8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurulaceae.

Description of *Candidatus* Inoccida atrusetta sp. nov.

Candidatus Inoccida atrusetta (NL. fem. n. *atrusetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LCKU01 sp001001625*. The type genome for the species is the GenBank assembly GCA_001001625.1. The GC content of the type genome is 45.14 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Inoccida gen. nov.

Candidatus Inoccida (NL. fem. n. *Inoccida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LCKU01*. The type species for the genus is *Candidatus* Inoccida atrusetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-52-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitellaceae.

Description of *Candidatus* Inoccosa pudibitio sp. nov.

Candidatus Inoccosa pudibitio (NL. fem. n. *pudibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOW01 sp003566885*. The type genome for the species is the GenBank assembly GCA_003566885.1. The GC content of the type genome is 59.29 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Inoccosa gen. nov.

Candidatus Inoccosa (NL. fem. n. *Inoccosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOW01*. The type species for the genus is *Candidatus* Inoccosa pudibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T3Sed10-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupariaceae.

Description of *Candidatus* Inoccosa renavisca sp. nov.

Candidatus Inoccosa renavisca (NL. fem. n. *renavisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOW01 sp007132315*. The type genome for the species is the GenBank assembly GCA_007132315.1. The GC content of the type genome is 61.04 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Inoccula arbavilega sp. nov.

Candidatus Inoccula arbavilega (NL. fem. n. *arbavilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILLO01 sp903919045*. The type genome for the species is the GenBank assembly GCA_903919045.1. The GC content of the type genome is 70.42 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Inoccula gen. nov.

Candidatus Inoccula (NL. fem. n. *Inoccula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILLO01*. The type species for the genus is *Candidatus* Inoccula arbavilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Inoccula culibicella sp. nov.

Candidatus Inoccula culibicella (NL. fem. n. *culibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILLO01 sp903835065*. The type genome for the species is the GenBank assembly GCA_903835065.1. The GC content of the type genome is 67.19 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Inoffana adhorilega sp. nov.

Candidatus Inoffana adhorilega (NL. fem. n. *adhorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFU01 sp013286805*. The type genome for the species is the GenBank assembly GCA_013286805.1. The GC content of the type genome is 41.2 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Inoffana gen. nov.

Candidatus Inoffana (NL. fem. n. *Inoffana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFU01*. The type species for the genus is *Candidatus* Inoffana adhorilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetiaceae.

Description of *Candidatus* Inoffana dicibicella sp. nov.

Candidatus Inoffana dicibicella (NL. fem. n. *dicibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFU01 sp013286655*. The type genome for the species is the GenBank assembly GCA_013286655.1. The GC content of the type genome is 40.59 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Inoffana peribibra sp. nov.

Candidatus Inoffana peribibra (NL. fem. n. *peribibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFU01 sp013286385*. The type genome for the species is the GenBank assembly GCA_013286385.1. The GC content of the type genome is 44.65 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Inoffaria adlenitio sp. nov.

Candidatus Inoffaria adlenitio (NL. fem. n. *adlenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADII01 sp013151415*. The type genome for the species is the GenBank assembly GCA_013151415.1. The GC content of the type genome is 58.24 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Inoffaria gen. nov.

Candidatus Inoffaria (NL. fem. n. *Inoffaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADII01*. The type species for the genus is *Candidatus* Inoffaria adlenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Inoffula inlepessa sp. nov.

Candidatus Inoffula inlepessa (NL. fem. n. *inlepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7067 sp002493755*. The type genome for the species is the GenBank assembly GCA_002493755.1. The GC content of the type genome is 43.94 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Inoffula gen. nov.

Candidatus Inoffula (NL. fem. n. *Inoffula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7067*. The type species for the genus is *Candidatus* Inoffula inlepessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inordana dinupifica sp. nov.

Candidatus Inordana dinupifica (NL. fem. n. *dinupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDR01 sp002071695*. The type genome for the species is the GenBank assembly GCA_002071695.1. The GC content of the type genome is 67.1 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Inordana gen. nov.

Candidatus Inordana (NL. fem. n. *Inordana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDR01*. The type species for the genus is *Candidatus* Inordana dinupifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Inordaria cicilitio sp. nov.

Candidatus Inordaria cicilitio (NL. fem. n. *cicilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUK01 sp004297445*. The type genome for the species is the GenBank assembly GCA_004297445.1. The GC content of the type genome is 60.2 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Inordaria gen. nov.

Candidatus Inordaria (NL. fem. n. *Inordaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUK01*. The type species for the genus is *Candidatus* Inordaria cicilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabosaceae.

Description of *Candidatus* Inordella antimimonas sp. nov.

Candidatus Inordella antimimonas (NL. fem. n. *antimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHQ01 sp011052215*. The type genome for the species is the GenBank assembly GCA_011052215.1. The GC content of the type genome is 47.83 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Inordella gen. nov.

Candidatus Inordella (NL. fem. n. *Inordella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHQ01*. The type species for the genus is *Candidatus* Inordella antimimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipulaceae.

Description of *Candidatus* Inordella oscilisca sp. nov.

Candidatus Inordella oscilisca (NL. fem. n. *oscilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHQ01 sp013151795*. The type genome for the species is the GenBank assembly GCA_013151795.1. The GC content of the type genome is 42.29 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Inordia notacitia sp. nov.

Candidatus Inordia notacitia (NL. fem. n. *notacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-G20 sp003215775*. The type genome for the species is the GenBank assembly GCA_003215775.1. The GC content of the type genome is 38.36 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Inordia gen. nov.

Candidatus Inordia (NL. fem. n. *Inordia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AG-409-G20*. The type species for the genus is *Candidatus* Inordia notacitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inordosa biparessa sp. nov.

Candidatus Inordosa biparessa (NL. fem. n. *biparessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P2935 sp900104565*. The type genome for the species is the GenBank assembly RS_GCF_900104565.1. The GC content of the type genome is 45.21 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Inordosa gen. nov.

Candidatus Inordosa (NL. fem. n. *Inordosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Marseille-P2935*. The type species for the genus is *Candidatus* Inordosa biparessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inordula adtubitio sp. nov.

Candidatus Inordula adtubitio (NL. fem. n. *adtubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIZ01 sp012515455*. The type genome for the species is the GenBank assembly GCA_012515455.1. The GC content of the type genome is 59.33 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Inordula gen. nov.

Candidatus Inordula (NL. fem. n. *Inordula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIZ01*. The type species for the genus is *Candidatus* Inordula adtubitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Inordula humecimonia sp. nov.

Candidatus Inordula humecimonia (NL. fem. n. *humecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIZ01 sp012800565*. The type genome for the species is the GenBank assembly GCA_012800565.1. The GC content of the type genome is 56.31 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Inornaria divulatio sp. nov.

Candidatus Inornaria divulatio (NL. fem. n. *divulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711415 sp002711415*. The type genome for the species is the GenBank assembly GCA_002711415.1. The GC content of the type genome is 60.99 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Inornaria gen. nov.

Candidatus Inornaria (NL. fem. n. *Inornaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711415*. The type species for the genus is *Candidatus* Inornaria divulatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Inornella adgubitoga sp. nov.

Candidatus Inornella adgubitoga (NL. fem. n. *adgubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-02-FULL-39-14 sp001779205*. The type genome for the species is the GenBank assembly GCA_001779205.1. The GC content of the type genome is 38.43 % and the genome length is 1.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Inornella gen. nov.

Candidatus Inornella (NL. fem. n. *Inornella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-39-14*. The type species for the genus is *Candidatus* Inornella adgubitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Inornella optabilega sp. nov.

Candidatus Inornella optabilega (NL. fem. n. *optabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-39-14 sp001779055*. The type genome for the species is the GenBank assembly GCA_001779055.1. The GC content of the type genome is 37.62 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Inornia colimitura sp. nov.

Candidatus Inornia colimitura (NL. fem. n. *colimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12478 sp004298405*. The type genome for the species is the GenBank assembly GCA_004298405.1. The GC content of the type genome is 50.32 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Inornia gen. nov.

Candidatus Inornia (NL. fem. n. *Inornia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12478*. The type species for the genus is *Candidatus* Inornia colimitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Inornia colubax sp. nov.

Candidatus Inornia colubax (NL. fem. n. *colubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12478 sp000993535*. The type genome for the species is the GenBank assembly GCA_000993535.1. The GC content of the type genome is 40.75 % and the genome length is 1.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Inornia enuntousia sp. nov.

Candidatus Inornia enuntousia (NL. fem. n. *enuntousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12478 sp002793515*. The type genome for the species is the GenBank assembly GCA_002793515.1. The GC content of the type genome is 47.73 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Inornia inregetta sp. nov.

Candidatus Inornia inregetta (NL. fem. n. *inregetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12478 sp013204385*. The type genome for the species is the GenBank assembly GCA_013204385.1. The GC content of the type genome is 45.69 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Inornia supelax sp. nov.

Candidatus Inornia supelax (NL. fem. n. *supelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12478 sp003485135*. The type genome for the species is the GenBank assembly GCA_003485135.1. The GC content of the type genome is 41.96 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Inornida infesitura sp. nov.

Candidatus Inornida infesitura (NL. fem. n. *infesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2487 sp002341815*. The type genome for the species is the GenBank assembly GCA_002341815.1. The GC content of the type genome is 52.63 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Inornida gen. nov.

Candidatus Inornida (NL. fem. n. *Inornida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2487*. The type species for the genus is *Candidatus* Inornida infesitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inornosa brabrimonia sp. nov.

Candidatus Inornosa brabrimonia (NL. fem. n. *brabrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedPE-SWsnd-G2 sp001874335*. The type genome for the species is the GenBank assembly GCA_001874335.1. The GC content of the type genome is 33.98 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Inornosa gen. nov.

Candidatus Inornosa (NL. fem. n. *Inornosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *MedPE-SWsnd-G2*. The type species for the genus is *Candidatus* Inornosa brabrimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inornula undevifica sp. nov.

Candidatus Inornula undevifica (NL. fem. n. *undevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9338 sp003510895*. The type genome for the species is the GenBank assembly GCA_003510895.1. The GC content of the type genome is 36.1 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Inornula gen. nov.

Candidatus Inornula (NL. fem. n. *Inornula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9338*. The type species for the genus is *Candidatus* Inornula undevifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Inpasana resupax sp. nov.

Candidatus Inpasana resupax (NL. fem. n. *resupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VRTS01 sp008017755*. The type genome for the species is the GenBank assembly RS_GCF_008017755.1. The GC content of the type genome is 68.67 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Inpasana gen. nov.

Candidatus Inpasana (NL. fem. n. *Inpasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VRTS01*. The type species for the genus is *Candidatus* Inpasana resupax

.

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpasaria epogdicula sp. nov.

Candidatus Inpasaria epogdicula (NL. fem. n. *epogdicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MES5 sp009711615*. The type genome for the species is the GenBank assembly GCA_009711615.1. The GC content of the type genome is 39.44 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Inpasaria gen. nov.

Candidatus Inpasaria (NL. fem. n. *Inpasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MES5*. The type species for the genus is *Candidatus* Inpasaria epogdicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpasella artopimonia sp. nov.

Candidatus Inpasella artopimonia (NL. fem. n. *artopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRSA01 sp903881085*. The type genome for the species is the GenBank assembly GCA_903881085.1. The GC content of the type genome is 57.6 % and the genome length is 11.88 Mbp.

Description of *Candidatus* Inpasella gen. nov.

Candidatus Inpasella (NL. fem. n. *Inpasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRSA01*. The type species for the genus is *Candidatus* Inpasella artopimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpasia benepessa sp. nov.

Candidatus Inpasia benepessa (NL. fem. n. *benepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGT01 sp012727555*. The type genome for the species is the GenBank assembly GCA_012727555.1. The GC content of the type genome is 57.48 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Inpasia gen. nov.

Candidatus Inpasia (NL. fem. n. *Inpasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGT01*. The type species for the genus is *Candidatus* Inpasia benepessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpasida accenastra sp. nov.

Candidatus Inpasida accenastra (NL. fem. n. *accenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZB01 sp013349725*. The type genome for the species is the GenBank assembly GCA_013349725.1. The GC content of the type genome is 49.74 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Inpasida gen. nov.

Candidatus Inpasida (NL. fem. n. *Inpasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUZB01*. The type species for the genus is *Candidatus* Inpasida accenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpasosa depicitrix sp. nov.

Candidatus Inpasosa depicitrix (NL. fem. n. *depicitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXG01 sp012516015*. The type genome for the species is the GenBank assembly GCA_012516015.1. The GC content of the type genome is 62.88 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Inpasosa gen. nov.

Candidatus Inpasosa (NL. fem. n. *Inpasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXG01*. The type species for the genus is *Candidatus* Inpasosa depicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpelana antomatio sp. nov.

Candidatus Inpelana antomatio (NL. fem. n. *antomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-413 sp003141555*. The type genome for the species is the GenBank assembly GCA_003141555.1. The GC content of the type genome is 62.83 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Inpelana gen. nov.

Candidatus Inpelana (NL. fem. n. *Inpelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-413*. The type species for the genus is *Candidatus* Inpelana antomatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomacellaceae.

Description of *Candidatus* Inpelaria ancepivita sp. nov.

Candidatus Inpelaria ancepivita (NL. fem. n. *ancepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-43-10 sp002773655*. The type genome for the species is the GenBank assembly GCA_002773655.1. The GC content of the type genome is 42.76 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Inpelaria gen. nov.

Candidatus Inpelaria (NL. fem. n. *Inpelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-43-10*. The type species for the genus is *Candidatus* Inpelaria ancepivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-47-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacellaceae.

Description of *Candidatus* Inpelella appugicula sp. nov.

Candidatus Inpelella appugicula (NL. fem. n. *appugicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSTP01 sp011362545*. The type genome for the species is the GenBank assembly GCA_011362545.1. The GC content of the type genome is 74.33 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Inpelella gen. nov.

Candidatus Inpelella (NL. fem. n. *Inpelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSTP01*. The type species for the genus is *Candidatus* Inpelella appugicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Inpelia irrecitrix sp. nov.

Candidatus Inpelia irrecitrix (NL. fem. n. *irrecitrix* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-461 sp003161255*. The type genome for the species is the GenBank assembly GCA_003161255.1. The GC content of the type genome is 68.38 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Inpelia gen. nov.

Candidatus Inpelia (NL. fem. n. *Inpelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-461*. The type species for the genus is *Candidatus* Inpelia irrecitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Inpelia obtecousia sp. nov.

Candidatus Inpelia obtecousia (NL. fem. n. *obtecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-461 sp003151235*. The type genome for the species is the GenBank assembly GCA_003151235.1. The GC content of the type genome is 67.08 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Inpelula fragmentia sp. nov.

Candidatus Inpelula fragmentia (NL. fem. n. *fragmentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTWD01 sp012963185*. The type genome for the species is the GenBank assembly GCA_012963185.1. The GC content of the type genome is 52.04 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Inpelula gen. nov.

Candidatus Inpelula (NL. fem. n. *Inpelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTWD01*. The type species for the genus is *Candidatus* Inpelula fragmentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8438*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiposaceae.

Description of *Candidatus* Inpenana palifitudo sp. nov.

Candidatus Inpenana palifitudo (NL. fem. n. *palifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-188 sp002049825*. The type genome for the species is the GenBank assembly GCA_002049825.1. The GC content of the type genome is 46.16 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Inpenana gen. nov.

Candidatus Inpenana (NL. fem. n. *Inpenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-188*. The type species for the genus is *Candidatus* Inpenana palifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogiaceae.

Description of *Candidatus* Inpenaria tenebibra sp. nov.

Candidatus Inpenaria tenebibra (NL. fem. n. *tenebibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mal4 sp007747795*. The type genome for the species is the GenBank assembly RS_GCF_007747795.1. The GC content of the type genome is 63.36 % and the genome length is 7.74 Mbp.

Description of *Candidatus* Inpenaria gen. nov.

Candidatus Inpenaria (NL. fem. n. *Inpenaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Mal4*. The type species for the genus is *Candidatus* Inpenaria tenebibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpenia ludimessa sp. nov.

Candidatus Inpenia ludimessa (NL. fem. n. *ludimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B68-G16 sp003647945*. The type genome for the species is the GenBank assembly GCA_003647945.1. The GC content of the type genome is 46.4 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Inpenia gen. nov.

Candidatus Inpenia (NL. fem. n. *Inpenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B68-G16*. The type species for the genus is *Candidatus* Inpenia ludimessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Inpenosa agrapibra sp. nov.

Candidatus Inpenosa agrapibra (NL. fem. n. *agrapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGB01 sp013812245*. The type genome for the species is the GenBank assembly GCA_013812245.1. The GC content of the type genome is 63.77 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Inpenosa gen. nov.

Candidatus Inpenosa (NL. fem. n. *Inpenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDGB01*. The type species for the genus is *Candidatus* Inpenosa agrapibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpenosa lubenousia sp. nov.

Candidatus Inpenosa lubenousia (NL. fem. n. *lubenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGB01 sp013695335*. The type genome for the species is the GenBank assembly GCA_013695335.1. The GC content of the type genome is 62.65 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Inpenosa renavicula sp. nov.

Candidatus Inpenosa renavicula (NL. fem. n. *renavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGB01 sp013815485*. The type genome for the species is the GenBank assembly GCA_013815485.1. The GC content of the type genome is 63.29 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Inperana occalitrix sp. nov.

Candidatus Inperana occalitrix (NL. fem. n. *occalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2725625 sp002725625*. The type genome for the species is the GenBank assembly GCA_002725625.1. The GC content of the type genome is 51.69 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Inperana gen. nov.

Candidatus Inperana (NL. fem. n. *Inperana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2725625*. The type species for the genus is *Candidatus* Inperana

occalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Inperaria odolligena sp. nov.

Candidatus Inperaria odolligena (NL. fem. n. *odolligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMOY01 sp014377795*. The type genome for the species is the GenBank assembly GCA_014377795.1. The GC content of the type genome is 73.5 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Inperaria gen. nov.

Candidatus Inperaria (NL. fem. n. *Inperaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMOY01*. The type species for the genus is *Candidatus* Inperaria odolligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inperella hemidimonia sp. nov.

Candidatus Inperella hemidimonia (NL. fem. n. *hemidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQV01 sp011371325*. The type genome for the species is the GenBank assembly GCA_011371325.1. The GC content of the type genome is 32.24 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Inperella gen. nov.

Candidatus Inperella (NL. fem. n. *Inperella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQV01*. The type species for the genus is *Candidatus* Inperella hemidimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inperida rarefitia sp. nov.

Candidatus Inperida rarefitia (NL. fem. n. *rarefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSU01 sp009379925*. The type genome for the species is the GenBank assembly GCA_009379925.1. The GC content of the type genome is 69.82 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Inperida gen. nov.

Candidatus Inperida (NL. fem. n. *Inperida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSU01*. The type species for the genus is *Candidatus* Inperida rarefitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Inperosa annecugo sp. nov.

Candidatus Inperosa annecugo (NL. fem. n. *annecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSS58A sp002403295*. The type genome for the species is the GenBank assembly GCA_002403295.1. The GC content of the type genome is 66.83 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Inperosa gen. nov.

Candidatus Inperosa (NL. fem. n. *Inperosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSS58A*. The type species for the genus is *Candidatus* Inperosa annecugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inperosa sicinivita sp. nov.

Candidatus Inperosa sicinivita (NL. fem. n. *sicinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSS58A sp002403075*. The type genome for the species is the GenBank assembly GCA_002403075.1. The GC content of the type genome is 66.57 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Inperula bugilimonas sp. nov.

Candidatus Inperula bugilimonas (NL. fem. n. *bugilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *9FT-COMBO-48-23 sp001795315*. The type genome for the species is the GenBank assembly GCA_001795315.1. The GC content of the type genome is 48.01 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Inperula gen. nov.

Candidatus Inperula (NL. fem. n. *Inperula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *9FT-COMBO-48-23*. The type species for the genus is *Candidatus* Inperula bugilimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Inpinana crastibula sp. nov.

Candidatus Inpinana crastibula (NL. fem. n. *crastibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-34 sp013215095*. The type genome for the species is the GenBank assembly GCA_013215095.1. The GC content of the type genome is 33.43 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Inpinana gen. nov.

Candidatus Inpinana (NL. fem. n. *Inpinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-34*. The type species for the genus is *Candidatus* Inpinana crastibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpinaria brabricula sp. nov.

Candidatus Inpinaria brabricula (NL. fem. n. *brabricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B24-G6 sp003643835*. The type genome for the species is the GenBank assembly GCA_003643835.1. The GC content of the type genome is 33.35 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Inpinaria gen. nov.

Candidatus Inpinaria (NL. fem. n. *Inpinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B24-G6*. The type species for the genus is *Candidatus* Inpinaria brabricula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpinella tenebastra sp. nov.

Candidatus Inpinella tenebastra (NL. fem. n. *tenebastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILKO01 sp903834835*. The type genome for the species is the GenBank assembly GCA_903834835.1. The GC content of the type genome is 64.39 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Inpinella gen. nov.

Candidatus Inpinella (NL. fem. n. *Inpinella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILKO01*. The type species for the genus is *Candidatus* Inpinella tenebastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Inpinida malogitoga sp. nov.

Candidatus Inpinida malogitoga (NL. fem. n. *malogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKP01 sp009778035*. The type genome for the species is the GenBank assembly GCA_009778035.1. The GC content of the type genome is 52.15 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Inpinida gen. nov.

Candidatus Inpinida (NL. fem. n. *Inpinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKP01*. The type species for the genus is *Candidatus* Inpinida malogitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpinida omnifastra sp. nov.

Candidatus Inpinida omnifastra (NL. fem. n. *omnifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKP01 sp009783865*. The type genome for the species is the GenBank assembly GCA_009783865.1. The GC content of the type genome is 47.65 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Inpinosa sanabicella sp. nov.

Candidatus Inpinosa sanabicella (NL. fem. n. *sanabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIYB01 sp014360155*. The type genome for the species is the GenBank assembly GCA_014360155.1. The GC content of the type genome is 43.83 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Inpinosa gen. nov.

Candidatus Inpinosa (NL. fem. n. *Inpinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIYB01*. The type species for the genus is *Candidatus* Inpinosa sanabicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpinula colepitica sp. nov.

Candidatus Inpinula colepitica (NL. fem. n. *colepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZB01 sp012515085*. The type genome for the species is the GenBank assembly GCA_012515085.1. The GC content of the type genome is 43.87 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Inpinula gen. nov.

Candidatus Inpinula (NL. fem. n. *Inpinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZB01*. The type species for the genus is *Candidatus* Inpinula colepitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Inpudana meridatio sp. nov.

Candidatus Inpudana meridatio (NL. fem. n. *meridatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQG01 sp013203365*. The type genome for the species is the GenBank assembly GCA_013203365.1. The GC content of the type genome is 59.61 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Inpudana gen. nov.

Candidatus Inpudana (NL. fem. n. *Inpudana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQG01*. The type species for the genus is *Candidatus* Inpudana meridatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1343*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapellaceae.

Description of *Candidatus* Inpudaria impigago sp. nov.

Candidatus Inpudaria impigago (NL. fem. n. *impigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWE01 sp011388385*. The type genome for the species is the GenBank assembly GCA_011388385.1. The GC content of the type genome is 68.67 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Inpudaria gen. nov.

Candidatus Inpudaria (NL. fem. n. *Inpudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWE01*. The type species for the genus is *Candidatus* Inpudaria impigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicilidaceae.

Description of *Candidatus* Inpudaria minagitas sp. nov.

Candidatus Inpudaria minagitas (NL. fem. n. *minagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWE01 sp011373735*. The type genome for the species is the GenBank assembly GCA_011373735.1. The GC content of the type genome is 67.67 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Inpudia innasitia sp. nov.

Candidatus Inpudia innasitia (NL. fem. n. *innasitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-56-11 sp001004885*. The type genome for the species is the GenBank assembly GCA_001004885.1. The GC content of the type genome is 55.47 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Inpudia gen. nov.

Candidatus Inpudia (NL. fem. n. *Inpudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-56-11*. The type species for the genus is *Candidatus* Inpudia innasitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Inpudida infinousia sp. nov.

Candidatus Inpudida infinousia (NL. fem. n. *infinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWC01 sp004357505*. The type genome for the species is the GenBank assembly GCA_004357505.1. The GC content of the type genome is 58.13 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Inpudida gen. nov.

Candidatus Inpudida (NL. fem. n. *Inpudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWC01*. The type species for the genus is *Candidatus* Inpudida infinousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecariaceae.

Description of *Candidatus* Inpurana fragmigena sp. nov.

Candidatus Inpurana fragmigena (NL. fem. n. *fragmigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVC01 sp013698305*. The type genome for the species is the GenBank assembly GCA_013698305.1. The GC content of the type genome is 62.47 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Inpurana gen. nov.

Candidatus Inpurana (NL. fem. n. *Inpurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCVC01*. The type species for the genus is *Candidatus* Inpurana fragmigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Inpuraria cerebibra sp. nov.

Candidatus Inpuraria cerebibra (NL. fem. n. *cerebibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1766 sp900554855*. The type genome for the species is the GenBank assembly GCA_900554855.1. The GC content of the type genome is 59.17 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Inpuraria gen. nov.

Candidatus Inpuraria (NL. fem. n. *Inpuraria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1766*. The type species for the genus is *Candidatus* Inpuraria cerebibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpurella celamivita sp. nov.

Candidatus Inpurella celamivita (NL. fem. n. *celamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMOB01 sp013204345*. The type genome for the species is the GenBank assembly GCA_013204345.1. The GC content of the type genome is 37.9 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Inpurella gen. nov.

Candidatus Inpurella (NL. fem. n. *Inpurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMOB01*. The type species for the genus is *Candidatus* Inpurella celamivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpuria manupastra sp. nov.

Candidatus Inpuria manupastra (NL. fem. n. *manupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862585 sp002862585*. The type genome for the species is the GenBank assembly GCA_002862585.1. The GC content of the type genome is 34.86 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Inpuria gen. nov.

Candidatus Inpuria (NL. fem. n. *Inpuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2862585*. The type species for the genus is *Candidatus* Inpuria manupastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalellaceae.

Description of *Candidatus* Inpurida desonugo sp. nov.

Candidatus Inpurida desonugo (NL. fem. n. *desonugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAU01 sp013695265*. The type genome for the species is the GenBank assembly GCA_013695265.1. The GC content of the type genome is 63.9 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Inpurida gen. nov.

Candidatus Inpurida (NL. fem. n. *Inpurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAU01*. The type species for the genus is *Candidatus* Inpurida desonugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpurosa clancastra sp. nov.

Candidatus Inpurosa clancastra (NL. fem. n. *clancastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733885 sp002733885*. The type genome for the species is the GenBank assembly GCA_002733885.1. The GC content of the type genome is 34.85 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Inpurosa gen. nov.

Candidatus Inpurosa (NL. fem. n. *Inpurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2733885*. The type species for the genus is *Candidatus* Inpurosa clancastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inpurosa inadfisca sp. nov.

Candidatus Inpurosa inadfisca (NL. fem. n. *inadfisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733885 sp012963655*. The type genome for the species is the GenBank assembly GCA_012963655.1. The GC content of the type genome is 35.74 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Inquilinus lametitudo sp. nov.

Candidatus Inquilinus lametitudo (NL. fem. n. *lametitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Inquilinus sp005938675*. The type genome for the species is the GenBank assembly RS_GCF_005938675.2. The GC content of the type genome is 68.97 % and the genome length is 8.97 Mbp.

Description of *Candidatus* Inrecana idciretta sp. nov.

Candidatus Inrecana idciretta (NL. fem. n. *idciretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3069 sp002366795*. The type genome for the species is the GenBank assembly GCA_002366795.1. The GC content of the type genome is 61.69 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Inrecana gen. nov.

Candidatus Inrecana (NL. fem. n. *Inrecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3069*. The type species for the genus is *Candidatus* Inrecana idciretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrecaria nivomitica sp. nov.

