Description of *Candidatus* Lachnotalea adcubilega sp. nov.

Candidatus Lachnotalea adcubilega (NL. fem. n. *adcubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lachnotalea sp900184995*. The type genome for the species is the GenBank assembly RS_GCF_900184995.1. The GC content of the type genome is 40.33 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Lacibacter adcubetta sp. nov.

Candidatus Lacibacter adcubetta (NL. fem. n. *adcubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacibacter sp009996555*. The type genome for the species is the GenBank assembly GCA_009996555.1. The GC content of the type genome is 41.21 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Lacibacter cenobiforma sp. nov.

Candidatus Lacibacter cenobiforma (NL. fem. n. *cenobiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacibacter sp002336115*. The type genome for the species is the GenBank assembly GCA_002336115.1. The GC content of the type genome is 38.21 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Lacibacter ensigitas sp. nov.

Candidatus Lacibacter ensigitas (NL. fem. n. *ensigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacibacter sp002337125*. The type genome for the species is the GenBank assembly GCA_002337125.1. The GC content of the type genome is 39.0 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Lacibacter essonicula sp. nov.

Candidatus Lacibacter essonicula (NL. fem. n. *essonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacibacter sp014168535*. The type genome for the species is the GenBank assembly RS_GCF_014168535.1. The GC content of the type genome is 40.25 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Lacimicrobium laculifica sp. nov.

Candidatus Lacimicrobium laculifica (NL. fem. n. *laculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacimicrobium sp002201535*. The type genome for the species is the GenBank assembly RS_GCF_002201535.1. The GC content of the type genome is 50.51 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Lacinana debucitas sp. nov.

Candidatus Lacinana debucitas (NL. fem. n. *debucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4882 sp002399265*. The type genome for the species is the GenBank assembly GCA_002397625.1. The GC content of the type genome is 50.56 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Lacinana gen. nov.

Candidatus Lacinana (NL. fem. n. *Lacinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4882*. The type species for the genus is *Candidatus* Lacinana debucitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4882*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinanaceae.

Description of *Candidatus* Lacinanaceae fam. nov.

Candidatus Lacinanaceae (NL. fem. n. *Lacinanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4882.* The type genus for the taxon is *Candidatus* Lacinana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4882*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lacinanales.

Description of *Candidatus* Lacinanales ord. nov.

Candidatus Lacinanales (NL. fem. n. *Lacinanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4882.* The type genus for the taxon is *Candidatus* Lacinana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4882*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lacinanae.

Description of *Candidatus* Lacinanae class. nov.

Candidatus Lacinanae (NL. fem. n. *c__Lacinanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4882.* The type genus for the taxon is *Candidatus* Lacinana .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_G*.

Description of *Candidatus* Lacinella adnilentia sp. nov.

Candidatus Lacinella adnilentia (NL. fem. n. *adnilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1691 sp900549825*. The type genome for the species is the GenBank assembly GCA_900549825.1. The GC content of the type genome is 54.5 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Lacinella gen. nov.

Candidatus Lacinella (NL. fem. n. *Lacinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1691*. The type species for the genus is *Candidatus* Lacinella adnilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lacinella categicula sp. nov.

Candidatus Lacinella categicula (NL. fem. n. *categicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1691 sp900544715*. The type genome for the species is the GenBank assembly GCA_900544715.1. The GC content of the type genome is 53.29 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Lacinella inresetta sp. nov.

Candidatus Lacinella inresetta (NL. fem. n. *inresetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1691 sp900552985*. The type genome for the species is the GenBank assembly GCA_900552985.1. The GC content of the type genome is 54.6 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Lacinella paralitas sp. nov.

Candidatus Lacinella paralitas (NL. fem. n. *paralitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1691 sp900544375*. The type genome for the species is the GenBank assembly RS_GCF_900762455.1. The GC content of the type genome is 51.89 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Lacinella vivifentia sp. nov.

Candidatus Lacinella vivifentia (NL. fem. n. *vivifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1691 sp002320555*. The type genome for the species is the GenBank assembly GCA_900540315.1. The GC content of the type genome is 53.23 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Lacinida bimotibula sp. nov.

Candidatus Lacinida bimotibula (NL. fem. n. *bimotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPS01 sp003551845*. The type genome for the species is the GenBank assembly GCA_003551845.1. The GC content of the type genome is 41.01 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Lacinida gen. nov.

Candidatus Lacinida (NL. fem. n. *Lacinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWPS01*. The type species for the genus is *Candidatus* Lacinida bimotibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinidaceae.

Description of *Candidatus* Lacinidaceae fam. nov.

Candidatus Lacinidaceae (NL. fem. n. *Lacinidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWPS01.* The type genus for the taxon is *Candidatus* Lacinida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Lacinida cetaratio sp. nov.

Candidatus Lacinida cetaratio (NL. fem. n. *cetaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPS01 sp003554445*. The type genome for the species is the GenBank assembly GCA_003554445.1. The GC content of the type genome is 39.95 %

and the genome length is 0.96 Mbp.

Description of *Candidatus* Lacinida exhonitrix sp. nov.

Candidatus Lacinida exhonitrix (NL. fem. n. *exhonitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPS01 sp003557065*. The type genome for the species is the GenBank assembly GCA_003557065.1. The GC content of the type genome is 38.37 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Lacinida inredax sp. nov.

Candidatus Lacinida inredax (NL. fem. n. *inredax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPS01 sp003554915*. The type genome for the species is the GenBank assembly GCA_003554915.1. The GC content of the type genome is 42.42 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Lacinosa xenopibula sp. nov.

Candidatus Lacinosa xenopibula (NL. fem. n. *xenopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066905 sp900066905*. The type genome for the species is the GenBank assembly GCA_900066905.1. The GC content of the type genome is 56.68 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Lacinosa gen. nov.

Candidatus Lacinosa (NL. fem. n. *Lacinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-900066905*. The type species for the genus is *Candidatus* Lacinosa xenopibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-900066905*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinosaceae.

Description of *Candidatus* Lacinosaceae fam. nov.

Candidatus Lacinosaceae (NL. fem. n. *Lacinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-900066905.* The type genus for the taxon is *Candidatus* Lacinosa .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Lacinutrix catobax sp. nov.

Candidatus Lacinutrix catobax (NL. fem. n. *catobax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacinutrix sp002831665*. The type genome for the species is the GenBank assembly RS_GCF_002831665.1. The GC content of the type genome is 31.64 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Lacinutrix cilotilenta sp. nov.

Candidatus Lacinutrix cilotilenta (NL. fem. n. *cilotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacinutrix sp001874145*. The type genome for the species is the GenBank assembly GCA_001874145.1. The GC content of the type genome is 30.63 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Lacinutrix citocibra sp. nov.

Candidatus Lacinutrix citocibra (NL. fem. n. *citocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacinutrix sp000211855*. The type genome for the species is the GenBank assembly RS_GCF_000211855.2. The GC content of the type genome is 30.82 % and the genome length is 3.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "deep sea".

Description of *Candidatus* Lacinutrix triclisca sp. nov.

Candidatus Lacinutrix triclisca (NL. fem. n. *triclisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacinutrix sp000934685*. The type genome for the species is the GenBank assembly RS_GCF_000934685.1. The GC content of the type genome is 34.61 % and the genome length is 3.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Surface seawater".

Description of *Candidatus* Lacipirellula dinupitia sp. nov.

Candidatus Lacipirellula dinupitia (NL. fem. n. *dinupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacipirellula sp013822725*. The type genome for the species is the GenBank assembly GCA_013822725.1. The GC content of the type genome is 61.68 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Lacipirellula semipitica sp. nov.

Candidatus Lacipirellula semipitica (NL. fem. n. *semipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacipirellula sp007746075*. The type genome for the species is the GenBank assembly RS_GCF_007746075.1. The GC content of the type genome is 61.98 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Lacipirellula vepalibra sp. nov.

Candidatus Lacipirellula vepalibra (NL. fem. n. *vepalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacipirellula sp003576855*. The type genome for the species is the GenBank assembly GCA_003576855.1. The GC content of the type genome is 66.05 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Lacisediminihabitans telegitura sp. nov.

Candidatus Lacisediminihabitans telegitura (NL. fem. n. *telegitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacisediminihabitans sp014217685*. The type genome for the species is the GenBank assembly RS_GCF_014217685.1. The GC content of the type genome is 66.14 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Lacisediminihabitans vilipedo sp. nov.

Candidatus Lacisediminihabitans vilipedo (NL. fem. n. *vilipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacisediminihabitans sp003454135*. The type genome for the species is the GenBank assembly GCA_003454135.1. The GC content of the type genome is 66.74 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Lacrimispora ambidimonas sp. nov.

Candidatus Lacrimispora ambidimonas (NL. fem. n. *ambidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002389905*. The type genome for the species is the GenBank assembly GCA_002389905.1. The GC content of the type genome is 44.93 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Lacrimispora bisulentia sp. nov.

Candidatus Lacrimispora bisulentia (NL. fem. n. *bisulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp009712635*. The type genome for the species is the GenBank assembly GCA_009712635.1. The GC content of the type genome is 41.71 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Lacrimispora ceracessa sp. nov.

Candidatus Lacrimispora ceracessa (NL. fem. n. *ceracessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp902363735*. The type genome for the species is the GenBank assembly RS_GCF_902363735.1. The GC content of the type genome is 42.89

% and the genome length is 4.65 Mbp.

Description of *Candidatus* Lacrimispora diponitas sp. nov.

Candidatus Lacrimispora diponitas (NL. fem. n. *diponitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp007115105*. The type genome for the species is the GenBank assembly RS_GCF_007115105.1. The GC content of the type genome is 41.48 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Lacrimispora divorivita sp. nov.

Candidatus Lacrimispora divorivita (NL. fem. n. *divorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp001312405*. The type genome for the species is the GenBank assembly GCA_001312405.1. The GC content of the type genome is 44.07 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Lacrimispora inabsisca sp. nov.

Candidatus Lacrimispora inabsisca (NL. fem. n. *inabsisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp902363835*. The type genome for the species is the GenBank assembly RS_GCF_902363835.1. The GC content of the type genome is 43.98 % and the genome length is 6.26 Mbp.

Description of *Candidatus* Lacrimispora inhositrix sp. nov.

Candidatus Lacrimispora inhositrix (NL. fem. n. *inhositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp003833015*. The type genome for the species is the GenBank assembly RS_GCF_003833015.1. The GC content of the type genome is 39.63 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Lacrimispora lenimitura sp. nov.

Candidatus Lacrimispora lenimitura (NL. fem. n. *lenimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp000526575*. The type genome for the species is the GenBank assembly RS_GCF_000526575.1. The GC content of the type genome is 42.06 % and the genome length is 4.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Lacrimispora manomibula sp. nov.

Candidatus Lacrimispora manomibula (NL. fem. n. *manomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002478865*. The type genome for the species is the GenBank assembly GCA_002455735.1. The GC content of the type genome is 40.25 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Lacrimispora nidifastra sp. nov.

Candidatus Lacrimispora nidifastra (NL. fem. n. *nidifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002429965*. The type genome for the species is the GenBank assembly GCA_002429965.1. The GC content of the type genome is 44.52 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Lacrimispora obveritas sp. nov.

Candidatus Lacrimispora obveritas (NL. fem. n. *obveritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002409995*. The type genome for the species is the GenBank assembly GCA_002409995.1. The GC content of the type genome is 40.64 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Lacrimispora pomifago sp. nov.

Candidatus Lacrimispora pomifago (NL. fem. n. *pomifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002365025*. The type genome for the species is the GenBank assembly GCA_002365025.1. The GC content of the type genome is 43.95 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Lacrimispora proscetta sp. nov.

Candidatus Lacrimispora proscetta (NL. fem. n. *proscetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp900155545*. The type genome for the species is the GenBank assembly RS_GCF_900155545.1. The GC content of the type genome is 44.75 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Lacrimispora repecedo sp. nov.

Candidatus Lacrimispora repecedo (NL. fem. n. *repecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacrimispora sp002367105*. The type genome for the species is the GenBank assembly GCA_002367105.1. The GC content of the type genome is 43.75 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Lacticaseibacillus adessisca sp. nov.

Candidatus Lacticaseibacillus adessisca (NL. fem. n. *adessisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp003946165*. The type genome for the species is the GenBank assembly RS_GCF_003946165.1. The GC content of the type genome is 50.91 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Lacticaseibacillus arancimonia sp. nov.

Candidatus Lacticaseibacillus arancimonia (NL. fem. n. *arancimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Lacticaseibacillus sp003946115*. The type genome for the species is the GenBank assembly RS_GCF_003946115.1. The GC content of the type genome is 58.0 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Lacticaseibacillus impacessa sp. nov.

Candidatus Lacticaseibacillus impacessa (NL. fem. n. *impacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp004010095*. The type genome for the species is the GenBank assembly RS_GCF_004010095.1. The GC content of the type genome is 52.68 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Lacticaseibacillus infenedo sp. nov.

Candidatus Lacticaseibacillus infenedo (NL. fem. n. *infenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp013407595*. The type genome for the species is the GenBank assembly RS_GCF_013407595.1. The GC content of the type genome is 59.85 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Lacticaseibacillus lametastra sp. nov.

Candidatus Lacticaseibacillus lametastra (NL. fem. n. *lametastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp003946485*. The type genome for the species is the GenBank assembly RS_GCF_003946485.1. The GC content of the type genome is 58.28 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Lacticaseibacillus manufibula sp. nov.

Candidatus Lacticaseibacillus manufibula (NL. fem. n. *manufibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp003946405*. The type genome for the species is the GenBank assembly RS_GCF_003946405.1. The GC content of the type genome is 55.44 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Lacticaseibacillus octinatio sp. nov.

Candidatus Lacticaseibacillus octinatio (NL. fem. n. *octinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp900540605*. The type genome for the species is the GenBank assembly GCA_900540605.1. The GC content of the type genome is 53.36 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Lacticaseibacillus pavicousia sp. nov.

Candidatus Lacticaseibacillus pavicousia (NL. fem. n. *pavicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp009687905*. The type genome for the species is the GenBank assembly RS_GCF_009687925.1. The GC content of the type genome is 52.31 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Lacticaseibacillus scelligena sp. nov.

Candidatus Lacticaseibacillus scelligena (NL. fem. n. *scelligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp003946465*. The type genome for the species is the GenBank assembly RS_GCF_003946465.1. The GC content of the type genome is 55.47 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Lacticaseibacillus virecilenta sp. nov.

Candidatus Lacticaseibacillus virecilenta (NL. fem. n. *virecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacticaseibacillus sp003946175*. The type genome for the species is the GenBank assembly RS_GCF_003946175.1. The GC content of the type genome is 53.02 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Lactiplantibacillus adcucibra sp. nov.

Candidatus Lactiplantibacillus adcucibra (NL. fem. n. *adcucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp005404945*. The type genome for the species is the GenBank assembly RS_GCF_005404945.1. The GC content of the type genome is 44.17 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Lactiplantibacillus adpelatica sp. nov.

Candidatus Lactiplantibacillus adpelatica (NL. fem. n. *adpelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp005405005*. The type genome for the species is the GenBank assembly RS_GCF_005405005.1. The GC content of the type genome is 43.67 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Lactiplantibacillus aggenicula sp. nov.

Candidatus Lactiplantibacillus aggenicula (NL. fem. n. *aggenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp005405125*. The type genome for the species is the GenBank assembly RS_GCF_005405125.1. The GC content of the type genome is 44.42 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Lactiplantibacillus bipatibra sp. nov.

Candidatus Lactiplantibacillus bipatibra (NL. fem. n. *bipatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp002970915*. The type genome for the species is the GenBank assembly RS_GCF_002970915.1. The GC content of the type genome is 42.77 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Lactiplantibacillus ecfunifica sp. nov.

Candidatus Lactiplantibacillus ecfunifica (NL. fem. n. *ecfunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Lactiplantibacillus sp005405085*. The type genome for the species is the GenBank assembly RS_GCF_005405085.1. The GC content of the type genome is 43.97 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Lactiplantibacillus intolousia sp. nov.

Candidatus Lactiplantibacillus intolousia (NL. fem. n. *intolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp005405105*. The type genome for the species is the GenBank assembly RS_GCF_005405105.1. The GC content of the type genome is 44.73 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Lactiplantibacillus navicilega sp. nov.

Candidatus Lactiplantibacillus navicilega (NL. fem. n. *navicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp005405065*. The type genome for the species is the GenBank assembly RS_GCF_005405065.1. The GC content of the type genome is 44.32 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Lactiplantibacillus robigugo sp. nov.

Candidatus Lactiplantibacillus robigugo (NL. fem. n. *robigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactiplantibacillus sp002970935*. The type genome for the species is the GenBank assembly RS_GCF_002970935.1. The GC content of the type genome is 43.15 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Lactobacillus catapivita sp. nov.

Candidatus Lactobacillus catapivita (NL. fem. n. *catapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp002417825*. The type genome for the species is the GenBank assembly GCA_002417825.1. The GC content of the type genome is 40.84 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Lactobacillus cululitica sp. nov.

Candidatus Lactobacillus cululitica (NL. fem. n. *cululitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp002418055*. The type genome for the species is the GenBank assembly GCA_002417865.1. The GC content of the type genome is 43.06 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Lactobacillus cululousia sp. nov.

Candidatus Lactobacillus cululousia (NL. fem. n. *cululousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp002911475*. The type genome for the species is the GenBank assembly RS_GCF_002911475.1. The GC content of the type genome is 37.93 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Lactobacillus nubifago sp. nov.

Candidatus Lactobacillus nubifago (NL. fem. n. *nubifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp003692965*. The type genome for the species is the GenBank assembly RS_GCF_003692865.1. The GC content of the type genome is 34.74 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Lactobacillus reforatio sp. nov.

Candidatus Lactobacillus reforatio (NL. fem. n. *reforatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp000760615*. The type genome for the species is the GenBank assembly RS_GCF_000760615.1. The GC content of the type genome is 35.35 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Lactobacillus tenilatica sp. nov.

Candidatus Lactobacillus tenilatica (NL. fem. n. *tenilatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactobacillus sp007570935*. The type genome for the species is the GenBank assembly RS_GCF_007570935.1. The GC content of the type genome is 33.48 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Lactococcus curoticella sp. nov.

Candidatus Lactococcus curoticella (NL. fem. n. *curoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp004210295*. The type genome for the species is the GenBank assembly RS_GCF_004210295.1. The GC content of the type genome is 39.37 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Lactococcus desonisca sp. nov.

Candidatus Lactococcus desonisca (NL. fem. n. *desonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp009601055*. The type genome for the species is the GenBank assembly RS_GCF_009601055.1. The GC content of the type genome is 38.5 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Lactococcus tomacitura sp. nov.

Candidatus Lactococcus tomacitura (NL. fem. n. *tomacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp009779335*. The type genome for the species is the GenBank assembly GCA_009778765.1. The GC content of the type genome is 37.96 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Lactococcus vecoricula sp. nov.

Candidatus Lactococcus vecoricula (NL. fem. n. *vecoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp003627095*. The type genome for the species is the GenBank assembly RS_GCF_003627095.1. The GC content of the type genome is 37.37 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Lactococcus vilititrix sp. nov.

Candidatus Lactococcus vilititrix (NL. fem. n. *vilititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp002492185*. The type genome for the species is the GenBank assembly GCA_002490355.1. The GC content of the type genome is 39.25 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Lactococcus vivififorma sp. nov.

Candidatus Lactococcus vivififorma (NL. fem. n. *vivififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactococcus sp006965445*. The type genome for the species is the GenBank assembly RS_GCF_006965445.1. The GC content of the type genome is 37.97 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Lactonifactor detotifica sp. nov.

Candidatus Lactonifactor detotifica (NL. fem. n. *detotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lactonifactor sp009677585*. The type genome for the species is the GenBank assembly RS_GCF_009677655.1. The GC content of the type genome is 45.61 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Laculana ascelugo sp. nov.

Candidatus Laculana ascelugo (NL. fem. n. *ascelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1193 sp902783915*. The type genome for the species is the GenBank assembly GCA_902783915.1. The GC content of the type genome is 25.5 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Laculana gen. nov.

Candidatus Laculana (NL. fem. n. *Laculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1193*. The type species for the genus is *Candidatus* Laculana ascelugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Laculana cerarago sp. nov.

Candidatus Laculana cerarago (NL. fem. n. *cerarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1193 sp900550145*. The type genome for the species is the GenBank assembly RS_GCF_900756145.1. The GC content of the type genome is 26.95 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Laculana impugatica sp. nov.

Candidatus Laculana impugatica (NL. fem. n. *impugatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1193 sp000436255*. The type genome for the species is the GenBank assembly GCA_000436255.1. The GC content of the type genome is 25.58 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Lacularia vanitibula sp. nov.

Candidatus Lacularia vanitibula (NL. fem. n. *vanitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *16-39-46 sp002257235*. The type genome for the species is the GenBank assembly GCA_002257235.1. The GC content of the type genome is 39.33 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Lacularia gen. nov.

Candidatus Lacularia (NL. fem. n. *Lacularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *16-39-46*. The type species for the genus is *Candidatus* Lacularia vanitibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *16-39-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laculariaceae.

Description of *Candidatus* Laculariaceae fam. nov.

Candidatus Laculariaceae (NL. fem. n. *Laculariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *16-39-46.* The type genus for the taxon is *Candidatus* Lacularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *16-39-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Laculariales.

Description of *Candidatus* Laculariales ord. nov.

Candidatus Laculariales (NL. fem. n. *Laculariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *16-39-46.* The type genus for the taxon is *Candidatus* Lacularia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Laculella resulibra sp. nov.

Candidatus Laculella resulibra (NL. fem. n. *resulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REAB01 sp004293645*. The type genome for the species is the GenBank assembly GCA_004293985.1. The GC content of the type genome is 46.11 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Laculella gen. nov.

Candidatus Laculella (NL. fem. n. *Laculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REAB01*. The type species for the genus is *Candidatus* Laculella resulibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Laculia absegifica sp. nov.

Candidatus Laculia absegifica (NL. fem. n. *absegifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM14224 sp900761905*. The type genome for the species is the GenBank assembly RS_GCF_900761905.1. The GC content of the type genome is 46.48 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Laculia gen. nov.

Candidatus Laculia (NL. fem. n. *Laculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM14224*. The type species for the genus is *Candidatus* Laculia absegifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM14224*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laculiaceae.

Description of *Candidatus* Laculiaceae fam. nov.

Candidatus Laculiaceae (NL. fem. n. *Laculiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGM14224.* The type genus for the taxon is *Candidatus* Laculia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTUO25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifariales.

Description of *Candidatus* Laculida melopetta sp. nov.

Candidatus Laculida melopetta (NL. fem. n. *melopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLV01 sp007121385*. The type genome for the species is the GenBank assembly GCA_007121385.1. The GC content of the type genome is 51.7 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Laculida gen. nov.

Candidatus Laculida (NL. fem. n. *Laculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLV01*. The type species for the genus is *Candidatus* Laculida melopetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Laculosa lupanitrix sp. nov.

Candidatus Laculosa lupanitrix (NL. fem. n. *lupanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-27 sp001302725*. The type genome for the species is the GenBank assembly GCA_001302725.1. The GC content of the type genome is 53.62 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Laculosa gen. nov.

Candidatus Laculosa (NL. fem. n. *Laculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-27*. The type species for the genus is *Candidatus* Laculosa lupanitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DG-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laculosaceae.

Description of *Candidatus* Laculosaceae fam. nov.

Candidatus Laculosaceae (NL. fem. n. *Laculosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-27.* The type genus for the taxon is *Candidatus* Laculosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DG-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Laculosales.

Description of *Candidatus* Laculosales ord. nov.

Candidatus Laculosales (NL. fem. n. *Laculosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-27.* The type genus for the taxon is *Candidatus* Laculosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripellae.

Description of *Candidatus* Laculula delebicula sp. nov.

Candidatus Laculula delebicula (NL. fem. n. *delebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1312 sp900550625*. The type genome for the species is the GenBank assembly GCA_900550625.1. The GC content of the type genome is 52.48 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Laculula gen. nov.

Candidatus Laculula (NL. fem. n. *Laculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1312*. The type species for the genus is *Candidatus* Laculula delebicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Lacunisphaera bimetatio sp. nov.

Candidatus Lacunisphaera bimetatio (NL. fem. n. *bimetatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp903856725*. The type genome for the species is the GenBank assembly GCA_903856725.1. The GC content of the type genome is 54.91 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Lacunisphaera edissax sp. nov.

Candidatus Lacunisphaera edissax (NL. fem. n. *edissax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp009695095*. The type genome for the species is the GenBank assembly GCA_009695095.1. The GC content of the type genome is 63.11 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Lacunisphaera enigmiforma sp. nov.

Candidatus Lacunisphaera enigmiforma (NL. fem. n. *enigmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp002304425*. The type genome for the species is the GenBank assembly GCA_002304425.1. The GC content of the type genome is 56.8 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Lacunisphaera futatax sp. nov.

Candidatus Lacunisphaera futatax (NL. fem. n. *futatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp005787865*. The type genome for the species is the GenBank assembly GCA_903919025.1. The GC content of the type genome is 56.84 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Lacunisphaera linigigena sp. nov.

Candidatus Lacunisphaera linigigena (NL. fem. n. *linigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp903898675*. The type genome for the species is the GenBank assembly GCA_903845515.1. The GC content of the type genome is 65.15 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Lacunisphaera meriditas sp. nov.

Candidatus Lacunisphaera meriditas (NL. fem. n. *meriditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp903906135*. The type genome for the species is the GenBank assembly GCA_903906135.1. The GC content of the type genome is 56.33 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Lacunisphaera siminatica sp. nov.

Candidatus Lacunisphaera siminatica (NL. fem. n. *siminatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp001464505*. The type genome for the species is the GenBank assembly GCA_001464505.1. The GC content of the type genome is 64.27 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Lacunisphaera utricitoga sp. nov.

Candidatus Lacunisphaera utricitoga (NL. fem. n. *utricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lacunisphaera sp900104925*. The type genome for the species is the GenBank assembly RS_GCF_900104925.1. The GC content of the type genome is 65.67 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Lametana semigitia sp. nov.

Candidatus Lametana semigitia (NL. fem. n. *semigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUQO01 sp012032775*. The type genome for the species is the GenBank assembly GCA_012032775.1. The GC content of the type genome is 60.65 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Lametana gen. nov.

Candidatus Lametana (NL. fem. n. *Lametana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUQO01*. The type species for the genus is *Candidatus* Lametana semigitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lametaria lanigugo sp. nov.

Candidatus Lametaria lanigugo (NL. fem. n. *lanigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILIB01 sp903834195*. The type genome for the species is the GenBank assembly GCA_903834195.1. The GC content of the type genome is 43.92 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Lametaria gen. nov.

Candidatus Lametaria (NL. fem. n. *Lametaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILIB01*. The type species for the genus is *Candidatus* Lametaria lanigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILIB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lametariaceae.

Description of *Candidatus* Lametariaceae fam. nov.

Candidatus Lametariaceae (NL. fem. n. *Lametariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAILIB01*. The type genus for the taxon is *Candidatus* Lametaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAILIB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lametariales.

Description of *Candidatus* Lametariales ord. nov.

Candidatus Lametariales (NL. fem. n. *Lametariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILIB01*. The type genus for the taxon is *Candidatus* Lametaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Lametella actutousia sp. nov.

Candidatus Lametella actutousia (NL. fem. n. *actutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMYC01 sp004356105*. The type genome for the species is the GenBank assembly GCA_004356105.1. The GC content of the type genome is 60.49 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Lametella gen. nov.

Candidatus Lametella (NL. fem. n. *Lametella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMYC01*. The type species for the genus is *Candidatus* Lametella actutousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMYC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lametellaceae.

Description of *Candidatus* Lametellaceae fam. nov.

Candidatus Lametellaceae (NL. fem. n. *Lametellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMYC01.* The type genus for the taxon is *Candidatus* Lametella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sugilidales.

Description of *Candidatus* Lametida arillessa sp. nov.

Candidatus Lametida arillessa (NL. fem. n. *arillessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp900556965*. The type genome for the species is the GenBank assembly GCA_900556965.1. The GC content of the type genome is 47.92 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Lametida gen. nov.

Candidatus Lametida (NL. fem. n. *Lametida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-81*. The type species for the genus is *Candidatus* Lametida arillessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lametida buxifivita sp. nov.

Candidatus Lametida buxifivita (NL. fem. n. *buxifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp900066785*. The type genome for the species is the GenBank assembly RS_GCF_003477775.1. The GC content of the type genome is 48.72 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Lametida catagitica sp. nov.

Candidatus Lametida catagitica (NL. fem. n. *catagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-81 sp900541255*. The type genome for the species is the GenBank assembly GCA_900541255.1. The GC content of the type genome is 52.21 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Lametida cuferitas sp. nov.

Candidatus Lametida cuferitas (NL. fem. n. *cuferitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp000435795*. The type genome for the species is the GenBank assembly RS_GCF_902363025.1. The GC content of the type genome is 51.89 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Lametida dedigicella sp. nov.

Candidatus Lametida dedigicella (NL. fem. n. *dedigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp900066055*. The type genome for the species is the GenBank assembly RS_GCF_003479565.1. The GC content of the type genome is 48.24 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Lametida semibatio sp. nov.

Candidatus Lametida semibatio (NL. fem. n. *semibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp900066535*. The type genome for the species is the GenBank assembly RS_GCF_003604275.1. The GC content of the type genome is 47.99 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Lametida senipibula sp. nov.

Candidatus Lametida senipibula (NL. fem. n. *senipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-81 sp009917545*. The type genome for the species is the GenBank assembly RS_GCF_009917505.1. The GC content of the type genome is 48.82 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Lametosa detumiforma sp. nov.

Candidatus Lametosa detumiforma (NL. fem. n. *detumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAU01 sp009780035*. The type genome for the species is the GenBank assembly GCA_009780035.1. The GC content of the type genome is 33.56 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Lametosa gen. nov.

Candidatus Lametosa (NL. fem. n. *Lametosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAU01*. The type species for the genus is *Candidatus* Lametosa detumiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lametosaceae.

Description of *Candidatus* Lametosaceae fam. nov.

Candidatus Lametosaceae (NL. fem. n. *Lametosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRAU01.* The type genus for the taxon is *Candidatus* Lametosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRAU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lametosales.

Description of *Candidatus* Lametosales ord. nov.

Candidatus Lametosales (NL. fem. n. *Lametosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRAU01.* The type genus for the taxon is *Candidatus* Lametosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Lametula defacisca sp. nov.

Candidatus Lametula defacisca (NL. fem. n. *defacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYIR01 sp902582715*. The type genome for the species is the GenBank assembly GCA_902582715.1. The GC content of the type genome is 32.32 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Lametula gen. nov.

Candidatus Lametula (NL. fem. n. *Lametula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABYIR01*. The type species for the genus is *Candidatus* Lametula defacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-422-B15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifosaceae.

Description of *Candidatus* Lametula forabitudo sp. nov.

Candidatus Lametula forabitudo (NL. fem. n. *forabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYIR01 sp902536525*. The type genome for the species is the GenBank assembly GCA_902536525.1. The GC content of the type genome is 32.17 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Lametula televibra sp. nov.

Candidatus Lametula televibra (NL. fem. n. *televibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYIR01 sp902518955*. The type genome for the species is the GenBank assembly GCA_902518955.1. The GC content of the type genome is 32.04 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Lametula tenemitas sp. nov.

Candidatus Lametula tenemitas (NL. fem. n. *tenemitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYIR01 sp902584815*. The type genome for the species is the GenBank assembly GCA_902634765.1. The GC content of the type genome is 32.2 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Lametula vilitousia sp. nov.

Candidatus Lametula vilitousia (NL. fem. n. *vilitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABYIR01 sp902553285*. The type genome for the species is the GenBank assembly GCA_902553285.1. The GC content of the type genome is 32.54 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Lamprocystis catafifica sp. nov.

Candidatus Lamprocystis catafifica (NL. fem. n. *catafifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lamprocystis sp903933125*. The type genome for the species is the GenBank assembly GCA_903933125.1. The GC content of the type genome is 64.28 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Lamprocystis valefatica sp. nov.

Candidatus Lamprocystis valefatica (NL. fem. n. *valefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lamprocystis sp013426805*. The type genome for the species is the GenBank assembly GCA_013426805.1. The GC content of the type genome is 64.09 % and the genome length is 7.61 Mbp.

Description of *Candidatus* Lampropedia desepilenta sp. nov.

Candidatus Lampropedia desepilenta (NL. fem. n. *desepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lampropedia sp003703475*. The type genome for the species is the GenBank assembly RS_GCF_003703445.1. The GC content of the type genome is 62.92 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Lampropedia taraxetta sp. nov.

Candidatus Lampropedia taraxetta (NL. fem. n. *taraxetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lampropedia sp002285285*. The type genome for the species is the GenBank assembly RS_GCF_002285255.1. The GC content of the type genome is 65.27 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Lampropedia tolutousia sp. nov.

Candidatus Lampropedia tolutousia (NL. fem. n. *tolutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lampropedia sp002285265*. The type genome for the species is the GenBank assembly RS_GCF_003703375.1. The GC content of the type genome is 66.24 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Lancefieldella inlapentia sp. nov.

Candidatus Lancefieldella inlapentia (NL. fem. n. *inlapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lancefieldella sp900555335*. The type genome for the species is the GenBank assembly GCA_900555335.1. The GC content of the type genome is 47.5 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Lancefieldella lacinitoga sp. nov.

Candidatus Lancefieldella lacinitoga (NL. fem. n. *lacinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lancefieldella sp000411555*. The type genome for the species is the GenBank assembly RS_GCF_000411555.1. The GC content of the type genome is 51.81 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Lancefieldella lavabastra sp. nov.

Candidatus Lancefieldella lavabastra (NL. fem. n. *lavabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lancefieldella sp000564995*. The type genome for the species is the GenBank assembly RS_GCF_000758945.1. The GC content of the type genome is 48.43 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Lancefieldella manibedo sp. nov.

Candidatus Lancefieldella manibedo (NL. fem. n. *manibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lancefieldella sp902373375*. The type genome for the species is the GenBank assembly GCA_902373375.1. The GC content of the type genome is 46.1 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Lanifana defosago sp. nov.

Candidatus Lanifana defosago (NL. fem. n. *defosago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009786275*. The type genome for the species is the GenBank assembly GCA_009786275.1. The GC content of the type genome is 60.74 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Lanifana gen. nov.

Candidatus Lanifana (NL. fem. n. *Lanifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMQ01*. The type species for the genus is *Candidatus* Lanifana defosago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanifana dimadicella sp. nov.

Candidatus Lanifana dimadicella (NL. fem. n. *dimadicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009779995*. The type genome for the species is the GenBank assembly GCA_009779995.1. The GC content of the type genome is 60.55 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Lanifana forabentia sp. nov.

Candidatus Lanifana forabentia (NL. fem. n. *forabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009786735*. The type genome for the species is the GenBank assembly GCA_009786735.1. The GC content of the type genome is 57.37 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Lanifana infirilega sp. nov.

Candidatus Lanifana infirilega (NL. fem. n. *infirilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009784445*. The type genome for the species is the GenBank assembly GCA_009784445.1. The GC content of the type genome is 54.14 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Lanifana vagabitas sp. nov.

Candidatus Lanifana vagabitas (NL. fem. n. *vagabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009777055*. The type genome for the species is the GenBank assembly GCA_009777055.1. The GC content of the type genome is 58.73 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Lanifana volunago sp. nov.

Candidatus Lanifana volunago (NL. fem. n. *volunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMQ01 sp009785335*. The type genome for the species is the GenBank assembly GCA_009785335.1. The GC content of the type genome is 52.72 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Lanifaria mahelimonas sp. nov.

Candidatus Lanifaria mahelimonas (NL. fem. n. *mahelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M1805 sp006226965*. The type genome for the species is the GenBank assembly GCA_006226965.1. The GC content of the type genome is 37.9 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Lanifaria gen. nov.

Candidatus Lanifaria (NL. fem. n. *Lanifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M1805*. The type species for the genus is *Candidatus* Lanifaria mahelimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *M1805*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanifariaceae.

Description of *Candidatus* Lanifariaceae fam. nov.

Candidatus Lanifariaceae (NL. fem. n. *Lanifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *M1805.* The type genus for the taxon is *Candidatus* Lanifaria .

According to GTDB R06-RS202, this family belongs to the order *Balneolales*.

Description of *Candidatus* Lanifella antiritura sp. nov.

Candidatus Lanifella antiritura (NL. fem. n. *antiritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5266 sp012518765*. The type genome for the species is the

GenBank assembly GCA_012518765.1. The GC content of the type genome is 33.71 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Lanifella gen. nov.

Candidatus Lanifella (NL. fem. n. *Lanifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5266*. The type species for the genus is *Candidatus* Lanifella antiritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Lanifella detunitia sp. nov.

Candidatus Lanifella detunitia (NL. fem. n. *detunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5266 sp012519525*. The type genome for the species is the GenBank assembly GCA_012519525.1. The GC content of the type genome is 33.13 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Lanifella inciviforma sp. nov.

Candidatus Lanifella inciviforma (NL. fem. n. *inciviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5266 sp002069895*. The type genome for the species is the GenBank assembly GCA_002069895.1. The GC content of the type genome is 35.16 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Lanifella resacitoga sp. nov.

Candidatus Lanifella resacitoga (NL. fem. n. *resacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5266 sp002411545*. The type genome for the species is the GenBank assembly GCA_002411545.1. The GC content of the type genome is 36.19 %

and the genome length is 1.78 Mbp.

Description of *Candidatus* Lanifia adessentia sp. nov.

Candidatus Lanifia adessentia (NL. fem. n. *adessentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp902583715*. The type genome for the species is the GenBank assembly GCA_902583715.1. The GC content of the type genome is 48.66 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Lanifia gen. nov.

Candidatus Lanifia (NL. fem. n. *Lanifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3439*. The type species for the genus is *Candidatus* Lanifia adessentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanifia affamitrix sp. nov.

Candidatus Lanifia affamitrix (NL. fem. n. *affamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp012269685*. The type genome for the species is the GenBank assembly GCA_012269685.1. The GC content of the type genome is 51.51 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Lanifia apposisca sp. nov.

Candidatus Lanifia apposisca (NL. fem. n. *apposisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp002378605*. The type genome for the species is the GenBank assembly GCA_002378605.1. The GC content of the type genome is 51.1 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Lanifia bimetilega sp. nov.

Candidatus Lanifia bimetilega (NL. fem. n. *bimetilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp003212345*. The type genome for the species is the GenBank assembly GCA_902592035.1. The GC content of the type genome is 46.47 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Lanifia exsoredo sp. nov.

Candidatus Lanifia exsoredo (NL. fem. n. *exsoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp902559985*. The type genome for the species is the GenBank assembly GCA_902559985.1. The GC content of the type genome is 46.0 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Lanifia inpenicella sp. nov.

Candidatus Lanifia inpenicella (NL. fem. n. *inpenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp009919335*. The type genome for the species is the GenBank assembly GCA_009919335.1. The GC content of the type genome is 52.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Lanifia subinitica sp. nov.

Candidatus Lanifia subinitica (NL. fem. n. *subinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3439 sp003282865*. The type genome for the species is the GenBank assembly GCA_003282865.1. The GC content of the type genome is 45.89 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Lanifida ancepessa sp. nov.

Candidatus Lanifida ancepessa (NL. fem. n. *ancepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003554025*. The type genome for the species is the GenBank assembly GCA_003554025.1. The GC content of the type genome is 48.57 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Lanifida gen. nov.

Candidatus Lanifida (NL. fem. n. *Lanifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-81*. The type species for the genus is *Candidatus* Lanifida ancepessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanifida armigibra sp. nov.

Candidatus Lanifida armigibra (NL. fem. n. *armigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003551455*. The type genome for the species is the GenBank assembly GCA_003551455.1. The GC content of the type genome is 55.01 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Lanifida blactax sp. nov.

Candidatus Lanifida blactax (NL. fem. n. *blactax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003553945*. The type genome for the species is the GenBank assembly GCA_003553945.1. The GC content of the type genome is 52.96 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Lanifida demulitura sp. nov.

Candidatus Lanifida demulitura (NL. fem. n. *demulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003552275*. The type genome for the species is the

GenBank assembly GCA_003552275.1. The GC content of the type genome is 55.27 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Lanifida desulatio sp. nov.

Candidatus Lanifida desulatio (NL. fem. n. *desulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003568315*. The type genome for the species is the GenBank assembly GCA_003550405.1. The GC content of the type genome is 54.16 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Lanifida dupunentia sp. nov.

Candidatus Lanifida dupunentia (NL. fem. n. *dupunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003551005*. The type genome for the species is the GenBank assembly GCA_003554175.1. The GC content of the type genome is 55.69 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lanifida turifitoga sp. nov.

Candidatus Lanifida turifitoga (NL. fem. n. *turifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-81 sp003552925*. The type genome for the species is the GenBank assembly GCA_003552925.1. The GC content of the type genome is 49.99 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Lanifosa expopastra sp. nov.

Candidatus Lanifosa expopastra (NL. fem. n. *expopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAR01 sp903858915*. The type genome for the species is the GenBank assembly GCA_903858915.1. The GC content of the type genome is 33.67 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Lanifosa gen. nov.

Candidatus Lanifosa (NL. fem. n. *Lanifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYAR01*. The type species for the genus is *Candidatus* Lanifosa expopastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Lanifosa letificula sp. nov.

Candidatus Lanifosa letificula (NL. fem. n. *letificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAR01 sp009925685*. The type genome for the species is the GenBank assembly GCA_009927945.1. The GC content of the type genome is 33.77 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Lanifosa miracifica sp. nov.

Candidatus Lanifosa miracifica (NL. fem. n. *miracifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAR01 sp005787525*. The type genome for the species is the GenBank assembly GCA_005787525.1. The GC content of the type genome is 32.46 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lanifosa turibifica sp. nov.

Candidatus Lanifosa turibifica (NL. fem. n. *turibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAR01 sp903959715*. The type genome for the species is the GenBank assembly GCA_903959715.1. The GC content of the type genome is 32.9 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Lanifula conipifica sp. nov.

Candidatus Lanifula conipifica (NL. fem. n. *conipifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-55 sp002084765*. The type genome for the species is the GenBank assembly GCA_002084765.1. The GC content of the type genome is 46.29 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Lanifula gen. nov.

Candidatus Lanifula (NL. fem. n. *Lanifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-55*. The type species for the genus is *Candidatus* Lanifula conipifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4572-55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanifulaceae.

Description of *Candidatus* Lanifulaceae fam. nov.

Candidatus Lanifulaceae (NL. fem. n. *Lanifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-55.* The type genus for the taxon is *Candidatus* Lanifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *4572-55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lanifulales.

Description of *Candidatus* Lanifulales ord. nov.

Candidatus Lanifulales (NL. fem. n. *Lanifulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-55.* The type genus for the taxon is *Candidatus* Lanifula .

According to the original version of GTDB R06-RS202, this family belongs to the class *4572-55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lanifulae.

Description of *Candidatus* Lanifulae class. nov.

Candidatus Lanifulae (NL. fem. n. *c__Lanifulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-55.* The type genus for the taxon is *Candidatus* Lanifula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *4572-55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Lanifulota.

Description of *Candidatus* Lanifulota phyl. nov.

Candidatus Lanifulota (NL. fem. n. *Lanifulota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-55.* The type genus for the taxon is *Candidatus* Lanifula .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Lanigana ancipicella sp. nov.

Candidatus Lanigana ancipicella (NL. fem. n. *ancipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6186 sp903907935*. The type genome for the species is the GenBank assembly GCA_903907935.1. The GC content of the type genome is 31.53 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Lanigana gen. nov.

Candidatus Lanigana (NL. fem. n. *Lanigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6186*. The type species for the genus is *Candidatus* Lanigana ancipicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6186*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laniganaceae.

Description of *Candidatus* Laniganaceae fam. nov.

Candidatus Laniganaceae (NL. fem. n. *Laniganaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6186.* The type genus for the taxon is *Candidatus* Lanigana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6186*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Laniganales.

Description of *Candidatus* Laniganales ord. nov.

Candidatus Laniganales (NL. fem. n. *Laniganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6186.* The type genus for the taxon is *Candidatus* Lanigana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Lanigana celamibula sp. nov.

Candidatus Lanigana celamibula (NL. fem. n. *celamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6186 sp002422785*. The type genome for the species is the GenBank assembly GCA_903935345.1. The GC content of the type genome is 31.56 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Lanigana cerebimonas sp. nov.

Candidatus Lanigana cerebimonas (NL. fem. n. *cerebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6186 sp903827925*. The type genome for the species is the GenBank assembly GCA_903827925.1. The GC content of the type genome is 28.53 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lanigana impinax sp. nov.

Candidatus Lanigana impinax (NL. fem. n. *impinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6186 sp903822055*. The type genome for the species is the GenBank assembly GCA_903822055.1. The GC content of the type genome is 31.74 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Lanigaria tabifitrix sp. nov.

Candidatus Lanigaria tabifitrix (NL. fem. n. *tabifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMP01 sp007133465*. The type genome for the species is the GenBank assembly GCA_007127115.1. The GC content of the type genome is 72.65 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Lanigaria gen. nov.

Candidatus Lanigaria (NL. fem. n. *Lanigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMP01*. The type species for the genus is *Candidatus* Lanigaria tabifitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanigella obfirifica sp. nov.

Candidatus Lanigella obfirifica (NL. fem. n. *obfirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYY01 sp013696235*. The type genome for the species is the GenBank assembly GCA_013696235.1. The GC content of the type genome is 71.38 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Lanigella gen. nov.

Candidatus Lanigella (NL. fem. n. *Lanigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYY01*. The type species for the genus is *Candidatus* Lanigella obfirifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCYY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanigellaceae.

Description of *Candidatus* Lanigellaceae fam. nov.

Candidatus Lanigellaceae (NL. fem. n. *Lanigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCYY01.* The type genus for the taxon is *Candidatus* Lanigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACCYY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lanigellales.

Description of *Candidatus* Lanigellales ord. nov.

Candidatus Lanigellales (NL. fem. n. *Lanigellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCYY01.* The type genus for the taxon is *Candidatus* Lanigella .

According to the GTDB R06-RS202, this order belongs to the class *Actinomycetia*.

Description of *Candidatus* Lanigia mirabugo sp. nov.

Candidatus Lanigia mirabugo (NL. fem. n. *mirabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1147 sp002311315*. The type genome for the species is the GenBank assembly GCA_003978585.1. The GC content of the type genome is 53.41 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Lanigia gen. nov.

Candidatus Lanigia (NL. fem. n. *Lanigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1147*. The type species for the genus is *Candidatus* Lanigia mirabugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA2778. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigidaceae.

Description of *Candidatus* Lanigida adfulicella sp. nov.

Candidatus Lanigida adfulicella (NL. fem. n. *adfulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG842 sp902796355*. The type genome for the species is the GenBank assembly GCA_902796355.1. The GC content of the type genome is 49.69 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Lanigida gen. nov.

Candidatus Lanigida (NL. fem. n. *Lanigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG842*. The type species for the genus is *Candidatus* Lanigida adfulicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanigida inaspessa sp. nov.

Candidatus Lanigida inaspessa (NL. fem. n. *inaspessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG842 sp902773445*. The type genome for the species is the GenBank assembly GCA_902773445.1. The GC content of the type genome is 51.45 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Lanigida loripiforma sp. nov.

Candidatus Lanigida loripiforma (NL. fem. n. *loripiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG842 sp900313775*. The type genome for the species is the GenBank assembly GCA_900313775.1. The GC content of the type genome is 52.17 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Lanigosa adnulitoga sp. nov.

Candidatus Lanigosa adnulitoga (NL. fem. n. *adnulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp002685435*. The type genome for the species is the GenBank assembly GCA_002685435.1. The GC content of the type genome is 44.1 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Lanigosa gen. nov.

Candidatus Lanigosa (NL. fem. n. *Lanigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10364*. The type species for the genus is *Candidatus* Lanigosa adnulitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanigosa advecago sp. nov.

Candidatus Lanigosa advecago (NL. fem. n. *advecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003455605*. The type genome for the species is the GenBank assembly GCA_003455605.1. The GC content of the type genome is 46.36 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Lanigosa afranatio sp. nov.

Candidatus Lanigosa afranatio (NL. fem. n. *afranatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp002430755*. The type genome for the species is the GenBank assembly GCA_002430755.1. The GC content of the type genome is 45.73 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Lanigosa arrecousia sp. nov.

Candidatus Lanigosa arrecousia (NL. fem. n. *arrecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003545085*. The type genome for the species is the GenBank assembly GCA_003545085.1. The GC content of the type genome is 44.35 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Lanigosa bicoredo sp. nov.

Candidatus Lanigosa bicoredo (NL. fem. n. *bicoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003045825*. The type genome for the species is the GenBank assembly GCA_009936725.1. The GC content of the type genome is 45.04 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Lanigosa bovicedo sp. nov.

Candidatus Lanigosa bovicedo (NL. fem. n. *bovicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp002387615*. The type genome for the species is the GenBank assembly GCA_002478785.1. The GC content of the type genome is 44.19 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lanigosa culibibra sp. nov.

Candidatus Lanigosa culibibra (NL. fem. n. *culibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp902614915*. The type genome for the species is the GenBank assembly GCA_902614915.1. The GC content of the type genome is 39.28 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Lanigosa delubigena sp. nov.

Candidatus Lanigosa delubigena (NL. fem. n. *delubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10364 sp003445735*. The type genome for the species is the GenBank assembly GCA_011525165.1. The GC content of the type genome is 46.28 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lanigosa denupitia sp. nov.

Candidatus Lanigosa denupitia (NL. fem. n. *denupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp012269745*. The type genome for the species is the GenBank assembly GCA_012269745.1. The GC content of the type genome is 45.38 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Lanigosa derelatio sp. nov.

Candidatus Lanigosa derelatio (NL. fem. n. *derelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp013911625*. The type genome for the species is the GenBank assembly GCA_013911625.1. The GC content of the type genome is 45.57 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Lanigosa detunisca sp. nov.

Candidatus Lanigosa detunisca (NL. fem. n. *detunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp002378005*. The type genome for the species is the GenBank assembly GCA_002378005.1. The GC content of the type genome is 47.4 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lanigosa fatifilega sp. nov.

Candidatus Lanigosa fatifilega (NL. fem. n. *fatifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003487785*. The type genome for the species is the GenBank assembly GCA_002339565.1. The GC content of the type genome is 41.81 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Lanigosa inexpimonas sp. nov.

Candidatus Lanigosa inexpimonas (NL. fem. n. *inexpimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp002707525*. The type genome for the species is the GenBank assembly GCA_002707525.1. The GC content of the type genome is 40.43 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Lanigosa onocritia sp. nov.

Candidatus Lanigosa onocritia (NL. fem. n. *onocritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003023665*. The type genome for the species is the GenBank assembly GCA_003023665.1. The GC content of the type genome is 40.87 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lanigosa selibatio sp. nov.

Candidatus Lanigosa selibatio (NL. fem. n. *selibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp011525035*. The type genome for the species is the GenBank assembly GCA_011525035.1. The GC content of the type genome is 46.41 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Lanigosa semifitia sp. nov.

Candidatus Lanigosa semifitia (NL. fem. n. *semifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10364 sp003385605*. The type genome for the species is the GenBank assembly GCA_003385605.1. The GC content of the type genome is 45.97 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Lanigula regifitudo sp. nov.

Candidatus Lanigula regifitudo (NL. fem. n. *regifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UWMA-0217 sp012961935*. The type genome for the species is the GenBank assembly GCA_012961935.1. The GC content of the type genome is 48.06 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Lanigula gen. nov.

Candidatus Lanigula (NL. fem. n. *Lanigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UWMA-0217*. The type species for the genus is *Candidatus* Lanigula regifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UWMA-0217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanigulaceae.

Description of *Candidatus* Lanigulaceae fam. nov.

Candidatus Lanigulaceae (NL. fem. n. *Lanigulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UWMA-0217.* The type genus for the taxon is *Candidatus* Lanigula .

According to GTDB R06-RS202, this family belongs to the order *Thiotrichales*.

Description of *Candidatus* Lanugana arbavigena sp. nov.

Candidatus Lanugana arbavigena (NL. fem. n. *arbavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABD01 sp014238425*. The type genome for the species is the GenBank assembly GCA_014238425.1. The GC content of the type genome is 34.83 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Lanugana gen. nov.

Candidatus Lanugana (NL. fem. n. *Lanugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABD01*. The type species for the genus is *Candidatus* Lanugana arbavigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanugana semipilega sp. nov.

Candidatus Lanugana semipilega (NL. fem. n. *semipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABD01 sp013001365*. The type genome for the species is the GenBank assembly GCA_013043265.1. The GC content of the type genome is 38.61 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Lanugaria adhorimonia sp. nov.

Candidatus Lanugaria adhorimonia (NL. fem. n. *adhorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALW01 sp900547955*. The type genome for the species is the GenBank assembly GCA_900547955.1. The GC content of the type genome is 46.79 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Lanugaria gen. nov.

Candidatus Lanugaria (NL. fem. n. *Lanugaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QALW01*. The type species for the genus is *Candidatus* Lanugaria adhorimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QALW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugariaceae.

Description of *Candidatus* Lanugariaceae fam. nov.

Candidatus Lanugariaceae (NL. fem. n. *Lanugariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *QALW01*. The type genus for the taxon is *Candidatus* Lanugaria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Lanugaria desepibra sp. nov.

Candidatus Lanugaria desepibra (NL. fem. n. *desepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALW01 sp003150515*. The type genome for the species is the GenBank assembly GCA_900547535.1. The GC content of the type genome is 47.97 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Lanugaria lapicitrix sp. nov.

Candidatus Lanugaria lapicitrix (NL. fem. n. *lapicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALW01 sp900552055*. The type genome for the species is the GenBank assembly RS_GCF_900752885.1. The GC content of the type genome is 46.91 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Lanugella adaggibra sp. nov.

Candidatus Lanugella adaggibra (NL. fem. n. *adaggibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUB01 sp012517875*. The type genome for the species is the GenBank assembly GCA_012517875.1. The GC content of the type genome is 65.69 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Lanugella gen. nov.

Candidatus Lanugella (NL. fem. n. *Lanugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUB01*. The type species for the genus is *Candidatus* Lanugella adaggibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYUB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Lanugellaceae.

Description of *Candidatus* Lanugellaceae fam. nov.

Candidatus Lanugellaceae (NL. fem. n. *Lanugellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUB01.* The type genus for the taxon is *Candidatus* Lanugella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYUB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lanugellales.

Description of *Candidatus* Lanugellales ord. nov.

Candidatus Lanugellales (NL. fem. n. *Lanugellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUB01.* The type genus for the taxon is *Candidatus* Lanugella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomulae.

Description of *Candidatus* Lanugida citipitica sp. nov.

Candidatus Lanugida citipitica (NL. fem. n. *citipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003165795*. The type genome for the species is the GenBank assembly GCA_003167855.1. The GC content of the type genome is 58.52 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Lanugida gen. nov.

Candidatus Lanugida (NL. fem. n. *Lanugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-257*. The type species for the genus is *Candidatus* Lanugida citipitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanugida cocibigena sp. nov.

Candidatus Lanugida cocibigena (NL. fem. n. *cocibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003135475*. The type genome for the species is the GenBank assembly GCA_003135475.1. The GC content of the type genome is 58.65 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Lanugida decupastra sp. nov.

Candidatus Lanugida decupastra (NL. fem. n. *decupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003151335*. The type genome for the species is the GenBank assembly GCA_003165535.1. The GC content of the type genome is 58.8 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Lanugida effacitoga sp. nov.

Candidatus Lanugida effacitoga (NL. fem. n. *effacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003135315*. The type genome for the species is the GenBank assembly GCA_003135315.1. The GC content of the type genome is 59.27 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Lanugida munifessa sp. nov.

Candidatus Lanugida munifessa (NL. fem. n. *munifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003152695*. The type genome for the species is the GenBank assembly GCA_003167225.1. The GC content of the type genome is 58.72 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Lanugida rudecicula sp. nov.

Candidatus Lanugida rudecicula (NL. fem. n. *rudecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003151875*. The type genome for the species is the GenBank assembly GCA_003151875.1. The GC content of the type genome is 59.23 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Lanugida sacomiforma sp. nov.

Candidatus Lanugida sacomiforma (NL. fem. n. *sacomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-257 sp003160215*. The type genome for the species is the GenBank assembly GCA_003160215.1. The GC content of the type genome is 58.0 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Lanugosa adsibessa sp. nov.

Candidatus Lanugosa adsibessa (NL. fem. n. *adsibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp010084195*. The type genome for the species is the GenBank assembly GCA_010084195.1. The GC content of the type genome is 59.39 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Lanugosa gen. nov.

Candidatus Lanugosa (NL. fem. n. *Lanugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-234*. The type species for the genus is *Candidatus* Lanugosa adsibessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lanugosa cohuritia sp. nov.

Candidatus Lanugosa cohuritia (NL. fem. n. *cohuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BOG-234 sp003136575*. The type genome for the species is the GenBank assembly GCA_003136575.1. The GC content of the type genome is 60.07 % and the genome length is 6.6 Mbp.

Description of *Candidatus* Lanugosa colopitudo sp. nov.

Candidatus Lanugosa colopitudo (NL. fem. n. *colopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903907865*. The type genome for the species is the GenBank assembly GCA_903920995.1. The GC content of the type genome is 62.45 % and the genome length is 7.48 Mbp.

Description of *Candidatus* Lanugosa culibifica sp. nov.

Candidatus Lanugosa culibifica (NL. fem. n. *culibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903929755*. The type genome for the species is the GenBank assembly GCA_903910425.1. The GC content of the type genome is 59.85 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Lanugosa denavitica sp. nov.

Candidatus Lanugosa denavitica (NL. fem. n. *denavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903925015*. The type genome for the species is the GenBank assembly GCA_903925015.1. The GC content of the type genome is 60.61 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Lanugosa depicatio sp. nov.

Candidatus Lanugosa depicatio (NL. fem. n. *depicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903875575*. The type genome for the species is the GenBank assembly GCA_903875575.1. The GC content of the type genome is 59.9 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Lanugosa echidigena sp. nov.

Candidatus Lanugosa echidigena (NL. fem. n. *echidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903923395*. The type genome for the species is the GenBank assembly GCA_903923395.1. The GC content of the type genome is 58.66 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Lanugosa ininnitas sp. nov.

Candidatus Lanugosa ininnitas (NL. fem. n. *ininnitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903893525*. The type genome for the species is the GenBank assembly GCA_903893525.1. The GC content of the type genome is 60.62 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Lanugosa lanugugo sp. nov.

Candidatus Lanugosa lanugugo (NL. fem. n. *lanugugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903825445*. The type genome for the species is the GenBank assembly GCA_903825445.1. The GC content of the type genome is 58.37 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Lanugosa reduvigena sp. nov.

Candidatus Lanugosa reduvigena (NL. fem. n. *reduvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903851195*. The type genome for the species is the GenBank assembly GCA_903923385.1. The GC content of the type genome is 62.27 % and the genome length is 7.69 Mbp.

Description of *Candidatus* Lanugosa rubefugo sp. nov.

Candidatus Lanugosa rubefugo (NL. fem. n. *rubefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903900705*. The type genome for the species is the GenBank assembly GCA_903890055.1. The GC content of the type genome is 61.56 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Lanugosa tomacitoga sp. nov.

Candidatus Lanugosa tomacitoga (NL. fem. n. *tomacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-234 sp903828455*. The type genome for the species is the GenBank assembly GCA_903828455.1. The GC content of the type genome is 62.85 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Lanugula acculitia sp. nov.

Candidatus Lanugula acculitia (NL. fem. n. *acculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-12 sp003105265*. The type genome for the species is the GenBank assembly GCA_003105265.1. The GC content of the type genome is 57.34 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Lanugula gen. nov.

Candidatus Lanugula (NL. fem. n. *Lanugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-12*. The type species for the genus is *Candidatus* Lanugula acculitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Lanugulaceae fam. nov.

Candidatus Lanugulaceae (NL. fem. n. *Lanugulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEB-12*. The type genus for the taxon is *Candidatus* Lanugula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GN15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solacidales.

Description of *Candidatus* Lapicana malediforma sp. nov.

Candidatus Lapicana malediforma (NL. fem. n. *malediforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG013 sp001486445*. The type genome for the species is the GenBank assembly GCA_902755365.1. The GC content of the type genome is 63.67 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Lapicana gen. nov.

Candidatus Lapicana (NL. fem. n. *Lapicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG013*. The type species for the genus is *Candidatus* Lapicana malediforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lapicaria nivomilega sp. nov.

Candidatus Lapicaria nivomilega (NL. fem. n. *nivomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1908 sp900556185*. The type genome for the species is the GenBank assembly RS_GCF_900753745.1. The GC content of the type genome is 34.53 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Lapicaria gen. nov.

Candidatus Lapicaria (NL. fem. n. *Lapicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1908*. The type species for the genus is *Candidatus* Lapicaria

nivomilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Lapicella reduvetta sp. nov.

Candidatus Lapicella reduvetta (NL. fem. n. *reduvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAI01 sp003567135*. The type genome for the species is the GenBank assembly GCA_003567135.1. The GC content of the type genome is 48.45 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Lapicella gen. nov.

Candidatus Lapicella (NL. fem. n. *Lapicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXAI01*. The type species for the genus is *Candidatus* Lapicella reduvetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapicellaceae.

Description of *Candidatus* Lapicellaceae fam. nov.

Candidatus Lapicellaceae (NL. fem. n. *Lapicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXAI01*. The type genus for the taxon is *Candidatus* Lapicella .

According to GTDB R06-RS202, this family belongs to the order *Balneolales*.

Description of *Candidatus* Lapicia subodifica sp. nov.

Candidatus Lapicia subodifica (NL. fem. n. *subodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PXDI01 sp003565095*. The type genome for the species is the GenBank assembly GCA_003565095.1. The GC content of the type genome is 54.23 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Lapicia gen. nov.

Candidatus Lapicia (NL. fem. n. *Lapicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXDI01*. The type species for the genus is *Candidatus* Lapicia subodifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXDI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapiciaceae.

Description of *Candidatus* Lapiciaceae fam. nov.

Candidatus Lapiciaceae (NL. fem. n. *Lapiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXDI01.* The type genus for the taxon is *Candidatus* Lapicia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Lapicosa adgesigena sp. nov.

Candidatus Lapicosa adgesigena (NL. fem. n. *adgesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp003556985*. The type genome for the species is the GenBank assembly GCA_003556985.1. The GC content of the type genome is 44.66 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Lapicosa gen. nov.

Candidatus Lapicosa (NL. fem. n. *Lapicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXAP01*. The type species for the genus is *Candidatus* Lapicosa

adgesigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifidaceae.

Description of *Candidatus* Lapicosa catapimonas sp. nov.

Candidatus Lapicosa catapimonas (NL. fem. n. *catapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007132715*. The type genome for the species is the GenBank assembly GCA_007129855.1. The GC content of the type genome is 48.34 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Lapicosa cicatibra sp. nov.

Candidatus Lapicosa cicatibra (NL. fem. n. *cicatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007120695*. The type genome for the species is the GenBank assembly GCA_003556565.1. The GC content of the type genome is 43.43 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Lapicosa cruppitio sp. nov.

Candidatus Lapicosa cruppitio (NL. fem. n. *cruppitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007132365*. The type genome for the species is the GenBank assembly GCA_007132365.1. The GC content of the type genome is 43.82 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Lapicosa extipugo sp. nov.

Candidatus Lapicosa extipugo (NL. fem. n. *extipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007134675*. The type genome for the species is the

GenBank assembly GCA_007134675.1. The GC content of the type genome is 42.66 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Lapicosa gasifedo sp. nov.

Candidatus Lapicosa gasifedo (NL. fem. n. *gasifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007123885*. The type genome for the species is the GenBank assembly GCA_007121265.1. The GC content of the type genome is 44.43 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Lapicosa indipigena sp. nov.

Candidatus Lapicosa indipigena (NL. fem. n. *indipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007695015*. The type genome for the species is the GenBank assembly GCA_007695015.1. The GC content of the type genome is 48.38 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Lapicosa inmolitudo sp. nov.

Candidatus Lapicosa inmolitudo (NL. fem. n. *inmolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007132225*. The type genome for the species is the GenBank assembly GCA_007132225.1. The GC content of the type genome is 41.3 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Lapicosa insepax sp. nov.

Candidatus Lapicosa insepax (NL. fem. n. *insepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp003567115*. The type genome for the species is the GenBank assembly GCA_003567115.1. The GC content of the type genome is 42.93 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Lapicosa insibitica sp. nov.

Candidatus Lapicosa insibitica (NL. fem. n. *insibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007131165*. The type genome for the species is the GenBank assembly GCA_007131165.1. The GC content of the type genome is 46.63 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Lapicosa socagifica sp. nov.

Candidatus Lapicosa socagifica (NL. fem. n. *socagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007119075*. The type genome for the species is the GenBank assembly GCA_007119075.1. The GC content of the type genome is 48.42 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Lapicosa teniliforma sp. nov.

Candidatus Lapicosa teniliforma (NL. fem. n. *teniliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007133565*. The type genome for the species is the GenBank assembly GCA_007133565.1. The GC content of the type genome is 47.79 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Lapicosa viragisca sp. nov.

Candidatus Lapicosa viragisca (NL. fem. n. *viragisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAP01 sp007135095*. The type genome for the species is the GenBank assembly GCA_007135095.1. The GC content of the type genome is 45.25 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Lapicula absurago sp. nov.

Candidatus Lapicula absurago (NL. fem. n. *absurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002353215*. The type genome for the species is the GenBank assembly GCA_002353215.1. The GC content of the type genome is 45.18 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Lapicula gen. nov.

Candidatus Lapicula (NL. fem. n. *Lapicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4334*. The type species for the genus is *Candidatus* Lapicula absurago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lapicula algebimonia sp. nov.

Candidatus Lapicula algebimonia (NL. fem. n. *algebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp012729225*. The type genome for the species is the GenBank assembly GCA_012729225.1. The GC content of the type genome is 45.21 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Lapicula cisaledo sp. nov.

Candidatus Lapicula cisaledo (NL. fem. n. *cisaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp900316975*. The type genome for the species is the GenBank assembly GCA_900316975.1. The GC content of the type genome is 47.62 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Lapicula cucurilega sp. nov.

Candidatus Lapicula cucurilega (NL. fem. n. *cucurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp009177185*. The type genome for the species is the

GenBank assembly GCA_009177185.1. The GC content of the type genome is 49.25 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Lapicula culilicella sp. nov.

Candidatus Lapicula culilicella (NL. fem. n. *culilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002353575*. The type genome for the species is the GenBank assembly GCA_002353575.1. The GC content of the type genome is 46.88 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Lapicula delecousia sp. nov.

Candidatus Lapicula delecousia (NL. fem. n. *delecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902803605*. The type genome for the species is the GenBank assembly GCA_902803605.1. The GC content of the type genome is 49.04 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Lapicula dilecitrix sp. nov.

Candidatus Lapicula dilecitrix (NL. fem. n. *dilecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902800305*. The type genome for the species is the GenBank assembly GCA_902800305.1. The GC content of the type genome is 49.23 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Lapicula ducililenta sp. nov.

Candidatus Lapicula ducililenta (NL. fem. n. *ducililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902768125*. The type genome for the species is the GenBank assembly GCA_902768125.1. The GC content of the type genome is 48.08 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Lapicula fefeletta sp. nov.

Candidatus Lapicula fefeletta (NL. fem. n. *fefeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902786925*. The type genome for the species is the GenBank assembly GCA_902786925.1. The GC content of the type genome is 48.55 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Lapicula habacitas sp. nov.

Candidatus Lapicula habacitas (NL. fem. n. *habacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002393555*. The type genome for the species is the GenBank assembly GCA_002393555.1. The GC content of the type genome is 51.21 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Lapicula hemititrix sp. nov.

Candidatus Lapicula hemititrix (NL. fem. n. *hemititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902774005*. The type genome for the species is the GenBank assembly GCA_902774005.1. The GC content of the type genome is 47.59 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Lapicula inlumiforma sp. nov.

Candidatus Lapicula inlumiforma (NL. fem. n. *inlumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902802265*. The type genome for the species is the GenBank assembly GCA_902802265.1. The GC content of the type genome is 49.36 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Lapicula malogentia sp. nov.

Candidatus Lapicula malogentia (NL. fem. n. *malogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002363115*. The type genome for the species is the GenBank assembly GCA_002363115.1. The GC content of the type genome is 48.8 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Lapicula mavorivita sp. nov.

Candidatus Lapicula mavorivita (NL. fem. n. *mavorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp902801475*. The type genome for the species is the GenBank assembly GCA_902801475.1. The GC content of the type genome is 48.6 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Lapicula oblucousia sp. nov.

Candidatus Lapicula oblucousia (NL. fem. n. *oblucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002317225*. The type genome for the species is the GenBank assembly GCA_002317225.1. The GC content of the type genome is 43.37 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Lapicula panopitio sp. nov.

Candidatus Lapicula panopitio (NL. fem. n. *panopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp002342585*. The type genome for the species is the GenBank assembly GCA_902803225.1. The GC content of the type genome is 43.85 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Lapicula rudicitudo sp. nov.

Candidatus Lapicula rudicitudo (NL. fem. n. *rudicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp900318775*. The type genome for the species is the GenBank assembly GCA_002350325.1. The GC content of the type genome is 48.13 %

and the genome length is 2.74 Mbp.

Description of *Candidatus* Lapicula semibitura sp. nov.

Candidatus Lapicula semibitura (NL. fem. n. *semibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4334 sp900316505*. The type genome for the species is the GenBank assembly GCA_902760895.1. The GC content of the type genome is 48.0 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Lapidilactobacillus culigedo sp. nov.

Candidatus Lapidilactobacillus culigedo (NL. fem. n. *culigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lapidilactobacillus sp003946695*. The type genome for the species is the GenBank assembly RS_GCF_003946695.1. The GC content of the type genome is 40.11 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Lapidilactobacillus inlacetta sp. nov.

Candidatus Lapidilactobacillus inlacetta (NL. fem. n. *inlacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lapidilactobacillus sp003946215*. The type genome for the species is the GenBank assembly RS_GCF_003946215.1. The GC content of the type genome is 42.48 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Lapilana debucilenta sp. nov.

Candidatus Lapilana debucilenta (NL. fem. n. *debucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2-FULL-39-29 sp001778355*. The type genome for the species is the GenBank assembly GCA_001778355.1. The GC content of the type genome is 40.52 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Lapilana gen. nov.

Candidatus Lapilana (NL. fem. n. *Lapilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D2-FULL-39-29*. The type species for the genus is *Candidatus* Lapilana debucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2-FULL-39-29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilanaceae.

Description of *Candidatus* Lapilanaceae fam. nov.

Candidatus Lapilanaceae (NL. fem. n. *Lapilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D2-FULL-39-29.* The type genus for the taxon is *Candidatus* Lapilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *D2-FULL-39-29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lapilanales.

Description of *Candidatus* Lapilanales ord. nov.

Candidatus Lapilanales (NL. fem. n. *Lapilanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D2-FULL-39-29.* The type genus for the taxon is *Candidatus* Lapilana .

According to the original version of GTDB R06-RS202, this family belongs to the class *D2-FULL-39-29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lapilanae.

Description of *Candidatus* Lapilanae class. nov.

Candidatus Lapilanae (NL. fem. n. *c__Lapilanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D2-FULL-39-29.* The type genus for the taxon is *Candidatus* Lapilana .

According to GTDB R06-RS202, this class belongs to the phylum *Firestonebacteria*.

Description of *Candidatus* Lapilana vepalicula sp. nov.

Candidatus Lapilana vepalicula (NL. fem. n. *vepalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2-FULL-39-29 sp001778375*. The type genome for the species is the GenBank assembly GCA_001780375.1. The GC content of the type genome is 39.27 % and the genome length is 3.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Lapilaria acropetta sp. nov.

Candidatus Lapilaria acropetta (NL. fem. n. *acropetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp002746305*. The type genome for the species is the GenBank assembly GCA_002746305.1. The GC content of the type genome is 36.41 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Lapilaria gen. nov.

Candidatus Lapilaria (NL. fem. n. *Lapilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9320*. The type species for the genus is *Candidatus* Lapilaria acropetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Lapilariaceae fam. nov.

Candidatus Lapilariaceae (NL. fem. n. *Lapilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9320.* The type genus for the taxon is *Candidatus* Lapilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Lapilaria alcedilenta sp. nov.

Candidatus Lapilaria alcedilenta (NL. fem. n. *alcedilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp013042025*. The type genome for the species is the GenBank assembly GCA_013042025.1. The GC content of the type genome is 35.45 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Lapilaria apruciforma sp. nov.

Candidatus Lapilaria apruciforma (NL. fem. n. *apruciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp003516975*. The type genome for the species is the GenBank assembly GCA_003516975.1. The GC content of the type genome is 37.56 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Lapilaria delubibula sp. nov.

Candidatus Lapilaria delubibula (NL. fem. n. *delubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp003485825*. The type genome for the species is the GenBank assembly GCA_003485825.1. The GC content of the type genome is 39.86 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Lapilaria diludifica sp. nov.

Candidatus Lapilaria diludifica (NL. fem. n. *diludifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp003484585*. The type genome for the species is the GenBank assembly GCA_003484585.1. The GC content of the type genome is 38.32 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Lapilaria hemidousia sp. nov.

Candidatus Lapilaria hemidousia (NL. fem. n. *hemidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9320 sp002384205*. The type genome for the species is the GenBank assembly GCA_002384205.1. The GC content of the type genome is 37.62 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Lapilella accerisca sp. nov.

Candidatus Lapilella accerisca (NL. fem. n. *accerisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8229 sp002686675*. The type genome for the species is the GenBank assembly GCA_002686675.1. The GC content of the type genome is 39.05 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Lapilella gen. nov.

Candidatus Lapilella (NL. fem. n. *Lapilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8229*. The type species for the genus is *Candidatus* Lapilella accerisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilellaceae.

Description of *Candidatus* Lapilellaceae fam. nov.

Candidatus Lapilellaceae (NL. fem. n. *Lapilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8229.* The type genus for the taxon is *Candidatus* Lapilella .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Lapilella inresugo sp. nov.

Candidatus Lapilella inresugo (NL. fem. n. *inresugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8229 sp003535775*. The type genome for the species is the GenBank assembly GCA_003535775.1. The GC content of the type genome is 39.24 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Lapilella monumifica sp. nov.

Candidatus Lapilella monumifica (NL. fem. n. *monumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8229 sp012964235*. The type genome for the species is the GenBank assembly GCA_012964235.1. The GC content of the type genome is 39.61 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Lapilella peripicula sp. nov.

Candidatus Lapilella peripicula (NL. fem. n. *peripicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8229 sp002726775*. The type genome for the species is the GenBank assembly GCA_002726775.1. The GC content of the type genome is 39.77 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Lapilia duricibula sp. nov.

Candidatus Lapilia duricibula (NL. fem. n. *duricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKPT01 sp007119405*. The type genome for the species is the GenBank assembly GCA_007119405.1. The GC content of the type genome is 68.94 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Lapilia gen. nov.

Candidatus Lapilia (NL. fem. n. *Lapilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKPT01*. The type species for the genus is *Candidatus* Lapilia duricibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lapilida irraditrix sp. nov.

Candidatus Lapilida irraditrix (NL. fem. n. *irraditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWU01 sp011388375*. The type genome for the species is the GenBank assembly GCA_011388375.1. The GC content of the type genome is 29.03 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Lapilida gen. nov.

Candidatus Lapilida (NL. fem. n. *Lapilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWU01*. The type species for the genus is *Candidatus* Lapilida irraditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRWU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilidaceae.

Description of *Candidatus* Lapilidaceae fam. nov.

Candidatus Lapilidaceae (NL. fem. n. *Lapilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRWU01*. The type genus for the taxon is *Candidatus* Lapilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Lapilosa conaribula sp. nov.

Candidatus Lapilosa conaribula (NL. fem. n. *conaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5627 sp012719115*. The type genome for the species is the

GenBank assembly GCA_012719115.1. The GC content of the type genome is 44.34 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Lapilosa gen. nov.

Candidatus Lapilosa (NL. fem. n. *Lapilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5627*. The type species for the genus is *Candidatus* Lapilosa conaribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5627*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilosaceae.