Candidatus Inrecaria nivomitica (NL. fem. n. *nivomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717925 sp002717925*. The type genome for the species is the GenBank assembly GCA_002717925.1. The GC content of the type genome is 36.33 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Inrecaria gen. nov.

Candidatus Inrecaria (NL. fem. n. *Inrecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717925*. The type species for the genus is *Candidatus* Inrecaria nivomitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nivomellaceae.

Description of *Candidatus* Inrecia astapicula sp. nov.

Candidatus Inrecia astapicula (NL. fem. n. *astapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-62-17 sp903899705*. The type genome for the species is the GenBank assembly GCA_903899705.1. The GC content of the type genome is 59.85 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Inrecia gen. nov.

Candidatus Inrecia (NL. fem. n. *Inrecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-62-17*. The type species for the genus is *Candidatus* Inrecia astapicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Inrecia desacitio sp. nov.

Candidatus Inrecia desacitio (NL. fem. n. *desacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-62-17 sp903859155*. The type genome for the species is the GenBank assembly GCA_903859155.1. The GC content of the type genome is 61.36 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Inrecia pedepessa sp. nov.

Candidatus Inrecia pedepessa (NL. fem. n. *pedepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-62-17 sp001770355*. The type genome for the species is the GenBank assembly GCA_001770355.1. The GC content of the type genome is 61.86 % and the genome length is 4.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Inrecida lametessa sp. nov.

Candidatus Inrecida lametessa (NL. fem. n. *lametessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1591 sp900553255*. The type genome for the species is the GenBank assembly GCA_900553255.1. The GC content of the type genome is 59.13 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Inrecida gen. nov.

Candidatus Inrecida (NL. fem. n. *Inrecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1591*. The type species for the genus is *Candidatus* Inrecida lametessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrecosa oblivitia sp. nov.

Candidatus Inrecosa oblivitia (NL. fem. n. *oblivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIM01 sp013297745*. The type genome for the species is the GenBank assembly GCA_013297745.1. The GC content of the type genome is 38.91 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Inrecosa gen. nov.

Candidatus Inrecosa (NL. fem. n. *Inrecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIM01*. The type species for the genus is *Candidatus* Inrecosa oblivitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrecula sicunibula sp. nov.

Candidatus Inrecula sicunibula (NL. fem. n. *sicunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-11 sp003599505*. The type genome for the species is the GenBank assembly GCA_003599505.1. The GC content of the type genome is 47.98 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Inrecula gen. nov.

Candidatus Inrecula (NL. fem. n. *Inrecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-11*. The type species for the genus is *Candidatus* Inrecula sicunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Inredana cisorentia sp. nov.

Candidatus Inredana cisorentia (NL. fem. n. *cisorentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-Chloro-G4 sp002816705*. The type genome for the species is the GenBank assembly GCA_002816705.1. The GC content of the type genome is 55.49 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Inredana gen. nov.

Candidatus Inredana (NL. fem. n. *Inredana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Casp-Chloro-G4*. The type species for the genus is *Candidatus* Inredana cisorentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Inredella bonitatio sp. nov.

Candidatus Inredella bonitatio (NL. fem. n. *bonitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-42-10 sp001801625*. The type genome for the species is the GenBank assembly GCA_001801625.1. The GC content of the type genome is 42.14 % and the genome length is 1.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Inredella gen. nov.

Candidatus Inredella (NL. fem. n. *Inredella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-42-10*. The type species for the genus is *Candidatus* Inredella bonitatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Inredia solifilega sp. nov.

Candidatus Inredia solifilega (NL. fem. n. *solifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-44-32 sp001823065*. The type genome for the species is the GenBank assembly GCA_001823065.1. The GC content of the type genome is 43.96 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Inredia gen. nov.

Candidatus Inredia (NL. fem. n. *Inredia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-44-32*. The type species for the genus is *Candidatus* Inredia solifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Inredosa cadurivita sp. nov.

Candidatus Inredosa cadurivita (NL. fem. n. *cadurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4053 sp003457075*. The type genome for the species is the GenBank assembly GCA_003457075.1. The GC content of the type genome is 48.54 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Inredosa gen. nov.

Candidatus Inredosa (NL. fem. n. *Inredosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4053*. The type species for the genus is *Candidatus* Inredosa cadurivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Nap2-2B*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Relenariaceae.

Description of *Candidatus* Inredosa inrepilega sp. nov.

Candidatus Inredosa inrepilega (NL. fem. n. *inrepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4053 sp002382125*. The type genome for the species is the GenBank assembly GCA_002382125.1. The GC content of the type genome is 47.16 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Inrefana manupimonia sp. nov.

Candidatus Inrefana manupimonia (NL. fem. n. *manupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUA01 sp008501825*. The type genome for the species is the GenBank assembly GCA_008501825.1. The GC content of the type genome is 57.42 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Inrefana gen. nov.

Candidatus Inrefana (NL. fem. n. *Inrefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQUA01*. The type species for the genus is *Candidatus* Inrefana manupimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Inrefaria susicifica sp. nov.

Candidatus Inrefaria susicifica (NL. fem. n. *susicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch67 sp013178375*. The type genome for the species is the GenBank assembly GCA_013178375.1. The GC content of the type genome is 58.34 % and the

genome length is 6.32 Mbp.

Description of *Candidatus* Inrefaria gen. nov.

Candidatus Inrefaria (NL. fem. n. *Inrefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch67*. The type species for the genus is *Candidatus* Inrefaria susicifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrefella bugilifica sp. nov.

Candidatus Inrefella bugilifica (NL. fem. n. *bugilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXB01 sp903824495*. The type genome for the species is the GenBank assembly GCA_903824495.1. The GC content of the type genome is 41.09 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Inrefella gen. nov.

Candidatus Inrefella (NL. fem. n. *Inrefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJXB01*. The type species for the genus is *Candidatus* Inrefella bugilifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrefida accenitia sp. nov.

Candidatus Inrefida accenitia (NL. fem. n. *accenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKJ01 sp011333555*. The type genome for the species is the GenBank assembly GCA_011333555.1. The GC content of the type genome is 58.78 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Inrefida gen. nov.

Candidatus Inrefida (NL. fem. n. *Inrefida* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKJ01*. The type species for the genus is *Candidatus* Inrefida accenitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-60-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubanaceae.

Description of *Candidatus* Inrefida anxifitica sp. nov.

Candidatus Inrefida anxifitica (NL. fem. n. *anxifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKJ01 sp011358955*. The type genome for the species is the GenBank assembly GCA_011358955.1. The GC content of the type genome is 59.62 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Inrefida exoscago sp. nov.

Candidatus Inrefida exoscago (NL. fem. n. *exoscago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKJ01 sp011389355*. The type genome for the species is the GenBank assembly GCA_011389355.1. The GC content of the type genome is 58.87 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Inrefosa cenotago sp. nov.

Candidatus Inrefosa cenotago (NL. fem. n. *cenotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBY01 sp012521915*. The type genome for the species is the GenBank assembly GCA_012521915.1. The GC content of the type genome is 52.08 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Inrefosa gen. nov.

Candidatus Inrefosa (NL. fem. n. *Inrefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBY01*. The type species for the genus is *Candidatus* Inrefosa cenotago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Inrefosa cerucilega sp. nov.

Candidatus Inrefosa cerucilega (NL. fem. n. *cerucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBY01 sp012523135*. The type genome for the species is the GenBank assembly GCA_012523135.1. The GC content of the type genome is 60.66 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Inrefosa depasitas sp. nov.

Candidatus Inrefosa depasitas (NL. fem. n. *depasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBY01 sp012511525*. The type genome for the species is the GenBank assembly GCA_012511525.1. The GC content of the type genome is 61.03 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Inrefosa pavicilenta sp. nov.

Candidatus Inrefosa pavicilenta (NL. fem. n. *pavicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBY01 sp012729935*. The type genome for the species is the GenBank assembly GCA_012729935.1. The GC content of the type genome is 48.6 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Inrefula inmolatio sp. nov.

Candidatus Inrefula inmolatio (NL. fem. n. *inmolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTQG01 sp011355095*. The type genome for the species is the GenBank assembly GCA_011355095.1. The GC content of the type genome is 37.54 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Inrefula gen. nov.

Candidatus Inrefula (NL. fem. n. *Inrefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTQG01*. The type species for the genus is *Candidatus* Inrefula inmolatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Inregana mahemifica sp. nov.

Candidatus Inregana mahemifica (NL. fem. n. *mahemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716945 sp002716945*. The type genome for the species is the GenBank assembly GCA_002716945.1. The GC content of the type genome is 29.26 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Inregana gen. nov.

Candidatus Inregana (NL. fem. n. *Inregana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716945*. The type species for the genus is *Candidatus* Inregana mahemifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Inregaria insepentia sp. nov.

Candidatus Inregaria insepentia (NL. fem. n. *insepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACPL01 sp009995495*. The type genome for the species is the GenBank assembly GCA_009995495.1. The GC content of the type genome is 33.19 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Inregaria gen. nov.

Candidatus Inregaria (NL. fem. n. *Inregaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACPL01*. The type species for the genus is *Candidatus* Inregaria insepentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Inregella opuscatica sp. nov.

Candidatus Inregella opuscatica (NL. fem. n. *opuscatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQPO01 sp903873735*. The type genome for the species is the GenBank assembly GCA_903873735.1. The GC content of the type genome is 41.58 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Inregella gen. nov.

Candidatus Inregella (NL. fem. n. *Inregella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQPO01*. The type species for the genus is *Candidatus* Inregella opuscatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFAQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabulaceae.

Description of *Candidatus* Inregia dilecousia sp. nov.

Candidatus Inregia dilecousia (NL. fem. n. *dilecousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJZ01 sp014382295*. The type genome for the species is the GenBank assembly GCA_014382295.1. The GC content of the type genome is 46.02 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Inregia gen. nov.

Candidatus Inregia (NL. fem. n. *Inregia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJZ01*. The type species for the genus is *Candidatus* Inregia dilecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inregida valefitas sp. nov.

Candidatus Inregida valefitas (NL. fem. n. *valefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJS01 sp009885955*. The type genome for the species is the GenBank assembly GCA_009885955.1. The GC content of the type genome is 42.79 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Inregida gen. nov.

Candidatus Inregida (NL. fem. n. *Inregida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJS01*. The type species for the genus is *Candidatus* Inregida valefitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Inregosa acrotastra sp. nov.

Candidatus Inregosa acrotastra (NL. fem. n. *acrotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-K07 sp003211755*. The type genome for the species is the GenBank assembly GCA_003211755.1. The GC content of the type genome is 40.59 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Inregosa gen. nov.

Candidatus Inregosa (NL. fem. n. *Inregosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-K07*. The type species for the genus is *Candidatus* Inregosa acrotastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inregosa apogrugo sp. nov.

Candidatus Inregosa apogrugo (NL. fem. n. *apogrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-K07 sp003278225*. The type genome for the species is the GenBank assembly GCA_003278225.1. The GC content of the type genome is 38.84 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Inregosa conubigena sp. nov.

Candidatus Inregosa conubigena (NL. fem. n. *conubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-K07 sp003280295*. The type genome for the species is the GenBank assembly GCA_003280295.1. The GC content of the type genome is 38.59 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Inregosa dilecugo sp. nov.

Candidatus Inregosa dilecugo (NL. fem. n. *dilecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AG-363-K07 sp902560875*. The type genome for the species is the GenBank assembly GCA_902560875.1. The GC content of the type genome is 38.38 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Inregosa inmiticella sp. nov.

Candidatus Inregosa inmiticella (NL. fem. n. *inmiticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-K07 sp003278175*. The type genome for the species is the GenBank assembly GCA_003278175.1. The GC content of the type genome is 39.82 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Inregosa orgetitoga sp. nov.

Candidatus Inregosa orgetitoga (NL. fem. n. *orgetitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-K07 sp003280225*. The type genome for the species is the GenBank assembly GCA_003280225.1. The GC content of the type genome is 39.66 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Inregula expecitudo sp. nov.

Candidatus Inregula expecitudo (NL. fem. n. *expecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVS01 sp009694135*. The type genome for the species is the GenBank assembly GCA_009694135.1. The GC content of the type genome is 65.45 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Inregula gen. nov.

Candidatus Inregula (NL. fem. n. *Inregula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVS01*. The type species for the genus is *Candidatus* Inregula expecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Inrelana obfenax sp. nov.

Candidatus Inrelana obfenax (NL. fem. n. *obfenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFS01 sp013152795*. The type genome for the species is the GenBank assembly GCA_013152795.1. The GC content of the type genome is 50.87 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Inrelana gen. nov.

Candidatus Inrelana (NL. fem. n. *Inrelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFS01*. The type species for the genus is *Candidatus* Inrelana obfenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Inrelaria argimugo sp. nov.

Candidatus Inrelaria argimugo (NL. fem. n. *argimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBX01 sp009694925*. The type genome for the species is the GenBank assembly GCA_009694925.1. The GC content of the type genome is 34.99 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Inrelaria gen. nov.

Candidatus Inrelaria (NL. fem. n. *Inrelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBX01*. The type species for the genus is *Candidatus* Inrelaria argimugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

1-14-0-10-40-38. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malediaceae.

Description of *Candidatus* Inrelella ignomessa sp. nov.

Candidatus Inrelella ignomessa (NL. fem. n. *ignomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNT01 sp011056905*. The type genome for the species is the GenBank assembly GCA_011056905.1. The GC content of the type genome is 49.94 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Inrelella gen. nov.

Candidatus Inrelella (NL. fem. n. *Inrelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNT01*. The type species for the genus is *Candidatus* Inrelella ignomessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defunellaceae.

Description of *Candidatus* Inrelida sicaressa sp. nov.

Candidatus Inrelida sicaressa (NL. fem. n. *sicaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12474 sp003484685*. The type genome for the species is the GenBank assembly GCA_003484685.1. The GC content of the type genome is 43.66 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Inrelida gen. nov.

Candidatus Inrelida (NL. fem. n. *Inrelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12474*. The type species for the genus is *Candidatus* Inrelida sicaressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrelida visifentia sp. nov.

Candidatus Inrelida visifentia (NL. fem. n. *visifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12474 sp007116155*. The type genome for the species is the GenBank assembly GCA_007116155.1. The GC content of the type genome is 40.65 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Inrelosa assibitura sp. nov.

Candidatus Inrelosa assibitura (NL. fem. n. *assibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11588 sp900754755*. The type genome for the species is the GenBank assembly RS_GCF_900754755.1. The GC content of the type genome is 59.24 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Inrelosa gen. nov.

Candidatus Inrelosa (NL. fem. n. *Inrelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11588*. The type species for the genus is *Candidatus* Inrelosa assibitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Inrelula chancifica sp. nov.

Candidatus Inrelula chancifica (NL. fem. n. *chancifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-42 sp007748035*. The type genome for the species is the GenBank assembly RS_GCF_007748035.1. The GC content of the type genome is 57.96

% and the genome length is 6.61 Mbp.

Description of *Candidatus* Inrelula gen. nov.

Candidatus Inrelula (NL. fem. n. *Inrelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-42*. The type species for the genus is *Candidatus* Inrelula chancifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Inrelula desacivita sp. nov.

Candidatus Inrelula desacivita (NL. fem. n. *desacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-42 sp003233055*. The type genome for the species is the GenBank assembly GCA_003233055.1. The GC content of the type genome is 59.25 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Inremana monogastra sp. nov.

Candidatus Inremana monogastra (NL. fem. n. *monogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SC2-9 sp003008575*. The type genome for the species is the GenBank assembly RS_GCF_003008575.1. The GC content of the type genome is 68.21 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Inremana gen. nov.

Candidatus Inremana (NL. fem. n. *Inremana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SC2-9*. The type species for the genus is *Candidatus* Inremana monogastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inremella subucilenta sp. nov.

Candidatus Inremella subucilenta (NL. fem. n. *subucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12202 sp002691725*. The type genome for the species is the GenBank assembly GCA_002691725.1. The GC content of the type genome is 47.59 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Inremella gen. nov.

Candidatus Inremella (NL. fem. n. *Inremella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12202*. The type species for the genus is *Candidatus* Inremella subucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1172*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demigidaceae.

Description of *Candidatus* Inremida ratififorma sp. nov.

Candidatus Inremida ratififorma (NL. fem. n. *ratififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14243 sp902797185*. The type genome for the species is the GenBank assembly GCA_902797185.1. The GC content of the type genome is 51.7 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Inremida gen. nov.

Candidatus Inremida (NL. fem. n. *Inremida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14243*. The type species for the genus is *Candidatus* Inremida ratififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inremosa gerunicella sp. nov.

Candidatus Inremosa gerunicella (NL. fem. n. *gerunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7522 sp002476865*. The type genome for the species is the GenBank assembly GCA_002476865.1. The GC content of the type genome is 38.5 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Inremosa gen. nov.

Candidatus Inremosa (NL. fem. n. *Inremosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7522*. The type species for the genus is *Candidatus* Inremosa gerunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicidaceae.

Description of *Candidatus* Inremula encenatica sp. nov.

Candidatus Inremula encenatica (NL. fem. n. *encenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13233 sp900762805*. The type genome for the species is the GenBank assembly RS_GCF_900762805.1. The GC content of the type genome is 61.31 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Inremula gen. nov.

Candidatus Inremula (NL. fem. n. *Inremula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13233*. The type species for the genus is *Candidatus* Inremula encenatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrepana admodimonia sp. nov.

Candidatus Inrepana admodimonia (NL. fem. n. *admodimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCK01 sp013812905*. The type genome for the species is the GenBank assembly GCA_013812905.1. The GC content of the type genome is 54.14 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Inrepana gen. nov.

Candidatus Inrepana (NL. fem. n. *Inrepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCK01*. The type species for the genus is *Candidatus* Inrepana admodimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrepana oppugimonia sp. nov.

Candidatus Inrepana oppugimonia (NL. fem. n. *oppugimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCK01 sp013817595*. The type genome for the species is the GenBank assembly GCA_013817595.1. The GC content of the type genome is 54.7 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Inrepana semimentia sp. nov.

Candidatus Inrepana semimentia (NL. fem. n. *semimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCK01 sp013811945*. The type genome for the species is the GenBank assembly GCA_013811945.1. The GC content of the type genome is 54.58 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Inrepella conabax sp. nov.

Candidatus Inrepella conabax (NL. fem. n. *conabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFY01 sp009783445*. The type genome for the species is the GenBank assembly GCA_009783445.1. The GC content of the type genome is 40.64 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Inrepella gen. nov.

Candidatus Inrepella (NL. fem. n. *Inrepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFY01*. The type species for the genus is *Candidatus* Inrepella conabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrepula semidigena sp. nov.

Candidatus Inrepula semidigena (NL. fem. n. *semidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SUP05 sp000205985*. The type genome for the species is the GenBank assembly GCA_000205985.2. The GC content of the type genome is 39.26 % and the genome length is 1.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Saanich Inlet".

Description of *Candidatus* Inrepula gen. nov.

Candidatus Inrepula (NL. fem. n. *Inrepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SUP05*. The type species for the genus is *Candidatus* Inrepula semidigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inresaria adtenitas sp. nov.

Candidatus Inresaria adtenitas (NL. fem. n. *adtenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-43-11 sp001805165*. The type genome for the species is the

GenBank assembly GCA_001805165.1. The GC content of the type genome is 43.34 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Inresaria gen. nov.

Candidatus Inresaria (NL. fem. n. *Inresaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-43-11*. The type species for the genus is *Candidatus* Inresaria adtenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HDB-SIOI813*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculosaceae.

Description of *Candidatus* Inresella nutamifica sp. nov.

Candidatus Inresella nutamifica (NL. fem. n. *nutamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-40-15 sp001816655*. The type genome for the species is the GenBank assembly GCA_001816655.1. The GC content of the type genome is 40.84 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Inresella gen. nov.

Candidatus Inresella (NL. fem. n. *Inresella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-40-15*. The type species for the genus is *Candidatus* Inresella nutamifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-39-9b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexellaceae.

Description of *Candidatus* Inresida everbilega sp. nov.

Candidatus Inresida everbilega (NL. fem. n. *everbilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-275 sp002085205*. The type genome for the species is the GenBank assembly GCA_002085205.1. The GC content of the type genome is 37.39 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Inresida gen. nov.

Candidatus Inresida (NL. fem. n. *Inresida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-275*. The type species for the genus is *Candidatus* Inresida everbilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Inresosa tenilicula sp. nov.

Candidatus Inresosa tenilicula (NL. fem. n. *tenilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMSC01 sp013204685*. The type genome for the species is the GenBank assembly GCA_013204685.1. The GC content of the type genome is 44.71 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Inresosa gen. nov.

Candidatus Inresosa (NL. fem. n. *Inresosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMSC01*. The type species for the genus is *Candidatus* Inresosa tenilicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKK-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepellaceae.

Description of *Candidatus* Inretana cilicimonia sp. nov.

Candidatus Inretana cilicimonia (NL. fem. n. *cilicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8949 sp003532195*. The type genome for the species is the GenBank assembly GCA_003532195.1. The GC content of the type genome is 56.15 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Inretana gen. nov.

Candidatus Inretana (NL. fem. n. *Inretana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8949*. The type species for the genus is *Candidatus* Inretana cilicimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Inretana dececax sp. nov.

Candidatus Inretana dececax (NL. fem. n. *dececax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8949 sp003451915*. The type genome for the species is the GenBank assembly GCA_003451915.1. The GC content of the type genome is 50.47 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Inretana inmacitio sp. nov.

Candidatus Inretana inmacitio (NL. fem. n. *inmacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8949 sp012520975*. The type genome for the species is the GenBank assembly GCA_012520975.1. The GC content of the type genome is 50.49 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Inretana reforastra sp. nov.

Candidatus Inretana reforastra (NL. fem. n. *reforastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8949 sp012519875*. The type genome for the species is the GenBank assembly GCA_012519875.1. The GC content of the type genome is 51.61 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Inretaria volucifica sp. nov.

Candidatus Inretaria volucifica (NL. fem. n. *volucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNKH01 sp014382155*. The type genome for the species is the GenBank assembly GCA_014382155.1. The GC content of the type genome is 44.17 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Inretaria gen. nov.

Candidatus Inretaria (NL. fem. n. *Inretaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNKH01*. The type species for the genus is *Candidatus* Inretaria volucifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Inretida bicinastra sp. nov.

Candidatus Inretida bicinastra (NL. fem. n. *bicinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13038 sp902785135*. The type genome for the species is the GenBank assembly GCA_902785135.1. The GC content of the type genome is 25.56 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Inretida gen. nov.

Candidatus Inretida (NL. fem. n. *Inretida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13038*. The type species for the genus is *Candidatus* Inretida bicinastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Inretida subodiforma sp. nov.

Candidatus Inretida subodiforma (NL. fem. n. *subodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13038 sp902789425*. The type genome for the species is the GenBank assembly GCA_902789425.1. The GC content of the type genome is 24.45 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Inretida tolutibra sp. nov.

Candidatus Inretida tolutibra (NL. fem. n. *tolutibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13038 sp902801825*. The type genome for the species is the GenBank assembly GCA_902801825.1. The GC content of the type genome is 22.94 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Inretosa adpacifica sp. nov.

Candidatus Inretosa adpacifica (NL. fem. n. *adpacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHCC01 sp003243915*. The type genome for the species is the GenBank assembly GCA_003243915.1. The GC content of the type genome is 69.06 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Inretosa gen. nov.

Candidatus Inretosa (NL. fem. n. *Inretosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHCC01*. The type species for the genus is *Candidatus* Inretosa adpacifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inretula sonipimonas sp. nov.

Candidatus Inretula sonipimonas (NL. fem. n. *sonipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11977 sp902774525*. The type genome for the species is the GenBank assembly GCA_902774525.1. The GC content of the type genome is 44.31 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Inretula gen. nov.

Candidatus Inretula (NL. fem. n. *Inretula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11977*. The type species for the genus is *Candidatus* Inretula sonipimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrevana pedepiforma sp. nov.

Candidatus Inrevana pedepiforma (NL. fem. n. *pedepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11098 sp003534085*. The type genome for the species is the GenBank assembly GCA_003534085.1. The GC content of the type genome is 41.86 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Inrevana gen. nov.

Candidatus Inrevana (NL. fem. n. *Inrevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11098*. The type species for the genus is *Candidatus* Inrevana pedepiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Inrevaria exentugo sp. nov.

Candidatus Inrevaria exentugo (NL. fem. n. *exentugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSB01 sp007571095*. The type genome for the species is the GenBank assembly GCA_007571095.1. The GC content of the type genome is 54.3 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Inrevaria gen. nov.

Candidatus Inrevaria (NL. fem. n. *Inrevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKSB01*. The type species for the genus is *Candidatus* Inrevaria exentugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Inrevia revulitura sp. nov.

Candidatus Inrevia revulitura (NL. fem. n. *revulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTC01 sp902805635*. The type genome for the species is the GenBank assembly GCA_902805635.1. The GC content of the type genome is 68.68 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Inrevia gen. nov.

Candidatus Inrevia (NL. fem. n. *Inrevia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTC01*. The type species for the genus is *Candidatus* Inrevia

revulitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonanaceae.

Description of *Candidatus* Inrevida adcesitica sp. nov.

Candidatus Inrevida adcesitica (NL. fem. n. *adcesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1444 sp013286675*. The type genome for the species is the GenBank assembly GCA_013286675.1. The GC content of the type genome is 43.56 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Inrevida gen. nov.

Candidatus Inrevida (NL. fem. n. *Inrevida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1444*. The type species for the genus is *Candidatus* Inrevida adcesitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inrevida virecatica sp. nov.

Candidatus Inrevida virecatica (NL. fem. n. *virecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1444 sp003153295*. The type genome for the species is the GenBank assembly GCA_003153295.1. The GC content of the type genome is 42.67 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Inrevosa abambilega sp. nov.

Candidatus Inrevosa abambilega (NL. fem. n. *abambilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCK01 sp002070005*. The type genome for the species is the

GenBank assembly GCA_002070005.1. The GC content of the type genome is 37.34 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Inrevosa gen. nov.

Candidatus Inrevosa (NL. fem. n. *Inrevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCK01*. The type species for the genus is *Candidatus* Inrevosa abambilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Inrevula catagousia sp. nov.

Candidatus Inrevula catagousia (NL. fem. n. *catagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8129 sp003517915*. The type genome for the species is the GenBank assembly GCA_003517915.1. The GC content of the type genome is 49.53 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Inrevula gen. nov.

Candidatus Inrevula (NL. fem. n. *Inrevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8129*. The type species for the genus is *Candidatus* Inrevula catagousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insalana cerifedo sp. nov.

Candidatus Insalana cerifedo (NL. fem. n. *cerifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OCS116 sp013214705*. The type genome for the species is the GenBank assembly GCA_013214705.1. The GC content of the type genome is 44.17 %

and the genome length is 3.52 Mbp.

Description of *Candidatus* Insalana gen. nov.

Candidatus Insalana (NL. fem. n. *Insalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OCS116*. The type species for the genus is *Candidatus* Insalana cerifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OSC116*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifanaceae.

Description of *Candidatus* Insalana exhonatica sp. nov.

Candidatus Insalana exhonatica (NL. fem. n. *exhonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OCS116 sp002402005*. The type genome for the species is the GenBank assembly GCA_002402005.1. The GC content of the type genome is 44.88 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Insalana invigitrix sp. nov.

Candidatus Insalana invigitrix (NL. fem. n. *invigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OCS116 sp013214985*. The type genome for the species is the GenBank assembly GCA_013214985.1. The GC content of the type genome is 39.2 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Insalana uberrimonas sp. nov.

Candidatus Insalana uberrimonas (NL. fem. n. *uberrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OCS116 sp002401855*. The type genome for the species is the GenBank assembly GCA_002401855.1. The GC content of the type genome is 43.97 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Insalella insoritica sp. nov.

Candidatus Insalella insoritica (NL. fem. n. *insoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2687715 sp002687715*. The type genome for the species is the GenBank assembly GCA_002687715.1. The GC content of the type genome is 67.05 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Insalella gen. nov.

Candidatus Insalella (NL. fem. n. *Insalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2687715*. The type species for the genus is *Candidatus* Insalella insoritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobellaceae.

Description of *Candidatus* Insalia cilicitio sp. nov.

Candidatus Insalia cilicitio (NL. fem. n. *cilicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWGR01 sp003551365*. The type genome for the species is the GenBank assembly GCA_003551365.1. The GC content of the type genome is 59.63 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Insalia gen. nov.

Candidatus Insalia (NL. fem. n. *Insalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWGR01*. The type species for the genus is *Candidatus* Insalia cilicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforariaceae.

Description of *Candidatus* Insalia insusessa sp. nov.

Candidatus Insalia insusessa (NL. fem. n. *insusessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWGR01 sp003554565*. The type genome for the species is the GenBank assembly GCA_003554565.1. The GC content of the type genome is 58.42 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Insalida selibastra sp. nov.

Candidatus Insalida selibastra (NL. fem. n. *selibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683775 sp002683775*. The type genome for the species is the GenBank assembly GCA_002683775.1. The GC content of the type genome is 30.0 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Insalida gen. nov.

Candidatus Insalida (NL. fem. n. *Insalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2683775*. The type species for the genus is *Candidatus* Insalida selibastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Insalosa cerofilega sp. nov.

Candidatus Insalosa cerofilega (NL. fem. n. *cerofilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCES01 sp013416455*. The type genome for the species is the GenBank assembly RS_GCF_013416455.1. The GC content of the type genome is 63.12 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Insalosa gen. nov.

Candidatus Insalosa (NL. fem. n. *Insalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCES01*. The type species for the genus is *Candidatus* Insalosa cerofilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insalosa venucivita sp. nov.

Candidatus Insalosa venucivita (NL. fem. n. *venucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCES01 sp012512545*. The type genome for the species is the GenBank assembly GCA_012512545.1. The GC content of the type genome is 59.98 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Insalula haluciforma sp. nov.

Candidatus Insalula haluciforma (NL. fem. n. *haluciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYU01 sp002839825*. The type genome for the species is the GenBank assembly GCA_002839825.1. The GC content of the type genome is 38.06 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Insalula gen. nov.

Candidatus Insalula (NL. fem. n. *Insalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYU01*. The type species for the genus is *Candidatus* Insalula haluciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Insemana eccisitrix sp. nov.

Candidatus Insemana eccisitrix (NL. fem. n. *eccisitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTT01 sp011389765*. The type genome for the species is the GenBank assembly GCA_011389765.1. The GC content of the type genome is 54.28 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Insemana gen. nov.

Candidatus Insemana (NL. fem. n. *Insemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTT01*. The type species for the genus is *Candidatus* Insemana eccisitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insemella categigena sp. nov.

Candidatus Insemella categigena (NL. fem. n. *categigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVH01 sp013043915*. The type genome for the species is the GenBank assembly GCA_013043915.1. The GC content of the type genome is 51.01 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Insemella gen. nov.

Candidatus Insemella (NL. fem. n. *Insemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVH01*. The type species for the genus is *Candidatus* Insemella categigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insemia delecibra sp. nov.

Candidatus Insemia delecibra (NL. fem. n. *delecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-22_A sp002773795*. The type genome for the species is the GenBank assembly GCA_002773795.1. The GC content of the type genome is 42.36 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Insemia gen. nov.

Candidatus Insemia (NL. fem. n. *Insemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-22_A*. The type species for the genus is *Candidatus* Insemia delecibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Insemula defositia sp. nov.

Candidatus Insemula defositia (NL. fem. n. *defositia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401735 sp006844635*. The type genome for the species is the GenBank assembly GCA_006844635.1. The GC content of the type genome is 43.75 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Insemula gen. nov.

Candidatus Insemula (NL. fem. n. *Insemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401735*. The type species for the genus is *Candidatus* Insemula defositia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insemula expopessa sp. nov.

Candidatus Insemula expopessa (NL. fem. n. *expopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401735 sp002401735*. The type genome for the species is the GenBank assembly GCA_002401735.1. The GC content of the type genome is 42.59 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Insenana morigastra sp. nov.

Candidatus Insenana morigastra (NL. fem. n. *morigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBAZ01 sp005239935*. The type genome for the species is the GenBank assembly GCA_005239935.1. The GC content of the type genome is 68.09 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Insenana gen. nov.

Candidatus Insenana (NL. fem. n. *Insenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBAZ01*. The type species for the genus is *Candidatus* Insenana morigastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetariaceae.

Description of *Candidatus* Insenida detepibra sp. nov.

Candidatus Insenida detepibra (NL. fem. n. *detepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTI01 sp009377815*. The type genome for the species is the GenBank assembly GCA_009377815.1. The GC content of the type genome is 64.1 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Insenida gen. nov.

Candidatus Insenida (NL. fem. n. *Insenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTI01*. The type species for the genus is *Candidatus* Insenida

detepibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Insenosa abindax sp. nov.

Candidatus Insenosa abindax (NL. fem. n. *abindax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU13 sp013202635*. The type genome for the species is the GenBank assembly GCA_013202635.1. The GC content of the type genome is 46.52 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Insenosa gen. nov.

Candidatus Insenosa (NL. fem. n. *Insenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU13*. The type species for the genus is *Candidatus* Insenosa abindax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Insenosa pacifedo sp. nov.

Candidatus Insenosa pacifedo (NL. fem. n. *pacifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU13 sp014384025*. The type genome for the species is the GenBank assembly GCA_014384025.1. The GC content of the type genome is 46.28 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Insenula cinefago sp. nov.

Candidatus Insenula cinefago (NL. fem. n. *cinefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWP01 sp011373615*. The type genome for the species is the GenBank assembly GCA_011373615.1. The GC content of the type genome is 62.09 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Insenula gen. nov.

Candidatus Insenula (NL. fem. n. *Insenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWP01*. The type species for the genus is *Candidatus* Insenula cinefago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J036*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetanaceae.

Description of *Candidatus* Insepana inargax sp. nov.

Candidatus Insepana inargax (NL. fem. n. *inargax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKIU01 sp007116275*. The type genome for the species is the GenBank assembly GCA_007116275.1. The GC content of the type genome is 34.26 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Insepana gen. nov.

Candidatus Insepana (NL. fem. n. *Insepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKIU01*. The type species for the genus is *Candidatus* Insepana inargax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Insepella edissastra sp. nov.

Candidatus Insepella edissastra (NL. fem. n. *edissastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG34 sp003242255*. The type genome for the species is the GenBank assembly GCA_003242255.1. The GC content of the type genome is 48.47 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Insepella gen. nov.

Candidatus Insepella (NL. fem. n. *Insepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG34*. The type species for the genus is *Candidatus* Insepella edissastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insepida onocribra sp. nov.

Candidatus Insepida onocribra (NL. fem. n. *onocribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEI01 sp002071045*. The type genome for the species is the GenBank assembly GCA_002071045.1. The GC content of the type genome is 60.43 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Insepida gen. nov.

Candidatus Insepida (NL. fem. n. *Insepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWEI01*. The type species for the genus is *Candidatus* Insepida onocribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1062*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapariaceae.

Description of *Candidatus* Inseposa bigemimonas sp. nov.

Candidatus Inseposa bigemimonas (NL. fem. n. *bigemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-3-00-62-12 sp002785585*. The type genome for the species is the GenBank assembly GCA_002785585.1. The GC content of the type genome is 62.13 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Inseposa gen. nov.

Candidatus Inseposa (NL. fem. n. *Inseposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-3-00-62-12*. The type species for the genus is *Candidatus* Inseposa bigemimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insepula coninicella sp. nov.

Candidatus Insepula coninicella (NL. fem. n. *coninicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747805 sp002747805*. The type genome for the species is the GenBank assembly GCA_002747805.1. The GC content of the type genome is 48.77 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Insepula gen. nov.

Candidatus Insepula (NL. fem. n. *Insepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747805*. The type species for the genus is *Candidatus* Insepula coninicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insibana antacibra sp. nov.

Candidatus Insibana antacibra (NL. fem. n. *antacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RU20A sp900155885*. The type genome for the species is the GenBank assembly RS_GCF_900155885.1. The GC content of the type genome is 63.83 % and the

genome length is 4.53 Mbp.

Description of *Candidatus* Insibana gen. nov.

Candidatus Insibana (NL. fem. n. *Insibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RU20A*. The type species for the genus is *Candidatus* Insibana antacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insibaria disidicella sp. nov.

Candidatus Insibaria disidicella (NL. fem. n. *disidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIA01 sp004378665*. The type genome for the species is the GenBank assembly GCA_004378665.1. The GC content of the type genome is 47.97 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Insibaria gen. nov.

Candidatus Insibaria (NL. fem. n. *Insibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOIA01*. The type species for the genus is *Candidatus* Insibaria disidicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insibella acceribula sp. nov.

Candidatus Insibella acceribula (NL. fem. n. *acceribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LiPW-15 sp007375645*. The type genome for the species is the GenBank assembly GCA_007375645.1. The GC content of the type genome is 48.6 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Insibella gen. nov.

Candidatus Insibella (NL. fem. n. *Insibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LiPW-15*. The type species for the genus is *Candidatus* Insibella acceribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Insibida tumefimonia sp. nov.

Candidatus Insibida tumefimonia (NL. fem. n. *tumefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-37-12 sp002793015*. The type genome for the species is the GenBank assembly GCA_002793015.1. The GC content of the type genome is 37.42 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Insibida gen. nov.

Candidatus Insibida (NL. fem. n. *Insibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-37-12*. The type species for the genus is *Candidatus* Insibida tumefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Insibosa lupanicella sp. nov.

Candidatus Insibosa lupanicella (NL. fem. n. *lupanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QVMH01 sp010501035*. The type genome for the species is the GenBank assembly RS_GCF_010501035.1. The GC content of the type genome is 39.89 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Insibosa gen. nov.

Candidatus Insibosa (NL. fem. n. *Insibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QVMH01*. The type species for the genus is *Candidatus* Insibosa lupanicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insibula ammatedo sp. nov.

Candidatus Insibula ammatedo (NL. fem. n. *ammatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-560 sp011330835*. The type genome for the species is the GenBank assembly GCA_011330835.1. The GC content of the type genome is 61.0 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Insibula gen. nov.

Candidatus Insibula (NL. fem. n. *Insibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-560*. The type species for the genus is *Candidatus* Insibula ammatedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UWMA-0217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanigulaceae.

Description of *Candidatus* Insicana ossucetta sp. nov.

Candidatus Insicana ossucetta (NL. fem. n. *ossucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPE01 sp011046715*. The type genome for the species is the GenBank assembly GCA_011046715.1. The GC content of the type genome is 59.66 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Insicana gen. nov.

Candidatus Insicana (NL. fem. n. *Insicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPE01*. The type species for the genus is *Candidatus* Insicana ossucetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *20CM-2-55-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripariaceae.

Description of *Candidatus* Insicia bimetivita sp. nov.

Candidatus Insicia bimetivita (NL. fem. n. *bimetivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHL01 sp011334775*. The type genome for the species is the GenBank assembly GCA_011334775.1. The GC content of the type genome is 37.43 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Insicia gen. nov.

Candidatus Insicia (NL. fem. n. *Insicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHL01*. The type species for the genus is *Candidatus* Insicia bimetivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6016*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mahelosaceae.

Description of *Candidatus* Insicida resulugo sp. nov.

Candidatus Insicida resulugo (NL. fem. n. *resulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAAV01 sp004563595*. The type genome for the species is the GenBank assembly GCA_004563595.2. The GC content of the type genome is 28.87 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Insicida gen. nov.

Candidatus Insicida (NL. fem. n. *Insicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAAV01*. The type species for the genus is *Candidatus* Insicida resulugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Insinana catobitoga sp. nov.

Candidatus Insinana catobitoga (NL. fem. n. *catobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM707 sp002869615*. The type genome for the species is the GenBank assembly GCA_002869615.1. The GC content of the type genome is 53.07 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Insinana gen. nov.

Candidatus Insinana (NL. fem. n. *Insinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM707*. The type species for the genus is *Candidatus* Insinana catobitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petululaceae.

Description of *Candidatus* Insinana dapifibula sp. nov.

Candidatus Insinana dapifibula (NL. fem. n. *dapifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM707 sp002868925*. The type genome for the species is the GenBank assembly GCA_002868925.1. The GC content of the type genome is 56.03 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Insinaria cenotousia sp. nov.

Candidatus Insinaria cenotousia (NL. fem. n. *cenotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVCS01 sp002049885*. The type genome for the species is the GenBank assembly GCA_002049885.1. The GC content of the type genome is 68.28 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Insinaria gen. nov.

Candidatus Insinaria (NL. fem. n. *Insinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVCS01*. The type species for the genus is *Candidatus* Insinaria cenotousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Insinella nefaritura sp. nov.

Candidatus Insinella nefaritura (NL. fem. n. *nefaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1045 sp900547995*. The type genome for the species is the GenBank assembly GCA_900547995.1. The GC content of the type genome is 25.69 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Insinella gen. nov.

Candidatus Insinella (NL. fem. n. *Insinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1045*. The type species for the genus is *Candidatus* Insinella nefaritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Insinia attegilenta sp. nov.

Candidatus Insinia attegilenta (NL. fem. n. *attegilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60007 sp007859315*. The type genome for the species is the GenBank assembly RS_GCF_007859315.1. The GC content of the type genome is 66.16 % and the genome length is 9.09 Mbp.

Description of *Candidatus* Insinia gen. nov.

Candidatus Insinia (NL. fem. n. *Insinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYSU-D60007*. The type species for the genus is *Candidatus* Insinia attegilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insinia effigago sp. nov.

Candidatus Insinia effigago (NL. fem. n. *effigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60007 sp003574685*. The type genome for the species is the GenBank assembly RS_GCF_003574685.1. The GC content of the type genome is 66.28 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Insinia utrolousia sp. nov.

Candidatus Insinia utrolousia (NL. fem. n. *utrolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60007 sp008039615*. The type genome for the species is the GenBank assembly RS_GCF_008039615.1. The GC content of the type genome is 67.91 % and the genome length is 8.76 Mbp.

Description of *Candidatus* Insinosa negidivita sp. nov.

Candidatus Insinosa negidivita (NL. fem. n. *negidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSY01 sp012032475*. The type genome for the species is the GenBank assembly GCA_012032475.1. The GC content of the type genome is 61.01 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Insinosa gen. nov.

Candidatus Insinosa (NL. fem. n. *Insinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSY01*. The type species for the genus is *Candidatus* Insinosa negidivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insinula binocugo sp. nov.

Candidatus Insinula binocugo (NL. fem. n. *binocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDKV01 sp013002045*. The type genome for the species is the GenBank assembly GCA_013002045.1. The GC content of the type genome is 58.89 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Insinula gen. nov.

Candidatus Insinula (NL. fem. n. *Insinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDKV01*. The type species for the genus is *Candidatus* Insinula binocugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solaculaceae.

Description of *Candidatus* Insomana domicicella sp. nov.

Candidatus Insomana domicicella (NL. fem. n. *domicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1794 sp002315435*. The type genome for the species is the GenBank assembly GCA_002315435.1. The GC content of the type genome is 38.32 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Insomana gen. nov.

Candidatus Insomana (NL. fem. n. *Insomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1794*. The type species for the genus is *Candidatus* Insomana domicicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insomaria perexilenta sp. nov.

Candidatus Insomaria perexilenta (NL. fem. n. *perexilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PC08-66 sp000830255*. The type genome for the species is the GenBank assembly GCA_000830255.1. The GC content of the type genome is 46.89 % and the genome length is 2.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Pozzo dei Cristalli sulfidic cave stream".

Description of *Candidatus* Insomaria gen. nov.

Candidatus Insomaria (NL. fem. n. *Insomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PC08-66*. The type species for the genus is *Candidatus* Insomaria perexilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insomella adnecimonia sp. nov.

Candidatus Insomella adnecimonia (NL. fem. n. *adnecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UMGS1815 sp900555345*. The type genome for the species is the GenBank assembly GCA_900555345.1. The GC content of the type genome is 52.8 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Insomella gen. nov.

Candidatus Insomella (NL. fem. n. *Insomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1815*. The type species for the genus is *Candidatus* Insomella adnecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Insomella recucibula sp. nov.

Candidatus Insomella recucibula (NL. fem. n. *recucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1815 sp011957885*. The type genome for the species is the GenBank assembly RS_GCF_011957885.1. The GC content of the type genome is 45.4 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Insomia viburibra sp. nov.

Candidatus Insomia viburibra (NL. fem. n. *viburibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXQ01 sp011367795*. The type genome for the species is the GenBank assembly GCA_011367795.1. The GC content of the type genome is 37.79 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Insomia gen. nov.

Candidatus Insomia (NL. fem. n. *Insomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXQ01*. The type species for the genus is *Candidatus* Insomia viburibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarellaceae.

Description of *Candidatus* Insomida optabessa sp. nov.

Candidatus Insomida optabessa (NL. fem. n. *optabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKIB01 sp007116635*. The type genome for the species is the GenBank assembly GCA_007116635.1. The GC content of the type genome is 51.56 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Insomida gen. nov.

Candidatus Insomida (NL. fem. n. *Insomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKIB01*. The type species for the genus is *Candidatus* Insomida optabessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insomosa ascalicella sp. nov.

Candidatus Insomosa ascalicella (NL. fem. n. *ascalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7573 sp002477905*. The type genome for the species is the GenBank assembly GCA_002477905.1. The GC content of the type genome is 50.99 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Insomosa gen. nov.

Candidatus Insomosa (NL. fem. n. *Insomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7573*. The type species for the genus is *Candidatus* Insomosa ascalicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAG-272. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Insomula immedisca sp. nov.

Candidatus Insomula immedisca (NL. fem. n. *immedisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYHK01 sp903925985*. The type genome for the species is the GenBank assembly GCA_903925985.1. The GC content of the type genome is 53.65 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Insomula gen. nov.

Candidatus Insomula (NL. fem. n. *Insomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYHK01*. The type species for the genus is *Candidatus* Insomula immedisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insoparia holisimonia sp. nov.

Candidatus Insoparia holisimonia (NL. fem. n. *holisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXY01 sp012515645*. The type genome for the species is the GenBank assembly GCA_012515645.1. The GC content of the type genome is 54.2 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Insoparia gen. nov.

Candidatus Insoparia (NL. fem. n. *Insoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXY01*. The type species for the genus is *Candidatus* Insoparia holisimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insopia annicastra sp. nov.

Candidatus Insopia annicastra (NL. fem. n. *annicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCBS01 sp902773475*. The type genome for the species is the GenBank assembly GCA_902773475.1. The GC content of the type genome is 62.53 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Insopia gen. nov.

Candidatus Insopia (NL. fem. n. *Insopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCBS01*. The type species for the genus is *Candidatus* Insopia annicastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Insopia tigurugo sp. nov.

Candidatus Insopia tigurugo (NL. fem. n. *tigurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCBS01 sp902799715*. The type genome for the species is the GenBank assembly GCA_902799715.1. The GC content of the type genome is 64.8 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Insopida catagitura sp. nov.

Candidatus Insopida catagitura (NL. fem. n. *catagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14179 sp902796545*. The type genome for the species is the GenBank assembly GCA_902796545.1. The GC content of the type genome is 57.58 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Insopida gen. nov.

Candidatus Insopida (NL. fem. n. *Insopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14179*. The type species for the genus is *Candidatus* Insopida catagitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regiganaceae.

Description of *Candidatus* Insoposa allapibra sp. nov.

Candidatus Insoposa allapibra (NL. fem. n. *allapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNS01 sp011047195*. The type genome for the species is the GenBank assembly GCA_011047195.1. The GC content of the type genome is 54.9 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Insoposa gen. nov.

Candidatus Insoposa (NL. fem. n. *Insoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNS01*. The type species for the genus is *Candidatus* Insoposa allapibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJZX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumellaceae.

Description of *Candidatus* Insopula adpagibula sp. nov.

Candidatus Insopula adpagibula (NL. fem. n. *adpagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QIAA01 sp003224905*. The type genome for the species is the GenBank assembly GCA_003224905.1. The GC content of the type genome is 55.88 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Insopula gen. nov.

Candidatus Insopula (NL. fem. n. *Insopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QIAA01*. The type species for the genus is *Candidatus* Insopula adpagibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insoraria adfunitia sp. nov.

Candidatus Insoraria adfunitia (NL. fem. n. *adfunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C-19 sp009917405*. The type genome for the species is the GenBank assembly RS_GCF_009917405.1. The GC content of the type genome is 38.75 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Insoraria gen. nov.

Candidatus Insoraria (NL. fem. n. *Insoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C-19*. The type species for the genus is *Candidatus* Insoraria adfunitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insorula acrobitica sp. nov.

Candidatus Insorula acrobitica (NL. fem. n. *acrobitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GR16-43 sp013003965*. The type genome for the species is the GenBank assembly RS_GCF_013003965.1. The GC content of the type genome is 67.02 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Insorula gen. nov.

Candidatus Insorula (NL. fem. n. *Insorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GR16-43*. The type species for the genus is *Candidatus* Insorula acrobitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponellaceae.

Description of *Candidatus* Insorula allapetta sp. nov.

Candidatus Insorula allapetta (NL. fem. n. *allapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GR16-43 sp012274175*. The type genome for the species is the GenBank assembly GCA_012274175.1. The GC content of the type genome is 68.76 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Insorula inremiforma sp. nov.

Candidatus Insorula inremiforma (NL. fem. n. *inremiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GR16-43 sp013003985*. The type genome for the species is the GenBank assembly RS_GCF_013003985.1. The GC content of the type genome is 66.12 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Insorula melopitas sp. nov.

Candidatus Insorula melopitas (NL. fem. n. *melopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GR16-43 sp001953215*. The type genome for the species is the GenBank assembly RS_GCF_001953215.1. The GC content of the type genome is 67.12 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Insubana ephipitudo sp. nov.

Candidatus Insubana ephipitudo (NL. fem. n. *ephipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SJAQ100 sp014145335*. The type genome for the species is the GenBank assembly RS_GCF_014145335.1. The GC content of the type genome is 71.27 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Insubana gen. nov.

Candidatus Insubana (NL. fem. n. *Insubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SJAQ100*. The type species for the genus is *Candidatus* Insubana ephipitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insubella denicitia sp. nov.

Candidatus Insubella denicitia (NL. fem. n. *denicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGF01 sp009787345*. The type genome for the species is the GenBank assembly GCA_009787345.1. The GC content of the type genome is 47.21 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Insubella gen. nov.

Candidatus Insubella (NL. fem. n. *Insubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGF01*. The type species for the genus is *Candidatus* Insubella denicitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insubia artufitia sp. nov.

Candidatus Insubia artufitia (NL. fem. n. *artufitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp012798065*. The type genome for the species is the

GenBank assembly GCA_012798065.1. The GC content of the type genome is 52.12 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Insubia gen. nov.

Candidatus Insubia (NL. fem. n. *Insubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6107*. The type species for the genus is *Candidatus* Insubia artufitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insubia dibapilega sp. nov.

Candidatus Insubia dibapilega (NL. fem. n. *dibapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp003524305*. The type genome for the species is the GenBank assembly GCA_003524305.1. The GC content of the type genome is 45.86 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Insubia diritessa sp. nov.

Candidatus Insubia diritessa (NL. fem. n. *diritessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp002347485*. The type genome for the species is the GenBank assembly GCA_002347485.1. The GC content of the type genome is 54.37 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Insubia immobibula sp. nov.

Candidatus Insubia immobibula (NL. fem. n. *immobibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp009773005*. The type genome for the species is the GenBank assembly GCA_009773005.1. The GC content of the type genome is 46.91 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Insubia immodago sp. nov.

Candidatus Insubia immodago (NL. fem. n. *immodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp013824385*. The type genome for the species is the GenBank assembly GCA_013824385.1. The GC content of the type genome is 44.88 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Insubia isoscitoga sp. nov.

Candidatus Insubia isoscitoga (NL. fem. n. *isoscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp002428455*. The type genome for the species is the GenBank assembly GCA_002428455.1. The GC content of the type genome is 52.05 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Insubia panopago sp. nov.

Candidatus Insubia panopago (NL. fem. n. *panopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp002840715*. The type genome for the species is the GenBank assembly GCA_002840715.1. The GC content of the type genome is 45.13 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Insubia plostago sp. nov.

Candidatus Insubia plostago (NL. fem. n. *plostago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp003158355*. The type genome for the species is the GenBank assembly GCA_003158355.1. The GC content of the type genome is 47.66 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Insubia reforicula sp. nov.

Candidatus Insubia reforicula (NL. fem. n. *reforicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp002402725*. The type genome for the species is the GenBank assembly GCA_002402725.1. The GC content of the type genome is 52.04 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Insubia sonabax sp. nov.

Candidatus Insubia sonabax (NL. fem. n. *sonabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp003501835*. The type genome for the species is the GenBank assembly GCA_003501835.1. The GC content of the type genome is 52.98 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Insubia tirunisca sp. nov.

Candidatus Insubia tirunisca (NL. fem. n. *tirunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6107 sp012797695*. The type genome for the species is the GenBank assembly GCA_012797695.1. The GC content of the type genome is 52.46 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Insubosa excomitoga sp. nov.

Candidatus Insubosa excomitoga (NL. fem. n. *excomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-9 sp003963365*. The type genome for the species is the GenBank assembly GCA_003963365.1. The GC content of the type genome is 38.18 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Insubosa gen. nov.

Candidatus Insubosa (NL. fem. n. *Insubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-9*. The type species for the genus is *Candidatus* Insubosa

excomitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insubula inlacicula sp. nov.

Candidatus Insubula inlacicula (NL. fem. n. *inlacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP202 sp014238205*. The type genome for the species is the GenBank assembly GCA_014238205.1. The GC content of the type genome is 57.97 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Insubula gen. nov.

Candidatus Insubula (NL. fem. n. *Insubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP202*. The type species for the genus is *Candidatus* Insubula inlacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Insubula obverimonas sp. nov.

Candidatus Insubula obverimonas (NL. fem. n. *obverimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP202 sp002722935*. The type genome for the species is the GenBank assembly GCA_002722935.1. The GC content of the type genome is 61.24 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Insufana haricicula sp. nov.

Candidatus Insufana haricicula (NL. fem. n. *haricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLWY01 sp013178255*. The type genome for the species is the

GenBank assembly GCA_013178255.1. The GC content of the type genome is 50.57 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Insufana gen. nov.

Candidatus Insufana (NL. fem. n. *Insufana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLWY01*. The type species for the genus is *Candidatus* Insufana haricicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insufaria immatatio sp. nov.

Candidatus Insufaria immatatio (NL. fem. n. *immatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TC-15 sp010092855*. The type genome for the species is the GenBank assembly GCA_010092855.1. The GC content of the type genome is 60.09 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Insufaria gen. nov.

Candidatus Insufaria (NL. fem. n. *Insufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TC-15*. The type species for the genus is *Candidatus* Insufaria immatatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibariaceae.

Description of *Candidatus* Insufella dicibivita sp. nov.

Candidatus Insufella dicibivita (NL. fem. n. *dicibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6772 sp002685115*. The type genome for the species is the GenBank assembly GCA_002685115.1. The GC content of the type genome is 35.34 %

and the genome length is 1.34 Mbp.

Description of *Candidatus* Insufella gen. nov.

Candidatus Insufella (NL. fem. n. *Insufella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6772*. The type species for the genus is *Candidatus* Insufella dicibivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7430*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desaciaceae.

Description of *Candidatus* Insufella velivivita sp. nov.

Candidatus Insufella velivivita (NL. fem. n. *velivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6772 sp002453265*. The type genome for the species is the GenBank assembly GCA_002453265.1. The GC content of the type genome is 34.03 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Insufida enigmugo sp. nov.

Candidatus Insufida enigmugo (NL. fem. n. *enigmugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CK1056 sp010500615*. The type genome for the species is the GenBank assembly RS_GCF_010500615.1. The GC content of the type genome is 53.99 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Insufida gen. nov.