Description of *Candidatus* Lapilosaceae fam. nov.

Candidatus Lapilosaceae (NL. fem. n. *Lapilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5627.* The type genus for the taxon is *Candidatus* Lapilosa .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Lapilosa desucentia sp. nov.

Candidatus Lapilosa desucentia (NL. fem. n. *desucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5627 sp012520835*. The type genome for the species is the GenBank assembly GCA_012520835.1. The GC content of the type genome is 46.71 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Lapilosa documicula sp. nov.

Candidatus Lapilosa documicula (NL. fem. n. *documicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5627 sp002421585*. The type genome for the species is the GenBank assembly GCA_002421585.1. The GC content of the type genome is 44.15 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Lapilosa ensifugo sp. nov.

Candidatus Lapilosa ensifugo (NL. fem. n. *ensifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5627 sp002419135*. The type genome for the species is the GenBank assembly GCA_002419135.1. The GC content of the type genome is 43.96 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Larkinella bicalentia sp. nov.

Candidatus Larkinella bicalentia (NL. fem. n. *bicalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Larkinella sp008727875*. The type genome for the species is the GenBank assembly RS_GCF_008727875.1. The GC content of the type genome is 52.27 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Larkinella divolessa sp. nov.

Candidatus Larkinella divolessa (NL. fem. n. *divolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Larkinella sp003334855*. The type genome for the species is the GenBank assembly RS_GCF_003334855.1. The GC content of the type genome is 51.79 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Larkinella funebitura sp. nov.

Candidatus Larkinella funebitura (NL. fem. n. *funebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Larkinella sp006149005*. The type genome for the species is the GenBank assembly RS_GCF_006149005.1. The GC content of the type genome is 51.82 % and the genome length is 7.94 Mbp.

Description of *Candidatus* Larkinella utrariforma sp. nov.

Candidatus Larkinella utrariforma (NL. fem. n. *utrariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Larkinella sp004366505*. The type genome for the species is the GenBank assembly RS_GCF_004366505.1. The GC content of the type genome is 53.4 % and the genome length is 7.27 Mbp.

Description of *Candidatus* Latibana nimiriforma sp. nov.

Candidatus Latibana nimiriforma (NL. fem. n. *nimiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUQR01 sp903901335*. The type genome for the species is the GenBank assembly GCA_903872855.1. The GC content of the type genome is 50.16 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Latibana gen. nov.

Candidatus Latibana (NL. fem. n. *Latibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUQR01*. The type species for the genus is *Candidatus* Latibana nimiriforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Latibaria bicubitas sp. nov.

Candidatus Latibaria bicubitas (NL. fem. n. *bicubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-80 sp002418775*. The type genome for the species is the GenBank assembly GCA_002421505.1. The GC content of the type genome is 46.07 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Latibaria gen. nov.

Candidatus Latibaria (NL. fem. n. *Latibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *46-80*. The type species for the genus is *Candidatus* Latibaria bicubitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Nap2-2B*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenariaceae.

Description of *Candidatus* Latibaria defacetta sp. nov.

Candidatus Latibaria defacetta (NL. fem. n. *defacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-80 sp003513005*. The type genome for the species is the GenBank assembly GCA_001508995.1. The GC content of the type genome is 45.75 % and the genome length is 2.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample SB1".

Description of *Candidatus* Latibaria letifugo sp. nov.

Candidatus Latibaria letifugo (NL. fem. n. *letifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-80 sp002382755*. The type genome for the species is the GenBank assembly GCA_002347425.1. The GC content of the type genome is 46.37 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Latibaria octipimonia sp. nov.

Candidatus Latibaria octipimonia (NL. fem. n. *octipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-80 sp003485325*. The type genome for the species is the GenBank assembly GCA_003485325.1. The GC content of the type genome is 45.74 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Latibia molecetta sp. nov.

Candidatus Latibia molecetta (NL. fem. n. *molecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3505 sp002728755*. The type genome for the species is the GenBank assembly GCA_002728755.1. The GC content of the type genome is 54.59 %

and the genome length is 4.14 Mbp.

Description of *Candidatus* Latibia gen. nov.

Candidatus Latibia (NL. fem. n. *Latibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3505*. The type species for the genus is *Candidatus* Latibia molecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3505*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Latibiaceae.

Description of *Candidatus* Latibiaceae fam. nov.

Candidatus Latibiaceae (NL. fem. n. *Latibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3505.* The type genus for the taxon is *Candidatus* Latibia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3505*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibiales.

Description of *Candidatus* Latibiales ord. nov.

Candidatus Latibiales (NL. fem. n. *Latibiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3505.* The type genus for the taxon is *Candidatus* Latibia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Latibida ignosicella sp. nov.

Candidatus Latibida ignosicella (NL. fem. n. *ignosicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-32-72 sp000989525*. The type genome for the species is the

GenBank assembly GCA_000989525.1. The GC content of the type genome is 32.7 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Latibida gen. nov.

Candidatus Latibida (NL. fem. n. *Latibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-32-72*. The type species for the genus is *Candidatus* Latibida ignosicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-32-72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Latibidaceae.

Description of *Candidatus* Latibidaceae fam. nov.

Candidatus Latibidaceae (NL. fem. n. *Latibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-32-72.* The type genus for the taxon is *Candidatus* Latibida .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Lautropia coticifica sp. nov.

Candidatus Lautropia coticifica (NL. fem. n. *coticifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lautropia sp012513675*. The type genome for the species is the GenBank assembly GCA_012513675.1. The GC content of the type genome is 69.74 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Lautropia subofisca sp. nov.

Candidatus Lautropia subofisca (NL. fem. n. *subofisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lautropia sp013813615*. The type genome for the species is the GenBank assembly GCA_013813615.1. The GC content of the type genome is 66.35 %

and the genome length is 3.28 Mbp.

Description of *Candidatus* Lavabana apercugo sp. nov.

Candidatus Lavabana apercugo (NL. fem. n. *apercugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003152015*. The type genome for the species is the GenBank assembly GCA_003152015.1. The GC content of the type genome is 64.62 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Lavabana gen. nov.

Candidatus Lavabana (NL. fem. n. *Lavabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-756*. The type species for the genus is *Candidatus* Lavabana apercugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Lavabana betacitudo sp. nov.

Candidatus Lavabana betacitudo (NL. fem. n. *betacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003153575*. The type genome for the species is the GenBank assembly GCA_003167335.1. The GC content of the type genome is 69.28 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Lavabana catabimonas sp. nov.

Candidatus Lavabana catabimonas (NL. fem. n. *catabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003164095*. The type genome for the species is the GenBank assembly GCA_003164095.1. The GC content of the type genome is 69.74 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Lavabana cerarax sp. nov.

Candidatus Lavabana cerarax (NL. fem. n. *cerarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp903873395*. The type genome for the species is the GenBank assembly GCA_903848135.1. The GC content of the type genome is 64.65 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Lavabana citivugo sp. nov.

Candidatus Lavabana citivugo (NL. fem. n. *citivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003164275*. The type genome for the species is the GenBank assembly GCA_003164275.1. The GC content of the type genome is 64.65 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Lavabana decucimonas sp. nov.

Candidatus Lavabana decucimonas (NL. fem. n. *decucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003133325*. The type genome for the species is the GenBank assembly GCA_003133325.1. The GC content of the type genome is 64.71 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Lavabana detorifica sp. nov.

Candidatus Lavabana detorifica (NL. fem. n. *detorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp903849265*. The type genome for the species is the GenBank assembly GCA_903849265.1. The GC content of the type genome is 67.0 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Lavabana manubiforma sp. nov.

Candidatus Lavabana manubiforma (NL. fem. n. *manubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp903894295*. The type genome for the species is the GenBank assembly GCA_903853495.1. The GC content of the type genome is 67.06 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Lavabana pudibousia sp. nov.

Candidatus Lavabana pudibousia (NL. fem. n. *pudibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003157945*. The type genome for the species is the GenBank assembly GCA_003157945.1. The GC content of the type genome is 71.81 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Lavabana recocitudo sp. nov.

Candidatus Lavabana recocitudo (NL. fem. n. *recocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp903906055*. The type genome for the species is the GenBank assembly GCA_903853155.1. The GC content of the type genome is 66.15 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Lavabana tegumastra sp. nov.

Candidatus Lavabana tegumastra (NL. fem. n. *tegumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-756 sp003138855*. The type genome for the species is the GenBank assembly GCA_003159395.1. The GC content of the type genome is 67.74 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Lavabaria nidifitica sp. nov.

Candidatus Lavabaria nidifitica (NL. fem. n. *nidifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Fen-1308 sp903822005*. The type genome for the species is the GenBank assembly GCA_903822005.1. The GC content of the type genome is 49.5 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Lavabaria gen. nov.

Candidatus Lavabaria (NL. fem. n. *Lavabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1308*. The type species for the genus is *Candidatus* Lavabaria nidifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Lavabaria nutamessa sp. nov.

Candidatus Lavabaria nutamessa (NL. fem. n. *nutamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1308 sp003170655*. The type genome for the species is the GenBank assembly GCA_003162365.1. The GC content of the type genome is 49.18 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Lavabella minurentia sp. nov.

Candidatus Lavabella minurentia (NL. fem. n. *minurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPHT01 sp903864935*. The type genome for the species is the GenBank assembly GCA_903864935.1. The GC content of the type genome is 44.56 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Lavabella gen. nov.

Candidatus Lavabella (NL. fem. n. *Lavabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPHT01*. The type species for the genus is *Candidatus* Lavabella minurentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Lavabella rudiciforma sp. nov.

Candidatus Lavabella rudiciforma (NL. fem. n. *rudiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPHT01 sp903825615*. The type genome for the species is the GenBank assembly GCA_903825615.1. The GC content of the type genome is 43.71 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Lavabia attorousia sp. nov.

Candidatus Lavabia attorousia (NL. fem. n. *attorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-631 sp900754115*. The type genome for the species is the GenBank assembly RS_GCF_900754115.1. The GC content of the type genome is 30.05 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Lavabia gen. nov.

Candidatus Lavabia (NL. fem. n. *Lavabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-631*. The type species for the genus is *Candidatus* Lavabia attorousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-631*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavabiaceae.

Description of *Candidatus* Lavabiaceae fam. nov.

Candidatus Lavabiaceae (NL. fem. n. *Lavabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-631.* The type genus for the taxon is *Candidatus* Lavabia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Lavabia categilega sp. nov.

Candidatus Lavabia categilega (NL. fem. n. *categilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-631 sp900762575*. The type genome for the species is the GenBank assembly RS_GCF_900762575.1. The GC content of the type genome is 26.31 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Lavabia necopicella sp. nov.

Candidatus Lavabia necopicella (NL. fem. n. *necopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-631 sp000433015*. The type genome for the species is the GenBank assembly GCA_000433015.1. The GC content of the type genome is 30.08 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Lavabida dilecitudo sp. nov.

Candidatus Lavabida dilecitudo (NL. fem. n. *dilecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNP01 sp007132995*. The type genome for the species is the GenBank assembly GCA_003557255.1. The GC content of the type genome is 48.4 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Lavabida gen. nov.

Candidatus Lavabida (NL. fem. n. *Lavabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNP01*. The type species for the genus is *Candidatus* Lavabida dilecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Lavabosa manubugo sp. nov.

Candidatus Lavabosa manubugo (NL. fem. n. *manubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDLI01 sp013003065*. The type genome for the species is the GenBank assembly GCA_013043745.1. The GC content of the type genome is 68.8 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Lavabosa gen. nov.

Candidatus Lavabosa (NL. fem. n. *Lavabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDLI01*. The type species for the genus is *Candidatus* Lavabosa manubugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Lavabula linigessa sp. nov.

Candidatus Lavabula linigessa (NL. fem. n. *linigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4770 sp002403335*. The type genome for the species is the GenBank assembly GCA_002403335.1. The GC content of the type genome is 38.67 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Lavabula gen. nov.

Candidatus Lavabula (NL. fem. n. *Lavabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4770*. The type species for the genus is *Candidatus* Lavabula

linigessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lavacana vitabitica sp. nov.

Candidatus Lavacana vitabitica (NL. fem. n. *vitabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA38 sp003223835*. The type genome for the species is the GenBank assembly GCA_003223835.1. The GC content of the type genome is 67.57 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Lavacana gen. nov.

Candidatus Lavacana (NL. fem. n. *Lavacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp6-AA38*. The type species for the genus is *Candidatus* Lavacana vitabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Lavacaria bipenilega sp. nov.

Candidatus Lavacaria bipenilega (NL. fem. n. *bipenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp003451935*. The type genome for the species is the GenBank assembly GCA_003451935.1. The GC content of the type genome is 64.76 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lavacaria gen. nov.

Candidatus Lavacaria (NL. fem. n. *Lavacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Lenti-01*. The type species for the genus is *Candidatus* Lavacaria bipenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Lenti-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacariaceae.

Description of *Candidatus* Lavacariaceae fam. nov.

Candidatus Lavacariaceae (NL. fem. n. *Lavacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Lenti-01.* The type genus for the taxon is *Candidatus* Lavacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *LD1-PB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delacariales.

Description of *Candidatus* Lavacaria depopedo sp. nov.

Candidatus Lavacaria depopedo (NL. fem. n. *depopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp009928955*. The type genome for the species is the GenBank assembly GCA_009928955.1. The GC content of the type genome is 65.9 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Lavacaria duponimonas sp. nov.

Candidatus Lavacaria duponimonas (NL. fem. n. *duponimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp012514035*. The type genome for the species is the GenBank assembly GCA_012514035.1. The GC content of the type genome is 63.62 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Lavacaria impigessa sp. nov.

Candidatus Lavacaria impigessa (NL. fem. n. *impigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp009930415*. The type genome for the species is the

GenBank assembly GCA_009930415.1. The GC content of the type genome is 66.12 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Lavacaria malagicella sp. nov.

Candidatus Lavacaria malagicella (NL. fem. n. *malagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp002347655*. The type genome for the species is the GenBank assembly GCA_002412675.1. The GC content of the type genome is 66.72 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Lavacaria nugivimonia sp. nov.

Candidatus Lavacaria nugivimonia (NL. fem. n. *nugivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp002071335*. The type genome for the species is the GenBank assembly GCA_002071335.1. The GC content of the type genome is 61.0 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Lavacaria vocifisca sp. nov.

Candidatus Lavacaria vocifisca (NL. fem. n. *vocifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-01 sp002304915*. The type genome for the species is the GenBank assembly GCA_012841945.1. The GC content of the type genome is 59.93 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Lavacella admigitura sp. nov.

Candidatus Lavacella admigitura (NL. fem. n. *admigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-426-I14 sp902533695*. The type genome for the species is the GenBank assembly GCA_902533695.1. The GC content of the type genome is 30.22 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Lavacella gen. nov.

Candidatus Lavacella (NL. fem. n. *Lavacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-426-I14*. The type species for the genus is *Candidatus* Lavacella admigitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA536-G10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depicosaceae.

Description of *Candidatus* Lavacella dimacitica sp. nov.

Candidatus Lavacella dimacitica (NL. fem. n. *dimacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-426-I14 sp003213175*. The type genome for the species is the GenBank assembly GCA_002698075.1. The GC content of the type genome is 29.94 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Lavacella negidifica sp. nov.

Candidatus Lavacella negidifica (NL. fem. n. *negidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-426-I14 sp003210055*. The type genome for the species is the GenBank assembly GCA_902577605.1. The GC content of the type genome is 29.58 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Lavacia monimifica sp. nov.

Candidatus Lavacia monimifica (NL. fem. n. *monimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAURB01 sp012033335*. The type genome for the species is the GenBank assembly GCA_012033335.1. The GC content of the type genome is 47.85 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Lavacia gen. nov.

Candidatus Lavacia (NL. fem. n. *Lavacia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAURB01*. The type species for the genus is *Candidatus* Lavacia monimifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lavacida arrecitura sp. nov.

Candidatus Lavacida arrecitura (NL. fem. n. *arrecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINCZ01 sp903847195*. The type genome for the species is the GenBank assembly GCA_903847195.1. The GC content of the type genome is 62.6 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Lavacida gen. nov.

Candidatus Lavacida (NL. fem. n. *Lavacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINCZ01*. The type species for the genus is *Candidatus* Lavacida arrecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAINCZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacidaceae.

Description of *Candidatus* Lavacidaceae fam. nov.

Candidatus Lavacidaceae (NL. fem. n. *Lavacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINCZ01.* The type genus for the taxon is *Candidatus* Lavacida .

According to GTDB R06-RS202, this family belongs to the order *Acidobacteriales*.

Description of *Candidatus* Lavacosa undevitura sp. nov.

Candidatus Lavacosa undevitura (NL. fem. n. *undevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-LCP sp005223185*. The type genome for the species is the GenBank assembly GCA_005223185.1. The GC content of the type genome is 46.54 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Lavacosa gen. nov.

Candidatus Lavacosa (NL. fem. n. *Lavacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-LCP*. The type species for the genus is *Candidatus* Lavacosa undevitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-LCP*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacosaceae.

Description of *Candidatus* Lavacosaceae fam. nov.

Candidatus Lavacosaceae (NL. fem. n. *Lavacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-LCP.* The type genus for the taxon is *Candidatus* Lavacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B3-LCP*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lavacosales.

Description of *Candidatus* Lavacosales ord. nov.

Candidatus Lavacosales (NL. fem. n. *Lavacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-LCP.* The type genus for the taxon is *Candidatus* Lavacosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *B3-LCP*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lavacosae.

Description of *Candidatus* Lavacosae class. nov.

Candidatus Lavacosae (NL. fem. n. *c__Lavacosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-LCP*. The type genus for the taxon is *Candidatus* Lavacosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Desonellota.

Description of *Candidatus* Lavacula repudisca sp. nov.

Candidatus Lavacula repudisca (NL. fem. n. *repudisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVZY01 sp011772205*. The type genome for the species is the GenBank assembly GCA_011771545.1. The GC content of the type genome is 53.14 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Lavacula gen. nov.

Candidatus Lavacula (NL. fem. n. *Lavacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVZY01*. The type species for the genus is *Candidatus* Lavacula repudisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WVZY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavaculaceae.

Description of *Candidatus* Lavaculaceae fam. nov.

Candidatus Lavaculaceae (NL. fem. n. *Lavaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVZY01*. The type genus for the taxon is *Candidatus* Lavacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WVZY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lavaculales.

Description of *Candidatus* Lavaculales ord. nov.

Candidatus Lavaculales (NL. fem. n. *Lavaculales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVZY01*. The type genus for the taxon is *Candidatus* Lavacula .

According to the GTDB R06-RS202, this order belongs to the class *Krumholzibacteria*.

Description of *Candidatus* Lawsonella inmemitica sp. nov.

Candidatus Lawsonella inmemitica (NL. fem. n. *inmemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonella sp012842085*. The type genome for the species is the GenBank assembly GCA_012842085.1. The GC content of the type genome is 51.82 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Lawsonibacter absoritica sp. nov.

Candidatus Lawsonibacter absoritica (NL. fem. n. *absoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900553135*. The type genome for the species is the GenBank assembly GCA_900553135.1. The GC content of the type genome is 61.53 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Lawsonibacter adsecedo sp. nov.

Candidatus Lawsonibacter adsecedo (NL. fem. n. *adsecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900766145*. The type genome for the species is the GenBank assembly GCA_900766145.1. The GC content of the type genome is 55.04 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Lawsonibacter altivitrix sp. nov.

Candidatus Lawsonibacter altivitrix (NL. fem. n. *altivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Lawsonibacter sp009911645*. The type genome for the species is the GenBank assembly RS_GCF_009911645.1. The GC content of the type genome is 57.77 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Lawsonibacter benevicella sp. nov.

Candidatus Lawsonibacter benevicella (NL. fem. n. *benevicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp003478995*. The type genome for the species is the GenBank assembly RS_GCF_003478995.1. The GC content of the type genome is 58.64 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Lawsonibacter catilisca sp. nov.

Candidatus Lawsonibacter catilisca (NL. fem. n. *catilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900066645*. The type genome for the species is the GenBank assembly GCA_900066645.1. The GC content of the type genome is 56.38 % and the genome length is 2.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Lawsonibacter demigugo sp. nov.

Candidatus Lawsonibacter demigugo (NL. fem. n. *demigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp009911595*. The type genome for the species is the GenBank assembly RS_GCF_009911595.1. The GC content of the type genome is 58.41 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Lawsonibacter energugo sp. nov.

Candidatus Lawsonibacter energugo (NL. fem. n. *energugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900754605*. The type genome for the species is the GenBank assembly GCA_900754605.1. The GC content of the type genome is 55.34 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Lawsonibacter fatifedo sp. nov.

Candidatus Lawsonibacter fatifedo (NL. fem. n. *fatifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp002160305*. The type genome for the species is the GenBank assembly RS_GCF_002160305.1. The GC content of the type genome is 59.86 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Lawsonibacter impilitrix sp. nov.

Candidatus Lawsonibacter impilitrix (NL. fem. n. *impilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp009917615*. The type genome for the species is the GenBank assembly RS_GCF_009917615.1. The GC content of the type genome is 55.58 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Lawsonibacter macilatica sp. nov.

Candidatus Lawsonibacter macilatica (NL. fem. n. *macilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900066825*. The type genome for the species is the GenBank assembly RS_GCF_003573975.1. The GC content of the type genome is 57.83 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Lawsonibacter mahelatio sp. nov.

Candidatus Lawsonibacter mahelatio (NL. fem. n. *mahelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900545895*. The type genome for the species is the GenBank assembly GCA_900545895.1. The GC content of the type genome is 62.18 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Lawsonibacter malagetta sp. nov.

Candidatus Lawsonibacter malagetta (NL. fem. n. *malagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900764755*. The type genome for the species is the GenBank assembly GCA_900764755.1. The GC content of the type genome is 59.85 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Lawsonibacter oblanitura sp. nov.

Candidatus Lawsonibacter oblanitura (NL. fem. n. *oblanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900763995*. The type genome for the species is the GenBank assembly GCA_900763995.1. The GC content of the type genome is 54.05 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Lawsonibacter pinigitio sp. nov.

Candidatus Lawsonibacter pinigitio (NL. fem. n. *pinigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp002161175*. The type genome for the species is the GenBank assembly RS_GCF_002161175.1. The GC content of the type genome is 57.17 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Lawsonibacter pluscitia sp. nov.

Candidatus Lawsonibacter pluscitia (NL. fem. n. *pluscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900550705*. The type genome for the species is the GenBank assembly GCA_900550705.1. The GC content of the type genome is 63.3 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Lawsonibacter purulatio sp. nov.

Candidatus Lawsonibacter purulatio (NL. fem. n. *purulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Lawsonibacter sp000492175*. The type genome for the species is the GenBank assembly RS_GCF_000492175.1. The GC content of the type genome is 58.77 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Lawsonibacter rarefedo sp. nov.

Candidatus Lawsonibacter rarefedo (NL. fem. n. *rarefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp902363045*. The type genome for the species is the GenBank assembly GCA_900766565.1. The GC content of the type genome is 60.39 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Lawsonibacter retunitica sp. nov.

Candidatus Lawsonibacter retunitica (NL. fem. n. *retunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp000177015*. The type genome for the species is the GenBank assembly RS_GCF_902374265.1. The GC content of the type genome is 56.8 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Lawsonibacter secunatio sp. nov.

Candidatus Lawsonibacter secunatio (NL. fem. n. *secunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp014287875*. The type genome for the species is the GenBank assembly GCA_900762865.1. The GC content of the type genome is 62.14 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Lawsonibacter senipago sp. nov.

Candidatus Lawsonibacter senipago (NL. fem. n. *senipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp900549405*. The type genome for the species is the GenBank assembly GCA_900549405.1. The GC content of the type genome is 62.04 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Lawsonibacter tiguritia sp. nov.

Candidatus Lawsonibacter tiguritia (NL. fem. n. *tiguritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lawsonibacter sp003612335*. The type genome for the species is the GenBank assembly RS_GCF_003612335.1. The GC content of the type genome is 60.0 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Laxitana addubivita sp. nov.

Candidatus Laxitana addubivita (NL. fem. n. *addubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG03 sp013791745*. The type genome for the species is the GenBank assembly GCA_013791745.1. The GC content of the type genome is 48.28 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Laxitana gen. nov.

Candidatus Laxitana (NL. fem. n. *Laxitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG03*. The type species for the genus is *Candidatus* Laxitana addubivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitanaceae.

Description of *Candidatus* Laxitanaceae fam. nov.

Candidatus Laxitanaceae (NL. fem. n. *Laxitanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG03.* The type genus for the taxon is *Candidatus* Laxitana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Laxitanales.

Description of *Candidatus* Laxitanales ord. nov.

Candidatus Laxitanales (NL. fem. n. *Laxitanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG03.* The type genus for the taxon is *Candidatus* Laxitana .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Laxitanae.

Description of *Candidatus* Laxitanae class. nov.

Candidatus Laxitanae (NL. fem. n. *c__Laxitanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG03.* The type genus for the taxon is *Candidatus* Laxitana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Laxitanota.

Description of *Candidatus* Laxitanota phyl. nov.

Candidatus Laxitanota (NL. fem. n. *Laxitanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG03.* The type genus for the taxon is *Candidatus* Laxitana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Laxitana exoscatica sp. nov.

Candidatus Laxitana exoscatica (NL. fem. n. *exoscatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG03 sp002841685*. The type genome for the species is the GenBank assembly GCA_002841685.1. The GC content of the type genome is 47.85 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Laxitana octipatica sp. nov.

Candidatus Laxitana octipatica (NL. fem. n. *octipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG03 sp013791675*. The type genome for the species is the GenBank assembly GCA_013791675.1. The GC content of the type genome is 45.15 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Laxitana tumefitica sp. nov.

Candidatus Laxitana tumefitica (NL. fem. n. *tumefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG03 sp002780705*. The type genome for the species is the GenBank assembly GCA_002780705.1. The GC content of the type genome is 49.89 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Laxitaria colutitoga sp. nov.

Candidatus Laxitaria colutitoga (NL. fem. n. *colutitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4166 sp002379985*. The type genome for the species is the GenBank assembly GCA_002699265.1. The GC content of the type genome is 41.5 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Laxitaria gen. nov.

Candidatus Laxitaria (NL. fem. n. *Laxitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4166*. The type species for the genus is *Candidatus* Laxitaria colutitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Laxitella dehinimonas sp. nov.

Candidatus Laxitella dehinimonas (NL. fem. n. *dehinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2193 sp002327335*. The type genome for the species is the GenBank assembly GCA_002327335.1. The GC content of the type genome is 36.16 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Laxitella gen. nov.

Candidatus Laxitella (NL. fem. n. *Laxitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2193*. The type species for the genus is *Candidatus* Laxitella dehinimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2193*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitellaceae.

Description of *Candidatus* Laxitellaceae fam. nov.

Candidatus Laxitellaceae (NL. fem. n. *Laxitellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2193.* The type genus for the taxon is *Candidatus* Laxitella .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Laxitia catafastra sp. nov.

Candidatus Laxitia catafastra (NL. fem. n. *catafastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1557 sp002773185*. The type genome for the species is the GenBank assembly GCA_002773185.1. The GC content of the type genome is 33.95 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Laxitia gen. nov.

Candidatus Laxitia (NL. fem. n. *Laxitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1557*. The type species for the genus is *Candidatus* Laxitia

catafastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Laxitia dicibitura sp. nov.

Candidatus Laxitia dicibitura (NL. fem. n. *dicibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1557 sp001871435*. The type genome for the species is the GenBank assembly GCA_001871435.1. The GC content of the type genome is 32.33 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Laxitia inmutitrix sp. nov.

Candidatus Laxitia inmutitrix (NL. fem. n. *inmutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1557 sp002793035*. The type genome for the species is the GenBank assembly GCA_002793035.1. The GC content of the type genome is 33.32 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Laxitia refunicula sp. nov.

Candidatus Laxitia refunicula (NL. fem. n. *refunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1557 sp001783255*. The type genome for the species is the GenBank assembly GCA_001783255.1. The GC content of the type genome is 32.5 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Laxitida acrobentia sp. nov.

Candidatus Laxitida acrobentia (NL. fem. n. *acrobentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B30-G6 sp003647375*. The type genome for the species is the GenBank assembly GCA_003647375.1. The GC content of the type genome is 47.76 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Laxitida gen. nov.

Candidatus Laxitida (NL. fem. n. *Laxitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B30-G6*. The type species for the genus is *Candidatus* Laxitida acrobentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B30-G6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitidaceae.

Description of *Candidatus* Laxitidaceae fam. nov.

Candidatus Laxitidaceae (NL. fem. n. *Laxitidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B30-G6.* The type genus for the taxon is *Candidatus* Laxitida .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Laxitosa adnicibra sp. nov.

Candidatus Laxitosa adnicibra (NL. fem. n. *adnicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PYGY01 sp003555385*. The type genome for the species is the GenBank assembly GCA_003555385.1. The GC content of the type genome is 48.78 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Laxitosa gen. nov.

Candidatus Laxitosa (NL. fem. n. *Laxitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PYGY01*. The type species for the genus is *Candidatus* Laxitosa

adnicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Laxitosa conabivita sp. nov.

Candidatus Laxitosa conabivita (NL. fem. n. *conabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PYGY01 sp007129945*. The type genome for the species is the GenBank assembly GCA_003554165.1. The GC content of the type genome is 48.73 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Laxitosa denomilenta sp. nov.

Candidatus Laxitosa denomilenta (NL. fem. n. *denomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PYGY01 sp003560215*. The type genome for the species is the GenBank assembly GCA_003553405.1. The GC content of the type genome is 49.67 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Laxitosa fatifax sp. nov.

Candidatus Laxitosa fatifax (NL. fem. n. *fatifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PYGY01 sp003554665*. The type genome for the species is the GenBank assembly GCA_003551825.1. The GC content of the type genome is 47.71 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Laxitula modifitoga sp. nov.

Candidatus Laxitula modifitoga (NL. fem. n. *modifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748835 sp002748835*. The type genome for the species is the

GenBank assembly GCA_002748835.1. The GC content of the type genome is 53.49 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Laxitula gen. nov.

Candidatus Laxitula (NL. fem. n. *Laxitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748835*. The type species for the genus is *Candidatus* Laxitula modifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2748835*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitulaceae.

Description of *Candidatus* Laxitulaceae fam. nov.

Candidatus Laxitulaceae (NL. fem. n. *Laxitulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2748835.* The type genus for the taxon is *Candidatus* Laxitula .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Leadbetterella decucessa sp. nov.

Candidatus Leadbetterella decucessa (NL. fem. n. *decucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leadbetterella sp002483125*. The type genome for the species is the GenBank assembly RS_GCF_009905725.1. The GC content of the type genome is 43.65 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Leadbetterella revecetta sp. nov.

Candidatus Leadbetterella revecetta (NL. fem. n. *revecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leadbetterella sp002256295*. The type genome for the species is the GenBank assembly GCA_002256295.1. The GC content of the type genome is 36.38 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Lebetimonas cohoribula sp. nov.

Candidatus Lebetimonas cohoribula (NL. fem. n. *cohoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lebetimonas sp000523275*. The type genome for the species is the GenBank assembly RS_GCF_000522965.1. The GC content of the type genome is 31.33 % and the genome length is 1.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hydrothermal vent".

Description of *Candidatus* Leclercia bonifimonia sp. nov.

Candidatus Leclercia bonifimonia (NL. fem. n. *bonifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leclercia sp002902985*. The type genome for the species is the GenBank assembly RS_GCF_002919525.1. The GC content of the type genome is 55.62 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Leclercia cocolilenta sp. nov.

Candidatus Leclercia cocolilenta (NL. fem. n. *cocolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leclercia sp002469605*. The type genome for the species is the GenBank assembly GCA_002469605.1. The GC content of the type genome is 57.47 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Leclercia feculivita sp. nov.

Candidatus Leclercia feculivita (NL. fem. n. *feculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leclercia sp003024485*. The type genome for the species is the GenBank assembly RS_GCF_003024485.1. The GC content of the type genome is 56.43 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Leclercia robigitrix sp. nov.

Candidatus Leclercia robigitrix (NL. fem. n. *robigitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leclercia sp000755535*. The type genome for the species is the GenBank assembly GCA_002390855.1. The GC content of the type genome is 55.03 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Lederbergia inargicula sp. nov.

Candidatus Lederbergia inargicula (NL. fem. n. *inargicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lederbergia sp008764245*. The type genome for the species is the GenBank assembly RS_GCF_008764245.1. The GC content of the type genome is 38.43 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Leeia adlecimonas sp. nov.

Candidatus Leeia adlecimonas (NL. fem. n. *adlecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeia sp012641365*. The type genome for the species is the GenBank assembly RS_GCF_012641365.1. The GC content of the type genome is 60.7 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Leeuwenhoekiella acistousia sp. nov.

Candidatus Leeuwenhoekiella acistousia (NL. fem. n. *acistousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeuwenhoekiella sp000733945*. The type genome for the species is the GenBank assembly RS_GCF_000733945.1. The GC content of the type genome is 40.15 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Leeuwenhoekiella alembisca sp. nov.

Candidatus Leeuwenhoekiella alembisca (NL. fem. n. *alembisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeuwenhoekiella sp011050015*. The type genome for the species is the GenBank assembly GCA_011050015.1. The GC content of the type genome is 40.66 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Leeuwenhoekiella ancepimonia sp. nov.

Candidatus Leeuwenhoekiella ancepimonia (NL. fem. n. *ancepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeuwenhoekiella sp000687915*. The type genome for the species is the GenBank assembly RS_GCF_000687915.1. The GC content of the type genome is 36.52 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Leeuwenhoekiella bucolatio sp. nov.

Candidatus Leeuwenhoekiella bucolatio (NL. fem. n. *bucolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeuwenhoekiella sp002708845*. The type genome for the species is the GenBank assembly GCA_002291795.1. The GC content of the type genome is 40.66 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Leeuwenhoekiella buxifentia sp. nov.

Candidatus Leeuwenhoekiella buxifentia (NL. fem. n. *buxifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leeuwenhoekiella sp002710685*. The type genome for the species is the GenBank assembly GCA_002710685.1. The GC content of the type genome is 44.29 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Legifaria conabatica sp. nov.

Candidatus Legifaria conabatica (NL. fem. n. *conabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2163 sp001774455*. The type genome for the species is the GenBank assembly GCA_001774455.1. The GC content of the type genome is 34.99 % and the genome length is 0.36 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; 10% subassembly".

Description of *Candidatus* Legifaria gen. nov.

Candidatus Legifaria (NL. fem. n. *Legifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2163*. The type species for the genus is *Candidatus* Legifaria conabatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Legifariaceae fam. nov.

Candidatus Legifariaceae (NL. fem. n. *Legifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2163.* The type genus for the taxon is *Candidatus* Legifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Legifaria habacugo sp. nov.

Candidatus Legifaria habacugo (NL. fem. n. *habacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2163 sp002327585*. The type genome for the species is the GenBank assembly GCA_002327585.1. The GC content of the type genome is 38.28 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Legifaria semiditrix sp. nov.

Candidatus Legifaria semiditrix (NL. fem. n. *semiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2163 sp002778715*. The type genome for the species is the

GenBank assembly GCA_002778715.1. The GC content of the type genome is 35.22 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Legifella attematio sp. nov.

Candidatus Legifella attematio (NL. fem. n. *attematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1174 sp902787065*. The type genome for the species is the GenBank assembly GCA_902787065.1. The GC content of the type genome is 36.36 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Legifella gen. nov.

Candidatus Legifella (NL. fem. n. *Legifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1174*. The type species for the genus is *Candidatus* Legifella attematio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Legifella lavabentia sp. nov.

Candidatus Legifella lavabentia (NL. fem. n. *lavabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1174 sp002311025*. The type genome for the species is the GenBank assembly GCA_002311025.1. The GC content of the type genome is 36.02 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Legifella nocenatio sp. nov.

Candidatus Legifella nocenatio (NL. fem. n. *nocenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1174 sp902791965*. The type genome for the species is the GenBank assembly GCA_902791965.1. The GC content of the type genome is 38.74 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Legifella rosaribula sp. nov.

Candidatus Legifella rosaribula (NL. fem. n. *rosaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1174 sp900556855*. The type genome for the species is the GenBank assembly GCA_900556855.1. The GC content of the type genome is 45.28 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Legifia nosocimonia sp. nov.

Candidatus Legifia nosocimonia (NL. fem. n. *nosocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1756 sp002314795*. The type genome for the species is the GenBank assembly GCA_002314795.1. The GC content of the type genome is 45.11 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Legifia gen. nov.

Candidatus Legifia (NL. fem. n. *Legifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1756*. The type species for the genus is *Candidatus* Legifia nosocimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Legifia paropimonas sp. nov.

Candidatus Legifia paropimonas (NL. fem. n. *paropimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1756 sp900321845*. The type genome for the species is the GenBank assembly GCA_902759815.1. The GC content of the type genome is 49.07 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Legifida medimivita sp. nov.

Candidatus Legifida medimivita (NL. fem. n. *medimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *N074bin48 sp004356685*. The type genome for the species is the GenBank assembly GCA_004356685.1. The GC content of the type genome is 35.37 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Legifida gen. nov.

Candidatus Legifida (NL. fem. n. *Legifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *N074bin48*. The type species for the genus is *Candidatus* Legifida medimivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *N074bin48*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifidaceae.

Description of *Candidatus* Legifidaceae fam. nov.

Candidatus Legifidaceae (NL. fem. n. *Legifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *N074bin48.* The type genus for the taxon is *Candidatus* Legifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siligiales.

Description of *Candidatus* Legionella allobousia sp. nov.

Candidatus Legionella allobousia (NL. fem. n. *allobousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp013697625*. The type genome for the species is the GenBank assembly GCA_013697625.1. The GC content of the type genome is 38.0 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Legionella atlanugo sp. nov.

Candidatus Legionella atlanugo (NL. fem. n. *atlanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp003989735*. The type genome for the species is the GenBank assembly RS_GCF_003989735.1. The GC content of the type genome is 38.98 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Legionella femelousia sp. nov.

Candidatus Legionella femelousia (NL. fem. n. *femelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp014109805*. The type genome for the species is the GenBank assembly RS_GCF_014109805.1. The GC content of the type genome is 38.28 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Legionella inexpousia sp. nov.

Candidatus Legionella inexpousia (NL. fem. n. *inexpousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp001899505*. The type genome for the species is the GenBank assembly GCA_001899505.1. The GC content of the type genome is 40.49 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Legionella latibetta sp. nov.

Candidatus Legionella latibetta (NL. fem. n. *latibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp011764505*. The type genome for the species is the GenBank assembly RS_GCF_011764505.1. The GC content of the type genome is 39.14 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Legionella nivomitia sp. nov.

Candidatus Legionella nivomitia (NL. fem. n. *nivomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp002352055*. The type genome for the species is the GenBank assembly GCA_002352055.1. The GC content of the type genome is 38.17 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Legionella refacugo sp. nov.

Candidatus Legionella refacugo (NL. fem. n. *refacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp003184185*. The type genome for the species is the GenBank assembly RS_GCF_003990155.1. The GC content of the type genome is 37.82 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Legionella semibitudo sp. nov.

Candidatus Legionella semibitudo (NL. fem. n. *semibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp002786205*. The type genome for the species is the GenBank assembly GCA_002786245.1. The GC content of the type genome is 40.11 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Legionella sonivitia sp. nov.

Candidatus Legionella sonivitia (NL. fem. n. *sonivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp014109825*. The type genome for the species is the GenBank assembly RS_GCF_014109825.1. The GC content of the type genome is 37.87 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Legionella xeropisca sp. nov.

Candidatus Legionella xeropisca (NL. fem. n. *xeropisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella sp004297865*. The type genome for the species is the GenBank assembly GCA_004297865.1. The GC content of the type genome is 39.76 %

and the genome length is 2.73 Mbp.

Description of *Candidatus* Legionella bicapousia sp. nov.

Candidatus Legionella bicapousia (NL. fem. n. *bicapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Legionella_A sp003990055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003990055.1. The GC content of the type genome is 42.33 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Leifsonia adtilimonia sp. nov.

Candidatus Leifsonia adtilimonia (NL. fem. n. *adtilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp013359685*. The type genome for the species is the GenBank assembly RS_GCF_013359685.1. The GC content of the type genome is 70.4 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Leifsonia armifilenta sp. nov.

Candidatus Leifsonia armifilenta (NL. fem. n. *armifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp001423695*. The type genome for the species is the GenBank assembly RS_GCF_001423695.1. The GC content of the type genome is 69.61 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Leifsonia cinipitoga sp. nov.

Candidatus Leifsonia cinipitoga (NL. fem. n. *cinipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp002105485*. The type genome for the species is the GenBank assembly RS_GCF_012317045.1. The GC content of the type genome is 69.08 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Leifsonia cocibago sp. nov.

Candidatus Leifsonia cocibago (NL. fem. n. *cocibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp009765225*. The type genome for the species is the GenBank assembly RS_GCF_009765225.1. The GC content of the type genome is 70.14 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Leifsonia defaritrix sp. nov.

Candidatus Leifsonia defaritrix (NL. fem. n. *defaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp001898805*. The type genome for the species is the GenBank assembly GCA_001898805.1. The GC content of the type genome is 70.79 % and the genome length is 4.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Leifsonia lubenivita sp. nov.

Candidatus Leifsonia lubenivita (NL. fem. n. *lubenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp003664105*. The type genome for the species is the GenBank assembly RS_GCF_003664105.1. The GC content of the type genome is 70.63 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Leifsonia morigedo sp. nov.

Candidatus Leifsonia morigedo (NL. fem. n. *morigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp900100265*. The type genome for the species is the GenBank assembly RS_GCF_900100265.1. The GC content of the type genome is 69.77 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Leifsonia peracibula sp. nov.

Candidatus Leifsonia peracibula (NL. fem. n. *peracibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp900114565*. The type genome for the species is the GenBank assembly RS_GCF_900108465.1. The GC content of the type genome is 69.22 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Leifsonia semapibra sp. nov.

Candidatus Leifsonia semapibra (NL. fem. n. *semapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp001428745*. The type genome for the species is the GenBank assembly RS_GCF_001428745.1. The GC content of the type genome is 68.52 % and the genome length is 4.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Leifsonia subinilenta sp. nov.

Candidatus Leifsonia subinilenta (NL. fem. n. *subinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia sp003367665*. The type genome for the species is the GenBank assembly GCA_003367665.1. The GC content of the type genome is 71.0 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Leifsonia decenimonia sp. nov.

Candidatus Leifsonia decenimonia (NL. fem. n. *decenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia_A sp004801905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004801905.1. The GC content of the type genome is 68.17 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Leifsonia miracimonas sp. nov.

Candidatus Leifsonia miracimonas (NL. fem. n. *miracimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia_A sp001425325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001425325.1. The GC content of the type genome is 68.25 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Leifsonia panifimonas sp. nov.

Candidatus Leifsonia panifimonas (NL. fem. n. *panifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leifsonia_A sp001422325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001422325.1. The GC content of the type genome is 67.92 % and the genome length is 4.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Leisingera bicalax sp. nov.

Candidatus Leisingera bicalax (NL. fem. n. *bicalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp000813745*. The type genome for the species is the GenBank assembly RS_GCF_000813745.1. The GC content of the type genome is 62.45 % and the genome length is 5.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Leisingera decamatio sp. nov.

Candidatus Leisingera decamatio (NL. fem. n. *decamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp001730095*. The type genome for the species is the GenBank assembly GCA_001730095.1. The GC content of the type genome is 60.34 % and the genome length is 4.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ovicells".

Description of *Candidatus* Leisingera expanitia sp. nov.

Candidatus Leisingera expanitia (NL. fem. n. *expanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp013373325*. The type genome for the species is the GenBank assembly GCA_013373325.1. The GC content of the type genome is 62.86 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Leisingera gabinitio sp. nov.

Candidatus Leisingera gabinitio (NL. fem. n. *gabinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp000203975*. The type genome for the species is the GenBank assembly RS_GCF_000813905.1. The GC content of the type genome is 62.75 % and the genome length is 4.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Leisingera insenimonia sp. nov.

Candidatus Leisingera insenimonia (NL. fem. n. *insenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp013317235*. The type genome for the species is the GenBank assembly RS_GCF_013317235.1. The GC content of the type genome is 62.9 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Leisingera nicotitio sp. nov.

Candidatus Leisingera nicotitio (NL. fem. n. *nicotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp001679925*. The type genome for the species is the GenBank assembly RS_GCF_001679925.1. The GC content of the type genome is 62.26 % and the genome length is 5.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sand flats".

Description of *Candidatus* Leisingera occumitia sp. nov.

Candidatus Leisingera occumitia (NL. fem. n. *occumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp000813725*. The type genome for the species is the GenBank assembly RS_GCF_000813725.1. The GC content of the type genome is 62.45 % and the genome length is 5.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Leisingera subacicella sp. nov.

Candidatus Leisingera subacicella (NL. fem. n. *subacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp000813965*. The type genome for the species is the GenBank assembly RS_GCF_000813965.1. The GC content of the type genome is 62.44 % and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Leisingera vicecentia sp. nov.

Candidatus Leisingera vicecentia (NL. fem. n. *vicecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leisingera sp004123675*. The type genome for the species is the GenBank assembly RS_GCF_004123675.1. The GC content of the type genome is 61.58 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Lelliottia absocibra sp. nov.

Candidatus Lelliottia absocibra (NL. fem. n. *absocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lelliottia sp009668015*. The type genome for the species is the GenBank assembly RS_GCF_009668015.1. The GC content of the type genome is 53.57 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Lelliottia facunisca sp. nov.

Candidatus Lelliottia facunisca (NL. fem. n. *facunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lelliottia sp000016325*. The type genome for the species is the GenBank assembly RS_GCF_000016325.1. The GC content of the type genome is 52.9 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Lenimana levifibula sp. nov.

Candidatus Lenimana levifibula (NL. fem. n. *levifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQWF01 sp903875455*. The type genome for the species is the GenBank assembly GCA_903834745.1. The GC content of the type genome is 44.59 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Lenimana gen. nov.

Candidatus Lenimana (NL. fem. n. *Lenimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQWF01*. The type species for the genus is *Candidatus* Lenimana levifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lenimaria caravedo sp. nov.

Candidatus Lenimaria caravedo (NL. fem. n. *caravedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYOX01 sp005804885*. The type genome for the species is the GenBank assembly GCA_005777485.1. The GC content of the type genome is 69.33 % and the genome length is 9.74 Mbp.

Description of *Candidatus* Lenimaria gen. nov.

Candidatus Lenimaria (NL. fem. n. *Lenimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYOX01*. The type species for the genus is *Candidatus* Lenimaria

caravedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2716585*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repepiaceae.

Description of *Candidatus* Lenimella paracax sp. nov.

Candidatus Lenimella paracax (NL. fem. n. *paracax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11795 sp002708065*. The type genome for the species is the GenBank assembly GCA_002708065.1. The GC content of the type genome is 45.72 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Lenimella gen. nov.

Candidatus Lenimella (NL. fem. n. *Lenimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11795*. The type species for the genus is *Candidatus* Lenimella paracax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Lenimia depupitura sp. nov.

Candidatus Lenimia depupitura (NL. fem. n. *depupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-592 sp011772965*. The type genome for the species is the GenBank assembly GCA_011771455.1. The GC content of the type genome is 48.46 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Lenimia gen. nov.

Candidatus Lenimia (NL. fem. n. *Lenimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SZUA-592*. The type species for the genus is *Candidatus* Lenimia depupitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Lenimia televicula sp. nov.

Candidatus Lenimia televicula (NL. fem. n. *televicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-592 sp003250975*. The type genome for the species is the GenBank assembly GCA_003250975.1. The GC content of the type genome is 49.32 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Lenimida dehonentia sp. nov.

Candidatus Lenimida dehonentia (NL. fem. n. *dehonentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2383 sp002343485*. The type genome for the species is the GenBank assembly GCA_002343225.1. The GC content of the type genome is 55.42 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Lenimida gen. nov.

Candidatus Lenimida (NL. fem. n. *Lenimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2383*. The type species for the genus is *Candidatus* Lenimida dehonentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lenimosa sanabilenta sp. nov.

Candidatus Lenimosa sanabilenta (NL. fem. n. *sanabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2255 sp002347565*. The type genome for the species is the GenBank assembly GCA_002347565.1. The GC content of the type genome is 65.7 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Lenimosa gen. nov.

Candidatus Lenimosa (NL. fem. n. *Lenimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2255*. The type species for the genus is *Candidatus* Lenimosa sanabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EtOH8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuranaceae.

Description of *Candidatus* Lenimula cilibisca sp. nov.

Candidatus Lenimula cilibisca (NL. fem. n. *cilibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQF01 sp011369445*. The type genome for the species is the GenBank assembly GCA_011369445.1. The GC content of the type genome is 63.52 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Lenimula gen. nov.

Candidatus Lenimula (NL. fem. n. *Lenimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQF01*. The type species for the genus is *Candidatus* Lenimula cilibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRQF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenimulaceae.

Description of *Candidatus* Lenimulaceae fam. nov.

Candidatus Lenimulaceae (NL. fem. n. *Lenimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DRQF01*. The type genus for the taxon is *Candidatus* Lenimula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catobellales.

Description of *Candidatus* Lenocana canacivita sp. nov.

Candidatus Lenocana canacivita (NL. fem. n. *canacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002780795 sp002780795*. The type genome for the species is the GenBank assembly GCA_002779965.1. The GC content of the type genome is 36.09 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Lenocana gen. nov.

Candidatus Lenocana (NL. fem. n. *Lenocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002780795*. The type species for the genus is *Candidatus* Lenocana canacivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Lenocaria susicentia sp. nov.

Candidatus Lenocaria susicentia (NL. fem. n. *susicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4054 sp002383495*. The type genome for the species is the GenBank assembly GCA_002424765.1. The GC content of the type genome is 52.92 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Lenocaria gen. nov.

Candidatus Lenocaria (NL. fem. n. *Lenocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA4054*. The type species for the genus is *Candidatus* Lenocaria susicentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4778*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biverosaceae.

Description of *Candidatus* Lenocella offulitoga sp. nov.

Candidatus Lenocella offulitoga (NL. fem. n. *offulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B62-G9 sp003645695*. The type genome for the species is the GenBank assembly GCA_003645695.1. The GC content of the type genome is 34.04 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Lenocella gen. nov.

Candidatus Lenocella (NL. fem. n. *Lenocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B62-G9*. The type species for the genus is *Candidatus* Lenocella offulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B62-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenocellaceae.

Description of *Candidatus* Lenocellaceae fam. nov.

Candidatus Lenocellaceae (NL. fem. n. *Lenocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B62-G9.* The type genus for the taxon is *Candidatus* Lenocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *B62-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lenocellales.

Description of *Candidatus* Lenocellales ord. nov.

Candidatus Lenocellales (NL. fem. n. *Lenocellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B62-G9.* The type genus for the taxon is *Candidatus* Lenocella .

According to the original version of GTDB R06-RS202, this family belongs to the class *B62-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lenocellae.

Description of *Candidatus* Lenocellae class. nov.

Candidatus Lenocellae (NL. fem. n. *c__Lenocellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B62-G9.* The type genus for the taxon is *Candidatus* Lenocella .

According to GTDB R06-RS202, this class belongs to the phylum *Spirochaetota*.

Description of *Candidatus* Lenocia caravicula sp. nov.

Candidatus Lenocia caravicula (NL. fem. n. *caravicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12075 sp003514005*. The type genome for the species is the GenBank assembly GCA_003487185.1. The GC content of the type genome is 38.08 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Lenocia gen. nov.

Candidatus Lenocia (NL. fem. n. *Lenocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12075*. The type species for the genus is *Candidatus* Lenocia caravicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12075*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenociaceae.

Description of *Candidatus* Lenociaceae fam. nov.

Candidatus Lenociaceae (NL. fem. n. *Lenociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12075.* The type genus for the taxon is *Candidatus* Lenocia .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Lenocida adrumitura sp. nov.

Candidatus Lenocida adrumitura (NL. fem. n. *adrumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp007692545*. The type genome for the species is the GenBank assembly GCA_007692545.1. The GC content of the type genome is 55.71 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Lenocida gen. nov.

Candidatus Lenocida (NL. fem. n. *Lenocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7441*. The type species for the genus is *Candidatus* Lenocida adrumitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Lenocida astapilenta sp. nov.

Candidatus Lenocida astapilenta (NL. fem. n. *astapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp902516225*. The type genome for the species is the GenBank assembly RS_GCF_902516225.1. The GC content of the type genome is 44.5 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Lenocida dilacago sp. nov.

Candidatus Lenocida dilacago (NL. fem. n. *dilacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp902587165*. The type genome for the species is the GenBank assembly RS_GCF_902587165.1. The GC content of the type genome is 49.31 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lenocida dilacentia sp. nov.

Candidatus Lenocida dilacentia (NL. fem. n. *dilacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp002480015*. The type genome for the species is the GenBank assembly GCA_002386805.1. The GC content of the type genome is 55.28 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Lenocida latibicula sp. nov.

Candidatus Lenocida latibicula (NL. fem. n. *latibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp002729725*. The type genome for the species is the GenBank assembly GCA_002729725.1. The GC content of the type genome is 52.14 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Lenocida linigitas sp. nov.

Candidatus Lenocida linigitas (NL. fem. n. *linigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp002862945*. The type genome for the species is the GenBank assembly GCA_002364985.1. The GC content of the type genome is 49.55 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Lenocida octinitrix sp. nov.

Candidatus Lenocida octinitrix (NL. fem. n. *octinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp009908325*. The type genome for the species is the GenBank assembly GCA_009908325.1. The GC content of the type genome is 56.19 %

and the genome length is 4.3 Mbp.

Description of *Candidatus* Lenocida pepenax sp. nov.

Candidatus Lenocida pepenax (NL. fem. n. *pepenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp003331195*. The type genome for the species is the GenBank assembly GCA_003331195.1. The GC content of the type genome is 49.92 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Lenocida ruricitia sp. nov.

Candidatus Lenocida ruricitia (NL. fem. n. *ruricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp902603705*. The type genome for the species is the GenBank assembly RS_GCF_902603705.1. The GC content of the type genome is 43.06 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Lenocida utrinitoga sp. nov.

Candidatus Lenocida utrinitoga (NL. fem. n. *utrinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7441 sp009886465*. The type genome for the species is the GenBank assembly GCA_009886465.1. The GC content of the type genome is 50.4 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Lenocosa tabititrix sp. nov.

Candidatus Lenocosa tabititrix (NL. fem. n. *tabititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-17 sp003598055*. The type genome for the species is the GenBank assembly GCA_003598055.1. The GC content of the type genome is 54.89 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Lenocosa gen. nov.

Candidatus Lenocosa (NL. fem. n. *Lenocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-17*. The type species for the genus is *Candidatus* Lenocosa tabititrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunulaceae.

Description of *Candidatus* Lenocula lucifimonia sp. nov.

Candidatus Lenocula lucifimonia (NL. fem. n. *lucifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5962 sp002430285*. The type genome for the species is the GenBank assembly GCA_002430285.1. The GC content of the type genome is 38.07 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Lenocula gen. nov.

Candidatus Lenocula (NL. fem. n. *Lenocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5962*. The type species for the genus is *Candidatus* Lenocula lucifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Lenoculaceae fam. nov.

Candidatus Lenoculaceae (NL. fem. n. *Lenoculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5962.* The type genus for the taxon is *Candidatus* Lenocula .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Lentibacillus codifitio sp. nov.

Candidatus Lentibacillus codifitio (NL. fem. n. *codifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentibacillus sp013373365*. The type genome for the species is the GenBank assembly RS_GCF_013373365.1. The GC content of the type genome is 42.04 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Lentibacillus depelitrix sp. nov.

Candidatus Lentibacillus depelitrix (NL. fem. n. *depelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentibacillus sp004145795*. The type genome for the species is the GenBank assembly GCA_004145795.1. The GC content of the type genome is 44.09 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Lentibacillus forabiforma sp. nov.

Candidatus Lentibacillus forabiforma (NL. fem. n. *forabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentibacillus sp902806455*. The type genome for the species is the GenBank assembly RS_GCF_902806455.1. The GC content of the type genome is 39.79 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Lentibacillus pecunibula sp. nov.

Candidatus Lentibacillus pecunibula (NL. fem. n. *pecunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentibacillus sp902726655*. The type genome for the species is the GenBank assembly RS_GCF_902726655.1. The GC content of the type genome is 41.2 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Lentibacter remedimonia sp. nov.

Candidatus Lentibacter remedimonia (NL. fem. n. *remedimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentibacter sp003417655*. The type genome for the species is the GenBank assembly RS_GCF_003417655.1. The GC content of the type genome is 63.63 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Lentilactobacillus diponicula sp. nov.

Candidatus Lentilactobacillus diponicula (NL. fem. n. *diponicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentilactobacillus sp002418005*. The type genome for the species is the GenBank assembly GCA_002418005.1. The GC content of the type genome is 37.18 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Lentilactobacillus repuricula sp. nov.

Candidatus Lentilactobacillus repuricula (NL. fem. n. *repuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentilactobacillus sp013184075*. The type genome for the species is the GenBank assembly RS_GCF_013184075.1. The GC content of the type genome is 37.82 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Lentilitoribacter ascelousia sp. nov.

Candidatus Lentilitoribacter ascelousia (NL. fem. n. *ascelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentilitoribacter sp900537175*. The type genome for the species is the GenBank assembly RS_GCF_900537175.1. The GC content of the type genome is 44.32 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Lentimicrobium anancatica sp. nov.

Candidatus Lentimicrobium anancatica (NL. fem. n. *anancatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp001603685*. The type genome for the species is the GenBank assembly GCA_001603685.1. The GC content of the type genome is 48.15 %

and the genome length is 3.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Lentimicrobium catapisca sp. nov.

Candidatus Lentimicrobium catapisca (NL. fem. n. *catapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002433025*. The type genome for the species is the GenBank assembly GCA_002432165.1. The GC content of the type genome is 46.81 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Lentimicrobium desuritura sp. nov.

Candidatus Lentimicrobium desuritura (NL. fem. n. *desuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002441345*. The type genome for the species is the GenBank assembly GCA_002441345.1. The GC content of the type genome is 47.82 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Lentimicrobium diludicella sp. nov.

Candidatus Lentimicrobium diludicella (NL. fem. n. *diludicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002412885*. The type genome for the species is the GenBank assembly GCA_002842665.1. The GC content of the type genome is 41.5 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Lentimicrobium inmitimonia sp. nov.

Candidatus Lentimicrobium inmitimonia (NL. fem. n. *inmitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp009773515*. The type genome for the species is the GenBank assembly GCA_009773515.1. The GC content of the type genome is 41.42 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Lentimicrobium melopedo sp. nov.

Candidatus Lentimicrobium melopedo (NL. fem. n. *melopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp013336205*. The type genome for the species is the GenBank assembly GCA_013336205.1. The GC content of the type genome is 42.28 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Lentimicrobium perabivita sp. nov.

Candidatus Lentimicrobium perabivita (NL. fem. n. *perabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002425985*. The type genome for the species is the GenBank assembly GCA_002425985.1. The GC content of the type genome is 47.1 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Lentimicrobium ridibastra sp. nov.

Candidatus Lentimicrobium ridibastra (NL. fem. n. *ridibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002410555*. The type genome for the species is the GenBank assembly GCA_002410555.1. The GC content of the type genome is 42.0 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Lentimicrobium subodugo sp. nov.

Candidatus Lentimicrobium subodugo (NL. fem. n. *subodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp002426025*. The type genome for the species is the GenBank assembly GCA_002842425.1. The GC content of the type genome is 41.84 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Lentimicrobium susicitas sp. nov.

Candidatus Lentimicrobium susicitas (NL. fem. n. *susicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentimicrobium sp009773455*. The type genome for the species is the GenBank assembly GCA_009773455.1. The GC content of the type genome is 45.01 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Lentzea astipibula sp. nov.

Candidatus Lentzea astipibula (NL. fem. n. *astipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentzea sp001279525*. The type genome for the species is the GenBank assembly RS_GCF_001279525.1. The GC content of the type genome is 70.55 % and the genome length is 9.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil #75".

Description of *Candidatus* Lentzea dilicugo sp. nov.

Candidatus Lentzea dilicugo (NL. fem. n. *dilicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentzea sp011067745*. The type genome for the species is the GenBank assembly RS_GCF_011067745.1. The GC content of the type genome is 68.71 % and the genome length is 10.21 Mbp.

Description of *Candidatus* Lentzea revecimonia sp. nov.

Candidatus Lentzea revecimonia (NL. fem. n. *revecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lentzea sp007845675*. The type genome for the species is the GenBank assembly RS_GCF_007845675.1. The GC content of the type genome is 69.5 % and the genome length is 9.37 Mbp.

Description of *Candidatus* Lenunaria hexagivita sp. nov.

Candidatus Lenunaria hexagivita (NL. fem. n. *hexagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-549 sp003162055*. The type genome for the species is the GenBank assembly GCA_003162355.1. The GC content of the type genome is 65.39 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Lenunaria gen. nov.

Candidatus Lenunaria (NL. fem. n. *Lenunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-549*. The type species for the genus is *Candidatus* Lenunaria hexagivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lenunaria inreditas sp. nov.

Candidatus Lenunaria inreditas (NL. fem. n. *inreditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-549 sp003170995*. The type genome for the species is the GenBank assembly GCA_003170995.1. The GC content of the type genome is 64.44 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Lenunaria lapicitia sp. nov.

Candidatus Lenunaria lapicitia (NL. fem. n. *lapicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-549 sp003132665*. The type genome for the species is the GenBank assembly GCA_003132665.1. The GC content of the type genome is 65.8 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Lenunaria ossifitoga sp. nov.

Candidatus Lenunaria ossifitoga (NL. fem. n. *ossifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-549 sp003162235*. The type genome for the species is the GenBank assembly GCA_003162235.1. The GC content of the type genome is 66.05 %

and the genome length is 1.87 Mbp.

Description of *Candidatus* Lenunaria vatilitrix sp. nov.

Candidatus Lenunaria vatilitrix (NL. fem. n. *vatilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-549 sp003170155*. The type genome for the species is the GenBank assembly GCA_003170155.1. The GC content of the type genome is 65.24 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Lenunella adseciforma sp. nov.

Candidatus Lenunella adseciforma (NL. fem. n. *adseciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002457115*. The type genome for the species is the GenBank assembly GCA_002457115.1. The GC content of the type genome is 40.25 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Lenunella gen. nov.

Candidatus Lenunella (NL. fem. n. *Lenunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G52*. The type species for the genus is *Candidatus* Lenunella adseciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lenunella affirilega sp. nov.

Candidatus Lenunella affirilega (NL. fem. n. *affirilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902554705*. The type genome for the species is the GenBank assembly RS_GCF_902554705.1. The GC content of the type genome is 39.91 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lenunella altipatica sp. nov.

Candidatus Lenunella altipatica (NL. fem. n. *altipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002682975*. The type genome for the species is the GenBank assembly GCA_002682975.1. The GC content of the type genome is 40.45 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Lenunella arcelibula sp. nov.

Candidatus Lenunella arcelibula (NL. fem. n. *arcelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902632125*. The type genome for the species is the GenBank assembly RS_GCF_902632125.1. The GC content of the type genome is 39.41 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Lenunella assubousia sp. nov.

Candidatus Lenunella assubousia (NL. fem. n. *assubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902543185*. The type genome for the species is the GenBank assembly RS_GCF_902543185.1. The GC content of the type genome is 39.75 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Lenunella biparitura sp. nov.

Candidatus Lenunella biparitura (NL. fem. n. *biparitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002171355*. The type genome for the species is the GenBank assembly GCA_002171355.1. The GC content of the type genome is 39.24 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Lenunella cepurisca sp. nov.

Candidatus Lenunella cepurisca (NL. fem. n. *cepurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902606585*. The type genome for the species is the GenBank assembly RS_GCF_902606585.1. The GC content of the type genome is 39.57 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Lenunella colubessa sp. nov.

Candidatus Lenunella colubessa (NL. fem. n. *colubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002711145*. The type genome for the species is the GenBank assembly GCA_002711145.1. The GC content of the type genome is 40.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Lenunella decapago sp. nov.

Candidatus Lenunella decapago (NL. fem. n. *decapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002704465*. The type genome for the species is the GenBank assembly GCA_002704465.1. The GC content of the type genome is 39.91 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Lenunella decatedo sp. nov.

Candidatus Lenunella decatedo (NL. fem. n. *decatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902635985*. The type genome for the species is the GenBank assembly RS_GCF_902635985.1. The GC content of the type genome is 40.08 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Lenunella depecigena sp. nov.

Candidatus Lenunella depecigena (NL. fem. n. *depecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp002457055*. The type genome for the species is the GenBank assembly RS_GCF_902525685.1. The GC content of the type genome is 40.5

% and the genome length is 1.64 Mbp.

Description of *Candidatus* Lenunella detepibula sp. nov.

Candidatus Lenunella detepibula (NL. fem. n. *detepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp001627925*. The type genome for the species is the GenBank assembly RS_GCF_902535265.1. The GC content of the type genome is 40.51 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Lenunella fetifimonas sp. nov.

Candidatus Lenunella fetifimonas (NL. fem. n. *fetifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902573175*. The type genome for the species is the GenBank assembly RS_GCF_902573175.1. The GC content of the type genome is 39.79 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Lenunella gerunitura sp. nov.

Candidatus Lenunella gerunitura (NL. fem. n. *gerunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902534325*. The type genome for the species is the GenBank assembly RS_GCF_902534325.1. The GC content of the type genome is 39.75 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Lenunella homulibra sp. nov.

Candidatus Lenunella homulibra (NL. fem. n. *homulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp001627375*. The type genome for the species is the GenBank assembly GCA_001627595.1. The GC content of the type genome is 39.69 % and the genome length is 2.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 12 - depth 47m".

Description of *Candidatus* Lenunella lucubigena sp. nov.

Candidatus Lenunella lucubigena (NL. fem. n. *lucubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902605785*. The type genome for the species is the GenBank assembly RS_GCF_902605785.1. The GC content of the type genome is 40.02 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Lenunella nimiritoga sp. nov.

Candidatus Lenunella nimiritoga (NL. fem. n. *nimiritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902554885*. The type genome for the species is the GenBank assembly RS_GCF_902554885.1. The GC content of the type genome is 40.38 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lenunella paropax sp. nov.

Candidatus Lenunella paropax (NL. fem. n. *paropax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp003332035*. The type genome for the species is the GenBank assembly RS_GCF_902515675.1. The GC content of the type genome is 40.09 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Lenunella peribedo sp. nov.

Candidatus Lenunella peribedo (NL. fem. n. *peribedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902631295*. The type genome for the species is the GenBank assembly RS_GCF_902631295.1. The GC content of the type genome is 40.02 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Lenunella selibugo sp. nov.

Candidatus Lenunella selibugo (NL. fem. n. *selibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G52 sp902602765*. The type genome for the species is the GenBank assembly RS_GCF_902602765.1. The GC content of the type genome is 40.18 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Lenunia retecicula sp. nov.

Candidatus Lenunia retecicula (NL. fem. n. *retecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-FULL-39-10 sp001792345*. The type genome for the species is the GenBank assembly GCA_001792345.1. The GC content of the type genome is 37.76 % and the genome length is 1.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Lenunia gen. nov.

Candidatus Lenunia (NL. fem. n. *Lenunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-FULL-39-10*. The type species for the genus is *Candidatus* Lenunia retecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Lenunida semodibula sp. nov.

Candidatus Lenunida semodibula (NL. fem. n. *semodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-310 sp003558985*. The type genome for the species is the GenBank assembly GCA_003558985.1. The GC content of the type genome is 45.36 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Lenunida gen. nov.

Candidatus Lenunida (NL. fem. n. *Lenunida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED10-310*. The type species for the genus is *Candidatus* Lenunida semodibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSED10-310*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenunidaceae.

Description of *Candidatus* Lenunidaceae fam. nov.

Candidatus Lenunidaceae (NL. fem. n. *Lenunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSED10-310.* The type genus for the taxon is *Candidatus* Lenunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSSED10-310*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lenunidales.

Description of *Candidatus* Lenunidales ord. nov.

Candidatus Lenunidales (NL. fem. n. *Lenunidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSED10-310.* The type genus for the taxon is *Candidatus* Lenunida .

According to the original version of GTDB R06-RS202, this family belongs to the class *CSSED10-310*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lenunidae.

Description of *Candidatus* Lenunidae class. nov.

Candidatus Lenunidae (NL. fem. n. *c__Lenunidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSED10-310.* The type genus for the taxon is *Candidatus* Lenunida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CSSED10-310*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Lenunidota.

Description of *Candidatus* Lenunidota phyl. nov.

Candidatus Lenunidota (NL. fem. n. *Lenunidota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSED10-310.* The type genus for the taxon is *Candidatus* Lenunida .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Lenunosa bifarilenta sp. nov.

Candidatus Lenunosa bifarilenta (NL. fem. n. *bifarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11272 sp902790495*. The type genome for the species is the GenBank assembly GCA_902790495.1. The GC content of the type genome is 63.89 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Lenunosa gen. nov.

Candidatus Lenunosa (NL. fem. n. *Lenunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11272*. The type species for the genus is *Candidatus* Lenunosa bifarilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Lenunosa delucitica sp. nov.

Candidatus Lenunosa delucitica (NL. fem. n. *delucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11272 sp902767565*. The type genome for the species is the GenBank assembly GCA_902767565.1. The GC content of the type genome is 63.53 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Lenunula adnunisca sp. nov.

Candidatus Lenunula adnunisca (NL. fem. n. *adnunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp002308575*. The type genome for the species is the GenBank assembly GCA_002308575.1. The GC content of the type genome is 51.12 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Lenunula gen. nov.

Candidatus Lenunula (NL. fem. n. *Lenunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1252*. The type species for the genus is *Candidatus* Lenunula adnunisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-1252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenunulaceae.

Description of *Candidatus* Lenunulaceae fam. nov.

Candidatus Lenunulaceae (NL. fem. n. *Lenunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-1252.* The type genus for the taxon is *Candidatus* Lenunula .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Lenunula depupitia sp. nov.

Candidatus Lenunula depupitia (NL. fem. n. *depupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp002368735*. The type genome for the species is the GenBank assembly GCA_002368735.1. The GC content of the type genome is 54.54 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Lenunula detorigena sp. nov.

Candidatus Lenunula detorigena (NL. fem. n. *detorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp002371075*. The type genome for the species is the GenBank assembly GCA_002371075.1. The GC content of the type genome is 52.42 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Lenunula luticimonas sp. nov.

Candidatus Lenunula luticimonas (NL. fem. n. *luticimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp002363545*. The type genome for the species is the GenBank assembly GCA_003542435.1. The GC content of the type genome is 49.15 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Lenunula obrigibra sp. nov.

Candidatus Lenunula obrigibra (NL. fem. n. *obrigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp002395405*. The type genome for the species is the GenBank assembly GCA_002395405.1. The GC content of the type genome is 49.27 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Lenunula roraricella sp. nov.

Candidatus Lenunula roraricella (NL. fem. n. *roraricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1252 sp003445835*. The type genome for the species is the GenBank assembly GCA_003445835.1. The GC content of the type genome is 51.83 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Leptobacterium colimitio sp. nov.

Candidatus Leptobacterium colimitio (NL. fem. n. *colimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Leptobacterium sp009901575*. The type genome for the species is the GenBank assembly RS_GCF_009901575.1. The GC content of the type genome is 33.2 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Leptolinea detunitudo sp. nov.

Candidatus Leptolinea detunitudo (NL. fem. n. *detunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptolinea sp012798535*. The type genome for the species is the GenBank assembly GCA_012798535.1. The GC content of the type genome is 50.45 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Leptolinea imbecitas sp. nov.

Candidatus Leptolinea imbecitas (NL. fem. n. *imbecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptolinea sp012798615*. The type genome for the species is the GenBank assembly GCA_012798615.1. The GC content of the type genome is 48.9 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Leptolinea scorbago sp. nov.

Candidatus Leptolinea scorbago (NL. fem. n. *scorbago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptolinea sp012515195*. The type genome for the species is the GenBank assembly GCA_012515195.1. The GC content of the type genome is 48.02 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Leptolyngbya oratrentia sp. nov.

Candidatus Leptolyngbya oratrentia (NL. fem. n. *oratrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptolyngbya sp001548435*. The type genome for the species is the GenBank assembly RS_GCF_001548435.1. The GC content of the type genome is 46.7 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Leptolyngbya sonivilega sp. nov.

Candidatus Leptolyngbya sonivilega (NL. fem. n. *sonivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptolyngbya sp001485215*. The type genome for the species is the GenBank assembly RS_GCF_001485215.1. The GC content of the type genome is 47.43 % and the genome length is 6.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilm material".

Description of *Candidatus* Leptospira defasitia sp. nov.

Candidatus Leptospira defasitia (NL. fem. n. *defasitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptospira_B sp000347035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000347035.1. The GC content of the type genome is 41.66 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Leptotrichia cululitia sp. nov.

Candidatus Leptotrichia cululitia (NL. fem. n. *cululitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia sp002240055*. The type genome for the species is the GenBank assembly RS_GCF_002240055.1. The GC content of the type genome is 29.62 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Leptotrichia resacitia sp. nov.

Candidatus Leptotrichia resacitia (NL. fem. n. *resacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia sp001553645*. The type genome for the species is the GenBank assembly RS_GCF_001553645.1. The GC content of the type genome is 29.79 % and the genome length is 2.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Leptotrichia rosacicella sp. nov.

Candidatus Leptotrichia rosacicella (NL. fem. n. *rosacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia sp000469385*. The type genome for the species is the GenBank assembly RS_GCF_000469385.1. The GC content of the type genome is 29.64 % and the genome length is 2.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "subgingival plaque biofilm".

Description of *Candidatus* Leptotrichia ruricimonas sp. nov.

Candidatus Leptotrichia ruricimonas (NL. fem. n. *ruricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia sp013394795*. The type genome for the species is the GenBank assembly RS_GCF_013394795.1. The GC content of the type genome is 31.38 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Leptotrichia incivitica sp. nov.

Candidatus Leptotrichia incivitica (NL. fem. n. *incivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia_A sp001274535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001274535.1. The GC content of the type genome is 31.41 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Leptotrichia refuliforma sp. nov.

Candidatus Leptotrichia refuliforma (NL. fem. n. *refuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leptotrichia_A sp000469505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_000469505.1. The GC content of the type genome is 31.38 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Letifaria adsesibula sp. nov.

Candidatus Letifaria adsesibula (NL. fem. n. *adsesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2991 sp009838385*. The type genome for the species is the GenBank assembly GCA_009838385.1. The GC content of the type genome is 68.41 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Letifaria gen. nov.

Candidatus Letifaria (NL. fem. n. *Letifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2991*. The type species for the genus is *Candidatus* Letifaria adsesibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Letifariaceae fam. nov.

Candidatus Letifariaceae (NL. fem. n. *Letifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2991.* The type genus for the taxon is *Candidatus* Letifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Letifariales.

Description of *Candidatus* Letifariales ord. nov.

Candidatus Letifariales (NL. fem. n. *Letifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA2991*. The type genus for the taxon is *Candidatus* Letifaria .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Letifaria malogigena sp. nov.

Candidatus Letifaria malogigena (NL. fem. n. *malogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2991 sp009839725*. The type genome for the species is the GenBank assembly GCA_009839725.1. The GC content of the type genome is 68.89 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Letifaria metabitura sp. nov.

Candidatus Letifaria metabitura (NL. fem. n. *metabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2991 sp009841435*. The type genome for the species is the GenBank assembly GCA_009837515.1. The GC content of the type genome is 68.21 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Letifaria vaniticula sp. nov.

Candidatus Letifaria vaniticula (NL. fem. n. *vaniticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2991 sp002346645*. The type genome for the species is the GenBank assembly GCA_002717065.1. The GC content of the type genome is 54.78 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Letifella affirifica sp. nov.

Candidatus Letifella affirifica (NL. fem. n. *affirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10428 sp003252385*. The type genome for the species is the GenBank assembly GCA_003252385.1. The GC content of the type genome is 46.46 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Letifella gen. nov.

Candidatus Letifella (NL. fem. n. *Letifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10428*. The type species for the genus is *Candidatus* Letifella affirifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifellaceae.

Description of *Candidatus* Letifellaceae fam. nov.