Candidatus Insufida (NL. fem. n. *Insufida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CK1056*. The type species for the genus is *Candidatus* Insufida enigmugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Verruco-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Vitigidaceae.

Description of *Candidatus* Insufida semilitia sp. nov.

Candidatus Insufida semilitia (NL. fem. n. *semilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CK1056 sp009908535*. The type genome for the species is the GenBank assembly GCA_009908535.1. The GC content of the type genome is 62.46 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Insufosa abinvitoga sp. nov.

Candidatus Insufosa abinvitoga (NL. fem. n. *abinvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYLN01 sp012514915*. The type genome for the species is the GenBank assembly GCA_012514915.1. The GC content of the type genome is 68.02 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Insufosa gen. nov.

Candidatus Insufosa (NL. fem. n. *Insufosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYLN01*. The type species for the genus is *Candidatus* Insufosa abinvitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenariaceae.

Description of *Candidatus* Insufosa abligivita sp. nov.

Candidatus Insufosa abligivita (NL. fem. n. *abligivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYLN01 sp012521875*. The type genome for the species is the GenBank assembly GCA_012521875.1. The GC content of the type genome is 63.88 %

and the genome length is 3.96 Mbp.

Description of *Candidatus* Insufula domabilega sp. nov.

Candidatus Insufula domabilega (NL. fem. n. *domabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-58-95 sp001872165*. The type genome for the species is the GenBank assembly GCA_001872165.1. The GC content of the type genome is 58.04 % and the genome length is 1.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Insufula gen. nov.

Candidatus Insufula (NL. fem. n. *Insufula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-58-95*. The type species for the genus is *Candidatus* Insufula domabilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Insurana infinastra sp. nov.

Candidatus Insurana infinastra (NL. fem. n. *infinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBP01 sp013694835*. The type genome for the species is the GenBank assembly GCA_013694835.1. The GC content of the type genome is 69.84 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Insurana gen. nov.

Candidatus Insurana (NL. fem. n. *Insurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBP01*. The type species for the genus is *Candidatus* Insurana infinastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Insuraria incocigena sp. nov.

Candidatus Insuraria incocigena (NL. fem. n. *incocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACOMS01 sp902628375*. The type genome for the species is the GenBank assembly GCA_902628375.1. The GC content of the type genome is 34.84 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Insuraria gen. nov.

Candidatus Insuraria (NL. fem. n. *Insuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACOMS01*. The type species for the genus is *Candidatus* Insuraria incocigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimulaceae.

Description of *Candidatus* Insurella defacago sp. nov.

Candidatus Insurella defacago (NL. fem. n. *defacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXS01 sp012515775*. The type genome for the species is the GenBank assembly GCA_012515775.1. The GC content of the type genome is 63.8 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Insurella gen. nov.

Candidatus Insurella (NL. fem. n. *Insurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXS01*. The type species for the genus is *Candidatus* Insurella

defacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibariaceae.

Description of *Candidatus* Insuria inambibra sp. nov.

Candidatus Insuria inambibra (NL. fem. n. *inambibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNT01 sp012798145*. The type genome for the species is the GenBank assembly GCA_012798145.1. The GC content of the type genome is 38.81 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Insuria gen. nov.

Candidatus Insuria (NL. fem. n. *Insuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNT01*. The type species for the genus is *Candidatus* Insuria inambibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefaridaceae.

Description of *Candidatus* Insurida adgenimonia sp. nov.

Candidatus Insurida adgenimonia (NL. fem. n. *adgenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14107 sp900772685*. The type genome for the species is the GenBank assembly RS_GCF_900772685.1. The GC content of the type genome is 42.85 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Insurida gen. nov.

Candidatus Insurida (NL. fem. n. *Insurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RUG14107*. The type species for the genus is *Candidatus* Insurida adgenimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insurida esculago sp. nov.

Candidatus Insurida esculago (NL. fem. n. *esculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14107 sp902796005*. The type genome for the species is the GenBank assembly GCA_902796005.1. The GC content of the type genome is 55.11 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Insurida herinitoga sp. nov.

Candidatus Insurida herinitoga (NL. fem. n. *herinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14107 sp902795985*. The type genome for the species is the GenBank assembly GCA_902795985.1. The GC content of the type genome is 53.97 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Insurida inculigena sp. nov.

Candidatus Insurida inculigena (NL. fem. n. *inculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14107 sp902795795*. The type genome for the species is the GenBank assembly GCA_902795795.1. The GC content of the type genome is 46.95 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Insurosa obsatetta sp. nov.

Candidatus Insurosa obsatetta (NL. fem. n. *obsatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5799 sp002418185*. The type genome for the species is the GenBank assembly GCA_002418185.1. The GC content of the type genome is 59.4 %

and the genome length is 2.48 Mbp.

Description of *Candidatus* Insurosa gen. nov.

Candidatus Insurosa (NL. fem. n. *Insurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5799*. The type species for the genus is *Candidatus* Insurosa obsatetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifellaceae.

Description of *Candidatus* Insurula immacicella sp. nov.

Candidatus Insurula immacicella (NL. fem. n. *immacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSG01 sp012842725*. The type genome for the species is the GenBank assembly GCA_012842725.1. The GC content of the type genome is 35.28 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Insurula gen. nov.

Candidatus Insurula (NL. fem. n. *Insurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSG01*. The type species for the genus is *Candidatus* Insurula immacicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insurula indilatio sp. nov.

Candidatus Insurula indilatio (NL. fem. n. *indilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSG01 sp012521375*. The type genome for the species is the GenBank assembly GCA_012521375.1. The GC content of the type genome is 34.71 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Insusana decacitura sp. nov.

Candidatus Insusana decacitura (NL. fem. n. *decacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMR01 sp012798695*. The type genome for the species is the GenBank assembly GCA_012798695.1. The GC content of the type genome is 50.17 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Insusana gen. nov.

Candidatus Insusana (NL. fem. n. *Insusana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMR01*. The type species for the genus is *Candidatus* Insusana decacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Insusaria disidousia sp. nov.

Candidatus Insusaria disidousia (NL. fem. n. *disidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZZU01 sp009829985*. The type genome for the species is the GenBank assembly RS_GCF_009829985.1. The GC content of the type genome is 27.93 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Insusaria gen. nov.

Candidatus Insusaria (NL. fem. n. *Insusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZZU01*. The type species for the genus is *Candidatus* Insusaria disidousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insusella saxopitio sp. nov.

Candidatus Insusella saxopitio (NL. fem. n. *saxopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSP01 sp009380025*. The type genome for the species is the GenBank assembly GCA_009380025.1. The GC content of the type genome is 64.38 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Insusella gen. nov.

Candidatus Insusella (NL. fem. n. *Insusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSP01*. The type species for the genus is *Candidatus* Insusella saxopitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Insusida abmatibula sp. nov.

Candidatus Insusida abmatibula (NL. fem. n. *abmatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-174 sp007117285*. The type genome for the species is the GenBank assembly GCA_007117285.1. The GC content of the type genome is 30.73 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Insusida gen. nov.

Candidatus Insusida (NL. fem. n. *Insusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-174*. The type species for the genus is *Candidatus* Insusida abmatibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Insusula vinolatio sp. nov.

Candidatus Insusula vinolatio (NL. fem. n. *vinolatio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVJ01 sp013043985*. The type genome for the species is the GenBank assembly GCA_013043985.1. The GC content of the type genome is 39.97 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Insusula gen. nov.

Candidatus Insusula (NL. fem. n. *Insusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVJ01*. The type species for the genus is *Candidatus* Insusula vinolatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenellaceae.

Description of *Candidatus* Intabia chancugo sp. nov.

Candidatus Intabia chancugo (NL. fem. n. *chancugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSC01 sp012842935*. The type genome for the species is the GenBank assembly GCA_012842935.1. The GC content of the type genome is 67.32 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Intabia gen. nov.

Candidatus Intabia (NL. fem. n. *Intabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSC01*. The type species for the genus is *Candidatus* Intabia chancugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intabia cohuritura sp. nov.

Candidatus Intabia cohuritura (NL. fem. n. *cohuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSC01 sp008933895*. The type genome for the species is the GenBank assembly GCA_008933895.1. The GC content of the type genome is 66.27 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Intabida hexapetta sp. nov.

Candidatus Intabida hexapetta (NL. fem. n. *hexapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1943 sp002336845*. The type genome for the species is the GenBank assembly GCA_002336845.1. The GC content of the type genome is 63.72 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Intabida gen. nov.

Candidatus Intabida (NL. fem. n. *Intabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1943*. The type species for the genus is *Candidatus* Intabida hexapetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intabida sacopigena sp. nov.

Candidatus Intabida sacopigena (NL. fem. n. *sacopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1943 sp013328815*. The type genome for the species is the GenBank assembly RS_GCF_013328815.1. The GC content of the type genome is 65.16 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Intabosa scelliforma sp. nov.

Candidatus Intabosa scelliforma (NL. fem. n. *scelliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAITRH01 sp903894755*. The type genome for the species is the GenBank assembly GCA_903894755.1. The GC content of the type genome is 62.33 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Intabosa gen. nov.

Candidatus Intabosa (NL. fem. n. *Intabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITRH01*. The type species for the genus is *Candidatus* Intabosa scelliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intacana cetarentia sp. nov.

Candidatus Intacana cetarentia (NL. fem. n. *cetarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHJ01 sp012735465*. The type genome for the species is the GenBank assembly GCA_012735465.1. The GC content of the type genome is 39.21 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Intacana gen. nov.

Candidatus Intacana (NL. fem. n. *Intacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHJ01*. The type species for the genus is *Candidatus* Intacana cetarentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SK-Y3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifanaceae.

Description of *Candidatus* Intacaria cululastra sp. nov.

Candidatus Intacaria cululastra (NL. fem. n. *cululastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-55 sp005888465*. The type genome for the species is the GenBank

assembly GCA_005888465.1. The GC content of the type genome is 68.89 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Intacaria gen. nov.

Candidatus Intacaria (NL. fem. n. *Intacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-55*. The type species for the genus is *Candidatus* Intacaria cululastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Intacella tomogitoga sp. nov.

Candidatus Intacella tomogitoga (NL. fem. n. *tomogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBB01 sp013695145*. The type genome for the species is the GenBank assembly GCA_013695145.1. The GC content of the type genome is 71.93 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Intacella gen. nov.

Candidatus Intacella (NL. fem. n. *Intacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBB01*. The type species for the genus is *Candidatus* Intacella tomogitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intacia penecicula sp. nov.

Candidatus Intacia penecicula (NL. fem. n. *penecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J023 sp003697015*. The type genome for the species is the GenBank assembly GCA_003697015.1. The GC content of the type genome is 71.53 % and the

genome length is 5.34 Mbp.

Description of *Candidatus* Intacia gen. nov.

Candidatus Intacia (NL. fem. n. *Intacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J023*. The type species for the genus is *Candidatus* Intacia penecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Intacida foricibra sp. nov.

Candidatus Intacida foricibra (NL. fem. n. *foricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRQ01 sp003176165*. The type genome for the species is the GenBank assembly GCA_003176165.1. The GC content of the type genome is 43.41 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Intacida gen. nov.

Candidatus Intacida (NL. fem. n. *Intacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRQ01*. The type species for the genus is *Candidatus* Intacida foricibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12028*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimidaceae.

Description of *Candidatus* Intacosa alcalugo sp. nov.

Candidatus Intacosa alcalugo (NL. fem. n. *alcalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7524 sp002478275*. The type genome for the species is the GenBank assembly GCA_002478275.1. The GC content of the type genome is 63.48 %

and the genome length is 1.81 Mbp.

Description of *Candidatus* Intacosa gen. nov.

Candidatus Intacosa (NL. fem. n. *Intacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7524*. The type species for the genus is *Candidatus* Intacosa alcalugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA912*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Masocanaceae.

Description of *Candidatus* Intamana monocitia sp. nov.

Candidatus Intamana monocitia (NL. fem. n. *monocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXHS01 sp005773145*. The type genome for the species is the GenBank assembly GCA_005773145.1. The GC content of the type genome is 59.57 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Intamana gen. nov.

Candidatus Intamana (NL. fem. n. *Intamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXHS01*. The type species for the genus is *Candidatus* Intamana monocitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intamaria ecnepago sp. nov.

Candidatus Intamaria ecnepago (NL. fem. n. *ecnepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHVH01 sp003222245*. The type genome for the species is the GenBank assembly GCA_003222245.1. The GC content of the type genome is 55.49 % and the genome length is 7.0 Mbp.

Description of *Candidatus* Intamaria gen. nov.

Candidatus Intamaria (NL. fem. n. *Intamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHVH01*. The type species for the genus is *Candidatus* Intamaria ecnepago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7656*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamiaceae.

Description of *Candidatus* Intamella intesicula sp. nov.

Candidatus Intamella intesicula (NL. fem. n. *intesicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFW01 sp007376265*. The type genome for the species is the GenBank assembly GCA_007376265.1. The GC content of the type genome is 46.16 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Intamella gen. nov.

Candidatus Intamella (NL. fem. n. *Intamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFW01*. The type species for the genus is *Candidatus* Intamella intesicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Intamia exaggatica sp. nov.

Candidatus Intamia exaggatica (NL. fem. n. *exaggatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSF151 sp005116795*. The type genome for the species is the GenBank assembly GCA_005116795.1. The GC content of the type genome is 61.59 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Intamia gen. nov.

Candidatus Intamia (NL. fem. n. *Intamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSF151*. The type species for the genus is *Candidatus* Intamia exaggatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intamida adtacivita sp. nov.

Candidatus Intamida adtacivita (NL. fem. n. *adtacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLanc-01 sp001603075*. The type genome for the species is the GenBank assembly GCA_001603075.1. The GC content of the type genome is 62.78 % and the genome length is 5.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Intamida gen. nov.

Candidatus Intamida (NL. fem. n. *Intamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLanc-01*. The type species for the genus is *Candidatus* Intamida adtacivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Intamida amfitatica sp. nov.

Candidatus Intamida amfitatica (NL. fem. n. *amfitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLanc-01 sp012719085*. The type genome for the species is the GenBank assembly GCA_012719085.1. The GC content of the type genome is 62.62 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Intamida bipenitura sp. nov.

Candidatus Intamida bipenitura (NL. fem. n. *bipenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLanc-01 sp012744475*. The type genome for the species is the GenBank assembly GCA_012744475.1. The GC content of the type genome is 62.61 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Intamida effunigena sp. nov.

Candidatus Intamida effunigena (NL. fem. n. *effunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLanc-01 sp012517265*. The type genome for the species is the GenBank assembly GCA_012517265.1. The GC content of the type genome is 63.47 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Intamida herinivita sp. nov.

Candidatus Intamida herinivita (NL. fem. n. *herinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLanc-01 sp002327785*. The type genome for the species is the GenBank assembly GCA_002327785.1. The GC content of the type genome is 60.78 % and the genome length is 6.32 Mbp.

Description of *Candidatus* Intamosa ulcisentia sp. nov.

Candidatus Intamosa ulcisentia (NL. fem. n. *ulcisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQV01 sp013203065*. The type genome for the species is the GenBank assembly GCA_013203065.1. The GC content of the type genome is 50.6 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Intamosa gen. nov.

Candidatus Intamosa (NL. fem. n. *Intamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQV01*. The type species for the genus is *Candidatus* Intamosa ulcisentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intamula homogitudo sp. nov.

Candidatus Intamula homogitudo (NL. fem. n. *homogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JC640 sp010367455*. The type genome for the species is the GenBank assembly RS_GCF_010367455.1. The GC content of the type genome is 63.6 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Intamula gen. nov.

Candidatus Intamula (NL. fem. n. *Intamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JC640*. The type species for the genus is *Candidatus* Intamula homogitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intecana adfabitudo sp. nov.

Candidatus Intecana adfabitudo (NL. fem. n. *adfabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAH01 sp009788085*. The type genome for the species is the GenBank assembly GCA_009788085.1. The GC content of the type genome is 48.83 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Intecana gen. nov.

Candidatus Intecana (NL. fem. n. *Intecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAH01*. The type species for the genus is *Candidatus* Intecana

adfabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Intecana ranunitrix sp. nov.

Candidatus Intecana ranunitrix (NL. fem. n. *ranunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAH01 sp009780315*. The type genome for the species is the GenBank assembly GCA_009780315.1. The GC content of the type genome is 40.22 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Intecaria intesibra sp. nov.

Candidatus Intecaria intesibra (NL. fem. n. *intesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHB01 sp011334855*. The type genome for the species is the GenBank assembly GCA_011334855.1. The GC content of the type genome is 57.92 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Intecaria gen. nov.

Candidatus Intecaria (NL. fem. n. *Intecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHB01*. The type species for the genus is *Candidatus* Intecaria intesibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-60-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubanaceae.

Description of *Candidatus* Intecella turibibra sp. nov.

Candidatus Intecella turibibra (NL. fem. n. *turibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D16-63 sp003612475*. The type genome for the species is the GenBank assembly RS_GCF_003612475.1. The GC content of the type genome is 67.37 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Intecella gen. nov.

Candidatus Intecella (NL. fem. n. *Intecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D16-63*. The type species for the genus is *Candidatus* Intecella turibibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intecia depacedo sp. nov.

Candidatus Intecia depacedo (NL. fem. n. *depacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-64 sp005883215*. The type genome for the species is the GenBank assembly GCA_005883215.1. The GC content of the type genome is 71.76 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Intecia gen. nov.

Candidatus Intecia (NL. fem. n. *Intecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-64*. The type species for the genus is *Candidatus* Intecia depacedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intecida excerilenta sp. nov.

Candidatus Intecida excerilenta (NL. fem. n. *excerilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKTW01 sp902603215*. The type genome for the species is the GenBank assembly GCA_902603215.1. The GC content of the type genome is 28.51 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Intecida gen. nov.

Candidatus Intecida (NL. fem. n. *Intecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACKTW01*. The type species for the genus is *Candidatus* Intecida excerilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intecosa denupitio sp. nov.

Candidatus Intecosa denupitio (NL. fem. n. *denupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPH01 sp012838435*. The type genome for the species is the GenBank assembly GCA_012838435.1. The GC content of the type genome is 60.42 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Intecosa gen. nov.

Candidatus Intecosa (NL. fem. n. *Intecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPH01*. The type species for the genus is *Candidatus* Intecosa denupitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Intecosa octacatio sp. nov.

Candidatus Intecosa octacatio (NL. fem. n. *octacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPH01 sp002071025*. The type genome for the species is the GenBank assembly GCA_002071025.1. The GC content of the type genome is 63.99 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Intecula obnoxivita sp. nov.

Candidatus Intecula obnoxivita (NL. fem. n. *obnoxivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBB01 sp013360675*. The type genome for the species is the GenBank assembly GCA_013360675.1. The GC content of the type genome is 67.25 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Intecula gen. nov.

Candidatus Intecula (NL. fem. n. *Intecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBB01*. The type species for the genus is *Candidatus* Intecula obnoxivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Intemaria incunimonas sp. nov.

Candidatus Intemaria incunimonas (NL. fem. n. *incunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B17-G2 sp003645805*. The type genome for the species is the GenBank assembly GCA_003645805.1. The GC content of the type genome is 41.83 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Intemaria gen. nov.

Candidatus Intemaria (NL. fem. n. *Intemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B17-G2*. The type species for the genus is *Candidatus* Intemaria incunimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-213*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarariaceae.

Description of *Candidatus* Intemella utrolitoga sp. nov.

Candidatus Intemella utrolitoga (NL. fem. n. *utrolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZI01 sp009692345*. The type genome for the species is the GenBank assembly GCA_009692345.1. The GC content of the type genome is 64.77 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Intemella gen. nov.

Candidatus Intemella (NL. fem. n. *Intemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZI01*. The type species for the genus is *Candidatus* Intemella utrolitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Intemosa notacibula sp. nov.

Candidatus Intemosa notacibula (NL. fem. n. *notacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11214 sp902766915*. The type genome for the species is the GenBank assembly GCA_902766915.1. The GC content of the type genome is 41.05 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Intemosa gen. nov.

Candidatus Intemosa (NL. fem. n. *Intemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11214*. The type species for the genus is *Candidatus* Intemosa notacibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intemosa ranunitica sp. nov.

Candidatus Intemosa ranunitica (NL. fem. n. *ranunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11214 sp902776725*. The type genome for the species is the GenBank assembly GCA_902776725.1. The GC content of the type genome is 46.55 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Intemosa remeditoga sp. nov.

Candidatus Intemosa remeditoga (NL. fem. n. *remeditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11214 sp902797405*. The type genome for the species is the GenBank assembly GCA_902797405.1. The GC content of the type genome is 42.09 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Intemula antimilega sp. nov.

Candidatus Intemula antimilega (NL. fem. n. *antimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin22 sp009840135*. The type genome for the species is the GenBank assembly GCA_009840135.1. The GC content of the type genome is 59.23 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Intemula gen. nov.

Candidatus Intemula (NL. fem. n. *Intemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin22*. The type species for the genus is *Candidatus* Intemula antimilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Intemula immeditia sp. nov.

Candidatus Intemula immeditia (NL. fem. n. *immeditia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin22 sp002238505*. The type genome for the species is the GenBank assembly GCA_002238505.1. The GC content of the type genome is 59.2 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Intenella episcicula sp. nov.

Candidatus Intenella episcicula (NL. fem. n. *episcicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSP01 sp012518355*. The type genome for the species is the GenBank assembly GCA_012518355.1. The GC content of the type genome is 58.31 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Intenella gen. nov.

Candidatus Intenella (NL. fem. n. *Intenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSP01*. The type species for the genus is *Candidatus* Intenella episcicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11051*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipiaceae.

Description of *Candidatus* Intenia alluvicula sp. nov.

Candidatus Intenia alluvicula (NL. fem. n. *alluvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFP01 sp007376145*. The type genome for the species is the GenBank assembly GCA_007376145.1. The GC content of the type genome is 60.61 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Intenia gen. nov.

Candidatus Intenia (NL. fem. n. *Intenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFP01*. The type species for the genus is *Candidatus* Intenia alluvicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZMI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicinulaceae.

Description of *Candidatus* Intenida colubimonas sp. nov.

Candidatus Intenida colubimonas (NL. fem. n. *colubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GYS-P2D sp009833045*. The type genome for the species is the GenBank assembly RS_GCF_009833045.1. The GC content of the type genome is 43.34 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Intenida gen. nov.

Candidatus Intenida (NL. fem. n. *Intenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GYS-P2D*. The type species for the genus is *Candidatus* Intenida colubimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intenida deparisca sp. nov.

Candidatus Intenida deparisca (NL. fem. n. *deparisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GYS-P2D sp902609095*. The type genome for the species is the GenBank assembly GCA_902609095.1. The GC content of the type genome is 37.62 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Intenula necopugo sp. nov.

Candidatus Intenula necopugo (NL. fem. n. *necopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-9 sp005888295*. The type genome for the species is the GenBank assembly GCA_005888295.1. The GC content of the type genome is 70.02 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Intenula gen. nov.

Candidatus Intenula (NL. fem. n. *Intenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-9*. The type species for the genus is *Candidatus* Intenula necopugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tiroculaceae.

Description of *Candidatus* Intesaria adcomicula sp. nov.

Candidatus Intesaria adcomicula (NL. fem. n. *adcomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFN01 sp013152895*. The type genome for the species is the GenBank assembly GCA_013152895.1. The GC content of the type genome is 65.19 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Intesaria gen. nov.

Candidatus Intesaria (NL. fem. n. *Intesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFN01*. The type species for the genus is *Candidatus* Intesaria adcomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denoridaceae.

Description of *Candidatus* Intesella xenodilenta sp. nov.

Candidatus Intesella xenodilenta (NL. fem. n. *xenodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1176 sp003151975*. The type genome for the species is the GenBank assembly GCA_003151975.1. The GC content of the type genome is 63.47 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Intesella gen. nov.

Candidatus Intesella (NL. fem. n. *Intesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1176*. The type species for the genus is *Candidatus* Intesella xenodilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9628*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recorariaceae.

Description of *Candidatus* Intesia aclasibula sp. nov.

Candidatus Intesia aclasibula (NL. fem. n. *aclasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHW01 sp012270675*. The type genome for the species is the GenBank assembly GCA_012270675.1. The GC content of the type genome is 60.69 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Intesia gen. nov.

Candidatus Intesia (NL. fem. n. *Intesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHW01*. The type species for the genus is *Candidatus* Intesia aclasibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2709665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coninulaceae.

Description of *Candidatus* Intesida denavitura sp. nov.

Candidatus Intesida denavitura (NL. fem. n. *denavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2598 sp002339345*. The type genome for the species is the GenBank assembly GCA_002339345.1. The GC content of the type genome is 55.78 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Intesida gen. nov.

Candidatus Intesida (NL. fem. n. *Intesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2598*. The type species for the genus is *Candidatus* Intesida denavitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PH28-bin88*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depoposaceae.

Description of *Candidatus* Intesosa alluvisca sp. nov.

Candidatus Intesosa alluvisca (NL. fem. n. *alluvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPV01 sp012523875*. The type genome for the species is the GenBank assembly GCA_012523875.1. The GC content of the type genome is 34.23 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Intesosa gen. nov.

Candidatus Intesosa (NL. fem. n. *Intesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPV01*. The type species for the genus is *Candidatus* Intesosa alluvisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intesosa domabiforma sp. nov.

Candidatus Intesosa domabiforma (NL. fem. n. *domabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPV01 sp012519635*. The type genome for the species is the GenBank assembly GCA_012519635.1. The GC content of the type genome is 35.02 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Intestinibacter assubitoga sp. nov.

Candidatus Intestinibacter assubitoga (NL. fem. n. *assubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Intestinibacter sp900553485*. The type genome for the species is the GenBank assembly GCA_900553485.1. The GC content of the type genome is 30.69 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Intestinibacter turififica sp. nov.

Candidatus Intestinibacter turififica (NL. fem. n. *turififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Intestinibacter sp900540355*. The type genome for the species is the GenBank assembly GCA_900759275.1. The GC content of the type genome is 28.36 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Intestinibaculum lucifessa sp. nov.

Candidatus Intestinibaculum lucifessa (NL. fem. n. *lucifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Intestinibaculum sp900317015*. The type genome for the species is the GenBank assembly GCA_900317015.1. The GC content of the type genome is 39.1 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Intestinimonas edissilega sp. nov.

Candidatus Intestinimonas edissilega (NL. fem. n. *edissilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Intestinimonas sp900540545*. The type genome for the species is the GenBank assembly GCA_900540545.1. The GC content of the type genome is 63.68 %

and the genome length is 3.34 Mbp.

Description of *Candidatus* Intesula fatilugo sp. nov.

Candidatus Intesula fatilugo (NL. fem. n. *fatilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYBY01 sp005788585*. The type genome for the species is the GenBank assembly GCA_005788585.1. The GC content of the type genome is 72.11 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Intesula gen. nov.

Candidatus Intesula (NL. fem. n. *Intesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYBY01*. The type species for the genus is *Candidatus* Intesula fatilugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intolana taraxilenta sp. nov.

Candidatus Intolana taraxilenta (NL. fem. n. *taraxilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBD01 sp013695115*. The type genome for the species is the GenBank assembly GCA_013695115.1. The GC content of the type genome is 70.55 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Intolana gen. nov.

Candidatus Intolana (NL. fem. n. *Intolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBD01*. The type species for the genus is *Candidatus* Intolana taraxilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilulaceae.

Description of *Candidatus* Intolaria abluvessa sp. nov.

Candidatus Intolaria abluvessa (NL. fem. n. *abluvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVT01 sp010027105*. The type genome for the species is the GenBank assembly GCA_010027105.1. The GC content of the type genome is 68.85 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Intolaria gen. nov.

Candidatus Intolaria (NL. fem. n. *Intolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGVT01*. The type species for the genus is *Candidatus* Intolaria abluvessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Intolaria indififica sp. nov.

Candidatus Intolaria indififica (NL. fem. n. *indififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVT01 sp009926295*. The type genome for the species is the GenBank assembly GCA_009926295.1. The GC content of the type genome is 69.3 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Intolaria monopilega sp. nov.

Candidatus Intolaria monopilega (NL. fem. n. *monopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVT01 sp009923125*. The type genome for the species is the GenBank assembly GCA_009923125.1. The GC content of the type genome is 69.62 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Intolella acrotilega sp. nov.

Candidatus Intolella acrotilega (NL. fem. n. *acrotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILRJ01 sp014377845*. The type genome for the species is the GenBank assembly GCA_014377845.1. The GC content of the type genome is 62.43 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Intolella gen. nov.

Candidatus Intolella (NL. fem. n. *Intolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILRJ01*. The type species for the genus is *Candidatus* Intolella acrotilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intolella emancessa sp. nov.

Candidatus Intolella emancessa (NL. fem. n. *emancessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILRJ01 sp010365165*. The type genome for the species is the GenBank assembly GCA_010365165.1. The GC content of the type genome is 60.08 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Intolella exaspifica sp. nov.

Candidatus Intolella exaspifica (NL. fem. n. *exaspifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILRJ01 sp903836575*. The type genome for the species is the GenBank assembly GCA_903836575.1. The GC content of the type genome is 57.76 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Intolella extipago sp. nov.

Candidatus Intolella extipago (NL. fem. n. *extipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILRJ01 sp014376645*. The type genome for the species is the GenBank assembly GCA_014376645.1. The GC content of the type genome is 61.7 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Intolella favonax sp. nov.

Candidatus Intolella favonax (NL. fem. n. *favonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILRJ01 sp014377155*. The type genome for the species is the GenBank assembly GCA_014377155.1. The GC content of the type genome is 57.78 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Intolia desupitica sp. nov.

Candidatus Intolia desupitica (NL. fem. n. *desupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRB01 sp012519005*. The type genome for the species is the GenBank assembly GCA_012519005.1. The GC content of the type genome is 44.85 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Intolia gen. nov.

Candidatus Intolia (NL. fem. n. *Intolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRB01*. The type species for the genus is *Candidatus* Intolia desupitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosidaceae.

Description of *Candidatus* Intolida omnivilega sp. nov.

Candidatus Intolida omnivilega (NL. fem. n. *omnivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSP01 sp013213985*. The type genome for the species is the GenBank assembly GCA_013213985.1. The GC content of the type genome is 36.98 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Intolida gen. nov.

Candidatus Intolida (NL. fem. n. *Intolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSP01*. The type species for the genus is *Candidatus* Intolida omnivilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intolosa exinditudo sp. nov.

Candidatus Intolosa exinditudo (NL. fem. n. *exinditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDC01 sp012729455*. The type genome for the species is the GenBank assembly GCA_012729455.1. The GC content of the type genome is 60.68 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Intolosa gen. nov.

Candidatus Intolosa (NL. fem. n. *Intolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDC01*. The type species for the genus is *Candidatus* Intolosa exinditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Intorella adhorugo sp. nov.

Candidatus Intorella adhorugo (NL. fem. n. *adhorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WQUV01 sp009777795*. The type genome for the species is the GenBank assembly GCA_009777795.1. The GC content of the type genome is 54.55 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Intorella gen. nov.

Candidatus Intorella (NL. fem. n. *Intorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQUV01*. The type species for the genus is *Candidatus* Intorella adhorugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intorella desomitas sp. nov.

Candidatus Intorella desomitas (NL. fem. n. *desomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUV01 sp009778015*. The type genome for the species is the GenBank assembly GCA_009778015.1. The GC content of the type genome is 53.26 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Intorella luticitura sp. nov.

Candidatus Intorella luticitura (NL. fem. n. *luticitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUV01 sp009781895*. The type genome for the species is the GenBank assembly GCA_009781895.1. The GC content of the type genome is 49.96 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Intoria exaspitudo sp. nov.

Candidatus Intoria exaspitudo (NL. fem. n. *exaspitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFS01 sp011064965*. The type genome for the species is the GenBank assembly GCA_011064965.1. The GC content of the type genome is 46.8 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Intoria gen. nov.

Candidatus Intoria (NL. fem. n. *Intoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFS01*. The type species for the genus is *Candidatus* Intoria exaspitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intorida insopitura sp. nov.

Candidatus Intorida insopitura (NL. fem. n. *insopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RXIX01 sp003989075*. The type genome for the species is the GenBank assembly GCA_003989075.1. The GC content of the type genome is 62.27 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Intorida gen. nov.

Candidatus Intorida (NL. fem. n. *Intorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RXIX01*. The type species for the genus is *Candidatus* Intorida insopitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Intorula insoritudo sp. nov.

Candidatus Intorula insoritudo (NL. fem. n. *insoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJR01 sp012522835*. The type genome for the species is the GenBank assembly GCA_012522835.1. The GC content of the type genome is 39.54 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Intorula gen. nov.

Candidatus Intorula (NL. fem. n. *Intorula* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJR01*. The type species for the genus is *Candidatus* Intorula insoritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inturana inabsitas sp. nov.

Candidatus Inturana inabsitas (NL. fem. n. *inabsitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJH01 sp014382665*. The type genome for the species is the GenBank assembly GCA_014382665.1. The GC content of the type genome is 47.92 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Inturana gen. nov.

Candidatus Inturana (NL. fem. n. *Inturana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJH01*. The type species for the genus is *Candidatus* Inturana inabsitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11574*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momoranaceae.

Description of *Candidatus* Inturaria refunimonas sp. nov.

Candidatus Inturaria refunimonas (NL. fem. n. *refunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8514 sp003543235*. The type genome for the species is the GenBank assembly GCA_003543235.1. The GC content of the type genome is 36.08 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Inturaria gen. nov.

Candidatus Inturaria (NL. fem. n. *Inturaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8514*. The type species for the genus is *Candidatus* Inturaria refunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inturella tetenitrix sp. nov.

Candidatus Inturella tetenitrix (NL. fem. n. *tetenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Glo-13 sp003354025*. The type genome for the species is the GenBank assembly GCA_003354025.1. The GC content of the type genome is 42.23 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Inturella gen. nov.

Candidatus Inturella (NL. fem. n. *Inturella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Glo-13*. The type species for the genus is *Candidatus* Inturella tetenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Inturia alcibitica sp. nov.

Candidatus Inturia alcibitica (NL. fem. n. *alcibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM503 sp002869585*. The type genome for the species is the GenBank assembly GCA_002869585.1. The GC content of the type genome is 54.55 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Inturia gen. nov.

Candidatus Inturia (NL. fem. n. *Inturia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM503*. The type species for the genus is *Candidatus* Inturia alcibitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inturosa melililega sp. nov.

Candidatus Inturosa melililega (NL. fem. n. *melililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG678 sp900321335*. The type genome for the species is the GenBank assembly GCA_900321335.1. The GC content of the type genome is 58.71 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Inturosa gen. nov.

Candidatus Inturosa (NL. fem. n. *Inturosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG678*. The type species for the genus is *Candidatus* Inturosa melililega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inturula adnubimonas sp. nov.

Candidatus Inturula adnubimonas (NL. fem. n. *adnubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNK01 sp007133095*. The type genome for the species is the GenBank assembly GCA_007133095.1. The GC content of the type genome is 42.16 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Inturula gen. nov.

Candidatus Inturula (NL. fem. n. *Inturula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNK01*. The type species for the genus is *Candidatus* Inturula adnubimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Inturula bigaribula sp. nov.

Candidatus Inturula bigaribula (NL. fem. n. *bigaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNK01 sp003566255*. The type genome for the species is the GenBank assembly GCA_003566255.1. The GC content of the type genome is 44.09 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Inurbaria bigarugo sp. nov.

Candidatus Inurbaria bigarugo (NL. fem. n. *bigarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-884 sp000433875*. The type genome for the species is the GenBank assembly GCA_000433875.1. The GC content of the type genome is 26.68 % and the genome length is 1.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Inurbaria gen. nov.

Candidatus Inurbaria (NL. fem. n. *Inurbaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-884*. The type species for the genus is *Candidatus* Inurbaria bigarugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Inurbia ambusicella sp. nov.

Candidatus Inurbia ambusicella (NL. fem. n. *ambusicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJB01 sp014380815*. The type genome for the species is the GenBank assembly GCA_014380815.1. The GC content of the type genome is 62.41 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Inurbia gen. nov.

Candidatus Inurbia (NL. fem. n. *Inurbia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJB01*. The type species for the genus is *Candidatus* Inurbia ambusicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Inurbida absocicella sp. nov.

Candidatus Inurbida absocicella (NL. fem. n. *absocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1124 sp002313265*. The type genome for the species is the GenBank assembly GCA_002313265.1. The GC content of the type genome is 48.24 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Inurbida gen. nov.

Candidatus Inurbida (NL. fem. n. *Inurbida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1124*. The type species for the genus is *Candidatus* Inurbida absocicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invecana cuticicella sp. nov.

Candidatus Invecana cuticicella (NL. fem. n. *cuticicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYK01 sp013696525*. The type genome for the species is the GenBank assembly GCA_013696525.1. The GC content of the type genome is 66.18 %

and the genome length is 3.63 Mbp.

Description of *Candidatus* Invecana gen. nov.

Candidatus Invecana (NL. fem. n. *Invecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYK01*. The type species for the genus is *Candidatus* Invecana cuticicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Invecaria annicimonia sp. nov.

Candidatus Invecaria annicimonia (NL. fem. n. *annicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BX12 sp902363595*. The type genome for the species is the GenBank assembly RS_GCF_902363595.1. The GC content of the type genome is 47.21 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Invecaria gen. nov.

Candidatus Invecaria (NL. fem. n. *Invecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BX12*. The type species for the genus is *Candidatus* Invecaria annicimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invecaria ceraricula sp. nov.

Candidatus Invecaria ceraricula (NL. fem. n. *ceraricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BX12 sp014333425*. The type genome for the species is the GenBank assembly RS_GCF_014333425.1. The GC content of the type genome is 47.0 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Invecaria encepimonas sp. nov.

Candidatus Invecaria encepimonas (NL. fem. n. *encepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BX12 sp009911365*. The type genome for the species is the GenBank assembly RS_GCF_009911365.1. The GC content of the type genome is 46.9 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Invecella admoretta sp. nov.

Candidatus Invecella admoretta (NL. fem. n. *admoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZU01 sp013289515*. The type genome for the species is the GenBank assembly GCA_013289515.1. The GC content of the type genome is 44.19 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Invecella gen. nov.

Candidatus Invecella (NL. fem. n. *Invecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCZU01*. The type species for the genus is *Candidatus* Invecella admoretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RVW-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpanaceae.

Description of *Candidatus* Invecia negiditio sp. nov.

Candidatus Invecia negiditio (NL. fem. n. *negiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2396 sp002343325*. The type genome for the species is the GenBank assembly GCA_002343325.1. The GC content of the type genome is 67.21 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Invecia gen. nov.

Candidatus Invecia (NL. fem. n. *Invecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2396*. The type species for the genus is *Candidatus* Invecia negiditio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Invecida macilibra sp. nov.

Candidatus Invecida macilibra (NL. fem. n. *macilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11788 sp900760465*. The type genome for the species is the GenBank assembly RS_GCF_900760465.1. The GC content of the type genome is 32.05 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Invecida gen. nov.

Candidatus Invecida (NL. fem. n. *Invecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11788*. The type species for the genus is *Candidatus* Invecida macilibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-274*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotulaceae.

Description of *Candidatus* Invecosa nucifessa sp. nov.

Candidatus Invecosa nucifessa (NL. fem. n. *nucifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002705045 sp002705045*. The type genome for the species is the GenBank assembly GCA_002705045.2. The GC content of the type genome is 37.99 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Invecosa gen. nov.

Candidatus Invecosa (NL. fem. n. *Invecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002705045*. The type species for the genus is *Candidatus* Invecosa nucifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invecula expisitura sp. nov.

Candidatus Invecula expisitura (NL. fem. n. *expisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRC01 sp013141375*. The type genome for the species is the GenBank assembly GCA_013141375.1. The GC content of the type genome is 46.28 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Invecula gen. nov.

Candidatus Invecula (NL. fem. n. *Invecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRC01*. The type species for the genus is *Candidatus* Invecula expisitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invesaria laculedo sp. nov.

Candidatus Invesaria laculedo (NL. fem. n. *laculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-61-28 sp001767035*. The type genome for the species is the GenBank assembly GCA_001767035.1. The GC content of the type genome is 60.88 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Invesaria gen. nov.

Candidatus Invesaria (NL. fem. n. *Invesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-61-28*. The type species for the genus is *Candidatus* Invesaria laculedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-54-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacosaceae.

Description of *Candidatus* Invesosa actarousia sp. nov.

Candidatus Invesosa actarousia (NL. fem. n. *actarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp002841545*. The type genome for the species is the GenBank assembly GCA_002841545.1. The GC content of the type genome is 47.29 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Invesosa gen. nov.

Candidatus Invesosa (NL. fem. n. *Invesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2658*. The type species for the genus is *Candidatus* Invesosa actarousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invesosa adposax sp. nov.

Candidatus Invesosa adposax (NL. fem. n. *adposax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp009929315*. The type genome for the species is the GenBank assembly GCA_009929315.1. The GC content of the type genome is 48.54 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Invesosa defosibula sp. nov.

Candidatus Invesosa defosibula (NL. fem. n. *defosibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp002359425*. The type genome for the species is the GenBank assembly GCA_002359425.1. The GC content of the type genome is 54.59 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Invesosa denecitas sp. nov.

Candidatus Invesosa denecitas (NL. fem. n. *denecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp012719035*. The type genome for the species is the GenBank assembly GCA_012719035.1. The GC content of the type genome is 45.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Invesosa homolatio sp. nov.

Candidatus Invesosa homolatio (NL. fem. n. *homolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp012729875*. The type genome for the species is the GenBank assembly GCA_012729875.1. The GC content of the type genome is 51.27 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Invesosa impinentia sp. nov.

Candidatus Invesosa impinentia (NL. fem. n. *impinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp012728025*. The type genome for the species is the GenBank assembly GCA_012728025.1. The GC content of the type genome is 45.71 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Invesosa ossaritura sp. nov.

Candidatus Invesosa ossaritura (NL. fem. n. *ossaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2658 sp012516225*. The type genome for the species is the GenBank assembly GCA_012516225.1. The GC content of the type genome is 44.71 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Invetana invinivita sp. nov.

Candidatus Invetana invinivita (NL. fem. n. *invinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6132 sp002435835*. The type genome for the species is the GenBank assembly GCA_002435835.1. The GC content of the type genome is 29.55 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Invetana gen. nov.

Candidatus Invetana (NL. fem. n. *Invetana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6132*. The type species for the genus is *Candidatus* Invetana invinivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invetella gen. nov.

Candidatus Invetella (NL. fem. n. *Invetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQG01*. The type species for the genus is *Candidatus* Invetella abyssi_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invetida imbeligena sp. nov.

Candidatus Invetida imbeligena (NL. fem. n. *imbeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRU01 sp011390755*. The type genome for the species is the GenBank assembly GCA_011390755.1. The GC content of the type genome is 47.59 %

and the genome length is 6.9 Mbp.

Description of *Candidatus* Invetida gen. nov.

Candidatus Invetida (NL. fem. n. *Invetida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRU01*. The type species for the genus is *Candidatus* Invetida imbeligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invetula artolitia sp. nov.

Candidatus Invetula artolitia (NL. fem. n. *artolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDES01 sp013286935*. The type genome for the species is the GenBank assembly GCA_013286935.1. The GC content of the type genome is 39.83 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Invetula gen. nov.

Candidatus Invetula (NL. fem. n. *Invetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDES01*. The type species for the genus is *Candidatus* Invetula artolitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invicaria cerofessa sp. nov.

Candidatus Invicaria cerofessa (NL. fem. n. *cerofessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQK01 sp004321885*. The type genome for the species is the GenBank assembly GCA_004321885.1. The GC content of the type genome is 49.78 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Invicaria gen. nov.

Candidatus Invicaria (NL. fem. n. *Invicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCQK01*. The type species for the genus is *Candidatus* Invicaria cerofessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Invicella admurentia sp. nov.

Candidatus Invicella admurentia (NL. fem. n. *admurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXUP01 sp013335935*. The type genome for the species is the GenBank assembly GCA_013335935.1. The GC content of the type genome is 41.36 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Invicella gen. nov.

Candidatus Invicella (NL. fem. n. *Invicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXUP01*. The type species for the genus is *Candidatus* Invicella admurentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invicia ciminitudo sp. nov.

Candidatus Invicia ciminitudo (NL. fem. n. *ciminitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNI01 sp012799605*. The type genome for the species is the GenBank assembly GCA_012799605.1. The GC content of the type genome is 49.49 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Invicia gen. nov.

Candidatus Invicia (NL. fem. n. *Invicia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUNI01*. The type species for the genus is *Candidatus* Invicia ciminitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vaciliaceae.

Description of *Candidatus* Invicia rinocastra sp. nov.

Candidatus Invicia rinocastra (NL. fem. n. *rinocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNI01 sp012837285*. The type genome for the species is the GenBank assembly GCA_012837285.1. The GC content of the type genome is 51.47 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Invicia saburitia sp. nov.

Candidatus Invicia saburitia (NL. fem. n. *saburitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNI01 sp012839445*. The type genome for the species is the GenBank assembly GCA_012839445.1. The GC content of the type genome is 47.41 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Invicida obsigilenta sp. nov.

Candidatus Invicida obsigilenta (NL. fem. n. *obsigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-53-9 sp002791805*. The type genome for the species is the GenBank assembly GCA_002791805.1. The GC content of the type genome is 53.21 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Invicida gen. nov.

Candidatus Invicida (NL. fem. n. *Invicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-53-9*. The type species for the genus is *Candidatus* Invicida obsigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotidaceae.

Description of *Candidatus* Invicosa appecitas sp. nov.

Candidatus Invicosa appecitas (NL. fem. n. *appecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp902772745*. The type genome for the species is the GenBank assembly GCA_902772745.1. The GC content of the type genome is 53.59 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Invicosa gen. nov.

Candidatus Invicosa (NL. fem. n. *Invicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1267*. The type species for the genus is *Candidatus* Invicosa appecitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invicosa colapitudo sp. nov.

Candidatus Invicosa colapitudo (NL. fem. n. *colapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp002315555*. The type genome for the species is the GenBank assembly GCA_002315555.1. The GC content of the type genome is 52.57 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Invicosa decamisca sp. nov.

Candidatus Invicosa decamisca (NL. fem. n. *decamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp902803345*. The type genome for the species is the GenBank assembly GCA_902803345.1. The GC content of the type genome is 52.62 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Invicosa depeligena sp. nov.

Candidatus Invicosa depeligena (NL. fem. n. *depeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp902783795*. The type genome for the species is the GenBank assembly GCA_902783795.1. The GC content of the type genome is 49.54 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Invicosa effinax sp. nov.

Candidatus Invicosa effinax (NL. fem. n. *effinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp902803485*. The type genome for the species is the GenBank assembly GCA_902803485.1. The GC content of the type genome is 53.96 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Invicosa taxiletta sp. nov.

Candidatus Invicosa taxiletta (NL. fem. n. *taxiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp002315255*. The type genome for the species is the GenBank assembly GCA_002315255.1. The GC content of the type genome is 50.6 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Invicosa turicax sp. nov.

Candidatus Invicosa turicax (NL. fem. n. *turicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp902796795*. The type genome for the species is the GenBank assembly GCA_902796795.1. The GC content of the type genome is 57.8 %

and the genome length is 2.08 Mbp.

Description of *Candidatus* Invicosa xenoditudo sp. nov.

Candidatus Invicosa xenoditudo (NL. fem. n. *xenoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1267 sp002308115*. The type genome for the species is the GenBank assembly GCA_002308115.1. The GC content of the type genome is 55.55 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Invicula offirilega sp. nov.

Candidatus Invicula offirilega (NL. fem. n. *offirilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B61-G2 sp003647605*. The type genome for the species is the GenBank assembly GCA_003647605.1. The GC content of the type genome is 38.14 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Invicula gen. nov.

Candidatus Invicula (NL. fem. n. *Invicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B61-G2*. The type species for the genus is *Candidatus* Invicula offirilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Invigaria cuticitas sp. nov.

Candidatus Invigaria cuticitas (NL. fem. n. *cuticitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2767 sp002897995*. The type genome for the species is the GenBank assembly GCA_002897995.1. The GC content of the type genome is 60.89 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Invigaria gen. nov.

Candidatus Invigaria (NL. fem. n. *Invigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2767*. The type species for the genus is *Candidatus* Invigaria cuticitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invigaria paracisca sp. nov.

Candidatus Invigaria paracisca (NL. fem. n. *paracisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2767 sp002352635*. The type genome for the species is the GenBank assembly GCA_002352635.1. The GC content of the type genome is 56.7 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Invigaria vivifastra sp. nov.

Candidatus Invigaria vivifastra (NL. fem. n. *vivifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2767 sp003228955*. The type genome for the species is the GenBank assembly GCA_003228955.1. The GC content of the type genome is 59.98 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Invigella ascelimonia sp. nov.

Candidatus Invigella ascelimonia (NL. fem. n. *ascelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GH1-50 sp009830125*. The type genome for the species is the GenBank assembly RS_GCF_009830125.1. The GC content of the type genome is 64.05 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Invigella gen. nov.

Candidatus Invigella (NL. fem. n. *Invigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GH1-50*. The type species for the genus is *Candidatus* Invigella ascelimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invigia ossicax sp. nov.

Candidatus Invigia ossicax (NL. fem. n. *ossicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOIA01 sp903858295*. The type genome for the species is the GenBank assembly GCA_903858295.1. The GC content of the type genome is 44.96 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Invigia gen. nov.

Candidatus Invigia (NL. fem. n. *Invigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOIA01*. The type species for the genus is *Candidatus* Invigia ossicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogiaceae.

Description of *Candidatus* Invigida oblivatica sp. nov.

Candidatus Invigida oblivatica (NL. fem. n. *oblivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P3662 sp900178005*. The type genome for the species is the GenBank assembly RS_GCF_900178005.1. The GC content of the type genome is 41.69 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Invigida gen. nov.

Candidatus Invigida (NL. fem. n. *Invigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Marseille-P3662*. The type species for the genus is *Candidatus* Invigida oblivatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invigosa ecnepimonas sp. nov.

Candidatus Invigosa ecnepimonas (NL. fem. n. *ecnepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWH01 sp009765965*. The type genome for the species is the GenBank assembly RS_GCF_009765965.1. The GC content of the type genome is 66.89 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Invigosa gen. nov.

Candidatus Invigosa (NL. fem. n. *Invigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAHJWH01*. The type species for the genus is *Candidatus* Invigosa ecnepimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invigosa vanidivita sp. nov.

Candidatus Invigosa vanidivita (NL. fem. n. *vanidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWH01 sp903642205*. The type genome for the species is the GenBank assembly RS_GCF_903642205.1. The GC content of the type genome is 68.83 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Invigula indecastra sp. nov.

Candidatus Invigula indecastra (NL. fem. n. *indecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJD01 sp012800525*. The type genome for the species is the

GenBank assembly GCA_012800525.1. The GC content of the type genome is 31.68 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Invigula gen. nov.

Candidatus Invigula (NL. fem. n. *Invigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZJD01*. The type species for the genus is *Candidatus* Invigula indecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Invigula ocissiforma sp. nov.

Candidatus Invigula ocissiforma (NL. fem. n. *ocissiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJD01 sp012841525*. The type genome for the species is the GenBank assembly GCA_012841525.1. The GC content of the type genome is 29.46 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Invinana corocicula sp. nov.

Candidatus Invinana corocicula (NL. fem. n. *corocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRW01 sp013140805*. The type genome for the species is the GenBank assembly GCA_013140805.1. The GC content of the type genome is 67.54 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Invinana gen. nov.

Candidatus Invinana (NL. fem. n. *Invinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRW01*. The type species for the genus is *Candidatus* Invinana corocicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

RBG-16-71-46. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Invinaria decamedo sp. nov.

Candidatus Invinaria decamedo (NL. fem. n. *decamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-P03 sp003215295*. The type genome for the species is the GenBank assembly GCA_003215295.1. The GC content of the type genome is 41.4 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Invinaria gen. nov.

Candidatus Invinaria (NL. fem. n. *Invinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-P03*. The type species for the genus is *Candidatus* Invinaria decamedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invinella coninitas sp. nov.

Candidatus Invinella coninitas (NL. fem. n. *coninitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1109 sp900548675*. The type genome for the species is the GenBank assembly GCA_900548675.1. The GC content of the type genome is 30.79 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Invinella gen. nov.

Candidatus Invinella (NL. fem. n. *Invinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1109*. The type species for the genus is *Candidatus* Invinella coninitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Caliposaceae.

Description of *Candidatus* Invinia rinocitio sp. nov.

Candidatus Invinia rinocitio (NL. fem. n. *rinocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFS01 sp012511615*. The type genome for the species is the GenBank assembly GCA_012511615.1. The GC content of the type genome is 41.08 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Invinia gen. nov.

Candidatus Invinia (NL. fem. n. *Invinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFS01*. The type species for the genus is *Candidatus* Invinia rinocitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceruciaceae.

Description of *Candidatus* Invinida irreficella sp. nov.

Candidatus Invinida irreficella (NL. fem. n. *irreficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9639 sp003450735*. The type genome for the species is the GenBank assembly GCA_003450735.1. The GC content of the type genome is 67.93 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Invinida gen. nov.

Candidatus Invinida (NL. fem. n. *Invinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9639*. The type species for the genus is *Candidatus* Invinida irreficella .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA1565. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papiliaceae.

Description of *Candidatus* Invinosa irremastra sp. nov.

Candidatus Invinosa irremastra (NL. fem. n. *irremastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5073 sp002415845*. The type genome for the species is the GenBank assembly GCA_002415845.1. The GC content of the type genome is 40.99 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Invinosa gen. nov.

Candidatus Invinosa (NL. fem. n. *Invinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5073*. The type species for the genus is *Candidatus* Invinosa irremastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Invorana defenifica sp. nov.

Candidatus Invorana defenifica (NL. fem. n. *defenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWS01 sp011388425*. The type genome for the species is the GenBank assembly GCA_011388425.1. The GC content of the type genome is 60.18 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Invorana gen. nov.

Candidatus Invorana (NL. fem. n. *Invorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWS01*. The type species for the genus is *Candidatus* Invorana defenifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invoraria ignobitia sp. nov.

Candidatus Invoraria ignobitia (NL. fem. n. *ignobitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-B13 sp003216035*. The type genome for the species is the GenBank assembly GCA_003216035.1. The GC content of the type genome is 41.09 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Invoraria gen. nov.

Candidatus Invoraria (NL. fem. n. *Invoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-B13*. The type species for the genus is *Candidatus* Invoraria ignobitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Invoria scammimonia sp. nov.

Candidatus Invoria scammimonia (NL. fem. n. *scammimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7328 sp002471345*. The type genome for the species is the GenBank assembly GCA_002471345.1. The GC content of the type genome is 35.74 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Invoria gen. nov.

Candidatus Invoria (NL. fem. n. *Invoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7328*. The type species for the genus is *Candidatus* Invoria scammimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Iodidimonas tabitilenta sp. nov.

Candidatus Iodidimonas tabitilenta (NL. fem. n. *tabitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Iodidimonas sp000710935*. The type genome for the species is the GenBank assembly RS_GCF_008579165.1. The GC content of the type genome is 56.13 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Iodobacter inoblitica sp. nov.

Candidatus Iodobacter inoblitica (NL. fem. n. *inoblitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Iodobacter sp002735645*. The type genome for the species is the GenBank assembly RS_GCF_002735645.1. The GC content of the type genome is 49.59 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Iodobacter mirabisca sp. nov.

Candidatus Iodobacter mirabisca (NL. fem. n. *mirabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Iodobacter sp000969645*. The type genome for the species is the GenBank assembly RS_GCF_000969645.2. The GC content of the type genome is 48.73 % and the genome length is 4.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Iodobacter tetenitas sp. nov.