Candidatus Letifellaceae (NL. fem. n. *Letifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10428.* The type genus for the taxon is *Candidatus* Letifella .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Letifella resulousia sp. nov.

Candidatus Letifella resulousia (NL. fem. n. *resulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10428 sp003508755*. The type genome for the species is the GenBank assembly GCA_003508755.1. The GC content of the type genome is 38.38 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Letifia feficitrix sp. nov.

Candidatus Letifia feficitrix (NL. fem. n. *feficitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12451 sp001805965*. The type genome for the species is the GenBank assembly GCA_001805945.1. The GC content of the type genome is 37.55 % and the genome length is 2.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Letifia gen. nov.

Candidatus Letifia (NL. fem. n. *Letifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12451*. The type species for the genus is *Candidatus* Letifia feficitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Letifida inobrilenta sp. nov.

Candidatus Letifida inobrilenta (NL. fem. n. *inobrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2709385 sp002709385*. The type genome for the species is the GenBank assembly GCA_002709385.1. The GC content of the type genome is 38.48 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Letifida gen. nov.

Candidatus Letifida (NL. fem. n. *Letifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2709385*. The type species for the genus is *Candidatus* Letifida inobrilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2709385*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifidaceae.

Description of *Candidatus* Letifidaceae fam. nov.

Candidatus Letifidaceae (NL. fem. n. *Letifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2709385.* The type genus for the taxon is *Candidatus* Letifida .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Letifosa faticivita sp. nov.

Candidatus Letifosa faticivita (NL. fem. n. *faticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9983 sp000996035*. The type genome for the species is the GenBank assembly GCA_000995735.1. The GC content of the type genome is 39.8 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Letifosa gen. nov.

Candidatus Letifosa (NL. fem. n. *Letifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9983*. The type species for the genus is *Candidatus* Letifosa faticivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifosaceae.

Description of *Candidatus* Letifosaceae fam. nov.

Candidatus Letifosaceae (NL. fem. n. *Letifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9983.* The type genus for the taxon is *Candidatus* Letifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Letifosales.

Description of *Candidatus* Letifosales ord. nov.

Candidatus Letifosales (NL. fem. n. *Letifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9983.* The type genus for the taxon is *Candidatus* Letifosa .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Letifula lenimitudo sp. nov.

Candidatus Letifula lenimitudo (NL. fem. n. *lenimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6503 sp002436405*. The type genome for the species is the GenBank assembly GCA_002360855.1. The GC content of the type genome is 47.87 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Letifula gen. nov.

Candidatus Letifula (NL. fem. n. *Letifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6503*. The type species for the genus is *Candidatus* Letifula lenimitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6503*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifulaceae.

Description of *Candidatus* Letifulaceae fam. nov.

Candidatus Letifulaceae (NL. fem. n. *Letifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6503.* The type genus for the taxon is *Candidatus* Letifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1280*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacariales.

Description of *Candidatus* Leucobacter abligatio sp. nov.

Candidatus Leucobacter abligatio (NL. fem. n. *abligatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp900163635*. The type genome for the species is the GenBank assembly RS_GCF_900163635.1. The GC content of the type genome is 65.83 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Leucobacter adtolitio sp. nov.

Candidatus Leucobacter adtolitio (NL. fem. n. *adtolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp011382985*. The type genome for the species is the GenBank assembly RS_GCF_011382985.1. The GC content of the type genome is 60.32 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Leucobacter aruspastra sp. nov.

Candidatus Leucobacter aruspastra (NL. fem. n. *aruspastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp012511645*. The type genome for the species is the GenBank assembly GCA_012511645.1. The GC content of the type genome is 62.61 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Leucobacter caruciforma sp. nov.

Candidatus Leucobacter caruciforma (NL. fem. n. *caruciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp011382965*. The type genome for the species is the GenBank assembly RS_GCF_011382965.1. The GC content of the type genome is 62.45 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Leucobacter cilibax sp. nov.

Candidatus Leucobacter cilibax (NL. fem. n. *cilibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp011299575*. The type genome for the species is the GenBank assembly RS_GCF_011299575.1. The GC content of the type genome is 61.52 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Leucobacter conariforma sp. nov.

Candidatus Leucobacter conariforma (NL. fem. n. *conariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp001373475*. The type genome for the species is the GenBank assembly RS_GCF_001373475.1. The GC content of the type genome is 67.44 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Leucobacter desucilega sp. nov.

Candidatus Leucobacter desucilega (NL. fem. n. *desucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp000349545*. The type genome for the species is the GenBank assembly RS_GCF_004028235.1. The GC content of the type genome is 70.47 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Leucobacter excaribra sp. nov.

Candidatus Leucobacter excaribra (NL. fem. n. *excaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp002336855*. The type genome for the species is the GenBank assembly GCA_002336855.1. The GC content of the type genome is 64.82 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Leucobacter homicousia sp. nov.

Candidatus Leucobacter homicousia (NL. fem. n. *homicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp003569785*. The type genome for the species is the GenBank assembly RS_GCF_003569785.1. The GC content of the type genome is 69.87 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Leucobacter inpasitura sp. nov.

Candidatus Leucobacter inpasitura (NL. fem. n. *inpasitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Leucobacter sp014529985*. The type genome for the species is the GenBank assembly RS_GCF_014529985.1. The GC content of the type genome is 61.64 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Leucobacter monocousia sp. nov.

Candidatus Leucobacter monocousia (NL. fem. n. *monocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp002752355*. The type genome for the species is the GenBank assembly RS_GCF_002752415.1. The GC content of the type genome is 70.5 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Leucobacter opercedo sp. nov.

Candidatus Leucobacter opercedo (NL. fem. n. *opercedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp012510755*. The type genome for the species is the GenBank assembly GCA_012510755.1. The GC content of the type genome is 60.29 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Leucobacter oppanago sp. nov.

Candidatus Leucobacter oppanago (NL. fem. n. *oppanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp001482305*. The type genome for the species is the GenBank assembly RS_GCF_001482305.1. The GC content of the type genome is 65.32 % and the genome length is 3.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "chromate-contaminated soil".

Description of *Candidatus* Leucobacter practago sp. nov.

Candidatus Leucobacter practago (NL. fem. n. *practago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp014530035*. The type genome for the species is the GenBank assembly RS_GCF_014530035.1. The GC content of the type genome is 61.38 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Leucobacter recogessa sp. nov.

Candidatus Leucobacter recogessa (NL. fem. n. *recogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp000980875*. The type genome for the species is the GenBank assembly RS_GCF_000980875.1. The GC content of the type genome is 70.27 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Adult mosquito gut".

Description of *Candidatus* Leucobacter ridibisca sp. nov.

Candidatus Leucobacter ridibisca (NL. fem. n. *ridibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucobacter sp000633415*. The type genome for the species is the GenBank assembly RS_GCF_000633415.1. The GC content of the type genome is 71.32 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Carnivorous Plant Phytotelma".

Description of *Candidatus* Leuconostoc decucicula sp. nov.

Candidatus Leuconostoc decucicula (NL. fem. n. *decucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leuconostoc sp900554745*. The type genome for the species is the GenBank assembly GCA_900554745.1. The GC content of the type genome is 44.62 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Leucothrix adcucetta sp. nov.

Candidatus Leucothrix adcucetta (NL. fem. n. *adcucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Leucothrix sp002747455*. The type genome for the species is the GenBank assembly GCA_002747455.1. The GC content of the type genome is 47.88 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Levidana innabibra sp. nov.

Candidatus Levidana innabibra (NL. fem. n. *innabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIYF01 sp014360065*. The type genome for the species is the GenBank assembly GCA_014360065.1. The GC content of the type genome is 54.79 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Levidana gen. nov.

Candidatus Levidana (NL. fem. n. *Levidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIYF01*. The type species for the genus is *Candidatus* Levidana innabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIYF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levidanaceae.

Description of *Candidatus* Levidanaceae fam. nov.

Candidatus Levidanaceae (NL. fem. n. *Levidanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIYF01.* The type genus for the taxon is *Candidatus* Levidana .

According to GTDB R06-RS202, this family belongs to the order *Moorellales*.

Description of *Candidatus* Levidaria adcelitoga sp. nov.

Candidatus Levidaria adcelitoga (NL. fem. n. *adcelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp003511465*. The type genome for the species is the GenBank assembly GCA_003511465.1. The GC content of the type genome is 48.2 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Levidaria gen. nov.

Candidatus Levidaria (NL. fem. n. *Levidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11021*. The type species for the genus is *Candidatus* Levidaria adcelitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Levidaria adnulentia sp. nov.

Candidatus Levidaria adnulentia (NL. fem. n. *adnulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012727425*. The type genome for the species is the GenBank assembly GCA_012727425.1. The GC content of the type genome is 53.47 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Levidaria colimessa sp. nov.

Candidatus Levidaria colimessa (NL. fem. n. *colimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012521315*. The type genome for the species is the GenBank assembly GCA_012521315.1. The GC content of the type genome is 54.08 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Levidaria depupitica sp. nov.

Candidatus Levidaria depupitica (NL. fem. n. *depupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp013664685*. The type genome for the species is the GenBank assembly RS_GCF_013664685.1. The GC content of the type genome is 52.09 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Levidaria diritugo sp. nov.

Candidatus Levidaria diritugo (NL. fem. n. *diritugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012837705*. The type genome for the species is the GenBank assembly GCA_012837705.1. The GC content of the type genome is 50.52 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Levidaria famelifica sp. nov.

Candidatus Levidaria famelifica (NL. fem. n. *famelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012837715*. The type genome for the species is the GenBank assembly GCA_012837715.1. The GC content of the type genome is 49.33 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Levidaria indipifica sp. nov.

Candidatus Levidaria indipifica (NL. fem. n. *indipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012735135*. The type genome for the species is the GenBank assembly GCA_012735135.1. The GC content of the type genome is 51.01 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Levidaria maxumibula sp. nov.

Candidatus Levidaria maxumibula (NL. fem. n. *maxumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11021 sp012512605*. The type genome for the species is the GenBank assembly GCA_012512605.1. The GC content of the type genome is 50.67 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Levidella delapitica sp. nov.

Candidatus Levidella delapitica (NL. fem. n. *delapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYW01 sp902810745*. The type genome for the species is the GenBank assembly RS_GCF_902810745.1. The GC content of the type genome is 64.33

% and the genome length is 5.59 Mbp.

Description of *Candidatus* Levidella gen. nov.

Candidatus Levidella (NL. fem. n. *Levidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYW01*. The type species for the genus is *Candidatus* Levidella delapitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADDYW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levidellaceae.

Description of *Candidatus* Levidellaceae fam. nov.

Candidatus Levidellaceae (NL. fem. n. *Levidellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADDYW01.* The type genus for the taxon is *Candidatus* Levidella .

According to the original version of GTDB R06-RS202, this family belongs to the order *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipulales.

Description of *Candidatus* Levidia allacilenta sp. nov.

Candidatus Levidia allacilenta (NL. fem. n. *allacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MC1 sp002632265*. The type genome for the species is the GenBank assembly GCA_002632265.1. The GC content of the type genome is 35.55 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Levidia gen. nov.

Candidatus Levidia (NL. fem. n. *Levidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MC1*. The type species for the genus is *Candidatus* Levidia allacilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

MC1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levidiaceae.

Description of *Candidatus* Levidiaceae fam. nov.

Candidatus Levidiaceae (NL. fem. n. *Levidiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MC1*. The type genus for the taxon is *Candidatus* Levidia .

According to the original version of GTDB R06-RS202, this family belongs to the order *MC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Levidiales.

Description of *Candidatus* Levidiales ord. nov.

Candidatus Levidiales (NL. fem. n. *Levidiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MC1*. The type genus for the taxon is *Candidatus* Levidia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Levidida alsiditas sp. nov.

Candidatus Levidida alsiditas (NL. fem. n. *alsiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp002840435*. The type genome for the species is the GenBank assembly GCA_002840435.1. The GC content of the type genome is 49.46 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Levidida gen. nov.

Candidatus Levidida (NL. fem. n. *Levidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8904*. The type species for the genus is *Candidatus* Levidida alsiditas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Levidida arcebimonas sp. nov.

Candidatus Levidida arcebimonas (NL. fem. n. *arcebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp012797505*. The type genome for the species is the GenBank assembly GCA_012797505.1. The GC content of the type genome is 54.96 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Levidida atlanimonia sp. nov.

Candidatus Levidida atlanimonia (NL. fem. n. *atlanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp012729055*. The type genome for the species is the GenBank assembly GCA_012729055.1. The GC content of the type genome is 57.17 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Levidida cerififorma sp. nov.

Candidatus Levidida cerififorma (NL. fem. n. *cerififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp009668925*. The type genome for the species is the GenBank assembly GCA_009668925.1. The GC content of the type genome is 53.77 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Levidida ceromessa sp. nov.

Candidatus Levidida ceromessa (NL. fem. n. *ceromessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp002304995*. The type genome for the species is the GenBank assembly GCA_002304995.1. The GC content of the type genome is 57.94 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Levidida delapitoga sp. nov.

Candidatus Levidida delapitoga (NL. fem. n. *delapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp002070455*. The type genome for the species is the GenBank assembly GCA_002070455.1. The GC content of the type genome is 48.34 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Levidida delecibula sp. nov.

Candidatus Levidida delecibula (NL. fem. n. *delecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp002382045*. The type genome for the species is the GenBank assembly GCA_002382045.1. The GC content of the type genome is 49.21 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Levidida denecetta sp. nov.

Candidatus Levidida denecetta (NL. fem. n. *denecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp003506745*. The type genome for the species is the GenBank assembly GCA_003506745.1. The GC content of the type genome is 51.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Levidida detumitia sp. nov.

Candidatus Levidida detumitia (NL. fem. n. *detumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp002347685*. The type genome for the species is the GenBank assembly GCA_002347685.1. The GC content of the type genome is 51.55 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Levidida excorivita sp. nov.

Candidatus Levidida excorivita (NL. fem. n. *excorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8904 sp002840635*. The type genome for the species is the GenBank assembly GCA_002840635.1. The GC content of the type genome is 47.91 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Levidida exsupifica sp. nov.

Candidatus Levidida exsupifica (NL. fem. n. *exsupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp009773315*. The type genome for the species is the GenBank assembly GCA_009773315.1. The GC content of the type genome is 48.8 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Levidida immodigena sp. nov.

Candidatus Levidida immodigena (NL. fem. n. *immodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp903904655*. The type genome for the species is the GenBank assembly GCA_903904655.1. The GC content of the type genome is 48.91 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Levidida invecigena sp. nov.

Candidatus Levidida invecigena (NL. fem. n. *invecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp012510495*. The type genome for the species is the GenBank assembly GCA_012510495.1. The GC content of the type genome is 53.5 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Levidida irradastra sp. nov.

Candidatus Levidida irradastra (NL. fem. n. *irradastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8904 sp012522275*. The type genome for the species is the GenBank assembly GCA_012522275.1. The GC content of the type genome is 52.6 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Levidosa capilastra sp. nov.

Candidatus Levidosa capilastra (NL. fem. n. *capilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1064 sp002316235*. The type genome for the species is the GenBank assembly GCA_012517455.1. The GC content of the type genome is 44.87 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Levidosa gen. nov.

Candidatus Levidosa (NL. fem. n. *Levidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1064*. The type species for the genus is *Candidatus* Levidosa capilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Levidula funebilega sp. nov.

Candidatus Levidula funebilega (NL. fem. n. *funebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-113 sp005881995*. The type genome for the species is the GenBank assembly GCA_005881995.1. The GC content of the type genome is 54.35 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Levidula gen. nov.

Candidatus Levidula (NL. fem. n. *Levidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-113*. The type species for the genus is *Candidatus* Levidula funebilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Levifana decupitica sp. nov.

Candidatus Levifana decupitica (NL. fem. n. *decupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723415 sp002723415*. The type genome for the species is the GenBank assembly GCA_002723415.1. The GC content of the type genome is 30.33 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Levifana gen. nov.

Candidatus Levifana (NL. fem. n. *Levifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002723415*. The type species for the genus is *Candidatus* Levifana decupitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002723415*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifanaceae.

Description of *Candidatus* Levifanaceae fam. nov.

Candidatus Levifanaceae (NL. fem. n. *Levifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002723415.* The type genus for the taxon is *Candidatus* Levifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Levifana latibitia sp. nov.

Candidatus Levifana latibitia (NL. fem. n. *latibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723415 sp002721445*. The type genome for the species is the GenBank assembly GCA_002721445.1. The GC content of the type genome is 30.48 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Levifaria divorax sp. nov.

Candidatus Levifaria divorax (NL. fem. n. *divorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA998 sp002291925*. The type genome for the species is the GenBank assembly GCA_002291925.1. The GC content of the type genome is 61.14 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Levifaria gen. nov.

Candidatus Levifaria (NL. fem. n. *Levifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA998*. The type species for the genus is *Candidatus* Levifaria divorax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA998*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifariaceae.

Description of *Candidatus* Levifariaceae fam. nov.

Candidatus Levifariaceae (NL. fem. n. *Levifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA998.* The type genus for the taxon is *Candidatus* Levifaria .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Levifaria inconicula sp. nov.

Candidatus Levifaria inconicula (NL. fem. n. *inconicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA998 sp002291845*. The type genome for the species is the GenBank assembly GCA_002291845.1. The GC content of the type genome is 55.51 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Levifella laculicella sp. nov.

Candidatus Levifella laculicella (NL. fem. n. *laculicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1050 sp011373705*. The type genome for the species is the GenBank assembly GCA_011373705.1. The GC content of the type genome is 42.5 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Levifella gen. nov.

Candidatus Levifella (NL. fem. n. *Levifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-1050*. The type species for the genus is *Candidatus* Levifella laculicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-1050*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifellaceae.

Description of *Candidatus* Levifellaceae fam. nov.

Candidatus Levifellaceae (NL. fem. n. *Levifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-1050.* The type genus for the taxon is *Candidatus* Levifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-1050*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Levifellales.

Description of *Candidatus* Levifellales ord. nov.

Candidatus Levifellales (NL. fem. n. *Levifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-1050.* The type genus for the taxon is *Candidatus* Levifella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SpSt-1050*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Levifellae.

Description of *Candidatus* Levifellae class. nov.

Candidatus Levifellae (NL. fem. n. *c__Levifellae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-1050.* The type genus for the taxon is *Candidatus* Levifella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SpSt-1050*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Levifellota.

Description of *Candidatus* Levifellota phyl. nov.

Candidatus Levifellota (NL. fem. n. *Levifellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-1050.* The type genus for the taxon is *Candidatus* Levifella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Levifia tibicifica sp. nov.

Candidatus Levifia tibicifica (NL. fem. n. *tibicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-39 sp001303765*. The type genome for the species is the GenBank assembly GCA_001303765.1. The GC content of the type genome is 26.23 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Levifia gen. nov.

Candidatus Levifia (NL. fem. n. *Levifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-39*. The type species for the genus is *Candidatus* Levifia tibicifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Levifiaceae fam. nov.

Candidatus Levifiaceae (NL. fem. n. *Levifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-39.* The type genus for the taxon is *Candidatus* Levifia .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Levifosa nefanugo sp. nov.

Candidatus Levifosa nefanugo (NL. fem. n. *nefanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4735 sp002404155*. The type genome for the species is the GenBank assembly GCA_002405245.1. The GC content of the type genome is 68.56 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Levifosa gen. nov.

Candidatus Levifosa (NL. fem. n. *Levifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4735*. The type species for the genus is *Candidatus* Levifosa nefanugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Levifula cepulitica sp. nov.

Candidatus Levifula cepulitica (NL. fem. n. *cepulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-41-13 sp001821615*. The type genome for the species is the GenBank assembly GCA_001821615.1. The GC content of the type genome is 40.43 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Levifula gen. nov.

Candidatus Levifula (NL. fem. n. *Levifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-41-13*. The type species for the genus is *Candidatus* Levifula cepulitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-41-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifulaceae.

Description of *Candidatus* Levifulaceae fam. nov.

Candidatus Levifulaceae (NL. fem. n. *Levifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-41-13.* The type genus for the taxon is *Candidatus* Levifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WO2-41-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refulariales.

Description of *Candidatus* Levilactobacillus anatrimonia sp. nov.

Candidatus Levilactobacillus anatrimonia (NL. fem. n. *anatrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946545*. The type genome for the species is the GenBank assembly RS_GCF_003946545.1. The GC content of the type genome is 49.8 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Levilactobacillus cisalitica sp. nov.

Candidatus Levilactobacillus cisalitica (NL. fem. n. *cisalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946095*. The type genome for the species is the GenBank assembly RS_GCF_003946095.1. The GC content of the type genome is 49.15 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Levilactobacillus exsusigena sp. nov.

Candidatus Levilactobacillus exsusigena (NL. fem. n. *exsusigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946335*. The type genome for the species is the GenBank assembly RS_GCF_003946335.1. The GC content of the type genome is 47.39 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Levilactobacillus famelimonia sp. nov.

Candidatus Levilactobacillus famelimonia (NL. fem. n. *famelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946395*. The type genome for the species is the GenBank assembly RS_GCF_003946395.1. The GC content of the type genome is 48.85 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Levilactobacillus impugilega sp. nov.

Candidatus Levilactobacillus impugilega (NL. fem. n. *impugilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946145*. The type genome for the species is the GenBank assembly RS_GCF_003946145.1. The GC content of the type genome is 47.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Levilactobacillus inbelifica sp. nov.

Candidatus Levilactobacillus inbelifica (NL. fem. n. *inbelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp007115095*. The type genome for the species is the GenBank assembly RS_GCF_007115095.1. The GC content of the type genome is 47.88 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Levilactobacillus locupatio sp. nov.

Candidatus Levilactobacillus locupatio (NL. fem. n. *locupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp012641185*. The type genome for the species is the GenBank assembly RS_GCF_012641105.1. The GC content of the type genome is 48.11 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Levilactobacillus nucifedo sp. nov.

Candidatus Levilactobacillus nucifedo (NL. fem. n. *nucifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946085*. The type genome for the species is the GenBank assembly RS_GCF_003946085.1. The GC content of the type genome is 50.49 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Levilactobacillus obsecetta sp. nov.

Candidatus Levilactobacillus obsecetta (NL. fem. n. *obsecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946345*. The type genome for the species is the GenBank assembly RS_GCF_003946345.1. The GC content of the type genome is 47.73 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Levilactobacillus recumibra sp. nov.

Candidatus Levilactobacillus recumibra (NL. fem. n. *recumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp012641095*. The type genome for the species is the GenBank assembly RS_GCF_012641095.1. The GC content of the type genome is 50.39 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Levilactobacillus releciforma sp. nov.

Candidatus Levilactobacillus releciforma (NL. fem. n. *releciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Levilactobacillus sp003946045*. The type genome for the species is the GenBank assembly RS_GCF_003946045.1. The GC content of the type genome is 50.33

% and the genome length is 3.11 Mbp.

Description of *Candidatus* Lewinella roraritoga sp. nov.

Candidatus Lewinella roraritoga (NL. fem. n. *roraritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella sp003045895*. The type genome for the species is the GenBank assembly GCA_003023605.1. The GC content of the type genome is 53.31 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Lewinella adteniforma sp. nov.

Candidatus Lewinella adteniforma (NL. fem. n. *adteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella_A sp001625015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001625015.1. The GC content of the type genome is 55.29 % and the genome length is 5.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea surface microlayer".

Description of *Candidatus* Lewinella cerucax sp. nov.

Candidatus Lewinella cerucax (NL. fem. n. *cerucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella_A sp008014675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008014675.1. The GC content of the type genome is 52.83 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Lewinella insomentia sp. nov.

Candidatus Lewinella insomentia (NL. fem. n. *insomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Lewinella_A sp002591745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002591745.1. The GC content of the type genome is 50.43 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Lewinella lorarimonia sp. nov.

Candidatus Lewinella lorarimonia (NL. fem. n. *lorarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella_A sp003390935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003390935.1. The GC content of the type genome is 57.59 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Lewinella notacibra sp. nov.

Candidatus Lewinella notacibra (NL. fem. n. *notacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella_A sp004375085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004375085.3. The GC content of the type genome is 56.32 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Lewinella regifugo sp. nov.

Candidatus Lewinella regifugo (NL. fem. n. *regifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lewinella_A sp003390915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003390915.1. The GC content of the type genome is 61.93 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Liberibacter perabitudo sp. nov.

Candidatus Liberibacter perabitudo (NL. fem. n. *perabitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Liberibacter sp014048425*. The type genome for the species is the GenBank assembly RS_GCF_014048425.1. The GC content of the type genome is 37.34 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Licenana pecunitudo sp. nov.

Candidatus Licenana pecunitudo (NL. fem. n. *pecunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILHX01 sp903834185*. The type genome for the species is the GenBank assembly GCA_903837675.1. The GC content of the type genome is 51.96 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Licenana gen. nov.

Candidatus Licenana (NL. fem. n. *Licenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILHX01*. The type species for the genus is *Candidatus* Licenana pecunitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Licenaria coturitura sp. nov.

Candidatus Licenaria coturitura (NL. fem. n. *coturitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1231 sp903910555*. The type genome for the species is the GenBank assembly GCA_903856455.1. The GC content of the type genome is 62.65 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Licenaria gen. nov.

Candidatus Licenaria (NL. fem. n. *Licenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Fen-1231*. The type species for the genus is *Candidatus* Licenaria coturitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Licenaria inobritura sp. nov.

Candidatus Licenaria inobritura (NL. fem. n. *inobritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1231 sp903876745*. The type genome for the species is the GenBank assembly GCA_903876745.1. The GC content of the type genome is 68.45 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Licenaria pavicessa sp. nov.

Candidatus Licenaria pavicessa (NL. fem. n. *pavicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1231 sp014192065*. The type genome for the species is the GenBank assembly GCA_014192065.1. The GC content of the type genome is 64.77 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Licenaria periditudo sp. nov.

Candidatus Licenaria periditudo (NL. fem. n. *periditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1231 sp903882745*. The type genome for the species is the GenBank assembly GCA_903877525.1. The GC content of the type genome is 64.1 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Licenaria sicinimonia sp. nov.

Candidatus Licenaria sicinimonia (NL. fem. n. *sicinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1231 sp003171215*. The type genome for the species is the GenBank assembly GCA_003168085.1. The GC content of the type genome is 66.58 %

and the genome length is 3.6 Mbp.

Description of *Candidatus* Licenella prosledo sp. nov.

Candidatus Licenella prosledo (NL. fem. n. *prosledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RR4-38 sp008501705*. The type genome for the species is the GenBank assembly GCA_008501705.1. The GC content of the type genome is 41.9 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Licenella gen. nov.

Candidatus Licenella (NL. fem. n. *Licenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RR4-38*. The type species for the genus is *Candidatus* Licenella prosledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Licenella vecorifica sp. nov.

Candidatus Licenella vecorifica (NL. fem. n. *vecorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RR4-38 sp013043685*. The type genome for the species is the GenBank assembly GCA_013043685.1. The GC content of the type genome is 41.48 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Licenella xeramentia sp. nov.

Candidatus Licenella xeramentia (NL. fem. n. *xeramentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RR4-38 sp002966125*. The type genome for the species is the GenBank assembly RS_GCF_002966125.1. The GC content of the type genome is 41.89 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Licenia echidedo sp. nov.

Candidatus Licenia echidedo (NL. fem. n. *echidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2785325 sp002785325*. The type genome for the species is the GenBank assembly GCA_002785325.1. The GC content of the type genome is 39.83 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Licenia gen. nov.

Candidatus Licenia (NL. fem. n. *Licenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2785325*. The type species for the genus is *Candidatus* Licenia echidedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2785325*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Liceniaceae.

Description of *Candidatus* Liceniaceae fam. nov.

Candidatus Liceniaceae (NL. fem. n. *Liceniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2785325.* The type genus for the taxon is *Candidatus* Licenia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tubicidales.

Description of *Candidatus* Licenida dilicimonia sp. nov.

Candidatus Licenida dilicimonia (NL. fem. n. *dilicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720855 sp002720855*. The type genome for the species is the GenBank assembly GCA_002720855.1. The GC content of the type genome is 50.95 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Licenida gen. nov.

Candidatus Licenida (NL. fem. n. *Licenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720855*. The type species for the genus is *Candidatus* Licenida dilicimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Licenosa conabitica sp. nov.

Candidatus Licenosa conabitica (NL. fem. n. *conabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1561 sp001791745*. The type genome for the species is the GenBank assembly GCA_001791745.1. The GC content of the type genome is 47.13 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Licenosa gen. nov.

Candidatus Licenosa (NL. fem. n. *Licenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1561*. The type species for the genus is *Candidatus* Licenosa conabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labecellaceae.

Description of *Candidatus* Licenosa tomogisca sp. nov.

Candidatus Licenosa tomogisca (NL. fem. n. *tomogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1561 sp001872545*. The type genome for the species is the GenBank assembly GCA_002785005.1. The GC content of the type genome is 58.14 %

and the genome length is 1.07 Mbp.

Description of *Candidatus* Licenula avoncitica sp. nov.

Candidatus Licenula avoncitica (NL. fem. n. *avoncitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYM01 sp009692805*. The type genome for the species is the GenBank assembly GCA_009692805.1. The GC content of the type genome is 66.97 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Licenula gen. nov.

Candidatus Licenula (NL. fem. n. *Licenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYM01*. The type species for the genus is *Candidatus* Licenula avoncitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Licenulaceae.

Description of *Candidatus* Licenulaceae fam. nov.

Candidatus Licenulaceae (NL. fem. n. *Licenulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYM01.* The type genus for the taxon is *Candidatus* Licenula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHYM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Licenulales.

Description of *Candidatus* Licenulales ord. nov.

Candidatus Licenulales (NL. fem. n. *Licenulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYM01.* The type genus for the taxon is *Candidatus* Licenula .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Ligilactobacillus luculigena sp. nov.

Candidatus Ligilactobacillus luculigena (NL. fem. n. *luculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ligilactobacillus sp900765635*. The type genome for the species is the GenBank assembly RS_GCF_900765635.1. The GC content of the type genome is 35.69 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Limisphaera nefanigena sp. nov.

Candidatus Limisphaera nefanigena (NL. fem. n. *nefanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limisphaera sp011058495*. The type genome for the species is the GenBank assembly GCA_011058495.1. The GC content of the type genome is 65.25 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Limnobacter adhoribula sp. nov.

Candidatus Limnobacter adhoribula (NL. fem. n. *adhoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp012032215*. The type genome for the species is the GenBank assembly GCA_012032215.1. The GC content of the type genome is 53.68 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Limnobacter cerifitica sp. nov.

Candidatus Limnobacter cerifitica (NL. fem. n. *cerifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp000170915*. The type genome for the species is the GenBank assembly GCA_002377005.1. The GC content of the type genome is 52.4 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Limnobacter cobalago sp. nov.

Candidatus Limnobacter cobalago (NL. fem. n. *cobalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp902506325*. The type genome for the species is the GenBank assembly RS_GCF_902506325.1. The GC content of the type genome is 52.22 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Limnobacter desorago sp. nov.

Candidatus Limnobacter desorago (NL. fem. n. *desorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp002954425*. The type genome for the species is the GenBank assembly GCA_002321545.1. The GC content of the type genome is 52.68 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Limnobacter labecilega sp. nov.

Candidatus Limnobacter labecilega (NL. fem. n. *labecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp002428895*. The type genome for the species is the GenBank assembly GCA_002428895.1. The GC content of the type genome is 42.45 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Limnobacter nosocicella sp. nov.

Candidatus Limnobacter nosocicella (NL. fem. n. *nosocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobacter sp005871185*. The type genome for the species is the GenBank assembly RS_GCF_005871185.1. The GC content of the type genome is 52.55 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Limnobacter relenibula sp. nov.

Candidatus Limnobacter relenibula (NL. fem. n. *relenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Limnobacter sp001601825*. The type genome for the species is the GenBank assembly GCA_001601825.1. The GC content of the type genome is 52.48 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "CACIAM 66 non-axenic culture of unicellular cyanobacterium started from freshwater".

Description of *Candidatus* Limnobaculum domipimonia sp. nov.

Candidatus Limnobaculum domipimonia (NL. fem. n. *domipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobaculum sp004295645*. The type genome for the species is the GenBank assembly RS_GCF_004295645.1. The GC content of the type genome is 45.68 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Limnobaculum nehalimonas sp. nov.

Candidatus Limnobaculum nehalimonas (NL. fem. n. *nehalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnobaculum sp006491675*. The type genome for the species is the GenBank assembly RS_GCF_006491675.1. The GC content of the type genome is 45.29 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Limnochorda rorifitica sp. nov.

Candidatus Limnochorda rorifitica (NL. fem. n. *rorifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnochorda sp012799445*. The type genome for the species is the GenBank assembly GCA_012799445.1. The GC content of the type genome is 69.21 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Limnohabitans allapitas sp. nov.

Candidatus Limnohabitans allapitas (NL. fem. n. *allapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp003063545*. The type genome for the species is the GenBank assembly RS_GCF_003063545.1. The GC content of the type genome is 53.95

% and the genome length is 2.63 Mbp.

Description of *Candidatus* Limnohabitans benepiforma sp. nov.

Candidatus Limnohabitans benepiforma (NL. fem. n. *benepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903856995*. The type genome for the species is the GenBank assembly GCA_903856995.1. The GC content of the type genome is 56.28 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Limnohabitans benifilenta sp. nov.

Candidatus Limnohabitans benifilenta (NL. fem. n. *benifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903906635*. The type genome for the species is the GenBank assembly GCA_903906635.1. The GC content of the type genome is 57.7 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Limnohabitans cotenugo sp. nov.

Candidatus Limnohabitans cotenugo (NL. fem. n. *cotenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903886485*. The type genome for the species is the GenBank assembly GCA_903830665.1. The GC content of the type genome is 55.98 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Limnohabitans depocigena sp. nov.

Candidatus Limnohabitans depocigena (NL. fem. n. *depocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903845315*. The type genome for the species is the GenBank assembly GCA_903845315.1. The GC content of the type genome is 57.25 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Limnohabitans desepimonia sp. nov.

Candidatus Limnohabitans desepimonia (NL. fem. n. *desepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903952885*. The type genome for the species is the GenBank assembly GCA_903952885.1. The GC content of the type genome is 55.22 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Limnohabitans diludatio sp. nov.

Candidatus Limnohabitans diludatio (NL. fem. n. *diludatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp002778315*. The type genome for the species is the GenBank assembly RS_GCF_002778315.1. The GC content of the type genome is 57.81 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Limnohabitans extunatio sp. nov.

Candidatus Limnohabitans extunatio (NL. fem. n. *extunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp005786815*. The type genome for the species is the GenBank assembly GCA_005786815.1. The GC content of the type genome is 51.14 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Limnohabitans inpelimonia sp. nov.

Candidatus Limnohabitans inpelimonia (NL. fem. n. *inpelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp002778325*. The type genome for the species is the GenBank assembly RS_GCF_002778325.1. The GC content of the type genome is 56.54 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Limnohabitans minuritudo sp. nov.

Candidatus Limnohabitans minuritudo (NL. fem. n. *minuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903925445*. The type genome for the species is the GenBank assembly GCA_903925445.1. The GC content of the type genome is 55.39 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Limnohabitans negotifica sp. nov.

Candidatus Limnohabitans negotifica (NL. fem. n. *negotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903880855*. The type genome for the species is the GenBank assembly GCA_903823475.1. The GC content of the type genome is 50.24 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Limnohabitans semifessa sp. nov.

Candidatus Limnohabitans semifessa (NL. fem. n. *semifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903832625*. The type genome for the species is the GenBank assembly GCA_903892525.1. The GC content of the type genome is 55.48 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Limnohabitans semigibula sp. nov.

Candidatus Limnohabitans semigibula (NL. fem. n. *semigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp903892175*. The type genome for the species is the GenBank assembly GCA_903906215.1. The GC content of the type genome is 58.2 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Limnohabitans siticivita sp. nov.

Candidatus Limnohabitans siticivita (NL. fem. n. *siticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp002282445*. The type genome for the species is the GenBank assembly GCA_002281915.1. The GC content of the type genome is 54.62 %

and the genome length is 2.63 Mbp.

Description of *Candidatus* Limnohabitans tabitedo sp. nov.

Candidatus Limnohabitans tabitedo (NL. fem. n. *tabitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp002347905*. The type genome for the species is the GenBank assembly GCA_002347905.1. The GC content of the type genome is 51.05 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Limnohabitans vitigitrix sp. nov.

Candidatus Limnohabitans vitigitrix (NL. fem. n. *vitigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans sp009923345*. The type genome for the species is the GenBank assembly GCA_009923345.1. The GC content of the type genome is 51.36 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Limnohabitans ablepitrix sp. nov.

Candidatus Limnohabitans ablepitrix (NL. fem. n. *ablepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063315.1. The GC content of the type genome is 59.33 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Limnohabitans actaratica sp. nov.

Candidatus Limnohabitans actaratica (NL. fem. n. *actaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063505.1. The GC

content of the type genome is 59.62 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Limnohabitans adfulisca sp. nov.

Candidatus Limnohabitans adfulisca (NL. fem. n. *adfulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063665.1. The GC content of the type genome is 61.08 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Limnohabitans adobrilega sp. nov.

Candidatus Limnohabitans adobrilega (NL. fem. n. *adobrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001412535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001412535.1. The GC content of the type genome is 59.93 % and the genome length is 3.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Limnohabitans adorditas sp. nov.

Candidatus Limnohabitans adorditas (NL. fem. n. *adorditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp009693505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009693505.1. The GC content of the type genome is 51.74 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Limnohabitans antacibula sp. nov.

Candidatus Limnohabitans antacibula (NL. fem. n. *antacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063355.1. The GC content of the type genome is 59.55 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Limnohabitans arcipiforma sp. nov.

Candidatus Limnohabitans arcipiforma (NL. fem. n. *arcipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903856875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903856875.1. The GC content of the type genome is 51.67 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Limnohabitans aspilifica sp. nov.

Candidatus Limnohabitans aspilifica (NL. fem. n. *aspilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp005789685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005789685.1. The GC content of the type genome is 51.9 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Limnohabitans bicalimonas sp. nov.

Candidatus Limnohabitans bicalimonas (NL. fem. n. *bicalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001412575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001412575.1. The GC content of the type genome is 53.32 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as

"freshwater".

Description of *Candidatus* Limnohabitans bimetessa sp. nov.

Candidatus Limnohabitans bimetessa (NL. fem. n. *bimetessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp009928125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009928125.1. The GC content of the type genome is 53.47 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Limnohabitans cacopax sp. nov.

Candidatus Limnohabitans cacopax (NL. fem. n. *cacopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903935585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903945545.1. The GC content of the type genome is 59.06 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Limnohabitans capabitudo sp. nov.

Candidatus Limnohabitans capabitudo (NL. fem. n. *capabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903932865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903932865.1. The GC content of the type genome is 59.4 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Limnohabitans cepulimonia sp. nov.

Candidatus Limnohabitans cepulimonia (NL. fem. n. *cepulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Limnohabitans_A sp903953985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903932905.1. The GC content of the type genome is 59.79 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Limnohabitans ceracetta sp. nov.

Candidatus Limnohabitans ceracetta (NL. fem. n. *ceracetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903916355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903916355.1. The GC content of the type genome is 58.52 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Limnohabitans crusmitia sp. nov.

Candidatus Limnohabitans crusmitia (NL. fem. n. *crusmitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001269365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269365.1. The GC content of the type genome is 52.08 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Limnohabitans extinatica sp. nov.

Candidatus Limnohabitans extinatica (NL. fem. n. *extinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063645.1. The GC content of the type genome is 58.7 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Limnohabitans fibicatica sp. nov.

Candidatus Limnohabitans fibicatica (NL. fem. n. *fibicatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903844775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903844775.1. The GC content of the type genome is 51.69 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Limnohabitans fusifibra sp. nov.

Candidatus Limnohabitans fusifibra (NL. fem. n. *fusifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063375.1. The GC content of the type genome is 51.7 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Limnohabitans impudisca sp. nov.

Candidatus Limnohabitans impudisca (NL. fem. n. *impudisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001269345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269345.1. The GC content of the type genome is 60.35 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Limnohabitans invecatica sp. nov.

Candidatus Limnohabitans invecatica (NL. fem. n. *invecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001269385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269385.1. The GC

content of the type genome is 59.52 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Limnohabitans lupanessa sp. nov.

Candidatus Limnohabitans lupanessa (NL. fem. n. *lupanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063415.1. The GC content of the type genome is 58.2 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Limnohabitans manupago sp. nov.

Candidatus Limnohabitans manupago (NL. fem. n. *manupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063575.1. The GC content of the type genome is 59.15 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Limnohabitans masocibra sp. nov.

Candidatus Limnohabitans masocibra (NL. fem. n. *masocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903894995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903915505.1. The GC content of the type genome is 58.67 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Limnohabitans metapatica sp. nov.

Candidatus Limnohabitans metapatica (NL. fem. n. *metapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Limnohabitans_A sp003063265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063265.1. The GC content of the type genome is 59.17 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Limnohabitans molecatio sp. nov.

Candidatus Limnohabitans molecatio (NL. fem. n. *molecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp002778275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002778275.1. The GC content of the type genome is 60.13 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Limnohabitans navicatica sp. nov.

Candidatus Limnohabitans navicatica (NL. fem. n. *navicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp001517545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000292865.1. The GC content of the type genome is 58.48 % and the genome length is 3.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water from Rimov reservoir".

Description of *Candidatus* Limnohabitans paracicella sp. nov.

Candidatus Limnohabitans paracicella (NL. fem. n. *paracicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063435.1. The GC content of the type genome is 60.15 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Limnohabitans pomifetta sp. nov.

Candidatus Limnohabitans pomifetta (NL. fem. n. *pomifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903961095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903961095.1. The GC content of the type genome is 50.86 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Limnohabitans pulegedo sp. nov.

Candidatus Limnohabitans pulegedo (NL. fem. n. *pulegedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp000293865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000293865.2. The GC content of the type genome is 58.52 % and the genome length is 3.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water from Rimov reservoir".

Description of *Candidatus* Limnohabitans retunastra sp. nov.

Candidatus Limnohabitans retunastra (NL. fem. n. *retunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903822825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903832095.1. The GC content of the type genome is 59.73 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Limnohabitans rosacetta sp. nov.

Candidatus Limnohabitans rosacetta (NL. fem. n. *rosacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp002256145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002256145.1. The GC content of the type genome is 58.78 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Limnohabitans rubicentia sp. nov.

Candidatus Limnohabitans rubicentia (NL. fem. n. *rubicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp903870145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903843035.1. The GC content of the type genome is 54.61 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Limnohabitans tabitimonia sp. nov.

Candidatus Limnohabitans tabitimonia (NL. fem. n. *tabitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp003063335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003063335.1. The GC content of the type genome is 59.8 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Limnohabitans tibicisca sp. nov.

Candidatus Limnohabitans tibicisca (NL. fem. n. *tibicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp002255935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002255935.1. The GC content of the type genome is 60.06 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Limnohabitans vicecibula sp. nov.

Candidatus Limnohabitans vicecibula (NL. fem. n. *vicecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnohabitans_A sp002778285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002778285.1. The GC content of the type genome is 58.2 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Limnothrix elastousia sp. nov.

Candidatus Limnothrix elastousia (NL. fem. n. *elastousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnothrix sp012033055*. The type genome for the species is the GenBank assembly GCA_012033055.1. The GC content of the type genome is 45.68 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Limnothrix lanigetta sp. nov.

Candidatus Limnothrix lanigetta (NL. fem. n. *lanigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnothrix sp001693255*. The type genome for the species is the GenBank assembly RS_GCF_001693255.1. The GC content of the type genome is 49.26 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Limnothrix monoditrix sp. nov.

Candidatus Limnothrix monoditrix (NL. fem. n. *monoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnothrix sp002356215*. The type genome for the species is the GenBank assembly RS_GCF_000485815.1. The GC content of the type genome is 49.25 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Limnothrix nitelitas sp. nov.

Candidatus Limnothrix nitelitas (NL. fem. n. *nitelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnothrix sp001693275*. The type genome for the species is the GenBank assembly RS_GCF_000715475.1. The GC content of the type genome is 49.35 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Limnothrix senipentia sp. nov.

Candidatus Limnothrix senipentia (NL. fem. n. *senipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limnothrix sp000316605*. The type genome for the species is the GenBank assembly RS_GCF_000316605.1. The GC content of the type genome is 43.87 % and the genome length is 5.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Crystal Cave (limestone)".

Description of *Candidatus* Limosilactobacillus adporessa sp. nov.

Candidatus Limosilactobacillus adporessa (NL. fem. n. *adporessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp900156885*. The type genome for the species is the GenBank assembly RS_GCF_900156885.1. The GC content of the type genome is 45.42 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Limosilactobacillus bigaressa sp. nov.

Candidatus Limosilactobacillus bigaressa (NL. fem. n. *bigaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp009663775*. The type genome for the species is the GenBank assembly RS_GCF_009663775.1. The GC content of the type genome is 38.87 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Limosilactobacillus cinefitia sp. nov.

Candidatus Limosilactobacillus cinefitia (NL. fem. n. *cinefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp900557215*. The type genome for the species is the GenBank assembly GCA_902388645.1. The GC content of the type genome is 39.42 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Limosilactobacillus defosax sp. nov.

Candidatus Limosilactobacillus defosax (NL. fem. n. *defosax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp002299975*. The type genome for the species is the GenBank assembly GCA_002299975.1. The GC content of the type genome is 50.49 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Limosilactobacillus desupimonas sp. nov.

Candidatus Limosilactobacillus desupimonas (NL. fem. n. *desupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp014145435*. The type genome for the species is the GenBank assembly RS_GCF_014145435.1. The GC content of the type genome is 38.48 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Limosilactobacillus detotisca sp. nov.

Candidatus Limosilactobacillus detotisca (NL. fem. n. *detotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp014145615*. The type genome for the species is the GenBank assembly RS_GCF_014145605.1. The GC content of the type genome is 38.24 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Limosilactobacillus heriniforma sp. nov.

Candidatus Limosilactobacillus heriniforma (NL. fem. n. *heriniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp014145545*. The type genome for the species is the GenBank assembly RS_GCF_014145585.1. The GC content of the type genome is 37.95 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Limosilactobacillus innecitas sp. nov.

Candidatus Limosilactobacillus innecitas (NL. fem. n. *innecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp013487845*. The type genome for the species is the GenBank assembly RS_GCF_013487845.1. The GC content of the type genome is 42.54 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Limosilactobacillus peridessa sp. nov.

Candidatus Limosilactobacillus peridessa (NL. fem. n. *peridessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp014145505*. The type genome for the species is the GenBank assembly RS_GCF_014145505.1. The GC content of the type genome is 39.12 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Limosilactobacillus peripessa sp. nov.

Candidatus Limosilactobacillus peripessa (NL. fem. n. *peripessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Limosilactobacillus sp012843675*. The type genome for the species is the GenBank assembly RS_GCF_012843675.1. The GC content of the type genome is 45.89 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Linigana bonifedo sp. nov.

Candidatus Linigana bonifedo (NL. fem. n. *bonifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFW01 sp013286305*. The type genome for the species is the GenBank assembly GCA_013286305.1. The GC content of the type genome is 40.57 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Linigana gen. nov.

Candidatus Linigana (NL. fem. n. *Linigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFW01*. The type species for the genus is *Candidatus* Linigana bonifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Linigana depasitio sp. nov.

Candidatus Linigana depasitio (NL. fem. n. *depasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFW01 sp013286415*. The type genome for the species is the GenBank assembly GCA_013286415.1. The GC content of the type genome is 40.71 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Linigana lupanitica sp. nov.

Candidatus Linigana lupanitica (NL. fem. n. *lupanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFW01 sp903882935*. The type genome for the species is the GenBank assembly GCA_903835135.1. The GC content of the type genome is 44.67 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Linigana lutulitoga sp. nov.

Candidatus Linigana lutulitoga (NL. fem. n. *lutulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFW01 sp013285915*. The type genome for the species is the GenBank assembly GCA_013285915.1. The GC content of the type genome is 41.74 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Linigaria diponifica sp. nov.

Candidatus Linigaria diponifica (NL. fem. n. *diponifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Fen-1262 sp003152875*. The type genome for the species is the GenBank assembly GCA_003155505.1. The GC content of the type genome is 60.41 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Linigaria gen. nov.

Candidatus Linigaria (NL. fem. n. *Linigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1262*. The type species for the genus is *Candidatus* Linigaria diponifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Linigaria indubilega sp. nov.

Candidatus Linigaria indubilega (NL. fem. n. *indubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1262 sp003161755*. The type genome for the species is the GenBank assembly GCA_003161755.1. The GC content of the type genome is 52.95 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Linigia lubenessa sp. nov.

Candidatus Linigia lubenessa (NL. fem. n. *lubenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2268 sp002418685*. The type genome for the species is the GenBank assembly GCA_002423525.1. The GC content of the type genome is 34.1 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Linigia gen. nov.

Candidatus Linigia (NL. fem. n. *Linigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2268*. The type species for the genus is *Candidatus* Linigia lubenessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Linigiaceae fam. nov.

Candidatus Linigiaceae (NL. fem. n. *Linigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2268.* The type genus for the taxon is *Candidatus* Linigia .

According to GTDB R06-RS202, this family belongs to the order *Kapabacteriales*.

Description of *Candidatus* Linigida inresitura sp. nov.

Candidatus Linigida inresitura (NL. fem. n. *inresitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2778 sp002352385*. The type genome for the species is the GenBank assembly GCA_002352385.1. The GC content of the type genome is 55.65 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Linigida gen. nov.

Candidatus Linigida (NL. fem. n. *Linigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2778*. The type species for the genus is *Candidatus* Linigida inresitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2778*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigidaceae.

Description of *Candidatus* Linigidaceae fam. nov.

Candidatus Linigidaceae (NL. fem. n. *Linigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2778.* The type genus for the taxon is *Candidatus* Linigida .

According to GTDB R06-RS202, this family belongs to the order *Methylococcales*.

Description of *Candidatus* Linigosa indipimonia sp. nov.

Candidatus Linigosa indipimonia (NL. fem. n. *indipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-42-7-A sp001831055*. The type genome for the species is the GenBank assembly GCA_001831055.1. The GC content of the type genome is 41.76 % and the genome length is 1.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Linigosa gen. nov.

Candidatus Linigosa (NL. fem. n. *Linigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-42-7-A*. The type species for the genus is *Candidatus* Linigosa indipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-42-7-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigosaceae.

Description of *Candidatus* Linigosaceae fam. nov.

Candidatus Linigosaceae (NL. fem. n. *Linigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-42-7-A.* The type genus for the taxon is *Candidatus* Linigosa .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Linigula viripessa sp. nov.

Candidatus Linigula viripessa (NL. fem. n. *viripessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715505 sp002715505*. The type genome for the species is the GenBank assembly GCA_002715505.1. The GC content of the type genome is 29.48 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Linigula gen. nov.

Candidatus Linigula (NL. fem. n. *Linigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715505*. The type species for the genus is *Candidatus* Linigula viripessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Lipingzhangella nutamiforma sp. nov.

Candidatus Lipingzhangella nutamiforma (NL. fem. n. *nutamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lipingzhangella sp003725585*. The type genome for the species is the GenBank assembly RS_GCF_003725585.1. The GC content of the type genome is 69.79 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Listeria decapimonia sp. nov.

Candidatus Listeria decapimonia (NL. fem. n. *decapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp014229095*. The type genome for the species is the GenBank assembly RS_GCF_014225985.1. The GC content of the type genome is 38.6 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Listeria facunitudo sp. nov.

Candidatus Listeria facunitudo (NL. fem. n. *facunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp014223685*. The type genome for the species is the GenBank assembly RS_GCF_014224035.1. The GC content of the type genome is 35.92 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Listeria femelatica sp. nov.

Candidatus Listeria femelatica (NL. fem. n. *femelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp014229345*. The type genome for the species is the GenBank assembly RS_GCF_014229345.1. The GC content of the type genome is 36.85 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Listeria loripivita sp. nov.

Candidatus Listeria loripivita (NL. fem. n. *loripivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp014229645*. The type genome for the species is the GenBank assembly RS_GCF_014229645.1. The GC content of the type genome is 38.67 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Listeria practedo sp. nov.

Candidatus Listeria practedo (NL. fem. n. *practedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp902806445*. The type genome for the species is the GenBank assembly RS_GCF_902806445.1. The GC content of the type genome is 36.69 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Listeria rubicicella sp. nov.

Candidatus Listeria rubicicella (NL. fem. n. *rubicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp014227775*. The type genome for the species is the GenBank assembly RS_GCF_014224195.1. The GC content of the type genome is 38.79 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Listeria tirocago sp. nov.

Candidatus Listeria tirocago (NL. fem. n. *tirocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria sp011800755*. The type genome for the species is the GenBank assembly RS_GCF_011800755.1. The GC content of the type genome is 40.07 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Listeria fecunatio sp. nov.

Candidatus Listeria fecunatio (NL. fem. n. *fecunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria_A sp013820765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013820765.1. The GC content of the type genome is 42.25 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Listeria papavicella sp. nov.

Candidatus Listeria papavicella (NL. fem. n. *papavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Listeria_A sp014322795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014322795.1. The GC content of the type genome is 41.9 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Litoreibacter dibucentia sp. nov.

Candidatus Litoreibacter dibucentia (NL. fem. n. *dibucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litoreibacter sp013042765*. The type genome for the species is the GenBank assembly GCA_013042765.1. The GC content of the type genome is 60.21 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Litoreibacter inexpilenta sp. nov.

Candidatus Litoreibacter inexpilenta (NL. fem. n. *inexpilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litoreibacter sp009811795*. The type genome for the species is the GenBank assembly RS_GCF_009811795.1. The GC content of the type genome is 57.52 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Litoribacter subucimonas sp. nov.

Candidatus Litoribacter subucimonas (NL. fem. n. *subucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litoribacter sp007483685*. The type genome for the species is the GenBank assembly RS_GCF_007483685.1. The GC content of the type genome is 42.13 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Litoricola lutulentia sp. nov.

Candidatus Litoricola lutulentia (NL. fem. n. *lutulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litoricola sp012269655*. The type genome for the species is the GenBank assembly GCA_012269785.1. The GC content of the type genome is 53.57 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Litorilituus denicitoga sp. nov.

Candidatus Litorilituus denicitoga (NL. fem. n. *denicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litorilituus sp003545765*. The type genome for the species is the GenBank assembly RS_GCF_003545765.1. The GC content of the type genome is 37.19 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Litorivivens binocitia sp. nov.

Candidatus Litorivivens binocitia (NL. fem. n. *binocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litorivivens sp002710725*. The type genome for the species is the GenBank assembly GCA_002710725.1. The GC content of the type genome is 56.44 %

and the genome length is 2.91 Mbp.

Description of *Candidatus* Litorivivens dilacicula sp. nov.

Candidatus Litorivivens dilacicula (NL. fem. n. *dilacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Litorivivens sp002415025*. The type genome for the species is the GenBank assembly GCA_002723235.1. The GC content of the type genome is 55.26 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Locelana idipsitudo sp. nov.

Candidatus Locelana idipsitudo (NL. fem. n. *idipsitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVV01 sp009694095*. The type genome for the species is the GenBank assembly GCA_009694095.1. The GC content of the type genome is 61.79 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Locelana gen. nov.

Candidatus Locelana (NL. fem. n. *Locelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVV01*. The type species for the genus is *Candidatus* Locelana idipsitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelanaceae.

Description of *Candidatus* Locelanaceae fam. nov.

Candidatus Locelanaceae (NL. fem. n. *Locelanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVV01*. The type genus for the taxon is *Candidatus* Locelana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHVV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Locelanales.

Description of *Candidatus* Locelanales ord. nov.

Candidatus Locelanales (NL. fem. n. *Locelanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVV01*. The type genus for the taxon is *Candidatus* Locelana .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Locelaria viburiforma sp. nov.

Candidatus Locelaria viburiforma (NL. fem. n. *viburiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3950 sp002385475*. The type genome for the species is the GenBank assembly GCA_012728195.1. The GC content of the type genome is 41.71 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Locelaria gen. nov.

Candidatus Locelaria (NL. fem. n. *Locelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3950*. The type species for the genus is *Candidatus* Locelaria viburiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Locelella pabilitrix sp. nov.

Candidatus Locelella pabilitrix (NL. fem. n. *pabilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-69-5 sp001917535*. The type genome for the species is the GenBank assembly GCA_001918005.1. The GC content of the type genome is 69.37 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 2 days after first rain event (91mm)".

Description of *Candidatus* Locelella gen. nov.

Candidatus Locelella (NL. fem. n. *Locelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-4-69-5*. The type species for the genus is *Candidatus* Locelella pabilitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Locelia adalgifica sp. nov.

Candidatus Locelia adalgifica (NL. fem. n. *adalgifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp003133815*. The type genome for the species is the GenBank assembly GCA_003133815.1. The GC content of the type genome is 54.92 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Locelia gen. nov.

Candidatus Locelia (NL. fem. n. *Locelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11358*. The type species for the genus is *Candidatus* Locelia adalgifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11358*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loceliaceae.

Description of *Candidatus* Loceliaceae fam. nov.

Candidatus Loceliaceae (NL. fem. n. *Loceliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11358.* The type genus for the taxon is *Candidatus* Locelia .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Locelia adpanilega sp. nov.

Candidatus Locelia adpanilega (NL. fem. n. *adpanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903921455*. The type genome for the species is the GenBank assembly GCA_903921455.1. The GC content of the type genome is 58.24 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Locelia adtoritas sp. nov.

Candidatus Locelia adtoritas (NL. fem. n. *adtoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903850425*. The type genome for the species is the GenBank assembly GCA_903850425.1. The GC content of the type genome is 58.07 % and the genome length is 6.89 Mbp.

Description of *Candidatus* Locelia catalatica sp. nov.

Candidatus Locelia catalatica (NL. fem. n. *catalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903878805*. The type genome for the species is the GenBank assembly GCA_903878805.1. The GC content of the type genome is 55.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Locelia ceromifica sp. nov.

Candidatus Locelia ceromifica (NL. fem. n. *ceromifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp003151855*. The type genome for the species is the GenBank assembly GCA_003151855.1. The GC content of the type genome is 58.66 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Locelia conarilega sp. nov.

Candidatus Locelia conarilega (NL. fem. n. *conarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903884535*. The type genome for the species is the GenBank assembly GCA_903849155.1. The GC content of the type genome is 56.86 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Locelia debucetta sp. nov.

Candidatus Locelia debucetta (NL. fem. n. *debucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903918885*. The type genome for the species is the GenBank assembly GCA_903879495.1. The GC content of the type genome is 55.99 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Locelia decacessa sp. nov.

Candidatus Locelia decacessa (NL. fem. n. *decacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903835255*. The type genome for the species is the GenBank assembly GCA_903885235.1. The GC content of the type genome is 59.65 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Locelia denicetta sp. nov.

Candidatus Locelia denicetta (NL. fem. n. *denicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903889895*. The type genome for the species is the GenBank assembly GCA_903889895.1. The GC content of the type genome is 56.77 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Locelia denomentia sp. nov.

Candidatus Locelia denomentia (NL. fem. n. *denomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903858275*. The type genome for the species is the GenBank assembly GCA_903858275.1. The GC content of the type genome is 57.32 %

and the genome length is 3.66 Mbp.

Description of *Candidatus* Locelia dilemibula sp. nov.

Candidatus Locelia dilemibula (NL. fem. n. *dilemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903827955*. The type genome for the species is the GenBank assembly GCA_903827955.1. The GC content of the type genome is 56.63 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Locelia dilogentia sp. nov.

Candidatus Locelia dilogentia (NL. fem. n. *dilogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903861445*. The type genome for the species is the GenBank assembly GCA_903861445.1. The GC content of the type genome is 56.21 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Locelia duricitoga sp. nov.

Candidatus Locelia duricitoga (NL. fem. n. *duricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp003139955*. The type genome for the species is the GenBank assembly GCA_003139955.1. The GC content of the type genome is 55.59 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Locelia eclecisca sp. nov.

Candidatus Locelia eclecisca (NL. fem. n. *eclecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp003455565*. The type genome for the species is the GenBank assembly GCA_003455565.1. The GC content of the type genome is 56.37 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Locelia homogentia sp. nov.

Candidatus Locelia homogentia (NL. fem. n. *homogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903872345*. The type genome for the species is the GenBank assembly GCA_903911525.1. The GC content of the type genome is 58.52 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Locelia innoxax sp. nov.

Candidatus Locelia innoxax (NL. fem. n. *innoxax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903847285*. The type genome for the species is the GenBank assembly GCA_903847285.1. The GC content of the type genome is 56.04 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Locelia leviditia sp. nov.

Candidatus Locelia leviditia (NL. fem. n. *leviditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903820285*. The type genome for the species is the GenBank assembly GCA_903912905.1. The GC content of the type genome is 58.42 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Locelia malagousia sp. nov.

Candidatus Locelia malagousia (NL. fem. n. *malagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903895255*. The type genome for the species is the GenBank assembly GCA_903854905.1. The GC content of the type genome is 59.54 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Locelia peracastra sp. nov.

Candidatus Locelia peracastra (NL. fem. n. *peracastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903936645*. The type genome for the species is the GenBank assembly GCA_903936645.1. The GC content of the type genome is 59.33 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Locelia pericetta sp. nov.

Candidatus Locelia pericetta (NL. fem. n. *pericetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903944085*. The type genome for the species is the GenBank assembly GCA_903944085.1. The GC content of the type genome is 57.44 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Locelia pinigicula sp. nov.

Candidatus Locelia pinigicula (NL. fem. n. *pinigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903917705*. The type genome for the species is the GenBank assembly GCA_903917705.1. The GC content of the type genome is 60.07 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Locelia protritica sp. nov.

Candidatus Locelia protritica (NL. fem. n. *protritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903922735*. The type genome for the species is the GenBank assembly GCA_903922735.1. The GC content of the type genome is 57.12 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Locelia risibibula sp. nov.

Candidatus Locelia risibibula (NL. fem. n. *risibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903870815*. The type genome for the species is the GenBank assembly GCA_903870815.1. The GC content of the type genome is 58.83 %

and the genome length is 3.17 Mbp.

Description of *Candidatus* Locelia robigousia sp. nov.

Candidatus Locelia robigousia (NL. fem. n. *robigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903911825*. The type genome for the species is the GenBank assembly GCA_903907945.1. The GC content of the type genome is 55.12 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Locelia semificula sp. nov.

Candidatus Locelia semificula (NL. fem. n. *semificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903842235*. The type genome for the species is the GenBank assembly GCA_903842235.1. The GC content of the type genome is 59.59 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Locelia sonabitura sp. nov.

Candidatus Locelia sonabitura (NL. fem. n. *sonabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903888765*. The type genome for the species is the GenBank assembly GCA_903831205.1. The GC content of the type genome is 56.03 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Locelia subofilenta sp. nov.

Candidatus Locelia subofilenta (NL. fem. n. *subofilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903865745*. The type genome for the species is the GenBank assembly GCA_903865745.1. The GC content of the type genome is 55.82 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Locelia subucilega sp. nov.

Candidatus Locelia subucilega (NL. fem. n. *subucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903875465*. The type genome for the species is the GenBank assembly GCA_903875465.1. The GC content of the type genome is 58.59 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Locelia tresvitrix sp. nov.

Candidatus Locelia tresvitrix (NL. fem. n. *tresvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903822015*. The type genome for the species is the GenBank assembly GCA_903822015.1. The GC content of the type genome is 58.49 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Locelia viripimonia sp. nov.

Candidatus Locelia viripimonia (NL. fem. n. *viripimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11358 sp903833055*. The type genome for the species is the GenBank assembly GCA_903833055.1. The GC content of the type genome is 54.46 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Locelida abinvitudo sp. nov.

Candidatus Locelida abinvitudo (NL. fem. n. *abinvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp013817135*. The type genome for the species is the GenBank assembly GCA_013817135.1. The GC content of the type genome is 49.93 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Locelida gen. nov.

Candidatus Locelida (NL. fem. n. *Locelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8639*. The type species for the genus is *Candidatus* Locelida abinvitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Locelidaceae fam. nov.

Candidatus Locelidaceae (NL. fem. n. *Locelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8639.* The type genus for the taxon is *Candidatus* Locelida .

According to GTDB R06-RS202, this family belongs to the order *Nitrospirales*.

Description of *Candidatus* Locelida adpeniforma sp. nov.

Candidatus Locelida adpeniforma (NL. fem. n. *adpeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp003228495*. The type genome for the species is the GenBank assembly GCA_003228495.1. The GC content of the type genome is 48.4 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Locelida angipetta sp. nov.

Candidatus Locelida angipetta (NL. fem. n. *angipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp003233615*. The type genome for the species is the GenBank assembly GCA_003233615.1. The GC content of the type genome is 47.56 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Locelida artopessa sp. nov.

Candidatus Locelida artopessa (NL. fem. n. *artopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8639 sp009377845*. The type genome for the species is the GenBank assembly GCA_009377845.1. The GC content of the type genome is 50.74 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Locelida feficatica sp. nov.

Candidatus Locelida feficatica (NL. fem. n. *feficatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp902500695*. The type genome for the species is the GenBank assembly GCA_902500695.1. The GC content of the type genome is 50.07 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Locelida inoffisca sp. nov.

Candidatus Locelida inoffisca (NL. fem. n. *inoffisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp003523945*. The type genome for the species is the GenBank assembly GCA_003523945.1. The GC content of the type genome is 49.93 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Locelida lorarisca sp. nov.

Candidatus Locelida lorarisca (NL. fem. n. *lorarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8639 sp003235785*. The type genome for the species is the GenBank assembly GCA_003235785.1. The GC content of the type genome is 49.92 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Locelosa induvitica sp. nov.

Candidatus Locelosa induvitica (NL. fem. n. *induvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10329 sp003456455*. The type genome for the species is the GenBank assembly GCA_003456455.1. The GC content of the type genome is 42.11 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Locelosa gen. nov.

Candidatus Locelosa (NL. fem. n. *Locelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10329*. The type species for the genus is *Candidatus* Locelosa induvitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10329*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelosaceae.

Description of *Candidatus* Locelosaceae fam. nov.

Candidatus Locelosaceae (NL. fem. n. *Locelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10329.* The type genus for the taxon is *Candidatus* Locelosa .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Locelula albogitica sp. nov.

Candidatus Locelula albogitica (NL. fem. n. *albogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJHQ01 sp903819565*. The type genome for the species is the GenBank assembly GCA_903819565.1. The GC content of the type genome is 55.6 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Locelula gen. nov.

Candidatus Locelula (NL. fem. n. *Locelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJHQ01*. The type species for the genus is *Candidatus* Locelula albogitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panopellaceae.

Description of *Candidatus* Locelula demigigena sp. nov.

Candidatus Locelula demigigena (NL. fem. n. *demigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJHQ01 sp903820505*. The type genome for the species is the GenBank assembly GCA_903841325.1. The GC content of the type genome is 54.3 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Locupana tenemastra sp. nov.

Candidatus Locupana tenemastra (NL. fem. n. *tenemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITUV01 sp903895725*. The type genome for the species is the GenBank assembly GCA_903893645.1. The GC content of the type genome is 65.56 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Locupana gen. nov.

Candidatus Locupana (NL. fem. n. *Locupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITUV01*. The type species for the genus is *Candidatus* Locupana tenemastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITUV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locupanaceae.

Description of *Candidatus* Locupanaceae fam. nov.

Candidatus Locupanaceae (NL. fem. n. *Locupanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAITUV01.* The type genus for the taxon is *Candidatus* Locupana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIXZC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Murelariales.

Description of *Candidatus* Locuparia cimitastra sp. nov.

Candidatus Locuparia cimitastra (NL. fem. n. *cimitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9659 sp002694945*. The type genome for the species is the GenBank assembly GCA_003518165.1. The GC content of the type genome is 47.47 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Locuparia gen. nov.

Candidatus Locuparia (NL. fem. n. *Locuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9659*. The type species for the genus is *Candidatus* Locuparia cimitastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Locuparia impilicella sp. nov.

Candidatus Locuparia impilicella (NL. fem. n. *impilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9659 sp902567095*. The type genome for the species is the GenBank assembly GCA_902567095.1. The GC content of the type genome is 43.45 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Locuparia innupedo sp. nov.

Candidatus Locuparia innupedo (NL. fem. n. *innupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9659 sp012961165*. The type genome for the species is the GenBank assembly GCA_012961165.1. The GC content of the type genome is 50.92 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Locuparia refulifica sp. nov.

Candidatus Locuparia refulifica (NL. fem. n. *refulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9659 sp002711495*. The type genome for the species is the GenBank assembly GCA_002711495.1. The GC content of the type genome is 43.24 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Locuparia verifitica sp. nov.

Candidatus Locuparia verifitica (NL. fem. n. *verifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9659 sp002708765*. The type genome for the species is the GenBank assembly GCA_002708765.1. The GC content of the type genome is 44.79 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Locupella decapicula sp. nov.

Candidatus Locupella decapicula (NL. fem. n. *decapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1359 sp003141315*. The type genome for the species is the GenBank assembly GCA_003141735.1. The GC content of the type genome is 47.82 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Locupella gen. nov.

Candidatus Locupella (NL. fem. n. *Locupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1359*. The type species for the genus is *Candidatus* Locupella decapicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Locupia cruppiforma sp. nov.

Candidatus Locupia cruppiforma (NL. fem. n. *cruppiforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRP01 sp007571315*. The type genome for the species is the GenBank assembly GCA_007571315.1. The GC content of the type genome is 63.48 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Locupia gen. nov.

Candidatus Locupia (NL. fem. n. *Locupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKRP01*. The type species for the genus is *Candidatus* Locupia cruppiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RKRP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locupiaceae.

Description of *Candidatus* Locupiaceae fam. nov.

Candidatus Locupiaceae (NL. fem. n. *Locupiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RKRP01.* The type genus for the taxon is *Candidatus* Locupia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RKRP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Locupiales.

Description of *Candidatus* Locupiales ord. nov.

Candidatus Locupiales (NL. fem. n. *Locupiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RKRP01.* The type genus for the taxon is *Candidatus* Locupia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Locupia fetulivita sp. nov.

Candidatus Locupia fetulivita (NL. fem. n. *fetulivita* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRP01 sp009844425*. The type genome for the species is the GenBank assembly GCA_009844425.1. The GC content of the type genome is 64.06 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Locupia ludifentia sp. nov.

Candidatus Locupia ludifentia (NL. fem. n. *ludifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRP01 sp009845905*. The type genome for the species is the GenBank assembly GCA_009845905.1. The GC content of the type genome is 64.58 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Locupia monocitudo sp. nov.

Candidatus Locupia monocitudo (NL. fem. n. *monocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRP01 sp009838035*. The type genome for the species is the GenBank assembly GCA_009842185.1. The GC content of the type genome is 64.53 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Locupia novilugo sp. nov.

Candidatus Locupia novilugo (NL. fem. n. *novilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRP01 sp011523505*. The type genome for the species is the GenBank assembly GCA_011523505.1. The GC content of the type genome is 64.64 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Locupida levidibula sp. nov.

Candidatus Locupida levidibula (NL. fem. n. *levidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVW01 sp009694085*. The type genome for the species is the GenBank assembly GCA_009694085.1. The GC content of the type genome is 64.44 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Locupida gen. nov.

Candidatus Locupida (NL. fem. n. *Locupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVW01*. The type species for the genus is *Candidatus* Locupida levidibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locupidaceae.

Description of *Candidatus* Locupidaceae fam. nov.

Candidatus Locupidaceae (NL. fem. n. *Locupidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVW01.* The type genus for the taxon is *Candidatus* Locupida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHVW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Locupidales.

Description of *Candidatus* Locupidales ord. nov.

Candidatus Locupidales (NL. fem. n. *Locupidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVW01.* The type genus for the taxon is *Candidatus* Locupida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Locuposa istinitio sp. nov.

Candidatus Locuposa istinitio (NL. fem. n. *istinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *O2-12-FULL-59-9 sp001800185*. The type genome for the species is the GenBank assembly GCA_001800185.1. The GC content of the type genome is 58.89 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Locuposa gen. nov.

Candidatus Locuposa (NL. fem. n. *Locuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-59-9*. The type species for the genus is *Candidatus* Locuposa istinitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-12-FULL-59-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locuposaceae.

Description of *Candidatus* Locuposaceae fam. nov.

Candidatus Locuposaceae (NL. fem. n. *Locuposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *O2-12-FULL-59-9.* The type genus for the taxon is *Candidatus* Locuposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *02-12-FULL-59-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pudibanales.

Description of *Candidatus* Loigolactobacillus adsesago sp. nov.

Candidatus Loigolactobacillus adsesago (NL. fem. n. *adsesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loigolactobacillus sp003946385*. The type genome for the species is the GenBank assembly RS_GCF_003946385.1. The GC content of the type genome is 42.66 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Loigolactobacillus rubecivita sp. nov.

Candidatus Loigolactobacillus rubecivita (NL. fem. n. *rubecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loigolactobacillus sp005405165*. The type genome for the species is the GenBank assembly RS_GCF_005405165.1. The GC content of the type genome is 43.47 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Loigolactobacillus semigitio sp. nov.

Candidatus Loigolactobacillus semigitio (NL. fem. n. *semigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loigolactobacillus sp003946445*. The type genome for the species is the GenBank assembly RS_GCF_003946445.1. The GC content of the type genome is 42.58 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Loktanella holovilega sp. nov.

Candidatus Loktanella holovilega (NL. fem. n. *holovilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loktanella sp004145405*. The type genome for the species is the GenBank assembly RS_GCF_004145405.1. The GC content of the type genome is 66.44 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Loktanella obfusimonia sp. nov.

Candidatus Loktanella obfusimonia (NL. fem. n. *obfusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loktanella sp001420005*. The type genome for the species is the GenBank assembly RS_GCF_001420005.1. The GC content of the type genome is 61.95 % and the genome length is 3.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Surface seawater".

Description of *Candidatus* Loktanella ocissifica sp. nov.

Candidatus Loktanella ocissifica (NL. fem. n. *ocissifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Loktanella sp900110705*. The type genome for the species is the GenBank assembly RS_GCF_900110705.1. The GC content of the type genome is 61.76 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Longibacter infatiforma sp. nov.

Candidatus Longibacter infatiforma (NL. fem. n. *infatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Longibacter sp009908725*. The type genome for the species is the GenBank assembly GCA_009908725.1. The GC content of the type genome is 62.6 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Longibaculum agnicifica sp. nov.

Candidatus Longibaculum agnicifica (NL. fem. n. *agnicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Longibaculum sp900538465*. The type genome for the species is the GenBank assembly GCA_900538465.1. The GC content of the type genome is 30.51 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Longimicrobium acertessa sp. nov.

Candidatus Longimicrobium acertessa (NL. fem. n. *acertessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Longimicrobium sp902805735*. The type genome for the species is the GenBank assembly GCA_902805735.1. The GC content of the type genome is 70.97 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Lorarana cadavitas sp. nov.

Candidatus Lorarana cadavitas (NL. fem. n. *cadavitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4877 sp002399285*. The type genome for the species is the GenBank assembly GCA_002399285.1. The GC content of the type genome is 47.33 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Lorarana gen. nov.

Candidatus Lorarana (NL. fem. n. *Lorarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4877*. The type species for the genus is *Candidatus* Lorarana cadavitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lorararanaceae.

Description of *Candidatus* Lorararanaceae fam. nov.

Candidatus Lorararanaceae (NL. fem. n. *Lorararanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4877*. The type genus for the taxon is *Candidatus* Lorarana .

According to GTDB R06-RS202, this family belongs to the order *Caldanaerobiales*.

Description of *Candidatus* Lorarana coninilega sp. nov.

Candidatus Lorarana coninilega (NL. fem. n. *coninilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4877 sp002399345*. The type genome for the species is the GenBank assembly GCA_002396845.1. The GC content of the type genome is 41.18 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Lorararia ensifitrix sp. nov.

Candidatus Lorararia ensifitrix (NL. fem. n. *ensifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10197 sp003501255*. The type genome for the species is the GenBank assembly GCA_003501255.1. The GC content of the type genome is 45.58 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Lorararia gen. nov.

Candidatus Lorararia (NL. fem. n. *Lorararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10197*. The type species for the genus is *Candidatus* Lorararia ensifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lorararia ceae.

Description of *Candidatus* Lorararia ceae fam. nov.

Candidatus Lorararia ceae (NL. fem. n. *Lorararia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10197.* The type genus for the taxon is *Candidatus* Lorararia .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Lorarella domicilega sp. nov.

Candidatus Lorarella domicilega (NL. fem. n. *domicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAW01 sp903911135*. The type genome for the species is the GenBank assembly GCA_903925625.1. The GC content of the type genome is 40.25 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Lorarella gen. nov.

Candidatus Lorarella (NL. fem. n. *Lorarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDAW01*. The type species for the genus is *Candidatus* Lorarella domicilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDAW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lorarellaceae.

Description of *Candidatus* Lorarellaceae fam. nov.

Candidatus Lorarellaceae (NL. fem. n. *Lorarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDAW01*. The type genus for the taxon is *Candidatus* Lorarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lenunanales.

Description of *Candidatus* Lorarella negidastra sp. nov.

Candidatus Lorarella negidastra (NL. fem. n. *negidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAW01 sp013288905*. The type genome for the species is the GenBank assembly GCA_013288905.1. The GC content of the type genome is 37.34 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Lorarella refinitura sp. nov.

Candidatus Lorarella refinitura (NL. fem. n. *refinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAW01 sp903844645*. The type genome for the species is the GenBank assembly GCA_903830515.1. The GC content of the type genome is 40.82 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Loraria cicarastra sp. nov.

Candidatus Loraria cicarastra (NL. fem. n. *cicarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-41-16 sp001782805*. The type genome for the species is the GenBank assembly GCA_001784325.1. The GC content of the type genome is 40.59 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Loraria gen. nov.

Candidatus Loraria (NL. fem. n. *Loraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-41-16*. The type species for the genus is *Candidatus* Loraria cicarastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Lorarosa pavimitia sp. nov.

Candidatus Lorarosa pavimitia (NL. fem. n. *pavimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-43-14 sp001816835*. The type genome for the species is the GenBank assembly GCA_001816835.1. The GC content of the type genome is 42.98 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Lorarosa gen. nov.

Candidatus Lorarosa (NL. fem. n. *Lorarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-43-14*. The type species for the genus is *Candidatus* Lorarosa pavimitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-43-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lorarosaceae.

Description of *Candidatus* Lorarosaceae fam. nov.

Candidatus Lorarosaceae (NL. fem. n. *Lorarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-43-14.* The type genus for the taxon is *Candidatus* Lorarosa .

According to GTDB R06-RS202, this family belongs to the order *Woykebacterales*.

Description of *Candidatus* Lorarula videlitura sp. nov.

Candidatus Lorarula videlitura (NL. fem. n. *videlitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-02-FULL-42-17 sp001786095*. The type genome for the species is the GenBank assembly GCA_001785635.1. The GC content of the type genome is 41.77 % and the genome length is 0.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Lorarula gen. nov.

Candidatus Lorarula (NL. fem. n. *Lorarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-02-FULL-42-17*. The type species for the genus is *Candidatus* Lorarula videlitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Loripana catapicula sp. nov.

Candidatus Loripana catapicula (NL. fem. n. *catapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6776 sp002453155*. The type genome for the species is the GenBank assembly GCA_002376795.1. The GC content of the type genome is 45.18 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Loripana gen. nov.

Candidatus Loripana (NL. fem. n. *Loripana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6776*. The type species for the genus is *Candidatus* Loripana catapicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Loriparia immadetta sp. nov.

Candidatus Loriparia immadetta (NL. fem. n. *immadetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-8 sp003598065*. The type genome for the species is the GenBank assembly GCA_003598065.1. The GC content of the type genome is 62.23 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Loriparia gen. nov.

Candidatus Loriparia (NL. fem. n. *Loriparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-8*. The type species for the genus is *Candidatus* Loriparia immadetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loripariaceae.

Description of *Candidatus* Loripariaceae fam. nov.

Candidatus Loripariaceae (NL. fem. n. *Loripariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-8.* The type genus for the taxon is *Candidatus* Loriparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripariales.

Description of *Candidatus* Loripariales ord. nov.

Candidatus Loripariales (NL. fem. n. *Loripariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-8.* The type genus for the taxon is *Candidatus* Loriparia .

According to the original version of GTDB R06-RS202, this family belongs to the class

SURF-8. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripariae.

Description of *Candidatus* Loripariae class. nov.

Candidatus Loripariae (NL. fem. n. *c__Loripariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-8.* The type genus for the taxon is *Candidatus* Loriparia .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Loripia decupitrix sp. nov.

Candidatus Loripia decupitrix (NL. fem. n. *decupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTSX01 sp012965065*. The type genome for the species is the GenBank assembly GCA_012965065.1. The GC content of the type genome is 40.95 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Loripia gen. nov.

Candidatus Loripia (NL. fem. n. *Loripia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTSX01*. The type species for the genus is *Candidatus* Loripia decupitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11654*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refaciaceae.

Description of *Candidatus* Loripida ranunicella sp. nov.

Candidatus Loripida ranunicella (NL. fem. n. *ranunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG100 sp900315555*. The type genome for the species is the GenBank assembly GCA_900315555.1. The GC content of the type genome is 53.65 %

and the genome length is 1.82 Mbp.

Description of *Candidatus* Loripida gen. nov.

Candidatus Loripida (NL. fem. n. *Loripida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG100*. The type species for the genus is *Candidatus* Loripida ranunicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Loriposa decitetta sp. nov.

Candidatus Loriposa decitetta (NL. fem. n. *decitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2565 sp002340265*. The type genome for the species is the GenBank assembly GCA_002340265.1. The GC content of the type genome is 40.88 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Loriposa gen. nov.

Candidatus Loriposa (NL. fem. n. *Loriposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2565*. The type species for the genus is *Candidatus* Loriposa decitetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loriposaceae.

Description of *Candidatus* Loriposaceae fam. nov.

Candidatus Loriposaceae (NL. fem. n. *Loriposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2565.* The type genus for the taxon is *Candidatus* Loriposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Loriposales.

Description of *Candidatus* Loriposales ord. nov.

Candidatus Loriposales (NL. fem. n. *Loriposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2565.* The type genus for the taxon is *Candidatus* Loriposa .

According to the GTDB R06-RS202, this order belongs to the class *Lentisphaeria*.

Description of *Candidatus* Loripula latibatica sp. nov.

Candidatus Loripula latibatica (NL. fem. n. *latibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-26 sp001794125*. The type genome for the species is the GenBank assembly GCA_001794125.1. The GC content of the type genome is 42.87 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Loripula gen. nov.

Candidatus Loripula (NL. fem. n. *Loripula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-26*. The type species for the genus is *Candidatus* Loripula latibatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Loripula nicomatica sp. nov.

Candidatus Loripula nicomatica (NL. fem. n. *nicomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-26 sp001794055*. The type genome for the species is

the GenBank assembly GCA_001794055.1. The GC content of the type genome is 40.42 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Lubenana conopifica sp. nov.

Candidatus Lubenana conopifica (NL. fem. n. *conopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV40 sp003219215*. The type genome for the species is the GenBank assembly GCA_003218855.1. The GC content of the type genome is 55.33 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Lubenana gen. nov.

Candidatus Lubenana (NL. fem. n. *Lubenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV40*. The type species for the genus is *Candidatus* Lubenana conopifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Lubenana debucitia sp. nov.

Candidatus Lubenana debucitia (NL. fem. n. *debucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV40 sp003220055*. The type genome for the species is the GenBank assembly GCA_003219585.1. The GC content of the type genome is 55.55 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Lubenana documitia sp. nov.

Candidatus Lubenana documitia (NL. fem. n. *documitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AV40 sp003218705*. The type genome for the species is the GenBank assembly GCA_003218705.1. The GC content of the type genome is 55.42 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Lubenana epigritio sp. nov.

Candidatus Lubenana epigritio (NL. fem. n. *epigritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV40 sp003219495*. The type genome for the species is the GenBank assembly GCA_003219495.1. The GC content of the type genome is 56.32 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Lubenaria fetifilenta sp. nov.

Candidatus Lubenaria fetifilenta (NL. fem. n. *fetifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVP01 sp009694165*. The type genome for the species is the GenBank assembly GCA_009694165.1. The GC content of the type genome is 65.41 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Lubenaria gen. nov.

Candidatus Lubenaria (NL. fem. n. *Lubenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVP01*. The type species for the genus is *Candidatus* Lubenaria fetifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lubenariaceae.

Description of *Candidatus* Lubenariaceae fam. nov.

Candidatus Lubenariaceae (NL. fem. n. *Lubenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVP01.* The type genus for the taxon is *Candidatus* Lubenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order

SHVP01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lubenariales.

Description of *Candidatus* Lubenariales ord. nov.

Candidatus Lubenariales (NL. fem. n. *Lubenariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVP01*. The type genus for the taxon is *Candidatus* Lubenaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Lubenella admodentia sp. nov.

Candidatus Lubenella admodentia (NL. fem. n. *admodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXPK01 sp005776365*. The type genome for the species is the GenBank assembly GCA_005776365.1. The GC content of the type genome is 66.03 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Lubenella gen. nov.

Candidatus Lubenella (NL. fem. n. *Lubenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXPK01*. The type species for the genus is *Candidatus* Lubenella admodentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifulaceae.

Description of *Candidatus* Lubenella bicapicula sp. nov.

Candidatus Lubenella bicapicula (NL. fem. n. *bicapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXPK01 sp903925435*. The type genome for the species is the GenBank assembly GCA_903892055.1. The GC content of the type genome is 66.3 %

and the genome length is 3.01 Mbp.

Description of *Candidatus* Lubenia lenunugo sp. nov.

Candidatus Lubenia lenunugo (NL. fem. n. *lenunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G17 sp002457675*. The type genome for the species is the GenBank assembly GCA_002167615.1. The GC content of the type genome is 35.7 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Lubenia gen. nov.

Candidatus Lubenia (NL. fem. n. *Lubenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G17*. The type species for the genus is *Candidatus* Lubenia lenunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Lubenida papavigena sp. nov.

Candidatus Lubenida papavigena (NL. fem. n. *papavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-41-21 sp002782865*. The type genome for the species is the GenBank assembly GCA_002788995.1. The GC content of the type genome is 41.04 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Lubenida gen. nov.

Candidatus Lubenida (NL. fem. n. *Lubenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-41-21*. The type species for the genus is *Candidatus* Lubenida papavigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9934*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Nugivanaceae.

Description of *Candidatus* Lubenosa negotentia sp. nov.

Candidatus Lubenosa negotentia (NL. fem. n. *negotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W0P28-013 sp004557405*. The type genome for the species is the GenBank assembly GCA_004557405.1. The GC content of the type genome is 49.4 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Lubenosa gen. nov.

Candidatus Lubenosa (NL. fem. n. *Lubenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W0P28-013*. The type species for the genus is *Candidatus* Lubenosa negotentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lubenosa vinolibra sp. nov.

Candidatus Lubenosa vinolibra (NL. fem. n. *vinolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W0P28-013 sp012837685*. The type genome for the species is the GenBank assembly GCA_002071125.1. The GC content of the type genome is 40.34 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Lubenula ludibiforma sp. nov.

Candidatus Lubenula ludibiforma (NL. fem. n. *ludibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-42-11 sp001821455*. The type genome for the species is the GenBank assembly GCA_001821455.1. The GC content of the type genome is 39.75 % and the genome length is 0.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at

13ft depth".

Description of *Candidatus* Lubenula gen. nov.

Candidatus Lubenula (NL. fem. n. *Lubenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-42-11*. The type species for the genus is *Candidatus* Lubenula ludibiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-42-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lubenulaceae.

Description of *Candidatus* Lubenulaceae fam. nov.

Candidatus Lubenulaceae (NL. fem. n. *Lubenulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-42-11.* The type genus for the taxon is *Candidatus* Lubenula .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Lucelana bisuledo sp. nov.

Candidatus Lucelana bisuledo (NL. fem. n. *bisuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin127 sp012270805*. The type genome for the species is the GenBank assembly GCA_012270805.1. The GC content of the type genome is 55.77 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Lucelana gen. nov.

Candidatus Lucelana (NL. fem. n. *Lucelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin127*. The type species for the genus is *Candidatus* Lucelana bisuledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Lucelanaceae fam. nov.

Candidatus Lucelanaceae (NL. fem. n. *Lucelanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin127.* The type genus for the taxon is *Candidatus* Lucelana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Carucellales.

Description of *Candidatus* Lucelana conigifica sp. nov.

Candidatus Lucelana conigifica (NL. fem. n. *conigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin127 sp009838175*. The type genome for the species is the GenBank assembly GCA_009846085.1. The GC content of the type genome is 56.28 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Lucelana ephipatica sp. nov.

Candidatus Lucelana ephipatica (NL. fem. n. *ephipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin127 sp009837685*. The type genome for the species is the GenBank assembly GCA_009837685.1. The GC content of the type genome is 56.16 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Lucelana irradimonia sp. nov.

Candidatus Lucelana irradimonia (NL. fem. n. *irradimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin127 sp002239045*. The type genome for the species is the GenBank assembly GCA_002239045.1. The GC content of the type genome is 56.35 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Lucelaria tirunitudo sp. nov.

Candidatus Lucelaria tirunitudo (NL. fem. n. *tirunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPJN01 sp006844605*. The type genome for the species is the GenBank assembly GCA_006844605.1. The GC content of the type genome is 54.79 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Lucelaria gen. nov.

Candidatus Lucelaria (NL. fem. n. *Lucelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPJN01*. The type species for the genus is *Candidatus* Lucelaria tirunitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPJN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelariaceae.

Description of *Candidatus* Lucelariaceae fam. nov.

Candidatus Lucelariaceae (NL. fem. n. *Lucelariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPJN01.* The type genus for the taxon is *Candidatus* Lucelaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SPJN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lucelariales.

Description of *Candidatus* Lucelariales ord. nov.

Candidatus Lucelariales (NL. fem. n. *Lucelariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPJN01.* The type genus for the taxon is *Candidatus* Lucelaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Lucelella betacitia sp. nov.

Candidatus Lucelella betacitia (NL. fem. n. *betacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULZ01 sp012840125*. The type genome for the species is the GenBank assembly GCA_012840125.1. The GC content of the type genome is 53.46 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Lucelella gen. nov.

Candidatus Lucelella (NL. fem. n. *Lucelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULZ01*. The type species for the genus is *Candidatus* Lucelella betacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DULZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelellaceae.

Description of *Candidatus* Lucelellaceae fam. nov.

Candidatus Lucelellaceae (NL. fem. n. *Lucelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DULZ01.* The type genus for the taxon is *Candidatus* Lucelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DULZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lucelellales.

Description of *Candidatus* Lucelellales ord. nov.

Candidatus Lucelellales (NL. fem. n. *Lucelellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DULZ01.* The type genus for the taxon is *Candidatus* Lucelella .

According to the GTDB R06-RS202, this order belongs to the class *Moorellia*.

Description of *Candidatus* Lucelia adfirilega sp. nov.

Candidatus Lucelia adfirilega (NL. fem. n. *adfirilega* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTO01 sp009377665*. The type genome for the species is the GenBank assembly GCA_009377665.1. The GC content of the type genome is 65.58 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Lucelia gen. nov.

Candidatus Lucelia (NL. fem. n. *Lucelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTO01*. The type species for the genus is *Candidatus* Lucelia adfirilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHTO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luceliaceae.

Description of *Candidatus* Luceliaceae fam. nov.

Candidatus Luceliaceae (NL. fem. n. *Luceliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHTO01.* The type genus for the taxon is *Candidatus* Lucelia .

According to the original version of GTDB R06-RS202, this family belongs to the order *WHTO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luceliales.

Description of *Candidatus* Luceliales ord. nov.

Candidatus Luceliales (NL. fem. n. *Luceliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHTO01.* The type genus for the taxon is *Candidatus* Lucelia .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Lucelida affabimonas sp. nov.

Candidatus Lucelida affabimonas (NL. fem. n. *affabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902526535*. The type genome for the species is the GenBank assembly GCA_902526535.1. The GC content of the type genome is 32.58 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Lucelida gen. nov.

Candidatus Lucelida (NL. fem. n. *Lucelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED112*. The type species for the genus is *Candidatus* Lucelida affabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelidaceae.

Description of *Candidatus* Lucelidaceae fam. nov.

Candidatus Lucelidaceae (NL. fem. n. *Lucelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED112.* The type genus for the taxon is *Candidatus* Lucelida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludimulales.

Description of *Candidatus* Lucelida aterrentia sp. nov.

Candidatus Lucelida aterrentia (NL. fem. n. *aterrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002684055*. The type genome for the species is the GenBank assembly GCA_002684055.1. The GC content of the type genome is 35.98 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Lucelida badititio sp. nov.

Candidatus Lucelida badititio (NL. fem. n. *badititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp003213455*. The type genome for the species is the GenBank assembly GCA_003213455.1. The GC content of the type genome is 34.62 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Lucelida curacimonia sp. nov.

Candidatus Lucelida curacimonia (NL. fem. n. *curacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002683115*. The type genome for the species is the GenBank assembly GCA_002683115.1. The GC content of the type genome is 34.68 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Lucelida dapifica sp. nov.

Candidatus Lucelida dapifica (NL. fem. n. *dapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp003278815*. The type genome for the species is the GenBank assembly GCA_003278815.1. The GC content of the type genome is 34.31 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Lucelida dimacicella sp. nov.

Candidatus Lucelida dimacicella (NL. fem. n. *dimacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902563885*. The type genome for the species is the GenBank assembly GCA_902563885.1. The GC content of the type genome is 32.98 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Lucelida direcilenta sp. nov.

Candidatus Lucelida direcilenta (NL. fem. n. *direcilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *TMED112 sp902585315*. The type genome for the species is the GenBank assembly GCA_902527455.1. The GC content of the type genome is 34.27 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Lucelida ficulivita sp. nov.

Candidatus Lucelida ficulivita (NL. fem. n. *ficulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp003280455*. The type genome for the species is the GenBank assembly GCA_003280455.1. The GC content of the type genome is 32.92 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Lucelida filifatica sp. nov.

Candidatus Lucelida filifatica (NL. fem. n. *filifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002716745*. The type genome for the species is the GenBank assembly GCA_013911325.1. The GC content of the type genome is 34.08 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Lucelida inbecigena sp. nov.

Candidatus Lucelida inbecigena (NL. fem. n. *inbecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp004321845*. The type genome for the species is the GenBank assembly GCA_004321845.1. The GC content of the type genome is 34.32 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Lucelida inpasugo sp. nov.

Candidatus Lucelida inpasugo (NL. fem. n. *inpasugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002692425*. The type genome for the species is the GenBank assembly GCA_002692425.1. The GC content of the type genome is 33.67 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Lucelida lucifitio sp. nov.

Candidatus Lucelida lucifitio (NL. fem. n. *lucifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902619265*. The type genome for the species is the GenBank assembly GCA_902604345.1. The GC content of the type genome is 34.19 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Lucelida munifitica sp. nov.

Candidatus Lucelida munifitica (NL. fem. n. *munifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902535365*. The type genome for the species is the GenBank assembly GCA_012270425.1. The GC content of the type genome is 36.0 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Lucelida obfirilenta sp. nov.

Candidatus Lucelida obfirilenta (NL. fem. n. *obfirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp003331605*. The type genome for the species is the GenBank assembly GCA_003331605.1. The GC content of the type genome is 36.34 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Lucelida omnifessa sp. nov.

Candidatus Lucelida omnifessa (NL. fem. n. *omnifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002727535*. The type genome for the species is the GenBank assembly GCA_002727535.1. The GC content of the type genome is 33.13 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Lucelida sicunimonas sp. nov.

Candidatus Lucelida sicunimonas (NL. fem. n. *sicunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902529055*. The type genome for the species is the GenBank assembly GCA_902585745.1. The GC content of the type genome is 34.78 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Lucelida spastousia sp. nov.

Candidatus Lucelida spastousia (NL. fem. n. *spastousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002170245*. The type genome for the species is the GenBank assembly GCA_002170245.2. The GC content of the type genome is 33.84 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Lucelida subucitica sp. nov.

Candidatus Lucelida subucitica (NL. fem. n. *subucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp902610995*. The type genome for the species is the GenBank assembly GCA_902534605.1. The GC content of the type genome is 34.84 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Lucelida urbicilenta sp. nov.

Candidatus Lucelida urbicilenta (NL. fem. n. *urbicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED112 sp002690945*. The type genome for the species is the GenBank assembly GCA_002690945.1. The GC content of the type genome is 34.13 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Lucelula tenilibula sp. nov.

Candidatus Lucelula tenilibula (NL. fem. n. *tenilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *OF09-33XD sp003481995*. The type genome for the species is the GenBank assembly RS_GCF_003481995.1. The GC content of the type genome is 49.2 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Lucelula gen. nov.

Candidatus Lucelula (NL. fem. n. *Lucelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OF09-33XD*. The type species for the genus is *Candidatus* Lucelula tenilibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucerana pedifitia sp. nov.

Candidatus Lucerana pedifitia (NL. fem. n. *pedifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWAD01 sp903910645*. The type genome for the species is the GenBank assembly GCA_903829385.1. The GC content of the type genome is 64.19 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Lucerana gen. nov.

Candidatus Lucerana (NL. fem. n. *Lucerana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWAD01*. The type species for the genus is *Candidatus* Lucerana pedifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIWAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luceranaceae.

Description of *Candidatus* Luceranaceae fam. nov.

Candidatus Luceranaceae (NL. fem. n. *Luceranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWAD01.* The type genus for the taxon is *Candidatus* Lucerana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIWAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luceranales.

Description of *Candidatus* Luceranales ord. nov.

Candidatus Luceranales (NL. fem. n. *Luceranales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWAD01*. The type genus for the taxon is *Candidatus* Lucerana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Revecariae.

Description of *Candidatus* Luceraria bonitugo sp. nov.

Candidatus Luceraria bonitugo (NL. fem. n. *bonitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBIL01 sp903939665*. The type genome for the species is the GenBank assembly GCA_903939665.1. The GC content of the type genome is 59.3 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Luceraria gen. nov.

Candidatus Luceraria (NL. fem. n. *Luceraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBIL01*. The type species for the genus is *Candidatus* Luceraria bonitugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luceraria tegumibra sp. nov.

Candidatus Luceraria tegumibra (NL. fem. n. *tegumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBIL01 sp903953145*. The type genome for the species is the

GenBank assembly GCA_903953145.1. The GC content of the type genome is 56.69 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Lucerella adlubugo sp. nov.

Candidatus Lucerella adlubugo (NL. fem. n. *adlubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAN01 sp009704555*. The type genome for the species is the GenBank assembly GCA_009704555.1. The GC content of the type genome is 55.51 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Lucerella gen. nov.

Candidatus Lucerella (NL. fem. n. *Lucerella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYAN01*. The type species for the genus is *Candidatus* Lucerella adlubugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucerella cocoditura sp. nov.

Candidatus Lucerella cocoditura (NL. fem. n. *cocoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAN01 sp005787575*. The type genome for the species is the GenBank assembly GCA_005787575.1. The GC content of the type genome is 50.17 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Lucerella colubiforma sp. nov.

Candidatus Lucerella colubiforma (NL. fem. n. *colubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAN01 sp010028225*. The type genome for the species is the GenBank assembly GCA_010028225.1. The GC content of the type genome is 49.76 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Lucerida ranunatica sp. nov.

Candidatus Lucerida ranunatica (NL. fem. n. *ranunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSRG01 sp013215165*. The type genome for the species is the GenBank assembly GCA_013215165.1. The GC content of the type genome is 50.86 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Lucerida gen. nov.

Candidatus Lucerida (NL. fem. n. *Lucerida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSRG01*. The type species for the genus is *Candidatus* Lucerida ranunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABSRG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luceridaceae.

Description of *Candidatus* Luceridaceae fam. nov.

Candidatus Luceridaceae (NL. fem. n. *Luceridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSRG01.* The type genus for the taxon is *Candidatus* Lucerida .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Lucerosa tenebitica sp. nov.

Candidatus Lucerosa tenebitica (NL. fem. n. *tenebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-42-20 sp001785965*. The type genome for the species is the GenBank assembly GCA_001785415.1. The GC content of the type genome is 42.03 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Lucerosa gen. nov.

Candidatus Lucerosa (NL. fem. n. *Lucerosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-42-20*. The type species for the genus is *Candidatus* Lucerosa tenebitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Lucerula bugilisca sp. nov.

Candidatus Lucerula bugilisca (NL. fem. n. *bugilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-411 sp000437275*. The type genome for the species is the GenBank assembly GCA_000437275.1. The GC content of the type genome is 36.0 % and the genome length is 3.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Lucerula gen. nov.

Candidatus Lucerula (NL. fem. n. *Lucerula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-411*. The type species for the genus is *Candidatus* Lucerula bugilisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucerula excanisca sp. nov.

Candidatus Lucerula excanisca (NL. fem. n. *excanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-411 sp902795895*. The type genome for the species is the GenBank assembly GCA_902795895.1. The GC content of the type genome is 36.6 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Lucerula homogitrix sp. nov.

Candidatus Lucerula homogitrix (NL. fem. n. *homogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-411 sp902786205*. The type genome for the species is the GenBank assembly GCA_902786205.1. The GC content of the type genome is 35.47 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Lucifana insorugo sp. nov.

Candidatus Lucifana insorugo (NL. fem. n. *insorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2999 sp002346475*. The type genome for the species is the GenBank assembly GCA_002346475.1. The GC content of the type genome is 46.15 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Lucifana gen. nov.

Candidatus Lucifana (NL. fem. n. *Lucifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2999*. The type species for the genus is *Candidatus* Lucifana insorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Lucifanaceae fam. nov.

Candidatus Lucifanaceae (NL. fem. n. *Lucifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2999.* The type genus for the taxon is *Candidatus* Lucifana .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Lucifaria salubugo sp. nov.

Candidatus Lucifaria salubugo (NL. fem. n. *salubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-09 sp002385605*. The type genome for the species is the GenBank assembly GCA_012523495.1. The GC content of the type genome is 50.76 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Lucifaria gen. nov.

Candidatus Lucifaria (NL. fem. n. *Lucifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-09*. The type species for the genus is *Candidatus* Lucifaria salubugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Lucifaria volunilega sp. nov.

Candidatus Lucifaria volunilega (NL. fem. n. *volunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-09 sp001604065*. The type genome for the species is the GenBank assembly GCA_001604065.1. The GC content of the type genome is 48.14 % and the genome length is 1.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Lucifella capudibra sp. nov.

Candidatus Lucifella capudibra (NL. fem. n. *capudibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTS01 sp012031345*. The type genome for the species is the GenBank assembly GCA_012031345.1. The GC content of the type genome is 54.6 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Lucifella gen. nov.

Candidatus Lucifella (NL. fem. n. *Lucifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTS01*. The type species for the genus is *Candidatus* Lucifella capudibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAUTS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifellaceae.

Description of *Candidatus* Lucifellaceae fam. nov.

Candidatus Lucifellaceae (NL. fem. n. *Lucifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAUTS01.* The type genus for the taxon is *Candidatus* Lucifella .

According to GTDB R06-RS202, this family belongs to the order *Methylacidiphilales*.

Description of *Candidatus* Lucifia holisibra sp. nov.

Candidatus Lucifia holisibra (NL. fem. n. *holisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2251 sp002347815*. The type genome for the species is the GenBank assembly GCA_002381965.1. The GC content of the type genome is 62.81 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Lucifia gen. nov.

Candidatus Lucifia (NL. fem. n. *Lucifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2251*. The type species for the genus is *Candidatus* Lucifia holisibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2251*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifiaceae.

Description of *Candidatus* Lucifiaceae fam. nov.

Candidatus Lucifiaceae (NL. fem. n. *Lucifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2251.* The type genus for the taxon is *Candidatus* Lucifia .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Lucifida idipsilega sp. nov.

Candidatus Lucifida idipsilega (NL. fem. n. *idipsilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMT01 sp003551495*. The type genome for the species is the GenBank assembly GCA_003551495.1. The GC content of the type genome is 43.05 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Lucifida gen. nov.

Candidatus Lucifida (NL. fem. n. *Lucifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUMT01*. The type species for the genus is *Candidatus* Lucifida idipsilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifidaceae.

Description of *Candidatus* Lucifidaceae fam. nov.

Candidatus Lucifidaceae (NL. fem. n. *Lucifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUMT01.* The type genus for the taxon is *Candidatus* Lucifida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Lucifida vecorilenta sp. nov.

Candidatus Lucifida vecorilenta (NL. fem. n. *vecorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMT01 sp007125955*. The type genome for the species is the GenBank assembly GCA_003568385.1. The GC content of the type genome is 42.78 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Lucifida vocifibra sp. nov.

Candidatus Lucifida vocifibra (NL. fem. n. *vocifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMT01 sp003554865*. The type genome for the species is the GenBank assembly GCA_003554865.1. The GC content of the type genome is 42.52 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Lucifosa arcifimonas sp. nov.

Candidatus Lucifosa arcifimonas (NL. fem. n. *arcifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED58 sp002708105*. The type genome for the species is the GenBank assembly GCA_002708105.2. The GC content of the type genome is 31.26 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Lucifosa gen. nov.

Candidatus Lucifosa (NL. fem. n. *Lucifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED58*. The type species for the genus is *Candidatus* Lucifosa arcifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Lucifosa detecifica sp. nov.

Candidatus Lucifosa detecifica (NL. fem. n. *detecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED58 sp002701865*. The type genome for the species is the GenBank assembly GCA_002701865.2. The GC content of the type genome is 32.29 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Lucifosa peridilega sp. nov.

Candidatus Lucifosa peridilega (NL. fem. n. *peridilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED58 sp002167555*. The type genome for the species is the GenBank assembly GCA_002712365.2. The GC content of the type genome is 31.16 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Lucifula coticilega sp. nov.

Candidatus Lucifula coticilega (NL. fem. n. *coticilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C254 sp002797315*. The type genome for the species is the GenBank assembly RS_GCF_001310615.1. The GC content of the type genome is 41.03 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Lucifula gen. nov.

Candidatus Lucifula (NL. fem. n. *Lucifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C254*. The type species for the genus is *Candidatus* Lucifula coticilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucubana alectatio sp. nov.

Candidatus Lucubana alectatio (NL. fem. n. *alectatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1781 sp004554705*. The type genome for the species is the GenBank assembly GCA_004554705.1. The GC content of the type genome is 28.76 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Lucubana gen. nov.

Candidatus Lucubana (NL. fem. n. *Lucubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1781*. The type species for the genus is *Candidatus* Lucubana alectatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Lucubana navicibula sp. nov.

Candidatus Lucubana navicibula (NL. fem. n. *navicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1781 sp900553365*. The type genome for the species is the GenBank assembly RS_GCF_900767855.1. The GC content of the type genome is 28.97 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Lucubana rorifedo sp. nov.

Candidatus Lucubana rorifedo (NL. fem. n. *rorifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1781 sp900555075*. The type genome for the species is the GenBank assembly RS_GCF_900772145.1. The GC content of the type genome is 28.73 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Lucubana rubefentia sp. nov.

Candidatus Lucubana rubefentia (NL. fem. n. *rubefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1781 sp900553695*. The type genome for the species is the GenBank assembly RS_GCF_900767795.1. The GC content of the type genome is 29.57 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Lucubana viburifica sp. nov.

Candidatus Lucubana viburifica (NL. fem. n. *viburifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1781 sp900554635*. The type genome for the species is the GenBank assembly GCA_900554635.1. The GC content of the type genome is 29.64 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Lucubaria volunicula sp. nov.

Candidatus Lucubaria volunicula (NL. fem. n. *volunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYB2-FULL-41-6 sp001773215*. The type genome for the species is the GenBank assembly GCA_001773015.1. The GC content of the type genome is 40.36 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point A".

Description of *Candidatus* Lucubaria gen. nov.

Candidatus Lucubaria (NL. fem. n. *Lucubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYB2-FULL-41-6*. The type species for the genus is *Candidatus* Lucubaria volunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Lucubella documilenta sp. nov.

Candidatus Lucubella documilenta (NL. fem. n. *documilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITOL01 sp014377905*. The type genome for the species is the GenBank assembly GCA_014377905.1. The GC content of the type genome is 62.18 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Lucubella gen. nov.

Candidatus Lucubella (NL. fem. n. *Lucubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITOL01*. The type species for the genus is *Candidatus* Lucubella documilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucubella siligilega sp. nov.

Candidatus Lucubella siligilega (NL. fem. n. *siligilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITOL01 sp903893975*. The type genome for the species is the GenBank assembly GCA_903904745.1. The GC content of the type genome is 65.99 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Lucubia abpatitura sp. nov.

Candidatus Lucubia abpatitura (NL. fem. n. *abpatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2020 sp003524565*. The type genome for the species is the GenBank assembly GCA_003524565.1. The GC content of the type genome is 58.05 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Lucubia gen. nov.

Candidatus Lucubia (NL. fem. n. *Lucubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2020*. The type species for the genus is *Candidatus* Lucubia abpatitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2020*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucubiaceae.

Description of *Candidatus* Lucubiaceae fam. nov.

Candidatus Lucubiaceae (NL. fem. n. *Lucubiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2020.* The type genus for the taxon is *Candidatus* Lucubia .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales*.

Description of *Candidatus* Lucubia dicimicella sp. nov.

Candidatus Lucubia dicimicella (NL. fem. n. *dicimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2020 sp004297545*. The type genome for the species is the GenBank assembly GCA_004297545.1. The GC content of the type genome is 58.99 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Lucubia epogdedo sp. nov.

Candidatus Lucubia epogdedo (NL. fem. n. *epogdedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2020 sp002334985*. The type genome for the species is the GenBank assembly GCA_002334985.1. The GC content of the type genome is 57.71 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Lucubida sonipatio sp. nov.

Candidatus Lucubida sonipatio (NL. fem. n. *sonipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-601 sp003136185*. The type genome for the species is the GenBank assembly GCA_003140395.1. The GC content of the type genome is 65.69 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Lucubida gen. nov.

Candidatus Lucubida (NL. fem. n. *Lucubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-601*. The type species for the genus is *Candidatus* Lucubida

sonipatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-793*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibidaceae.

Description of *Candidatus* Lucubosa manibiforma sp. nov.

Candidatus Lucubosa manibiforma (NL. fem. n. *manibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDG01 sp013154075*. The type genome for the species is the GenBank assembly GCA_013154075.1. The GC content of the type genome is 37.39 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Lucubosa gen. nov.

Candidatus Lucubosa (NL. fem. n. *Lucubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDG01*. The type species for the genus is *Candidatus* Lucubosa manibiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucubosaceae.

Description of *Candidatus* Lucubosaceae fam. nov.

Candidatus Lucubosaceae (NL. fem. n. *Lucubosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADDG01*. The type genus for the taxon is *Candidatus* Lucubosa .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Lucubula binociforma sp. nov.

Candidatus Lucubula binociforma (NL. fem. n. *binociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BOG-930 sp903918195*. The type genome for the species is the GenBank assembly GCA_903830085.1. The GC content of the type genome is 68.0 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Lucubula gen. nov.

Candidatus Lucubula (NL. fem. n. *Lucubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-930*. The type species for the genus is *Candidatus* Lucubula binociforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lucubula desuribra sp. nov.

Candidatus Lucubula desuribra (NL. fem. n. *desuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-930 sp003164455*. The type genome for the species is the GenBank assembly GCA_003164455.1. The GC content of the type genome is 67.15 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Lucubula diponatica sp. nov.

Candidatus Lucubula diponatica (NL. fem. n. *diponatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-930 sp903907955*. The type genome for the species is the GenBank assembly GCA_903874365.1. The GC content of the type genome is 68.27 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Lucubula famelitio sp. nov.

Candidatus Lucubula famelitio (NL. fem. n. *famelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-930 sp903839965*. The type genome for the species is the GenBank assembly GCA_903839965.1. The GC content of the type genome is 67.99 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Luculana conamedo sp. nov.

Candidatus Luculana conamedo (NL. fem. n. *conamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKZ01 sp011329335*. The type genome for the species is the GenBank assembly GCA_011329335.1. The GC content of the type genome is 52.24 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Luculana gen. nov.

Candidatus Luculana (NL. fem. n. *Luculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKZ01*. The type species for the genus is *Candidatus* Luculana conamedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTKZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculanaceae.

Description of *Candidatus* Luculanaceae fam. nov.

Candidatus Luculanaceae (NL. fem. n. *Luculanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKZ01.* The type genus for the taxon is *Candidatus* Luculana .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_A*.

Description of *Candidatus* Luculana munifilega sp. nov.

Candidatus Luculana munifilega (NL. fem. n. *munifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKZ01 sp011370345*. The type genome for the species is the GenBank assembly GCA_011370345.1. The GC content of the type genome is 53.07 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Lucularia lucerax sp. nov.

Candidatus Lucularia lucerax (NL. fem. n. *lucerax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-33-13 sp000989565*. The type genome for the species is the GenBank assembly GCA_001788765.1. The GC content of the type genome is 32.97 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Lucularia gen. nov.

Candidatus Lucularia (NL. fem. n. *Lucularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-33-13*. The type species for the genus is *Candidatus* Lucularia lucerax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-33-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucularia ceae.

Description of *Candidatus* Lucularia ceae fam. nov.

Candidatus Lucularia ceae (NL. fem. n. *Lucularia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-33-13.* The type genus for the taxon is *Candidatus* Lucularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Luculella volucisca sp. nov.

Candidatus Luculella volucisca (NL. fem. n. *volucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUEV01 sp903898335*. The type genome for the species is the GenBank assembly GCA_903831895.1. The GC content of the type genome is 40.26 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Luculella gen. nov.

Candidatus Luculella (NL. fem. n. *Luculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUEV01*. The type species for the genus is *Candidatus* Luculella volucisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIUEV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculellaceae.

Description of *Candidatus* Luculellaceae fam. nov.

Candidatus Luculellaceae (NL. fem. n. *Luculellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUEV01.* The type genus for the taxon is *Candidatus* Luculella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIUEV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luculellales.

Description of *Candidatus* Luculellales ord. nov.

Candidatus Luculellales (NL. fem. n. *Luculellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUEV01.* The type genus for the taxon is *Candidatus* Luculella .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Luculida abascifica sp. nov.

Candidatus Luculida abascifica (NL. fem. n. *abascifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRYD01 sp011388315*. The type genome for the species is the GenBank assembly GCA_011388315.1. The GC content of the type genome is 30.24 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Luculida gen. nov.

Candidatus Luculida (NL. fem. n. *Luculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRYD01*. The type species for the genus is *Candidatus* Luculida abascifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculidaceae.

Description of *Candidatus* Luculidaceae fam. nov.

Candidatus Luculidaceae (NL. fem. n. *Luculidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRYD01.* The type genus for the taxon is *Candidatus* Luculida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luculidales.

Description of *Candidatus* Luculidales ord. nov.

Candidatus Luculidales (NL. fem. n. *Luculidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRYD01.* The type genus for the taxon is *Candidatus* Luculida .

According to the GTDB R06-RS202, this order belongs to the class *Calescibacteriia*.

Description of *Candidatus* Luculosa monumilega sp. nov.

Candidatus Luculosa monumilega (NL. fem. n. *monumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HDB-SIOI813 sp001805205*. The type genome for the species is the GenBank assembly GCA_001805205.1. The GC content of the type genome is 41.76 % and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Luculosa gen. nov.

Candidatus Luculosa (NL. fem. n. *Luculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HDB-SIOI813*. The type species for the genus is *Candidatus* Luculosa monumilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HDB-SIOI813*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculosaceae.

Description of *Candidatus* Luculosaceae fam. nov.

Candidatus Luculosaceae (NL. fem. n. *Luculosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HDB-SIOI813.* The type genus for the taxon is *Candidatus* Luculosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *HDB-SIOI813*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luculosales.

Description of *Candidatus* Luculosales ord. nov.

Candidatus Luculosales (NL. fem. n. *Luculosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HDB-SIOI813.* The type genus for the taxon is *Candidatus* Luculosa .

According to the GTDB R06-RS202, this order belongs to the class *Nitrospiria*.

Description of *Candidatus* Luculula cadavitio sp. nov.

Candidatus Luculula cadavitio (NL. fem. n. *cadavitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1518 sp900552575*. The type genome for the species is the GenBank assembly RS_GCF_903645315.1. The GC content of the type genome is 55.85 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Luculula gen. nov.

Candidatus Luculula (NL. fem. n. *Luculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1518*. The type species for the genus is *Candidatus* Luculula cadavitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludibana ambusatio sp. nov.

Candidatus Ludibana ambusatio (NL. fem. n. *ambusatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-46 sp013695505*. The type genome for the species is the GenBank assembly GCA_013695505.1. The GC content of the type genome is 69.52 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Ludibana gen. nov.

Candidatus Ludibana (NL. fem. n. *Ludibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-46*. The type species for the genus is *Candidatus* Ludibana ambusatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Ludibana innecitura sp. nov.

Candidatus Ludibana innecitura (NL. fem. n. *innecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-46 sp005882635*. The type genome for the species is the GenBank assembly GCA_005882635.1. The GC content of the type genome is 70.83 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Ludibana siminax sp. nov.

Candidatus Ludibana siminax (NL. fem. n. *siminax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-46 sp013698095*. The type genome for the species is the GenBank assembly GCA_013698095.1. The GC content of the type genome is 69.47 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Ludibaria rubecetta sp. nov.

Candidatus Ludibaria rubecetta (NL. fem. n. *rubecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKXS01 sp007128345*. The type genome for the species is the GenBank assembly GCA_007119085.1. The GC content of the type genome is 52.63 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Ludibaria gen. nov.

Candidatus Ludibaria (NL. fem. n. *Ludibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKXS01*. The type species for the genus is *Candidatus* Ludibaria rubecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWKH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimelosaceae.

Description of *Candidatus* Ludibella cerebitas sp. nov.

Candidatus Ludibella cerebitas (NL. fem. n. *cerebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J044 sp003696465*. The type genome for the species is the GenBank assembly GCA_003696465.1. The GC content of the type genome is 64.4 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ludibella gen. nov.

Candidatus Ludibella (NL. fem. n. *Ludibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J044*. The type species for the genus is *Candidatus* Ludibella cerebitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J044*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludibellaceae.

Description of *Candidatus* Ludibellaceae fam. nov.

Candidatus Ludibellaceae (NL. fem. n. *Ludibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J044.* The type genus for the taxon is *Candidatus* Ludibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *J044*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludibellales.

Description of *Candidatus* Ludibellales ord. nov.

Candidatus Ludibellales (NL. fem. n. *Ludibellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J044.* The type genus for the taxon is *Candidatus* Ludibella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Ludibia negidimonas sp. nov.

Candidatus Ludibia negidimonas (NL. fem. n. *negidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12115 sp003514055*. The type genome for the species is the GenBank assembly GCA_001795995.1. The GC content of the type genome is 43.01 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Ludibia gen. nov.

Candidatus Ludibia (NL. fem. n. *Ludibia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12115*. The type species for the genus is *Candidatus* Ludibia negidimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Ludibida domipilega sp. nov.

Candidatus Ludibida domipilega (NL. fem. n. *domipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1031 sp000431215*. The type genome for the species is the GenBank assembly GCA_001701255.1. The GC content of the type genome is 55.21 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Ludibida gen. nov.

Candidatus Ludibida (NL. fem. n. *Ludibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1031*. The type species for the genus is *Candidatus* Ludibida domipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludibida voragitura sp. nov.

Candidatus Ludibida voragitura (NL. fem. n. *voragitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1031 sp900752535*. The type genome for the species is the GenBank assembly RS_GCF_900752535.1. The GC content of the type genome is 53.38 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Ludibosa attubax sp. nov.

Candidatus Ludibosa attubax (NL. fem. n. *attubax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBLH01 sp002084525*. The type genome for the species is the GenBank assembly GCA_002084525.1. The GC content of the type genome is 33.14 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Ludibosa gen. nov.

Candidatus Ludibosa (NL. fem. n. *Ludibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBLH01*. The type species for the genus is *Candidatus* Ludibosa attubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NBLH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludibosaceae.

Description of *Candidatus* Ludibosaceae fam. nov.

Candidatus Ludibosaceae (NL. fem. n. *Ludibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NBLH01.* The type genus for the taxon is *Candidatus* Ludibosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Ludibula inmitimonas sp. nov.

Candidatus Ludibula inmitimonas (NL. fem. n. *inmitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747515 sp002747515*. The type genome for the species is the GenBank assembly GCA_002747515.1. The GC content of the type genome is 35.4 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Ludibula gen. nov.

Candidatus Ludibula (NL. fem. n. *Ludibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747515*. The type species for the genus is *Candidatus* Ludibula inmitimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2747515*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludibulaceae.

Description of *Candidatus* Ludibulaceae fam. nov.

Candidatus Ludibulaceae (NL. fem. n. *Ludibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747515.* The type genus for the taxon is *Candidatus* Ludibula .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Ludifana armifitudo sp. nov.

Candidatus Ludifana armifitudo (NL. fem. n. *armifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNLC01 sp014381725*. The type genome for the species is the GenBank assembly GCA_014381725.1. The GC content of the type genome is 33.95 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Ludifana gen. nov.

Candidatus Ludifana (NL. fem. n. *Ludifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNLC01*. The type species for the genus is *Candidatus* Ludifana armifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACNLC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludifanaceae.

Description of *Candidatus* Ludifanaceae fam. nov.

Candidatus Ludifanaceae (NL. fem. n. *Ludifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACNLC01*. The type genus for the taxon is *Candidatus* Ludifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Ludifaria abrepicula sp. nov.

Candidatus Ludifaria abrepicula (NL. fem. n. *abrepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp002344795*. The type genome for the species is the GenBank assembly GCA_002344795.1. The GC content of the type genome is 41.04 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Ludifaria gen. nov.

Candidatus Ludifaria (NL. fem. n. *Ludifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ELB16-189*. The type species for the genus is *Candidatus* Ludifaria abrepicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludifaria adambivita sp. nov.

Candidatus Ludifaria adambivita (NL. fem. n. *adambivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013298505*. The type genome for the species is the GenBank assembly GCA_013298505.1. The GC content of the type genome is 41.3 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Ludifaria adgenimonas sp. nov.

Candidatus Ludifaria adgenimonas (NL. fem. n. *adgenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp003504855*. The type genome for the species is the GenBank assembly GCA_003504855.1. The GC content of the type genome is 49.3 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Ludifaria allubessa sp. nov.

Candidatus Ludifaria allubessa (NL. fem. n. *allubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp003537495*. The type genome for the species is the GenBank assembly GCA_003537495.1. The GC content of the type genome is 42.04 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Ludifaria aruspifica sp. nov.

Candidatus Ludifaria aruspifica (NL. fem. n. *aruspifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013141055*. The type genome for the species is the GenBank assembly GCA_013141055.1. The GC content of the type genome is 42.05 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Ludifaria bovicessa sp. nov.

Candidatus Ludifaria bovicessa (NL. fem. n. *bovicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013140395*. The type genome for the species is the GenBank assembly GCA_013140395.1. The GC content of the type genome is 42.39 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Ludifaria cadurigena sp. nov.

Candidatus Ludifaria cadurigena (NL. fem. n. *cadurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp002398365*. The type genome for the species is the GenBank assembly GCA_002398365.1. The GC content of the type genome is 42.41 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Ludifaria conificula sp. nov.

Candidatus Ludifaria conificula (NL. fem. n. *conificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp012032815*. The type genome for the species is the GenBank assembly GCA_012032815.1. The GC content of the type genome is 41.32 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Ludifaria culililenta sp. nov.

Candidatus Ludifaria culililenta (NL. fem. n. *culililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013414665*. The type genome for the species is the GenBank assembly GCA_013414665.1. The GC content of the type genome is 43.63 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Ludifaria denunitura sp. nov.

Candidatus Ludifaria denunitura (NL. fem. n. *denunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013140555*. The type genome for the species is the GenBank assembly GCA_013140555.1. The GC content of the type genome is 42.09 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Ludifaria detosimonas sp. nov.

Candidatus Ludifaria detosimonas (NL. fem. n. *detosimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp002345965*. The type genome for the species is the GenBank assembly GCA_003535515.1. The GC content of the type genome is 41.77 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Ludifaria navifessa sp. nov.

Candidatus Ludifaria navifessa (NL. fem. n. *navifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp002352225*. The type genome for the species is the GenBank assembly GCA_002352225.1. The GC content of the type genome is 42.19 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Ludifaria nugigastra sp. nov.

Candidatus Ludifaria nugigastra (NL. fem. n. *nugigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp001567185*. The type genome for the species is the GenBank assembly GCA_001567185.1. The GC content of the type genome is 43.94 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Ludifaria pabililega sp. nov.

Candidatus Ludifaria pabililega (NL. fem. n. *pabililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp003541895*. The type genome for the species is the GenBank assembly GCA_003541895.1. The GC content of the type genome is 40.58 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Ludifaria pabilimonia sp. nov.

Candidatus Ludifaria pabilimonia (NL. fem. n. *pabilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp002405445*. The type genome for the species is the GenBank assembly GCA_002405445.1. The GC content of the type genome is 46.18 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Ludifaria sonivivita sp. nov.

Candidatus Ludifaria sonivivita (NL. fem. n. *sonivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013285845*. The type genome for the species is the GenBank assembly GCA_013285845.1. The GC content of the type genome is 42.16 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Ludifaria stercifica sp. nov.

Candidatus Ludifaria stercifica (NL. fem. n. *stercifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ELB16-189 sp013285945*. The type genome for the species is the GenBank assembly GCA_013285945.1. The GC content of the type genome is 42.09 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Ludifella dehinedo sp. nov.

Candidatus Ludifella dehinedo (NL. fem. n. *dehinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCX01 sp013287915*. The type genome for the species is the GenBank assembly GCA_013287675.1. The GC content of the type genome is 47.14 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Ludifella gen. nov.

Candidatus Ludifella (NL. fem. n. *Ludifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCX01*. The type species for the genus is *Candidatus* Ludifella dehinedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludifia turicatica sp. nov.

Candidatus Ludifia turicatica (NL. fem. n. *turicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMEU01 sp007375675*. The type genome for the species is the

GenBank assembly GCA_007378945.1. The GC content of the type genome is 45.44 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Ludifia gen. nov.

Candidatus Ludifia (NL. fem. n. *Ludifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMEU01*. The type species for the genus is *Candidatus* Ludifia turicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Ludifida amnenilenta sp. nov.

Candidatus Ludifida amnenilenta (NL. fem. n. *amnenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-668 sp003158895*. The type genome for the species is the GenBank assembly GCA_003158895.1. The GC content of the type genome is 67.82 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Ludifida gen. nov.

Candidatus Ludifida (NL. fem. n. *Ludifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-668*. The type species for the genus is *Candidatus* Ludifida amnenilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludifida nucifimonia sp. nov.

Candidatus Ludifida nucifimonia (NL. fem. n. *nucifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-668 sp003153855*. The type genome for the species is the GenBank assembly GCA_003153855.1. The GC content of the type genome is 68.41 %

and the genome length is 3.67 Mbp.

Description of *Candidatus* Ludifosa onocrentia sp. nov.

Candidatus Ludifosa onocrentia (NL. fem. n. *onocrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXP01 sp004356335*. The type genome for the species is the GenBank assembly GCA_004356335.1. The GC content of the type genome is 54.32 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Ludifosa gen. nov.

Candidatus Ludifosa (NL. fem. n. *Ludifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXP01*. The type species for the genus is *Candidatus* Ludifosa onocrentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludifosaceae.

Description of *Candidatus* Ludifosaceae fam. nov.

Candidatus Ludifosaceae (NL. fem. n. *Ludifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXP01.* The type genus for the taxon is *Candidatus* Ludifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SMXP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludifosales.

Description of *Candidatus* Ludifosales ord. nov.

Candidatus Ludifosales (NL. fem. n. *Ludifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXP01.* The type genus for the taxon is *Candidatus* Ludifosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Ludifula betacastra sp. nov.

Candidatus Ludifula betacastra (NL. fem. n. *betacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWEK01 sp003553445*. The type genome for the species is the GenBank assembly GCA_003553445.1. The GC content of the type genome is 42.36 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Ludifula gen. nov.

Candidatus Ludifula (NL. fem. n. *Ludifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWEK01*. The type species for the genus is *Candidatus* Ludifula betacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceruciaceae.

Description of *Candidatus* Ludimana adpecitas sp. nov.

Candidatus Ludimana adpecitas (NL. fem. n. *adpecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp002422165*. The type genome for the species is the GenBank assembly GCA_002422165.1. The GC content of the type genome is 44.08 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Ludimana gen. nov.

Candidatus Ludimana (NL. fem. n. *Ludimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1364*. The type species for the genus is *Candidatus* Ludimana adpecitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Ludimana cerevitia sp. nov.

Candidatus Ludimana cerevitia (NL. fem. n. *cerevitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp903959355*. The type genome for the species is the GenBank assembly GCA_903940515.1. The GC content of the type genome is 35.54 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Ludimana cerofatica sp. nov.

Candidatus Ludimana cerofatica (NL. fem. n. *cerofatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp903842795*. The type genome for the species is the GenBank assembly GCA_903842795.1. The GC content of the type genome is 36.6 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Ludimana inabsatica sp. nov.

Candidatus Ludimana inabsatica (NL. fem. n. *inabsatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp002306345*. The type genome for the species is the GenBank assembly GCA_002306345.1. The GC content of the type genome is 36.05 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Ludimana lenocugo sp. nov.

Candidatus Ludimana lenocugo (NL. fem. n. *lenocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp903891335*. The type genome for the species is the GenBank assembly GCA_903891335.1. The GC content of the type genome is 43.26 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Ludimana nitelibra sp. nov.

Candidatus Ludimana nitelibra (NL. fem. n. *nitelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp001029715*. The type genome for the species is the GenBank assembly GCA_000993185.1. The GC content of the type genome is 35.98 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Ludimana semivicella sp. nov.

Candidatus Ludimana semivicella (NL. fem. n. *semivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1364 sp002422765*. The type genome for the species is the GenBank assembly GCA_002422765.1. The GC content of the type genome is 39.51 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Ludimaria adcomax sp. nov.

Candidatus Ludimaria adcomax (NL. fem. n. *adcomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-49-11 sp001791465*. The type genome for the species is the GenBank assembly GCA_001791465.1. The GC content of the type genome is 49.41 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ludimaria gen. nov.

Candidatus Ludimaria (NL. fem. n. *Ludimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-49-11*. The type species for the genus is *Candidatus* Ludimaria adcomax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimariaceae.

Description of *Candidatus* Ludimariaceae fam. nov.

Candidatus Ludimariaceae (NL. fem. n. *Ludimariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-49-11.* The type genus for the taxon is *Candidatus* Ludimaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludimariales.

Description of *Candidatus* Ludimariales ord. nov.

Candidatus Ludimariales (NL. fem. n. *Ludimariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-49-11.* The type genus for the taxon is *Candidatus* Ludimaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Ludimella levidisca sp. nov.

Candidatus Ludimella levidisca (NL. fem. n. *levidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C-53 sp003612525*. The type genome for the species is the GenBank assembly RS_GCF_003612525.1. The GC content of the type genome is 43.45 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Ludimella gen. nov.

Candidatus Ludimella (NL. fem. n. *Ludimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C-53*. The type species for the genus is *Candidatus* Ludimella levidisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludimia ambacetta sp. nov.

Candidatus Ludimia ambacetta (NL. fem. n. *ambacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp903932155*. The type genome for the species is the GenBank assembly GCA_903932155.1. The GC content of the type genome is 59.21 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Ludimia gen. nov.

Candidatus Ludimia (NL. fem. n. *Ludimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-288*. The type species for the genus is *Candidatus* Ludimia ambacetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ludimia bovicentia sp. nov.

Candidatus Ludimia bovicentia (NL. fem. n. *bovicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp003162875*. The type genome for the species is the GenBank assembly GCA_003134355.1. The GC content of the type genome is 61.6 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Ludimia catagitas sp. nov.

Candidatus Ludimia catagitas (NL. fem. n. *catagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp003142215*. The type genome for the species is the GenBank assembly GCA_003159515.1. The GC content of the type genome is 61.41 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Ludimia fiducetta sp. nov.

Candidatus Ludimia fiducetta (NL. fem. n. *fiducetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp003132145*. The type genome for the species is the GenBank assembly GCA_003159875.1. The GC content of the type genome is 61.66 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Ludimia rarefigena sp. nov.

Candidatus Ludimia rarefigena (NL. fem. n. *rarefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp003133205*. The type genome for the species is the GenBank assembly GCA_003133205.1. The GC content of the type genome is 60.1 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Ludimia serotitudo sp. nov.

Candidatus Ludimia serotitudo (NL. fem. n. *serotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-288 sp003142235*. The type genome for the species is the GenBank assembly GCA_003165995.1. The GC content of the type genome is 62.69 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Ludimida bucelastra sp. nov.

Candidatus Ludimida bucelastra (NL. fem. n. *bucelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1435 sp000433775*. The type genome for the species is the GenBank assembly GCA_900543955.1. The GC content of the type genome is 45.87 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Ludimida gen. nov.

Candidatus Ludimida (NL. fem. n. *Ludimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1435*. The type species for the genus is *Candidatus* Ludimida bucelastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Ludimida papilibula sp. nov.

Candidatus Ludimida papilibula (NL. fem. n. *papilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1435 sp900769665*. The type genome for the species is the GenBank assembly RS_GCF_900769665.1. The GC content of the type genome is 48.04 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Ludimida susicax sp. nov.

Candidatus Ludimida susicax (NL. fem. n. *susicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1435 sp003537755*. The type genome for the species is the GenBank assembly GCA_003537755.1. The GC content of the type genome is 48.7 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Ludimosa scammifica sp. nov.

Candidatus Ludimosa scammifica (NL. fem. n. *scammifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFS01 sp012728115*. The type genome for the species is the GenBank assembly GCA_012728115.1. The GC content of the type genome is 40.37 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Ludimosa gen. nov.

Candidatus Ludimosa (NL. fem. n. *Ludimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFS01*. The type species for the genus is *Candidatus* Ludimosa scammifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JAAYFS01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimosaceae.

Description of *Candidatus* Ludimosaceae fam. nov.

Candidatus Ludimosaceae (NL. fem. n. *Ludimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYFS01*. The type genus for the taxon is *Candidatus* Ludimosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilidales.

Description of *Candidatus* Lugubana antipitas sp. nov.

Candidatus Lugubana antipitas (NL. fem. n. *antipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAN01 sp007126865*. The type genome for the species is the GenBank assembly GCA_007126865.1. The GC content of the type genome is 60.23 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Lugubana gen. nov.

Candidatus Lugubana (NL. fem. n. *Lugubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAN01*. The type species for the genus is *Candidatus* Lugubana antipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papavosaceae.

Description of *Candidatus* Lugubana coturibra sp. nov.

Candidatus Lugubana coturibra (NL. fem. n. *coturibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SLAN01 sp007135605*. The type genome for the species is the GenBank assembly GCA_003558715.1. The GC content of the type genome is 60.05 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Lugubana exsurugo sp. nov.

Candidatus Lugubana exsurugo (NL. fem. n. *exsurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAN01 sp003552745*. The type genome for the species is the GenBank assembly GCA_003552745.1. The GC content of the type genome is 60.49 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Lugubaria favonicella sp. nov.

Candidatus Lugubaria favonicella (NL. fem. n. *favonicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *66-26 sp001897745*. The type genome for the species is the GenBank assembly GCA_001897745.1. The GC content of the type genome is 66.12 % and the genome length is 4.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Lugubaria gen. nov.

Candidatus Lugubaria (NL. fem. n. *Lugubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *66-26*. The type species for the genus is *Candidatus* Lugubaria favonicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lugubella dicabicula sp. nov.

Candidatus Lugubella dicabicula (NL. fem. n. *dicabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1198 sp003132425*. The type genome for the species is the GenBank assembly GCA_003135075.1. The GC content of the type genome is 60.91 %

and the genome length is 4.09 Mbp.

Description of *Candidatus* Lugubella gen. nov.

Candidatus Lugubella (NL. fem. n. *Lugubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-1198*. The type species for the genus is *Candidatus* Lugubella dicabicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lugubella ectenitas sp. nov.

Candidatus Lugubella ectenitas (NL. fem. n. *ectenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1198 sp003165495*. The type genome for the species is the GenBank assembly GCA_003165495.1. The GC content of the type genome is 60.78 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Lugubella habacentia sp. nov.

Candidatus Lugubella habacentia (NL. fem. n. *habacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1198 sp003137095*. The type genome for the species is the GenBank assembly GCA_003138845.1. The GC content of the type genome is 65.13 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Lugubella holovessa sp. nov.

Candidatus Lugubella holovessa (NL. fem. n. *holovessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1198 sp003134045*. The type genome for the species is the GenBank assembly GCA_003156025.1. The GC content of the type genome is 62.98 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Lugubella omnigitrix sp. nov.

Candidatus Lugubella omnigitrix (NL. fem. n. *omnigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1198 sp003164785*. The type genome for the species is the GenBank assembly GCA_003164785.1. The GC content of the type genome is 62.32 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Lugubia agratatica sp. nov.

Candidatus Lugubia agratatica (NL. fem. n. *agratatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1731 sp902779565*. The type genome for the species is the GenBank assembly GCA_902779565.1. The GC content of the type genome is 60.99 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Lugubia gen. nov.

Candidatus Lugubia (NL. fem. n. *Lugubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1731*. The type species for the genus is *Candidatus* Lugubia agratatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Lugubia cimitilega sp. nov.

Candidatus Lugubia cimitilega (NL. fem. n. *cimitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1731 sp002317575*. The type genome for the species is the GenBank assembly GCA_002317575.1. The GC content of the type genome is 64.17 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Lugubida valefimonia sp. nov.

Candidatus Lugubida valefimonia (NL. fem. n. *valefimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-43-20 sp002780235*. The type genome for the species is the GenBank assembly GCA_001872655.1. The GC content of the type genome is 42.97 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Lugubida gen. nov.

Candidatus Lugubida (NL. fem. n. *Lugubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-43-20*. The type species for the genus is *Candidatus* Lugubida valefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-43-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lugubidaceae.

Description of *Candidatus* Lugubidaceae fam. nov.

Candidatus Lugubidaceae (NL. fem. n. *Lugubidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-43-20.* The type genus for the taxon is *Candidatus* Lugubida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fidenellales.

Description of *Candidatus* Lugubosa cenodedo sp. nov.

Candidatus Lugubosa cenodedo (NL. fem. n. *cenodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6668 sp002455215*. The type genome for the species is the GenBank assembly GCA_002455215.1. The GC content of the type genome is 50.22 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Lugubosa gen. nov.

Candidatus Lugubosa (NL. fem. n. *Lugubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6668*. The type species for the genus is *Candidatus* Lugubosa cenodedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6668*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lugubosaceae.

Description of *Candidatus* Lugubosaceae fam. nov.

Candidatus Lugubosaceae (NL. fem. n. *Lugubosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6668.* The type genus for the taxon is *Candidatus* Lugubosa .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Lugubula nocenifica sp. nov.

Candidatus Lugubula nocenifica (NL. fem. n. *nocenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2558 sp002340425*. The type genome for the species is the GenBank assembly GCA_012798635.1. The GC content of the type genome is 31.37 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Lugubula gen. nov.

Candidatus Lugubula (NL. fem. n. *Lugubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2558*. The type species for the genus is *Candidatus* Lugubula nocenifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Lujinxingia adtagedo sp. nov.

Candidatus Lujinxingia adtagedo (NL. fem. n. *adtagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lujinxingia sp007997015*. The type genome for the species is the GenBank assembly RS_GCF_007997015.1. The GC content of the type genome is 64.59 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Lujinxingia mahelilenta sp. nov.

Candidatus Lujinxingia mahelilenta (NL. fem. n. *mahelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lujinxingia sp007997005*. The type genome for the species is the GenBank assembly RS_GCF_007997005.1. The GC content of the type genome is 65.01 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Luminiphilus abnocax sp. nov.

Candidatus Luminiphilus abnocax (NL. fem. n. *abnocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp902613175*. The type genome for the species is the GenBank assembly RS_GCF_902613175.1. The GC content of the type genome is 52.31 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Luminiphilus adpicatio sp. nov.

Candidatus Luminiphilus adpicatio (NL. fem. n. *adpicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp009937065*. The type genome for the species is the GenBank assembly GCA_009937065.1. The GC content of the type genome is 52.53 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Luminiphilus adpugatica sp. nov.

Candidatus Luminiphilus adpugatica (NL. fem. n. *adpugatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp011524755*. The type genome for the species is the GenBank assembly GCA_011524755.1. The GC content of the type genome is 53.92 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Luminiphilus adtesitas sp. nov.

Candidatus Luminiphilus adtesitas (NL. fem. n. *adtesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp008081075*. The type genome for the species is the GenBank assembly GCA_008081075.1. The GC content of the type genome is 56.54 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Luminiphilus arilletta sp. nov.

Candidatus Luminiphilus arilletta (NL. fem. n. *arilletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002691405*. The type genome for the species is the GenBank assembly GCA_002691405.1. The GC content of the type genome is 52.79 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Luminiphilus arillisca sp. nov.

Candidatus Luminiphilus arillisca (NL. fem. n. *arillisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp000227505*. The type genome for the species is the GenBank assembly RS_GCF_000227505.1. The GC content of the type genome is 52.9 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Luminiphilus assifago sp. nov.

Candidatus Luminiphilus assifago (NL. fem. n. *assifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Luminiphilus sp902518075*. The type genome for the species is the GenBank assembly RS_GCF_902518075.1. The GC content of the type genome is 55.78 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Luminiphilus assucicula sp. nov.

Candidatus Luminiphilus assucicula (NL. fem. n. *assucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002377985*. The type genome for the species is the GenBank assembly GCA_002377985.1. The GC content of the type genome is 56.92 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Luminiphilus bifisibula sp. nov.

Candidatus Luminiphilus bifisibula (NL. fem. n. *bifisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp003331335*. The type genome for the species is the GenBank assembly GCA_003331335.1. The GC content of the type genome is 52.56 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Luminiphilus bisulifica sp. nov.

Candidatus Luminiphilus bisulifica (NL. fem. n. *bisulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp000169115*. The type genome for the species is the GenBank assembly RS_GCF_000169115.1. The GC content of the type genome is 51.82 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Luminiphilus ceracatio sp. nov.

Candidatus Luminiphilus ceracatio (NL. fem. n. *ceracatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002683395*. The type genome for the species is the GenBank assembly GCA_004213755.1. The GC content of the type genome is 57.06 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Luminiphilus codifibula sp. nov.

Candidatus Luminiphilus codifibula (NL. fem. n. *codifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002689915*. The type genome for the species is the GenBank assembly GCA_002171595.1. The GC content of the type genome is 52.13 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Luminiphilus conamitas sp. nov.

Candidatus Luminiphilus conamitas (NL. fem. n. *conamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp012270045*. The type genome for the species is the GenBank assembly GCA_012270045.1. The GC content of the type genome is 60.05 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Luminiphilus decunilega sp. nov.

Candidatus Luminiphilus decunilega (NL. fem. n. *decunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002721785*. The type genome for the species is the GenBank assembly GCA_002721785.1. The GC content of the type genome is 57.22 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Luminiphilus desepatio sp. nov.

Candidatus Luminiphilus desepatio (NL. fem. n. *desepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp011523115*. The type genome for the species is the GenBank assembly GCA_011523115.1. The GC content of the type genome is 57.7 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Luminiphilus detumitica sp. nov.

Candidatus Luminiphilus detumitica (NL. fem. n. *detumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002389505*. The type genome for the species is the GenBank assembly GCA_002390055.1. The GC content of the type genome is 53.27 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Luminiphilus ignigedo sp. nov.

Candidatus Luminiphilus ignigedo (NL. fem. n. *ignigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp009886815*. The type genome for the species is the GenBank assembly GCA_009886815.1. The GC content of the type genome is 52.91 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Luminiphilus inabsessa sp. nov.

Candidatus Luminiphilus inabsessa (NL. fem. n. *inabsessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002705465*. The type genome for the species is the GenBank assembly GCA_002705465.1. The GC content of the type genome is 57.0 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Luminiphilus inbecax sp. nov.

Candidatus Luminiphilus inbecax (NL. fem. n. *inbecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp902547755*. The type genome for the species is the GenBank assembly RS_GCF_902547755.1. The GC content of the type genome is 52.81 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Luminiphilus inlumitio sp. nov.

Candidatus Luminiphilus inlumitio (NL. fem. n. *inlumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Luminiphilus sp002469785*. The type genome for the species is the GenBank assembly GCA_002469785.1. The GC content of the type genome is 52.29 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Luminiphilus inpenatica sp. nov.

Candidatus Luminiphilus inpenatica (NL. fem. n. *inpenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp902623175*. The type genome for the species is the GenBank assembly RS_GCF_902623175.1. The GC content of the type genome is 56.16 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Luminiphilus metabetta sp. nov.

Candidatus Luminiphilus metabetta (NL. fem. n. *metabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002691565*. The type genome for the species is the GenBank assembly GCA_002691565.1. The GC content of the type genome is 53.32 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Luminiphilus mirabibula sp. nov.

Candidatus Luminiphilus mirabibula (NL. fem. n. *mirabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp902631395*. The type genome for the species is the GenBank assembly RS_GCF_902623385.1. The GC content of the type genome is 53.92 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Luminiphilus molecimonas sp. nov.

Candidatus Luminiphilus molecimonas (NL. fem. n. *molecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002390485*. The type genome for the species is the GenBank assembly GCA_002389625.1. The GC content of the type genome is 53.7 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Luminiphilus peropitrix sp. nov.

Candidatus Luminiphilus peropitrix (NL. fem. n. *peropitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp013911345*. The type genome for the species is the GenBank assembly GCA_013911345.1. The GC content of the type genome is 57.28 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Luminiphilus pomifastra sp. nov.

Candidatus Luminiphilus pomifastra (NL. fem. n. *pomifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002456975*. The type genome for the species is the GenBank assembly GCA_002704305.1. The GC content of the type genome is 53.18 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Luminiphilus remulousia sp. nov.

Candidatus Luminiphilus remulousia (NL. fem. n. *remulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp003331685*. The type genome for the species is the GenBank assembly GCA_003331685.1. The GC content of the type genome is 58.03 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Luminiphilus resalilega sp. nov.

Candidatus Luminiphilus resalilega (NL. fem. n. *resalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp902520195*. The type genome for the species is the GenBank assembly RS_GCF_902520195.1. The GC content of the type genome is 56.19 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Luminiphilus resulentia sp. nov.

Candidatus Luminiphilus resulentia (NL. fem. n. *resulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002703585*. The type genome for the species is the GenBank assembly GCA_002703585.1. The GC content of the type genome is 53.18 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Luminiphilus totidimonia sp. nov.

Candidatus Luminiphilus totidimonia (NL. fem. n. *totidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002683335*. The type genome for the species is the GenBank assembly GCA_002683335.1. The GC content of the type genome is 54.07 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Luminiphilus vanidisca sp. nov.

Candidatus Luminiphilus vanidisca (NL. fem. n. *vanidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp003523185*. The type genome for the species is the GenBank assembly GCA_003523185.1. The GC content of the type genome is 53.23 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Luminiphilus veridiforma sp. nov.

Candidatus Luminiphilus veridiforma (NL. fem. n. *veridiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luminiphilus sp002862405*. The type genome for the species is the GenBank assembly GCA_002862405.1. The GC content of the type genome is 52.68 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Luminiphilus xeropimonia sp. nov.

Candidatus Luminiphilus xeropimonia (NL. fem. n. *xeropimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Luminiphilus sp002696455*. The type genome for the species is the GenBank assembly GCA_002696455.1. The GC content of the type genome is 58.58 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Lunatimonas nivomastra sp. nov.

Candidatus Lunatimonas nivomastra (NL. fem. n. *nivomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lunatimonas sp009797935*. The type genome for the species is the GenBank assembly RS_GCF_009797935.1. The GC content of the type genome is 42.08 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Lupanana cisoressa sp. nov.

Candidatus Lupanana cisoressa (NL. fem. n. *cisoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDR01 sp012512705*. The type genome for the species is the GenBank assembly GCA_012512705.1. The GC content of the type genome is 45.11 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Lupanana gen. nov.

Candidatus Lupanana (NL. fem. n. *Lupanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDR01*. The type species for the genus is *Candidatus* Lupanana cisoressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZDR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lupananaceae.

Description of *Candidatus* Lupananaceae fam. nov.

Candidatus Lupananaceae (NL. fem. n. *Lupananaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZDR01.* The type genus for the taxon is *Candidatus* Lupanana .

According to the original version of GTDB R06-RS202, this family belongs to the order

DTU022. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depelidales.

Description of *Candidatus* Lupanella lanigitura sp. nov.

Candidatus Lupanella lanigitura (NL. fem. n. *lanigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10105 sp000995415*. The type genome for the species is the GenBank assembly GCA_001779175.1. The GC content of the type genome is 42.51 % and the genome length is 1.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Lupanella gen. nov.

Candidatus Lupanella (NL. fem. n. *Lupanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10105*. The type species for the genus is *Candidatus* Lupanella lanigitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10105*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lupanellaceae.

Description of *Candidatus* Lupanellaceae fam. nov.

Candidatus Lupanellaceae (NL. fem. n. *Lupanellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10105.* The type genus for the taxon is *Candidatus* Lupanella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10105*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lupanellales.

Description of *Candidatus* Lupanellales ord. nov.

Candidatus Lupanellales (NL. fem. n. *Lupanellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10105.* The type genus for the taxon is *Candidatus* Lupanella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Lupanida acratedo sp. nov.

Candidatus Lupanida acratedo (NL. fem. n. *acratedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *43-37 sp001897475*. The type genome for the species is the GenBank assembly GCA_001897475.1. The GC content of the type genome is 43.42 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Lupanida gen. nov.

Candidatus Lupanida (NL. fem. n. *Lupanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *43-37*. The type species for the genus is *Candidatus* Lupanida acratedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *43-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lupanidaceae.

Description of *Candidatus* Lupanidaceae fam. nov.

Candidatus Lupanidaceae (NL. fem. n. *Lupanidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *43-37.* The type genus for the taxon is *Candidatus* Lupanida .

According to the original version of GTDB R06-RS202, this family belongs to the order *43-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lupanidales.

Description of *Candidatus* Lupanidales ord. nov.

Candidatus Lupanidales (NL. fem. n. *Lupanidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *43-37*. The type genus for the taxon is *Candidatus* Lupanida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Lupanosa cerofivita sp. nov.

Candidatus Lupanosa cerofivita (NL. fem. n. *cerofivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDQA01 sp013042475*. The type genome for the species is the GenBank assembly GCA_013002945.1. The GC content of the type genome is 51.8 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Lupanosa gen. nov.

Candidatus Lupanosa (NL. fem. n. *Lupanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDQA01*. The type species for the genus is *Candidatus* Lupanosa cerofivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Lupanula nutabibula sp. nov.

Candidatus Lupanula nutabibula (NL. fem. n. *nutabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWAN01 sp903897765*. The type genome for the species is the GenBank assembly GCA_903867545.1. The GC content of the type genome is 43.11 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Lupanula gen. nov.

Candidatus Lupanula (NL. fem. n. *Lupanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWAN01*. The type species for the genus is *Candidatus* Lupanula nutabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWF2-35-9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refuliaceae.

Description of *Candidatus* Lupanula taraxibula sp. nov.

Candidatus Lupanula taraxibula (NL. fem. n. *taraxibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWAN01 sp903910705*. The type genome for the species is the GenBank assembly GCA_903860705.1. The GC content of the type genome is 45.04 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Luteibacter decucilega sp. nov.

Candidatus Luteibacter decucilega (NL. fem. n. *decucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp011759605*. The type genome for the species is the GenBank assembly RS_GCF_011759605.1. The GC content of the type genome is 65.76 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Luteibacter exhorimonia sp. nov.

Candidatus Luteibacter exhorimonia (NL. fem. n. *exhorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp009912395*. The type genome for the species is the GenBank assembly GCA_009912395.1. The GC content of the type genome is 65.16 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Luteibacter faticitia sp. nov.

Candidatus Luteibacter faticitia (NL. fem. n. *faticitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp000745055*. The type genome for the species is the GenBank assembly RS_GCF_900102405.1. The GC content of the type genome is 64.95 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Luteibacter ficedigena sp. nov.

Candidatus Luteibacter ficedigena (NL. fem. n. *ficedigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp900119235*. The type genome for the species is the GenBank assembly RS_GCF_900119235.1. The GC content of the type genome is 64.84 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Luteibacter maledousia sp. nov.