Candidatus Iodobacter tetenitas (NL. fem. n. *tetenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Iodobacter sp011601265*. The type genome for the species is the GenBank assembly RS_GCF_011601265.1. The GC content of the type genome is 49.42 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Iodobacter vepalessa sp. nov.

Candidatus Iodobacter vepalessa (NL. fem. n. *vepalessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Iodobacter sp003952345*. The type genome for the species is the GenBank assembly RS_GCF_003952345.1. The GC content of the type genome is 48.04 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Irradana refulitas sp. nov.

Candidatus Irradana refulitas (NL. fem. n. *refulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-33-9 sp001804565*. The type genome for the species is the GenBank assembly GCA_001804565.1. The GC content of the type genome is 33.18 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Irradana gen. nov.

Candidatus Irradana (NL. fem. n. *Irradana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-33-9*. The type species for the genus is *Candidatus* Irradana refulitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Irradula inciventia sp. nov.

Candidatus Irradula inciventia (NL. fem. n. *inciventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSG073 sp009711445*. The type genome for the species is the GenBank assembly RS_GCF_009711445.1. The GC content of the type genome is 42.24 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Irradula gen. nov.

Candidatus Irradula (NL. fem. n. *Irradula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKSG073*. The type species for the genus is *Candidatus* Irradula inciventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2696645*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubecidaceae.

Description of *Candidatus* Irrecana anastitrix sp. nov.

Candidatus Irrecana anastitrix (NL. fem. n. *anastitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA665 sp002299835*. The type genome for the species is the GenBank assembly GCA_002299835.1. The GC content of the type genome is 40.35 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Irrecana gen. nov.

Candidatus Irrecana (NL. fem. n. *Irrecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA665*. The type species for the genus is *Candidatus* Irrecana anastitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Irrecella antevitura sp. nov.

Candidatus Irrecella antevitura (NL. fem. n. *antevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp002723375*. The type genome for the species is the GenBank assembly GCA_002723375.1. The GC content of the type genome is 31.99 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Irrecella gen. nov.

Candidatus Irrecella (NL. fem. n. *Irrecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002700125*. The type species for the genus is *Candidatus* Irrecella antevitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED-70*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinanaceae.

Description of *Candidatus* Irrecella caselimonas sp. nov.

Candidatus Irrecella caselimonas (NL. fem. n. *caselimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp002721675*. The type genome for the species is the GenBank assembly GCA_002721675.1. The GC content of the type genome is 32.7 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Irrecella defesiforma sp. nov.

Candidatus Irrecella defesiforma (NL. fem. n. *defesiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp002702975*. The type genome for the species is the GenBank assembly GCA_002702975.1. The GC content of the type genome is 32.13 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Irrecella indepetta sp. nov.

Candidatus Irrecella indepetta (NL. fem. n. *indepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp009392285*. The type genome for the species is the GenBank assembly GCA_009392285.1. The GC content of the type genome is 33.4 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Irrecella ludifimonia sp. nov.

Candidatus Irrecella ludifimonia (NL. fem. n. *ludifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp002727435*. The type genome for the species is the GenBank assembly GCA_002727435.1. The GC content of the type genome is 31.25 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Irrecella obrigimonia sp. nov.

Candidatus Irrecella obrigimonia (NL. fem. n. *obrigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp013911545*. The type genome for the species is the GenBank assembly GCA_013911545.1. The GC content of the type genome is 31.74 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Irrecella pacifessa sp. nov.

Candidatus Irrecella pacifessa (NL. fem. n. *pacifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp002700125*. The type genome for the species is the GenBank assembly GCA_002700125.1. The GC content of the type genome is 36.02 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Irrecella probletta sp. nov.

Candidatus Irrecella probletta (NL. fem. n. *probletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp902620405*. The type genome for the species is the GenBank assembly GCA_902620405.1. The GC content of the type genome is 31.47 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Irrecella relapitio sp. nov.

Candidatus Irrecella relapitio (NL. fem. n. *relapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002700125 sp014239735*. The type genome for the species is the GenBank assembly GCA_014239735.1. The GC content of the type genome is 32.77 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Irrecia anatrax sp. nov.

Candidatus Irrecia anatrax (NL. fem. n. *anatrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705205 sp002705205*. The type genome for the species is the GenBank assembly GCA_002705205.1. The GC content of the type genome is 31.74 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Irrecia gen. nov.

Candidatus Irrecia (NL. fem. n. *Irrecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2705205*. The type species for the genus is *Candidatus* Irrecia anatrax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Irrecida agripitica sp. nov.

Candidatus Irrecida agripitica (NL. fem. n. *agripitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGU01 sp012727535*. The type genome for the species is the GenBank assembly GCA_012727535.1. The GC content of the type genome is 49.01 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Irrecida gen. nov.

Candidatus Irrecida (NL. fem. n. *Irrecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAYGU01*. The type species for the genus is *Candidatus* Irrecida agripitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Irrecosa inoblibula sp. nov.

Candidatus Irrecosa inoblibula (NL. fem. n. *inoblibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEM01 sp013287085*. The type genome for the species is the GenBank assembly GCA_013287085.1. The GC content of the type genome is 38.19 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Irrecosa gen. nov.

Candidatus Irrecosa (NL. fem. n. *Irrecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEM01*. The type species for the genus is *Candidatus* Irrecosa inoblibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Irrecula cicarifica sp. nov.

Candidatus Irrecula cicarifica (NL. fem. n. *cicarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6100 sp002423585*. The type genome for the species is the GenBank assembly GCA_002423585.1. The GC content of the type genome is 66.17 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Irrecula gen. nov.

Candidatus Irrecula (NL. fem. n. *Irrecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6100*. The type species for the genus is *Candidatus* Irrecula cicarifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Irrecula laculigena sp. nov.

Candidatus Irrecula laculigena (NL. fem. n. *laculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6100 sp009668945*. The type genome for the species is the GenBank assembly GCA_009668945.1. The GC content of the type genome is 66.2 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Irredana adgesivita sp. nov.

Candidatus Irredana adgesivita (NL. fem. n. *adgesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNN01 sp013824245*. The type genome for the species is the GenBank assembly GCA_013824245.1. The GC content of the type genome is 39.97 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Irredana gen. nov.

Candidatus Irredana (NL. fem. n. *Irredana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNN01*. The type species for the genus is *Candidatus* Irredana adgesivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarellaceae.

Description of *Candidatus* Irredaria navifago sp. nov.

Candidatus Irredaria navifago (NL. fem. n. *navifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4997 sp002398485*. The type genome for the species is the GenBank assembly GCA_002398485.1. The GC content of the type genome is 40.53 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Irredaria gen. nov.

Candidatus Irredaria (NL. fem. n. *Irredaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4997*. The type species for the genus is *Candidatus* Irredaria navifago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5755*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Figilulaceae.

Description of *Candidatus* Irredella anagnessa sp. nov.

Candidatus Irredella anagnessa (NL. fem. n. *anagnessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGG01 sp012735195*. The type genome for the species is the GenBank assembly GCA_012735195.1. The GC content of the type genome is 53.46 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Irredella gen. nov.

Candidatus Irredella (NL. fem. n. *Irredella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGG01*. The type species for the genus is *Candidatus* Irredella anagnessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Irredella solipugo sp. nov.

Candidatus Irredella solipugo (NL. fem. n. *solipugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGG01 sp012839115*. The type genome for the species is the GenBank assembly GCA_012839115.1. The GC content of the type genome is 52.6 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Irredella subacitoga sp. nov.

Candidatus Irredella subacitoga (NL. fem. n. *subacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGG01 sp012727895*. The type genome for the species is the GenBank assembly GCA_012727895.1. The GC content of the type genome is 54.94 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Irredia infelitica sp. nov.

Candidatus Irredia infelitica (NL. fem. n. *infelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2861585 sp002861585*. The type genome for the species is the GenBank assembly GCA_002861585.1. The GC content of the type genome is 46.62 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Irredia gen. nov.

Candidatus Irredia (NL. fem. n. *Irredia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2861585*. The type species for the genus is *Candidatus* Irredia infelitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irredida resupitas sp. nov.

Candidatus Irredida resupitas (NL. fem. n. *resupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBM01 sp005239725*. The type genome for the species is the GenBank assembly GCA_005239725.1. The GC content of the type genome is 44.06 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Irredida gen. nov.

Candidatus Irredida (NL. fem. n. *Irredida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBM01*. The type species for the genus is *Candidatus* Irredida resupitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Irrefana depaciforma sp. nov.

Candidatus Irrefana depaciforma (NL. fem. n. *depaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-49-22b sp001823165*. The type genome for the species is the GenBank assembly GCA_001823165.1. The GC content of the type genome is 49.64 % and the genome length is 0.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Irrefana gen. nov.

Candidatus Irrefana (NL. fem. n. *Irrefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-49-22b*. The type species for the genus is *Candidatus* Irrefana depaciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Irrefaria adsulisca sp. nov.

Candidatus Irrefaria adsulisca (NL. fem. n. *adsulisca* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTE01 sp011390035*. The type genome for the species is the GenBank assembly GCA_011390035.1. The GC content of the type genome is 63.36 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Irrefaria gen. nov.

Candidatus Irrefaria (NL. fem. n. *Irrefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTE01*. The type species for the genus is *Candidatus* Irrefaria adsulisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrefia cimelessa sp. nov.

Candidatus Irrefia cimelessa (NL. fem. n. *cimelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp013215445*. The type genome for the species is the GenBank assembly GCA_013215445.1. The GC content of the type genome is 44.99 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Irrefia gen. nov.

Candidatus Irrefia (NL. fem. n. *Irrefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Rs1*. The type species for the genus is *Candidatus* Irrefia cimelessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrefia dilacessa sp. nov.

Candidatus Irrefia dilacessa (NL. fem. n. *dilacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp000416315*. The type genome for the species is the GenBank assembly GCA_000416315.1. The GC content of the type genome is 45.15 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Irrefia estovifica sp. nov.

Candidatus Irrefia estovifica (NL. fem. n. *estovifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp013215505*. The type genome for the species is the GenBank assembly GCA_013215505.1. The GC content of the type genome is 45.16 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Irrefia ignicitas sp. nov.

Candidatus Irrefia ignicitas (NL. fem. n. *ignicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp002163025*. The type genome for the species is the GenBank assembly GCA_002163025.1. The GC content of the type genome is 45.79 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Irrefia inabrago sp. nov.

Candidatus Irrefia inabrago (NL. fem. n. *inabrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp013215375*. The type genome for the species is the GenBank assembly GCA_013215375.1. The GC content of the type genome is 43.33 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Irrefia refacimonia sp. nov.

Candidatus Irrefia refacimonia (NL. fem. n. *refacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs1 sp000416275*. The type genome for the species is the GenBank assembly GCA_000416275.1. The GC content of the type genome is 43.43 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Irrefida emancicella sp. nov.

Candidatus Irrefida emancicella (NL. fem. n. *emancicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1494_A sp002713165*. The type genome for the species is the GenBank assembly GCA_002713165.1. The GC content of the type genome is 38.39 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Irrefida gen. nov.

Candidatus Irrefida (NL. fem. n. *Irrefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1494_A*. The type species for the genus is *Candidatus* Irrefida emancicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrefosa visifimonas sp. nov.

Candidatus Irrefosa visifimonas (NL. fem. n. *visifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUTQ01 sp012841995*. The type genome for the species is the GenBank assembly GCA_012841995.1. The GC content of the type genome is 36.56 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Irrefosa gen. nov.

Candidatus Irrefosa (NL. fem. n. *Irrefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUTQ01*. The type species for the genus is *Candidatus* Irrefosa visifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irregana catapibula sp. nov.

Candidatus Irregana catapibula (NL. fem. n. *catapibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA945 sp900755905*. The type genome for the species is the GenBank assembly RS_GCF_900755905.1. The GC content of the type genome is 43.77 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Irregana gen. nov.

Candidatus Irregana (NL. fem. n. *Irregana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA945*. The type species for the genus is *Candidatus* Irregana catapibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irregana ecnepiforma sp. nov.

Candidatus Irregana ecnepiforma (NL. fem. n. *ecnepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA945 sp900549675*. The type genome for the species is the GenBank assembly GCA_900549675.1. The GC content of the type genome is 40.36 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Irregana entomibula sp. nov.

Candidatus Irregana entomibula (NL. fem. n. *entomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA945 sp900197595*. The type genome for the species is the GenBank assembly RS_GCF_900197595.1. The GC content of the type genome is 39.81 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Irregana inguritoga sp. nov.

Candidatus Irregana inguritoga (NL. fem. n. *inguritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA945 sp002293315*. The type genome for the species is the GenBank assembly GCA_002293315.1. The GC content of the type genome is 49.96 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Irregida nimirimonia sp. nov.

Candidatus Irregida nimirimonia (NL. fem. n. *nimirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEDU01 sp902826155*. The type genome for the species is the GenBank assembly GCA_902826155.1. The GC content of the type genome is 64.96 % and the genome length is 7.78 Mbp.

Description of *Candidatus* Irregida gen. nov.

Candidatus Irregida (NL. fem. n. *Irregida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEDU01*. The type species for the genus is *Candidatus* Irregida nimirimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Irregosa attegitrix sp. nov.

Candidatus Irregosa attegitrix (NL. fem. n. *attegitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1430 sp013374835*. The type genome for the species is the GenBank assembly GCA_013374835.1. The GC content of the type genome is 38.03 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Irregosa gen. nov.

Candidatus Irregosa (NL. fem. n. *Irregosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1430*. The type species for the genus is *Candidatus* Irregosa

attegitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Irregosa malagilenta sp. nov.

Candidatus Irregosa malagilenta (NL. fem. n. *malagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1430 sp002329465*. The type genome for the species is the GenBank assembly GCA_002329465.1. The GC content of the type genome is 39.32 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Irrelaria latibibra sp. nov.

Candidatus Irrelaria latibibra (NL. fem. n. *latibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVB01 sp009781815*. The type genome for the species is the GenBank assembly GCA_009781815.1. The GC content of the type genome is 43.15 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Irrelaria gen. nov.

Candidatus Irrelaria (NL. fem. n. *Irrelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVB01*. The type species for the genus is *Candidatus* Irrelaria latibibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Irrelella anagnicula sp. nov.

Candidatus Irrelella anagnicula (NL. fem. n. *anagnicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWAR01 sp002068715*. The type genome for the species is the GenBank assembly GCA_002068715.1. The GC content of the type genome is 60.43 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Irrelella gen. nov.

Candidatus Irrelella (NL. fem. n. *Irrelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWAR01*. The type species for the genus is *Candidatus* Irrelella anagnicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrelosa intecitoga sp. nov.

Candidatus Irrelosa intecitoga (NL. fem. n. *intecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5486 sp002427045*. The type genome for the species is the GenBank assembly GCA_002427045.1. The GC content of the type genome is 38.74 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Irrelosa gen. nov.

Candidatus Irrelosa (NL. fem. n. *Irrelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5486*. The type species for the genus is *Candidatus* Irrelosa intecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Irrelula holovimonas sp. nov.

Candidatus Irrelula holovimonas (NL. fem. n. *holovimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUSO01 sp012842565*. The type genome for the species is the GenBank assembly GCA_012842565.1. The GC content of the type genome is 56.72 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Irrelula gen. nov.

Candidatus Irrelula (NL. fem. n. *Irrelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSO01*. The type species for the genus is *Candidatus* Irrelula holovimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch115*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vituposaceae.

Description of *Candidatus* Irremana maledessa sp. nov.

Candidatus Irremana maledessa (NL. fem. n. *maledessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1001 sp002291875*. The type genome for the species is the GenBank assembly GCA_002291875.1. The GC content of the type genome is 69.34 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Irremana gen. nov.

Candidatus Irremana (NL. fem. n. *Irremana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1001*. The type species for the genus is *Candidatus* Irremana maledessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irremaria inreficella sp. nov.

Candidatus Irremaria inreficella (NL. fem. n. *inreficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEH01 sp011192195*. The type genome for the species is the

GenBank assembly GCA_011192195.1. The GC content of the type genome is 52.25 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Irremaria gen. nov.

Candidatus Irremaria (NL. fem. n. *Irremaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEH01*. The type species for the genus is *Candidatus* Irremaria inreficella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4572-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bovicidaceae.

Description of *Candidatus* Irremella adnubousia sp. nov.

Candidatus Irremella adnubousia (NL. fem. n. *adnubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZZ01 sp013288335*. The type genome for the species is the GenBank assembly GCA_013288335.1. The GC content of the type genome is 44.48 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Irremella gen. nov.

Candidatus Irremella (NL. fem. n. *Irremella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCZZ01*. The type species for the genus is *Candidatus* Irremella adnubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXRF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatariaceae.

Description of *Candidatus* Irremella defulax sp. nov.

Candidatus Irremella defulax (NL. fem. n. *defulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABCZZ01 sp013288985*. The type genome for the species is the GenBank assembly GCA_013288985.1. The GC content of the type genome is 48.36 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Irremella fumacatio sp. nov.

Candidatus Irremella fumacatio (NL. fem. n. *fumacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZZ01 sp013289445*. The type genome for the species is the GenBank assembly GCA_013289445.1. The GC content of the type genome is 53.05 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Irremella hibisitudo sp. nov.

Candidatus Irremella hibisitudo (NL. fem. n. *hibisitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZZ01 sp013286285*. The type genome for the species is the GenBank assembly GCA_013286285.1. The GC content of the type genome is 50.43 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Irremia insepessa sp. nov.

Candidatus Irremia insepessa (NL. fem. n. *insepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQZF01 sp009780885*. The type genome for the species is the GenBank assembly GCA_009780885.1. The GC content of the type genome is 59.68 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Irremia gen. nov.

Candidatus Irremia (NL. fem. n. *Irremia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQZF01*. The type species for the genus is *Candidatus* Irremia insepessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irremida pimenax sp. nov.

Candidatus Irremida pimenax (NL. fem. n. *pimenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077548 sp001464215*. The type genome for the species is the GenBank assembly GCA_001464215.1. The GC content of the type genome is 60.09 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Irremida gen. nov.

Candidatus Irremida (NL. fem. n. *Irremida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077548*. The type species for the genus is *Candidatus* Irremida pimenax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irremula infisitrix sp. nov.

Candidatus Irremula infisitrix (NL. fem. n. *infisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V1718 sp007993755*. The type genome for the species is the GenBank assembly RS_GCF_007993755.1. The GC content of the type genome is 55.21 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Irremula gen. nov.

Candidatus Irremula (NL. fem. n. *Irremula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *V1718*. The type species for the genus is *Candidatus* Irremula infisitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrevana vepalimonas sp. nov.

Candidatus Irrevana vepalimonas (NL. fem. n. *vepalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLT01 sp012799205*. The type genome for the species is the GenBank assembly GCA_012799205.1. The GC content of the type genome is 37.34 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Irrevana gen. nov.

Candidatus Irrevana (NL. fem. n. *Irrevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLT01*. The type species for the genus is *Candidatus* Irrevana vepalimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrevaria adordiforma sp. nov.

Candidatus Irrevaria adordiforma (NL. fem. n. *adordiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQQ01 sp011370265*. The type genome for the species is the GenBank assembly GCA_011370265.1. The GC content of the type genome is 54.93 % and the genome length is 8.47 Mbp.

Description of *Candidatus* Irrevaria gen. nov.

Candidatus Irrevaria (NL. fem. n. *Irrevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSQQ01*. The type species for the genus is *Candidatus* Irrevaria adordiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifariaceae.

Description of *Candidatus* Irrevaria holovetta sp. nov.

Candidatus Irrevaria holovetta (NL. fem. n. *holovetta* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQQ01 sp012032575*. The type genome for the species is the GenBank assembly GCA_012032575.1. The GC content of the type genome is 54.41 % and the genome length is 7.92 Mbp.

Description of *Candidatus* Irrevia adporitio sp. nov.

Candidatus Irrevia adporitio (NL. fem. n. *adporitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOI01 sp011054605*. The type genome for the species is the GenBank assembly GCA_011054605.1. The GC content of the type genome is 65.43 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Irrevia gen. nov.

Candidatus Irrevia (NL. fem. n. *Irrevia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOI01*. The type species for the genus is *Candidatus* Irrevia adporitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrevida adtumitudo sp. nov.

Candidatus Irrevida adtumitudo (NL. fem. n. *adtumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FS08-3 sp000830175*. The type genome for the species is the GenBank assembly GCA_000830175.1. The GC content of the type genome is 39.67 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sulfidic fissure spring - flowing".

Description of *Candidatus* Irrevida gen. nov.

Candidatus Irrevida (NL. fem. n. *Irrevida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *FS08-3*. The type species for the genus is *Candidatus* Irrevida adtumitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrevosa ensicitudo sp. nov.

Candidatus Irrevosa ensicitudo (NL. fem. n. *ensicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla85-3-4 sp007751035*. The type genome for the species is the GenBank assembly RS_GCF_007751035.1. The GC content of the type genome is 61.45 % and the genome length is 9.57 Mbp.

Description of *Candidatus* Irrevosa gen. nov.

Candidatus Irrevosa (NL. fem. n. *Irrevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pla85-3-4*. The type species for the genus is *Candidatus* Irrevosa ensicitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrevula milipitia sp. nov.

Candidatus Irrevula milipitia (NL. fem. n. *milipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-L14 sp003215545*. The type genome for the species is the GenBank assembly GCA_003215545.1. The GC content of the type genome is 38.58 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Irrevula gen. nov.

Candidatus Irrevula (NL. fem. n. *Irrevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-L14*. The type species for the genus is *Candidatus* Irrevula milipitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrotana annifisca sp. nov.

Candidatus Irrotana annifisca (NL. fem. n. *annifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKF01 sp013822285*. The type genome for the species is the GenBank assembly GCA_013822285.1. The GC content of the type genome is 67.94 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Irrotana gen. nov.

Candidatus Irrotana (NL. fem. n. *Irrotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNKF01*. The type species for the genus is *Candidatus* Irrotana annifisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrotana conibicula sp. nov.

Candidatus Irrotana conibicula (NL. fem. n. *conibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKF01 sp011525845*. The type genome for the species is the GenBank assembly GCA_011525845.1. The GC content of the type genome is 71.38 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Irrotana conigisca sp. nov.

Candidatus Irrotana conigisca (NL. fem. n. *conigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKF01 sp903906325*. The type genome for the species is the GenBank assembly GCA_903906325.1. The GC content of the type genome is 69.76 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Irrotana humecitas sp. nov.

Candidatus Irrotana humecitas (NL. fem. n. *humecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKF01 sp902825965*. The type genome for the species is the GenBank assembly GCA_902825965.1. The GC content of the type genome is 69.99 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Irrotaria cenoticella sp. nov.

Candidatus Irrotaria cenoticella (NL. fem. n. *cenoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXMG01 sp903920485*. The type genome for the species is the GenBank assembly GCA_903920485.1. The GC content of the type genome is 50.64 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Irrotaria gen. nov.

Candidatus Irrotaria (NL. fem. n. *Irrotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXMG01*. The type species for the genus is *Candidatus* Irrotaria cenoticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalulaceae.

Description of *Candidatus* Irrotaria regigilega sp. nov.

Candidatus Irrotaria regigilega (NL. fem. n. *regigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXMG01 sp903873095*. The type genome for the species is the GenBank assembly GCA_903873095.1. The GC content of the type genome is 39.34 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Irrotia innasitudo sp. nov.

Candidatus Irrotia innasitudo (NL. fem. n. *innasitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10424 sp003500165*. The type genome for the species is the GenBank assembly GCA_003500165.1. The GC content of the type genome is 68.3 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Irrotia gen. nov.

Candidatus Irrotia (NL. fem. n. *Irrotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10424*. The type species for the genus is *Candidatus* Irrotia innasitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrotida fumifilenta sp. nov.

Candidatus Irrotida fumifilenta (NL. fem. n. *fumifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAPH01 sp009908415*. The type genome for the species is the GenBank assembly GCA_009908415.1. The GC content of the type genome is 65.35 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Irrotida gen. nov.

Candidatus Irrotida (NL. fem. n. *Irrotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAPH01*. The type species for the genus is *Candidatus* Irrotida fumifilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrotosa ceraritio sp. nov.

Candidatus Irrotosa ceraritio (NL. fem. n. *ceraritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLC01 sp014379795*. The type genome for the species is the GenBank assembly GCA_014379795.1. The GC content of the type genome is 55.51 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Irrotosa gen. nov.

Candidatus Irrotosa (NL. fem. n. *Irrotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMLC01*. The type species for the genus is *Candidatus* Irrotosa ceraritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Irrotula adgesugo sp. nov.

Candidatus Irrotula adgesugo (NL. fem. n. *adgesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUT01 sp012841405*. The type genome for the species is the GenBank assembly GCA_012841405.1. The GC content of the type genome is 66.74 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Irrotula gen. nov.

Candidatus Irrotula (NL. fem. n. *Irrotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUT01*. The type species for the genus is *Candidatus* Irrotula adgesugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Isachenkonia decacatica sp. nov.

Candidatus Isachenkonia decacatica (NL. fem. n. *decacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isachenkonia sp007118655*. The type genome for the species is the GenBank assembly GCA_007129015.1. The GC content of the type genome is 44.02 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Isachenkonia endivitura sp. nov.

Candidatus Isachenkonia endivitura (NL. fem. n. *endivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isachenkonia sp007134725*. The type genome for the species is the GenBank assembly GCA_007134725.1. The GC content of the type genome is 41.95 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Isachenkonia pimenisca sp. nov.

Candidatus Isachenkonia pimenisca (NL. fem. n. *pimenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isachenkonia sp003553525*. The type genome for the species is the GenBank assembly GCA_003553525.1. The GC content of the type genome is 42.02 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Isachenkonia rosacilega sp. nov.

Candidatus Isachenkonia rosacilega (NL. fem. n. *rosacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isachenkonia sp007120165*. The type genome for the species is the GenBank assembly GCA_007120165.1. The GC content of the type genome is 43.79 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Isoptericola defanitura sp. nov.

Candidatus Isoptericola defanitura (NL. fem. n. *defanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isoptericola sp013085345*. The type genome for the species is the GenBank assembly RS_GCF_013085345.1. The GC content of the type genome is 73.03 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Isoptericola desoritura sp. nov.

Candidatus Isoptericola desoritura (NL. fem. n. *desoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isoptericola sp009663185*. The type genome for the species is the GenBank assembly GCA_009663185.1. The GC content of the type genome is 72.13 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Isoptericola immobatica sp. nov.

Candidatus Isoptericola immobatica (NL. fem. n. *immobatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Isoptericola sp011634835*. The type genome for the species is the GenBank assembly RS_GCF_011634835.1. The GC content of the type genome is 73.99 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Isoscaria delubilenta sp. nov.

Candidatus Isoscaria delubilenta (NL. fem. n. *delubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLXB01 sp012103295*. The type genome for the species is the GenBank assembly GCA_012103295.1. The GC content of the type genome is 54.01 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Isoscaria gen. nov.

Candidatus Isoscaria (NL. fem. n. *Isoscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLXB01*. The type species for the genus is *Candidatus* Isoscaria delubilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Isoscia artufivita sp. nov.

Candidatus Isoscia artufivita (NL. fem. n. *artufivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCM01 sp012729765*. The type genome for the species is the GenBank assembly GCA_012729765.1. The GC content of the type genome is 64.19 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Isoscia gen. nov.

Candidatus Isoscia (NL. fem. n. *Isoscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCM01*. The type species for the genus is *Candidatus* Isoscia artufivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibariaceae.

Description of *Candidatus* Isoscida curacilega sp. nov.

Candidatus Isoscida curacilega (NL. fem. n. *curacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746795 sp002746795*. The type genome for the species is the GenBank assembly GCA_002746795.1. The GC content of the type genome is 49.58 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Isoscida gen. nov.

Candidatus Isoscida (NL. fem. n. *Isoscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746795*. The type species for the genus is *Candidatus* Isoscida curacilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Isoscosa adposibula sp. nov.