Candidatus Luteibacter maledousia (NL. fem. n. *maledousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp014192715*. The type genome for the species is the GenBank assembly RS_GCF_014192715.1. The GC content of the type genome is 63.0 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Luteibacter opporitura sp. nov.

Candidatus Luteibacter opporitura (NL. fem. n. *opporitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp000745005*. The type genome for the species is the GenBank assembly RS_GCF_000745005.1. The GC content of the type genome is 66.24 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Luteibacter pabilibula sp. nov.

Candidatus Luteibacter pabilibula (NL. fem. n. *pabilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp003050935*. The type genome for the species is the GenBank assembly RS_GCF_003050935.1. The GC content of the type genome is 64.13 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Luteibacter semilitio sp. nov.

Candidatus Luteibacter semilitio (NL. fem. n. *semilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp900110505*. The type genome for the species is the GenBank assembly RS_GCF_900110505.1. The GC content of the type genome is 67.67 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Luteibacter voragitudo sp. nov.

Candidatus Luteibacter voragitudo (NL. fem. n. *voragitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteibacter sp900109915*. The type genome for the species is the GenBank assembly RS_GCF_900109915.1. The GC content of the type genome is 66.95 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Luteimonas artocilenta sp. nov.

Candidatus Luteimonas artocilenta (NL. fem. n. *artocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp012515985*. The type genome for the species is the GenBank assembly GCA_012515985.1. The GC content of the type genome is 69.78 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Luteimonas aruspatica sp. nov.

Candidatus Luteimonas aruspatica (NL. fem. n. *aruspatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp002307375*. The type genome for the species is the GenBank assembly RS_GCF_002307375.1. The GC content of the type genome is 68.26 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Luteimonas capabentia sp. nov.

Candidatus Luteimonas capabentia (NL. fem. n. *capabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Luteimonas sp014192745*. The type genome for the species is the GenBank assembly RS_GCF_014192745.1. The GC content of the type genome is 69.15 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Luteimonas cobaletta sp. nov.

Candidatus Luteimonas cobaletta (NL. fem. n. *cobaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp012510865*. The type genome for the species is the GenBank assembly GCA_012510865.1. The GC content of the type genome is 71.73 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Luteimonas conamigena sp. nov.

Candidatus Luteimonas conamigena (NL. fem. n. *conamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp000472505*. The type genome for the species is the GenBank assembly RS_GCF_007829385.1. The GC content of the type genome is 71.93 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Luteimonas curabousia sp. nov.

Candidatus Luteimonas curabousia (NL. fem. n. *curabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp002324875*. The type genome for the species is the GenBank assembly RS_GCF_002324875.1. The GC content of the type genome is 68.9 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Luteimonas defaretta sp. nov.

Candidatus Luteimonas defaretta (NL. fem. n. *defaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp008312895*. The type genome for the species is the GenBank assembly RS_GCF_008312895.1. The GC content of the type genome is 68.76 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Luteimonas depeticula sp. nov.

Candidatus Luteimonas depeticula (NL. fem. n. *depeticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp902506295*. The type genome for the species is the GenBank assembly RS_GCF_902506295.1. The GC content of the type genome is 68.69 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Luteimonas lanigifica sp. nov.

Candidatus Luteimonas lanigifica (NL. fem. n. *lanigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp008244685*. The type genome for the species is the GenBank assembly RS_GCF_008244685.1. The GC content of the type genome is 69.9 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Luteimonas ludifitas sp. nov.

Candidatus Luteimonas ludifitas (NL. fem. n. *ludifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp001717465*. The type genome for the species is the GenBank assembly RS_GCF_001717465.1. The GC content of the type genome is 69.05 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Luteimonas ludifitudo sp. nov.

Candidatus Luteimonas ludifitudo (NL. fem. n. *ludifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp013425525*. The type genome for the species is the GenBank assembly RS_GCF_013425525.1. The GC content of the type genome is 70.42 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Luteimonas myalgugo sp. nov.

Candidatus Luteimonas myalgugo (NL. fem. n. *myalgugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp001683895*. The type genome for the species is the GenBank assembly GCA_001683895.1. The GC content of the type genome is 70.27 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Antarctic Hypolithon".

Description of *Candidatus* Luteimonas negiditrix sp. nov.

Candidatus Luteimonas negiditrix (NL. fem. n. *negiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp004118975*. The type genome for the species is the GenBank assembly RS_GCF_004118975.1. The GC content of the type genome is 69.34 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Luteimonas obvalessa sp. nov.

Candidatus Luteimonas obvalessa (NL. fem. n. *obvalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp013425765*. The type genome for the species is the GenBank assembly RS_GCF_013425765.1. The GC content of the type genome is 69.27 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Luteimonas peridax sp. nov.

Candidatus Luteimonas peridax (NL. fem. n. *peridax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp002849595*. The type genome for the species is the GenBank assembly RS_GCF_002849595.1. The GC content of the type genome is 69.55 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Luteimonas sacopiforma sp. nov.

Candidatus Luteimonas sacopiforma (NL. fem. n. *sacopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp007859305*. The type genome for the species is the GenBank assembly GCA_012729915.1. The GC content of the type genome is 72.32 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Luteimonas tenililega sp. nov.

Candidatus Luteimonas tenililega (NL. fem. n. *tenililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp002798175*. The type genome for the species is the GenBank assembly RS_GCF_002798175.1. The GC content of the type genome is 69.32 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Luteimonas tolutedo sp. nov.

Candidatus Luteimonas tolutedo (NL. fem. n. *tolutedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp001014645*. The type genome for the species is the GenBank assembly RS_GCF_001014645.1. The GC content of the type genome is 71.05 % and the genome length is 3.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Luteimonas vitifigena sp. nov.

Candidatus Luteimonas vitifigena (NL. fem. n. *vitifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas sp014212025*. The type genome for the species is the GenBank assembly RS_GCF_014212025.1. The GC content of the type genome is 69.63 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Luteimonas adlapitio sp. nov.

Candidatus Luteimonas adlapitio (NL. fem. n. *adlapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas_B sp003416885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003416885.1. The GC content of the type genome is 70.9 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Luteimonas carecousia sp. nov.

Candidatus Luteimonas carecousia (NL. fem. n. *carecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas_B sp011320095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011320095.1. The GC content of the type genome is 68.22 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Luteimonas desucatio sp. nov.

Candidatus Luteimonas desucatio (NL. fem. n. *desucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas_B sp004297225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004297225.1. The GC content of the type genome is 68.47 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Luteimonas saxificella sp. nov.

Candidatus Luteimonas saxificella (NL. fem. n. *saxificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas_B sp009792795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009792795.1. The GC content of the type genome is 66.79 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Luteimonas inadfifica sp. nov.

Candidatus Luteimonas inadfifica (NL. fem. n. *inadfifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteimonas_C sp902825775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902825775.1. The GC content of the type genome is 64.48 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Luteitalea assucastra sp. nov.

Candidatus Luteitalea assucastra (NL. fem. n. *assucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteitalea sp013695405*. The type genome for the species is the GenBank assembly GCA_013695405.1. The GC content of the type genome is 68.75 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Luteitalea inobricella sp. nov.

Candidatus Luteitalea inobricella (NL. fem. n. *inobricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteitalea sp001464065*. The type genome for the species is the GenBank assembly GCA_001464065.1. The GC content of the type genome is 69.95 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Luteococcus hirunimonia sp. nov.

Candidatus Luteococcus hirunimonia (NL. fem. n. *hirunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Luteococcus sp002387005*. The type genome for the species is the GenBank assembly GCA_002387005.1. The GC content of the type genome is 67.93 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Lutibacter adrecisca sp. nov.

Candidatus Lutibacter adrecisca (NL. fem. n. *adrecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp012524075*. The type genome for the species is the GenBank assembly RS_GCF_012524075.1. The GC content of the type genome is 30.28 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Lutibacter appugibra sp. nov.

Candidatus Lutibacter appugibra (NL. fem. n. *appugibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp004195315*. The type genome for the species is the GenBank assembly GCA_004195315.1. The GC content of the type genome is 30.08 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Lutibacter bipatitia sp. nov.

Candidatus Lutibacter bipatitia (NL. fem. n. *bipatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp004121075*. The type genome for the species is the GenBank assembly RS_GCF_004121075.1. The GC content of the type genome is 31.09 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Lutibacter cenobivita sp. nov.

Candidatus Lutibacter cenobivita (NL. fem. n. *cenobivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp013139515*. The type genome for the species is the GenBank assembly GCA_013139515.1. The GC content of the type genome is 29.7 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Lutibacter enimvago sp. nov.

Candidatus Lutibacter enimvago (NL. fem. n. *enimvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp002390165*. The type genome for the species is the GenBank assembly GCA_002390165.1. The GC content of the type genome is 29.11 %

and the genome length is 2.47 Mbp.

Description of *Candidatus* Lutibacter furibibula sp. nov.

Candidatus Lutibacter furibibula (NL. fem. n. *furibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp002842505*. The type genome for the species is the GenBank assembly GCA_002842505.1. The GC content of the type genome is 34.87 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Lutibacter lacinentia sp. nov.

Candidatus Lutibacter lacinentia (NL. fem. n. *lacinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp001800975*. The type genome for the species is the GenBank assembly GCA_001800975.1. The GC content of the type genome is 35.12 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Lutibacter ludimiforma sp. nov.

Candidatus Lutibacter ludimiforma (NL. fem. n. *ludimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp002733285*. The type genome for the species is the GenBank assembly GCA_002732565.1. The GC content of the type genome is 30.85 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Lutibacter reduniforma sp. nov.

Candidatus Lutibacter reduniforma (NL. fem. n. *reduniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp003516285*. The type genome for the species is the GenBank assembly GCA_003516285.1. The GC content of the type genome is 35.31 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Lutibacter resupedo sp. nov.

Candidatus Lutibacter resupedo (NL. fem. n. *resupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp010906935*. The type genome for the species is the GenBank assembly GCA_010906935.1. The GC content of the type genome is 34.28 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Lutibacter subadimonia sp. nov.

Candidatus Lutibacter subadimonia (NL. fem. n. *subadimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutibacter sp013041805*. The type genome for the species is the GenBank assembly GCA_013041805.1. The GC content of the type genome is 30.43 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Luticana vecoribra sp. nov.

Candidatus Luticana vecoribra (NL. fem. n. *vecoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIR01 sp013151245*. The type genome for the species is the GenBank assembly GCA_013151245.1. The GC content of the type genome is 40.92 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Luticana gen. nov.

Candidatus Luticana (NL. fem. n. *Luticana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIR01*. The type species for the genus is *Candidatus* Luticana vecoribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luticaria recorifica sp. nov.

Candidatus Luticaria recorifica (NL. fem. n. *recorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3906 sp002391555*. The type genome for the species is the GenBank assembly GCA_002391555.1. The GC content of the type genome is 40.82 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Luticaria gen. nov.

Candidatus Luticaria (NL. fem. n. *Luticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3906*. The type species for the genus is *Candidatus* Luticaria recorifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Luticia luculatica sp. nov.

Candidatus Luticia luculatica (NL. fem. n. *luculatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OPU3-GD-OMZ sp012965425*. The type genome for the species is the GenBank assembly GCA_012964185.1. The GC content of the type genome is 42.07 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Luticia gen. nov.

Candidatus Luticia (NL. fem. n. *Luticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OPU3-GD-OMZ*. The type species for the genus is *Candidatus* Luticia luculatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luticia peribitas sp. nov.

Candidatus Luticia peribitas (NL. fem. n. *peribitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OPU3-GD-OMZ sp012959905*. The type genome for the species is the GenBank assembly GCA_012959905.1. The GC content of the type genome is 42.67 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Luticia tabifatica sp. nov.

Candidatus Luticia tabifatica (NL. fem. n. *tabifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OPU3-GD-OMZ sp001901525*. The type genome for the species is the GenBank assembly GCA_001901525.1. The GC content of the type genome is 42.32 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Luticida accenigena sp. nov.

Candidatus Luticida accenigena (NL. fem. n. *accenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9219 sp003504035*. The type genome for the species is the GenBank assembly GCA_003504035.1. The GC content of the type genome is 46.33 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Luticida gen. nov.

Candidatus Luticida (NL. fem. n. *Luticida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9219*. The type species for the genus is *Candidatus* Luticida accenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticidaceae.

Description of *Candidatus* Luticidaceae fam. nov.

Candidatus Luticidaceae (NL. fem. n. *Luticidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9219.* The type genus for the taxon is *Candidatus* Luticida .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales_A*.

Description of *Candidatus* Luticosa dicanicula sp. nov.

Candidatus Luticosa dicanicula (NL. fem. n. *dicanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha5-Bin3 sp902577425*. The type genome for the species is the GenBank assembly GCA_902630545.1. The GC content of the type genome is 28.24 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Luticosa gen. nov.

Candidatus Luticosa (NL. fem. n. *Luticosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha5-Bin3*. The type species for the genus is *Candidatus* Luticosa dicanicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Luticosa relenigena sp. nov.

Candidatus Luticosa relenigena (NL. fem. n. *relenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha5-Bin3 sp902596065*. The type genome for the species is the GenBank assembly GCA_902596065.1. The GC content of the type genome is 28.29 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Luticosa remeditia sp. nov.

Candidatus Luticosa remeditia (NL. fem. n. *remeditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MarineAlpha5-Bin3 sp902567855*. The type genome for the species is the GenBank assembly GCA_902567855.1. The GC content of the type genome is 28.34 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Luticosa visififica sp. nov.

Candidatus Luticosa visififica (NL. fem. n. *visififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha5-Bin3 sp002938255*. The type genome for the species is the GenBank assembly GCA_002937975.1. The GC content of the type genome is 30.77 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Luticula admurisca sp. nov.

Candidatus Luticula admurisca (NL. fem. n. *admurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-474 sp003251775*. The type genome for the species is the GenBank assembly GCA_003251775.1. The GC content of the type genome is 34.29 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Luticula gen. nov.

Candidatus Luticula (NL. fem. n. *Luticula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-474*. The type species for the genus is *Candidatus* Luticula admurisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-474*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticulaceae.

Description of *Candidatus* Luticulaceae fam. nov.

Candidatus Luticulaceae (NL. fem. n. *Luticulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-474.* The type genus for the taxon is *Candidatus* Luticula .

According to GTDB R06-RS202, this family belongs to the order *Acetivibrionales*.

Description of *Candidatus* Lutimaribacter advigitudo sp. nov.

Candidatus Lutimaribacter advigitudo (NL. fem. n. *advigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutimaribacter sp009924775*. The type genome for the species is the GenBank assembly GCA_009924775.1. The GC content of the type genome is 60.18 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Lutimaribacter inlapitia sp. nov.

Candidatus Lutimaribacter inlapitia (NL. fem. n. *inlapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lutimaribacter sp000526275*. The type genome for the species is the GenBank assembly RS_GCF_000526275.1. The GC content of the type genome is 63.94 % and the genome length is 4.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Lutulana regigitudo sp. nov.

Candidatus Lutulana regigitudo (NL. fem. n. *regigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRKV01 sp011051635*. The type genome for the species is the GenBank assembly GCA_011051635.1. The GC content of the type genome is 62.17 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Lutulana gen. nov.

Candidatus Lutulana (NL. fem. n. *Lutulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRKV01*. The type species for the genus is *Candidatus* Lutulana regigitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lutulanaceae.

Description of *Candidatus* Lutulanaceae fam. nov.

Candidatus Lutulanaceae (NL. fem. n. *Lutulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRKV01*. The type genus for the taxon is *Candidatus* Lutulana .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Lutulella democastra sp. nov.

Candidatus Lutulella democastra (NL. fem. n. *democastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2134 sp002471805*. The type genome for the species is the GenBank assembly GCA_002327705.1. The GC content of the type genome is 42.89 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Lutulella gen. nov.

Candidatus Lutulella (NL. fem. n. *Lutulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2134*. The type species for the genus is *Candidatus* Lutulella democastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Lutulella tametivita sp. nov.

Candidatus Lutulella tametivita (NL. fem. n. *tametivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2134 sp002718285*. The type genome for the species is the GenBank assembly GCA_002718285.1. The GC content of the type genome is 33.04 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Lutulia nugiventia sp. nov.

Candidatus Lutulia nugiventia (NL. fem. n. *nugiventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1225 sp900549725*. The type genome for the species is the GenBank assembly RS_GCF_900763125.1. The GC content of the type genome is 54.32 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Lutulia gen. nov.

Candidatus Lutulia (NL. fem. n. *Lutulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1225*. The type species for the genus is *Candidatus* Lutulia nugiventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Lutulida bipenatio sp. nov.

Candidatus Lutulida bipenatio (NL. fem. n. *bipenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6065 sp002428865*. The type genome for the species is the GenBank assembly GCA_002428865.1. The GC content of the type genome is 49.0 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Lutulida gen. nov.

Candidatus Lutulida (NL. fem. n. *Lutulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6065*. The type species for the genus is *Candidatus* Lutulida bipenatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lutulidaceae.

Description of *Candidatus* Lutulidaceae fam. nov.

Candidatus Lutulidaceae (NL. fem. n. *Lutulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6065.* The type genus for the taxon is *Candidatus* Lutulida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Lutulosa defacitio sp. nov.

Candidatus Lutulosa defacitio (NL. fem. n. *defacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-43-210 sp002783585*. The type genome for the species is the GenBank assembly GCA_002783585.1. The GC content of the type genome is 42.51 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Lutulosa gen. nov.

Candidatus Lutulosa (NL. fem. n. *Lutulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-43-210*. The type species for the genus is *Candidatus* Lutulosa defacitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-43-210*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lutulosaceae.

Description of *Candidatus* Lutulosaceae fam. nov.

Candidatus Lutulosaceae (NL. fem. n. *Lutulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-43-210.* The type genus for the taxon is *Candidatus* Lutulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG1-02-43-210*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lutulosales.

Description of *Candidatus* Lutulosales ord. nov.

Candidatus Lutulosales (NL. fem. n. *Lutulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-43-210.* The type genus for the taxon is *Candidatus* Lutulosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Lutulula adrenicula sp. nov.

Candidatus Lutulula adrenicula (NL. fem. n. *adrenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009782315*. The type genome for the species is the GenBank assembly GCA_009782315.1. The GC content of the type genome is 51.29 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Lutulula gen. nov.

Candidatus Lutulula (NL. fem. n. *Lutulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCC01*. The type species for the genus is *Candidatus* Lutulula adrenicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapiaceae.

Description of *Candidatus* Lutulula asbesetta sp. nov.

Candidatus Lutulula asbesetta (NL. fem. n. *asbesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009777955*. The type genome for the species is the GenBank assembly GCA_009777955.1. The GC content of the type genome is 43.61 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Lutulula cohuritica sp. nov.

Candidatus Lutulula cohuritica (NL. fem. n. *cohuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009784235*. The type genome for the species is the GenBank assembly GCA_009784235.1. The GC content of the type genome is 45.82 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Lutulula desepitrix sp. nov.

Candidatus Lutulula desepitrix (NL. fem. n. *desepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009782725*. The type genome for the species is the GenBank assembly GCA_009782725.1. The GC content of the type genome is 47.55 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Lutulula dinupitura sp. nov.

Candidatus Lutulula dinupitura (NL. fem. n. *dinupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009783855*. The type genome for the species is the GenBank assembly GCA_009783855.1. The GC content of the type genome is 51.39 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Lutulula ininnitica sp. nov.

Candidatus Lutulula ininnitica (NL. fem. n. *ininnitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCC01 sp009785765*. The type genome for the species is the GenBank assembly GCA_009785765.1. The GC content of the type genome is 42.55 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Luxurana nubifedo sp. nov.

Candidatus Luxurana nubifedo (NL. fem. n. *nubifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2705 sp002690045*. The type genome for the species is the GenBank assembly GCA_002321835.1. The GC content of the type genome is 44.1 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Luxurana gen. nov.

Candidatus Luxurana (NL. fem. n. *Luxurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2705*. The type species for the genus is *Candidatus* Luxurana nubifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luxurana resacatio sp. nov.

Candidatus Luxurana resacatio (NL. fem. n. *resacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2705 sp002354205*. The type genome for the species is the GenBank assembly GCA_002354205.1. The GC content of the type genome is 45.37 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Luxuraria adfanessa sp. nov.

Candidatus Luxuraria adfanessa (NL. fem. n. *adfanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902619165*. The type genome for the species is the GenBank assembly GCA_902619165.1. The GC content of the type genome is 36.97 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Luxuraria gen. nov.

Candidatus Luxuraria (NL. fem. n. *Luxuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIJG01*. The type species for the genus is *Candidatus* Luxuraria

adfanessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luxuraria adsocousia sp. nov.

Candidatus Luxuraria adsocousia (NL. fem. n. *adsocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp003331935*. The type genome for the species is the GenBank assembly GCA_003331935.1. The GC content of the type genome is 37.28 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Luxuraria antipitudo sp. nov.

Candidatus Luxuraria antipitudo (NL. fem. n. *antipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902576905*. The type genome for the species is the GenBank assembly GCA_902576905.1. The GC content of the type genome is 37.08 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Luxuraria bipalitudo sp. nov.

Candidatus Luxuraria bipalitudo (NL. fem. n. *bipalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902596605*. The type genome for the species is the GenBank assembly GCA_902596605.1. The GC content of the type genome is 36.8 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Luxuraria deculitudo sp. nov.

Candidatus Luxuraria deculitudo (NL. fem. n. *deculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902537215*. The type genome for the species is the GenBank assembly GCA_902537215.1. The GC content of the type genome is 36.81 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Luxuraria divoritrix sp. nov.

Candidatus Luxuraria divoritrix (NL. fem. n. *divoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902556405*. The type genome for the species is the GenBank assembly GCA_902556405.1. The GC content of the type genome is 37.01 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Luxuraria imbelilega sp. nov.

Candidatus Luxuraria imbelilega (NL. fem. n. *imbelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902580265*. The type genome for the species is the GenBank assembly GCA_902580265.1. The GC content of the type genome is 36.65 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Luxuraria innumibra sp. nov.

Candidatus Luxuraria innumibra (NL. fem. n. *innumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902524845*. The type genome for the species is the GenBank assembly GCA_902524845.1. The GC content of the type genome is 37.37 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Luxuraria intorigena sp. nov.

Candidatus Luxuraria intorigena (NL. fem. n. *intorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902596985*. The type genome for the species is the GenBank assembly GCA_902596985.1. The GC content of the type genome is 37.02 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Luxuraria lavabitoga sp. nov.

Candidatus Luxuraria lavabitoga (NL. fem. n. *lavabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902540655*. The type genome for the species is the GenBank assembly GCA_902540655.1. The GC content of the type genome is 36.74 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Luxuraria levifastra sp. nov.

Candidatus Luxuraria levifastra (NL. fem. n. *levifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902537415*. The type genome for the species is the GenBank assembly GCA_902537415.1. The GC content of the type genome is 36.9 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Luxuraria maleditas sp. nov.

Candidatus Luxuraria maleditas (NL. fem. n. *maleditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902530595*. The type genome for the species is the GenBank assembly GCA_902530595.1. The GC content of the type genome is 37.2 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Luxuraria megalibra sp. nov.

Candidatus Luxuraria megalibra (NL. fem. n. *megalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902524655*. The type genome for the species is the GenBank assembly GCA_902524655.1. The GC content of the type genome is 36.66 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Luxuraria metuciforma sp. nov.

Candidatus Luxuraria metuciforma (NL. fem. n. *metuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CACIJG01 sp902611475*. The type genome for the species is the GenBank assembly GCA_902611475.1. The GC content of the type genome is 36.86 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Luxuraria milificella sp. nov.

Candidatus Luxuraria milificella (NL. fem. n. *milificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902567635*. The type genome for the species is the GenBank assembly GCA_902567635.1. The GC content of the type genome is 35.73 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Luxuraria milifitura sp. nov.

Candidatus Luxuraria milifitura (NL. fem. n. *milifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp002703515*. The type genome for the species is the GenBank assembly GCA_002703515.1. The GC content of the type genome is 36.84 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Luxuraria minurigena sp. nov.

Candidatus Luxuraria minurigena (NL. fem. n. *minurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902584635*. The type genome for the species is the GenBank assembly GCA_902584635.1. The GC content of the type genome is 36.7 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Luxuraria nicomax sp. nov.

Candidatus Luxuraria nicomax (NL. fem. n. *nicomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902581005*. The type genome for the species is the GenBank assembly GCA_902581005.1. The GC content of the type genome is 36.93 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Luxuraria nocumiforma sp. nov.

Candidatus Luxuraria nocumiforma (NL. fem. n. *nocumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902560505*. The type genome for the species is the GenBank assembly GCA_902560505.1. The GC content of the type genome is 36.94 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Luxuraria obsatitia sp. nov.

Candidatus Luxuraria obsatitia (NL. fem. n. *obsatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902586885*. The type genome for the species is the GenBank assembly GCA_902586885.1. The GC content of the type genome is 35.79 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Luxuraria rubicitoga sp. nov.

Candidatus Luxuraria rubicitoga (NL. fem. n. *rubicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902537235*. The type genome for the species is the GenBank assembly GCA_902537235.1. The GC content of the type genome is 36.95 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Luxuraria tribrilenta sp. nov.

Candidatus Luxuraria tribrilenta (NL. fem. n. *tribrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902574225*. The type genome for the species is the GenBank assembly GCA_902574225.1. The GC content of the type genome is 36.9 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Luxuraria undevastra sp. nov.

Candidatus Luxuraria undevastra (NL. fem. n. *undevastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIJG01 sp902531755*. The type genome for the species is the GenBank assembly GCA_902531755.1. The GC content of the type genome is 36.78 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Luxurella artifatio sp. nov.

Candidatus Luxurella artifatio (NL. fem. n. *artifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747355 sp002747355*. The type genome for the species is the GenBank assembly GCA_002747355.1. The GC content of the type genome is 66.81 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Luxurella gen. nov.

Candidatus Luxurella (NL. fem. n. *Luxurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747355*. The type species for the genus is *Candidatus* Luxurella artifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2747355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luxurellaceae.

Description of *Candidatus* Luxurellaceae fam. nov.

Candidatus Luxurellaceae (NL. fem. n. *Luxurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747355.* The type genus for the taxon is *Candidatus* Luxurella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2747355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luxurellales.

Description of *Candidatus* Luxurellales ord. nov.

Candidatus Luxurellales (NL. fem. n. *Luxurellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747355.* The type genus for the taxon is *Candidatus* Luxurella .

According to the GTDB R06-RS202, this order belongs to the class *Polyangia*.

Description of *Candidatus* Luxurida arnacicula sp. nov.

Candidatus Luxurida arnacicula (NL. fem. n. *arnacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LFER01 sp902633655*. The type genome for the species is the GenBank assembly RS_GCF_902633655.1. The GC content of the type genome is 43.08 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Luxurida gen. nov.

Candidatus Luxurida (NL. fem. n. *Luxurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LFER01*. The type species for the genus is *Candidatus* Luxurida arnacicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Luxurida vatiledo sp. nov.

Candidatus Luxurida vatiledo (NL. fem. n. *vatiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LFER01 sp001510135*. The type genome for the species is the GenBank assembly GCA_008081285.1. The GC content of the type genome is 49.88 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Luxurida vicatatica sp. nov.

Candidatus Luxurida vicatatica (NL. fem. n. *vicatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LFER01 sp011525185*. The type genome for the species is the

GenBank assembly GCA_011525185.1. The GC content of the type genome is 49.63 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Luxurosa gerunentia sp. nov.

Candidatus Luxurosa gerunentia (NL. fem. n. *gerunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-7 sp005893165*. The type genome for the species is the GenBank assembly GCA_005893195.1. The GC content of the type genome is 66.98 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Luxurosa gen. nov.

Candidatus Luxurosa (NL. fem. n. *Luxurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-7*. The type species for the genus is *Candidatus* Luxurosa gerunentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamanaceae.

Description of *Candidatus* Luxurosa manibimonia sp. nov.

Candidatus Luxurosa manibimonia (NL. fem. n. *manibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-7 sp005893275*. The type genome for the species is the GenBank assembly GCA_005893275.1. The GC content of the type genome is 66.25 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Luxurosa saxifago sp. nov.

Candidatus Luxurosa saxifago (NL. fem. n. *saxifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-7 sp005893265*. The type genome for the species is the GenBank assembly GCA_005893265.1. The GC content of the type genome is 65.52 % and the

genome length is 2.48 Mbp.

Description of *Candidatus* Luxurula endivitoga sp. nov.

Candidatus Luxurula endivitoga (NL. fem. n. *endivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AqS3 sp001750645*. The type genome for the species is the GenBank assembly GCA_001750645.1. The GC content of the type genome is 61.91 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Luxurula gen. nov.

Candidatus Luxurula (NL. fem. n. *Luxurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AqS3*. The type species for the genus is *Candidatus* Luxurula endivitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AqS3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luxurulaceae.

Description of *Candidatus* Luxurulaceae fam. nov.

Candidatus Luxurulaceae (NL. fem. n. *Luxurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AqS3.* The type genus for the taxon is *Candidatus* Luxurula .

According to the original version of GTDB R06-RS202, this family belongs to the order *AqS3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Luxurulales.

Description of *Candidatus* Luxurulales ord. nov.

Candidatus Luxurulales (NL. fem. n. *Luxurulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AqS3.* The type genus for the taxon is *Candidatus* Luxurula .

According to the GTDB R06-RS202, this order belongs to the class

Gammaproteobacteria.

Description of *Candidatus* Lyngbya incorigena sp. nov.

Candidatus Lyngbya incorigena (NL. fem. n. *incorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lyngbya sp000169095*. The type genome for the species is the GenBank assembly RS_GCF_000169095.1. The GC content of the type genome is 41.11 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Lysinibacillus bugilitica sp. nov.

Candidatus Lysinibacillus bugilitica (NL. fem. n. *bugilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp002237755*. The type genome for the species is the GenBank assembly RS_GCF_002237755.1. The GC content of the type genome is 36.63 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Lysinibacillus cacopastra sp. nov.

Candidatus Lysinibacillus cacopastra (NL. fem. n. *cacopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp001275675*. The type genome for the species is the GenBank assembly RS_GCF_001275675.1. The GC content of the type genome is 36.84 % and the genome length is 5.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Lysinibacillus hexapitica sp. nov.

Candidatus Lysinibacillus hexapitica (NL. fem. n. *hexapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp006864135*. The type genome for the species is the GenBank assembly GCA_004338635.1. The GC content of the type genome is 36.76 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Lysinibacillus invesitia sp. nov.

Candidatus Lysinibacillus invesitia (NL. fem. n. *invesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp009724685*. The type genome for the species is the GenBank assembly RS_GCF_009724685.1. The GC content of the type genome is 37.15 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Lysinibacillus nutamitudo sp. nov.

Candidatus Lysinibacillus nutamitudo (NL. fem. n. *nutamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp002973635*. The type genome for the species is the GenBank assembly GCA_002973635.1. The GC content of the type genome is 36.54 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Lysinibacillus recuciforma sp. nov.

Candidatus Lysinibacillus recuciforma (NL. fem. n. *recuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp002340205*. The type genome for the species is the GenBank assembly GCA_002340205.1. The GC content of the type genome is 36.77 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Lysinibacillus relapimonas sp. nov.

Candidatus Lysinibacillus relapimonas (NL. fem. n. *relapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp001308875*. The type genome for the species is the GenBank assembly RS_GCF_001308875.1. The GC content of the type genome is 37.03 % and the genome length is 4.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediments".

Description of *Candidatus* Lysinibacillus subinax sp. nov.

Candidatus Lysinibacillus subinax (NL. fem. n. *subinax* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus sp001278875*. The type genome for the species is the GenBank assembly RS_GCF_001278875.1. The GC content of the type genome is 36.6 % and the genome length is 5.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Lysinibacillus obsigatio sp. nov.

Candidatus Lysinibacillus obsigatio (NL. fem. n. *obsigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinibacillus_B sp002359075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002359075.1. The GC content of the type genome is 42.1 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Lysinimonas detecibra sp. nov.

Candidatus Lysinimonas detecibra (NL. fem. n. *detecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinimonas_A sp002325245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002416035.1. The GC content of the type genome is 69.77 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Lysinimonas inlacitura sp. nov.

Candidatus Lysinimonas inlacitura (NL. fem. n. *inlacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysinimonas_A sp011620705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011620705.1. The GC content of the type genome is 69.62 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Lysobacter adpugedo sp. nov.

Candidatus Lysobacter adpugedo (NL. fem. n. *adpugedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp004322525*. The type genome for the species is the GenBank assembly GCA_004322525.1. The GC content of the type genome is 67.03 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Lysobacter ancipilenta sp. nov.

Candidatus Lysobacter ancipilenta (NL. fem. n. *ancipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp902805755*. The type genome for the species is the GenBank assembly GCA_902805755.1. The GC content of the type genome is 67.46 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Lysobacter andabifica sp. nov.

Candidatus Lysobacter andabifica (NL. fem. n. *andabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp000426005*. The type genome for the species is the GenBank assembly RS_GCF_000426005.1. The GC content of the type genome is 66.75 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Lysobacter apercitica sp. nov.

Candidatus Lysobacter apercitica (NL. fem. n. *apercitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp900107375*. The type genome for the species is the GenBank assembly RS_GCF_900107375.1. The GC content of the type genome is 70.39 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Lysobacter ardifibra sp. nov.

Candidatus Lysobacter ardifibra (NL. fem. n. *ardifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp004361065*. The type genome for the species is the GenBank assembly RS_GCF_004361065.1. The GC content of the type genome is 67.91 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Lysobacter calipibula sp. nov.

Candidatus Lysobacter calipibula (NL. fem. n. *calipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp001830245*. The type genome for the species is the GenBank assembly GCA_001830245.1. The GC content of the type genome is 69.21 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point A".

Description of *Candidatus* Lysobacter cucuratica sp. nov.

Candidatus Lysobacter cucuratica (NL. fem. n. *cucuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp003719825*. The type genome for the species is the GenBank assembly RS_GCF_003719825.1. The GC content of the type genome is 67.72 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Lysobacter demadibula sp. nov.

Candidatus Lysobacter demadibula (NL. fem. n. *demadibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp001429785*. The type genome for the species is the GenBank assembly RS_GCF_001429785.1. The GC content of the type genome is 68.41 % and the genome length is 4.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Lysobacter encepifica sp. nov.

Candidatus Lysobacter encepifica (NL. fem. n. *encepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp003367355*. The type genome for the species is the GenBank assembly RS_GCF_003367355.1. The GC content of the type genome is 67.58 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Lysobacter enuntibra sp. nov.

Candidatus Lysobacter enuntibra (NL. fem. n. *enuntibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp013361435*. The type genome for the species is the GenBank assembly GCA_013361435.1. The GC content of the type genome is 68.94 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Lysobacter expopatio sp. nov.

Candidatus Lysobacter expopatio (NL. fem. n. *expopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp005503055*. The type genome for the species is the GenBank assembly RS_GCF_005503055.1. The GC content of the type genome is 67.47 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Lysobacter exurredo sp. nov.

Candidatus Lysobacter exurredo (NL. fem. n. *exurredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp000855665*. The type genome for the species is the GenBank assembly RS_GCF_000855665.1. The GC content of the type genome is 65.81 % and the genome length is 2.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Decomposing penguin feathers".

Description of *Candidatus* Lysobacter indifilega sp. nov.

Candidatus Lysobacter indifilega (NL. fem. n. *indifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp003382365*. The type genome for the species is the

GenBank assembly RS_GCF_003382365.1. The GC content of the type genome is 69.23 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Lysobacter inforitoga sp. nov.

Candidatus Lysobacter inforitoga (NL. fem. n. *inforitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp003586305*. The type genome for the species is the GenBank assembly RS_GCF_003586305.1. The GC content of the type genome is 71.63 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Lysobacter inhosibula sp. nov.

Candidatus Lysobacter inhosibula (NL. fem. n. *inhosibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp001427785*. The type genome for the species is the GenBank assembly RS_GCF_001427785.1. The GC content of the type genome is 66.16 % and the genome length is 6.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Lysobacter molecitas sp. nov.

Candidatus Lysobacter molecitas (NL. fem. n. *molecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp014145395*. The type genome for the species is the GenBank assembly RS_GCF_014145395.1. The GC content of the type genome is 68.76 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Lysobacter octipigena sp. nov.

Candidatus Lysobacter octipigena (NL. fem. n. *octipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp014489475*. The type genome for the species is the GenBank assembly RS_GCF_014489475.1. The GC content of the type genome is 68.27 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Lysobacter panifessa sp. nov.

Candidatus Lysobacter panifessa (NL. fem. n. *panifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp008274655*. The type genome for the species is the GenBank assembly RS_GCF_008274655.1. The GC content of the type genome is 68.03 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Lysobacter pulegimonas sp. nov.

Candidatus Lysobacter pulegimonas (NL. fem. n. *pulegimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp001428685*. The type genome for the species is the GenBank assembly RS_GCF_001429315.1. The GC content of the type genome is 68.43 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Lysobacter risibax sp. nov.

Candidatus Lysobacter risibax (NL. fem. n. *risibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp900114355*. The type genome for the species is the GenBank assembly RS_GCF_900114355.1. The GC content of the type genome is 68.8 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Lysobacter semibitrix sp. nov.

Candidatus Lysobacter semibitrix (NL. fem. n. *semibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp001427225*. The type genome for the species is the GenBank assembly RS_GCF_001427225.1. The GC content of the type genome is 65.27 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Lysobacter visibastra sp. nov.

Candidatus Lysobacter visibastra (NL. fem. n. *visibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter sp009765215*. The type genome for the species is the GenBank assembly RS_GCF_009765215.1. The GC content of the type genome is 66.46 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Lysobacter annifax sp. nov.

Candidatus Lysobacter annifax (NL. fem. n. *annifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_A sp009740395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009740395.1. The GC content of the type genome is 66.36 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Lysobacter andabatio sp. nov.

Candidatus Lysobacter andabatio (NL. fem. n. *andabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_B sp002798295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002798295.1. The GC content of the type genome is 60.27 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Lysobacter arremugo sp. nov.

Candidatus Lysobacter arremugo (NL. fem. n. *arremugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_B sp011300685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011300685.1. The GC content of the type genome is 56.82 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Lysobacter duricago sp. nov.

Candidatus Lysobacter duricago (NL. fem. n. *duricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_B sp002798195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002798195.1. The GC content of the type genome is 60.06 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Lysobacter lubenibula sp. nov.

Candidatus Lysobacter lubenibula (NL. fem. n. *lubenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_B sp002798275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002798335.1. The GC content of the type genome is 60.0 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Lysobacter thapsitio sp. nov.

Candidatus Lysobacter thapsitio (NL. fem. n. *thapsitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Lysobacter_B sp002798255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002798255.1. The GC content of the type genome is 60.46 % and the genome length is 2.38 Mbp.

Description of *Candidatus* MONJU redacifica sp. nov.

Candidatus MONJU redacifica (NL. fem. n. *redacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *MONJU sp000801295*. The type genome for the species is the

GenBank assembly RS_GCF_000801295.1. The GC content of the type genome is 65.06 % and the genome length is 2.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Kairei Hydrothermal Field; Central Indian Ridge".

Description of *Candidatus* MONJU subabicula sp. nov.

Candidatus MONJU subabicula (NL. fem. n. *subabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *MONJU sp003696905*. The type genome for the species is the GenBank assembly GCA_003696905.1. The GC content of the type genome is 63.32 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Macilana conopilenta sp. nov.

Candidatus Macilana conopilenta (NL. fem. n. *conopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYRB01 sp903928445*. The type genome for the species is the GenBank assembly GCA_903921265.1. The GC content of the type genome is 56.33 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Macilana gen. nov.

Candidatus Macilana (NL. fem. n. *Macilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYRB01*. The type species for the genus is *Candidatus* Macilana conopilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGVZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conopulaceae.

Description of *Candidatus* Macilana laciniforma sp. nov.

Candidatus Macilana laciniforma (NL. fem. n. *laciniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIYRB01 sp903915625*. The type genome for the species is the GenBank assembly GCA_903915625.1. The GC content of the type genome is 50.99 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Macilana penuritudo sp. nov.

Candidatus Macilana penuritudo (NL. fem. n. *penuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYRB01 sp900299215*. The type genome for the species is the GenBank assembly GCA_900299215.1. The GC content of the type genome is 50.2 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Macilaria metabitio sp. nov.

Candidatus Macilaria metabitio (NL. fem. n. *metabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-45-14 sp001804785*. The type genome for the species is the GenBank assembly GCA_001804785.1. The GC content of the type genome is 46.24 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Macilaria gen. nov.

Candidatus Macilaria (NL. fem. n. *Macilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-45-14*. The type species for the genus is *Candidatus* Macilaria metabitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-45-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilariaceae.

Description of *Candidatus* Macilariaceae fam. nov.

Candidatus Macilariaceae (NL. fem. n. *Macilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GWF2-45-14*. The type genus for the taxon is *Candidatus* Macilaria .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Macilella laculugo sp. nov.

Candidatus Macilella laculugo (NL. fem. n. *laculugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-159 sp003551965*. The type genome for the species is the GenBank assembly GCA_003551965.1. The GC content of the type genome is 55.57 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Macilella gen. nov.

Candidatus Macilella (NL. fem. n. *Macilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-159*. The type species for the genus is *Candidatus* Macilella laculugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B1SED10-159*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilellaceae.

Description of *Candidatus* Macilellaceae fam. nov.

Candidatus Macilellaceae (NL. fem. n. *Macilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B1SED10-159.* The type genus for the taxon is *Candidatus* Macilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilidales.

Description of *Candidatus* Macilia dilemitoga sp. nov.

Candidatus Macilia dilemitoga (NL. fem. n. *dilemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4312 sp002394635*. The type genome for the species is the GenBank assembly GCA_002394635.1. The GC content of the type genome is 42.33 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Macilia gen. nov.

Candidatus Macilia (NL. fem. n. *Macilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4312*. The type species for the genus is *Candidatus* Macilia dilemitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Macilida defarivita sp. nov.

Candidatus Macilida defarivita (NL. fem. n. *defarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs170 sp005777315*. The type genome for the species is the GenBank assembly GCA_005800335.1. The GC content of the type genome is 57.87 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Macilida gen. nov.

Candidatus Macilida (NL. fem. n. *Macilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-120-MAGs170*. The type species for the genus is *Candidatus* Macilida defarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-12-MAGs170*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilicidaceae.

Description of *Candidatus* Macilida volubitrix sp. nov.

Candidatus Macilida volubitrix (NL. fem. n. *volubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs170 sp009695275*. The type genome for the species is

the GenBank assembly GCA_009695275.1. The GC content of the type genome is 57.64 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Macilosa inobratio sp. nov.

Candidatus Macilosa inobratio (NL. fem. n. *inobratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11320 sp003452185*. The type genome for the species is the GenBank assembly GCA_003452185.1. The GC content of the type genome is 66.43 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Macilosa gen. nov.

Candidatus Macilosa (NL. fem. n. *Macilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11320*. The type species for the genus is *Candidatus* Macilosa inobratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilosaceae.

Description of *Candidatus* Macilosaceae fam. nov.

Candidatus Macilosaceae (NL. fem. n. *Macilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11320.* The type genus for the taxon is *Candidatus* Macilosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Macondimonas bipinatio sp. nov.

Candidatus Macondimonas bipinatio (NL. fem. n. *bipinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Macondimonas sp002862965*. The type genome for the species is the GenBank assembly GCA_002862965.1. The GC content of the type genome is 66.88 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Macondimonas inguritura sp. nov.

Candidatus Macondimonas inguritura (NL. fem. n. *inguritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Macondimonas sp011620145*. The type genome for the species is the GenBank assembly GCA_011620145.1. The GC content of the type genome is 64.05 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Macondimonas mahemivita sp. nov.

Candidatus Macondimonas mahemivita (NL. fem. n. *mahemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Macondimonas sp002862435*. The type genome for the species is the GenBank assembly GCA_002862435.1. The GC content of the type genome is 63.33 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Macrococcus pecunitica sp. nov.

Candidatus Macrococcus pecunitica (NL. fem. n. *pecunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Macrococcus sp002438305*. The type genome for the species is the GenBank assembly GCA_002438305.1. The GC content of the type genome is 41.64 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Macrococcus colutilenta sp. nov.

Candidatus Macrococcus colutilenta (NL. fem. n. *colutilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Macrococcus_B sp004117835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004117835.1. The GC content of the type genome is 32.88 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Magnetaquicoccus cerebiforma sp. nov.

Candidatus Magnetaquicoccus cerebiforma (NL. fem. n. *cerebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetaquicoccus sp002753135*. The type genome for the species is the GenBank assembly GCA_002753135.1. The GC content of the type genome is 55.32 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Magnetaquicoccus pomifilega sp. nov.

Candidatus Magnetaquicoccus pomifilega (NL. fem. n. *pomifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetaquicoccus sp002753095*. The type genome for the species is the GenBank assembly GCA_002753095.1. The GC content of the type genome is 55.67 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Magnetobacterium exhedicula sp. nov.

Candidatus Magnetobacterium exhedicula (NL. fem. n. *exhedicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetobacterium sp002753685*. The type genome for the species is the GenBank assembly GCA_002753685.1. The GC content of the type genome is 49.04 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Magnetobacterium maxumetta sp. nov.

Candidatus Magnetobacterium maxumetta (NL. fem. n. *maxumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetobacterium sp002753395*. The type genome for the species is the GenBank assembly GCA_002753395.1. The GC content of the type genome is 44.44 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Magnetomorum insomitas sp. nov.

Candidatus Magnetomorum insomitas (NL. fem. n. *insomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetomorum sp002753725*. The type genome for the species is the GenBank assembly GCA_002753725.1. The GC content of the type genome is 38.47 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Magnetospira metucitica sp. nov.

Candidatus Magnetospira metucitica (NL. fem. n. *metucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospira sp000968135*. The type genome for the species is the GenBank assembly RS_GCF_000968135.1. The GC content of the type genome is 59.44 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Magnetospirillum cuticimonas sp. nov.

Candidatus Magnetospirillum cuticimonas (NL. fem. n. *cuticimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp903941095*. The type genome for the species is the GenBank assembly GCA_903941095.1. The GC content of the type genome is 66.32 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Magnetospirillum detunitio sp. nov.

Candidatus Magnetospirillum detunitio (NL. fem. n. *detunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp014380005*. The type genome for the species is the GenBank assembly GCA_014380005.1. The GC content of the type genome is 63.93 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Magnetospirillum lanigitica sp. nov.

Candidatus Magnetospirillum lanigitica (NL. fem. n. *lanigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp902729435*. The type genome for the species is the GenBank assembly RS_GCF_902729435.1. The GC content of the type genome is

68.88 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Magnetospirillum lapilisca sp. nov.

Candidatus Magnetospirillum lapilisca (NL. fem. n. *lapilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp006218045*. The type genome for the species is the GenBank assembly GCA_006218045.1. The GC content of the type genome is 63.92 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Magnetospirillum omnipitia sp. nov.

Candidatus Magnetospirillum omnipitia (NL. fem. n. *omnipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp002435715*. The type genome for the species is the GenBank assembly GCA_002435715.1. The GC content of the type genome is 62.79 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Magnetospirillum revecivita sp. nov.

Candidatus Magnetospirillum revecivita (NL. fem. n. *revecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp001898825*. The type genome for the species is the GenBank assembly GCA_001898825.1. The GC content of the type genome is 63.98 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Magnetospirillum venefitica sp. nov.

Candidatus Magnetospirillum venefitica (NL. fem. n. *venefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetospirillum sp014379805*. The type genome for the species is the GenBank assembly GCA_014379805.1. The GC content of the type genome is 63.78 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Magnetovibrio impudugo sp. nov.

Candidatus Magnetovibrio impudugo (NL. fem. n. *impudugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetovibrio sp002732845*. The type genome for the species is the GenBank assembly GCA_002732845.1. The GC content of the type genome is 49.58 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Magnetovibrio turibugo sp. nov.

Candidatus Magnetovibrio turibugo (NL. fem. n. *turibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Magnetovibrio sp002401565*. The type genome for the species is the GenBank assembly GCA_002401565.1. The GC content of the type genome is 49.06 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Mahelana subabousia sp. nov.

Candidatus Mahelana subabousia (NL. fem. n. *subabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha5-Bin12 sp002937855*. The type genome for the species is the GenBank assembly GCA_002715915.1. The GC content of the type genome is 28.14 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Mahelana gen. nov.

Candidatus Mahelana (NL. fem. n. *Mahelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha5-Bin12*. The type species for the genus is *Candidatus* Mahelana subabousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Mahelaria allubago sp. nov.

Candidatus Mahelaria allubago (NL. fem. n. *allubago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9627 sp001800605*. The type genome for the species is the GenBank assembly GCA_001800605.1. The GC content of the type genome is 33.97 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Mahelaria gen. nov.

Candidatus Mahelaria (NL. fem. n. *Mahelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9627*. The type species for the genus is *Candidatus* Mahelaria allubago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didaciaceae.

Description of *Candidatus* Mahelaria denunastra sp. nov.

Candidatus Mahelaria denunastra (NL. fem. n. *denunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9627 sp003452965*. The type genome for the species is the GenBank assembly GCA_001800565.1. The GC content of the type genome is 33.54 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Mahelella arcitax sp. nov.

Candidatus Mahelella arcitax (NL. fem. n. *arcitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10169 sp003505155*. The type genome for the species is the GenBank assembly GCA_003505155.1. The GC content of the type genome is 54.19 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Mahelella gen. nov.

Candidatus Mahelella (NL. fem. n. *Mahelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10169*. The type species for the genus is *Candidatus* Mahelella arcitax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mahelellaceae.

Description of *Candidatus* Mahelellaceae fam. nov.

Candidatus Mahelellaceae (NL. fem. n. *Mahelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10169.* The type genus for the taxon is *Candidatus* Mahelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Mahelia celamifica sp. nov.

Candidatus Mahelia celamifica (NL. fem. n. *celamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZJ450 sp011751885*. The type genome for the species is the GenBank assembly RS_GCF_011751885.1. The GC content of the type genome is 66.7 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Mahelia gen. nov.

Candidatus Mahelia (NL. fem. n. *Mahelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZJ450*. The type species for the genus is *Candidatus* Mahelia celamifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mahelia notacitudo sp. nov.

Candidatus Mahelia notacitudo (NL. fem. n. *notacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZJ450 sp009755725*. The type genome for the species is the GenBank assembly RS_GCF_009755725.1. The GC content of the type genome is 66.48 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Mahelida cilotigena sp. nov.

Candidatus Mahelida cilotigena (NL. fem. n. *cilotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1409 sp002338885*. The type genome for the species is the GenBank assembly GCA_900542865.1. The GC content of the type genome is 49.07 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Mahelida gen. nov.

Candidatus Mahelida (NL. fem. n. *Mahelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1409*. The type species for the genus is *Candidatus* Mahelida cilotigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mahelida detunivita sp. nov.

Candidatus Mahelida detunivita (NL. fem. n. *detunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1409 sp900553675*. The type genome for the species is the GenBank assembly GCA_900553675.1. The GC content of the type genome is 47.47 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Mahelida elastitura sp. nov.

Candidatus Mahelida elastitura (NL. fem. n. *elastitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1409 sp900760125*. The type genome for the species is the GenBank assembly RS_GCF_900760125.1. The GC content of the type genome is 47.55 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Mahelida pinifatio sp. nov.

Candidatus Mahelida pinifatio (NL. fem. n. *pinifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1409 sp002491605*. The type genome for the species is the GenBank assembly GCA_002491605.1. The GC content of the type genome is 44.59 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Mahelida senipicula sp. nov.

Candidatus Mahelida senipicula (NL. fem. n. *senipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1409 sp002305045*. The type genome for the species is the GenBank assembly GCA_002305045.1. The GC content of the type genome is 51.1 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Mahelosa divulitudo sp. nov.

Candidatus Mahelosa divulitudo (NL. fem. n. *divulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6016 sp002428055*. The type genome for the species is the GenBank assembly GCA_002428055.1. The GC content of the type genome is 42.23 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Mahelosa gen. nov.

Candidatus Mahelosa (NL. fem. n. *Mahelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6016*. The type species for the genus is *Candidatus* Mahelosa

divulitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6016*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mahelosaceae.

Description of *Candidatus* Mahelosaceae fam. nov.

Candidatus Mahelosaceae (NL. fem. n. *Mahelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6016.* The type genus for the taxon is *Candidatus* Mahelosa .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Mahelula agripitudo sp. nov.

Candidatus Mahelula agripitudo (NL. fem. n. *agripitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIG01 sp011334535*. The type genome for the species is the GenBank assembly GCA_011334535.1. The GC content of the type genome is 41.91 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Mahelula gen. nov.

Candidatus Mahelula (NL. fem. n. *Mahelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIG01*. The type species for the genus is *Candidatus* Mahelula agripitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTIG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mahelulaceae.

Description of *Candidatus* Mahelulaceae fam. nov.

Candidatus Mahelulaceae (NL. fem. n. *Mahelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTIG01.* The type genus for the taxon is *Candidatus* Mahelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTIG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Mahelulales.

Description of *Candidatus* Mahelulales ord. nov.

Candidatus Mahelulales (NL. fem. n. *Mahelulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTIG01.* The type genus for the taxon is *Candidatus* Mahelula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Mahemana cacopiforma sp. nov.

Candidatus Mahemana cacopiforma (NL. fem. n. *cacopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp001553345*. The type genome for the species is the GenBank assembly RS_GCF_003992235.1. The GC content of the type genome is 39.36 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Mahemana gen. nov.

Candidatus Mahemana (NL. fem. n. *Mahemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F0422*. The type species for the genus is *Candidatus* Mahemana cacopiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mahemana cadavilega sp. nov.

Candidatus Mahemana cadavilega (NL. fem. n. *cadavilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp900544365*. The type genome for the species is the GenBank

assembly GCA_900544365.1. The GC content of the type genome is 39.09 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Mahemana denorimonia sp. nov.

Candidatus Mahemana denorimonia (NL. fem. n. *denorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003992315*. The type genome for the species is the GenBank assembly RS_GCF_003992315.1. The GC content of the type genome is 39.44 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Mahemana dirititica sp. nov.

Candidatus Mahemana dirititica (NL. fem. n. *dirititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003999875*. The type genome for the species is the GenBank assembly RS_GCF_900759775.1. The GC content of the type genome is 40.56 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Mahemana holisentia sp. nov.

Candidatus Mahemana holisentia (NL. fem. n. *holisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp900766245*. The type genome for the species is the GenBank assembly RS_GCF_900766245.1. The GC content of the type genome is 39.55 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Mahemana manufitudo sp. nov.

Candidatus Mahemana manufitudo (NL. fem. n. *manufitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003992005*. The type genome for the species is the GenBank assembly RS_GCF_003992005.1. The GC content of the type genome is 39.49 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Mahemana penicugo sp. nov.

Candidatus Mahemana penicugo (NL. fem. n. *penicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003992015*. The type genome for the species is the GenBank assembly RS_GCF_003992085.1. The GC content of the type genome is 39.54 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Mahemana tirunigena sp. nov.

Candidatus Mahemana tirunigena (NL. fem. n. *tirunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003992055*. The type genome for the species is the GenBank assembly RS_GCF_003992255.1. The GC content of the type genome is 39.41 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Mahemana utpotousia sp. nov.

Candidatus Mahemana utpotousia (NL. fem. n. *utpotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0422 sp003992135*. The type genome for the species is the GenBank assembly RS_GCF_003992135.1. The GC content of the type genome is 39.08 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Mahemaria ascisitoga sp. nov.

Candidatus Mahemaria ascisitoga (NL. fem. n. *ascisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp013333395*. The type genome for the species is the GenBank assembly GCA_013333395.2. The GC content of the type genome is 28.87 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Mahemaria gen. nov.

Candidatus Mahemaria (NL. fem. n. *Mahemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-793*. The type species for the genus is *Candidatus* Mahemaria ascisitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Mahemaria divolifica sp. nov.

Candidatus Mahemaria divolifica (NL. fem. n. *divolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp013333035*. The type genome for the species is the GenBank assembly GCA_013333035.2. The GC content of the type genome is 27.1 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Mahemaria epistetta sp. nov.

Candidatus Mahemaria epistetta (NL. fem. n. *epistetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp900557475*. The type genome for the species is the GenBank assembly GCA_900557475.1. The GC content of the type genome is 28.56 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Mahemaria munifisca sp. nov.

Candidatus Mahemaria munifisca (NL. fem. n. *munifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp000433915*. The type genome for the species is the GenBank assembly GCA_000433915.1. The GC content of the type genome is 29.01 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Mahemaria subodago sp. nov.

Candidatus Mahemaria subodago (NL. fem. n. *subodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp002393975*. The type genome for the species is the GenBank assembly GCA_002393975.1. The GC content of the type genome is 29.26 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Mahemaria tegumatica sp. nov.

Candidatus Mahemaria tegumatica (NL. fem. n. *tegumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-793 sp902766085*. The type genome for the species is the GenBank assembly GCA_902766085.1. The GC content of the type genome is 28.64 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Mahemella devecicula sp. nov.

Candidatus Mahemella devecicula (NL. fem. n. *devecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG191 sp002373675*. The type genome for the species is the GenBank assembly GCA_002373475.1. The GC content of the type genome is 36.19 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Mahemella gen. nov.

Candidatus Mahemella (NL. fem. n. *Mahemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG191*. The type species for the genus is *Candidatus* Mahemella devecicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mahemella feculessa sp. nov.

Candidatus Mahemella feculessa (NL. fem. n. *feculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG191 sp900315945*. The type genome for the species is the

GenBank assembly GCA_900315945.1. The GC content of the type genome is 35.2 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Mahemella tomogicula sp. nov.

Candidatus Mahemella tomogicula (NL. fem. n. *tomogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG191 sp900316395*. The type genome for the species is the GenBank assembly GCA_900316395.1. The GC content of the type genome is 38.34 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Mahemia podagitoga sp. nov.

Candidatus Mahemia podagitoga (NL. fem. n. *podagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-21 sp001792305*. The type genome for the species is the GenBank assembly GCA_001793085.1. The GC content of the type genome is 38.63 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Mahemia gen. nov.

Candidatus Mahemia (NL. fem. n. *Mahemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-21*. The type species for the genus is *Candidatus* Mahemia podagitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Mahemia rubecitas sp. nov.

Candidatus Mahemia rubecitas (NL. fem. n. *rubecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-01-FULL-39-21 sp001792535*. The type genome for the species is the GenBank assembly GCA_001792935.1. The GC content of the type genome is 41.66 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Mahemida dilecibula sp. nov.

Candidatus Mahemida dilecibula (NL. fem. n. *dilecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLTB01 sp007122315*. The type genome for the species is the GenBank assembly GCA_003565395.1. The GC content of the type genome is 64.55 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Mahemida gen. nov.

Candidatus Mahemida (NL. fem. n. *Mahemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLTB01*. The type species for the genus is *Candidatus* Mahemida dilecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Mahemida hecatitura sp. nov.

Candidatus Mahemida hecatitura (NL. fem. n. *hecatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLTB01 sp007131295*. The type genome for the species is the GenBank assembly GCA_007125095.1. The GC content of the type genome is 64.83 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Mahemida necubilega sp. nov.

Candidatus Mahemida necubilega (NL. fem. n. *necubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLTB01 sp007694905*. The type genome for the species is the GenBank assembly GCA_007694905.1. The GC content of the type genome is 64.54 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Mahemida valefitoga sp. nov.

Candidatus Mahemida valefitoga (NL. fem. n. *valefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLTB01 sp007130155*. The type genome for the species is the GenBank assembly GCA_007130155.1. The GC content of the type genome is 63.51 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Mahemosa dilemisca sp. nov.

Candidatus Mahemosa dilemisca (NL. fem. n. *dilemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712005 sp002712005*. The type genome for the species is the GenBank assembly GCA_002435165.1. The GC content of the type genome is 37.62 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Mahemosa gen. nov.

Candidatus Mahemosa (NL. fem. n. *Mahemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712005*. The type species for the genus is *Candidatus* Mahemosa dilemisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mahemula paropastra sp. nov.

Candidatus Mahemula paropastra (NL. fem. n. *paropastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKHN01 sp903827265*. The type genome for the species is the GenBank assembly GCA_903825905.1. The GC content of the type genome is 50.81 %

and the genome length is 0.94 Mbp.

Description of *Candidatus* Mahemula gen. nov.

Candidatus Mahemula (NL. fem. n. *Mahemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKHN01*. The type species for the genus is *Candidatus* Mahemula paropastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9934*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivanaceae.

Description of *Candidatus* Mailhella apercifica sp. nov.

Candidatus Mailhella apercifica (NL. fem. n. *apercifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp902783285*. The type genome for the species is the GenBank assembly GCA_902783285.1. The GC content of the type genome is 62.62 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Mailhella attorastra sp. nov.

Candidatus Mailhella attorastra (NL. fem. n. *attorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp900553065*. The type genome for the species is the GenBank assembly GCA_900553065.1. The GC content of the type genome is 58.43 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Mailhella diponatio sp. nov.

Candidatus Mailhella diponatio (NL. fem. n. *diponatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp003150275*. The type genome for the species is the GenBank assembly GCA_003150275.1. The GC content of the type genome is 58.93 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Mailhella exadvitura sp. nov.

Candidatus Mailhella exadvitura (NL. fem. n. *exadvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp900555975*. The type genome for the species is the GenBank assembly GCA_900555975.1. The GC content of the type genome is 59.28 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Mailhella lugubivita sp. nov.

Candidatus Mailhella lugubivita (NL. fem. n. *lugubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp900770205*. The type genome for the species is the GenBank assembly RS_GCF_900770205.1. The GC content of the type genome is 52.58 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Mailhella rorifax sp. nov.

Candidatus Mailhella rorifax (NL. fem. n. *rorifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp900541395*. The type genome for the species is the GenBank assembly GCA_003343975.1. The GC content of the type genome is 62.37 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Mailhella volubitio sp. nov.

Candidatus Mailhella volubitio (NL. fem. n. *volubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mailhella sp003512875*. The type genome for the species is the GenBank assembly GCA_003512875.1. The GC content of the type genome is 43.86 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Malaciobacter cucurastra sp. nov.

Candidatus Malaciobacter cucurastra (NL. fem. n. *cucurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malaciobacter sp004116725*. The type genome for the species is the GenBank assembly RS_GCF_004116725.1. The GC content of the type genome is 27.12 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Malaciobacter inremimonas sp. nov.

Candidatus Malaciobacter inremimonas (NL. fem. n. *inremimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malaciobacter sp004116495*. The type genome for the species is the GenBank assembly RS_GCF_004116495.1. The GC content of the type genome is 26.55 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Malacoplasma adtenetta sp. nov.

Candidatus Malacoplasma adtenetta (NL. fem. n. *adtenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malacoplasma_A sp902782585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782585.1. The GC content of the type genome is 25.19 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Malacoplasma delubivita sp. nov.

Candidatus Malacoplasma delubivita (NL. fem. n. *delubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malacoplasma_A sp002372615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902803565.1. The GC content of the type genome is 24.65 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Malacoplasma diponedo sp. nov.

Candidatus Malacoplasma diponedo (NL. fem. n. *diponedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malacoplasma_A sp900316595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902784005.1. The GC content of the type genome is 26.67 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Malacoplasma incocitia sp. nov.

Candidatus Malacoplasma incocitia (NL. fem. n. *incocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malacoplasma_A sp902791895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902791895.1. The GC content of the type genome is 28.59 % and the genome length is 0.5 Mbp.

Description of *Candidatus* Malacoplasma monimibula sp. nov.

Candidatus Malacoplasma monimibula (NL. fem. n. *monimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malacoplasma_A sp902800015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902800015.1. The GC content of the type genome is 27.61 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Malagella cacopitrix sp. nov.

Candidatus Malagella cacopitrix (NL. fem. n. *cacopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-13 sp001789695*. The type genome for the species is the GenBank assembly GCA_001788055.1. The GC content of the type genome is 36.04 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Malagella gen. nov.

Candidatus Malagella (NL. fem. n. *Malagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-40-13*. The type species for the genus is *Candidatus* Malagella cacopitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Malagella detorimonia sp. nov.

Candidatus Malagella detorimonia (NL. fem. n. *detorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-13 sp001789745*. The type genome for the species is the GenBank assembly GCA_001789745.1. The GC content of the type genome is 39.2 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Malagella monimastra sp. nov.

Candidatus Malagella monimastra (NL. fem. n. *monimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-13 sp001788015*. The type genome for the species is the GenBank assembly GCA_001789545.1. The GC content of the type genome is 36.71 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Malagella retecago sp. nov.

Candidatus Malagella retecago (NL. fem. n. *retecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-13 sp001789635*. The type genome for the species is

the GenBank assembly GCA_001789285.1. The GC content of the type genome is 35.11 % and the genome length is 1.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Malagella rubefitica sp. nov.

Candidatus Malagella rubefitica (NL. fem. n. *rubefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-13 sp001789645*. The type genome for the species is the GenBank assembly GCA_001789645.1. The GC content of the type genome is 36.33 % and the genome length is 1.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Malagia susiciforma sp. nov.

Candidatus Malagia susiciforma (NL. fem. n. *susiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGQ01 sp013152295*. The type genome for the species is the GenBank assembly GCA_013152295.1. The GC content of the type genome is 53.51 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Malagia gen. nov.

Candidatus Malagia (NL. fem. n. *Malagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGQ01*. The type species for the genus is *Candidatus* Malagia susiciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malagiaceae.

Description of *Candidatus* Malagiaceae fam. nov.

Candidatus Malagiaceae (NL. fem. n. *Malagiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGQ01*. The type genus for the taxon is *Candidatus* Malagia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADGQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malagiales.

Description of *Candidatus* Malagiales ord. nov.

Candidatus Malagiales (NL. fem. n. *Malagiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGQ01*. The type genus for the taxon is *Candidatus* Malagia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Malagida benepicella sp. nov.

Candidatus Malagida benepicella (NL. fem. n. *benepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXUL01 sp009691765*. The type genome for the species is the GenBank assembly GCA_009691765.1. The GC content of the type genome is 60.64 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Malagida gen. nov.

Candidatus Malagida (NL. fem. n. *Malagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXUL01*. The type species for the genus is *Candidatus* Malagida benepicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobellaceae.

Description of *Candidatus* Malagida navifivita sp. nov.

Candidatus Malagida navifivita (NL. fem. n. *navifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXUL01 sp005790545*. The type genome for the species is the GenBank assembly GCA_005805155.1. The GC content of the type genome is 64.94 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Malagosa exorcastra sp. nov.

Candidatus Malagosa exorcastra (NL. fem. n. *exorcastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11222 sp003454415*. The type genome for the species is the GenBank assembly GCA_003454415.1. The GC content of the type genome is 59.08 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Malagosa gen. nov.

Candidatus Malagosa (NL. fem. n. *Malagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11222*. The type species for the genus is *Candidatus* Malagosa exorcastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malagosaceae.

Description of *Candidatus* Malagosaceae fam. nov.

Candidatus Malagosaceae (NL. fem. n. *Malagosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11222.* The type genus for the taxon is *Candidatus* Malagosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malagosales.

Description of *Candidatus* Malagosales ord. nov.

Candidatus Malagosales (NL. fem. n. *Malagosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11222.* The type genus for the taxon is *Candidatus* Malagosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Malagosa lavabisca sp. nov.

Candidatus Malagosa lavabisca (NL. fem. n. *lavabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11222 sp009693835*. The type genome for the species is the GenBank assembly GCA_009693835.1. The GC content of the type genome is 58.27 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Malagula bonititura sp. nov.

Candidatus Malagula bonititura (NL. fem. n. *bonititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4093 sp002083825*. The type genome for the species is the GenBank assembly GCA_002382535.1. The GC content of the type genome is 63.89 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Malagula gen. nov.

Candidatus Malagula (NL. fem. n. *Malagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4093*. The type species for the genus is *Candidatus* Malagula bonititura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4093*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malagulaceae.

Description of *Candidatus* Malagulaceae fam. nov.

Candidatus Malagulaceae (NL. fem. n. *Malagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4093.* The type genus for the taxon is *Candidatus* Malagula .

According to the original version of GTDB R06-RS202, this family belongs to the order *S15B-MN24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recumariales.

Description of *Candidatus* Maledana fumifibula sp. nov.

Candidatus Maledana fumifibula (NL. fem. n. *fumifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B15-G4 sp003644265*. The type genome for the species is the GenBank assembly GCA_003644265.1. The GC content of the type genome is 70.4 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Maledana gen. nov.

Candidatus Maledana (NL. fem. n. *Maledana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B15-G4*. The type species for the genus is *Candidatus* Maledana fumifibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B15-G4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledanaceae.

Description of *Candidatus* Maledanaceae fam. nov.

Candidatus Maledanaceae (NL. fem. n. *Maledanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B15-G4.* The type genus for the taxon is *Candidatus* Maledana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B15-G4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maledanales.

Description of *Candidatus* Maledanales ord. nov.

Candidatus Maledanales (NL. fem. n. *Maledanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *B15-G4*. The type genus for the taxon is *Candidatus* Maledana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Didacellae.

Description of *Candidatus* Maledaria depocivita sp. nov.

Candidatus Maledaria depocivita (NL. fem. n. *depocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVO01 sp903896775*. The type genome for the species is the GenBank assembly GCA_903896775.1. The GC content of the type genome is 58.33 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Maledaria gen. nov.

Candidatus Maledaria (NL. fem. n. *Maledaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVO01*. The type species for the genus is *Candidatus* Maledaria depocivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Maledaria extunifica sp. nov.

Candidatus Maledaria extunifica (NL. fem. n. *extunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVO01 sp903888485*. The type genome for the species is the GenBank assembly GCA_903888485.1. The GC content of the type genome is 63.1 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Maledaria irremitica sp. nov.

Candidatus Maledaria irremitica (NL. fem. n. *irremitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVO01 sp009694245*. The type genome for the species is the

GenBank assembly GCA_009694245.1. The GC content of the type genome is 61.6 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Maledella capilimonia sp. nov.

Candidatus Maledella capilimonia (NL. fem. n. *capilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFX01 sp007124045*. The type genome for the species is the GenBank assembly GCA_007124045.1. The GC content of the type genome is 41.57 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Maledella gen. nov.

Candidatus Maledella (NL. fem. n. *Maledella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLFX01*. The type species for the genus is *Candidatus* Maledella capilimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecariaceae.

Description of *Candidatus* Maledia eclecicula sp. nov.

Candidatus Maledia eclecicula (NL. fem. n. *eclecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-40-38 sp002773535*. The type genome for the species is the GenBank assembly GCA_002773535.1. The GC content of the type genome is 39.72 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Maledia gen. nov.

Candidatus Maledia (NL. fem. n. *Maledia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-40-38*. The type species for the genus is *Candidatus* Maledia eclecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

1-14-0-10-40-38. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malediaceae.

Description of *Candidatus* Malediaceae fam. nov.

Candidatus Malediaceae (NL. fem. n. *Malediaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-40-38.* The type genus for the taxon is *Candidatus* Maledia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Maledida imbecatica sp. nov.

Candidatus Maledida imbecatica (NL. fem. n. *imbecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABF01 sp014238345*. The type genome for the species is the GenBank assembly GCA_014238345.1. The GC content of the type genome is 57.37 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Maledida gen. nov.

Candidatus Maledida (NL. fem. n. *Maledida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABF01*. The type species for the genus is *Candidatus* Maledida imbecatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABABF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledidaceae.

Description of *Candidatus* Maledidaceae fam. nov.

Candidatus Maledidaceae (NL. fem. n. *Maledidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABABF01.* The type genus for the taxon is *Candidatus* Maledida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABABF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maledidales.

Description of *Candidatus* Maledidales ord. nov.

Candidatus Maledidales (NL. fem. n. *Maledidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABABF01.* The type genus for the taxon is *Candidatus* Maledida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Maledula domipitura sp. nov.

Candidatus Maledula domipitura (NL. fem. n. *domipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWAM01 sp013360985*. The type genome for the species is the GenBank assembly GCA_013360985.1. The GC content of the type genome is 64.88 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Maledula gen. nov.

Candidatus Maledula (NL. fem. n. *Maledula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWAM01*. The type species for the genus is *Candidatus* Maledula domipitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWAM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledulaceae.

Description of *Candidatus* Maledulaceae fam. nov.

Candidatus Maledulaceae (NL. fem. n. *Maledulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWAM01.* The type genus for the taxon is *Candidatus* Maledula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABWAM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maledulales.

Description of *Candidatus* Maledulales ord. nov.

Candidatus Maledulales (NL. fem. n. *Maledulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWAM01.* The type genus for the taxon is *Candidatus* Maledula .

According to the GTDB R06-RS202, this order belongs to the class *Verrucomicrobiae*.

Description of *Candidatus* Malifaria indomigena sp. nov.

Candidatus Malifaria indomigena (NL. fem. n. *indomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077555 sp001464755*. The type genome for the species is the GenBank assembly GCA_001464755.1. The GC content of the type genome is 64.38 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Malifaria gen. nov.

Candidatus Malifaria (NL. fem. n. *Malifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077555*. The type species for the genus is *Candidatus* Malifaria indomigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Malifaria lucubilega sp. nov.

Candidatus Malifaria lucubilega (NL. fem. n. *lucubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077555 sp001464855*. The type genome for the species is the

GenBank assembly GCA_001464855.1. The GC content of the type genome is 63.42 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Malifaria panopicella sp. nov.

Candidatus Malifaria panopicella (NL. fem. n. *panopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077555 sp001464955*. The type genome for the species is the GenBank assembly GCA_001464955.1. The GC content of the type genome is 66.16 % and the genome length is 4.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Malifaria panopitia sp. nov.

Candidatus Malifaria panopitia (NL. fem. n. *panopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077555 sp001464655*. The type genome for the species is the GenBank assembly GCA_001464655.1. The GC content of the type genome is 63.19 % and the genome length is 5.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Malifaria sonabedo sp. nov.

Candidatus Malifaria sonabedo (NL. fem. n. *sonabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077555 sp900117415*. The type genome for the species is the GenBank assembly GCA_001724295.1. The GC content of the type genome is 64.59 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Malifella homogimonia sp. nov.

Candidatus Malifella homogimonia (NL. fem. n. *homogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11858 sp003513015*. The type genome for the species is the GenBank assembly GCA_003512075.1. The GC content of the type genome is 52.47 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Malifella gen. nov.

Candidatus Malifella (NL. fem. n. *Malifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11858*. The type species for the genus is *Candidatus* Malifella homogimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11858*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifellaceae.

Description of *Candidatus* Malifellaceae fam. nov.

Candidatus Malifellaceae (NL. fem. n. *Malifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11858.* The type genus for the taxon is *Candidatus* Malifella .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Malifia denigitica sp. nov.

Candidatus Malifia denigitica (NL. fem. n. *denigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLH01 sp011370285*. The type genome for the species is the GenBank assembly GCA_011370285.1. The GC content of the type genome is 46.89 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Malifia gen. nov.

Candidatus Malifia (NL. fem. n. *Malifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLH01*. The type species for the genus is *Candidatus* Malifia

denigitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifiaceae.

Description of *Candidatus* Malifiaceae fam. nov.

Candidatus Malifiaceae (NL. fem. n. *Malifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLH01.* The type genus for the taxon is *Candidatus* Malifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Susicellales.

Description of *Candidatus* Malifia hemititica sp. nov.

Candidatus Malifia hemititica (NL. fem. n. *hemititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLH01 sp011327835*. The type genome for the species is the GenBank assembly GCA_011327835.1. The GC content of the type genome is 48.33 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Malifida demigibula sp. nov.

Candidatus Malifida demigibula (NL. fem. n. *demigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002712965 sp009392815*. The type genome for the species is the GenBank assembly GCA_009392815.1. The GC content of the type genome is 43.58 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Malifida gen. nov.

Candidatus Malifida (NL. fem. n. *Malifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002712965*. The type species for the genus is *Candidatus* Malifida

demigibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Malifida practimonas sp. nov.

Candidatus Malifida practimonas (NL. fem. n. *practimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002712965 sp009391195*. The type genome for the species is the GenBank assembly GCA_009391195.1. The GC content of the type genome is 43.76 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Malifida rubefiforma sp. nov.

Candidatus Malifida rubefiforma (NL. fem. n. *rubefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002712965 sp002696685*. The type genome for the species is the GenBank assembly GCA_002712965.1. The GC content of the type genome is 44.18 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Malifosa adtilitio sp. nov.

Candidatus Malifosa adtilitio (NL. fem. n. *adtilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1336 sp011358605*. The type genome for the species is the GenBank assembly GCA_011358605.1. The GC content of the type genome is 48.5 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Malifosa gen. nov.

Candidatus Malifosa (NL. fem. n. *Malifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1336*. The type species for the genus is *Candidatus* Malifosa adtilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicosaceae.

Description of *Candidatus* Malifosa carucivita sp. nov.

Candidatus Malifosa carucivita (NL. fem. n. *carucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1336 sp903908535*. The type genome for the species is the GenBank assembly GCA_903908535.1. The GC content of the type genome is 46.55 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Malifosa futatimonia sp. nov.

Candidatus Malifosa futatimonia (NL. fem. n. *futatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1336 sp013387205*. The type genome for the species is the GenBank assembly GCA_013387205.1. The GC content of the type genome is 43.01 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Malifosa licenitrix sp. nov.

Candidatus Malifosa licenitrix (NL. fem. n. *licenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1336 sp903913365*. The type genome for the species is the GenBank assembly GCA_903913365.1. The GC content of the type genome is 42.14 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Malifosa siligimonia sp. nov.

Candidatus Malifosa siligimonia (NL. fem. n. *siligimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1336 sp003151625*. The type genome for the species is the GenBank assembly GCA_003151625.1. The GC content of the type genome is 43.15 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Malifula penuredo sp. nov.

Candidatus Malifula penuredo (NL. fem. n. *penuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-39-37 sp000995135*. The type genome for the species is the GenBank assembly GCA_000995135.1. The GC content of the type genome is 38.57 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Malifula gen. nov.

Candidatus Malifula (NL. fem. n. *Malifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-39-37*. The type species for the genus is *Candidatus* Malifula penuredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-39-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifulaceae.

Description of *Candidatus* Malifulaceae fam. nov.

Candidatus Malifulaceae (NL. fem. n. *Malifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWE2-39-37.* The type genus for the taxon is *Candidatus* Malifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Maligana conigitoga sp. nov.

Candidatus Maligana conigitoga (NL. fem. n. *conigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-43-9 sp001775355*. The type genome for the species is the GenBank assembly GCA_001775355.1. The GC content of the type genome is 43.3 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Maligana gen. nov.

Candidatus Maligana (NL. fem. n. *Maligana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-43-9*. The type species for the genus is *Candidatus* Maligana conigitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-43-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maliganaceae.

Description of *Candidatus* Maliganaceae fam. nov.

Candidatus Maliganaceae (NL. fem. n. *Maliganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-43-9.* The type genus for the taxon is *Candidatus* Maligana .

According to the original version of GTDB R06-RS202, this family belongs to the order *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripellales.

Description of *Candidatus* Maligaria ludifastra sp. nov.

Candidatus Maligaria ludifastra (NL. fem. n. *ludifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2562 sp002340345*. The type genome for the species is the GenBank assembly GCA_002340345.1. The GC content of the type genome is 47.94 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Maligaria gen. nov.

Candidatus Maligaria (NL. fem. n. *Maligaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2562*. The type species for the genus is *Candidatus* Maligaria ludifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2562*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maligariaceae.

Description of *Candidatus* Maligariaceae fam. nov.

Candidatus Maligariaceae (NL. fem. n. *Maligariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2562.* The type genus for the taxon is *Candidatus* Maligaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2562*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maligariales.

Description of *Candidatus* Maligariales ord. nov.

Candidatus Maligariales (NL. fem. n. *Maligariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2562.* The type genus for the taxon is *Candidatus* Maligaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Maligella assefigena sp. nov.

Candidatus Maligella assefigena (NL. fem. n. *assefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDQX01 sp013042035*. The type genome for the species is the GenBank assembly GCA_013042035.1. The GC content of the type genome is 53.79 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Maligella gen. nov.

Candidatus Maligella (NL. fem. n. *Maligella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDQX01*. The type species for the genus is *Candidatus* Maligella assefigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JABDQX01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maligellaceae.

Description of *Candidatus* Maligellaceae fam. nov.

Candidatus Maligellaceae (NL. fem. n. *Maligellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDQX01*. The type genus for the taxon is *Candidatus* Maligella .

According to the original version of GTDB R06-RS202, this family belongs to the order *HK1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rumifiales.

Description of *Candidatus* Maligida cimititia sp. nov.

Candidatus Maligida cimititia (NL. fem. n. *cimititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin07 sp002898135*. The type genome for the species is the GenBank assembly GCA_002898135.1. The GC content of the type genome is 46.98 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Maligida gen. nov.

Candidatus Maligida (NL. fem. n. *Maligida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Bbin07*. The type species for the genus is *Candidatus* Maligida cimititia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-85*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepiaceae.

Description of *Candidatus* Maligida conififorma sp. nov.

Candidatus Maligida conififorma (NL. fem. n. *conififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BMS3Bbin07 sp013152195*. The type genome for the species is the GenBank assembly GCA_013152195.1. The GC content of the type genome is 46.88 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Maligida manubentia sp. nov.

Candidatus Maligida manubentia (NL. fem. n. *manubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin07 sp011051565*. The type genome for the species is the GenBank assembly GCA_011051565.1. The GC content of the type genome is 58.14 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Maligida scellitoga sp. nov.

Candidatus Maligida scellitoga (NL. fem. n. *scellitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin07 sp013152485*. The type genome for the species is the GenBank assembly GCA_013152485.1. The GC content of the type genome is 56.1 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Maligida subinedo sp. nov.

Candidatus Maligida subinedo (NL. fem. n. *subinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin07 sp003232715*. The type genome for the species is the GenBank assembly GCA_003232715.1. The GC content of the type genome is 46.04 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Maligosa arbaviforma sp. nov.

Candidatus Maligosa arbaviforma (NL. fem. n. *arbaviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp002373975*. The type genome for the species is the GenBank assembly GCA_002373975.1. The GC content of the type genome is 45.64 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Maligosa gen. nov.

Candidatus Maligosa (NL. fem. n. *Maligosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC2028*. The type species for the genus is *Candidatus* Maligosa arbaviforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Maligosa arcelitica sp. nov.

Candidatus Maligosa arcelitica (NL. fem. n. *arcelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp002317155*. The type genome for the species is the GenBank assembly GCA_002317155.1. The GC content of the type genome is 40.22 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Maligosa denunessa sp. nov.

Candidatus Maligosa denunessa (NL. fem. n. *denunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp902794095*. The type genome for the species is the GenBank assembly GCA_902794095.1. The GC content of the type genome is 44.34 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Maligosa inobsimonas sp. nov.

Candidatus Maligosa inobsimonas (NL. fem. n. *inobsimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp000702085*. The type genome for the species is the GenBank assembly RS_GCF_000702085.1. The GC content of the type genome is 44.2 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Maligosa mimogiforma sp. nov.

Candidatus Maligosa mimogiforma (NL. fem. n. *mimogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp000702685*. The type genome for the species is the GenBank assembly RS_GCF_000702685.1. The GC content of the type genome is 46.23 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Maligosa nutabitudo sp. nov.

Candidatus Maligosa nutabitudo (NL. fem. n. *nutabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp902767075*. The type genome for the species is the GenBank assembly GCA_902767075.1. The GC content of the type genome is 45.29 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Maligosa peradugo sp. nov.

Candidatus Maligosa peradugo (NL. fem. n. *peradugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp902761225*. The type genome for the species is the GenBank assembly GCA_902782065.1. The GC content of the type genome is 46.83 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Maligosa ranunitas sp. nov.

Candidatus Maligosa ranunitas (NL. fem. n. *ranunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp900320825*. The type genome for the species is the GenBank assembly GCA_900320825.1. The GC content of the type genome is 42.89 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Maligosa saxopitia sp. nov.

Candidatus Maligosa saxopitia (NL. fem. n. *saxopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AC2028 sp002373595*. The type genome for the species is the GenBank assembly GCA_002373595.1. The GC content of the type genome is 47.12 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Maligosa vitupitio sp. nov.

Candidatus Maligosa vitupitio (NL. fem. n. *vitupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC2028 sp902790935*. The type genome for the species is the GenBank assembly GCA_902790935.1. The GC content of the type genome is 44.22 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Maligula fraglatica sp. nov.

Candidatus Maligula fraglatica (NL. fem. n. *fraglatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADJA01 sp013151015*. The type genome for the species is the GenBank assembly GCA_013151015.1. The GC content of the type genome is 41.42 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Maligula gen. nov.

Candidatus Maligula (NL. fem. n. *Maligula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADJA01*. The type species for the genus is *Candidatus* Maligula fraglatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADJA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maligulaceae.

Description of *Candidatus* Maligulaceae fam. nov.

Candidatus Maligulaceae (NL. fem. n. *Maligulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADJA01.* The type genus for the taxon is *Candidatus* Maligula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Malivana exculentia sp. nov.

Candidatus Malivana exculentia (NL. fem. n. *exculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSC4 sp013693795*. The type genome for the species is the GenBank assembly GCA_013693795.1. The GC content of the type genome is 63.9 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Malivana gen. nov.

Candidatus Malivana (NL. fem. n. *Malivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSC4*. The type species for the genus is *Candidatus* Malivana exculentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SSC4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malivanaceae.

Description of *Candidatus* Malivanaceae fam. nov.

Candidatus Malivanaceae (NL. fem. n. *Malivanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SSC4.* The type genus for the taxon is *Candidatus* Malivana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-64-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacidales.

Description of *Candidatus* Malivaria desepugo sp. nov.

Candidatus Malivaria desepugo (NL. fem. n. *desepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBX01 sp011049385*. The type genome for the species is the GenBank assembly GCA_011049385.1. The GC content of the type genome is 67.15 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Malivaria gen. nov.

Candidatus Malivaria (NL. fem. n. *Malivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBX01*. The type species for the genus is *Candidatus* Malivaria desepugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Malivella ridibitica sp. nov.

Candidatus Malivella ridibitica (NL. fem. n. *ridibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXOI01 sp009840175*. The type genome for the species is the GenBank assembly GCA_009840175.1. The GC content of the type genome is 61.76 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Malivella gen. nov.

Candidatus Malivella (NL. fem. n. *Malivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXOI01*. The type species for the genus is *Candidatus* Malivella ridibitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Malivia arcitimonia sp. nov.

Candidatus Malivia arcitimonia (NL. fem. n. *arcitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJO01 sp009839535*. The type genome for the species is the GenBank assembly GCA_009839535.1. The GC content of the type genome is 62.52 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Malivia gen. nov.

Candidatus Malivia (NL. fem. n. *Malivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJO01*. The type species for the genus is *Candidatus* Malivia arcitimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Malivia expecibula sp. nov.

Candidatus Malivia expecibula (NL. fem. n. *expecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJO01 sp013002465*. The type genome for the species is the GenBank assembly GCA_013002465.1. The GC content of the type genome is 59.32 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Malivia mahemousia sp. nov.

Candidatus Malivia mahemousia (NL. fem. n. *mahemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJO01 sp009838075*. The type genome for the species is the GenBank assembly GCA_009842365.1. The GC content of the type genome is 63.48 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Malivia omnifentia sp. nov.

Candidatus Malivia omnifentia (NL. fem. n. *omnifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJO01 sp009843725*. The type genome for the species is the GenBank assembly GCA_009843725.1. The GC content of the type genome is 62.83 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Malivida alcibentia sp. nov.

Candidatus Malivida alcibentia (NL. fem. n. *alcibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11741 sp003488005*. The type genome for the species is the GenBank assembly GCA_003488005.1. The GC content of the type genome is 54.11 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Malivida gen. nov.

Candidatus Malivida (NL. fem. n. *Malivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11741*. The type species for the genus is *Candidatus* Malivida alcibentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Malivida anactitudo sp. nov.

Candidatus Malivida anactitudo (NL. fem. n. *anactitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11741 sp014380365*. The type genome for the species is the GenBank assembly GCA_014380365.1. The GC content of the type genome is 55.45 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Malivida bicinibula sp. nov.

Candidatus Malivida bicinibula (NL. fem. n. *bicinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11741 sp002427845*. The type genome for the species is the GenBank assembly GCA_002404175.1. The GC content of the type genome is 54.33 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Malivida extipousia sp. nov.

Candidatus Malivida extipousia (NL. fem. n. *extipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA11741 sp013697915*. The type genome for the species is the GenBank assembly GCA_013697915.1. The GC content of the type genome is 54.07 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Malivosa bifaricula sp. nov.

Candidatus Malivosa bifaricula (NL. fem. n. *bifaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG754 sp902780845*. The type genome for the species is the GenBank assembly GCA_902762665.1. The GC content of the type genome is 48.29 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Malivosa gen. nov.

Candidatus Malivosa (NL. fem. n. *Malivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG754*. The type species for the genus is *Candidatus* Malivosa bifaricula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Malivosa refunedo sp. nov.

Candidatus Malivosa refunedo (NL. fem. n. *refunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG754 sp900315895*. The type genome for the species is the GenBank assembly GCA_900322045.1. The GC content of the type genome is 50.85 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Malivosa selibitica sp. nov.

Candidatus Malivosa selibitica (NL. fem. n. *selibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG754 sp902778565*. The type genome for the species is the GenBank assembly GCA_902778565.1. The GC content of the type genome is 48.48 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Malivula haricilenta sp. nov.

Candidatus Malivula haricilenta (NL. fem. n. *haricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-005 sp001189165*. The type genome for the species is the GenBank assembly GCA_001189165.1. The GC content of the type genome is 43.4 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Malivula gen. nov.

Candidatus Malivula (NL. fem. n. *Malivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C7867-005*. The type species for the genus is *Candidatus* Malivula haricilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Malogana depasetta sp. nov.

Candidatus Malogana depasetta (NL. fem. n. *depasetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-53-10 sp001791035*. The type genome for the species is the GenBank assembly GCA_001791035.1. The GC content of the type genome is 53.2 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Malogana gen. nov.

Candidatus Malogana (NL. fem. n. *Malogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-53-10*. The type species for the genus is *Candidatus* Malogana depasetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11717*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Desomanaceae.

Description of *Candidatus* Malogaria tomacimonas sp. nov.

Candidatus Malogaria tomacimonas (NL. fem. n. *tomacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UJ101 sp001880285*. The type genome for the species is the GenBank assembly RS_GCF_001880285.1. The GC content of the type genome is 30.74 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Malogaria gen. nov.

Candidatus Malogaria (NL. fem. n. *Malogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UJ101*. The type species for the genus is *Candidatus* Malogaria tomacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UJ101*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogariaceae.

Description of *Candidatus* Malogariaceae fam. nov.

Candidatus Malogariaceae (NL. fem. n. *Malogariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UJ101.* The type genus for the taxon is *Candidatus* Malogaria .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Malogella metabitudo sp. nov.

Candidatus Malogella metabitudo (NL. fem. n. *metabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-44-17 sp001873565*. The type genome for the species is the GenBank assembly GCA_002783025.1. The GC content of the type genome is 43.67 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Malogella gen. nov.

Candidatus Malogella (NL. fem. n. *Malogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-44-17*. The type species for the genus is *Candidatus* Malogella metabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12470*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penurariaceae.

Description of *Candidatus* Malogia attematica sp. nov.

Candidatus Malogia attematica (NL. fem. n. *attematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1369 sp002305925*. The type genome for the species is the GenBank assembly GCA_002305925.1. The GC content of the type genome is 51.16 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Malogia gen. nov.

Candidatus Malogia (NL. fem. n. *Malogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1369*. The type species for the genus is *Candidatus* Malogia attematica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogiaceae.

Description of *Candidatus* Malogiaceae fam. nov.

Candidatus Malogiaceae (NL. fem. n. *Malogiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1369.* The type genus for the taxon is *Candidatus* Malogia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Malogiales.

Description of *Candidatus* Malogida catiletta sp. nov.

Candidatus Malogida catiletta (NL. fem. n. *catiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-76 sp002011685*. The type genome for the species is the GenBank assembly GCA_002011685.1. The GC content of the type genome is 51.84 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Malogida gen. nov.

Candidatus Malogida (NL. fem. n. *Malogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-76*. The type species for the genus is *Candidatus* Malogida catiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogidaceae.

Description of *Candidatus* Malogidaceae fam. nov.

Candidatus Malogidaceae (NL. fem. n. *Malogidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-76.* The type genus for the taxon is *Candidatus* Malogida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogidales.

Description of *Candidatus* Malogidales ord. nov.

Candidatus Malogidales (NL. fem. n. *Malogidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-76.* The type genus for the taxon is *Candidatus* Malogida .

According to the original version of GTDB R06-RS202, this family belongs to the class

UBA2214. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Renavosae.

Description of *Candidatus* Malogosa adtacentia sp. nov.

Candidatus Malogosa adtacentia (NL. fem. n. *adtacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTPP01 sp011334325*. The type genome for the species is the GenBank assembly GCA_011334325.1. The GC content of the type genome is 68.75 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Malogosa gen. nov.

Candidatus Malogosa (NL. fem. n. *Malogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPP01*. The type species for the genus is *Candidatus* Malogosa adtacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogosaceae.

Description of *Candidatus* Malogosaceae fam. nov.

Candidatus Malogosaceae (NL. fem. n. *Malogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTPP01.* The type genus for the taxon is *Candidatus* Malogosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogosales.

Description of *Candidatus* Malogosales ord. nov.

Candidatus Malogosales (NL. fem. n. *Malogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTPP01.* The type genus for the taxon is *Candidatus* Malogosa .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Malogula gemebitrix sp. nov.

Candidatus Malogula gemebitrix (NL. fem. n. *gemebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8958 sp903885795*. The type genome for the species is the GenBank assembly GCA_903855685.1. The GC content of the type genome is 50.59 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Malogula gen. nov.

Candidatus Malogula (NL. fem. n. *Malogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8958*. The type species for the genus is *Candidatus* Malogula gemebitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8958*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogulaceae.

Description of *Candidatus* Malogulaceae fam. nov.

Candidatus Malogulaceae (NL. fem. n. *Malogulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8958.* The type genus for the taxon is *Candidatus* Malogula .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Malogula semifousia sp. nov.

Candidatus Malogula semifousia (NL. fem. n. *semifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8958 sp003451635*. The type genome for the species is the GenBank assembly GCA_003451635.1. The GC content of the type genome is 52.27 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Malonomonas catapitica sp. nov.

Candidatus Malonomonas catapitica (NL. fem. n. *catapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malonomonas sp013152145*. The type genome for the species is the GenBank assembly GCA_013152145.1. The GC content of the type genome is 55.64 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Malonomonas manibilenta sp. nov.

Candidatus Malonomonas manibilenta (NL. fem. n. *manibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Malonomonas sp013138655*. The type genome for the species is the GenBank assembly GCA_013138655.1. The GC content of the type genome is 52.33 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Manganitrophus undevilenta sp. nov.

Candidatus Manganitrophus undevilenta (NL. fem. n. *undevilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Manganitrophus sp004297235*. The type genome for the species is the GenBank assembly GCA_004297235.1. The GC content of the type genome is 57.81 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Mangrovibacterium apposedo sp. nov.

Candidatus Mangrovibacterium apposedo (NL. fem. n. *apposedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovibacterium sp003246935*. The type genome for the species is the GenBank assembly GCA_003246935.1. The GC content of the type genome is 42.24 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Mangrovibacterium desucetta sp. nov.

Candidatus Mangrovibacterium desucetta (NL. fem. n. *desucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovibacterium sp010882175*. The type genome for the species is the GenBank assembly RS_GCF_010882175.1. The GC content of the type genome is 43.43 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Mangrovicoccus cilicilenta sp. nov.

Candidatus Mangrovicoccus cilicilenta (NL. fem. n. *cilicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovicoccus sp005870025*. The type genome for the species is the GenBank assembly RS_GCF_005870025.1. The GC content of the type genome is 69.06 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Mangrovicoccus defosilenta sp. nov.

Candidatus Mangrovicoccus defosilenta (NL. fem. n. *defosilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovicoccus sp013184745*. The type genome for the species is the GenBank assembly RS_GCF_013184745.1. The GC content of the type genome is 68.3 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Mangrovimonas pabiliforma sp. nov.

Candidatus Mangrovimonas pabiliforma (NL. fem. n. *pabiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovimonas sp001280515*. The type genome for the species is the GenBank assembly RS_GCF_001280515.1. The GC content of the type genome is 36.19 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mangrove soil".

Description of *Candidatus* Mangrovimonas inpinilenta sp. nov.

Candidatus Mangrovimonas inpinilenta (NL. fem. n. *inpinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mangrovimonas_A sp001280505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001280505.1. The GC content of the type genome is 38.65 % and the genome length is 4.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mangrove soil".

Description of *Candidatus* Manibana aprarugo sp. nov.

Candidatus Manibana aprarugo (NL. fem. n. *aprarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Plut-88900 sp012270635*. The type genome for the species is the GenBank assembly GCA_012270635.1. The GC content of the type genome is 63.29 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Manibana gen. nov.

Candidatus Manibana (NL. fem. n. *Manibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Plut-88900*. The type species for the genus is *Candidatus* Manibana aprarugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Plut-88900*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibanaceae.

Description of *Candidatus* Manibanaceae fam. nov.

Candidatus Manibanaceae (NL. fem. n. *Manibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Plut-88900.* The type genus for the taxon is *Candidatus* Manibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Plut-88900*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manibanales.

Description of *Candidatus* Manibanales ord. nov.

Candidatus Manibanales (NL. fem. n. *Manibanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Plut-88900.* The type genus for the taxon is *Candidatus* Manibana .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Manibaria defariforma sp. nov.

Candidatus Manibaria defariforma (NL. fem. n. *defariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9579 sp001784615*. The type genome for the species is the GenBank assembly GCA_001786555.1. The GC content of the type genome is 32.25 % and the genome length is 2.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Manibaria gen. nov.

Candidatus Manibaria (NL. fem. n. *Manibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9579*. The type species for the genus is *Candidatus* Manibaria defariforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibariaceae.

Description of *Candidatus* Manibariaceae fam. nov.

Candidatus Manibariaceae (NL. fem. n. *Manibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9579.* The type genus for the taxon is *Candidatus* Manibaria .

According to GTDB R06-RS202, this family belongs to the order *Gastranaerophilales*.

Description of *Candidatus* Manibaria tribrentia sp. nov.

Candidatus Manibaria tribrentia (NL. fem. n. *tribrentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9579 sp003499585*. The type genome for the species is the GenBank assembly GCA_003499585.1. The GC content of the type genome is 33.79 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Manibella desucimonas sp. nov.

Candidatus Manibella desucimonas (NL. fem. n. *desucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1470 sp900552105*. The type genome for the species is the GenBank assembly GCA_900552105.1. The GC content of the type genome is 36.99 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Manibella gen. nov.

Candidatus Manibella (NL. fem. n. *Manibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1470*. The type species for the genus is *Candidatus* Manibella desucimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Manibella obveritia sp. nov.

Candidatus Manibella obveritia (NL. fem. n. *obveritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1470 sp900766395*. The type genome for the species is the GenBank assembly RS_GCF_900766395.1. The GC content of the type genome is 36.67 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Manibida conaricella sp. nov.

Candidatus Manibida conaricella (NL. fem. n. *conaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2964 sp002348425*. The type genome for the species is the GenBank assembly GCA_002348425.1. The GC content of the type genome is 42.91 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Manibida gen. nov.

Candidatus Manibida (NL. fem. n. *Manibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2964*. The type species for the genus is *Candidatus* Manibida conaricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Manibidaceae fam. nov.

Candidatus Manibidaceae (NL. fem. n. *Manibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2964.* The type genus for the taxon is *Candidatus* Manibida .

According to the original version of GTDB R06-RS202, this family belongs to the order *MPNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Meridellales.

Description of *Candidatus* Manibida domabessa sp. nov.

Candidatus Manibida domabessa (NL. fem. n. *domabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2964 sp002712335*. The type genome for the species is the GenBank assembly GCA_002712335.1. The GC content of the type genome is 42.42 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Manibida impudicula sp. nov.

Candidatus Manibida impudicula (NL. fem. n. *impudicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2964 sp002719885*. The type genome for the species is the GenBank assembly GCA_002719885.1. The GC content of the type genome is 41.87 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Manibida invoratica sp. nov.

Candidatus Manibida invoratica (NL. fem. n. *invoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2964 sp002727395*. The type genome for the species is the GenBank assembly GCA_002727395.1. The GC content of the type genome is 40.87 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Manibosa direpitoga sp. nov.

Candidatus Manibosa direpitoga (NL. fem. n. *direpitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADAEX01 sp902787125*. The type genome for the species is the GenBank assembly GCA_902787125.1. The GC content of the type genome is 48.29 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Manibosa gen. nov.

Candidatus Manibosa (NL. fem. n. *Manibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADAEX01*. The type species for the genus is *Candidatus* Manibosa direpitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADAEX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibosaceae.

Description of *Candidatus* Manibosaceae fam. nov.

Candidatus Manibosaceae (NL. fem. n. *Manibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADAEX01*. The type genus for the taxon is *Candidatus* Manibosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADAEX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manibosales.

Description of *Candidatus* Manibosales ord. nov.

Candidatus Manibosales (NL. fem. n. *Manibosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADAEX01*. The type genus for the taxon is *Candidatus* Manibosa .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Mannheimia acrufitura sp. nov.

Candidatus Mannheimia acrufitura (NL. fem. n. *acrufitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mannheimia sp000521605*. The type genome for the species is the GenBank assembly RS_GCF_000521605.1. The GC content of the type genome is 39.64 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mucus".

Description of *Candidatus* Mannheimia bicoricella sp. nov.

Candidatus Mannheimia bicoricella (NL. fem. n. *bicoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mannheimia sp014541205*. The type genome for the species is the GenBank assembly RS_GCF_014541205.1. The GC content of the type genome is 39.78 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Mannheimia lucubatica sp. nov.

Candidatus Mannheimia lucubatica (NL. fem. n. *lucubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Mannheimia sp009828705*. The type genome for the species is the GenBank assembly RS_GCF_013377975.1. The GC content of the type genome is 38.99 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Manomana devecitia sp. nov.

Candidatus Manomana devecitia (NL. fem. n. *devecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-47-10 sp001820685*. The type genome for the species is the GenBank assembly GCA_001003045.1. The GC content of the type genome is 46.68 % and the genome length is 1.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Manomana gen. nov.

Candidatus Manomana (NL. fem. n. *Manomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-47-10*. The type species for the genus is *Candidatus* Manomana devecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conamulaceae.

Description of *Candidatus* Manomaria cadurastra sp. nov.

Candidatus Manomaria cadurastra (NL. fem. n. *cadurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIAT01 sp009691645*. The type genome for the species is the GenBank assembly GCA_009691645.1. The GC content of the type genome is 62.17 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Manomaria gen. nov.

Candidatus Manomaria (NL. fem. n. *Manomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIAT01*. The type species for the genus is *Candidatus* Manomaria

cadurastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXTU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hirunidaceae.

Description of *Candidatus* Manomella deculitica sp. nov.

Candidatus Manomella deculitica (NL. fem. n. *deculitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMMZ01 sp013205405*. The type genome for the species is the GenBank assembly GCA_013205405.1. The GC content of the type genome is 31.58 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Manomella gen. nov.

Candidatus Manomella (NL. fem. n. *Manomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMMZ01*. The type species for the genus is *Candidatus* Manomella deculitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Manomella nivomitio sp. nov.

Candidatus Manomella nivomitio (NL. fem. n. *nivomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMMZ01 sp903953615*. The type genome for the species is the GenBank assembly GCA_903953615.1. The GC content of the type genome is 37.3 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Manomia insenitia sp. nov.

Candidatus Manomia insenitia (NL. fem. n. *insenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYD01 sp009692945*. The type genome for the species is the GenBank assembly GCA_009692945.1. The GC content of the type genome is 64.87 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Manomia gen. nov.

Candidatus Manomia (NL. fem. n. *Manomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYD01*. The type species for the genus is *Candidatus* Manomia insenitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomiaceae.

Description of *Candidatus* Manomiaceae fam. nov.

Candidatus Manomiaceae (NL. fem. n. *Manomiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYD01*. The type genus for the taxon is *Candidatus* Manomia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manomiales.

Description of *Candidatus* Manomiales ord. nov.

Candidatus Manomiales (NL. fem. n. *Manomiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYD01*. The type genus for the taxon is *Candidatus* Manomia .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Manomida defasitura sp. nov.

Candidatus Manomida defasitura (NL. fem. n. *defasitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GN02-872 sp013368515*. The type genome for the species is the GenBank assembly GCA_013368515.1. The GC content of the type genome is 23.62 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Manomida gen. nov.

Candidatus Manomida (NL. fem. n. *Manomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GN02-872*. The type species for the genus is *Candidatus* Manomida defasitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Manomida infisitoga sp. nov.

Candidatus Manomida infisitoga (NL. fem. n. *infisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GN02-872 sp003260325*. The type genome for the species is the GenBank assembly GCA_003260325.1. The GC content of the type genome is 25.08 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Manomida lanugicula sp. nov.

Candidatus Manomida lanugicula (NL. fem. n. *lanugicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GN02-872 sp002761215*. The type genome for the species is the GenBank assembly GCA_013333755.2. The GC content of the type genome is 25.01 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Manomosa gasifugo sp. nov.

Candidatus Manomosa gasifugo (NL. fem. n. *gasifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12465 sp001871165*. The type genome for the species is the

GenBank assembly GCA_009992405.1. The GC content of the type genome is 37.55 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Manomosa gen. nov.

Candidatus Manomosa (NL. fem. n. *Manomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12465*. The type species for the genus is *Candidatus* Manomosa gasifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Manomosaceae fam. nov.

Candidatus Manomosaceae (NL. fem. n. *Manomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12465.* The type genus for the taxon is *Candidatus* Manomosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Manomosa herinimonia sp. nov.

Candidatus Manomosa herinimonia (NL. fem. n. *herinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12465 sp000999715*. The type genome for the species is the GenBank assembly GCA_003489845.1. The GC content of the type genome is 43.28 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Manomosa irradedo sp. nov.

Candidatus Manomosa irradedo (NL. fem. n. *irradedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12465 sp003056205*. The type genome for the species is the

GenBank assembly GCA_003056205.1. The GC content of the type genome is 33.56 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Manomula derelitio sp. nov.

Candidatus Manomula derelitio (NL. fem. n. *derelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACPJ01 sp009995455*. The type genome for the species is the GenBank assembly GCA_009994005.1. The GC content of the type genome is 41.1 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Manomula gen. nov.

Candidatus Manomula (NL. fem. n. *Manomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACPJ01*. The type species for the genus is *Candidatus* Manomula derelitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depocosaceae.

Description of *Candidatus* Manubana vehicousia sp. nov.

Candidatus Manubana vehicousia (NL. fem. n. *vehicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7662 sp002483345*. The type genome for the species is the GenBank assembly GCA_002483345.1. The GC content of the type genome is 48.58 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Manubana gen. nov.

Candidatus Manubana (NL. fem. n. *Manubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7662*. The type species for the genus is *Candidatus* Manubana vehicousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA7662. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubanaceae.

Description of *Candidatus* Manubanaceae fam. nov.

Candidatus Manubanaceae (NL. fem. n. *Manubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7662.* The type genus for the taxon is *Candidatus* Manubana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manubanales.

Description of *Candidatus* Manubanales ord. nov.

Candidatus Manubanales (NL. fem. n. *Manubanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7662.* The type genus for the taxon is *Candidatus* Manubana .

According to the GTDB R06-RS202, this order belongs to the class *Bacteroidia*.

Description of *Candidatus* Manubella appicatica sp. nov.

Candidatus Manubella appicatica (NL. fem. n. *appicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp013336285*. The type genome for the species is the GenBank assembly GCA_013336285.1. The GC content of the type genome is 52.75 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Manubella gen. nov.

Candidatus Manubella (NL. fem. n. *Manubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXTX01*. The type species for the genus is *Candidatus* Manubella appicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1568*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Bicalulaceae.

Description of *Candidatus* Manubella celamimonia sp. nov.

Candidatus Manubella celamimonia (NL. fem. n. *celamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp013334575*. The type genome for the species is the GenBank assembly GCA_013336155.1. The GC content of the type genome is 57.41 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Manubella obfusatio sp. nov.

Candidatus Manubella obfusatio (NL. fem. n. *obfusatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp903893925*. The type genome for the species is the GenBank assembly GCA_903893925.1. The GC content of the type genome is 51.53 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Manubella ontolessa sp. nov.

Candidatus Manubella ontolessa (NL. fem. n. *ontolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp013334245*. The type genome for the species is the GenBank assembly GCA_013334245.1. The GC content of the type genome is 54.37 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Manubella rinocentia sp. nov.

Candidatus Manubella rinocentia (NL. fem. n. *rinocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp903854995*. The type genome for the species is the GenBank assembly GCA_903854995.1. The GC content of the type genome is 54.75 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Manubella timefifica sp. nov.

Candidatus Manubella timefifica (NL. fem. n. *timefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXTX01 sp903859375*. The type genome for the species is the GenBank assembly GCA_903859375.1. The GC content of the type genome is 52.14 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Manubida biparatica sp. nov.

Candidatus Manubida biparatica (NL. fem. n. *biparatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1273 sp003161955*. The type genome for the species is the GenBank assembly GCA_003161955.1. The GC content of the type genome is 60.23 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Manubida gen. nov.

Candidatus Manubida (NL. fem. n. *Manubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1273*. The type species for the genus is *Candidatus* Manubida biparatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Manubida colopifica sp. nov.

Candidatus Manubida colopifica (NL. fem. n. *colopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1273 sp003158475*. The type genome for the species is the GenBank assembly GCA_003158475.1. The GC content of the type genome is 59.01 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Manubida desulicula sp. nov.

Candidatus Manubida desulicula (NL. fem. n. *desulicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1273 sp003157485*. The type genome for the species is the GenBank assembly GCA_003158685.1. The GC content of the type genome is 60.36 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Manubida manibifica sp. nov.

Candidatus Manubida manibifica (NL. fem. n. *manibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1273 sp003154425*. The type genome for the species is the GenBank assembly GCA_003154425.1. The GC content of the type genome is 60.58 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Manubula defasago sp. nov.

Candidatus Manubula defasago (NL. fem. n. *defasago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin65 sp002238725*. The type genome for the species is the GenBank assembly GCA_002238725.1. The GC content of the type genome is 66.16 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Manubula gen. nov.

Candidatus Manubula (NL. fem. n. *Manubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin65*. The type species for the genus is *Candidatus* Manubula defasago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin65*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubulaceae.

Description of *Candidatus* Manubulaceae fam. nov.

Candidatus Manubulaceae (NL. fem. n. *Manubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin65.* The type genus for the taxon is *Candidatus* Manubula .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin65*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manubulales.

Description of *Candidatus* Manubulales ord. nov.

Candidatus Manubulales (NL. fem. n. *Manubulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin65.* The type genus for the taxon is *Candidatus* Manubula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Manubula infatibula sp. nov.

Candidatus Manubula infatibula (NL. fem. n. *infatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin65 sp900197615*. The type genome for the species is the GenBank assembly RS_GCF_900197615.1. The GC content of the type genome is 66.08 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Manubula linigitica sp. nov.

Candidatus Manubula linigitica (NL. fem. n. *linigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin65 sp011523655*. The type genome for the species is the GenBank assembly GCA_011523655.1. The GC content of the type genome is 66.97 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Manubula semapessa sp. nov.

Candidatus Manubula semapessa (NL. fem. n. *semapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bin65 sp009840595*. The type genome for the species is the GenBank assembly GCA_009840595.1. The GC content of the type genome is 67.85 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Manufana cilicitia sp. nov.

Candidatus Manufana cilicitia (NL. fem. n. *cilicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WOUV01 sp009773045*. The type genome for the species is the GenBank assembly GCA_009773045.1. The GC content of the type genome is 61.18 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Manufana gen. nov.

Candidatus Manufana (NL. fem. n. *Manufana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WOUV01*. The type species for the genus is *Candidatus* Manufana cilicitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WOUV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufanaceae.

Description of *Candidatus* Manufanaceae fam. nov.

Candidatus Manufanaceae (NL. fem. n. *Manufanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WOUV01*. The type genus for the taxon is *Candidatus* Manufana .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Manufaria bimetimonas sp. nov.

Candidatus Manufaria bimetimonas (NL. fem. n. *bimetimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMTB01 sp903844265*. The type genome for the species is the GenBank assembly GCA_903863355.1. The GC content of the type genome is 64.55 %

and the genome length is 6.11 Mbp.

Description of *Candidatus* Manufaria gen. nov.

Candidatus Manufaria (NL. fem. n. *Manufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMTB01*. The type species for the genus is *Candidatus* Manufaria bimetimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIMTB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufariaceae.

Description of *Candidatus* Manufariaceae fam. nov.

Candidatus Manufariaceae (NL. fem. n. *Manufariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMTB01.* The type genus for the taxon is *Candidatus* Manufaria .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Manufella benemibra sp. nov.

Candidatus Manufella benemibra (NL. fem. n. *benemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG306 sp900316075*. The type genome for the species is the GenBank assembly GCA_002349765.1. The GC content of the type genome is 54.87 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Manufella gen. nov.

Candidatus Manufella (NL. fem. n. *Manufella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG306*. The type species for the genus is *Candidatus* Manufella benemibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Manufella denigicella sp. nov.

Candidatus Manufella denigicella (NL. fem. n. *denigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG306 sp900317755*. The type genome for the species is the GenBank assembly GCA_900317755.1. The GC content of the type genome is 41.59 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Manufella pacifibra sp. nov.

Candidatus Manufella pacifibra (NL. fem. n. *pacifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG306 sp902772635*. The type genome for the species is the GenBank assembly GCA_902772635.1. The GC content of the type genome is 47.96 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Manufella repecax sp. nov.

Candidatus Manufella repecax (NL. fem. n. *repecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG306 sp900313435*. The type genome for the species is the GenBank assembly GCA_902783475.1. The GC content of the type genome is 47.68 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Manufella terebimonas sp. nov.

Candidatus Manufella terebimonas (NL. fem. n. *terebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG306 sp900314085*. The type genome for the species is the GenBank assembly GCA_902804045.1. The GC content of the type genome is 54.02 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Manufia vehemivita sp. nov.

Candidatus Manufia vehemivita (NL. fem. n. *vehemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1559 sp001871015*. The type genome for the species is the GenBank assembly GCA_002779445.1. The GC content of the type genome is 38.7 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Manufia gen. nov.

Candidatus Manufia (NL. fem. n. *Manufia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1559*. The type species for the genus is *Candidatus* Manufia vehemivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1559*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufiaceae.

Description of *Candidatus* Manufiaceae fam. nov.

Candidatus Manufiaceae (NL. fem. n. *Manufiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1559.* The type genus for the taxon is *Candidatus* Manufia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1551*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Disidariales.

Description of *Candidatus* Manufida adsusetta sp. nov.

Candidatus Manufida adsusetta (NL. fem. n. *adsusetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp002704905*. The type genome for the species is the GenBank assembly GCA_002704905.1. The GC content of the type genome is 37.17 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Manufida gen. nov.

Candidatus Manufida (NL. fem. n. *Manufida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TCS55*. The type species for the genus is *Candidatus* Manufida adsusetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Manufidaceae fam. nov.

Candidatus Manufidaceae (NL. fem. n. *Manufidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TCS55.* The type genus for the taxon is *Candidatus* Manufida .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Manufida ammixastra sp. nov.

Candidatus Manufida ammixastra (NL. fem. n. *ammixastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp002716525*. The type genome for the species is the GenBank assembly GCA_002716525.1. The GC content of the type genome is 38.97 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Manufida debucentia sp. nov.

Candidatus Manufida debucentia (NL. fem. n. *debucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp012964665*. The type genome for the species is the GenBank assembly GCA_012964665.1. The GC content of the type genome is 39.51 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Manufida decucimonia sp. nov.

Candidatus Manufida decucimonia (NL. fem. n. *decucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp002715035*. The type genome for the species is the GenBank assembly GCA_002715035.1. The GC content of the type genome is 40.09 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Manufida defunitudo sp. nov.

Candidatus Manufida defunitudo (NL. fem. n. *defunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp001577025*. The type genome for the species is the GenBank assembly GCA_001626675.1. The GC content of the type genome is 41.84 % and the genome length is 1.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 34 - depth 258m".

Description of *Candidatus* Manufida direcousia sp. nov.

Candidatus Manufida direcousia (NL. fem. n. *direcousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp014382015*. The type genome for the species is the GenBank assembly GCA_014382015.1. The GC content of the type genome is 39.56 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Manufida legifago sp. nov.

Candidatus Manufida legifago (NL. fem. n. *legifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp002471845*. The type genome for the species is the GenBank assembly GCA_002328235.1. The GC content of the type genome is 43.0 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Manufida omnigimonia sp. nov.

Candidatus Manufida omnigimonia (NL. fem. n. *omnigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS55 sp014239505*. The type genome for the species is the GenBank assembly GCA_014239505.1. The GC content of the type genome is 32.39 % and the

genome length is 1.58 Mbp.

Description of *Candidatus* Manufosa eclecitudo sp. nov.

Candidatus Manufosa eclecitudo (NL. fem. n. *eclecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TS1B11 sp004124875*. The type genome for the species is the GenBank assembly RS_GCF_004124875.1. The GC content of the type genome is 56.04 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Manufosa gen. nov.

Candidatus Manufosa (NL. fem. n. *Manufosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TS1B11*. The type species for the genus is *Candidatus* Manufosa eclecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TS1B11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufosaceae.

Description of *Candidatus* Manufosaceae fam. nov.

Candidatus Manufosaceae (NL. fem. n. *Manufosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TS1B11*. The type genus for the taxon is *Candidatus* Manufosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Manufosa ellipitrix sp. nov.

Candidatus Manufosa ellipitrix (NL. fem. n. *ellipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TS1B11 sp004124295*. The type genome for the species is the GenBank assembly RS_GCF_004124295.1. The GC content of the type genome is 59.93

% and the genome length is 2.55 Mbp.

Description of *Candidatus* Manufula lucubivita sp. nov.

Candidatus Manufula lucubivita (NL. fem. n. *lucubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6808 sp002452695*. The type genome for the species is the GenBank assembly GCA_002452695.1. The GC content of the type genome is 52.46 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Manufula gen. nov.

Candidatus Manufula (NL. fem. n. *Manufula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6808*. The type species for the genus is *Candidatus* Manufula lucubivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deneciaceae.

Description of *Candidatus* Manufula peradifica sp. nov.

Candidatus Manufula peradifica (NL. fem. n. *peradifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6808 sp002383665*. The type genome for the species is the GenBank assembly GCA_002383665.1. The GC content of the type genome is 49.95 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Manupana acratitura sp. nov.

Candidatus Manupana acratitura (NL. fem. n. *acratitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900555885*. The type genome for the species is the GenBank assembly RS_GCF_900555885.1. The GC content of the type genome is 43.91 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Manupana gen. nov.

Candidatus Manupana (NL. fem. n. *Manupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TM7x*. The type species for the genus is *Candidatus* Manupana acratitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Manupana adcumousia sp. nov.

Candidatus Manupana adcumousia (NL. fem. n. *adcumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp002421965*. The type genome for the species is the GenBank assembly GCA_002421965.1. The GC content of the type genome is 47.17 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Manupana apsoritica sp. nov.

Candidatus Manupana apsoritica (NL. fem. n. *apsoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013100805*. The type genome for the species is the GenBank assembly RS_GCF_013100805.1. The GC content of the type genome is 50.67 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Manupana bigarax sp. nov.

Candidatus Manupana bigarax (NL. fem. n. *bigarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp010202115*. The type genome for the species is the GenBank assembly RS_GCF_010202115.1. The GC content of the type genome is 50.78 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Manupana bigemitrix sp. nov.

Candidatus Manupana bigemitrix (NL. fem. n. *bigemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900557595*. The type genome for the species is the GenBank assembly GCA_902406325.1. The GC content of the type genome is 43.47 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Manupana biverifica sp. nov.

Candidatus Manupana biverifica (NL. fem. n. *biverifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp010202645*. The type genome for the species is the GenBank assembly RS_GCF_010202645.1. The GC content of the type genome is 50.79 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Manupana colimicella sp. nov.

Candidatus Manupana colimicella (NL. fem. n. *colimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900555265*. The type genome for the species is the GenBank assembly RS_GCF_900555265.1. The GC content of the type genome is 43.16 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Manupana cosidentia sp. nov.

Candidatus Manupana cosidentia (NL. fem. n. *cosidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013100825*. The type genome for the species is the GenBank assembly RS_GCF_013098515.1. The GC content of the type genome is 50.76 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Manupana demulibra sp. nov.

Candidatus Manupana demulibra (NL. fem. n. *demulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *TM7x sp900556355*. The type genome for the species is the GenBank assembly RS_GCF_900757685.1. The GC content of the type genome is 43.03 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Manupana depacentia sp. nov.

Candidatus Manupana depacentia (NL. fem. n. *depacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013099195*. The type genome for the species is the GenBank assembly RS_GCF_013099195.1. The GC content of the type genome is 50.66 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Manupana depasatica sp. nov.

Candidatus Manupana depasatica (NL. fem. n. *depasatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp007845355*. The type genome for the species is the GenBank assembly RS_GCF_007845265.1. The GC content of the type genome is 43.34 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Manupana excamitudo sp. nov.

Candidatus Manupana excamitudo (NL. fem. n. *excamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900555675*. The type genome for the species is the GenBank assembly RS_GCF_900555675.1. The GC content of the type genome is 43.49 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Manupana exsatedo sp. nov.

Candidatus Manupana exsatedo (NL. fem. n. *exsatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013333695*. The type genome for the species is the GenBank assembly GCA_013333695.2. The GC content of the type genome is 51.13 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Manupana homicivita sp. nov.

Candidatus Manupana homicivita (NL. fem. n. *homicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp000803625*. The type genome for the species is the GenBank assembly RS_GCF_000803625.1. The GC content of the type genome is 44.45 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Manupana inabrousia sp. nov.

Candidatus Manupana inabrousia (NL. fem. n. *inabrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp005697565*. The type genome for the species is the GenBank assembly RS_GCF_005697565.1. The GC content of the type genome is 47.96 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Manupana inobribra sp. nov.

Candidatus Manupana inobribra (NL. fem. n. *inobribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900555425*. The type genome for the species is the GenBank assembly RS_GCF_900555425.1. The GC content of the type genome is 43.43 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Manupana laculitas sp. nov.

Candidatus Manupana laculitas (NL. fem. n. *laculitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013099015*. The type genome for the species is the GenBank assembly RS_GCF_013099015.1. The GC content of the type genome is 50.74 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Manupana metapago sp. nov.

Candidatus Manupana metapago (NL. fem. n. *metapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp013333495*. The type genome for the species is the GenBank assembly GCA_013333495.2. The GC content of the type genome is 48.56 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Manupana murelago sp. nov.

Candidatus Manupana murelago (NL. fem. n. *murelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp005697215*. The type genome for the species is the GenBank assembly RS_GCF_013100845.1. The GC content of the type genome is 50.81 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Manupana nicomicella sp. nov.

Candidatus Manupana nicomicella (NL. fem. n. *nicomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp010202465*. The type genome for the species is the GenBank assembly RS_GCF_010202465.1. The GC content of the type genome is 50.94 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Manupana repecitura sp. nov.

Candidatus Manupana repecitura (NL. fem. n. *repecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TM7x sp900556885*. The type genome for the species is the GenBank assembly RS_GCF_900556885.1. The GC content of the type genome is 43.64 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Manupana sonabetta sp. nov.

Candidatus Manupana sonabetta (NL. fem. n. *sonabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *TM7x sp010202845*. The type genome for the species is the GenBank assembly RS_GCF_010202845.1. The GC content of the type genome is 50.74 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Manuparia cilibitas sp. nov.

Candidatus Manuparia cilibitas (NL. fem. n. *cilibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIZ01 sp014382805*. The type genome for the species is the GenBank assembly GCA_014382805.1. The GC content of the type genome is 54.31 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Manuparia gen. nov.

Candidatus Manuparia (NL. fem. n. *Manuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNIZ01*. The type species for the genus is *Candidatus* Manuparia cilibitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Manupella capudilenta sp. nov.

Candidatus Manupella capudilenta (NL. fem. n. *capudilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPX01 sp011390535*. The type genome for the species is the GenBank assembly GCA_011390535.1. The GC content of the type genome is 48.07 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Manupella gen. nov.

Candidatus Manupella (NL. fem. n. *Manupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLPX01*. The type species for the genus is *Candidatus* Manupella capudilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLPX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manupellaceae.

Description of *Candidatus* Manupellaceae fam. nov.

Candidatus Manupellaceae (NL. fem. n. *Manupellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLPX01.* The type genus for the taxon is *Candidatus* Manupella .

According to the original version of GTDB R06-RS202, this family belongs to the order *HGW-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacellales.

Description of *Candidatus* Manupella penecitrix sp. nov.

Candidatus Manupella penecitrix (NL. fem. n. *penecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPX01 sp007131745*. The type genome for the species is the GenBank assembly GCA_007131745.1. The GC content of the type genome is 51.54 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Manupia depelicella sp. nov.

Candidatus Manupia depelicella (NL. fem. n. *depelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-46-25 sp001775835*. The type genome for the species is the GenBank assembly GCA_001774085.1. The GC content of the type genome is 51.37 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Manupia gen. nov.

Candidatus Manupia (NL. fem. n. *Manupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WO2-46-25*. The type species for the genus is *Candidatus* Manupia depelicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *M10-OD1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorifidaceae.

Description of *Candidatus* Manupida catapifica sp. nov.

Candidatus Manupida catapifica (NL. fem. n. *catapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2709565 sp002709565*. The type genome for the species is the GenBank assembly GCA_002709565.1. The GC content of the type genome is 44.86 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Manupida gen. nov.

Candidatus Manupida (NL. fem. n. *Manupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2709565*. The type species for the genus is *Candidatus* Manupida catapifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenellaceae.

Description of *Candidatus* Manuposa rosarax sp. nov.

Candidatus Manuposa rosarax (NL. fem. n. *rosarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDJ01 sp903877335*. The type genome for the species is the GenBank assembly GCA_903843795.1. The GC content of the type genome is 51.96 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Manuposa gen. nov.

Candidatus Manuposa (NL. fem. n. *Manuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRDJ01*. The type species for the genus is *Candidatus* Manuposa rosarax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Manupula viginago sp. nov.

Candidatus Manupula viginago (NL. fem. n. *viginago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVXW01 sp903910005*. The type genome for the species is the GenBank assembly GCA_903887595.1. The GC content of the type genome is 58.0 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Manupula gen. nov.

Candidatus Manupula (NL. fem. n. *Manupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVXW01*. The type species for the genus is *Candidatus* Manupula viginago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Maribacter bicinatio sp. nov.

Candidatus Maribacter bicinatio (NL. fem. n. *bicinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter sp011050675*. The type genome for the species is the GenBank assembly GCA_011049845.1. The GC content of the type genome is 34.65 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Maribacter depasago sp. nov.

Candidatus Maribacter depasago (NL. fem. n. *depasago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter sp002742365*. The type genome for the species is the GenBank assembly RS_GCF_003970695.1. The GC content of the type genome is 39.35 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Maribacter ephipentia sp. nov.

Candidatus Maribacter ephipentia (NL. fem. n. *ephipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter sp002742265*. The type genome for the species is the GenBank assembly RS_GCF_002742265.1. The GC content of the type genome is 40.81 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Maribacter resulatio sp. nov.

Candidatus Maribacter resulatio (NL. fem. n. *resulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter sp005771495*. The type genome for the species is the GenBank assembly RS_GCF_005771495.1. The GC content of the type genome is 36.01 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Maribacter rudicago sp. nov.

Candidatus Maribacter rudicago (NL. fem. n. *rudicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter sp001913155*. The type genome for the species is the GenBank assembly RS_GCF_001673755.1. The GC content of the type genome is 34.27 % and the genome length is 4.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater from shallow-sea hydrothermal system".

Description of *Candidatus* Maribacter adbelibula sp. nov.

Candidatus Maribacter adbelibula (NL. fem. n. *adbelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter_A sp000153165*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000153165.2. The GC content of the type genome is 36.98 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Maribacter arrugago sp. nov.

Candidatus Maribacter arrugago (NL. fem. n. *arrugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter_A sp002749285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002749285.1. The GC content of the type genome is 41.94 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Maribacter conigicella sp. nov.

Candidatus Maribacter conigicella (NL. fem. n. *conigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter_A sp014596745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014596745.1. The GC content of the type genome is 40.08 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Maribacter refocatio sp. nov.

Candidatus Maribacter refocatio (NL. fem. n. *refocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maribacter_A sp013001935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013001935.1. The GC content of the type genome is 38.41 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Maricaulis addivessa sp. nov.

Candidatus Maricaulis addivessa (NL. fem. n. *addivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maricaulis sp005871165*. The type genome for the species is the GenBank assembly RS_GCF_005871165.1. The GC content of the type genome is 63.63 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Maricaulis desepax sp. nov.

Candidatus Maricaulis desepax (NL. fem. n. *desepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maricaulis sp002707795*. The type genome for the species is the GenBank assembly GCA_002719875.1. The GC content of the type genome is 65.58 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Maricaulis subinitura sp. nov.

Candidatus Maricaulis subinitura (NL. fem. n. *subinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maricaulis sp002694345*. The type genome for the species is the GenBank assembly GCA_002694345.1. The GC content of the type genome is 63.91 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Maridesulfovibrio dicabastra sp. nov.

Candidatus Maridesulfovibrio dicabastra (NL. fem. n. *dicabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maridesulfovibrio sp010470675*. The type genome for the species is the GenBank assembly RS_GCF_010470675.1. The GC content of the type genome is 49.86 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Maridesulfovibrio excocentia sp. nov.

Candidatus Maridesulfovibrio excocentia (NL. fem. n. *excocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Maridesulfovibrio sp010470665*. The type genome for the species is the GenBank assembly RS_GCF_010470665.1. The GC content of the type genome is 48.0 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Maridesulfovibrio mahemessa sp. nov.

Candidatus Maridesulfovibrio mahemessa (NL. fem. n. *mahemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maridesulfovibrio sp002340305*. The type genome for the species is the GenBank assembly GCA_002340305.1. The GC content of the type genome is 47.32 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Maridesulfovibrio rorulitio sp. nov.

Candidatus Maridesulfovibrio rorulitio (NL. fem. n. *rorulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maridesulfovibrio sp004923195*. The type genome for the species is the GenBank assembly RS_GCF_004923195.1. The GC content of the type genome is 47.4 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Maridesulfovibrio rumififorma sp. nov.

Candidatus Maridesulfovibrio rumififorma (NL. fem. n. *rumififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maridesulfovibrio sp006210265*. The type genome for the species is the GenBank assembly GCA_006210265.1. The GC content of the type genome is 40.85 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Marinibacterium funivitia sp. nov.

Candidatus Marinibacterium funivitia (NL. fem. n. *funivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinibacterium sp003217735*. The type genome for the species is the GenBank assembly RS_GCF_003217735.2. The GC content of the type genome is 65.57 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Marinibacterium retunitoga sp. nov.

Candidatus Marinibacterium retunitoga (NL. fem. n. *retunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinibacterium sp002709405*. The type genome for the species is the GenBank assembly GCA_002709405.1. The GC content of the type genome is 65.73 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Mariniblastus excomivita sp. nov.

Candidatus Mariniblastus excomivita (NL. fem. n. *excomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariniblastus sp014237975*. The type genome for the species is the GenBank assembly GCA_014237975.1. The GC content of the type genome is 52.45 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Mariniblastus monimugo sp. nov.

Candidatus Mariniblastus monimugo (NL. fem. n. *monimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariniblastus sp011523945*. The type genome for the species is the GenBank assembly GCA_011523945.1. The GC content of the type genome is 47.93 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Mariniblastus pluscitrix sp. nov.

Candidatus Mariniblastus pluscitrix (NL. fem. n. *pluscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariniblastus sp011087765*. The type genome for the species is the GenBank assembly GCA_011087765.1. The GC content of the type genome is 48.23 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Marinicaulis adtiliforma sp. nov.

Candidatus Marinicaulis adtiliforma (NL. fem. n. *adtiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicaulis sp002704915*. The type genome for the species is the GenBank assembly GCA_002704915.1. The GC content of the type genome is 59.08 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Marinicaulis bonitatica sp. nov.

Candidatus Marinicaulis bonitatica (NL. fem. n. *bonitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicaulis sp002388885*. The type genome for the species is the GenBank assembly GCA_002388885.1. The GC content of the type genome is 57.19 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Marinicaulis derecitrix sp. nov.

Candidatus Marinicaulis derecitrix (NL. fem. n. *derecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicaulis sp013151255*. The type genome for the species is the GenBank assembly GCA_013151255.1. The GC content of the type genome is 57.51 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Marinicaulis excomitica sp. nov.

Candidatus Marinicaulis excomitica (NL. fem. n. *excomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicaulis sp013151435*. The type genome for the species is the GenBank assembly GCA_013151435.1. The GC content of the type genome is 52.35 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Marinicaulis obsatibra sp. nov.

Candidatus Marinicaulis obsatibra (NL. fem. n. *obsatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Marinicaulis sp001657385*. The type genome for the species is the GenBank assembly GCA_001657385.1. The GC content of the type genome is 64.51 % and the genome length is 4.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture inoculated with black band disease microbial mat".

Description of *Candidatus* Marinicaulis recumitura sp. nov.

Candidatus Marinicaulis recumitura (NL. fem. n. *recumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicaulis sp013002535*. The type genome for the species is the GenBank assembly GCA_013043665.1. The GC content of the type genome is 54.04 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Marinicella arrabax sp. nov.

Candidatus Marinicella arrabax (NL. fem. n. *arrabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinicella sp008501575*. The type genome for the species is the GenBank assembly GCA_008501575.1. The GC content of the type genome is 43.69 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Marinifilum encenimonia sp. nov.

Candidatus Marinifilum encenimonia (NL. fem. n. *encenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinifilum sp009295825*. The type genome for the species is the GenBank assembly RS_GCF_009295825.1. The GC content of the type genome is 34.49 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Marinifilum vitabitas sp. nov.

Candidatus Marinifilum vitabitas (NL. fem. n. *vitabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinifilum sp013141825*. The type genome for the species is the GenBank assembly RS_GCF_013141825.1. The GC content of the type genome is 37.29

% and the genome length is 5.29 Mbp.

Description of *Candidatus* Mariniflexile mirifitas sp. nov.

Candidatus Mariniflexile mirifitas (NL. fem. n. *mirifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariniflexile sp002848895*. The type genome for the species is the GenBank assembly GCA_002848895.1. The GC content of the type genome is 34.37 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Mariniflexile selibentia sp. nov.

Candidatus Mariniflexile selibentia (NL. fem. n. *selibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariniflexile sp002426835*. The type genome for the species is the GenBank assembly RS_GCF_009746565.1. The GC content of the type genome is 37.78 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Marinilabilia carecibra sp. nov.

Candidatus Marinilabilia carecibra (NL. fem. n. *carecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinilabilia sp002411085*. The type genome for the species is the GenBank assembly GCA_002411085.1. The GC content of the type genome is 42.2 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Marinilabilia recucitura sp. nov.

Candidatus Marinilabilia recucitura (NL. fem. n. *recucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinilabilia sp003121985*. The type genome for the species is the GenBank assembly RS_GCF_003121985.1. The GC content of the type genome is 40.85 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Marinirhabdus cerucentia sp. nov.

Candidatus Marinirhabdus cerucentia (NL. fem. n. *cerucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinirhabdus sp002375495*. The type genome for the species is the GenBank assembly GCA_002693005.1. The GC content of the type genome is 39.75 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Marinirhabdus detecicella sp. nov.

Candidatus Marinirhabdus detecicella (NL. fem. n. *detecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinirhabdus sp002707745*. The type genome for the species is the GenBank assembly GCA_002388705.1. The GC content of the type genome is 38.13 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Marinirhabdus illepimonia sp. nov.

Candidatus Marinirhabdus illepimonia (NL. fem. n. *illepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinirhabdus sp011044175*. The type genome for the species is the GenBank assembly RS_GCF_011044175.1. The GC content of the type genome is 37.43 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Marinirhabdus necubetta sp. nov.

Candidatus Marinirhabdus necubetta (NL. fem. n. *necubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinirhabdus sp002337605*. The type genome for the species is the GenBank assembly GCA_002337605.1. The GC content of the type genome is 38.62 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Marinisoma allapatica sp. nov.

Candidatus Marinisoma allapatica (NL. fem. n. *allapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902624575*. The type genome for the species is the GenBank assembly GCA_902624575.1. The GC content of the type genome is 31.66 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Marinisoma anastastra sp. nov.

Candidatus Marinisoma anastastra (NL. fem. n. *anastastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp012963075*. The type genome for the species is the GenBank assembly GCA_012963075.1. The GC content of the type genome is 32.59 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Marinisoma armifessa sp. nov.

Candidatus Marinisoma armifessa (NL. fem. n. *armifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp000402755*. The type genome for the species is the GenBank assembly GCA_000402755.1. The GC content of the type genome is 32.8 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Marinisoma depubisca sp. nov.

Candidatus Marinisoma depubisca (NL. fem. n. *depubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp014240005*. The type genome for the species is the GenBank assembly GCA_012959475.1. The GC content of the type genome is 32.54 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Marinisoma domabicula sp. nov.

Candidatus Marinisoma domabicula (NL. fem. n. *domabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902538565*. The type genome for the species is the GenBank assembly GCA_902521825.1. The GC content of the type genome is 31.79 %

and the genome length is 0.91 Mbp.

Description of *Candidatus* Marinisoma ecfacimonas sp. nov.

Candidatus Marinisoma ecfacimonas (NL. fem. n. *ecfacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902525615*. The type genome for the species is the GenBank assembly GCA_902525615.1. The GC content of the type genome is 31.55 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Marinisoma inherax sp. nov.

Candidatus Marinisoma inherax (NL. fem. n. *inherax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902624275*. The type genome for the species is the GenBank assembly GCA_902624275.1. The GC content of the type genome is 31.52 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Marinisoma labecicula sp. nov.

Candidatus Marinisoma labecicula (NL. fem. n. *labecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp002348725*. The type genome for the species is the GenBank assembly GCA_002348725.1. The GC content of the type genome is 31.6 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Marinisoma notacilega sp. nov.

Candidatus Marinisoma notacilega (NL. fem. n. *notacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp002710515*. The type genome for the species is the GenBank assembly GCA_902578385.1. The GC content of the type genome is 31.24 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Marinisoma obtunugo sp. nov.

Candidatus Marinisoma obtunugo (NL. fem. n. *obtunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp002701645*. The type genome for the species is the GenBank assembly GCA_002701645.1. The GC content of the type genome is 32.34 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Marinisoma octacicella sp. nov.

Candidatus Marinisoma octacicella (NL. fem. n. *octacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902526795*. The type genome for the species is the GenBank assembly GCA_902526795.1. The GC content of the type genome is 31.06 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Marinisoma octopifica sp. nov.

Candidatus Marinisoma octopifica (NL. fem. n. *octopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902636035*. The type genome for the species is the GenBank assembly GCA_902636035.1. The GC content of the type genome is 31.42 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Marinisoma pepenousia sp. nov.

Candidatus Marinisoma pepenousia (NL. fem. n. *pepenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902576865*. The type genome for the species is the GenBank assembly GCA_902576865.1. The GC content of the type genome is 31.68 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Marinisoma pluscentia sp. nov.

Candidatus Marinisoma pluscentia (NL. fem. n. *pluscentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902575395*. The type genome for the species is the GenBank assembly GCA_902575395.1. The GC content of the type genome is 32.62 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Marinisoma repagimonia sp. nov.

Candidatus Marinisoma repagimonia (NL. fem. n. *repagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp000402655*. The type genome for the species is the GenBank assembly GCA_902597955.1. The GC content of the type genome is 31.57 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Marinisoma resupifica sp. nov.

Candidatus Marinisoma resupifica (NL. fem. n. *resupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902599655*. The type genome for the species is the GenBank assembly GCA_011523025.1. The GC content of the type genome is 31.6 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Marinisoma rosacessa sp. nov.

Candidatus Marinisoma rosacessa (NL. fem. n. *rosacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp902629855*. The type genome for the species is the GenBank assembly GCA_902624155.1. The GC content of the type genome is 31.27 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Marinisoma viripimonas sp. nov.

Candidatus Marinisoma viripimonas (NL. fem. n. *viripimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinisoma sp000494305*. The type genome for the species is the GenBank assembly GCA_000494305.1. The GC content of the type genome is 32.62 %

and the genome length is 1.12 Mbp.

Description of *Candidatus* Marinitoga carucitura sp. nov.

Candidatus Marinitoga carucitura (NL. fem. n. *carucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinitoga sp001021165*. The type genome for the species is the GenBank assembly RS_GCF_001021165.1. The GC content of the type genome is 27.4 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Marinitoga sonivedo sp. nov.

Candidatus Marinitoga sonivedo (NL. fem. n. *sonivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinitoga sp011057715*. The type genome for the species is the GenBank assembly RS_GCF_011057715.1. The GC content of the type genome is 26.08 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Marinobacter adsibax sp. nov.

Candidatus Marinobacter adsibax (NL. fem. n. *adsibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp005871205*. The type genome for the species is the GenBank assembly RS_GCF_005871205.1. The GC content of the type genome is 57.36 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Marinobacter aglasicula sp. nov.

Candidatus Marinobacter aglasicula (NL. fem. n. *aglasicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp003441595*. The type genome for the species is the GenBank assembly RS_GCF_003441595.1. The GC content of the type genome is 57.65 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Marinobacter alembedo sp. nov.

Candidatus Marinobacter alembedo (NL. fem. n. *alembedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp008370345*. The type genome for the species is the GenBank assembly RS_GCF_008370345.1. The GC content of the type genome is 55.61 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Marinobacter antevessa sp. nov.

Candidatus Marinobacter antevessa (NL. fem. n. *antevessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp005298175*. The type genome for the species is the GenBank assembly RS_GCF_005298175.1. The GC content of the type genome is 57.37 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Marinobacter apharitia sp. nov.

Candidatus Marinobacter apharitia (NL. fem. n. *apharitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002407605*. The type genome for the species is the GenBank assembly RS_GCF_002407605.1. The GC content of the type genome is 53.65 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Marinobacter apsocibula sp. nov.

Candidatus Marinobacter apsocibula (NL. fem. n. *apsocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp000169375*. The type genome for the species is the GenBank assembly RS_GCF_000169375.1. The GC content of the type genome is 54.34 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Marinobacter asbesicula sp. nov.

Candidatus Marinobacter asbesicula (NL. fem. n. *asbesicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp900188435*. The type genome for the species is the GenBank assembly RS_GCF_900188435.1. The GC content of the type genome is 56.87 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Marinobacter bonifibula sp. nov.

Candidatus Marinobacter bonifibula (NL. fem. n. *bonifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp004792665*. The type genome for the species is the GenBank assembly RS_GCF_012956055.1. The GC content of the type genome is 57.3 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Marinobacter cacopatica sp. nov.

Candidatus Marinobacter cacopatica (NL. fem. n. *cacopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp013393545*. The type genome for the species is the GenBank assembly GCA_013393545.1. The GC content of the type genome is 54.55 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Marinobacter colipivita sp. nov.

Candidatus Marinobacter colipivita (NL. fem. n. *colipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp004353225*. The type genome for the species is the GenBank assembly RS_GCF_004353225.1. The GC content of the type genome is 53.52 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Marinobacter dirititio sp. nov.

Candidatus Marinobacter dirititio (NL. fem. n. *dirititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp008795955*. The type genome for the species is the GenBank assembly RS_GCF_008795955.1. The GC content of the type genome is 56.92

% and the genome length is 4.93 Mbp.

Description of *Candidatus* Marinobacter duricitas sp. nov.

Candidatus Marinobacter duricitas (NL. fem. n. *duricitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp000686085*. The type genome for the species is the GenBank assembly GCA_001314605.1. The GC content of the type genome is 57.58 % and the genome length is 4.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Marinobacter effulitas sp. nov.

Candidatus Marinobacter effulitas (NL. fem. n. *effulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp900188315*. The type genome for the species is the GenBank assembly RS_GCF_900188315.1. The GC content of the type genome is 57.24 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Marinobacter ellebifica sp. nov.

Candidatus Marinobacter ellebifica (NL. fem. n. *ellebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp003030785*. The type genome for the species is the GenBank assembly GCA_003030785.1. The GC content of the type genome is 56.78 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Marinobacter esculitrix sp. nov.

Candidatus Marinobacter esculitrix (NL. fem. n. *esculitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp001752365*. The type genome for the species is the GenBank assembly RS_GCF_001752365.1. The GC content of the type genome is 59.66 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "sediment".

Description of *Candidatus* Marinobacter illibitoga sp. nov.

Candidatus Marinobacter illibitoga (NL. fem. n. *illibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp011074955*. The type genome for the species is the GenBank assembly RS_GCF_011074955.1. The GC content of the type genome is 56.57 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Marinobacter immodatio sp. nov.

Candidatus Marinobacter immodatio (NL. fem. n. *immodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp001858325*. The type genome for the species is the GenBank assembly RS_GCF_001858325.1. The GC content of the type genome is 53.85 % and the genome length is 4.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment sample of Kongsfizorden; Arctic".

Description of *Candidatus* Marinobacter insomimonia sp. nov.

Candidatus Marinobacter insomimonia (NL. fem. n. *insomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002707215*. The type genome for the species is the GenBank assembly GCA_002707215.1. The GC content of the type genome is 58.13 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Marinobacter lametisca sp. nov.

Candidatus Marinobacter lametisca (NL. fem. n. *lametisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp900215155*. The type genome for the species is the GenBank assembly RS_GCF_002846515.1. The GC content of the type genome is 53.9 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Marinobacter lenunedo sp. nov.

Candidatus Marinobacter lenunedo (NL. fem. n. *lenunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp001650915*. The type genome for the species is the GenBank assembly RS_GCF_001650765.1. The GC content of the type genome is 57.2 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Marinobacter manibitia sp. nov.

Candidatus Marinobacter manibitia (NL. fem. n. *manibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp008107725*. The type genome for the species is the GenBank assembly RS_GCF_008107725.1. The GC content of the type genome is 56.95 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Marinobacter murilitia sp. nov.

Candidatus Marinobacter murilitia (NL. fem. n. *murilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002726615*. The type genome for the species is the GenBank assembly GCA_002714765.1. The GC content of the type genome is 56.95 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Marinobacter nocumivita sp. nov.

Candidatus Marinobacter nocumivita (NL. fem. n. *nocumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp001447155*. The type genome for the species is the GenBank assembly RS_GCF_001447155.2. The GC content of the type genome is 57.17 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Marinobacter ossucitrix sp. nov.

Candidatus Marinobacter ossucitrix (NL. fem. n. *ossucitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002933275*. The type genome for the species is the GenBank assembly RS_GCF_002933275.1. The GC content of the type genome is 57.25 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Marinobacter prodrivita sp. nov.

Candidatus Marinobacter prodrivita (NL. fem. n. *prodrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp003994855*. The type genome for the species is the GenBank assembly RS_GCF_003994855.1. The GC content of the type genome is 57.11 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Marinobacter rinocitia sp. nov.

Candidatus Marinobacter rinocitia (NL. fem. n. *rinocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002732725*. The type genome for the species is the GenBank assembly GCA_002732725.1. The GC content of the type genome is 57.03 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Marinobacter sonivastra sp. nov.

Candidatus Marinobacter sonivastra (NL. fem. n. *sonivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp002563885*. The type genome for the species is the GenBank assembly RS_GCF_002563815.1. The GC content of the type genome is 54.55 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Marinobacter tumefitas sp. nov.

Candidatus Marinobacter tumefitas (NL. fem. n. *tumefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp003318275*. The type genome for the species is the GenBank assembly RS_GCF_003318275.1. The GC content of the type genome is 53.7 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Marinobacter vehiciforma sp. nov.

Candidatus Marinobacter vehiciforma (NL. fem. n. *vehiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter sp014359475*. The type genome for the species is the GenBank assembly GCA_014359475.1. The GC content of the type genome is 58.4 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Marinobacter adnepitica sp. nov.

Candidatus Marinobacter adnepitica (NL. fem. n. *adnepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter_A sp004327985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004327985.1. The GC content of the type genome is 60.88 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Marinobacter benemigena sp. nov.

Candidatus Marinobacter benemigena (NL. fem. n. *benemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter_A sp003789045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003789045.1. The GC content of the type genome is 60.88 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Marinobacter rubicibra sp. nov.

Candidatus Marinobacter rubicibra (NL. fem. n. *rubicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacter_A sp002717955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002683455.1. The GC content of the type genome is 55.4 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Marinobacterium categibra sp. nov.

Candidatus Marinobacterium categibra (NL. fem. n. *categibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp003250495*. The type genome for the species is the GenBank assembly GCA_003250495.1. The GC content of the type genome is 63.36 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Marinobacterium derelivita sp. nov.

Candidatus Marinobacterium derelivita (NL. fem. n. *derelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp013868415*. The type genome for the species is the GenBank assembly RS_GCF_013868415.1. The GC content of the type genome is 56.39 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Marinobacterium impinugo sp. nov.

Candidatus Marinobacterium impinugo (NL. fem. n. *impinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp013373575*. The type genome for the species is the GenBank assembly GCA_013373575.1. The GC content of the type genome is 51.1 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Marinobacterium legifitia sp. nov.

Candidatus Marinobacterium legifitia (NL. fem. n. *legifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp000705555*. The type genome for the species is the

GenBank assembly RS_GCF_000705555.1. The GC content of the type genome is 56.45 % and the genome length is 4.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment sample from brackwater".

Description of *Candidatus* Marinobacterium tegimatica sp. nov.

Candidatus Marinobacterium tegimatica (NL. fem. n. *tegimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp013283365*. The type genome for the species is the GenBank assembly RS_GCF_013283405.1. The GC content of the type genome is 48.25 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Marinobacterium vigenitura sp. nov.

Candidatus Marinobacterium vigenitura (NL. fem. n. *vigenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium sp012848475*. The type genome for the species is the GenBank assembly RS_GCF_012848475.1. The GC content of the type genome is 47.73 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Marinobacterium appicilenta sp. nov.

Candidatus Marinobacterium appicilenta (NL. fem. n. *appicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinobacterium_A sp013373085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013373085.1. The GC content of the type genome is 59.99 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Marinomonas adcumentia sp. nov.

Candidatus Marinomonas adcumentia (NL. fem. n. *adcumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp013373235*. The type genome for the species is the GenBank assembly GCA_013373235.1. The GC content of the type genome is 42.3 %

and the genome length is 4.47 Mbp.

Description of *Candidatus* Marinomonas appicibula sp. nov.

Candidatus Marinomonas appicibula (NL. fem. n. *appicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp012584435*. The type genome for the species is the GenBank assembly RS_GCF_012584435.1. The GC content of the type genome is 46.03 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Marinomonas arcubugo sp. nov.

Candidatus Marinomonas arcubugo (NL. fem. n. *arcubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp004352835*. The type genome for the species is the GenBank assembly RS_GCF_004352835.1. The GC content of the type genome is 42.6 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Marinomonas biparugo sp. nov.

Candidatus Marinomonas biparugo (NL. fem. n. *biparugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp000153025*. The type genome for the species is the GenBank assembly RS_GCF_000153025.1. The GC content of the type genome is 40.87 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Marinomonas bugilousia sp. nov.

Candidatus Marinomonas bugilousia (NL. fem. n. *bugilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp000017285*. The type genome for the species is the GenBank assembly RS_GCF_012726345.1. The GC content of the type genome is 42.71 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Marinomonas ceraretta sp. nov.

Candidatus Marinomonas ceraretta (NL. fem. n. *ceraretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp006385675*. The type genome for the species is the GenBank assembly RS_GCF_006385675.1. The GC content of the type genome is 47.96 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Marinomonas diponousia sp. nov.

Candidatus Marinomonas diponousia (NL. fem. n. *diponousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp001624705*. The type genome for the species is the GenBank assembly RS_GCF_001624595.1. The GC content of the type genome is 40.43 % and the genome length is 5.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coastal seawater".

Description of *Candidatus* Marinomonas hemiditia sp. nov.