Candidatus Isoscosa adposibula (NL. fem. n. *adposibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFI01 sp011065125*. The type genome for the species is the GenBank assembly GCA_011065125.1. The GC content of the type genome is 26.37 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Isoscosa gen. nov.

Candidatus Isoscosa (NL. fem. n. *Isoscosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFI01*. The type species for the genus is *Candidatus* Isoscosa adposibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Istinana amatritio sp. nov.

Candidatus Istinana amatritio (NL. fem. n. *amatritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLYX01 sp009707705*. The type genome for the species is the GenBank assembly GCA_009707705.1. The GC content of the type genome is 57.35 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Istinana gen. nov.

Candidatus Istinana (NL. fem. n. *Istinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLYX01*. The type species for the genus is *Candidatus* Istinana amatritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Istinaria dupunimonia sp. nov.

Candidatus Istinaria dupunimonia (NL. fem. n. *dupunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B118-G9 sp003645845*. The type genome for the species is the GenBank assembly GCA_003645845.1. The GC content of the type genome is 44.52 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Istinaria gen. nov.

Candidatus Istinaria (NL. fem. n. *Istinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B118-G9*. The type species for the genus is *Candidatus* Istinaria dupunimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunellaceae.

Description of *Candidatus* Istinaria tiguritio sp. nov.

Candidatus Istinaria tiguritio (NL. fem. n. *tiguritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B118-G9 sp011046365*. The type genome for the species is the GenBank assembly GCA_011046365.1. The GC content of the type genome is 48.06 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Istinella troclitia sp. nov.

Candidatus Istinella troclitia (NL. fem. n. *troclitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACCLK01 sp902546795*. The type genome for the species is the GenBank assembly GCA_902546795.1. The GC content of the type genome is 30.6 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Istinella gen. nov.

Candidatus Istinella (NL. fem. n. *Istinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACCLK01*. The type species for the genus is *Candidatus* Istinella

troclitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Istinia petulimonas sp. nov.

Candidatus Istinia petulimonas (NL. fem. n. *petulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMXF01 sp903845345*. The type genome for the species is the GenBank assembly GCA_903845345.1. The GC content of the type genome is 69.5 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Istinia gen. nov.

Candidatus Istinia (NL. fem. n. *Istinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMXF01*. The type species for the genus is *Candidatus* Istinia petulimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Istinia unetvitia sp. nov.

Candidatus Istinia unetvitia (NL. fem. n. *unetvitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMXF01 sp013289985*. The type genome for the species is the GenBank assembly GCA_013289985.1. The GC content of the type genome is 69.55 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Istinula horomicula sp. nov.

Candidatus Istinula horomicula (NL. fem. n. *horomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746115 sp002746115*. The type genome for the species is the GenBank assembly GCA_002746115.1. The GC content of the type genome is 45.6 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Istinula gen. nov.

Candidatus Istinula (NL. fem. n. *Istinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746115*. The type species for the genus is *Candidatus* Istinula horomicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Izemoplasma abascedo sp. nov.

Candidatus Izemoplasma abascedo (NL. fem. n. *abascedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izemoplasma_B sp000753575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000753575.1. The GC content of the type genome is 29.22 % and the genome length is 2.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ocean sediment core sample 3730".

Description of *Candidatus* Izemoplasma casabedo sp. nov.

Candidatus Izemoplasma casabedo (NL. fem. n. *casabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izemoplasma_B sp014023125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014023125.1. The GC content of the type genome is 38.21 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Izemoplasma homunicella sp. nov.

Candidatus Izemoplasma homunicella (NL. fem. n. *homunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izemoplasma_B sp004195325*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004195325.1. The GC content of the type genome is 32.08 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Izemoplasma obsolentia sp. nov.

Candidatus Izemoplasma obsolentia (NL. fem. n. *obsolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izemoplasma_B sp000755705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000755705.1. The GC content of the type genome is 31.34 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ocean floor sediment; ocean sediment core sample 5579".

Description of *Candidatus* Izemopslasma vecoriforma sp. nov.

Candidatus Izemopslasma vecoriforma (NL. fem. n. *vecoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izemopslasma_C sp002285055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002285055.1. The GC content of the type genome is 29.56 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Izhakiella cacometta sp. nov.

Candidatus Izhakiella cacometta (NL. fem. n. *cacometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Izhakiella sp002752165*. The type genome for the species is the GenBank assembly RS_GCF_002751995.1. The GC content of the type genome is 51.86 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Janibacter pulegitudo sp. nov.

Candidatus Janibacter pulegitudo (NL. fem. n. *pulegitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janibacter sp001428305*. The type genome for the species is the GenBank assembly RS_GCF_001428305.1. The GC content of the type genome is 69.93 % and the genome length is 3.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Jannaschia conigessa sp. nov.

Candidatus Jannaschia conigessa (NL. fem. n. *conigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jannaschia sp013404595*. The type genome for the species is the GenBank assembly RS_GCF_013404595.1. The GC content of the type genome is 67.8 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Jannaschia depicatica sp. nov.

Candidatus Jannaschia depicatica (NL. fem. n. *depicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jannaschia sp003340555*. The type genome for the species is the GenBank assembly RS_GCF_003340555.1. The GC content of the type genome is 69.56 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Janthinobacterium abrelentia sp. nov.

Candidatus Janthinobacterium abrelentia (NL. fem. n. *abrelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002735705*. The type genome for the species is the GenBank assembly RS_GCF_002735705.1. The GC content of the type genome is 62.47 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Janthinobacterium adfabilenta sp. nov.

Candidatus Janthinobacterium adfabilenta (NL. fem. n. *adfabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002813325*. The type genome for the species is the GenBank assembly RS_GCF_002813325.1. The GC content of the type genome is 62.34 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Janthinobacterium adgubitio sp. nov.

Candidatus Janthinobacterium adgubitio (NL. fem. n. *adgubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp003133225*. The type genome for the species is the GenBank assembly GCA_003133225.1. The GC content of the type genome is 57.73 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Janthinobacterium adpagitrix sp. nov.

Candidatus Janthinobacterium adpagitrix (NL. fem. n. *adpagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp009208735*. The type genome for the species is the GenBank assembly RS_GCF_009208735.1. The GC content of the type genome is 63.13 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Janthinobacterium bucelifica sp. nov.

Candidatus Janthinobacterium bucelifica (NL. fem. n. *bucelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp009208565*. The type genome for the species is the GenBank assembly RS_GCF_009208565.1. The GC content of the type genome is 61.64 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Janthinobacterium cibaritia sp. nov.

Candidatus Janthinobacterium cibaritia (NL. fem. n. *cibaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp001758725*. The type genome for the species is the GenBank assembly RS_GCF_001758725.1. The GC content of the type genome is 62.88 % and the genome length is 6.31 Mbp. The isolation source for the NCBI

BioSample associated with the type genome is descibed as "water rainwater-tap Botanic Garden Hamburg".

Description of *Candidatus* Janthinobacterium cituventia sp. nov.

Candidatus Janthinobacterium cituventia (NL. fem. n. *cituventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002127655*. The type genome for the species is the GenBank assembly RS_GCF_002127625.1. The GC content of the type genome is 62.92 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Janthinobacterium colapicella sp. nov.

Candidatus Janthinobacterium colapicella (NL. fem. n. *colapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002846335*. The type genome for the species is the GenBank assembly RS_GCF_004365495.1. The GC content of the type genome is 61.9 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Janthinobacterium coticibula sp. nov.

Candidatus Janthinobacterium coticibula (NL. fem. n. *coticibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp000344615*. The type genome for the species is the GenBank assembly RS_GCF_000344615.1. The GC content of the type genome is 65.54 % and the genome length is 6.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Janthinobacterium demagax sp. nov.

Candidatus Janthinobacterium demagax (NL. fem. n. *demagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002127585*. The type genome for the species is the GenBank assembly RS_GCF_002127585.1. The GC content of the type genome is 63.31 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Janthinobacterium desupicella sp. nov.

Candidatus Janthinobacterium desupicella (NL. fem. n. *desupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002250505*. The type genome for the species is the GenBank assembly RS_GCF_002250505.1. The GC content of the type genome is 62.59 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Janthinobacterium divolitrix sp. nov.

Candidatus Janthinobacterium divolitrix (NL. fem. n. *divolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp900156175*. The type genome for the species is the GenBank assembly RS_GCF_900156175.1. The GC content of the type genome is 62.91 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Janthinobacterium ensifitio sp. nov.

Candidatus Janthinobacterium ensifitio (NL. fem. n. *ensifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp001865675*. The type genome for the species is the GenBank assembly RS_GCF_001865675.1. The GC content of the type genome is 63.63 % and the genome length is 6.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Janthinobacterium epiclitudo sp. nov.

Candidatus Janthinobacterium epiclitudo (NL. fem. n. *epiclitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002878455*. The type genome for the species is the GenBank assembly RS_GCF_002878455.1. The GC content of the type genome is 63.13 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Janthinobacterium faticago sp. nov.

Candidatus Janthinobacterium faticago (NL. fem. n. *faticago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp000745325*. The type genome for the species is the GenBank assembly RS_GCF_000745325.1. The GC content of the type genome is 62.47 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Janthinobacterium fidenitas sp. nov.

Candidatus Janthinobacterium fidenitas (NL. fem. n. *fidenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002002885*. The type genome for the species is the GenBank assembly RS_GCF_002002885.1. The GC content of the type genome is 62.99 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Janthinobacterium inmodastra sp. nov.

Candidatus Janthinobacterium inmodastra (NL. fem. n. *inmodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp009923995*. The type genome for the species is the GenBank assembly GCA_009923995.1. The GC content of the type genome is 64.37 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Janthinobacterium invetitudo sp. nov.

Candidatus Janthinobacterium invetitudo (NL. fem. n. *invetitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp014379395*. The type genome for the species is the GenBank assembly GCA_014379395.1. The GC content of the type genome is 65.56 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Janthinobacterium lucifisca sp. nov.

Candidatus Janthinobacterium lucifisca (NL. fem. n. *lucifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002797895*. The type genome for the species is the GenBank assembly RS_GCF_900103595.1. The GC content of the type genome is 62.85 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Janthinobacterium maxumilega sp. nov.

Candidatus Janthinobacterium maxumilega (NL. fem. n. *maxumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp900112025*. The type genome for the species is the GenBank assembly RS_GCF_900112025.1. The GC content of the type genome is 63.7 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Janthinobacterium nocenitrix sp. nov.

Candidatus Janthinobacterium nocenitrix (NL. fem. n. *nocenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp014200725*. The type genome for the species is the GenBank assembly RS_GCF_014200725.1. The GC content of the type genome is 59.81 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Janthinobacterium resuritura sp. nov.

Candidatus Janthinobacterium resuritura (NL. fem. n. *resuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp014200675*. The type genome for the species is the GenBank assembly RS_GCF_014200645.1. The GC content of the type genome is 60.24 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Janthinobacterium sicubifica sp. nov.

Candidatus Janthinobacterium sicubifica (NL. fem. n. *sicubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Janthinobacterium sp002869965*. The type genome for the species is the GenBank assembly RS_GCF_002869965.1. The GC content of the type genome is 62.0 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Jejuia adalgitica sp. nov.

Candidatus Jejuia adalgitica (NL. fem. n. *adalgitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jejuia sp014270105*. The type genome for the species is the GenBank assembly RS_GCF_014270105.1. The GC content of the type genome is 38.15 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Jejuia indepimonas sp. nov.

Candidatus Jejuia indepimonas (NL. fem. n. *indepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jejuia sp004310325*. The type genome for the species is the GenBank assembly RS_GCF_004310325.1. The GC content of the type genome is 34.99 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Jejuia obverilenta sp. nov.

Candidatus Jejuia obverilenta (NL. fem. n. *obverilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jejuia sp002428965*. The type genome for the species is the GenBank assembly GCA_002428965.1. The GC content of the type genome is 34.12 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Jeongeupia capuditas sp. nov.

Candidatus Jeongeupia capuditas (NL. fem. n. *capuditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jeongeupia sp001808185*. The type genome for the species is the GenBank assembly RS_GCF_001808185.1. The GC content of the type genome is 65.45 % and the genome length is 3.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil sample".

Description of *Candidatus* Jeotgalibacillus lametitia sp. nov.

Candidatus Jeotgalibacillus lametitia (NL. fem. n. *lametitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jeotgalibacillus sp004358665*. The type genome for the species is the GenBank assembly RS_GCF_004358665.1. The GC content of the type genome is 41.41 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Jeotgalibacillus tirocifica sp. nov.

Candidatus Jeotgalibacillus tirocifica (NL. fem. n. *tirocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jeotgalibacillus sp004405105*. The type genome for the species is the GenBank assembly RS_GCF_004405105.1. The GC content of the type genome is 43.57 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Jeotgalicoccus cenotigena sp. nov.

Candidatus Jeotgalicoccus cenotigena (NL. fem. n. *cenotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jeotgalicoccus sp903994045*. The type genome for the species is the GenBank assembly RS_GCF_903994045.1. The GC content of the type genome is 36.04 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Jeotgalicoccus nucifitudo sp. nov.

Candidatus Jeotgalicoccus nucifitudo (NL. fem. n. *nucifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jeotgalicoccus sp003513765*. The type genome for the species is the GenBank assembly GCA_003513765.1. The GC content of the type genome is 40.75 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Jettenia absegitica sp. nov.

Candidatus Jettenia absegitica (NL. fem. n. *absegitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jettenia sp900696655*. The type genome for the species is the GenBank assembly GCA_900696655.1. The GC content of the type genome is 41.75 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Jiangella colipitura sp. nov.

Candidatus Jiangella colipitura (NL. fem. n. *colipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jiangella sp003427025*. The type genome for the species is the GenBank assembly RS_GCF_003427025.1. The GC content of the type genome is 72.34 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Jiangella sifunax sp. nov.

Candidatus Jiangella sifunax (NL. fem. n. *sifunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jiangella sp003579925*. The type genome for the species is the GenBank assembly RS_GCF_003579925.1. The GC content of the type genome is 72.57 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Jidaibacter ecteniforma sp. nov.

Candidatus Jidaibacter ecteniforma (NL. fem. n. *ecteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jidaibacter sp000730245*. The type genome for the species is the GenBank assembly RS_GCF_000730245.1. The GC content of the type genome is 34.76 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Jidaibacter latibigena sp. nov.

Candidatus Jidaibacter latibigena (NL. fem. n. *latibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jidaibacter sp014116815*. The type genome for the species is the GenBank assembly GCA_014116815.1. The GC content of the type genome is 34.3 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Jiella adorditia sp. nov.

Candidatus Jiella adorditia (NL. fem. n. *adorditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jiella sp010500815*. The type genome for the species is the GenBank assembly RS_GCF_010500815.1. The GC content of the type genome is 65.73 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Jiella citocitrix sp. nov.

Candidatus Jiella citocitrix (NL. fem. n. *citocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jiella sp002700095*. The type genome for the species is the GenBank assembly GCA_002700095.1. The GC content of the type genome is 67.04 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Jiella supelitia sp. nov.

Candidatus Jiella supelitia (NL. fem. n. *supelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Jiella sp002088275*. The type genome for the species is the GenBank assembly RS_GCF_002088275.1. The GC content of the type genome is 67.39 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Johnsonella semilitudo sp. nov.

Candidatus Johnsonella semilitudo (NL. fem. n. *semilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Johnsonella sp900766185*. The type genome for the species is the GenBank assembly GCA_900766185.1. The GC content of the type genome is 36.02 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Joostella utralibra sp. nov.

Candidatus Joostella utralibra (NL. fem. n. *utralibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Joostella sp013391805*. The type genome for the species is the GenBank assembly RS_GCF_013391805.1. The GC content of the type genome is 37.28 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Kaistella adpanilenta sp. nov.

Candidatus Kaistella adpanilenta (NL. fem. n. *adpanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp001403755*. The type genome for the species is the GenBank assembly RS_GCF_001403755.1. The GC content of the type genome is 37.17 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Kaistella arnacastra sp. nov.

Candidatus Kaistella arnacastra (NL. fem. n. *arnacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp007362475*. The type genome for the species is the GenBank assembly RS_GCF_007362475.1. The GC content of the type genome is 35.21 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Kaistella buxifitrix sp. nov.

Candidatus Kaistella buxifitrix (NL. fem. n. *buxifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp008014695*. The type genome for the species is the GenBank assembly RS_GCF_008014695.1. The GC content of the type genome is 40.78 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Kaistella decitimonia sp. nov.

Candidatus Kaistella decitimonia (NL. fem. n. *decitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Kaistella sp013294015*. The type genome for the species is the GenBank assembly RS_GCF_013294015.1. The GC content of the type genome is 32.26 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Kaistella dilacitio sp. nov.

Candidatus Kaistella dilacitio (NL. fem. n. *dilacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002477665*. The type genome for the species is the GenBank assembly GCA_002380565.1. The GC content of the type genome is 45.07 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Kaistella divulitrix sp. nov.

Candidatus Kaistella divulitrix (NL. fem. n. *divulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp003692615*. The type genome for the species is the GenBank assembly RS_GCF_003692615.1. The GC content of the type genome is 42.4 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Kaistella legifilenta sp. nov.

Candidatus Kaistella legifilenta (NL. fem. n. *legifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp000023725*. The type genome for the species is the GenBank assembly RS_GCF_000023725.1. The GC content of the type genome is 42.69 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "glacial ice; 3519 m depth".

Description of *Candidatus* Kaistella luculitio sp. nov.

Candidatus Kaistella luculitio (NL. fem. n. *luculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002197835*. The type genome for the species is the GenBank assembly RS_GCF_002197835.1. The GC content of the type genome is 39.6 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Kaistella nucifilenta sp. nov.

Candidatus Kaistella nucifilenta (NL. fem. n. *nucifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002205795*. The type genome for the species is the GenBank assembly RS_GCF_002205795.1. The GC content of the type genome is 39.64 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Kaistella obtemax sp. nov.

Candidatus Kaistella obtemax (NL. fem. n. *obtemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002415135*. The type genome for the species is the GenBank assembly GCA_002415135.1. The GC content of the type genome is 35.68 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Kaistella opuscentia sp. nov.

Candidatus Kaistella opuscentia (NL. fem. n. *opuscentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp001898255*. The type genome for the species is the GenBank assembly GCA_001898255.1. The GC content of the type genome is 39.49 % and the genome length is 3.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Kaistella peneciforma sp. nov.

Candidatus Kaistella peneciforma (NL. fem. n. *peneciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002454815*. The type genome for the species is the GenBank assembly GCA_002454815.1. The GC content of the type genome is 43.32 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Kaistella ranunilenta sp. nov.

Candidatus Kaistella ranunilenta (NL. fem. n. *ranunilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp003860505*. The type genome for the species is the GenBank assembly RS_GCF_003860505.1. The GC content of the type genome is 39.87 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Kaistella redunibra sp. nov.

Candidatus Kaistella redunibra (NL. fem. n. *redunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002453895*. The type genome for the species is the GenBank assembly GCA_002453895.1. The GC content of the type genome is 39.72 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Kaistella scintago sp. nov.

Candidatus Kaistella scintago (NL. fem. n. *scintago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp004359195*. The type genome for the species is the GenBank assembly RS_GCF_004359195.1. The GC content of the type genome is 37.52 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Kaistella visifugo sp. nov.

Candidatus Kaistella visifugo (NL. fem. n. *visifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kaistella sp002426785*. The type genome for the species is the GenBank assembly GCA_003536155.1. The GC content of the type genome is 36.93 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Kamptonema televax sp. nov.

Candidatus Kamptonema televax (NL. fem. n. *televax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kamptonema sp001698425*. The type genome for the species is the GenBank assembly GCA_001698425.1. The GC content of the type genome is 40.96 % and the genome length is 5.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "co-culture originated from a tropical freshwater lake".

Description of *Candidatus* Kangiella exaggitia sp. nov.

Candidatus Kangiella exaggitia (NL. fem. n. *exaggitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kangiella sp013373015*. The type genome for the species is the GenBank assembly GCA_013373015.1. The GC content of the type genome is 41.14 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Kangiella galacitio sp. nov.

Candidatus Kangiella galacitio (NL. fem. n. *galacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kangiella sp013372875*. The type genome for the species is the GenBank assembly GCA_013372875.1. The GC content of the type genome is 43.13 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Kangiella incocibra sp. nov.

Candidatus Kangiella incocibra (NL. fem. n. *incocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kangiella sp009674675*. The type genome for the species is the GenBank assembly RS_GCF_009674675.1. The GC content of the type genome is 39.5 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Kangiella verifugo sp. nov.

Candidatus Kangiella verifugo (NL. fem. n. *verifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kangiella sp003370465*. The type genome for the species is the

GenBank assembly GCA_003370465.1. The GC content of the type genome is 43.45 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Keratinibaculum infabitudo sp. nov.

Candidatus Keratinibaculum infabitudo (NL. fem. n. *infabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Keratinibaculum sp012728075*. The type genome for the species is the GenBank assembly GCA_012728075.1. The GC content of the type genome is 31.5 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Ketobacter abnoritica sp. nov.

Candidatus Ketobacter abnoritica (NL. fem. n. *abnoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ketobacter sp002701845*. The type genome for the species is the GenBank assembly GCA_002701845.1. The GC content of the type genome is 57.41 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Ketobacter ancepiforma sp. nov.

Candidatus Ketobacter ancepiforma (NL. fem. n. *ancepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ketobacter sp003671495*. The type genome for the species is the GenBank assembly GCA_003671495.1. The GC content of the type genome is 56.89 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Ketobacter catapitura sp. nov.

Candidatus Ketobacter catapitura (NL. fem. n. *catapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ketobacter sp002471665*. The type genome for the species is the GenBank assembly GCA_002701315.1. The GC content of the type genome is 54.29 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Ketobacter cemenivita sp. nov.

Candidatus Ketobacter cemenivita (NL. fem. n. *cemenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ketobacter sp003667185*. The type genome for the species is the GenBank assembly RS_GCF_009746715.1. The GC content of the type genome is 49.98 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Ketobacter denigibra sp. nov.

Candidatus Ketobacter denigibra (NL. fem. n. *denigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ketobacter sp002708905*. The type genome for the species is the GenBank assembly GCA_002708905.1. The GC content of the type genome is 52.7 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Kibdelosporangium casigax sp. nov.

Candidatus Kibdelosporangium casigax (NL. fem. n. *casigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kibdelosporangium sp001984155*. The type genome for the species is the GenBank assembly RS_GCF_001984155.1. The GC content of the type genome is 68.16 % and the genome length is 11.71 Mbp.

Description of *Candidatus* Kibdelosporangium cenodilenta sp. nov.

Candidatus Kibdelosporangium cenodilenta (NL. fem. n. *cenodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kibdelosporangium sp000826545*. The type genome for the species is the GenBank assembly RS_GCF_000826545.1. The GC content of the type genome is 67.83 % and the genome length is 11.75 Mbp.

Description of *Candidatus* Kibdelosporangium detesatio sp. nov.

Candidatus Kibdelosporangium detesatio (NL. fem. n. *detesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kibdelosporangium sp000720375*. The type genome for the species is the GenBank assembly GCA_000720375.1. The GC content of the type genome is 66.28 % and the genome length is 12.42 Mbp.

Description of *Candidatus* Kibdelosporangium monoditia sp. nov.

Candidatus Kibdelosporangium monoditia (NL. fem. n. *monoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kibdelosporangium sp013280595*. The type genome for the species is the GenBank assembly RS_GCF_013280595.1. The GC content of the type genome is 68.2 % and the genome length is 10.35 Mbp.

Description of *Candidatus* Kiloniella penecibra sp. nov.

Candidatus Kiloniella penecibra (NL. fem. n. *penecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kiloniella sp900313065*. The type genome for the species is the GenBank assembly RS_GCF_900313065.1. The GC content of the type genome is 45.1 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Kiloniella salubibra sp. nov.

Candidatus Kiloniella salubibra (NL. fem. n. *salubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kiloniella sp002162915*. The type genome for the species is the GenBank assembly GCA_002162915.1. The GC content of the type genome is 46.77 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Kineobactrum novilimonas sp. nov.

Candidatus Kineobactrum novilimonas (NL. fem. n. *novilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineobactrum sp010669285*. The type genome for the species is the GenBank assembly RS_GCF_010669285.1. The GC content of the type genome is 60.68

% and the genome length is 4.65 Mbp.

Description of *Candidatus* Kineococcus impiritica sp. nov.

Candidatus Kineococcus impiritica (NL. fem. n. *impiritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineococcus sp009906795*. The type genome for the species is the GenBank assembly RS_GCF_009906795.1. The GC content of the type genome is 75.1 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Kineococcus nucifitas sp. nov.

Candidatus Kineococcus nucifitas (NL. fem. n. *nucifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineococcus sp009906315*. The type genome for the species is the GenBank assembly RS_GCF_009906315.1. The GC content of the type genome is 75.4 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Kineothrix benifetta sp. nov.

Candidatus Kineothrix benifetta (NL. fem. n. *benifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineothrix sp000403275*. The type genome for the species is the GenBank assembly RS_GCF_000403275.1. The GC content of the type genome is 45.08 % and the genome length is 4.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Kineothrix funivifica sp. nov.

Candidatus Kineothrix funivifica (NL. fem. n. *funivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineothrix sp012520655*. The type genome for the species is the GenBank assembly GCA_012520655.1. The GC content of the type genome is 41.56 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Kineothrix inmutax sp. nov.

Candidatus Kineothrix inmutax (NL. fem. n. *inmutax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineothrix sp009911195*. The type genome for the species is the GenBank assembly RS_GCF_009911195.1. The GC content of the type genome is 44.35 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Kineothrix lametigena sp. nov.

Candidatus Kineothrix lametigena (NL. fem. n. *lametigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineothrix sp011958945*. The type genome for the species is the GenBank assembly GCA_009774675.1. The GC content of the type genome is 44.08 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Kineothrix tegumessa sp. nov.

Candidatus Kineothrix tegumessa (NL. fem. n. *tegumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kineothrix sp003488965*. The type genome for the species is the GenBank assembly GCA_003488965.1. The GC content of the type genome is 43.82 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Kistimonas conigedo sp. nov.

Candidatus Kistimonas conigedo (NL. fem. n. *conigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kistimonas sp002238585*. The type genome for the species is the GenBank assembly GCA_002238585.1. The GC content of the type genome is 57.27 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Kitasatospora anastitas sp. nov.

Candidatus Kitasatospora anastitas (NL. fem. n. *anastitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp900105395*. The type genome for the species is the GenBank assembly RS_GCF_900105395.1. The GC content of the type genome is 73.63 % and the genome length is 9.9 Mbp.

Description of *Candidatus* Kitasatospora benivitia sp. nov.

Candidatus Kitasatospora benivitia (NL. fem. n. *benivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002813165*. The type genome for the species is the GenBank assembly RS_GCF_002813165.1. The GC content of the type genome is 74.04 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Kitasatospora canaciforma sp. nov.

Candidatus Kitasatospora canaciforma (NL. fem. n. *canaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp900199205*. The type genome for the species is the GenBank assembly RS_GCF_900199205.1. The GC content of the type genome is 72.9 % and the genome length is 8.43 Mbp.

Description of *Candidatus* Kitasatospora cuferitura sp. nov.

Candidatus Kitasatospora cuferitura (NL. fem. n. *cuferitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp000719695*. The type genome for the species is the GenBank assembly RS_GCF_000719695.1. The GC content of the type genome is 73.78 % and the genome length is 9.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake soil with Philodendrom oxycardium".

Description of *Candidatus* Kitasatospora debuciforma sp. nov.

Candidatus Kitasatospora debuciforma (NL. fem. n. *debuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Kitasatospora sp001625365*. The type genome for the species is the GenBank assembly RS_GCF_001625365.1. The GC content of the type genome is 72.82 % and the genome length is 9.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Kitasatospora decenousia sp. nov.

Candidatus Kitasatospora decenousia (NL. fem. n. *decenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp001424875*. The type genome for the species is the GenBank assembly RS_GCF_001424875.1. The GC content of the type genome is 71.42 % and the genome length is 8.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Kitasatospora enharilega sp. nov.

Candidatus Kitasatospora enharilega (NL. fem. n. *enharilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002943525*. The type genome for the species is the GenBank assembly RS_GCF_002943525.1. The GC content of the type genome is 72.74 % and the genome length is 8.96 Mbp.

Description of *Candidatus* Kitasatospora excamatica sp. nov.

Candidatus Kitasatospora excamatica (NL. fem. n. *excamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002813365*. The type genome for the species is the GenBank assembly RS_GCF_002813365.1. The GC content of the type genome is 73.11 % and the genome length is 8.81 Mbp.

Description of *Candidatus* Kitasatospora funebugo sp. nov.

Candidatus Kitasatospora funebugo (NL. fem. n. *funebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp000717715*. The type genome for the species is the GenBank assembly RS_GCF_000717715.1. The GC content of the type genome is 73.81

% and the genome length is 8.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ocean water".

Description of *Candidatus* Kitasatospora haricetta sp. nov.

Candidatus Kitasatospora haricetta (NL. fem. n. *haricetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002754615*. The type genome for the species is the GenBank assembly RS_GCF_002754615.1. The GC content of the type genome is 73.24 % and the genome length is 8.4 Mbp.

Description of *Candidatus* Kitasatospora inrepiforma sp. nov.

Candidatus Kitasatospora inrepiforma (NL. fem. n. *inrepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002300355*. The type genome for the species is the GenBank assembly RS_GCF_002300355.1. The GC content of the type genome is 73.05 % and the genome length is 9.25 Mbp.

Description of *Candidatus* Kitasatospora lanugentia sp. nov.

Candidatus Kitasatospora lanugentia (NL. fem. n. *lanugentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp000719705*. The type genome for the species is the GenBank assembly RS_GCF_000719705.1. The GC content of the type genome is 73.05 % and the genome length is 8.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Kitasatospora letifago sp. nov.

Candidatus Kitasatospora letifago (NL. fem. n. *letifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002846355*. The type genome for the species is the GenBank assembly RS_GCF_002846355.1. The GC content of the type genome is 71.54 % and the genome length is 8.96 Mbp.

Description of *Candidatus* Kitasatospora malifigena sp. nov.

Candidatus Kitasatospora malifigena (NL. fem. n. *malifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp002953255*. The type genome for the species is the GenBank assembly RS_GCF_008107605.1. The GC content of the type genome is 73.15 % and the genome length is 12.36 Mbp.

Description of *Candidatus* Kitasatospora nitelitura sp. nov.

Candidatus Kitasatospora nitelitura (NL. fem. n. *nitelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp001905465*. The type genome for the species is the GenBank assembly RS_GCF_001905465.1. The GC content of the type genome is 72.86 % and the genome length is 7.65 Mbp.

Description of *Candidatus* Kitasatospora recucedo sp. nov.

Candidatus Kitasatospora recucedo (NL. fem. n. *recucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp001905545*. The type genome for the species is the GenBank assembly RS_GCF_003435025.1. The GC content of the type genome is 73.47 % and the genome length is 9.69 Mbp.

Description of *Candidatus* Kitasatospora rinocitas sp. nov.

Candidatus Kitasatospora rinocitas (NL. fem. n. *rinocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp014596465*. The type genome for the species is the GenBank assembly RS_GCF_014596465.1. The GC content of the type genome is 72.84 % and the genome length is 9.74 Mbp.

Description of *Candidatus* Kitasatospora sacomitoga sp. nov.

Candidatus Kitasatospora sacomitoga (NL. fem. n. *sacomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp000720635*. The type genome for the species is the GenBank assembly RS_GCF_000720635.1. The GC content of the type genome is 72.8 % and the genome length is 8.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Kitasatospora senipitas sp. nov.

Candidatus Kitasatospora senipitas (NL. fem. n. *senipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp014596515*. The type genome for the species is the GenBank assembly RS_GCF_014596515.1. The GC content of the type genome is 73.03 % and the genome length is 9.17 Mbp.

Description of *Candidatus* Kitasatospora tabifitudo sp. nov.

Candidatus Kitasatospora tabifitudo (NL. fem. n. *tabifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kitasatospora sp013364235*. The type genome for the species is the GenBank assembly RS_GCF_013364235.1. The GC content of the type genome is 74.06 % and the genome length is 8.4 Mbp.

Description of *Candidatus* Klenkia artilitura sp. nov.

Candidatus Klenkia artilitura (NL. fem. n. *artilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Klenkia sp001424485*. The type genome for the species is the GenBank assembly RS_GCF_001424485.1. The GC content of the type genome is 74.2 % and the genome length is 4.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Klenkia feculago sp. nov.

Candidatus Klenkia feculago (NL. fem. n. *feculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Klenkia sp009296285*. The type genome for the species is the GenBank assembly RS_GCF_010685995.1. The GC content of the type genome is 74.63 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Klenkia metucatio sp. nov.

Candidatus Klenkia metucatio (NL. fem. n. *metucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Klenkia sp001424455*. The type genome for the species is the GenBank assembly RS_GCF_001424455.1. The GC content of the type genome is 74.04 % and the genome length is 4.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Kluyvera tumefatio sp. nov.

Candidatus Kluyvera tumefatio (NL. fem. n. *tumefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kluyvera sp902363335*. The type genome for the species is the GenBank assembly RS_GCF_902363335.1. The GC content of the type genome is 52.88 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Knoellia brasmetta sp. nov.

Candidatus Knoellia brasmetta (NL. fem. n. *brasmetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Knoellia sp000152705*. The type genome for the species is the GenBank assembly RS_GCF_000152705.1. The GC content of the type genome is 68.44 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Knoellia umbilibra sp. nov.

Candidatus Knoellia umbilibra (NL. fem. n. *umbilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Knoellia sp001427985*. The type genome for the species is the

GenBank assembly RS_GCF_001427985.1. The GC content of the type genome is 69.89 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Kocuria semapedo sp. nov.

Candidatus Kocuria semapedo (NL. fem. n. *semapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kocuria sp003226895*. The type genome for the species is the GenBank assembly RS_GCF_003226895.2. The GC content of the type genome is 70.83 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Kocuria veridisca sp. nov.

Candidatus Kocuria veridisca (NL. fem. n. *veridisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kocuria sp003797835*. The type genome for the species is the GenBank assembly RS_GCF_003797835.1. The GC content of the type genome is 67.02 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Kordia apsolentia sp. nov.

Candidatus Kordia apsolentia (NL. fem. n. *apsolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordia sp003352465*. The type genome for the species is the GenBank assembly RS_GCF_003352465.1. The GC content of the type genome is 35.6 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Kordia apsolitura sp. nov.

Candidatus Kordia apsolitura (NL. fem. n. *apsolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordia sp014397005*. The type genome for the species is the GenBank assembly RS_GCF_014397005.1. The GC content of the type genome is 34.06 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Kordia monimivita sp. nov.

Candidatus Kordia monimivita (NL. fem. n. *monimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordia sp006383075*. The type genome for the species is the GenBank assembly GCA_006383075.2. The GC content of the type genome is 35.83 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Kordiimonas advoricula sp. nov.

Candidatus Kordiimonas advoricula (NL. fem. n. *advoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp013372975*. The type genome for the species is the GenBank assembly GCA_013372975.1. The GC content of the type genome is 53.68 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Kordiimonas bigemax sp. nov.

Candidatus Kordiimonas bigemax (NL. fem. n. *bigemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp002401685*. The type genome for the species is the GenBank assembly GCA_002401685.1. The GC content of the type genome is 50.76 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Kordiimonas ecfunitia sp. nov.

Candidatus Kordiimonas ecfunitia (NL. fem. n. *ecfunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp013372925*. The type genome for the species is the GenBank assembly GCA_013372925.1. The GC content of the type genome is 54.01 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Kordiimonas medimitia sp. nov.

Candidatus Kordiimonas medimitia (NL. fem. n. *medimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp011088215*. The type genome for the species is the GenBank assembly GCA_011088215.1. The GC content of the type genome is 51.23 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Kordiimonas octodifica sp. nov.

Candidatus Kordiimonas octodifica (NL. fem. n. *octodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp006226495*. The type genome for the species is the GenBank assembly GCA_006226495.1. The GC content of the type genome is 61.13 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Kordiimonas oppanugo sp. nov.

Candidatus Kordiimonas oppanugo (NL. fem. n. *oppanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kordiimonas sp014238195*. The type genome for the species is the GenBank assembly GCA_014238195.1. The GC content of the type genome is 45.25 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Koribacter absegigena sp. nov.

Candidatus Koribacter absegigena (NL. fem. n. *absegigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Koribacter sp003151155*. The type genome for the species is the GenBank assembly GCA_003151155.1. The GC content of the type genome is 57.06 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Kosakonia accomivita sp. nov.

Candidatus Kosakonia accomivita (NL. fem. n. *accomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Kosakonia sp014490785*. The type genome for the species is the GenBank assembly RS_GCF_014490785.1. The GC content of the type genome is 54.91 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Kosakonia bicinitura sp. nov.

Candidatus Kosakonia bicinitura (NL. fem. n. *bicinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kosakonia sp002886105*. The type genome for the species is the GenBank assembly GCA_002886105.1. The GC content of the type genome is 54.56 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Kosakonia defasax sp. nov.

Candidatus Kosakonia defasax (NL. fem. n. *defasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kosakonia sp000410515*. The type genome for the species is the GenBank assembly RS_GCF_009914275.1. The GC content of the type genome is 53.87 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Kosakonia inexcilega sp. nov.

Candidatus Kosakonia inexcilega (NL. fem. n. *inexcilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kosakonia sp000814905*. The type genome for the species is the GenBank assembly RS_GCF_000814905.1. The GC content of the type genome is 53.62 % and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Kosmotoga semibibula sp. nov.

Candidatus Kosmotoga semibibula (NL. fem. n. *semibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kosmotoga_B sp003643975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_003643975.1. The GC content of the type genome is 41.32 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Kribbella adnecentia sp. nov.

Candidatus Kribbella adnecentia (NL. fem. n. *adnecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp005233875*. The type genome for the species is the GenBank assembly RS_GCF_005233875.1. The GC content of the type genome is 68.03 % and the genome length is 8.66 Mbp.

Description of *Candidatus* Kribbella adnubitio sp. nov.

Candidatus Kribbella adnubitio (NL. fem. n. *adnubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004216905*. The type genome for the species is the GenBank assembly RS_GCF_004216905.1. The GC content of the type genome is 68.13 % and the genome length is 8.43 Mbp.

Description of *Candidatus* Kribbella camilitica sp. nov.

Candidatus Kribbella camilitica (NL. fem. n. *camilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp001984195*. The type genome for the species is the GenBank assembly RS_GCF_001984195.1. The GC content of the type genome is 69.79 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Kribbella cuferax sp. nov.

Candidatus Kribbella cuferax (NL. fem. n. *cuferax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004331485*. The type genome for the species is the GenBank assembly RS_GCF_004331485.1. The GC content of the type genome is 68.27 % and the genome length is 8.83 Mbp.

Description of *Candidatus* Kribbella curotitia sp. nov.

Candidatus Kribbella curotitia (NL. fem. n. *curotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004342025*. The type genome for the species is the GenBank assembly RS_GCF_004342025.1. The GC content of the type genome is 68.07 % and the genome length is 9.15 Mbp.

Description of *Candidatus* Kribbella democitura sp. nov.

Candidatus Kribbella democitura (NL. fem. n. *democitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004365355*. The type genome for the species is the GenBank assembly RS_GCF_004365355.1. The GC content of the type genome is 68.09 % and the genome length is 8.37 Mbp.

Description of *Candidatus* Kribbella genocilenta sp. nov.

Candidatus Kribbella genocilenta (NL. fem. n. *genocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004345365*. The type genome for the species is the GenBank assembly RS_GCF_004342085.1. The GC content of the type genome is 68.47 % and the genome length is 9.19 Mbp.

Description of *Candidatus* Kribbella hiruditas sp. nov.

Candidatus Kribbella hiruditas (NL. fem. n. *hiruditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004345665*. The type genome for the species is the GenBank assembly RS_GCF_004345665.1. The GC content of the type genome is 67.75 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Kribbella inlepitica sp. nov.

Candidatus Kribbella inlepitica (NL. fem. n. *inlepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004365175*. The type genome for the species is the GenBank assembly RS_GCF_004365175.1. The GC content of the type genome is 68.2 % and the genome length is 8.03 Mbp.

Description of *Candidatus* Kribbella lacinousia sp. nov.

Candidatus Kribbella lacinousia (NL. fem. n. *lacinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp003261635*. The type genome for the species is the GenBank assembly RS_GCF_003261635.1. The GC content of the type genome is 67.82 % and the genome length is 8.03 Mbp.

Description of *Candidatus* Kribbella ludibifica sp. nov.

Candidatus Kribbella ludibifica (NL. fem. n. *ludibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp010548305*. The type genome for the species is the GenBank assembly RS_GCF_010548305.1. The GC content of the type genome is 67.68 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Kribbella lutulugo sp. nov.

Candidatus Kribbella lutulugo (NL. fem. n. *lutulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004361855*. The type genome for the species is the GenBank assembly RS_GCF_004361855.1. The GC content of the type genome is 67.96 % and the genome length is 9.46 Mbp.

Description of *Candidatus* Kribbella murelimonas sp. nov.

Candidatus Kribbella murelimonas (NL. fem. n. *murelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004348725*. The type genome for the species is the GenBank assembly RS_GCF_004348725.1. The GC content of the type genome is 69.39

% and the genome length is 7.45 Mbp.

Description of *Candidatus* Kribbella remedetta sp. nov.

Candidatus Kribbella remedetta (NL. fem. n. *remedetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004366075*. The type genome for the species is the GenBank assembly RS_GCF_004366005.1. The GC content of the type genome is 68.22 % and the genome length is 8.67 Mbp.

Description of *Candidatus* Kribbella subaditica sp. nov.

Candidatus Kribbella subaditica (NL. fem. n. *subaditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kribbella sp004365875*. The type genome for the species is the GenBank assembly RS_GCF_004365875.1. The GC content of the type genome is 67.64 % and the genome length is 8.32 Mbp.

Description of *Candidatus* Krumholzibacterium adhinigena sp. nov.

Candidatus Krumholzibacterium adhinigena (NL. fem. n. *adhinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Krumholzibacterium sp003369535*. The type genome for the species is the GenBank assembly GCA_003369535.1. The GC content of the type genome is 50.88 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Kurthia tumeficella sp. nov.

Candidatus Kurthia tumeficella (NL. fem. n. *tumeficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kurthia sp002418445*. The type genome for the species is the GenBank assembly GCA_002418445.1. The GC content of the type genome is 39.29 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Kushneria lucubimonia sp. nov.

Candidatus Kushneria lucubimonia (NL. fem. n. *lucubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kushneria sp001854625*. The type genome for the species is the GenBank assembly RS_GCF_001854625.1. The GC content of the type genome is 59.13 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "36% salinity surface water".

Description of *Candidatus* Kutzneria armificella sp. nov.

Candidatus Kutzneria armificella (NL. fem. n. *armificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Kutzneria sp000568255*. The type genome for the species is the GenBank assembly RS_GCF_000568255.1. The GC content of the type genome is 69.81 % and the genome length is 11.65 Mbp.

Description of *Candidatus* Labecana vitabugo sp. nov.

Candidatus Labecana vitabugo (NL. fem. n. *vitabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2011-GWA2-47-8b sp001003205*. The type genome for the species is the GenBank assembly GCA_001003205.1. The GC content of the type genome is 47.39 % and the genome length is 0.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Labecana gen. nov.

Candidatus Labecana (NL. fem. n. *Labecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2011-GWA2-47-8b*. The type species for the genus is *Candidatus* Labecana vitabugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WO2-44-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinacellaceae.

Description of *Candidatus* Labecaria alcibimonia sp. nov.

Candidatus Labecaria alcibimonia (NL. fem. n. *alcibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin54 sp004376695*. The type genome for the species is the GenBank assembly GCA_004376695.1. The GC content of the type genome is 53.15 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Labecaria gen. nov.

Candidatus Labecaria (NL. fem. n. *Labecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E29-bin54*. The type species for the genus is *Candidatus* Labecaria alcibimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Labecaria beneviforma sp. nov.

Candidatus Labecaria beneviforma (NL. fem. n. *beneviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin54 sp003556385*. The type genome for the species is the GenBank assembly GCA_003567995.1. The GC content of the type genome is 58.16 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Labecaria cocibedo sp. nov.

Candidatus Labecaria cocibedo (NL. fem. n. *cocibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin54 sp003567655*. The type genome for the species is the GenBank assembly GCA_003567655.1. The GC content of the type genome is 54.8 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Labecaria diluvilega sp. nov.

Candidatus Labecaria diluvilega (NL. fem. n. *diluvilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin54 sp003552465*. The type genome for the species is the GenBank assembly GCA_003552465.1. The GC content of the type genome is 57.96 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Labecella omninilenta sp. nov.

Candidatus Labecella omninilenta (NL. fem. n. *omninilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-24 sp001303185*. The type genome for the species is the GenBank assembly GCA_001303185.1. The GC content of the type genome is 61.52 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Labecella gen. nov.

Candidatus Labecella (NL. fem. n. *Labecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-24*. The type species for the genus is *Candidatus* Labecella omninilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labecellaceae.

Description of *Candidatus* Labecellaceae fam. nov.

Candidatus Labecellaceae (NL. fem. n. *Labecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-24.* The type genus for the taxon is *Candidatus* Labecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Labecellales ord. nov.

Candidatus Labecellales (NL. fem. n. *Labecellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-24.* The type genus for the taxon is *Candidatus* Labecella .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Labecia cisorugo sp. nov.

Candidatus Labecia cisorugo (NL. fem. n. *cisorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-42 sp001303785*. The type genome for the species is the GenBank assembly GCA_001303785.1. The GC content of the type genome is 46.25 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Labecia gen. nov.

Candidatus Labecia (NL. fem. n. *Labecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-42*. The type species for the genus is *Candidatus* Labecia cisorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Labeciaceae fam. nov.

Candidatus Labeciaceae (NL. fem. n. *Labeciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-42.* The type genus for the taxon is *Candidatus* Labecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labeciales.

Description of *Candidatus* Labeciales ord. nov.

Candidatus Labeciales (NL. fem. n. *Labeciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-42*. The type genus for the taxon is *Candidatus* Labecia .

According to the original version of GTDB R06-RS202, this family belongs to the class *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tigurariae.

Description of *Candidatus* Labecida lugubiforma sp. nov.

Candidatus Labecida lugubiforma (NL. fem. n. *lugubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1135 sp003142295*. The type genome for the species is the GenBank assembly GCA_003142295.1. The GC content of the type genome is 48.0 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Labecida gen. nov.

Candidatus Labecida (NL. fem. n. *Labecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1135*. The type species for the genus is *Candidatus* Labecida lugubiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacellaceae.

Description of *Candidatus* Labecida pinifitio sp. nov.

Candidatus Labecida pinifitio (NL. fem. n. *pinifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1135 sp903893135*. The type genome for the species is the GenBank assembly GCA_903893115.1. The GC content of the type genome is 47.66 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Labecida renavitio sp. nov.

Candidatus Labecida renavitio (NL. fem. n. *renavitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1135 sp003153775*. The type genome for the species is the GenBank assembly GCA_003154275.1. The GC content of the type genome is 50.12 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Labecida telegitudo sp. nov.

Candidatus Labecida telegitudo (NL. fem. n. *telegitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1135 sp003142635*. The type genome for the species is the GenBank assembly GCA_003171175.1. The GC content of the type genome is 49.66 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Labecosa bipatitica sp. nov.

Candidatus Labecosa bipatitica (NL. fem. n. *bipatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9414 sp003458885*. The type genome for the species is the GenBank assembly GCA_902366845.1. The GC content of the type genome is 40.91 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Labecosa gen. nov.

Candidatus Labecosa (NL. fem. n. *Labecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9414*. The type species for the genus is *Candidatus* Labecosa bipatitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Labecosa nivomitoga sp. nov.

Candidatus Labecosa nivomitoga (NL. fem. n. *nivomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9414 sp003489085*. The type genome for the species is the GenBank assembly GCA_003489085.1. The GC content of the type genome is 46.54 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Labilibaculum bisulisca sp. nov.

Candidatus Labilibaculum bisulisca (NL. fem. n. *bisulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Labilibaculum sp003863375*. The type genome for the species is the GenBank assembly RS_GCF_009795715.1. The GC content of the type genome is 36.2 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Labilithrix adreniforma sp. nov.

Candidatus Labilithrix adreniforma (NL. fem. n. *adreniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Labilithrix sp001899635*. The type genome for the species is the GenBank assembly GCA_001899635.1. The GC content of the type genome is 68.4 % and the genome length is 11.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Labilithrix ammixitrix sp. nov.

Candidatus Labilithrix ammixitrix (NL. fem. n. *ammixitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Labilithrix sp009781005*. The type genome for the species is the GenBank assembly GCA_009781005.1. The GC content of the type genome is 61.98 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Labilithrix corocilenta sp. nov.

Candidatus Labilithrix corocilenta (NL. fem. n. *corocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Labilithrix sp009780955*. The type genome for the species is the GenBank assembly GCA_009780955.1. The GC content of the type genome is 59.83 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Labrys rosaciforma sp. nov.

Candidatus Labrys rosaciforma (NL. fem. n. *rosaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Labrys sp001676615*. The type genome for the species is the GenBank assembly RS_GCF_001676615.1. The GC content of the type genome is 63.76 % and the genome length is 7.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* LacT semidibula sp. nov.

Candidatus LacT semidibula (NL. fem. n. *semidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *LacT sp009017255*. The type genome for the species is the GenBank assembly RS_GCF_009017255.1. The GC content of the type genome is 36.0 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Lachnoanaerobaculum insemitoga sp. nov.

Candidatus Lachnoanaerobaculum insemitoga (NL. fem. n. *insemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoanaerobaculum sp000209465*. The type genome for the species is the GenBank assembly RS_GCF_000209465.1. The GC content of the type genome is 35.69 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Lachnoanaerobaculum levifitas sp. nov.

Candidatus Lachnoanaerobaculum levifitas (NL. fem. n. *levifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoanaerobaculum sp000296385*. The type genome for the species is the GenBank assembly RS_GCF_000296385.1. The GC content of the type genome is

36.59 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Lachnoanaerobaculum malagivita sp. nov.

Candidatus Lachnoanaerobaculum malagivita (NL. fem. n. *malagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoanaerobaculum sp000287675*. The type genome for the species is the GenBank assembly RS_GCF_000287675.1. The GC content of the type genome is 35.98 % and the genome length is 2.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Lachnobacterium ensigicella sp. nov.

Candidatus Lachnobacterium ensigicella (NL. fem. n. *ensigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnobacterium sp900113385*. The type genome for the species is the GenBank assembly RS_GCF_900113385.1. The GC content of the type genome is 32.11 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Lachnoclostridium bonitisca sp. nov.

Candidatus Lachnoclostridium bonitisca (NL. fem. n. *bonitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium sp900078195*. The type genome for the species is the GenBank assembly RS_GCF_900078195.1. The GC content of the type genome is 33.21 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Lachnoclostridium catocedo sp. nov.

Candidatus Lachnoclostridium catocedo (NL. fem. n. *catocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium sp003526525*. The type genome for the species is the GenBank assembly GCA_003526525.1. The GC content of the type genome is 35.4

% and the genome length is 4.08 Mbp.

Description of *Candidatus* Lachnoclostridium bifarousia sp. nov.

Candidatus Lachnoclostridium bifarousia (NL. fem. n. *bifarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_A sp003464085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902366925.1. The GC content of the type genome is 46.21 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Lachnoclostridium catocilenta sp. nov.

Candidatus Lachnoclostridium catocilenta (NL. fem. n. *catocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_A sp002160755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002160755.1. The GC content of the type genome is 54.45 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Lachnoclostridium antecisca sp. nov.

Candidatus Lachnoclostridium antecisca (NL. fem. n. *antecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_B sp002160985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002160985.1. The GC content of the type genome is 52.26 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Lachnoclostridium carucastra sp. nov.

Candidatus Lachnoclostridium carucastra (NL. fem. n. *carucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_B sp000765215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005845155.1. The GC content of the type genome is 52.63 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Lachnoclostridium dicibetta sp. nov.

Candidatus Lachnoclostridium dicibetta (NL. fem. n. *dicibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_B sp900066765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900066765.1. The GC content of the type genome is 43.66 % and the genome length is 3.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Lachnoclostridium doxoledo sp. nov.

Candidatus Lachnoclostridium doxoledo (NL. fem. n. *doxoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_B sp900543315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900771625.1. The GC content of the type genome is 44.46 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Lachnoclostridium levidimonia sp. nov.

Candidatus Lachnoclostridium levidimonia (NL. fem. n. *levidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnoclostridium_B sp900066555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_902364385.1. The GC content of the type genome is 43.24 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Lachnospira adluvisca sp. nov.

Candidatus Lachnospira adluvisca (NL. fem. n. *adluvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900772425*. The type genome for the species is the GenBank assembly GCA_900772425.1. The GC content of the type genome is 35.73 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Lachnospira bipalatica sp. nov.

Candidatus Lachnospira bipalatica (NL. fem. n. *bipalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp000437735*. The type genome for the species is the GenBank assembly GCA_008680475.1. The GC content of the type genome is 41.56 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Lachnospira cenacago sp. nov.

Candidatus Lachnospira cenacago (NL. fem. n. *cenacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp002394205*. The type genome for the species is the GenBank assembly GCA_002394565.1. The GC content of the type genome is 37.69 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Lachnospira cobalitas sp. nov.

Candidatus Lachnospira cobalitas (NL. fem. n. *cobalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900545725*. The type genome for the species is the GenBank assembly GCA_900545725.1. The GC content of the type genome is 34.93 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Lachnospira coticastra sp. nov.

Candidatus Lachnospira coticastra (NL. fem. n. *coticastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp002435585*. The type genome for the species is the GenBank assembly GCA_002435585.1. The GC content of the type genome is 36.05 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Lachnospira defulitoga sp. nov.

Candidatus Lachnospira defulitoga (NL. fem. n. *defulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp003451515*. The type genome for the species is the GenBank assembly GCA_003451515.1. The GC content of the type genome is 37.7 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Lachnospira dicibitia sp. nov.

Candidatus Lachnospira dicibitia (NL. fem. n. *dicibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900551945*. The type genome for the species is the GenBank assembly GCA_900551945.1. The GC content of the type genome is 32.09 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Lachnospira fetulicella sp. nov.

Candidatus Lachnospira fetulicella (NL. fem. n. *fetulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp000436535*. The type genome for the species is the GenBank assembly GCA_000436535.1. The GC content of the type genome is 36.85 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Lachnospira fumifitia sp. nov.

Candidatus Lachnospira fumifitia (NL. fem. n. *fumifitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900547255*. The type genome for the species is the GenBank assembly GCA_900547255.1. The GC content of the type genome is 38.9 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Lachnospira hegumisca sp. nov.

Candidatus Lachnospira hegumisca (NL. fem. n. *hegumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900316325*. The type genome for the species is the GenBank assembly GCA_900539815.1. The GC content of the type genome is 36.39 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Lachnospira monociforma sp. nov.

Candidatus Lachnospira monociforma (NL. fem. n. *monociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp000436475*. The type genome for the species is the GenBank assembly GCA_003448165.1. The GC content of the type genome is 36.02 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Lachnospira subofastra sp. nov.

Candidatus Lachnospira subofastra (NL. fem. n. *subofastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp900552795*. The type genome for the species is the GenBank assembly GCA_900754395.1. The GC content of the type genome is 36.48 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Lachnospira turibedo sp. nov.

Candidatus Lachnospira turibedo (NL. fem. n. *turibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnospira sp003537285*. The type genome for the species is the GenBank assembly GCA_900538965.1. The GC content of the type genome is 37.31 % and the genome length is 2.74 Mbp.