Candidatus Marinomonas hemiditia (NL. fem. n. *hemiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp004352855*. The type genome for the species is the GenBank assembly RS_GCF_004352855.1. The GC content of the type genome is 45.67 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Marinomonas lanifetta sp. nov.

Candidatus Marinomonas lanifetta (NL. fem. n. *lanifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp001625355*. The type genome for the species is the GenBank assembly RS_GCF_001625355.1. The GC content of the type genome is 44.63 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "saline water".

Description of *Candidatus* Marinomonas scaccastra sp. nov.

Candidatus Marinomonas scaccastra (NL. fem. n. *scaccastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinomonas sp008122525*. The type genome for the species is the GenBank assembly RS_GCF_008122525.1. The GC content of the type genome is 46.05 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Marinoscillum abnocousia sp. nov.

Candidatus Marinoscillum abnocousia (NL. fem. n. *abnocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinoscillum sp902506655*. The type genome for the species is the GenBank assembly RS_GCF_902506655.1. The GC content of the type genome is 45.74 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Marinoscillum culilago sp. nov.

Candidatus Marinoscillum culilago (NL. fem. n. *culilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinoscillum sp002729235*. The type genome for the species is the GenBank assembly GCA_002729235.1. The GC content of the type genome is 40.09 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Marinospirillum adhosatio sp. nov.

Candidatus Marinospirillum adhosatio (NL. fem. n. *adhosatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinospirillum sp007119985*. The type genome for the species is the GenBank assembly GCA_007119985.1. The GC content of the type genome is 52.96 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Marinospirillum allapugo sp. nov.

Candidatus Marinospirillum allapugo (NL. fem. n. *allapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Marinospirillum sp007116195*. The type genome for the species is the GenBank assembly GCA_007116195.1. The GC content of the type genome is 49.54 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Marinospirillum anastiforma sp. nov.

Candidatus Marinospirillum anastiforma (NL. fem. n. *anastiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinospirillum sp012727935*. The type genome for the species is the GenBank assembly GCA_012727935.1. The GC content of the type genome is 43.86 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Marinospirillum monocitas sp. nov.

Candidatus Marinospirillum monocitas (NL. fem. n. *monocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinospirillum sp007116865*. The type genome for the species is the GenBank assembly GCA_007116865.1. The GC content of the type genome is 54.1 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Marinosulfonomonas attelitrix sp. nov.

Candidatus Marinosulfonomonas attelitrix (NL. fem. n. *attelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp002352425*. The type genome for the species is the GenBank assembly GCA_002352425.1. The GC content of the type genome is 55.05 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Marinosulfonomonas evangousia sp. nov.

Candidatus Marinosulfonomonas evangousia (NL. fem. n. *evangousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp003535335*. The type genome for the species is the GenBank assembly GCA_003535335.1. The GC content of the type genome is 51.85 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Marinosulfonomonas excogastra sp. nov.

Candidatus Marinosulfonomonas excogastra (NL. fem. n. *excogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp001321835*. The type genome for the species is the GenBank assembly GCA_001321835.1. The GC content of the type genome is 54.25 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single cell amplified by MDA; hadopelagic water column of the Puerto Rico Trench at 8200 m depth".

Description of *Candidatus* Marinosulfonomonas habacigena sp. nov.

Candidatus Marinosulfonomonas habacigena (NL. fem. n. *habacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp002732995*. The type genome for the species is the GenBank assembly GCA_002732995.1. The GC content of the type genome is 56.24 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Marinosulfonomonas irradibula sp. nov.

Candidatus Marinosulfonomonas irradibula (NL. fem. n. *irradibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp002748285*. The type genome for the species is the GenBank assembly GCA_002748285.1. The GC content of the type genome is 58.68 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Marinosulfonomonas lanugivita sp. nov.

Candidatus Marinosulfonomonas lanugivita (NL. fem. n. *lanugivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinosulfonomonas sp003544895*. The type genome for the species is the GenBank assembly RS_GCF_003544895.1. The GC content of the type genome is 57.38 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Marinovum resacugo sp. nov.

Candidatus Marinovum resacugo (NL. fem. n. *resacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marinovum sp006226775*. The type genome for the species is the GenBank assembly GCA_006226775.1. The GC content of the type genome is 67.02 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Mariprofundus decenentia sp. nov.

Candidatus Mariprofundus decenentia (NL. fem. n. *decenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariprofundus sp013387455*. The type genome for the species is the GenBank assembly RS_GCF_013387455.1. The GC content of the type genome is 50.96 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Mariprofundus embamitica sp. nov.

Candidatus Mariprofundus embamitica (NL. fem. n. *embamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariprofundus sp013387475*. The type genome for the species is the GenBank assembly RS_GCF_013387475.1. The GC content of the type genome is 51.94 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Mariprofundus inlapigena sp. nov.

Candidatus Mariprofundus inlapigena (NL. fem. n. *inlapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariprofundus sp003665155*. The type genome for the species is the GenBank assembly RS_GCF_003665155.1. The GC content of the type genome is 46.65 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Mariprofundus inresimonas sp. nov.

Candidatus Mariprofundus inresimonas (NL. fem. n. *inresimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariprofundus sp001871925*. The type genome for the species is the GenBank assembly GCA_001871925.1. The GC content of the type genome is 53.2 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Mariprofundus noninitio sp. nov.

Candidatus Mariprofundus noninitio (NL. fem. n. *noninitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mariprofundus sp002791575*. The type genome for the species is the GenBank assembly GCA_002781905.1. The GC content of the type genome is 54.38 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Marisediminicola chalbugo sp. nov.

Candidatus Marisediminicola chalbugo (NL. fem. n. *chalbugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marisediminicola sp011057645*. The type genome for the species is the GenBank assembly RS_GCF_011057645.1. The GC content of the type genome is 68.52 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Marisediminicola legifessa sp. nov.

Candidatus Marisediminicola legifessa (NL. fem. n. *legifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marisediminicola sp014378715*. The type genome for the species is the GenBank assembly GCA_014378715.1. The GC content of the type genome is 69.18 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Marisediminicola socagibra sp. nov.

Candidatus Marisediminicola socagibra (NL. fem. n. *socagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Marisediminicola sp014377425*. The type genome for the species is the GenBank assembly GCA_014377425.1. The GC content of the type genome is 62.43 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Marithrix denecastra sp. nov.

Candidatus Marithrix denecastra (NL. fem. n. *denecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marithrix sp001723685*. The type genome for the species is the GenBank assembly RS_GCF_001723665.1. The GC content of the type genome is 34.03 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "segment 2 of single filament from GC246 mud volcano site".

Description of *Candidatus* Maritimibacter anactitas sp. nov.

Candidatus Maritimibacter anactitas (NL. fem. n. *anactitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter sp011389895*. The type genome for the species is the GenBank assembly GCA_011389895.1. The GC content of the type genome is 63.33 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Maritimibacter curabitura sp. nov.

Candidatus Maritimibacter curabitura (NL. fem. n. *curabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter sp001626765*. The type genome for the species is the GenBank assembly GCA_001626765.1. The GC content of the type genome is 64.32 % and the genome length is 4.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 149 - depth 10m".

Description of *Candidatus* Maritimibacter fetutitas sp. nov.

Candidatus Maritimibacter fetutitas (NL. fem. n. *fetutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Maritimibacter sp002695005*. The type genome for the species is the GenBank assembly GCA_002695005.1. The GC content of the type genome is 64.42 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Maritimibacter homunentia sp. nov.

Candidatus Maritimibacter homunentia (NL. fem. n. *homunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter sp003520545*. The type genome for the species is the GenBank assembly GCA_003520545.1. The GC content of the type genome is 62.27 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Maritimibacter recocifica sp. nov.

Candidatus Maritimibacter recocifica (NL. fem. n. *recocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter sp009882975*. The type genome for the species is the GenBank assembly RS_GCF_009882975.1. The GC content of the type genome is 66.14 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Maritimibacter accenimonas sp. nov.

Candidatus Maritimibacter accenimonas (NL. fem. n. *accenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter_A sp900177545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900177545.1. The GC content of the type genome is 65.74 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Maritimibacter coturitas sp. nov.

Candidatus Maritimibacter coturitas (NL. fem. n. *coturitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter_A sp003694465*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003694465.1. The GC content of the type genome is 67.61 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Maritimibacter fatifitoga sp. nov.

Candidatus Maritimibacter fatifitoga (NL. fem. n. *fatifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter_A sp001873585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001873585.1. The GC content of the type genome is 64.86 % and the genome length is 1.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Maritimibacter peripicella sp. nov.

Candidatus Maritimibacter peripicella (NL. fem. n. *peripicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter_A sp011100505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008086115.1. The GC content of the type genome is 66.2 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Maritimibacter rutabitrix sp. nov.

Candidatus Maritimibacter rutabitrix (NL. fem. n. *rutabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Maritimibacter_A sp002746935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002746935.1. The GC content of the type genome is 66.49 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Marivirga ignobetta sp. nov.

Candidatus Marivirga ignobetta (NL. fem. n. *ignobetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivirga sp003973485*. The type genome for the species is the GenBank assembly GCA_003973485.1. The GC content of the type genome is 34.48 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Marivita inturatio sp. nov.

Candidatus Marivita inturatio (NL. fem. n. *inturatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivita sp003149565*. The type genome for the species is the GenBank assembly GCA_003149565.1. The GC content of the type genome is 58.81 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Marivivens culibibula sp. nov.

Candidatus Marivivens culibibula (NL. fem. n. *culibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivivens sp001908835*. The type genome for the species is the GenBank assembly GCA_013373465.1. The GC content of the type genome is 56.44 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Marivivens exhedilenta sp. nov.

Candidatus Marivivens exhedilenta (NL. fem. n. *exhedilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivivens sp004145845*. The type genome for the species is the GenBank assembly RS_GCF_004145845.1. The GC content of the type genome is 62.85 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Marivivens infiriforma sp. nov.

Candidatus Marivivens infiriforma (NL. fem. n. *infiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivivens sp009920775*. The type genome for the species is the GenBank assembly GCA_009920775.1. The GC content of the type genome is 62.43 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Marivivens navifousia sp. nov.

Candidatus Marivivens navifousia (NL. fem. n. *navifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marivivens sp002850435*. The type genome for the species is the GenBank assembly RS_GCF_002850435.1. The GC content of the type genome is 56.78 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Marixanthomonas bucolitas sp. nov.

Candidatus Marixanthomonas bucolitas (NL. fem. n. *bucolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marixanthomonas sp002631855*. The type genome for the species is the GenBank assembly GCA_002631855.1. The GC content of the type genome is 36.02 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Marixanthomonas favilatio sp. nov.

Candidatus Marixanthomonas favilatio (NL. fem. n. *favilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marixanthomonas sp002360635*. The type genome for the species is the GenBank assembly GCA_002696105.1. The GC content of the type genome is 36.17 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Marixanthomonas occenilega sp. nov.

Candidatus Marixanthomonas occenilega (NL. fem. n. *occenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Marixanthomonas sp002364245*. The type genome for the species is the GenBank assembly GCA_002364245.1. The GC content of the type genome is 36.69 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Marixanthomonas semifedo sp. nov.

Candidatus Marixanthomonas semifedo (NL. fem. n. *semifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marixanthomonas sp003095375*. The type genome for the species is the GenBank assembly RS_GCF_003095375.1. The GC content of the type genome is 40.62 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Marmoricola adsulilenta sp. nov.

Candidatus Marmoricola adsulilenta (NL. fem. n. *adsulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola sp000426045*. The type genome for the species is the GenBank assembly RS_GCF_000426045.1. The GC content of the type genome is 69.85 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Marmoricola catafago sp. nov.

Candidatus Marmoricola catafago (NL. fem. n. *catafago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola sp001424755*. The type genome for the species is the GenBank assembly RS_GCF_001424755.1. The GC content of the type genome is 73.38 % and the genome length is 3.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Marmoricola eclipicula sp. nov.

Candidatus Marmoricola eclipicula (NL. fem. n. *eclipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola sp003674065*. The type genome for the species is the GenBank assembly RS_GCF_003674065.1. The GC content of the type genome is 71.97 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Marmoricola irrotitrix sp. nov.

Candidatus Marmoricola irrotitrix (NL. fem. n. *irrotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola_A sp011299595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011299595.1. The GC content of the type genome is 72.43 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Marmoricola tetenago sp. nov.

Candidatus Marmoricola tetenago (NL. fem. n. *tetenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola_A sp902805845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902805845.1. The GC content of the type genome is 71.31 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Marmoricola viburimonia sp. nov.

Candidatus Marmoricola viburimonia (NL. fem. n. *viburimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marmoricola_A sp902805865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902805865.1. The GC content of the type genome is 70.93 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Martelella ascalatica sp. nov.

Candidatus Martelella ascalatica (NL. fem. n. *ascalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Martelella sp013184775*. The type genome for the species is the

GenBank assembly RS_GCF_013184775.1. The GC content of the type genome is 59.78 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Martelella colopicula sp. nov.

Candidatus Martelella colopicula (NL. fem. n. *colopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Martelella sp001578105*. The type genome for the species is the GenBank assembly RS_GCF_001578105.1. The GC content of the type genome is 62.29 % and the genome length is 5.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "petroleum-contaminated soil with high salinity".

Description of *Candidatus* Martelella peridibula sp. nov.

Candidatus Martelella peridibula (NL. fem. n. *peridibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Martelella sp006516955*. The type genome for the species is the GenBank assembly RS_GCF_006516955.1. The GC content of the type genome is 58.66 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Martelella rudecisca sp. nov.

Candidatus Martelella rudecisca (NL. fem. n. *rudecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Martelella sp013459645*. The type genome for the species is the GenBank assembly RS_GCF_013459645.1. The GC content of the type genome is 61.82 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Marvinbryantia abmaticula sp. nov.

Candidatus Marvinbryantia abmaticula (NL. fem. n. *abmaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marvinbryantia sp900544685*. The type genome for the species is the GenBank assembly GCA_900544685.1. The GC content of the type genome is 43.12 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Marvinbryantia cerarimonas sp. nov.

Candidatus Marvinbryantia cerarimonas (NL. fem. n. *cerarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marvinbryantia sp900550755*. The type genome for the species is the GenBank assembly GCA_900550755.1. The GC content of the type genome is 49.77 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Marvinbryantia fidenigena sp. nov.

Candidatus Marvinbryantia fidenigena (NL. fem. n. *fidenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marvinbryantia sp900066075*. The type genome for the species is the GenBank assembly RS_GCF_003435055.1. The GC content of the type genome is 42.92 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Marvinbryantia oppugivita sp. nov.

Candidatus Marvinbryantia oppugivita (NL. fem. n. *oppugivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marvinbryantia sp014385005*. The type genome for the species is the GenBank assembly GCA_014385005.1. The GC content of the type genome is 42.72 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Marvinbryantia voragicula sp. nov.

Candidatus Marvinbryantia voragicula (NL. fem. n. *voragicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Marvinbryantia sp002473385*. The type genome for the species is the GenBank assembly GCA_002473385.1. The GC content of the type genome is 48.14 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Masocana letifimonas sp. nov.

Candidatus Masocana letifimonas (NL. fem. n. *letifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA912 sp002293965*. The type genome for the species is the GenBank assembly GCA_002293965.1. The GC content of the type genome is 60.08 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Masocana gen. nov.

Candidatus Masocana (NL. fem. n. *Masocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA912*. The type species for the genus is *Candidatus* Masocana letifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA912*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Masocanaceae.

Description of *Candidatus* Masocanaceae fam. nov.

Candidatus Masocanaceae (NL. fem. n. *Masocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA912.* The type genus for the taxon is *Candidatus* Masocana .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Masocaria bulapibula sp. nov.

Candidatus Masocaria bulapibula (NL. fem. n. *bulapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718655 sp002167345*. The type genome for the species is the GenBank assembly GCA_002167345.2. The GC content of the type genome is 36.39 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Masocaria gen. nov.

Candidatus Masocaria (NL. fem. n. *Masocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002718655*. The type species for the genus is *Candidatus* Masocaria bulapibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Masocaria obsoressa sp. nov.

Candidatus Masocaria obsoressa (NL. fem. n. *obsoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718655 sp002718655*. The type genome for the species is the GenBank assembly GCA_002718655.1. The GC content of the type genome is 34.56 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Masocaria reduvousia sp. nov.

Candidatus Masocaria reduvousia (NL. fem. n. *reduvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718655 sp002698235*. The type genome for the species is the GenBank assembly GCA_002704395.1. The GC content of the type genome is 36.31 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Masocaria rudecugo sp. nov.

Candidatus Masocaria rudecugo (NL. fem. n. *rudecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718655 sp902562835*. The type genome for the species is the GenBank assembly GCA_902562835.1. The GC content of the type genome is 36.19 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Masocella tomacitica sp. nov.

Candidatus Masocella tomacitica (NL. fem. n. *tomacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE1-39-12 sp001029735*. The type genome for the species is the GenBank assembly GCA_001029735.1. The GC content of the type genome is 39.01 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Masocella gen. nov.

Candidatus Masocella (NL. fem. n. *Masocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE1-39-12*. The type species for the genus is *Candidatus* Masocella tomacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12157*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledosaceae.

Description of *Candidatus* Masocia adnilitura sp. nov.

Candidatus Masocia adnilitura (NL. fem. n. *adnilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-35-72 sp013205245*. The type genome for the species is the GenBank assembly GCA_013205245.1. The GC content of the type genome is 33.69 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Masocia gen. nov.

Candidatus Masocia (NL. fem. n. *Masocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-35-72*. The type species for the genus is *Candidatus* Masocia adnilitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Masocia ludifetta sp. nov.

Candidatus Masocia ludifetta (NL. fem. n. *ludifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-35-72 sp002793215*. The type genome for the species is the GenBank assembly GCA_002793215.1. The GC content of the type genome is 34.95 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Masocida acrimugo sp. nov.

Candidatus Masocida acrimugo (NL. fem. n. *acrimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-582 sp900760845*. The type genome for the species is the GenBank assembly RS_GCF_900760845.1. The GC content of the type genome is 26.0 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Masocida gen. nov.

Candidatus Masocida (NL. fem. n. *Masocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-582*. The type species for the genus is *Candidatus* Masocida acrimugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Masocida hirudessa sp. nov.

Candidatus Masocida hirudessa (NL. fem. n. *hirudessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-582 sp000435515*. The type genome for the species is the GenBank assembly GCA_000435515.1. The GC content of the type genome is 27.06 % and the genome length is 1.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Masocosa cicilifica sp. nov.

Candidatus Masocosa cicilifica (NL. fem. n. *cicilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-36-35 sp001771505*. The type genome for the species is the GenBank assembly GCA_001771505.1. The GC content of the type genome is 36.11 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Masocosa gen. nov.

Candidatus Masocosa (NL. fem. n. *Masocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-36-35*. The type species for the genus is *Candidatus* Masocosa cicilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-37-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumacariaceae.

Description of *Candidatus* Masocula cadavisca sp. nov.

Candidatus Masocula cadavisca (NL. fem. n. *cadavisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILQO01 sp903836285*. The type genome for the species is the GenBank assembly GCA_903836285.1. The GC content of the type genome is 66.75 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Masocula gen. nov.

Candidatus Masocula (NL. fem. n. *Masocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILQO01*. The type species for the genus is *Candidatus* Masocula cadavisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonanaceae.

Description of *Candidatus* Massilia abnorilega sp. nov.

Candidatus Massilia abnorilega (NL. fem. n. *abnorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp005222695*. The type genome for the species is the GenBank assembly RS_GCF_005222695.1. The GC content of the type genome is 65.42 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Massilia abrelibra sp. nov.

Candidatus Massilia abrelibra (NL. fem. n. *abrelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp000759615*. The type genome for the species is the GenBank assembly RS_GCF_000759615.1. The GC content of the type genome is 66.17 % and the genome length is 7.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Peanut rhizosphere".

Description of *Candidatus* Massilia adsifibra sp. nov.

Candidatus Massilia adsifibra (NL. fem. n. *adsifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp001425685*. The type genome for the species is the GenBank assembly RS_GCF_001425685.1. The GC content of the type genome is 66.3 % and the genome length is 7.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Massilia adsulousia sp. nov.

Candidatus Massilia adsulousia (NL. fem. n. *adsulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp002428015*. The type genome for the species is the GenBank assembly GCA_002428015.1. The GC content of the type genome is 66.1 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Massilia agripilenta sp. nov.

Candidatus Massilia agripilenta (NL. fem. n. *agripilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp012927275*. The type genome for the species is the GenBank assembly RS_GCF_012927275.1. The GC content of the type genome is 63.25 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Massilia baropitia sp. nov.

Candidatus Massilia baropitia (NL. fem. n. *baropitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp013003915*. The type genome for the species is the GenBank assembly RS_GCF_013003915.1. The GC content of the type genome is 64.54 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Massilia capabitoga sp. nov.

Candidatus Massilia capabitoga (NL. fem. n. *capabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp902506415*. The type genome for the species is the GenBank assembly RS_GCF_902506415.1. The GC content of the type genome is 65.58 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Massilia caseledo sp. nov.

Candidatus Massilia caseledo (NL. fem. n. *caseledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp012849555*. The type genome for the species is the GenBank assembly RS_GCF_012849555.1. The GC content of the type genome is 66.52 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Massilia cululessa sp. nov.

Candidatus Massilia cululessa (NL. fem. n. *cululessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Massilia sp900101265*. The type genome for the species is the GenBank assembly RS_GCF_900101265.1. The GC content of the type genome is 66.39 % and the genome length is 7.52 Mbp.

Description of *Candidatus* Massilia defenatica sp. nov.

Candidatus Massilia defenatica (NL. fem. n. *defenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp003520365*. The type genome for the species is the GenBank assembly GCA_003520365.1. The GC content of the type genome is 65.21 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Massilia eclipisca sp. nov.

Candidatus Massilia eclipisca (NL. fem. n. *eclipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp004798585*. The type genome for the species is the GenBank assembly RS_GCF_004798585.1. The GC content of the type genome is 64.8 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Massilia eclipitura sp. nov.

Candidatus Massilia eclipitura (NL. fem. n. *eclipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp003484545*. The type genome for the species is the GenBank assembly GCA_003484545.1. The GC content of the type genome is 65.59 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Massilia ensifetta sp. nov.

Candidatus Massilia ensifetta (NL. fem. n. *ensifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp002339265*. The type genome for the species is the GenBank assembly GCA_002339265.1. The GC content of the type genome is 65.53 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Massilia exorcilega sp. nov.

Candidatus Massilia exorcilega (NL. fem. n. *exorcilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp000745265*. The type genome for the species is the GenBank assembly RS_GCF_000745265.1. The GC content of the type genome is 65.7 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Massilia fefelibula sp. nov.

Candidatus Massilia fefelibula (NL. fem. n. *fefelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp011682055*. The type genome for the species is the GenBank assembly RS_GCF_011682055.1. The GC content of the type genome is 66.31 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Massilia fuligugo sp. nov.

Candidatus Massilia fuligugo (NL. fem. n. *fuligugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp001426525*. The type genome for the species is the GenBank assembly RS_GCF_009763355.1. The GC content of the type genome is 66.23 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Massilia habacastra sp. nov.

Candidatus Massilia habacastra (NL. fem. n. *habacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp002007115*. The type genome for the species is the GenBank assembly RS_GCF_002007115.1. The GC content of the type genome is 67.12 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Massilia ignomitia sp. nov.

Candidatus Massilia ignomitia (NL. fem. n. *ignomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp900129765*. The type genome for the species is the GenBank assembly RS_GCF_900129765.1. The GC content of the type genome is 61.79 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Massilia inargimonas sp. nov.

Candidatus Massilia inargimonas (NL. fem. n. *inargimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp000740675*. The type genome for the species is the GenBank assembly RS_GCF_000740675.1. The GC content of the type genome is 65.4 % and the genome length is 5.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Biological Soil Crust".

Description of *Candidatus* Massilia linigibra sp. nov.

Candidatus Massilia linigibra (NL. fem. n. *linigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp014171595*. The type genome for the species is the GenBank assembly RS_GCF_014171775.1. The GC content of the type genome is 65.21 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Massilia ludimitica sp. nov.

Candidatus Massilia ludimitica (NL. fem. n. *ludimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp002354135*. The type genome for the species is the GenBank assembly GCA_002354135.1. The GC content of the type genome is 65.58 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Massilia luxurago sp. nov.

Candidatus Massilia luxurago (NL. fem. n. *luxurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp001424165*. The type genome for the species is the GenBank assembly RS_GCF_001424165.1. The GC content of the type genome is 65.31 % and the genome length is 5.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Massilia octacilenta sp. nov.

Candidatus Massilia octacilenta (NL. fem. n. *octacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp003953935*. The type genome for the species is the GenBank assembly RS_GCF_003953935.1. The GC content of the type genome is 65.36 % and the genome length is 7.36 Mbp.

Description of *Candidatus* Massilia pocilitura sp. nov.

Candidatus Massilia pocilitura (NL. fem. n. *pocilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp004614195*. The type genome for the species is the GenBank assembly RS_GCF_004614195.1. The GC content of the type genome is 63.82 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Massilia podagiforma sp. nov.

Candidatus Massilia podagiforma (NL. fem. n. *podagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp001412595*. The type genome for the species is the GenBank assembly RS_GCF_001028775.2. The GC content of the type genome is 65.72 % and the genome length is 6.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Massilia ranunitudo sp. nov.

Candidatus Massilia ranunitudo (NL. fem. n. *ranunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp003590855*. The type genome for the species is the

GenBank assembly RS_GCF_003590855.1. The GC content of the type genome is 63.64 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Massilia rumifitio sp. nov.

Candidatus Massilia rumifitio (NL. fem. n. *rumifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp001485665*. The type genome for the species is the GenBank assembly RS_GCF_002900945.1. The GC content of the type genome is 63.46 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Massilia sicubitudo sp. nov.

Candidatus Massilia sicubitudo (NL. fem. n. *sicubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilia sp006715485*. The type genome for the species is the GenBank assembly RS_GCF_006715485.1. The GC content of the type genome is 65.52 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Massilimaliae turiletta sp. nov.

Candidatus Massilimaliae turiletta (NL. fem. n. *turiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilimaliae sp900752435*. The type genome for the species is the GenBank assembly RS_GCF_900752435.1. The GC content of the type genome is 48.38 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Massiliomicrobiota favonedo sp. nov.

Candidatus Massiliomicrobiota favonedo (NL. fem. n. *favonedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massiliomicrobiota sp002160815*. The type genome for the species is the GenBank assembly RS_GCF_002161155.1. The GC content of the type genome is 31.65 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Massiliomicrobiota tumefimonas sp. nov.

Candidatus Massiliomicrobiota tumefimonas (NL. fem. n. *tumefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massiliomicrobiota sp002160865*. The type genome for the species is the GenBank assembly RS_GCF_002160865.1. The GC content of the type genome is 31.45 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Massilistercora orgetimonas sp. nov.

Candidatus Massilistercora orgetimonas (NL. fem. n. *orgetimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Massilistercora sp902406105*. The type genome for the species is the GenBank assembly GCA_902406105.1. The GC content of the type genome is 47.9 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Mavorana adfanigena sp. nov.

Candidatus Mavorana adfanigena (NL. fem. n. *adfanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp902793915*. The type genome for the species is the GenBank assembly GCA_902793915.1. The GC content of the type genome is 53.24 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Mavorana gen. nov.

Candidatus Mavorana (NL. fem. n. *Mavorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1865*. The type species for the genus is *Candidatus* Mavorana adfanigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Mavorana baropitrix sp. nov.

Candidatus Mavorana baropitrix (NL. fem. n. *baropitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp900555785*. The type genome for the species is the GenBank assembly RS_GCF_900767225.1. The GC content of the type genome is 57.18 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Mavorana fetifigena sp. nov.

Candidatus Mavorana fetifigena (NL. fem. n. *fetifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp002438075*. The type genome for the species is the GenBank assembly GCA_002438075.1. The GC content of the type genome is 57.39 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Mavorana fusifilega sp. nov.

Candidatus Mavorana fusifilega (NL. fem. n. *fusifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp900769475*. The type genome for the species is the GenBank assembly RS_GCF_900769475.1. The GC content of the type genome is 53.58 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Mavorana obsoricula sp. nov.

Candidatus Mavorana obsoricula (NL. fem. n. *obsoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp900768535*. The type genome for the species is the GenBank assembly RS_GCF_900768535.1. The GC content of the type genome is 57.08 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Mavorana sicunatica sp. nov.

Candidatus Mavorana sicunatica (NL. fem. n. *sicunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp900547725*. The type genome for the species is the GenBank assembly GCA_900547725.1. The GC content of the type genome is 55.98 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Mavorana vaniticella sp. nov.

Candidatus Mavorana vaniticella (NL. fem. n. *vaniticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1865 sp902795355*. The type genome for the species is the GenBank assembly GCA_902795355.1. The GC content of the type genome is 55.71 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Mavoraria inlecimonas sp. nov.

Candidatus Mavoraria inlecimonas (NL. fem. n. *inlecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1459 sp002325765*. The type genome for the species is the GenBank assembly GCA_002325765.1. The GC content of the type genome is 23.84 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Mavoraria gen. nov.

Candidatus Mavoraria (NL. fem. n. *Mavoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1459*. The type species for the genus is *Candidatus* Mavoraria inlecimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1459*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorariaceae.

Description of *Candidatus* Mavorariaceae fam. nov.

Candidatus Mavorariaceae (NL. fem. n. *Mavorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1459.* The type genus for the taxon is *Candidatus* Mavoraria .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales_B*.

Description of *Candidatus* Mavoria adfamicella sp. nov.

Candidatus Mavoria adfamicella (NL. fem. n. *adfamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZHW01 sp012510515*. The type genome for the species is the GenBank assembly GCA_012510515.1. The GC content of the type genome is 29.87 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Mavoria gen. nov.

Candidatus Mavoria (NL. fem. n. *Mavoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZHW01*. The type species for the genus is *Candidatus* Mavoria adfamicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZHW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavoriaceae.

Description of *Candidatus* Mavoriaceae fam. nov.

Candidatus Mavoriaceae (NL. fem. n. *Mavoriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZHW01.* The type genus for the taxon is *Candidatus* Mavoria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Mavorida catagentia sp. nov.

Candidatus Mavorida catagentia (NL. fem. n. *catagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMMJ01 sp903842515*. The type genome for the species is the

GenBank assembly GCA_903842515.1. The GC content of the type genome is 32.95 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Mavorida gen. nov.

Candidatus Mavorida (NL. fem. n. *Mavorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMMJ01*. The type species for the genus is *Candidatus* Mavorida catagentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4408*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasanaceae.

Description of *Candidatus* Mavorosa solacicula sp. nov.

Candidatus Mavorosa solacicula (NL. fem. n. *solacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMO01 sp012839865*. The type genome for the species is the GenBank assembly GCA_012839865.1. The GC content of the type genome is 40.63 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Mavorosa gen. nov.

Candidatus Mavorosa (NL. fem. n. *Mavorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMO01*. The type species for the genus is *Candidatus* Mavorosa solacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorosaceae.

Description of *Candidatus* Mavorosaceae fam. nov.

Candidatus Mavorosaceae (NL. fem. n. *Mavorosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMO01*. The type genus for the taxon is *Candidatus* Mavorosa .

According to GTDB R06-RS202, this family belongs to the order *Acetivibrionales*.

Description of *Candidatus* Mavorula sicubetta sp. nov.

Candidatus Mavorula sicubetta (NL. fem. n. *sicubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLQ01 sp004282895*. The type genome for the species is the GenBank assembly GCA_013001425.1. The GC content of the type genome is 62.95 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Mavorula gen. nov.

Candidatus Mavorula (NL. fem. n. *Mavorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHLQ01*. The type species for the genus is *Candidatus* Mavorula sicubetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHLQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorulaceae.

Description of *Candidatus* Mavorulaceae fam. nov.

Candidatus Mavorulaceae (NL. fem. n. *Mavorulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHLQ01*. The type genus for the taxon is *Candidatus* Mavorula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Maxilana abmatitia sp. nov.

Candidatus Maxilana abmatitia (NL. fem. n. *abmatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902783435*. The type genome for the species is the GenBank assembly GCA_902783435.1. The GC content of the type genome is 25.54 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Maxilana gen. nov.

Candidatus Maxilana (NL. fem. n. *Maxilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3789*. The type species for the genus is *Candidatus* Maxilana abmatitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Maxilana affunicula sp. nov.

Candidatus Maxilana affunicula (NL. fem. n. *affunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902788735*. The type genome for the species is the GenBank assembly GCA_902788735.1. The GC content of the type genome is 26.1 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Maxilana alcedibra sp. nov.

Candidatus Maxilana alcedibra (NL. fem. n. *alcedibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp002369415*. The type genome for the species is the GenBank assembly GCA_002369415.1. The GC content of the type genome is 27.07 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Maxilana appicago sp. nov.

Candidatus Maxilana appicago (NL. fem. n. *appicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902796215*. The type genome for the species is the GenBank assembly GCA_902796215.1. The GC content of the type genome is 26.95 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Maxilana cenoditas sp. nov.

Candidatus Maxilana cenoditas (NL. fem. n. *cenoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902793315*. The type genome for the species is the GenBank assembly GCA_902793315.1. The GC content of the type genome is 27.05 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Maxilana conaredo sp. nov.

Candidatus Maxilana conaredo (NL. fem. n. *conaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902798815*. The type genome for the species is the GenBank assembly GCA_902798815.1. The GC content of the type genome is 25.82 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Maxilana cuferifica sp. nov.

Candidatus Maxilana cuferifica (NL. fem. n. *cuferifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902783315*. The type genome for the species is the GenBank assembly GCA_902783315.1. The GC content of the type genome is 27.72 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Maxilana depasousia sp. nov.

Candidatus Maxilana depasousia (NL. fem. n. *depasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902797265*. The type genome for the species is the GenBank assembly GCA_902797265.1. The GC content of the type genome is 27.17 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Maxilana dirititudo sp. nov.

Candidatus Maxilana dirititudo (NL. fem. n. *dirititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902782835*. The type genome for the species is the GenBank assembly GCA_902782835.1. The GC content of the type genome is 29.48 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Maxilana milipastra sp. nov.

Candidatus Maxilana milipastra (NL. fem. n. *milipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902794075*. The type genome for the species is the GenBank assembly GCA_902794075.1. The GC content of the type genome is 27.1 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Maxilana nubecibra sp. nov.

Candidatus Maxilana nubecibra (NL. fem. n. *nubecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp900543055*. The type genome for the species is the GenBank assembly GCA_900543055.1. The GC content of the type genome is 26.06 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Maxilana obsatax sp. nov.

Candidatus Maxilana obsatax (NL. fem. n. *obsatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902768065*. The type genome for the species is the GenBank assembly GCA_902768065.1. The GC content of the type genome is 26.95 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Maxilana satacivita sp. nov.

Candidatus Maxilana satacivita (NL. fem. n. *satacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902776735*. The type genome for the species is the GenBank assembly GCA_902786055.1. The GC content of the type genome is 25.96 %

and the genome length is 1.5 Mbp.

Description of *Candidatus* Maxilana sceptetta sp. nov.

Candidatus Maxilana sceptetta (NL. fem. n. *sceptetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902780585*. The type genome for the species is the GenBank assembly GCA_902780585.1. The GC content of the type genome is 28.83 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Maxilana semivago sp. nov.

Candidatus Maxilana semivago (NL. fem. n. *semivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902764545*. The type genome for the species is the GenBank assembly GCA_902764545.1. The GC content of the type genome is 27.39 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Maxilana sicunetta sp. nov.

Candidatus Maxilana sicunetta (NL. fem. n. *sicunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp900314225*. The type genome for the species is the GenBank assembly GCA_900314225.1. The GC content of the type genome is 25.82 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Maxilana utputiforma sp. nov.

Candidatus Maxilana utputiforma (NL. fem. n. *utputiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3789 sp902780395*. The type genome for the species is the GenBank assembly GCA_902780395.1. The GC content of the type genome is 27.45 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Maxilaria catecibra sp. nov.

Candidatus Maxilaria catecibra (NL. fem. n. *catecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYVA01 sp903862885*. The type genome for the species is the GenBank assembly GCA_903830485.1. The GC content of the type genome is 56.84 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Maxilaria gen. nov.

Candidatus Maxilaria (NL. fem. n. *Maxilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYVA01*. The type species for the genus is *Candidatus* Maxilaria catecibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Maxilaria hexapimonia sp. nov.

Candidatus Maxilaria hexapimonia (NL. fem. n. *hexapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYVA01 sp903929455*. The type genome for the species is the GenBank assembly GCA_903928375.1. The GC content of the type genome is 56.18 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Maxilella cacopousia sp. nov.

Candidatus Maxilella cacopousia (NL. fem. n. *cacopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGN01 sp011334915*. The type genome for the species is the GenBank assembly GCA_011334915.1. The GC content of the type genome is 54.54 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Maxilella gen. nov.

Candidatus Maxilella (NL. fem. n. *Maxilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGN01*. The type species for the genus is *Candidatus* Maxilella cacopousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilellaceae.

Description of *Candidatus* Maxilellaceae fam. nov.

Candidatus Maxilellaceae (NL. fem. n. *Maxilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGN01*. The type genus for the taxon is *Candidatus* Maxilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BSN033*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Debucellales.

Description of *Candidatus* Maxilia anatriforma sp. nov.

Candidatus Maxilia anatriforma (NL. fem. n. *anatriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTNB01 sp011358755*. The type genome for the species is the GenBank assembly GCA_011358755.1. The GC content of the type genome is 46.96 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Maxilia gen. nov.

Candidatus Maxilia (NL. fem. n. *Maxilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTNB01*. The type species for the genus is *Candidatus* Maxilia anatriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTNB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxiliaceae.

Description of *Candidatus* Maxiliaceae fam. nov.

Candidatus Maxiliaceae (NL. fem. n. *Maxiliaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTNB01.* The type genus for the taxon is *Candidatus* Maxilia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTNB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maxiliales.

Description of *Candidatus* Maxiliales ord. nov.

Candidatus Maxiliales (NL. fem. n. *Maxiliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTNB01.* The type genus for the taxon is *Candidatus* Maxilia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Maxilida legificella sp. nov.

Candidatus Maxilida legificella (NL. fem. n. *legificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10102 sp001825035*. The type genome for the species is the GenBank assembly GCA_001823475.1. The GC content of the type genome is 49.31 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Maxilida gen. nov.

Candidatus Maxilida (NL. fem. n. *Maxilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10102*. The type species for the genus is *Candidatus* Maxilida legificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Maxilidaceae fam. nov.

Candidatus Maxilidaceae (NL. fem. n. *Maxilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10102.* The type genus for the taxon is *Candidatus* Maxilida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Maxilosa renavigena sp. nov.

Candidatus Maxilosa renavigena (NL. fem. n. *renavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTQI01 sp011332705*. The type genome for the species is the GenBank assembly GCA_011332705.1. The GC content of the type genome is 43.63 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Maxilosa gen. nov.

Candidatus Maxilosa (NL. fem. n. *Maxilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTQI01*. The type species for the genus is *Candidatus* Maxilosa renavigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTQI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilosaceae.

Description of *Candidatus* Maxilosaceae fam. nov.

Candidatus Maxilosaceae (NL. fem. n. *Maxilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTQI01.* The type genus for the taxon is *Candidatus* Maxilosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTQI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maxilosales.

Description of *Candidatus* Maxilosales ord. nov.

Candidatus Maxilosales (NL. fem. n. *Maxilosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTQI01*. The type genus for the taxon is *Candidatus* Maxilosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Maxilula mirifilega sp. nov.

Candidatus Maxilula mirifilega (NL. fem. n. *mirifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-42 sp001789965*. The type genome for the species is the GenBank assembly GCA_001790035.1. The GC content of the type genome is 40.01 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Maxilula gen. nov.

Candidatus Maxilula (NL. fem. n. *Maxilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-40-42*. The type species for the genus is *Candidatus* Maxilula mirifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Maxumana adhoratica sp. nov.

Candidatus Maxumana adhoratica (NL. fem. n. *adhoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp002422915*. The type genome for the species is the GenBank assembly GCA_002422915.1. The GC content of the type genome is 50.41 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Maxumana gen. nov.

Candidatus Maxumana (NL. fem. n. *Maxumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6175*. The type species for the genus is *Candidatus* Maxumana adhoratica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Maxumana affabisca sp. nov.

Candidatus Maxumana affabisca (NL. fem. n. *affabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp001897295*. The type genome for the species is the GenBank assembly GCA_001897295.1. The GC content of the type genome is 49.51 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Maxumana altivilega sp. nov.

Candidatus Maxumana altivilega (NL. fem. n. *altivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp003545655*. The type genome for the species is the GenBank assembly GCA_003545655.1. The GC content of the type genome is 47.62 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Maxumana caselimonia sp. nov.

Candidatus Maxumana caselimonia (NL. fem. n. *caselimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp002429245*. The type genome for the species is the GenBank assembly GCA_002429245.1. The GC content of the type genome is 46.5 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Maxumana decomitrix sp. nov.

Candidatus Maxumana decomitrix (NL. fem. n. *decomitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp002726935*. The type genome for the species is the GenBank assembly GCA_002294615.1. The GC content of the type genome is 51.47 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Maxumana eclecentia sp. nov.

Candidatus Maxumana eclecentia (NL. fem. n. *eclecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp004100325*. The type genome for the species is the GenBank assembly GCA_004100325.1. The GC content of the type genome is 46.06 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Maxumana immobitoga sp. nov.

Candidatus Maxumana immobitoga (NL. fem. n. *immobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp001897305*. The type genome for the species is the GenBank assembly GCA_001897305.1. The GC content of the type genome is 46.59 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Maxumana ingigiforma sp. nov.

Candidatus Maxumana ingigiforma (NL. fem. n. *ingigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp009992235*. The type genome for the species is the GenBank assembly GCA_009992235.1. The GC content of the type genome is 47.98 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Maxumana umbilitia sp. nov.

Candidatus Maxumana umbilitia (NL. fem. n. *umbilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6175 sp002381485*. The type genome for the species is the GenBank assembly GCA_002381485.1. The GC content of the type genome is 49.68 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Maxumaria inadfitia sp. nov.

Candidatus Maxumaria inadfitia (NL. fem. n. *inadfitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7540 sp002478145*. The type genome for the species is the GenBank assembly GCA_002478145.1. The GC content of the type genome is 58.09 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Maxumaria gen. nov.

Candidatus Maxumaria (NL. fem. n. *Maxumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7540*. The type species for the genus is *Candidatus* Maxumaria inadfitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Maxumariaceae fam. nov.

Candidatus Maxumariaceae (NL. fem. n. *Maxumariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7540.* The type genus for the taxon is *Candidatus* Maxumaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maxumariales.

Description of *Candidatus* Maxumariales ord. nov.

Candidatus Maxumariales (NL. fem. n. *Maxumariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7540.* The type genus for the taxon is *Candidatus* Maxumaria .

According to the GTDB R06-RS202, this order belongs to the class *Acidobacteriae*.

Description of *Candidatus* Maxumella femelatio sp. nov.

Candidatus Maxumella femelatio (NL. fem. n. *femelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9002 sp003519545*. The type genome for the species is the GenBank assembly GCA_003519545.1. The GC content of the type genome is 31.42 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Maxumella gen. nov.

Candidatus Maxumella (NL. fem. n. *Maxumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9002*. The type species for the genus is *Candidatus* Maxumella femelatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Maxumella penicivita sp. nov.

Candidatus Maxumella penicivita (NL. fem. n. *penicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9002 sp002455255*. The type genome for the species is the GenBank assembly GCA_002455255.1. The GC content of the type genome is 30.7 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Maxumia abrelivita sp. nov.

Candidatus Maxumia abrelivita (NL. fem. n. *abrelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *LMEP-6097 sp005110385*. The type genome for the species is the GenBank assembly GCA_005110385.1. The GC content of the type genome is 35.84 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Maxumia gen. nov.

Candidatus Maxumia (NL. fem. n. *Maxumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LMEP-6097*. The type species for the genus is *Candidatus* Maxumia abrelivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LMEP-6097*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumiaceae.

Description of *Candidatus* Maxumiaceae fam. nov.

Candidatus Maxumiaceae (NL. fem. n. *Maxumiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LMEP-6097.* The type genus for the taxon is *Candidatus* Maxumia .

According to GTDB R06-RS202, this family belongs to the order *Caenarcaniphilales*.

Description of *Candidatus* Maxumia pomificella sp. nov.

Candidatus Maxumia pomificella (NL. fem. n. *pomificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LMEP-6097 sp009924885*. The type genome for the species is the GenBank assembly GCA_009924885.1. The GC content of the type genome is 35.78 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Maxumida insalitoga sp. nov.

Candidatus Maxumida insalitoga (NL. fem. n. *insalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPLA1 sp002050205*. The type genome for the species is the GenBank assembly GCA_002050205.1. The GC content of the type genome is 60.82 %

and the genome length is 4.44 Mbp.

Description of *Candidatus* Maxumida gen. nov.

Candidatus Maxumida (NL. fem. n. *Maxumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTPLA1*. The type species for the genus is *Candidatus* Maxumida insalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPLA1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumidaceae.

Description of *Candidatus* Maxumidaceae fam. nov.

Candidatus Maxumidaceae (NL. fem. n. *Maxumidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UTPLA1.* The type genus for the taxon is *Candidatus* Maxumida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomariales.

Description of *Candidatus* Maxumida vagabicula sp. nov.

Candidatus Maxumida vagabicula (NL. fem. n. *vagabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPLA1 sp003576905*. The type genome for the species is the GenBank assembly GCA_003576905.1. The GC content of the type genome is 63.76 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Maxumida vilipitas sp. nov.

Candidatus Maxumida vilipitas (NL. fem. n. *vilipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPLA1 sp900696465*. The type genome for the species is the GenBank assembly GCA_900696465.1. The GC content of the type genome is 61.55 %

and the genome length is 4.14 Mbp.

Description of *Candidatus* Maxumosa catecago sp. nov.

Candidatus Maxumosa catecago (NL. fem. n. *catecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1688 sp900545885*. The type genome for the species is the GenBank assembly GCA_900545885.1. The GC content of the type genome is 49.95 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Maxumosa gen. nov.

Candidatus Maxumosa (NL. fem. n. *Maxumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1688*. The type species for the genus is *Candidatus* Maxumosa catecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Maxumosa ciminibula sp. nov.

Candidatus Maxumosa ciminibula (NL. fem. n. *ciminibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1688 sp900554085*. The type genome for the species is the GenBank assembly GCA_900554085.1. The GC content of the type genome is 55.55 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Maxumosa epogditrix sp. nov.

Candidatus Maxumosa epogditrix (NL. fem. n. *epogditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1688 sp900754695*. The type genome for the species is the GenBank assembly RS_GCF_900754695.1. The GC content of the type genome is 59.57 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Maxumosa obmurifica sp. nov.

Candidatus Maxumosa obmurifica (NL. fem. n. *obmurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1688 sp900553825*. The type genome for the species is the GenBank assembly GCA_900553825.1. The GC content of the type genome is 58.7 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Maxumosa regifimonas sp. nov.

Candidatus Maxumosa regifimonas (NL. fem. n. *regifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1688 sp900544575*. The type genome for the species is the GenBank assembly RS_GCF_900761745.1. The GC content of the type genome is 56.2 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Maxumula abantiforma sp. nov.

Candidatus Maxumula abantiforma (NL. fem. n. *abantiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900754285*. The type genome for the species is the GenBank assembly RS_GCF_900754285.1. The GC content of the type genome is 27.72 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Maxumula gen. nov.

Candidatus Maxumula (NL. fem. n. *Maxumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-269*. The type species for the genus is *Candidatus* Maxumula abantiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Maxumula accapilenta sp. nov.

Candidatus Maxumula accapilenta (NL. fem. n. *accapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp902760765*. The type genome for the species is the GenBank assembly GCA_902760765.1. The GC content of the type genome is 26.63 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Maxumula advinetta sp. nov.

Candidatus Maxumula advinetta (NL. fem. n. *advinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp002372935*. The type genome for the species is the GenBank assembly GCA_002372935.1. The GC content of the type genome is 26.74 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Maxumula antegivita sp. nov.

Candidatus Maxumula antegivita (NL. fem. n. *antegivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900557115*. The type genome for the species is the GenBank assembly GCA_900557115.1. The GC content of the type genome is 26.82 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Maxumula apposicella sp. nov.

Candidatus Maxumula apposicella (NL. fem. n. *apposicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900762425*. The type genome for the species is the GenBank assembly RS_GCF_900762425.1. The GC content of the type genome is 26.39 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Maxumula arnacousia sp. nov.

Candidatus Maxumula arnacousia (NL. fem. n. *arnacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp902787685*. The type genome for the species is the GenBank assembly GCA_902787685.1. The GC content of the type genome is 26.76 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Maxumula canacessa sp. nov.

Candidatus Maxumula canacessa (NL. fem. n. *canacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp001915995*. The type genome for the species is the GenBank assembly GCA_001915995.1. The GC content of the type genome is 26.09 % and the genome length is 1.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Maxumula decapimonas sp. nov.

Candidatus Maxumula decapimonas (NL. fem. n. *decapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900556345*. The type genome for the species is the GenBank assembly GCA_900556345.1. The GC content of the type genome is 28.98 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Maxumula dibucimonas sp. nov.

Candidatus Maxumula dibucimonas (NL. fem. n. *dibucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900552555*. The type genome for the species is the GenBank assembly GCA_900552555.1. The GC content of the type genome is 26.96 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Maxumula divolitas sp. nov.

Candidatus Maxumula divolitas (NL. fem. n. *divolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900760175*. The type genome for the species is the

GenBank assembly RS_GCF_900760175.1. The GC content of the type genome is 27.93 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Maxumula domipitrix sp. nov.

Candidatus Maxumula domipitrix (NL. fem. n. *domipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900551615*. The type genome for the species is the GenBank assembly GCA_900551615.1. The GC content of the type genome is 27.06 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Maxumula fiducentia sp. nov.

Candidatus Maxumula fiducentia (NL. fem. n. *fiducentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900554565*. The type genome for the species is the GenBank assembly GCA_900554565.1. The GC content of the type genome is 27.72 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Maxumula furibimonas sp. nov.

Candidatus Maxumula furibimonas (NL. fem. n. *furibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp000435535*. The type genome for the species is the GenBank assembly GCA_000435535.1. The GC content of the type genome is 26.43 % and the genome length is 1.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Maxumula homolimonas sp. nov.

Candidatus Maxumula homolimonas (NL. fem. n. *homolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp001916055*. The type genome for the species is the GenBank assembly GCA_001916055.1. The GC content of the type genome is 28.11 % and the genome length is 1.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Maxumula lavabetta sp. nov.

Candidatus Maxumula lavabetta (NL. fem. n. *lavabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp001916005*. The type genome for the species is the GenBank assembly GCA_900554055.1. The GC content of the type genome is 26.72 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Maxumula lavacitudo sp. nov.

Candidatus Maxumula lavacitudo (NL. fem. n. *lavacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp001916065*. The type genome for the species is the GenBank assembly GCA_001916065.1. The GC content of the type genome is 27.78 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Maxumula metapivita sp. nov.

Candidatus Maxumula metapivita (NL. fem. n. *metapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900555615*. The type genome for the species is the GenBank assembly GCA_900555615.1. The GC content of the type genome is 27.9 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Maxumula negidago sp. nov.

Candidatus Maxumula negidago (NL. fem. n. *negidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900556945*. The type genome for the species is the GenBank assembly RS_GCF_900752255.1. The GC content of the type genome is 28.23 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Maxumula nimirousia sp. nov.

Candidatus Maxumula nimirousia (NL. fem. n. *nimirousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp000438255*. The type genome for the species is the GenBank assembly GCA_000438255.1. The GC content of the type genome is 26.87 % and the genome length is 1.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Maxumula nivomicula sp. nov.

Candidatus Maxumula nivomicula (NL. fem. n. *nivomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900553125*. The type genome for the species is the GenBank assembly GCA_900553125.1. The GC content of the type genome is 27.62 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Maxumula nocenilega sp. nov.

Candidatus Maxumula nocenilega (NL. fem. n. *nocenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900554175*. The type genome for the species is the GenBank assembly RS_GCF_900752925.1. The GC content of the type genome is 26.42 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Maxumula pavicifica sp. nov.

Candidatus Maxumula pavicifica (NL. fem. n. *pavicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900753165*. The type genome for the species is the GenBank assembly RS_GCF_900753165.1. The GC content of the type genome is 26.87 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Maxumula petulicula sp. nov.

Candidatus Maxumula petulicula (NL. fem. n. *petulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp003525075*. The type genome for the species is the GenBank assembly GCA_000437875.1. The GC content of the type genome is 26.44 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Maxumula remulitio sp. nov.

Candidatus Maxumula remulitio (NL. fem. n. *remulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900554365*. The type genome for the species is the GenBank assembly GCA_900554365.1. The GC content of the type genome is 26.68 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Maxumula rosariforma sp. nov.

Candidatus Maxumula rosariforma (NL. fem. n. *rosariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900556865*. The type genome for the species is the GenBank assembly GCA_900556865.1. The GC content of the type genome is 26.86 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Maxumula sicarax sp. nov.

Candidatus Maxumula sicarax (NL. fem. n. *sicarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp000431335*. The type genome for the species is the GenBank assembly GCA_003534715.1. The GC content of the type genome is 26.44 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Maxumula subodivita sp. nov.

Candidatus Maxumula subodivita (NL. fem. n. *subodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp000437215*. The type genome for the species is the

GenBank assembly GCA_000437215.1. The GC content of the type genome is 26.71 % and the genome length is 1.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Maxumula tumefisca sp. nov.

Candidatus Maxumula tumefisca (NL. fem. n. *tumefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp001916035*. The type genome for the species is the GenBank assembly GCA_900554015.1. The GC content of the type genome is 27.46 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Maxumula uberrifica sp. nov.

Candidatus Maxumula uberrifica (NL. fem. n. *uberrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp003518755*. The type genome for the species is the GenBank assembly GCA_003518755.1. The GC content of the type genome is 26.98 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Maxumula vepalastra sp. nov.

Candidatus Maxumula vepalastra (NL. fem. n. *vepalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900553985*. The type genome for the species is the GenBank assembly RS_GCF_900758855.1. The GC content of the type genome is 25.94 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Maxumula visifibula sp. nov.

Candidatus Maxumula visifibula (NL. fem. n. *visifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-269 sp900556695*. The type genome for the species is the GenBank assembly GCA_900556695.1. The GC content of the type genome is 26.98 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Medimana nubigicula sp. nov.

Candidatus Medimana nubigicula (NL. fem. n. *nubigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-224 sp006226225*. The type genome for the species is the GenBank assembly GCA_006226225.1. The GC content of the type genome is 51.72 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Medimana gen. nov.

Candidatus Medimana (NL. fem. n. *Medimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-224*. The type species for the genus is *Candidatus* Medimana nubigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2020*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucubiaceae.

Description of *Candidatus* Medimana rorulicula sp. nov.

Candidatus Medimana rorulicula (NL. fem. n. *rorulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-224 sp007116755*. The type genome for the species is the GenBank assembly GCA_007116755.1. The GC content of the type genome is 53.78 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Medimana ulcisax sp. nov.

Candidatus Medimana ulcisax (NL. fem. n. *ulcisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-224 sp013285465*. The type genome for the species is the GenBank assembly GCA_013285465.1. The GC content of the type genome is 51.69 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Medimaria metapatio sp. nov.

Candidatus Medimaria metapatio (NL. fem. n. *metapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-165 sp011057335*. The type genome for the species is the GenBank assembly GCA_011057335.1. The GC content of the type genome is 64.14 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Medimaria gen. nov.

Candidatus Medimaria (NL. fem. n. *Medimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-165*. The type species for the genus is *Candidatus* Medimaria metapatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimariaceae.

Description of *Candidatus* Medimariaceae fam. nov.

Candidatus Medimariaceae (NL. fem. n. *Medimariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-165.* The type genus for the taxon is *Candidatus* Medimaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minagiales.

Description of *Candidatus* Medimella depasitoga sp. nov.

Candidatus Medimella depasitoga (NL. fem. n. *depasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2968 sp002727195*. The type genome for the species is the GenBank assembly GCA_002727195.1. The GC content of the type genome is 59.09 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Medimella gen. nov.

Candidatus Medimella (NL. fem. n. *Medimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2968*. The type species for the genus is *Candidatus* Medimella depasitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimellaceae.

Description of *Candidatus* Medimellaceae fam. nov.

Candidatus Medimellaceae (NL. fem. n. *Medimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2968.* The type genus for the taxon is *Candidatus* Medimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Medimellales.

Description of *Candidatus* Medimellales ord. nov.

Candidatus Medimellales (NL. fem. n. *Medimellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2968.* The type genus for the taxon is *Candidatus* Medimella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Medimellae.

Description of *Candidatus* Medimellae class. nov.

Candidatus Medimellae (NL. fem. n. *c__Medimellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2968.* The type genus for the taxon is *Candidatus* Medimella .

According to GTDB R06-RS202, this class belongs to the phylum *Latescibacterota*.

Description of *Candidatus* Medimella turilitoga sp. nov.

Candidatus Medimella turilitoga (NL. fem. n. *turilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2968 sp002714465*. The type genome for the species is the GenBank assembly GCA_002714465.1. The GC content of the type genome is 56.54 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Medimia defasibula sp. nov.

Candidatus Medimia defasibula (NL. fem. n. *defasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3631 sp900546275*. The type genome for the species is the GenBank assembly GCA_900546275.1. The GC content of the type genome is 25.18 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Medimia gen. nov.

Candidatus Medimia (NL. fem. n. *Medimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3631*. The type species for the genus is *Candidatus* Medimia defasibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Medimia homoletta sp. nov.

Candidatus Medimia homoletta (NL. fem. n. *homoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3631 sp900544605*. The type genome for the species is the GenBank assembly GCA_900544605.1. The GC content of the type genome is 26.65 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Medimia utpotatio sp. nov.

Candidatus Medimia utpotatio (NL. fem. n. *utpotatio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3631 sp002374055*. The type genome for the species is the GenBank assembly GCA_002374055.1. The GC content of the type genome is 27.04 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Medimida bifisitio sp. nov.

Candidatus Medimida bifisitio (NL. fem. n. *bifisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWHF01 sp903912405*. The type genome for the species is the GenBank assembly GCA_903914015.1. The GC content of the type genome is 35.93 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Medimida gen. nov.

Candidatus Medimida (NL. fem. n. *Medimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWHF01*. The type species for the genus is *Candidatus* Medimida bifisitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Medimosa catalugo sp. nov.

Candidatus Medimosa catalugo (NL. fem. n. *catalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6623 sp002433055*. The type genome for the species is the GenBank assembly GCA_002716325.1. The GC content of the type genome is 47.6 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Medimosa gen. nov.

Candidatus Medimosa (NL. fem. n. *Medimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA6623*. The type species for the genus is *Candidatus* Medimosa catalugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6623*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimosaceae.

Description of *Candidatus* Medimosaceae fam. nov.

Candidatus Medimosaceae (NL. fem. n. *Medimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6623.* The type genus for the taxon is *Candidatus* Medimosa .

According to GTDB R06-RS202, this family belongs to the order *Bryobacterales*.

Description of *Candidatus* Medimula repagitudo sp. nov.

Candidatus Medimula repagitudo (NL. fem. n. *repagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOV01 sp007132345*. The type genome for the species is the GenBank assembly GCA_007124775.1. The GC content of the type genome is 62.15 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Medimula gen. nov.

Candidatus Medimula (NL. fem. n. *Medimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOV01*. The type species for the genus is *Candidatus* Medimula repagitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLOV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimulaceae.

Description of *Candidatus* Medimulaceae fam. nov.

Candidatus Medimulaceae (NL. fem. n. *Medimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SLOV01*. The type genus for the taxon is *Candidatus* Medimula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLOV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Medimulales.

Description of *Candidatus* Medimulales ord. nov.

Candidatus Medimulales (NL. fem. n. *Medimulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLOV01*. The type genus for the taxon is *Candidatus* Medimula .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Mediterraneibacter ablacicula sp. nov.

Candidatus Mediterraneibacter ablacicula (NL. fem. n. *ablacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp002314255*. The type genome for the species is the GenBank assembly GCA_002314255.1. The GC content of the type genome is 51.04 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Mediterraneibacter adrecitoga sp. nov.

Candidatus Mediterraneibacter adrecitoga (NL. fem. n. *adrecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900751785*. The type genome for the species is the GenBank assembly RS_GCF_900751785.1. The GC content of the type genome is 51.31 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Mediterraneibacter amatrax sp. nov.

Candidatus Mediterraneibacter amatrax (NL. fem. n. *amatrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp002161355*. The type genome for the species is the GenBank assembly RS_GCF_002161355.1. The GC content of the type genome is

50.28 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Mediterraneibacter amatressa sp. nov.

Candidatus Mediterraneibacter amatressa (NL. fem. n. *amatressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900553885*. The type genome for the species is the GenBank assembly GCA_900553885.1. The GC content of the type genome is 46.92 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Mediterraneibacter arcelax sp. nov.

Candidatus Mediterraneibacter arcelax (NL. fem. n. *arcelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp002160525*. The type genome for the species is the GenBank assembly RS_GCF_002160525.1. The GC content of the type genome is 49.45 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Mediterraneibacter cepuliforma sp. nov.

Candidatus Mediterraneibacter cepuliforma (NL. fem. n. *cepuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900541505*. The type genome for the species is the GenBank assembly RS_GCF_900755215.1. The GC content of the type genome is 47.5 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Mediterraneibacter culilitia sp. nov.

Candidatus Mediterraneibacter culilitia (NL. fem. n. *culilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900120155*. The type genome for the species is the GenBank assembly RS_GCF_900120155.1. The GC content of the type genome is 48.16 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Mediterraneibacter docibimonas sp. nov.

Candidatus Mediterraneibacter docibimonas (NL. fem. n. *docibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900555215*. The type genome for the species is the GenBank assembly GCA_902388775.1. The GC content of the type genome is 48.71 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Mediterraneibacter fumifago sp. nov.

Candidatus Mediterraneibacter fumifago (NL. fem. n. *fumifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp002159505*. The type genome for the species is the GenBank assembly RS_GCF_002159505.1. The GC content of the type genome is 46.76 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Mediterraneibacter inadfimonia sp. nov.

Candidatus Mediterraneibacter inadfimonia (NL. fem. n. *inadfimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900752395*. The type genome for the species is the GenBank assembly RS_GCF_900752395.1. The GC content of the type genome is 43.38 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Mediterraneibacter negoticula sp. nov.

Candidatus Mediterraneibacter negoticula (NL. fem. n. *negoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp014287475*. The type genome for the species is the GenBank assembly RS_GCF_014287475.1. The GC content of the type genome is 41.49 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Mediterraneibacter resalitura sp. nov.

Candidatus Mediterraneibacter resalitura (NL. fem. n. *resalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mediterraneibacter sp900761655*. The type genome for the species is the GenBank assembly RS_GCF_900761655.1. The GC content of the type genome is 49.61 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Megalana albogax sp. nov.

Candidatus Megalana albogax (NL. fem. n. *albogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-33 sp001303665*. The type genome for the species is the GenBank assembly GCA_001303665.1. The GC content of the type genome is 67.84 % and the genome length is 3.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Megalana gen. nov.

Candidatus Megalana (NL. fem. n. *Megalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-33*. The type species for the genus is *Candidatus* Megalana albogax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Megalanaceae fam. nov.

Candidatus Megalanaceae (NL. fem. n. *Megalanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-33.* The type genus for the taxon is *Candidatus* Megalana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalanales.

Description of *Candidatus* Megalanales ord. nov.

Candidatus Megalanales (NL. fem. n. *Megalanales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-33.* The type genus for the taxon is *Candidatus* Megalana .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Megalella doxolugo sp. nov.

Candidatus Megalella doxolugo (NL. fem. n. *doxolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch128b sp013177855*. The type genome for the species is the GenBank assembly GCA_013177855.1. The GC content of the type genome is 31.62 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Megalella gen. nov.

Candidatus Megalella (NL. fem. n. *Megalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch128b*. The type species for the genus is *Candidatus* Megalella doxolugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch128b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalellaceae.

Description of *Candidatus* Megalellaceae fam. nov.

Candidatus Megalellaceae (NL. fem. n. *Megalellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch128b.* The type genus for the taxon is *Candidatus* Megalella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ch128b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalellales.

Description of *Candidatus* Megalellales ord. nov.

Candidatus Megalellales (NL. fem. n. *Megalellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch128b.* The type genus for the taxon is *Candidatus* Megalella .

According to the GTDB R06-RS202, this order belongs to the class *Ignavibacteria*.

Description of *Candidatus* Megalella retecitrix sp. nov.

Candidatus Megalella retecitrix (NL. fem. n. *retecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch128b sp011047755*. The type genome for the species is the GenBank assembly GCA_011327465.1. The GC content of the type genome is 32.4 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Megalella voragago sp. nov.

Candidatus Megalella voragago (NL. fem. n. *voragago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch128b sp011332915*. The type genome for the species is the GenBank assembly GCA_011332915.1. The GC content of the type genome is 32.94 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Megalia secunitura sp. nov.

Candidatus Megalia secunitura (NL. fem. n. *secunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin08 sp002897775*. The type genome for the species is the GenBank assembly GCA_002897755.1. The GC content of the type genome is 45.4 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Megalia gen. nov.

Candidatus Megalia (NL. fem. n. *Megalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Bbin08*. The type species for the genus is *Candidatus* Megalia secunitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Bbin08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megaliaceae.

Description of *Candidatus* Megaliaceae fam. nov.

Candidatus Megaliaceae (NL. fem. n. *Megaliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Bbin08.* The type genus for the taxon is *Candidatus* Megalia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monodosales.

Description of *Candidatus* Megalida colepousia sp. nov.

Candidatus Megalida colepousia (NL. fem. n. *colepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-40-10 sp001784725*. The type genome for the species is the GenBank assembly GCA_001784725.1. The GC content of the type genome is 39.79 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Megalida gen. nov.

Candidatus Megalida (NL. fem. n. *Megalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-40-10*. The type species for the genus is *Candidatus* Megalida colepousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-40-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalidaceae.

Description of *Candidatus* Megalidaceae fam. nov.

Candidatus Megalidaceae (NL. fem. n. *Megalidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-40-10.* The type genus for the taxon is *Candidatus* Megalida .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Megalosa benifessa sp. nov.

Candidatus Megalosa benifessa (NL. fem. n. *benifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRPN01 sp011374625*. The type genome for the species is the GenBank assembly GCA_011374625.1. The GC content of the type genome is 43.38 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Megalosa gen. nov.

Candidatus Megalosa (NL. fem. n. *Megalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRPN01*. The type species for the genus is *Candidatus* Megalosa benifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Megalula defetilenta sp. nov.

Candidatus Megalula defetilenta (NL. fem. n. *defetilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZOR0006 sp000798955*. The type genome for the species is the GenBank assembly RS_GCF_000798955.1. The GC content of the type genome is 38.29 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "organic material".

Description of *Candidatus* Megalula gen. nov.

Candidatus Megalula (NL. fem. n. *Megalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZOR0006*. The type species for the genus is *Candidatus* Megalula defetilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZOR0006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalulaceae.

Description of *Candidatus* Megalulaceae fam. nov.

Candidatus Megalulaceae (NL. fem. n. *Megalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ZOR0006.* The type genus for the taxon is *Candidatus* Megalula .

According to the original version of GTDB R06-RS202, this family belongs to the order *ZOR0006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalulales.

Description of *Candidatus* Megalulales ord. nov.

Candidatus Megalulales (NL. fem. n. *Megalulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ZOR0006.* The type genus for the taxon is *Candidatus* Megalula .

According to the GTDB R06-RS202, this order belongs to the class *Bacilli*.

Description of *Candidatus* Megamonas carucicula sp. nov.

Candidatus Megamonas carucicula (NL. fem. n. *carucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megamonas sp900554895*. The type genome for the species is the GenBank assembly GCA_900554895.1. The GC content of the type genome is 39.62 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Megamonas resacicella sp. nov.

Candidatus Megamonas resacicella (NL. fem. n. *resacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megamonas sp900556715*. The type genome for the species is the GenBank assembly GCA_900753335.1. The GC content of the type genome is 31.59 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Megasphaera agravitudo sp. nov.

Candidatus Megasphaera agravitudo (NL. fem. n. *agravitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp900554215*. The type genome for the species is the GenBank assembly GCA_900554215.1. The GC content of the type genome is 53.48 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Megasphaera cerarimonia sp. nov.

Candidatus Megasphaera cerarimonia (NL. fem. n. *cerarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp002431345*. The type genome for the species is the GenBank assembly GCA_002437365.1. The GC content of the type genome is 45.23 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Megasphaera cotenitoga sp. nov.

Candidatus Megasphaera cotenitoga (NL. fem. n. *cotenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp001546855*. The type genome for the species is the GenBank assembly GCA_008672515.1. The GC content of the type genome is 51.88 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Megasphaera deciniforma sp. nov.

Candidatus Megasphaera deciniforma (NL. fem. n. *deciniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp900548635*. The type genome for the species is the GenBank assembly GCA_900758625.1. The GC content of the type genome is 55.09 %

and the genome length is 1.95 Mbp.

Description of *Candidatus* Megasphaera denicatio sp. nov.

Candidatus Megasphaera denicatio (NL. fem. n. *denicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp002319965*. The type genome for the species is the GenBank assembly GCA_900538535.1. The GC content of the type genome is 51.3 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Megasphaera famelitrix sp. nov.

Candidatus Megasphaera famelitrix (NL. fem. n. *famelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp902388315*. The type genome for the species is the GenBank assembly GCA_900765405.1. The GC content of the type genome is 52.78 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Megasphaera murelibula sp. nov.

Candidatus Megasphaera murelibula (NL. fem. n. *murelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp900540735*. The type genome for the species is the GenBank assembly GCA_900540735.1. The GC content of the type genome is 45.86 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Megasphaera refunatica sp. nov.

Candidatus Megasphaera refunatica (NL. fem. n. *refunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp000417505*. The type genome for the species is the GenBank assembly GCA_008668735.1. The GC content of the type genome is 54.88 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Megasphaera sceptitrix sp. nov.

Candidatus Megasphaera sceptitrix (NL. fem. n. *sceptitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Megasphaera sp900539295*. The type genome for the species is the GenBank assembly GCA_900539295.1. The GC content of the type genome is 51.38 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Meinhardsimonia ancipibra sp. nov.

Candidatus Meinhardsimonia ancipibra (NL. fem. n. *ancipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Meinhardsimonia sp003696705*. The type genome for the species is the GenBank assembly GCA_003696705.1. The GC content of the type genome is 67.19 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Meiothermus inpelivita sp. nov.

Candidatus Meiothermus inpelivita (NL. fem. n. *inpelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Meiothermus sp003351145*. The type genome for the species is the GenBank assembly RS_GCF_003351145.1. The GC content of the type genome is 66.83 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Meiothermus duricimonas sp. nov.

Candidatus Meiothermus duricimonas (NL. fem. n. *duricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Meiothermus_B sp003226535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004152925.1. The GC content of the type genome is 64.57 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Melilana immacigena sp. nov.

Candidatus Melilana immacigena (NL. fem. n. *immacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA796 sp002348535*. The type genome for the species is the GenBank assembly GCA_002348535.1. The GC content of the type genome is 59.22 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Melilana gen. nov.

Candidatus Melilana (NL. fem. n. *Melilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA796*. The type species for the genus is *Candidatus* Melilana immacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilanaceae.

Description of *Candidatus* Melilanaceae fam. nov.

Candidatus Melilanaceae (NL. fem. n. *Melilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA796.* The type genus for the taxon is *Candidatus* Melilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Melilanales.

Description of *Candidatus* Melilanales ord. nov.

Candidatus Melilanales (NL. fem. n. *Melilanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA796.* The type genus for the taxon is *Candidatus* Melilana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Melilanae.

Description of *Candidatus* Melilanae class. nov.

Candidatus Melilanae (NL. fem. n. *c__Melilanae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA796.* The type genus for the taxon is *Candidatus* Melilana .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Melilana palifisca sp. nov.

Candidatus Melilana palifisca (NL. fem. n. *palifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA796 sp002296975*. The type genome for the species is the GenBank assembly GCA_002425355.1. The GC content of the type genome is 57.23 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Melilaria siligicula sp. nov.

Candidatus Melilaria siligicula (NL. fem. n. *siligicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10365 sp003536295*. The type genome for the species is the GenBank assembly GCA_002384165.1. The GC content of the type genome is 51.44 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Melilaria gen. nov.

Candidatus Melilaria (NL. fem. n. *Melilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10365*. The type species for the genus is *Candidatus* Melilaria siligicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Melilella detenibula sp. nov.

Candidatus Melilella detenibula (NL. fem. n. *detenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CCMP332 sp014323545*. The type genome for the species is the GenBank assembly RS_GCF_014323545.1. The GC content of the type genome is 37.09 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Melilella gen. nov.

Candidatus Melilella (NL. fem. n. *Melilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CCMP332*. The type species for the genus is *Candidatus* Melilella detenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CCMP332*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilellaceae.

Description of *Candidatus* Melilellaceae fam. nov.

Candidatus Melilellaceae (NL. fem. n. *Melilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CCMP332.* The type genus for the taxon is *Candidatus* Melilella .

According to GTDB R06-RS202, this family belongs to the order *Cytophagales*.

Description of *Candidatus* Melilia levidetta sp. nov.

Candidatus Melilia levidetta (NL. fem. n. *levidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5444 sp002426575*. The type genome for the species is the GenBank assembly GCA_002426575.1. The GC content of the type genome is 33.85 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Melilia gen. nov.

Candidatus Melilia (NL. fem. n. *Melilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5444*. The type species for the genus is *Candidatus* Melilia levidetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Melilida inlapax sp. nov.

Candidatus Melilida inlapax (NL. fem. n. *inlapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1874 sp002352935*. The type genome for the species is the GenBank assembly GCA_002352935.1. The GC content of the type genome is 42.25 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Melilida gen. nov.

Candidatus Melilida (NL. fem. n. *Melilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1874*. The type species for the genus is *Candidatus* Melilida inlapax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1874*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilidaceae.

Description of *Candidatus* Melilidaceae fam. nov.

Candidatus Melilidaceae (NL. fem. n. *Melilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1874.* The type genus for the taxon is *Candidatus* Melilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1874*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Melilidales.

Description of *Candidatus* Melilidales ord. nov.

Candidatus Melilidales (NL. fem. n. *Melilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1874.* The type genus for the taxon is *Candidatus* Melilida .

According to the GTDB R06-RS202, this order belongs to the class *Moorellia*.

Description of *Candidatus* Melilosa hecatitoga sp. nov.

Candidatus Melilosa hecatitoga (NL. fem. n. *hecatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1381 sp002305435*. The type genome for the species is the GenBank assembly GCA_002305435.1. The GC content of the type genome is 47.52 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Melilosa gen. nov.

Candidatus Melilosa (NL. fem. n. *Melilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1381*. The type species for the genus is *Candidatus* Melilosa hecatitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Melilosaceae fam. nov.

Candidatus Melilosaceae (NL. fem. n. *Melilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1381.* The type genus for the taxon is *Candidatus* Melilosa .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales_A*.

Description of *Candidatus* Melilula derelax sp. nov.

Candidatus Melilula derelax (NL. fem. n. *derelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5343 sp002410125*. The type genome for the species is the GenBank assembly GCA_002410125.1. The GC content of the type genome is 31.81 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Melilula gen. nov.

Candidatus Melilula (NL. fem. n. *Melilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5343*. The type species for the genus is *Candidatus* Melilula derelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5343*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilulaceae.

Description of *Candidatus* Melilulaceae fam. nov.

Candidatus Melilulaceae (NL. fem. n. *Melilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5343.* The type genus for the taxon is *Candidatus* Melilula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Melopana dibapitio sp. nov.

Candidatus Melopana dibapitio (NL. fem. n. *dibapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6659 sp002344135*. The type genome for the species is the GenBank assembly GCA_002345945.1. The GC content of the type genome is 62.65 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Melopana gen. nov.

Candidatus Melopana (NL. fem. n. *Melopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6659*. The type species for the genus is *Candidatus* Melopana dibapitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Melopana effacigena sp. nov.

Candidatus Melopana effacigena (NL. fem. n. *effacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6659 sp002455425*. The type genome for the species is the GenBank assembly GCA_002455425.1. The GC content of the type genome is 63.3 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Meloparia bugilitio sp. nov.

Candidatus Meloparia bugilitio (NL. fem. n. *bugilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp900316455*. The type genome for the species is the GenBank assembly GCA_902770185.1. The GC content of the type genome is 47.85 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Meloparia gen. nov.

Candidatus Meloparia (NL. fem. n. *Meloparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG762*. The type species for the genus is *Candidatus* Meloparia bugilitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Meloparia catafitia sp. nov.

Candidatus Meloparia catafitia (NL. fem. n. *catafitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp900317765*. The type genome for the species is the GenBank assembly GCA_902757865.1. The GC content of the type genome is 50.1 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Meloparia encomimonia sp. nov.

Candidatus Meloparia encomimonia (NL. fem. n. *encomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp902802795*. The type genome for the species is the GenBank assembly GCA_902802795.1. The GC content of the type genome is 51.99 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Meloparia evangilega sp. nov.

Candidatus Meloparia evangilega (NL. fem. n. *evangilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp902803035*. The type genome for the species is the GenBank assembly GCA_902803035.1. The GC content of the type genome is 54.37 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Meloparia pluscilega sp. nov.

Candidatus Meloparia pluscilega (NL. fem. n. *pluscilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp902762615*. The type genome for the species is the GenBank assembly GCA_902762615.1. The GC content of the type genome is 49.69 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Meloparia recumastra sp. nov.

Candidatus Meloparia recumastra (NL. fem. n. *recumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp902799245*. The type genome for the species is the GenBank assembly GCA_902799245.1. The GC content of the type genome is 49.85 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Meloparia refocetta sp. nov.

Candidatus Meloparia refocetta (NL. fem. n. *refocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp900321515*. The type genome for the species is the GenBank assembly GCA_900321515.1. The GC content of the type genome is 49.55 %

and the genome length is 2.28 Mbp.

Description of *Candidatus* Meloparia regigastra sp. nov.

Candidatus Meloparia regigastra (NL. fem. n. *regigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp902762395*. The type genome for the species is the GenBank assembly GCA_902762395.1. The GC content of the type genome is 53.25 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Meloparia timefatio sp. nov.

Candidatus Meloparia timefatio (NL. fem. n. *timefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp900316495*. The type genome for the species is the GenBank assembly GCA_902768355.1. The GC content of the type genome is 53.68 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Meloparia vivifilenta sp. nov.

Candidatus Meloparia vivifilenta (NL. fem. n. *vivifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG762 sp900322085*. The type genome for the species is the GenBank assembly GCA_902760135.1. The GC content of the type genome is 49.18 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Melopella direpitrix sp. nov.

Candidatus Melopella direpitrix (NL. fem. n. *direpitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSTG01 sp011362555*. The type genome for the species is the GenBank assembly GCA_011362555.1. The GC content of the type genome is 35.74 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Melopella gen. nov.

Candidatus Melopella (NL. fem. n. *Melopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSTG01*. The type species for the genus is *Candidatus* Melopella direpitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSTG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melopellaceae.

Description of *Candidatus* Melopellaceae fam. nov.

Candidatus Melopellaceae (NL. fem. n. *Melopellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSTG01.* The type genus for the taxon is *Candidatus* Melopella .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Melopia detesicula sp. nov.

Candidatus Melopia detesicula (NL. fem. n. *detesicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-13 sp001303025*. The type genome for the species is the GenBank assembly GCA_001303025.1. The GC content of the type genome is 56.96 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Melopia gen. nov.

Candidatus Melopia (NL. fem. n. *Melopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-13*. The type species for the genus is *Candidatus* Melopia detesicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melopiaceae.

Description of *Candidatus* Melopiaceae fam. nov.

Candidatus Melopiaceae (NL. fem. n. *Melopiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-13.* The type genus for the taxon is *Candidatus* Melopia .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Melopida colapousia sp. nov.

Candidatus Melopida colapousia (NL. fem. n. *colapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2402 sp903929885*. The type genome for the species is the GenBank assembly GCA_903929885.1. The GC content of the type genome is 68.35 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Melopida gen. nov.

Candidatus Melopida (NL. fem. n. *Melopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2402*. The type species for the genus is *Candidatus* Melopida colapousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Melopida inmobisca sp. nov.

Candidatus Melopida inmobisca (NL. fem. n. *inmobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2402 sp002343715*. The type genome for the species is the GenBank assembly GCA_002343715.1. The GC content of the type genome is 64.93 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Meloposa semibibra sp. nov.

Candidatus Meloposa semibibra (NL. fem. n. *semibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-1-40CM-70-15 sp003223415*. The type genome for the species is the GenBank assembly GCA_003223415.1. The GC content of the type genome is 69.26 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Meloposa gen. nov.

Candidatus Meloposa (NL. fem. n. *Meloposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *13-1-40CM-70-15*. The type species for the genus is *Candidatus* Meloposa semibibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Melopula rudecimonas sp. nov.

Candidatus Melopula rudecimonas (NL. fem. n. *rudecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN37 sp002898375*. The type genome for the species is the GenBank assembly GCA_011053795.1. The GC content of the type genome is 41.54 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Melopula gen. nov.

Candidatus Melopula (NL. fem. n. *Melopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN37*. The type species for the genus is *Candidatus* Melopula rudecimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deteposaceae.

Description of *Candidatus* Menapana adrecousia sp. nov.

Candidatus Menapana adrecousia (NL. fem. n. *adrecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXO01 sp903822075*. The type genome for the species is the GenBank assembly GCA_903822075.1. The GC content of the type genome is 42.67 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Menapana gen. nov.

Candidatus Menapana (NL. fem. n. *Menapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJXO01*. The type species for the genus is *Candidatus* Menapana adrecousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunariaceae.

Description of *Candidatus* Menapana artilibra sp. nov.

Candidatus Menapana artilibra (NL. fem. n. *artilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXO01 sp903824735*. The type genome for the species is the GenBank assembly GCA_903824735.1. The GC content of the type genome is 41.52 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Menapana domipedo sp. nov.

Candidatus Menapana domipedo (NL. fem. n. *domipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXO01 sp903831305*. The type genome for the species is the GenBank assembly GCA_903831305.1. The GC content of the type genome is 40.4 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Menaparia argiticula sp. nov.

Candidatus Menaparia argiticula (NL. fem. n. *argiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1195 sp002308135*. The type genome for the species is the GenBank assembly GCA_002308135.1. The GC content of the type genome is 52.89 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Menaparia gen. nov.

Candidatus Menaparia (NL. fem. n. *Menaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1195*. The type species for the genus is *Candidatus* Menaparia argiticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Menaparia baditatio sp. nov.

Candidatus Menaparia baditatio (NL. fem. n. *baditatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1195 sp902774175*. The type genome for the species is the GenBank assembly GCA_902774175.1. The GC content of the type genome is 51.38 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Menaparia terebibra sp. nov.

Candidatus Menaparia terebibra (NL. fem. n. *terebibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1195 sp002309855*. The type genome for the species is the GenBank assembly GCA_002309855.1. The GC content of the type genome is 51.2 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Menapella ecfacastra sp. nov.

Candidatus Menapella ecfacastra (NL. fem. n. *ecfacastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SDB-A sp001412365*. The type genome for the species is the GenBank assembly GCA_001412365.1. The GC content of the type genome is 37.86 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "methanogenic consortium capable of long-chain paraffin degradation (SDB culture) enriched from contaminated sediments of San Diego Bay; California; degrades n-alkanes from C25 to C50".

Description of *Candidatus* Menapella gen. nov.

Candidatus Menapella (NL. fem. n. *Menapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SDB-A*. The type species for the genus is *Candidatus* Menapella ecfacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SDB-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Menapellaceae.

Description of *Candidatus* Menapellaceae fam. nov.

Candidatus Menapellaceae (NL. fem. n. *Menapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SDB-A*. The type genus for the taxon is *Candidatus* Menapella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SDB-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Menapellales.

Description of *Candidatus* Menapellales ord. nov.

Candidatus Menapellales (NL. fem. n. *Menapellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SDB-A*. The type genus for the taxon is *Candidatus* Menapella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SDB-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Menapellae.

Description of *Candidatus* Menapellae class. nov.

Candidatus Menapellae (NL. fem. n. *c__Menapellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SDB-A*. The type genus for the taxon is *Candidatus* Menapella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Tigurariota.

Description of *Candidatus* Menapida luxuritura sp. nov.

Candidatus Menapida luxuritura (NL. fem. n. *luxuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-B38 sp902505605*. The type genome for the species is the GenBank assembly GCA_902505605.1. The GC content of the type genome is 49.5 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Menapida gen. nov.

Candidatus Menapida (NL. fem. n. *Menapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-B38*. The type species for the genus is *Candidatus* Menapida luxuritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-B38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Menapidaceae.

Description of *Candidatus* Menapidaceae fam. nov.

Candidatus Menapidaceae (NL. fem. n. *Menapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-B38.* The type genus for the taxon is *Candidatus* Menapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *B3-B38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Menapidales.

Description of *Candidatus* Menapidales ord. nov.

Candidatus Menapidales (NL. fem. n. *Menapidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-B38.* The type genus for the taxon is *Candidatus* Menapida .

According to the original version of GTDB R06-RS202, this family belongs to the class *B3-B38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Menapidae.

Description of *Candidatus* Menapidae class. nov.

Candidatus Menapidae (NL. fem. n. *c__Menapidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-B38.* The type genus for the taxon is *Candidatus* Menapida .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Menapida palifetta sp. nov.

Candidatus Menapida palifetta (NL. fem. n. *palifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-B38 sp005223145*. The type genome for the species is the GenBank assembly GCA_005223145.1. The GC content of the type genome is 49.49 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Menaposa indotax sp. nov.

Candidatus Menaposa indotax (NL. fem. n. *indotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXUF01 sp013336165*. The type genome for the species is the GenBank assembly GCA_013336165.1. The GC content of the type genome is 61.51 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Menaposa gen. nov.

Candidatus Menaposa (NL. fem. n. *Menaposa* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXUF01*. The type species for the genus is *Candidatus* Menaposa indotax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXUF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Menaposaceae.

Description of *Candidatus* Menaposaceae fam. nov.

Candidatus Menaposaceae (NL. fem. n. *Menaposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXUF01.* The type genus for the taxon is *Candidatus* Menaposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Menapula semilentia sp. nov.

Candidatus Menapula semilentia (NL. fem. n. *semilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPR01 sp003557085*. The type genome for the species is the GenBank assembly GCA_003557085.1. The GC content of the type genome is 33.64 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Menapula gen. nov.

Candidatus Menapula (NL. fem. n. *Menapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWPR01*. The type species for the genus is *Candidatus* Menapula semilentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Menapulaceae.

Description of *Candidatus* Menapulaceae fam. nov.

Candidatus Menapulaceae (NL. fem. n. *Menapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWPR01.* The type genus for the taxon is *Candidatus* Menapula .

According to the original version of GTDB R06-RS202, this family belongs to the order *PWPR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Menapulales.

Description of *Candidatus* Menapulales ord. nov.

Candidatus Menapulales (NL. fem. n. *Menapulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWPR01.* The type genus for the taxon is *Candidatus* Menapula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehonellae.

Description of *Candidatus* Merdibacter acroligena sp. nov.

Candidatus Merdibacter acroligena (NL. fem. n. *acroligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Merdibacter sp900754715*. The type genome for the species is the GenBank assembly RS_GCF_900754715.1. The GC content of the type genome is 53.07 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Merdibacter attegastra sp. nov.

Candidatus Merdibacter attegastra (NL. fem. n. *attegastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Merdibacter sp900759455*. The type genome for the species is the GenBank assembly RS_GCF_900759455.1. The GC content of the type genome is 44.35 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Merdibacter refaciforma sp. nov.

Candidatus Merdibacter refaciforma (NL. fem. n. *refaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Merdibacter sp900543035*. The type genome for the species is the GenBank assembly GCA_900543035.1. The GC content of the type genome is 54.09 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Merdimonas canacitica sp. nov.

Candidatus Merdimonas canacitica (NL. fem. n. *canacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Merdimonas sp900553355*. The type genome for the species is the GenBank assembly GCA_900553355.1. The GC content of the type genome is 47.46 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Meridana impinimonas sp. nov.

Candidatus Meridana impinimonas (NL. fem. n. *impinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLK01 sp011333305*. The type genome for the species is the GenBank assembly GCA_011333305.1. The GC content of the type genome is 49.55 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Meridana gen. nov.

Candidatus Meridana (NL. fem. n. *Meridana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLK01*. The type species for the genus is *Candidatus* Meridana impinimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridanaceae.

Description of *Candidatus* Meridanaceae fam. nov.

Candidatus Meridanaceae (NL. fem. n. *Meridanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLK01.* The type genus for the taxon is *Candidatus* Meridana .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Meridella humecigena sp. nov.

Candidatus Meridella humecigena (NL. fem. n. *humecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPNO01 sp002239065*. The type genome for the species is the GenBank assembly GCA_002239065.1. The GC content of the type genome is 69.54 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Meridella gen. nov.

Candidatus Meridella (NL. fem. n. *Meridella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MPNO01*. The type species for the genus is *Candidatus* Meridella humecigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MPNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridellaceae.

Description of *Candidatus* Meridellaceae fam. nov.

Candidatus Meridellaceae (NL. fem. n. *Meridellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MPNO01.* The type genus for the taxon is *Candidatus* Meridella .

According to the original version of GTDB R06-RS202, this family belongs to the order *MPNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Meridellales.

Description of *Candidatus* Meridellales ord. nov.

Candidatus Meridellales (NL. fem. n. *Meridellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MPNO01*. The type genus for the taxon is *Candidatus* Meridella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Meridida affiritica sp. nov.

Candidatus Meridida affiritica (NL. fem. n. *affiritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4665 sp003516025*. The type genome for the species is the GenBank assembly GCA_003516025.1. The GC content of the type genome is 50.75 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Meridida gen. nov.

Candidatus Meridida (NL. fem. n. *Meridida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4665*. The type species for the genus is *Candidatus* Meridida affiritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridídaceae.

Description of *Candidatus* Meridídaceae fam. nov.

Candidatus Meridídaceae (NL. fem. n. *Meridídaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4665*. The type genus for the taxon is *Candidatus* Meridida .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Meridida delubifica sp. nov.

Candidatus Meridida delubifica (NL. fem. n. *delubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4665 sp002413835*. The type genome for the species is the GenBank assembly GCA_002405335.1. The GC content of the type genome is 52.15 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Meridida manibimonas sp. nov.

Candidatus Meridida manibimonas (NL. fem. n. *manibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4665 sp002413755*. The type genome for the species is the GenBank assembly GCA_002413755.1. The GC content of the type genome is 53.04 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Meridosa delecitia sp. nov.

Candidatus Meridosa delecitia (NL. fem. n. *delecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3561 sp002376005*. The type genome for the species is the GenBank assembly GCA_004366965.1. The GC content of the type genome is 63.22 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Meridosa gen. nov.

Candidatus Meridosa (NL. fem. n. *Meridosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3561*. The type species for the genus is *Candidatus* Meridosa delecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3561*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridosaceae.

Description of *Candidatus* Meridosaceae fam. nov.

Candidatus Meridosaceae (NL. fem. n. *Meridosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3561*. The type genus for the taxon is *Candidatus* Meridosa .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA3561. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Meridosales.

Description of *Candidatus* Meridosales ord. nov.

Candidatus Meridosales (NL. fem. n. *Meridosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3561*. The type genus for the taxon is *Candidatus* Meridosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Meridula dicimicula sp. nov.

Candidatus Meridula dicimicula (NL. fem. n. *dicimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIP01 sp013297925*. The type genome for the species is the GenBank assembly GCA_013297925.1. The GC content of the type genome is 55.5 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Meridula gen. nov.

Candidatus Meridula (NL. fem. n. *Meridula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIP01*. The type species for the genus is *Candidatus* Meridula dicimicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Meridula repagastra sp. nov.

Candidatus Meridula repagastra (NL. fem. n. *repagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIP01 sp013297865*. The type genome for the species is the GenBank assembly GCA_013297865.1. The GC content of the type genome is 59.31 %

and the genome length is 3.99 Mbp.

Description of *Candidatus* Meridula voragiforma sp. nov.

Candidatus Meridula voragiforma (NL. fem. n. *voragiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIP01 sp012036375*. The type genome for the species is the GenBank assembly GCA_012032015.1. The GC content of the type genome is 55.06 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Mesobacillus acculentia sp. nov.

Candidatus Mesobacillus acculentia (NL. fem. n. *acculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesobacillus sp003457145*. The type genome for the species is the GenBank assembly GCA_003457145.1. The GC content of the type genome is 41.86 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Mesobacillus favonugo sp. nov.

Candidatus Mesobacillus favonugo (NL. fem. n. *favonugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesobacillus sp001273925*. The type genome for the species is the GenBank assembly RS_GCF_001273925.1. The GC content of the type genome is 45.75 % and the genome length is 5.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Mesoflavibacter bicapax sp. nov.

Candidatus Mesoflavibacter bicapax (NL. fem. n. *bicapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesoflavibacter sp003008475*. The type genome for the species is the GenBank assembly RS_GCF_003008415.2. The GC content of the type genome is 31.19 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Mesomycoplasma abpatilenta sp. nov.

Candidatus Mesomycoplasma abpatilenta (NL. fem. n. *abpatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesomycoplasma sp012516495*. The type genome for the species is the GenBank assembly RS_GCF_012516495.1. The GC content of the type genome is 26.1 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Mesonia categatio sp. nov.

Candidatus Mesonia categatio (NL. fem. n. *categatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp008692195*. The type genome for the species is the GenBank assembly RS_GCF_008692195.1. The GC content of the type genome is 35.19 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Mesonia cotenessa sp. nov.

Candidatus Mesonia cotenessa (NL. fem. n. *cotenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp008017835*. The type genome for the species is the GenBank assembly RS_GCF_008017835.1. The GC content of the type genome is 35.71 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Mesonia dicibitica sp. nov.

Candidatus Mesonia dicibitica (NL. fem. n. *dicibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp006546625*. The type genome for the species is the GenBank assembly RS_GCF_006546625.1. The GC content of the type genome is 35.58 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Mesonia genocentia sp. nov.

Candidatus Mesonia genocentia (NL. fem. n. *genocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp002413625*. The type genome for the species is the GenBank assembly GCA_002364385.1. The GC content of the type genome is 34.64 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Mesonia lugubisca sp. nov.

Candidatus Mesonia lugubisca (NL. fem. n. *lugubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp012964435*. The type genome for the species is the GenBank assembly GCA_012964435.1. The GC content of the type genome is 34.9 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Mesonia rubicousia sp. nov.

Candidatus Mesonia rubicousia (NL. fem. n. *rubicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesonia sp003233725*. The type genome for the species is the GenBank assembly RS_GCF_003233725.1. The GC content of the type genome is 35.81 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Mesorhizobium absurousia sp. nov.

Candidatus Mesorhizobium absurousia (NL. fem. n. *absurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp005503535*. The type genome for the species is the GenBank assembly RS_GCF_005503535.1. The GC content of the type genome is 63.53 % and the genome length is 7.36 Mbp.

Description of *Candidatus* Mesorhizobium adlacessa sp. nov.

Candidatus Mesorhizobium adlacessa (NL. fem. n. *adlacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003997495*. The type genome for the species is the GenBank assembly RS_GCF_003997495.1. The GC content of the type genome is 62.46

% and the genome length is 6.52 Mbp.

Description of *Candidatus* Mesorhizobium adtesatio sp. nov.

Candidatus Mesorhizobium adtesatio (NL. fem. n. *adtesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006439355*. The type genome for the species is the GenBank assembly RS_GCF_006439355.1. The GC content of the type genome is 63.76 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Mesorhizobium ambadousia sp. nov.

Candidatus Mesorhizobium ambadousia (NL. fem. n. *ambadousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952365*. The type genome for the species is the GenBank assembly RS_GCF_003952365.1. The GC content of the type genome is 62.52 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Mesorhizobium appacago sp. nov.

Candidatus Mesorhizobium appacago (NL. fem. n. *appacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001899205*. The type genome for the species is the GenBank assembly GCA_001899205.1. The GC content of the type genome is 64.74 % and the genome length is 6.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Mesorhizobium aprarax sp. nov.

Candidatus Mesorhizobium aprarax (NL. fem. n. *aprarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000824805*. The type genome for the species is the GenBank assembly RS_GCF_000824805.1. The GC content of the type genome is 63.41 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Mesorhizobium ascenicella sp. nov.

Candidatus Mesorhizobium ascenicella (NL. fem. n. *ascenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000502955*. The type genome for the species is the GenBank assembly RS_GCF_000502955.1. The GC content of the type genome is 61.98 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Mesorhizobium ascenitia sp. nov.

Candidatus Mesorhizobium ascenitia (NL. fem. n. *ascenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004962925*. The type genome for the species is the GenBank assembly GCA_004962925.1. The GC content of the type genome is 61.91 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Mesorhizobium ascisisca sp. nov.

Candidatus Mesorhizobium ascisisca (NL. fem. n. *ascisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004963905*. The type genome for the species is the GenBank assembly GCA_004963905.1. The GC content of the type genome is 63.65 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Mesorhizobium attorisca sp. nov.

Candidatus Mesorhizobium attorisca (NL. fem. n. *attorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001854785*. The type genome for the species is the GenBank assembly RS_GCF_001854785.1. The GC content of the type genome is 63.24 % and the genome length is 6.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil from surrounding area".

Description of *Candidatus* Mesorhizobium baditousia sp. nov.

Candidatus Mesorhizobium baditousia (NL. fem. n. *baditousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000688075*. The type genome for the species is the GenBank assembly RS_GCF_000688075.1. The GC content of the type genome is 62.93 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Mesorhizobium bifisilenta sp. nov.

Candidatus Mesorhizobium bifisilenta (NL. fem. n. *bifisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003997935*. The type genome for the species is the GenBank assembly RS_GCF_003997935.1. The GC content of the type genome is 62.28 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Mesorhizobium bipenivita sp. nov.

Candidatus Mesorhizobium bipenivita (NL. fem. n. *bipenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004136315*. The type genome for the species is the GenBank assembly RS_GCF_900119745.1. The GC content of the type genome is 62.14 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Mesorhizobium bucolilenta sp. nov.

Candidatus Mesorhizobium bucolilenta (NL. fem. n. *bucolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002294995*. The type genome for the species is the GenBank assembly RS_GCF_002294995.1. The GC content of the type genome is 63.31 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Mesorhizobium buxifibula sp. nov.

Candidatus Mesorhizobium buxifibula (NL. fem. n. *buxifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004020105*. The type genome for the species is the GenBank assembly GCA_004019795.1. The GC content of the type genome is 62.16 %

and the genome length is 6.92 Mbp.

Description of *Candidatus* Mesorhizobium cacomedo sp. nov.

Candidatus Mesorhizobium cacomedo (NL. fem. n. *cacomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004962245*. The type genome for the species is the GenBank assembly GCA_004962545.1. The GC content of the type genome is 62.21 % and the genome length is 7.54 Mbp.

Description of *Candidatus* Mesorhizobium ceracilenta sp. nov.

Candidatus Mesorhizobium ceracilenta (NL. fem. n. *ceracilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004791165*. The type genome for the species is the GenBank assembly GCA_004017165.1. The GC content of the type genome is 62.84 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Mesorhizobium cerifigena sp. nov.

Candidatus Mesorhizobium cerifigena (NL. fem. n. *cerifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004791025*. The type genome for the species is the GenBank assembly RS_GCF_004792275.1. The GC content of the type genome is 63.6 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Mesorhizobium ciminitoga sp. nov.

Candidatus Mesorhizobium ciminitoga (NL. fem. n. *ciminitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003289965*. The type genome for the species is the GenBank assembly RS_GCF_003289965.1. The GC content of the type genome is 63.73 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Mesorhizobium citivetta sp. nov.

Candidatus Mesorhizobium citivetta (NL. fem. n. *citivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000427725*. The type genome for the species is the GenBank assembly RS_GCF_000427725.1. The GC content of the type genome is 63.09 % and the genome length is 7.1 Mbp.

Description of *Candidatus* Mesorhizobium cobalilenta sp. nov.

Candidatus Mesorhizobium cobalilenta (NL. fem. n. *cobalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001303895*. The type genome for the species is the GenBank assembly RS_GCF_001303895.1. The GC content of the type genome is 61.94 % and the genome length is 6.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture inoculated with cave lake water with methylated amine as carbon substrate".

Description of *Candidatus* Mesorhizobium cocolatica sp. nov.

Candidatus Mesorhizobium cocolatica (NL. fem. n. *cocolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952385*. The type genome for the species is the GenBank assembly GCA_004016885.1. The GC content of the type genome is 63.64 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Mesorhizobium codifatio sp. nov.

Candidatus Mesorhizobium codifatio (NL. fem. n. *codifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952485*. The type genome for the species is the GenBank assembly GCA_005117035.1. The GC content of the type genome is 62.91 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Mesorhizobium cohoritas sp. nov.

Candidatus Mesorhizobium cohoritas (NL. fem. n. *cohoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004791585*. The type genome for the species is the GenBank assembly RS_GCF_004022625.2. The GC content of the type genome is 63.53 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Mesorhizobium cohuratio sp. nov.

Candidatus Mesorhizobium cohuratio (NL. fem. n. *cohuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006439515*. The type genome for the species is the GenBank assembly RS_GCF_006442545.1. The GC content of the type genome is 62.64 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Mesorhizobium colubitica sp. nov.

Candidatus Mesorhizobium colubitica (NL. fem. n. *colubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000513935*. The type genome for the species is the GenBank assembly RS_GCF_000513935.1. The GC content of the type genome is 62.7 % and the genome length is 6.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Mesorhizobium colutugo sp. nov.

Candidatus Mesorhizobium colutugo (NL. fem. n. *colutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952505*. The type genome for the species is the GenBank assembly GCA_004017345.1. The GC content of the type genome is 63.61 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Mesorhizobium conigentia sp. nov.

Candidatus Mesorhizobium conigentia (NL. fem. n. *conigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000502715*. The type genome for the species is the GenBank assembly RS_GCF_000502455.1. The GC content of the type genome is 62.47 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Mesorhizobium delecatio sp. nov.

Candidatus Mesorhizobium delecatio (NL. fem. n. *delecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004010325*. The type genome for the species is the GenBank assembly GCA_005063435.1. The GC content of the type genome is 62.2 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Mesorhizobium demulimonia sp. nov.

Candidatus Mesorhizobium demulimonia (NL. fem. n. *demulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442315*. The type genome for the species is the GenBank assembly RS_GCF_006442315.1. The GC content of the type genome is 63.61 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Mesorhizobium denixatio sp. nov.

Candidatus Mesorhizobium denixatio (NL. fem. n. *denixatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000824845*. The type genome for the species is the GenBank assembly RS_GCF_000824845.1. The GC content of the type genome is 63.49 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Mesorhizobium denoricella sp. nov.

Candidatus Mesorhizobium denoricella (NL. fem. n. *denoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp900199455*. The type genome for the species is the GenBank assembly RS_GCF_900199455.1. The GC content of the type genome is 62.39

% and the genome length is 8.58 Mbp.

Description of *Candidatus* Mesorhizobium denupatio sp. nov.

Candidatus Mesorhizobium denupatio (NL. fem. n. *denupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001427385*. The type genome for the species is the GenBank assembly RS_GCF_001427385.1. The GC content of the type genome is 61.5 % and the genome length is 4.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mesorhizobium denupitrix sp. nov.

Candidatus Mesorhizobium denupitrix (NL. fem. n. *denupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000503055*. The type genome for the species is the GenBank assembly RS_GCF_000503055.1. The GC content of the type genome is 62.08 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Mesorhizobium depacimonia sp. nov.

Candidatus Mesorhizobium depacimonia (NL. fem. n. *depacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000359125*. The type genome for the species is the GenBank assembly RS_GCF_000359125.1. The GC content of the type genome is 62.36 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Mesorhizobium depelastra sp. nov.

Candidatus Mesorhizobium depelastra (NL. fem. n. *depelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004020315*. The type genome for the species is the GenBank assembly GCA_005047105.1. The GC content of the type genome is 61.66 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Mesorhizobium depicilega sp. nov.

Candidatus Mesorhizobium depicilega (NL. fem. n. *depicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002295115*. The type genome for the species is the GenBank assembly RS_GCF_007003945.1. The GC content of the type genome is 62.8 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Mesorhizobium depocimonas sp. nov.

Candidatus Mesorhizobium depocimonas (NL. fem. n. *depocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442685*. The type genome for the species is the GenBank assembly RS_GCF_006440785.1. The GC content of the type genome is 63.16 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Mesorhizobium desonigena sp. nov.

Candidatus Mesorhizobium desonigena (NL. fem. n. *desonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000425965*. The type genome for the species is the GenBank assembly RS_GCF_000425965.1. The GC content of the type genome is 62.81 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Mesorhizobium detositia sp. nov.

Candidatus Mesorhizobium detositia (NL. fem. n. *detositia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp007003975*. The type genome for the species is the GenBank assembly RS_GCF_007004055.1. The GC content of the type genome is 62.52 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Mesorhizobium didacitura sp. nov.

Candidatus Mesorhizobium didacitura (NL. fem. n. *didacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006440775*. The type genome for the species is the GenBank assembly RS_GCF_006443065.1. The GC content of the type genome is 63.65 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Mesorhizobium dilogago sp. nov.

Candidatus Mesorhizobium dilogago (NL. fem. n. *dilogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006658505*. The type genome for the species is the GenBank assembly RS_GCF_006442395.1. The GC content of the type genome is 62.74 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Mesorhizobium diponivita sp. nov.

Candidatus Mesorhizobium diponivita (NL. fem. n. *diponivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004791255*. The type genome for the species is the GenBank assembly RS_GCF_004794755.1. The GC content of the type genome is 62.56 % and the genome length is 6.96 Mbp.

Description of *Candidatus* Mesorhizobium doxolitrix sp. nov.

Candidatus Mesorhizobium doxolitrix (NL. fem. n. *doxolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002294945*. The type genome for the species is the GenBank assembly RS_GCF_004791945.1. The GC content of the type genome is 63.18 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Mesorhizobium duponitia sp. nov.

Candidatus Mesorhizobium duponitia (NL. fem. n. *duponitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004016445*. The type genome for the species is the GenBank assembly RS_GCF_004010465.2. The GC content of the type genome is 63.24

% and the genome length is 7.93 Mbp.

Description of *Candidatus* Mesorhizobium encepimonia sp. nov.

Candidatus Mesorhizobium encepimonia (NL. fem. n. *encepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003353565*. The type genome for the species is the GenBank assembly RS_GCF_003353565.1. The GC content of the type genome is 63.31 % and the genome length is 7.43 Mbp.

Description of *Candidatus* Mesorhizobium excoritoga sp. nov.

Candidatus Mesorhizobium excoritoga (NL. fem. n. *excoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001897075*. The type genome for the species is the GenBank assembly GCA_001897075.1. The GC content of the type genome is 61.16 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Mesorhizobium facunitura sp. nov.

Candidatus Mesorhizobium facunitura (NL. fem. n. *facunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001427025*. The type genome for the species is the GenBank assembly RS_GCF_001426965.1. The GC content of the type genome is 63.03 % and the genome length is 3.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mesorhizobium fatilibra sp. nov.

Candidatus Mesorhizobium fatilibra (NL. fem. n. *fatilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000502875*. The type genome for the species is the GenBank assembly RS_GCF_000502875.1. The GC content of the type genome is 62.48 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Mesorhizobium faviletta sp. nov.

Candidatus Mesorhizobium faviletta (NL. fem. n. *faviletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004020365*. The type genome for the species is the GenBank assembly GCA_004019895.1. The GC content of the type genome is 62.11 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Mesorhizobium fecunitudo sp. nov.

Candidatus Mesorhizobium fecunitudo (NL. fem. n. *fecunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp005063415*. The type genome for the species is the GenBank assembly GCA_005063415.1. The GC content of the type genome is 62.08 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Mesorhizobium hiruditudo sp. nov.

Candidatus Mesorhizobium hiruditudo (NL. fem. n. *hiruditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004022705*. The type genome for the species is the GenBank assembly RS_GCF_004791235.1. The GC content of the type genome is 63.38 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Mesorhizobium homilimonas sp. nov.

Candidatus Mesorhizobium homilimonas (NL. fem. n. *homilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002294725*. The type genome for the species is the GenBank assembly RS_GCF_002294725.1. The GC content of the type genome is 63.25 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Mesorhizobium indomax sp. nov.

Candidatus Mesorhizobium indomax (NL. fem. n. *indomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442205*. The type genome for the species is the GenBank assembly RS_GCF_006442205.1. The GC content of the type genome is 63.48 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Mesorhizobium indotago sp. nov.

Candidatus Mesorhizobium indotago (NL. fem. n. *indotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp013520985*. The type genome for the species is the GenBank assembly RS_GCF_013520985.1. The GC content of the type genome is 62.37 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Mesorhizobium inretibula sp. nov.

Candidatus Mesorhizobium inretibula (NL. fem. n. *inretibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000502835*. The type genome for the species is the GenBank assembly RS_GCF_000502835.1. The GC content of the type genome is 62.14 % and the genome length is 7.03 Mbp.

Description of *Candidatus* Mesorhizobium irrevitrix sp. nov.

Candidatus Mesorhizobium irrevitrix (NL. fem. n. *irrevitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003242525*. The type genome for the species is the GenBank assembly GCA_003242525.1. The GC content of the type genome is 62.22 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Mesorhizobium lenunisca sp. nov.

Candidatus Mesorhizobium lenunisca (NL. fem. n. *lenunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Mesorhizobium sp004020875*. The type genome for the species is the GenBank assembly GCA_004019885.1. The GC content of the type genome is 63.23 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Mesorhizobium levifisca sp. nov.

Candidatus Mesorhizobium levifisca (NL. fem. n. *levifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003996995*. The type genome for the species is the GenBank assembly RS_GCF_003997845.1. The GC content of the type genome is 62.59 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Mesorhizobium locelibula sp. nov.

Candidatus Mesorhizobium locelibula (NL. fem. n. *locelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp900115245*. The type genome for the species is the GenBank assembly RS_GCF_900115245.1. The GC content of the type genome is 63.63 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Mesorhizobium lubenilega sp. nov.

Candidatus Mesorhizobium lubenilega (NL. fem. n. *lubenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442815*. The type genome for the species is the GenBank assembly RS_GCF_006440575.1. The GC content of the type genome is 63.95 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Mesorhizobium luticedo sp. nov.

Candidatus Mesorhizobium luticedo (NL. fem. n. *luticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004020545*. The type genome for the species is the GenBank assembly GCA_004962185.1. The GC content of the type genome is 63.46 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Mesorhizobium macilimonas sp. nov.

Candidatus Mesorhizobium macilimonas (NL. fem. n. *macilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952465*. The type genome for the species is the GenBank assembly GCA_004016615.1. The GC content of the type genome is 63.3 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Mesorhizobium munimitio sp. nov.

Candidatus Mesorhizobium munimitio (NL. fem. n. *munimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002295065*. The type genome for the species is the GenBank assembly RS_GCF_002295065.1. The GC content of the type genome is 63.45 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Mesorhizobium murilitrix sp. nov.

Candidatus Mesorhizobium murilitrix (NL. fem. n. *murilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006440675*. The type genome for the species is the GenBank assembly RS_GCF_006439375.1. The GC content of the type genome is 63.94 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Mesorhizobium nicomastra sp. nov.

Candidatus Mesorhizobium nicomastra (NL. fem. n. *nicomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003952425*. The type genome for the species is the GenBank assembly GCA_004016805.1. The GC content of the type genome is 63.44 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Mesorhizobium nugivessa sp. nov.

Candidatus Mesorhizobium nugivessa (NL. fem. n. *nugivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004017275*. The type genome for the species is the GenBank assembly GCA_004016965.1. The GC content of the type genome is 62.23 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Mesorhizobium obambitio sp. nov.

Candidatus Mesorhizobium obambitio (NL. fem. n. *obambitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp003963455*. The type genome for the species is the GenBank assembly GCA_003963455.1. The GC content of the type genome is 63.8 % and the genome length is 6.9 Mbp.

Description of *Candidatus* Mesorhizobium panifousia sp. nov.

Candidatus Mesorhizobium panifousia (NL. fem. n. *panifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004017535*. The type genome for the species is the GenBank assembly GCA_004020305.1. The GC content of the type genome is 63.28 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Mesorhizobium parocimonas sp. nov.

Candidatus Mesorhizobium parocimonas (NL. fem. n. *parocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp002294985*. The type genome for the species is the GenBank assembly GCA_004018325.1. The GC content of the type genome is 63.31 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Mesorhizobium remeditudo sp. nov.

Candidatus Mesorhizobium remeditudo (NL. fem. n. *remeditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Mesorhizobium sp006440735*. The type genome for the species is the GenBank assembly RS_GCF_006440735.1. The GC content of the type genome is 64.0 % and the genome length is 7.03 Mbp.

Description of *Candidatus* Mesorhizobium rorifitudo sp. nov.

Candidatus Mesorhizobium rorifitudo (NL. fem. n. *rorifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp008520305*. The type genome for the species is the GenBank assembly RS_GCF_008520305.1. The GC content of the type genome is 62.31 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Mesorhizobium rubecilega sp. nov.

Candidatus Mesorhizobium rubecilega (NL. fem. n. *rubecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp900472295*. The type genome for the species is the GenBank assembly RS_GCF_900467855.1. The GC content of the type genome is 62.77 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Mesorhizobium sanabitia sp. nov.

Candidatus Mesorhizobium sanabitia (NL. fem. n. *sanabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp013170825*. The type genome for the species is the GenBank assembly RS_GCF_013170825.1. The GC content of the type genome is 62.78 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Mesorhizobium saxifitio sp. nov.

Candidatus Mesorhizobium saxifitio (NL. fem. n. *saxifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp004020645*. The type genome for the species is the GenBank assembly GCA_004019335.1. The GC content of the type genome is 61.78 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Mesorhizobium selecatica sp. nov.

Candidatus Mesorhizobium selecatica (NL. fem. n. *selecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001425625*. The type genome for the species is the GenBank assembly RS_GCF_001425625.1. The GC content of the type genome is 62.4 % and the genome length is 6.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mesorhizobium senacifica sp. nov.

Candidatus Mesorhizobium senacifica (NL. fem. n. *senacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp001427285*. The type genome for the species is the GenBank assembly RS_GCF_001427285.1. The GC content of the type genome is 60.89 % and the genome length is 4.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mesorhizobium subucastra sp. nov.

Candidatus Mesorhizobium subucastra (NL. fem. n. *subucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442965*. The type genome for the species is the GenBank assembly RS_GCF_006443075.1. The GC content of the type genome is 63.74 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Mesorhizobium tametugo sp. nov.

Candidatus Mesorhizobium tametugo (NL. fem. n. *tametugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp006442795*. The type genome for the species is the GenBank assembly RS_GCF_006442795.1. The GC content of the type genome is 63.23 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Mesorhizobium venabatio sp. nov.

Candidatus Mesorhizobium venabatio (NL. fem. n. *venabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp000824825*. The type genome for the species is the GenBank assembly RS_GCF_000824825.2. The GC content of the type genome is 63.52 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Mesorhizobium virecilega sp. nov.

Candidatus Mesorhizobium virecilega (NL. fem. n. *virecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp900472585*. The type genome for the species is the GenBank assembly RS_GCF_900472585.1. The GC content of the type genome is 62.85 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Mesorhizobium volubetta sp. nov.

Candidatus Mesorhizobium volubetta (NL. fem. n. *volubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium sp013170805*. The type genome for the species is the GenBank assembly RS_GCF_013170745.1. The GC content of the type genome is 62.45 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Mesorhizobium exforitas sp. nov.

Candidatus Mesorhizobium exforitas (NL. fem. n. *exforitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium_A sp002336975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002336975.1. The GC content of the type genome is 64.78 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Mesorhizobium abnepimonia sp. nov.

Candidatus Mesorhizobium abnepimonia (NL. fem. n. *abnepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium_D sp014595955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014595955.1. The GC content of the type genome is 63.33 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Mesorhizobium sarabicula sp. nov.

Candidatus Mesorhizobium sarabicula (NL. fem. n. *sarabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesorhizobium_E sp014495845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014495845.1. The GC content of the type genome is 67.9 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Mesosutterella ecfacitura sp. nov.

Candidatus Mesosutterella ecfacitura (NL. fem. n. *ecfacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesosutterella sp902797695*. The type genome for the species is the GenBank assembly GCA_902797695.1. The GC content of the type genome is 63.21 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Mesotoga alsisatica sp. nov.

Candidatus Mesotoga alsisatica (NL. fem. n. *alsisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp011620045*. The type genome for the species is the GenBank assembly GCA_011620045.1. The GC content of the type genome is 45.8 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Mesotoga carucedo sp. nov.

Candidatus Mesotoga carucedo (NL. fem. n. *carucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp002305955*. The type genome for the species is the GenBank assembly GCA_002305955.1. The GC content of the type genome is 50.49 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Mesotoga fecunitio sp. nov.

Candidatus Mesotoga fecunitio (NL. fem. n. *fecunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp002752635*. The type genome for the species is the GenBank assembly RS_GCF_002890355.1. The GC content of the type genome is 45.91 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Mesotoga occalimonia sp. nov.

Candidatus Mesotoga occalimonia (NL. fem. n. *occalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp001603185*. The type genome for the species is the GenBank assembly GCA_001603185.1. The GC content of the type genome is 46.98 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Mesotoga rorulessa sp. nov.

Candidatus Mesotoga rorulessa (NL. fem. n. *rorulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp003228205*. The type genome for the species is the GenBank assembly GCA_002435945.1. The GC content of the type genome is 45.64 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Mesotoga rudicitio sp. nov.

Candidatus Mesotoga rudicitio (NL. fem. n. *rudicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mesotoga sp003664995*. The type genome for the species is the GenBank assembly RS_GCF_003664995.1. The GC content of the type genome is 45.67 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Metabacillus buxificella sp. nov.

Candidatus Metabacillus buxificella (NL. fem. n. *buxificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus sp002577655*. The type genome for the species is the GenBank assembly RS_GCF_002577655.1. The GC content of the type genome is 35.29 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Metabacillus cadurousia sp. nov.

Candidatus Metabacillus cadurousia (NL. fem. n. *cadurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus sp004801455*. The type genome for the species is the GenBank assembly RS_GCF_004801455.1. The GC content of the type genome is 35.75 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Metabacillus curacitas sp. nov.

Candidatus Metabacillus curacitas (NL. fem. n. *curacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus sp002871465*. The type genome for the species is the GenBank assembly RS_GCF_903166545.1. The GC content of the type genome is 35.83 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Metabacillus melilitia sp. nov.

Candidatus Metabacillus melilitia (NL. fem. n. *melilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Metabacillus sp000518865*. The type genome for the species is the GenBank assembly RS_GCF_000518865.1. The GC content of the type genome is 36.05 % and the genome length is 5.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Metabacillus obtesifica sp. nov.

Candidatus Metabacillus obtesifica (NL. fem. n. *obtesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus sp003259415*. The type genome for the species is the GenBank assembly RS_GCF_003259415.1. The GC content of the type genome is 36.41 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Metabacillus tribritoga sp. nov.

Candidatus Metabacillus tribritoga (NL. fem. n. *tribritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus sp000981385*. The type genome for the species is the GenBank assembly RS_GCF_000981385.1. The GC content of the type genome is 37.0 % and the genome length is 6.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "solar saltern".

Description of *Candidatus* Metabacillus aneclitio sp. nov.

Candidatus Metabacillus aneclitio (NL. fem. n. *aneclitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus_B sp003816055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003816055.1. The GC content of the type genome is 44.88 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Metabacillus luxuritudo sp. nov.

Candidatus Metabacillus luxuritudo (NL. fem. n. *luxuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metabacillus_B sp000732485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000732485.2. The GC content of the type genome is 43.3 % and the genome length is 4.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Loyalsock Creek".

Description of *Candidatus* Metabana dibucatica sp. nov.

Candidatus Metabana dibucatica (NL. fem. n. *dibucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQQ01 sp903873995*. The type genome for the species is the GenBank assembly GCA_903873995.1. The GC content of the type genome is 66.34 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Metabana gen. nov.

Candidatus Metabana (NL. fem. n. *Metabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQQQ01*. The type species for the genus is *Candidatus* Metabana dibucatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metabana monimitio sp. nov.

Candidatus Metabana monimitio (NL. fem. n. *monimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQQ01 sp903924855*. The type genome for the species is the GenBank assembly GCA_903832455.1. The GC content of the type genome is 66.25 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Metabana peribatica sp. nov.

Candidatus Metabana peribatica (NL. fem. n. *peribatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQQ01 sp903823665*. The type genome for the species is the GenBank assembly GCA_903823665.1. The GC content of the type genome is 62.05 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Metabana solivicella sp. nov.

Candidatus Metabana solivicella (NL. fem. n. *solivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQQ01 sp903932545*. The type genome for the species is the GenBank assembly GCA_903932545.1. The GC content of the type genome is 61.16 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Metabana susicigena sp. nov.

Candidatus Metabana susicigena (NL. fem. n. *susicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQQ01 sp903891315*. The type genome for the species is the GenBank assembly GCA_903891315.1. The GC content of the type genome is 63.22 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Metabaria visibisca sp. nov.

Candidatus Metabaria visibisca (NL. fem. n. *visibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MR-S7 sp000400995*. The type genome for the species is the GenBank assembly RS_GCF_000400995.2. The GC content of the type genome is 68.3 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Metabaria gen. nov.

Candidatus Metabaria (NL. fem. n. *Metabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MR-S7*. The type species for the genus is *Candidatus* Metabaria visibisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metabella levidibra sp. nov.

Candidatus Metabella levidibra (NL. fem. n. *levidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-40-15 sp001819605*. The type genome for the species is the GenBank assembly GCA_001819655.1. The GC content of the type genome is 38.64 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Metabella gen. nov.

Candidatus Metabella (NL. fem. n. *Metabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-40-15*. The type species for the genus is *Candidatus* Metabella levidibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2143*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatulaceae.

Description of *Candidatus* Metabella volunitica sp. nov.

Candidatus Metabella volunitica (NL. fem. n. *volunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-40-15 sp001819555*. The type genome for the species is the GenBank assembly GCA_001819665.1. The GC content of the type genome is 39.61 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Metabia cerebax sp. nov.

Candidatus Metabia cerebax (NL. fem. n. *cerebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1174 sp003153935*. The type genome for the species is the GenBank assembly GCA_003154495.1. The GC content of the type genome is 49.66 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Metabia gen. nov.

Candidatus Metabia (NL. fem. n. *Metabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1174*. The type species for the genus is *Candidatus* Metabia cerebax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunulaceae.

Description of *Candidatus* Metabida socagastra sp. nov.

Candidatus Metabida socagastra (NL. fem. n. *socagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6184 sp002422845*. The type genome for the species is the GenBank assembly GCA_002422845.1. The GC content of the type genome is 40.13 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Metabida gen. nov.

Candidatus Metabida (NL. fem. n. *Metabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6184*. The type species for the genus is *Candidatus* Metabida socagastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6184*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metabidaceae.

Description of *Candidatus* Metabidaceae fam. nov.

Candidatus Metabidaceae (NL. fem. n. *Metabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6184.* The type genus for the taxon is *Candidatus* Metabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6184*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Metabidales.

Description of *Candidatus* Metabidales ord. nov.

Candidatus Metabidales (NL. fem. n. *Metabidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6184.* The type genus for the taxon is *Candidatus* Metabida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Metabosa defacitica sp. nov.

Candidatus Metabosa defacitica (NL. fem. n. *defacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-5 sp001643535*. The type genome for the species is the GenBank assembly GCA_001643535.1. The GC content of the type genome is 60.4 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment sample collected at the water-sediment interface from the South Pacific gyre; IODP site U1369".

Description of *Candidatus* Metabosa gen. nov.

Candidatus Metabosa (NL. fem. n. *Metabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-5*. The type species for the genus is *Candidatus* Metabosa defacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metabosaceae.

Description of *Candidatus* Metabosaceae fam. nov.

Candidatus Metabosaceae (NL. fem. n. *Metabosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-5*. The type genus for the taxon is *Candidatus* Metabosa .

According to GTDB R06-RS202, this family belongs to the order *Methylomirabilales*.

Description of *Candidatus* Metabosa denupago sp. nov.

Candidatus Metabosa denupago (NL. fem. n. *denupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-5 sp001443495*. The type genome for the species is the GenBank assembly GCA_001443495.1. The GC content of the type genome is 62.39 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Metabosa obtoratica sp. nov.

Candidatus Metabosa obtoratica (NL. fem. n. *obtoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-5 sp012974305*. The type genome for the species is the GenBank assembly GCA_012974305.1. The GC content of the type genome is 58.63 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Metabula ulcisilega sp. nov.

Candidatus Metabula ulcisilega (NL. fem. n. *ulcisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWZ01 sp009693575*. The type genome for the species is the GenBank assembly GCA_009693575.1. The GC content of the type genome is 43.77 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Metabula gen. nov.

Candidatus Metabula (NL. fem. n. *Metabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SHWZ01*. The type species for the genus is *Candidatus* Metabula ulcisilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHWZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metabulaceae.

Description of *Candidatus* Metabulaceae fam. nov.

Candidatus Metabulaceae (NL. fem. n. *Metabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHWZ01*. The type genus for the taxon is *Candidatus* Metabula .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Metallibacterium melilatio sp. nov.

Candidatus Metallibacterium melilatio (NL. fem. n. *melilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metallibacterium sp003233305*. The type genome for the species is the GenBank assembly GCA_003233305.1. The GC content of the type genome is 56.43 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Metamycoplasma benifedo sp. nov.

Candidatus Metamycoplasma benifedo (NL. fem. n. *benifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metamycoplasma sp012934885*. The type genome for the species is the GenBank assembly RS_GCF_012934885.1. The GC content of the type genome is 29.05 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Metamycoplasma galacedo sp. nov.

Candidatus Metamycoplasma galacedo (NL. fem. n. *galacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metamycoplasma sp013008815*. The type genome for the species is the GenBank assembly RS_GCF_013008815.1. The GC content of the type genome is 24.06 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Metamycoplasma obtemifica sp. nov.

Candidatus Metamycoplasma obtemifica (NL. fem. n. *obtemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metamycoplasma sp012934855*. The type genome for the species is the GenBank assembly RS_GCF_012934855.1. The GC content of the type genome is 28.49 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Metapella siticisca sp. nov.

Candidatus Metapella siticisca (NL. fem. n. *siticisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3920 sp002386065*. The type genome for the species is the GenBank assembly GCA_002386065.1. The GC content of the type genome is 34.49 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Metapella gen. nov.

Candidatus Metapella (NL. fem. n. *Metapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3920*. The type species for the genus is *Candidatus* Metapella siticisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metapia funamitio sp. nov.

Candidatus Metapia funamitio (NL. fem. n. *funamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA823 sp002296225*. The type genome for the species is the GenBank assembly GCA_002715285.1. The GC content of the type genome is 52.6 %

and the genome length is 3.74 Mbp.

Description of *Candidatus* Metapia gen. nov.

Candidatus Metapia (NL. fem. n. *Metapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA823*. The type species for the genus is *Candidatus* Metapia funamitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metapiaceae.

Description of *Candidatus* Metapiaceae fam. nov.

Candidatus Metapiaceae (NL. fem. n. *Metapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA823.* The type genus for the taxon is *Candidatus* Metapia .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Metapida anastitoga sp. nov.

Candidatus Metapida anastitoga (NL. fem. n. *anastitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-46 sp003231955*. The type genome for the species is the GenBank assembly GCA_003231955.1. The GC content of the type genome is 46.14 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Metapida gen. nov.

Candidatus Metapida (NL. fem. n. *Metapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-46*. The type species for the genus is *Candidatus* Metapida anastitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Metapida recocilega sp. nov.

Candidatus Metapida recocilega (NL. fem. n. *recocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-46 sp903893445*. The type genome for the species is the GenBank assembly GCA_903830935.1. The GC content of the type genome is 51.09 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Metaposa armidetta sp. nov.

Candidatus Metaposa armidetta (NL. fem. n. *armidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1424 sp012522695*. The type genome for the species is the GenBank assembly GCA_012522695.1. The GC content of the type genome is 31.75 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Metaposa gen. nov.

Candidatus Metaposa (NL. fem. n. *Metaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1424*. The type species for the genus is *Candidatus* Metaposa armidetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Metaposa proclugo sp. nov.

Candidatus Metaposa proclugo (NL. fem. n. *proclugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1424 sp012971835*. The type genome for the species is the GenBank assembly GCA_012971835.1. The GC content of the type genome is 38.44 %

and the genome length is 0.85 Mbp.

Description of *Candidatus* Metaposa tubicousia sp. nov.

Candidatus Metaposa tubicousia (NL. fem. n. *tubicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1424 sp002329705*. The type genome for the species is the GenBank assembly GCA_012511715.1. The GC content of the type genome is 46.55 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Metasolibacillus reduvitoga sp. nov.

Candidatus Metasolibacillus reduvitoga (NL. fem. n. *reduvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Metasolibacillus sp002360295*. The type genome for the species is the GenBank assembly GCA_002360295.1. The GC content of the type genome is 36.14 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Methylacidimicrobium octacatica sp. nov.

Candidatus Methylacidimicrobium octacatica (NL. fem. n. *octacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylacidimicrobium sp000526255*. The type genome for the species is the GenBank assembly RS_GCF_000526255.1. The GC content of the type genome is 62.74 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylacidimicrobium tirunibula sp. nov.

Candidatus Methylacidimicrobium tirunibula (NL. fem. n. *tirunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylacidimicrobium sp000379365*. The type genome for the species is the GenBank assembly RS_GCF_000379365.1. The GC content of the type genome is 60.89 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted

under MIGS 2.1".

Description of *Candidatus* Methylacidiphilum ensicago sp. nov.

Candidatus Methylacidiphilum ensicago (NL. fem. n. *ensicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylacidiphilum sp004421185*. The type genome for the species is the GenBank assembly RS_GCF_004421185.1. The GC content of the type genome is 41.1 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Methylacidiphilum immacitio sp. nov.

Candidatus Methylacidiphilum immacitio (NL. fem. n. *immacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylacidiphilum sp004421255*. The type genome for the species is the GenBank assembly RS_GCF_004421255.1. The GC content of the type genome is 41.38 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Methylibium buxifetta sp. nov.

Candidatus Methylibium buxifetta (NL. fem. n. *buxifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylibium sp013817365*. The type genome for the species is the GenBank assembly GCA_013817365.1. The GC content of the type genome is 67.42 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Methylibium nidifitio sp. nov.

Candidatus Methylibium nidifitio (NL. fem. n. *nidifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylibium sp013817345*. The type genome for the species is the GenBank assembly GCA_013817345.1. The GC content of the type genome is 67.34 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Methylibium patibedo sp. nov.

Candidatus Methylibium patibedo (NL. fem. n. *patibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylibium sp903889735*. The type genome for the species is the GenBank assembly GCA_903889735.1. The GC content of the type genome is 69.23 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Methylibium semimicula sp. nov.

Candidatus Methylibium semimicula (NL. fem. n. *semimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylibium sp902826655*. The type genome for the species is the GenBank assembly GCA_902826655.1. The GC content of the type genome is 70.19 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Methylibium sotulitica sp. nov.

Candidatus Methylibium sotulitica (NL. fem. n. *sotulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylibium sp001425905*. The type genome for the species is the GenBank assembly RS_GCF_001425905.1. The GC content of the type genome is 69.04 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Methylobacter dimacisca sp. nov.

Candidatus Methylobacter dimacisca (NL. fem. n. *dimacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacter_A sp903832775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903862195.1. The GC content of the type genome is 43.08 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Methylobacter hegumibra sp. nov.

Candidatus Methylobacter hegumibra (NL. fem. n. *hegumibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacter_A sp903831545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903831545.1. The GC content of the type genome is 44.3 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Methylobacter insomugo sp. nov.

Candidatus Methylobacter insomugo (NL. fem. n. *insomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacter_A sp004299305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004299305.1. The GC content of the type genome is 48.0 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Methylobacter offiricella sp. nov.

Candidatus Methylobacter offiricella (NL. fem. n. *offiricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacter_A sp004322395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004322395.1. The GC content of the type genome is 47.45 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Methylobacterium abhinitura sp. nov.

Candidatus Methylobacterium abhinitura (NL. fem. n. *abhinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp014191355*. The type genome for the species is the GenBank assembly RS_GCF_014191355.1. The GC content of the type genome is 67.55 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Methylobacterium adaggilenta sp. nov.

Candidatus Methylobacterium adaggilenta (NL. fem. n. *adaggilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp003173735*. The type genome for the species is the GenBank assembly RS_GCF_003173735.1. The GC content of the type genome is 70.45 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Methylobacterium allibago sp. nov.

Candidatus Methylobacterium allibago (NL. fem. n. *allibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp006151805*. The type genome for the species is the GenBank assembly RS_GCF_006151805.1. The GC content of the type genome is 70.42 % and the genome length is 7.87 Mbp.

Description of *Candidatus* Methylobacterium aplesitia sp. nov.

Candidatus Methylobacterium aplesitia (NL. fem. n. *aplesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp011043735*. The type genome for the species is the GenBank assembly RS_GCF_011043735.1. The GC content of the type genome is 70.34 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Methylobacterium appicimonas sp. nov.

Candidatus Methylobacterium appicimonas (NL. fem. n. *appicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008806345*. The type genome for the species is the GenBank assembly RS_GCF_008806345.1. The GC content of the type genome is 70.19 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Methylobacterium arnacitoga sp. nov.

Candidatus Methylobacterium arnacitoga (NL. fem. n. *arnacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp003201865*. The type genome for the species is the GenBank assembly RS_GCF_003201865.1. The GC content of the type genome is 69.58 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Methylobacterium baditimonia sp. nov.

Candidatus Methylobacterium baditimonia (NL. fem. n. *baditimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp000372825*. The type genome for the species is the GenBank assembly RS_GCF_000372825.1. The GC content of the type genome is 66.68 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylobacterium bipaligena sp. nov.

Candidatus Methylobacterium bipaligena (NL. fem. n. *bipaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp900103195*. The type genome for the species is the GenBank assembly RS_GCF_008329595.1. The GC content of the type genome is 68.98 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Methylobacterium capabetta sp. nov.

Candidatus Methylobacterium capabetta (NL. fem. n. *capabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008039875*. The type genome for the species is the GenBank assembly RS_GCF_008039935.1. The GC content of the type genome is 69.46 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Methylobacterium cepuricella sp. nov.

Candidatus Methylobacterium cepuricella (NL. fem. n. *cepuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001423295*. The type genome for the species is the GenBank assembly RS_GCF_001422775.1. The GC content of the type genome is 68.66 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium cepuritia sp. nov.

Candidatus Methylobacterium cepuritia (NL. fem. n. *cepuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001423265*. The type genome for the species is the GenBank assembly RS_GCF_001423265.1. The GC content of the type genome is 69.62 % and the genome length is 4.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium cisorisca sp. nov.

Candidatus Methylobacterium cisorisca (NL. fem. n. *cisorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008040045*. The type genome for the species is the GenBank assembly RS_GCF_008040045.1. The GC content of the type genome is 69.68 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Methylobacterium colimitica sp. nov.

Candidatus Methylobacterium colimitica (NL. fem. n. *colimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp003217615*. The type genome for the species is the GenBank assembly RS_GCF_003217615.1. The GC content of the type genome is 69.38 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Methylobacterium curotatica sp. nov.

Candidatus Methylobacterium curotatica (NL. fem. n. *curotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Methylobacterium sp001422815*. The type genome for the species is the GenBank assembly RS_GCF_001422815.1. The GC content of the type genome is 65.92 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium decamifica sp. nov.

Candidatus Methylobacterium decamifica (NL. fem. n. *decamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp003111705*. The type genome for the species is the GenBank assembly RS_GCF_003111705.1. The GC content of the type genome is 68.26 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Methylobacterium dedigessa sp. nov.

Candidatus Methylobacterium dedigessa (NL. fem. n. *dedigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp009806555*. The type genome for the species is the GenBank assembly RS_GCF_009806555.1. The GC content of the type genome is 69.51 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Methylobacterium defulitio sp. nov.

Candidatus Methylobacterium defulitio (NL. fem. n. *defulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp000019365*. The type genome for the species is the GenBank assembly RS_GCF_000019365.1. The GC content of the type genome is 71.5 % and the genome length is 7.74 Mbp.

Description of *Candidatus* Methylobacterium dehinetta sp. nov.

Candidatus Methylobacterium dehinetta (NL. fem. n. *dehinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp004745635*. The type genome for the species is the GenBank assembly RS_GCF_004745635.1. The GC content of the type genome is 70.97 % and the genome length is 7.83 Mbp.

Description of *Candidatus* Methylobacterium demagicella sp. nov.

Candidatus Methylobacterium demagicella (NL. fem. n. *demagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001542815*. The type genome for the species is the GenBank assembly RS_GCF_001542815.1. The GC content of the type genome is 68.41 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Methylobacterium denoredo sp. nov.

Candidatus Methylobacterium denoredo (NL. fem. n. *denoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001422375*. The type genome for the species is the GenBank assembly RS_GCF_001422375.1. The GC content of the type genome is 69.6 % and the genome length is 4.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium derunatio sp. nov.

Candidatus Methylobacterium derunatio (NL. fem. n. *derunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp003173775*. The type genome for the species is the GenBank assembly RS_GCF_003173775.1. The GC content of the type genome is 70.63 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Methylobacterium diluvitura sp. nov.

Candidatus Methylobacterium diluvitura (NL. fem. n. *diluvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008000895*. The type genome for the species is the GenBank assembly RS_GCF_008000895.1. The GC content of the type genome is 69.03 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Methylobacterium holovitrix sp. nov.

Candidatus Methylobacterium holovitrix (NL. fem. n. *holovitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp004004555*. The type genome for the species is the GenBank assembly RS_GCF_004004555.2. The GC content of the type genome is 71.86 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Methylobacterium irreditio sp. nov.

Candidatus Methylobacterium irreditio (NL. fem. n. *irreditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001425465*. The type genome for the species is the GenBank assembly RS_GCF_001425465.1. The GC content of the type genome is 69.43 % and the genome length is 5.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium mirificella sp. nov.

Candidatus Methylobacterium mirificella (NL. fem. n. *mirificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp900112625*. The type genome for the species is the GenBank assembly RS_GCF_004340765.1. The GC content of the type genome is 70.99 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Methylobacterium monogago sp. nov.

Candidatus Methylobacterium monogago (NL. fem. n. *monogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp010692745*. The type genome for the species is the GenBank assembly RS_GCF_010692745.1. The GC content of the type genome is 66.54 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Methylobacterium pocilibra sp. nov.

Candidatus Methylobacterium pocilibra (NL. fem. n. *pocilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp002778835*. The type genome for the species is the GenBank assembly GCA_003864615.1. The GC content of the type genome is 71.08 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Methylobacterium problicella sp. nov.

Candidatus Methylobacterium problicella (NL. fem. n. *problicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp005502455*. The type genome for the species is the GenBank assembly RS_GCF_005502455.1. The GC content of the type genome is 67.91 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Methylobacterium resupibula sp. nov.

Candidatus Methylobacterium resupibula (NL. fem. n. *resupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp000376345*. The type genome for the species is the GenBank assembly RS_GCF_000376345.1. The GC content of the type genome is 67.14 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylobacterium roraratica sp. nov.

Candidatus Methylobacterium roraratica (NL. fem. n. *roraratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001424705*. The type genome for the species is the GenBank assembly RS_GCF_001424705.1. The GC content of the type genome is 69.44 % and the genome length is 5.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium sanabessa sp. nov.

Candidatus Methylobacterium sanabessa (NL. fem. n. *sanabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp000519085*. The type genome for the species is the GenBank assembly RS_GCF_000519085.1. The GC content of the type genome is 66.67 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylobacterium selibedo sp. nov.

Candidatus Methylobacterium selibedo (NL. fem. n. *selibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001455965*. The type genome for the species is the GenBank assembly RS_GCF_001455965.1. The GC content of the type genome is 68.5 % and the genome length is 5.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "xylem sap".

Description of *Candidatus* Methylobacterium sicinilega sp. nov.

Candidatus Methylobacterium sicinilega (NL. fem. n. *sicinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001422885*. The type genome for the species is the GenBank assembly RS_GCF_001422885.1. The GC content of the type genome is 70.04 % and the genome length is 4.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium tenilastra sp. nov.

Candidatus Methylobacterium tenilastra (NL. fem. n. *tenilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008040035*. The type genome for the species is the GenBank assembly RS_GCF_008040035.1. The GC content of the type genome is 67.42 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Methylobacterium vagabitrix sp. nov.

Candidatus Methylobacterium vagabitrix (NL. fem. n. *vagabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001423085*. The type genome for the species is the GenBank assembly RS_GCF_002917135.1. The GC content of the type genome is 68.15 % and the genome length is 5.93 Mbp.

Description of *Candidatus* Methylobacterium venunitura sp. nov.

Candidatus Methylobacterium venunitura (NL. fem. n. *venunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp008040085*. The type genome for the species is the GenBank assembly RS_GCF_008040085.1. The GC content of the type genome is 69.03 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Methylobacterium verecitudo sp. nov.

Candidatus Methylobacterium verecitudo (NL. fem. n. *verecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001423405*. The type genome for the species is the GenBank assembly RS_GCF_001423405.1. The GC content of the type genome is 68.51 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylobacterium verecugo sp. nov.

Candidatus Methylobacterium verecugo (NL. fem. n. *verecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylobacterium sp001422985*. The type genome for the species is the GenBank assembly RS_GCF_001422985.1. The GC content of the type genome is 67.7 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylocaldum desupitio sp. nov.

Candidatus Methylocaldum desupitio (NL. fem. n. *desupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocaldum sp002005105*. The type genome for the species is the

GenBank assembly GCA_009749305.1. The GC content of the type genome is 58.07 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Methyloceanibacter categax sp. nov.

Candidatus Methyloceanibacter categax (NL. fem. n. *categax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp002383105*. The type genome for the species is the GenBank assembly GCA_002405275.1. The GC content of the type genome is 64.26 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Methyloceanibacter cenobibra sp. nov.

Candidatus Methyloceanibacter cenobibra (NL. fem. n. *cenobibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp003071365*. The type genome for the species is the GenBank assembly RS_GCF_003071365.1. The GC content of the type genome is 63.08 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Methyloceanibacter optabigena sp. nov.

Candidatus Methyloceanibacter optabigena (NL. fem. n. *optabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp002390155*. The type genome for the species is the GenBank assembly GCA_002390155.1. The GC content of the type genome is 63.7 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Methyloceanibacter redunitica sp. nov.

Candidatus Methyloceanibacter redunitica (NL. fem. n. *redunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp014380485*. The type genome for the species is the GenBank assembly GCA_014380485.1. The GC content of the type genome is 64.25 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Methyloceanibacter refunigena sp. nov.

Candidatus Methyloceanibacter refunigena (NL. fem. n. *refunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp002482645*. The type genome for the species is the GenBank assembly GCA_013391925.1. The GC content of the type genome is 62.78 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Methyloceanibacter tumefatica sp. nov.

Candidatus Methyloceanibacter tumefatica (NL. fem. n. *tumefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloceanibacter sp003135455*. The type genome for the species is the GenBank assembly GCA_003134835.1. The GC content of the type genome is 64.11 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Methylocella carunifica sp. nov.

Candidatus Methylocella carunifica (NL. fem. n. *carunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocella sp006514895*. The type genome for the species is the GenBank assembly GCA_006514895.1. The GC content of the type genome is 59.11 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Methylocella energisca sp. nov.

Candidatus Methylocella energisca (NL. fem. n. *energisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocella sp004564215*. The type genome for the species is the GenBank assembly RS_GCF_004564215.1. The GC content of the type genome is 58.94 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Methylocella fumifigena sp. nov.

Candidatus Methylocella fumifigena (NL. fem. n. *fumifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocella sp003162995*. The type genome for the species is the GenBank assembly GCA_003162995.1. The GC content of the type genome is 58.22 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Methylocella horomatio sp. nov.

Candidatus Methylocella horomatio (NL. fem. n. *horomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocella sp002890675*. The type genome for the species is the GenBank assembly GCA_002890675.1. The GC content of the type genome is 59.84 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Methylocella nicotisca sp. nov.

Candidatus Methylocella nicotisca (NL. fem. n. *nicotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocella sp003244015*. The type genome for the species is the GenBank assembly GCA_003244015.1. The GC content of the type genome is 59.76 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Methylococcus necubago sp. nov.

Candidatus Methylococcus necubago (NL. fem. n. *necubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylococcus sp012769535*. The type genome for the species is the GenBank assembly RS_GCF_012769535.1. The GC content of the type genome is 63.25 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Methylocystis adfulago sp. nov.

Candidatus Methylocystis adfulago (NL. fem. n. *adfulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp011058845*. The type genome for the species is the GenBank assembly RS_GCF_011058845.1. The GC content of the type genome is 62.44

% and the genome length is 4.47 Mbp.

Description of *Candidatus* Methylocystis advicitudo sp. nov.

Candidatus Methylocystis advicitudo (NL. fem. n. *advicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp000188155*. The type genome for the species is the GenBank assembly RS_GCF_000188155.2. The GC content of the type genome is 62.82 % and the genome length is 4.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer (aquifer; Canoga Park)".

Description of *Candidatus* Methylocystis artifimonia sp. nov.

Candidatus Methylocystis artifimonia (NL. fem. n. *artifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp005771425*. The type genome for the species is the GenBank assembly RS_GCF_005771425.1. The GC content of the type genome is 61.19 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Methylocystis buxanentia sp. nov.

Candidatus Methylocystis buxanentia (NL. fem. n. *buxanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp903891065*. The type genome for the species is the GenBank assembly GCA_903891065.1. The GC content of the type genome is 48.99 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Methylocystis buxanimonas sp. nov.

Candidatus Methylocystis buxanimonas (NL. fem. n. *buxanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp002929055*. The type genome for the species is the GenBank assembly GCA_002929055.1. The GC content of the type genome is 64.86 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Methylocystis cotenetta sp. nov.

Candidatus Methylocystis cotenetta (NL. fem. n. *cotenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp903870245*. The type genome for the species is the GenBank assembly GCA_903854565.1. The GC content of the type genome is 59.04 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Methylocystis decomedo sp. nov.

Candidatus Methylocystis decomedo (NL. fem. n. *decomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp003134075*. The type genome for the species is the GenBank assembly GCA_003133935.1. The GC content of the type genome is 62.55 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Methylocystis dehonatio sp. nov.

Candidatus Methylocystis dehonatio (NL. fem. n. *dehonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp002862095*. The type genome for the species is the GenBank assembly GCA_002862095.1. The GC content of the type genome is 61.27 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Methylocystis depocibra sp. nov.

Candidatus Methylocystis depocibra (NL. fem. n. *depocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp002412985*. The type genome for the species is the GenBank assembly GCA_005798165.1. The GC content of the type genome is 48.77 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Methylocystis detepetta sp. nov.

Candidatus Methylocystis detepetta (NL. fem. n. *detepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp009773555*. The type genome for the species is the GenBank assembly GCA_009773555.1. The GC content of the type genome is 62.57 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Methylocystis gerunitudo sp. nov.

Candidatus Methylocystis gerunitudo (NL. fem. n. *gerunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp003963405*. The type genome for the species is the GenBank assembly GCA_003963405.1. The GC content of the type genome is 63.89 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Methylocystis inambitoga sp. nov.

Candidatus Methylocystis inambitoga (NL. fem. n. *inambitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp014190435*. The type genome for the species is the GenBank assembly GCA_014190435.1. The GC content of the type genome is 45.48 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Methylocystis obsurentia sp. nov.

Candidatus Methylocystis obsurentia (NL. fem. n. *obsurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp000304315*. The type genome for the species is the GenBank assembly RS_GCF_000304315.1. The GC content of the type genome is 63.35 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Methylocystis proclilega sp. nov.

Candidatus Methylocystis proclilega (NL. fem. n. *proclilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp013350005*. The type genome for the species is the GenBank assembly RS_GCF_013350005.1. The GC content of the type genome is 62.6

% and the genome length is 3.85 Mbp.

Description of *Candidatus* Methylocystis solivitura sp. nov.

Candidatus Methylocystis solivitura (NL. fem. n. *solivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp003152255*. The type genome for the species is the GenBank assembly GCA_003152255.1. The GC content of the type genome is 61.51 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Methylocystis triclentia sp. nov.

Candidatus Methylocystis triclentia (NL. fem. n. *triclentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp900299115*. The type genome for the species is the GenBank assembly GCA_900299115.1. The GC content of the type genome is 48.07 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Methylocystis xenodiforma sp. nov.

Candidatus Methylocystis xenodiforma (NL. fem. n. *xenodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylocystis sp009921565*. The type genome for the species is the GenBank assembly GCA_009921565.1. The GC content of the type genome is 49.85 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Methylogaea serotatio sp. nov.

Candidatus Methylogaea serotatio (NL. fem. n. *serotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylogaea sp004299145*. The type genome for the species is the GenBank assembly GCA_004299145.1. The GC content of the type genome is 59.27 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Methyloglobulus adpecetta sp. nov.

Candidatus Methyloglobulus adpecetta (NL. fem. n. *adpecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloglobulus sp009695535*. The type genome for the species is the GenBank assembly GCA_009695535.1. The GC content of the type genome is 45.63 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Methyloglobulus amnigatio sp. nov.

Candidatus Methyloglobulus amnigatio (NL. fem. n. *amnigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloglobulus sp002483425*. The type genome for the species is the GenBank assembly GCA_002483425.1. The GC content of the type genome is 46.81 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Methyloglobulus expenigena sp. nov.

Candidatus Methyloglobulus expenigena (NL. fem. n. *expenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloglobulus sp013141505*. The type genome for the species is the GenBank assembly GCA_013141505.1. The GC content of the type genome is 45.73 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Methyloglobulus luxurousia sp. nov.

Candidatus Methyloglobulus luxurousia (NL. fem. n. *luxurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloglobulus sp003155565*. The type genome for the species is the GenBank assembly GCA_003155565.1. The GC content of the type genome is 45.96 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Methyloglobulus penecitio sp. nov.

Candidatus Methyloglobulus penecitio (NL. fem. n. *penecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloglobulus sp013140405*. The type genome for the species is the GenBank assembly GCA_013140405.1. The GC content of the type genome is 45.96 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Methylohalobius luticisca sp. nov.

Candidatus Methylohalobius luticisca (NL. fem. n. *luticisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylohalobius sp001566965*. The type genome for the species is the GenBank assembly GCA_011321975.1. The GC content of the type genome is 51.42 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Methyloligella impudimonas sp. nov.

Candidatus Methyloligella impudimonas (NL. fem. n. *impudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloligella sp013341275*. The type genome for the species is the GenBank assembly RS_GCF_013341275.1. The GC content of the type genome is 63.7 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Methylomarinum detosentia sp. nov.

Candidatus Methylomarinum detosentia (NL. fem. n. *detosentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomarinum sp006844585*. The type genome for the species is the GenBank assembly GCA_006844585.1. The GC content of the type genome is 44.19 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Methylomarinum octusessa sp. nov.

Candidatus Methylomarinum octusessa (NL. fem. n. *octusessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomarinum sp006844705*. The type genome for the species is the GenBank assembly GCA_006844705.1. The GC content of the type genome is 45.4 %

and the genome length is 3.08 Mbp.

Description of *Candidatus* Methylomicrobium dilibetta sp. nov.

Candidatus Methylomicrobium dilibetta (NL. fem. n. *dilibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomicrobium_A sp007135635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007135635.1. The GC content of the type genome is 48.4 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Methylomicrobium lenimimonas sp. nov.

Candidatus Methylomicrobium lenimimonas (NL. fem. n. *lenimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomicrobium_A sp003932755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003932755.1. The GC content of the type genome is 48.61 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Methylomirabilis adselilenta sp. nov.

Candidatus Methylomirabilis adselilenta (NL. fem. n. *adselilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomirabilis sp003105305*. The type genome for the species is the GenBank assembly GCA_003105305.1. The GC content of the type genome is 59.48 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Methylomirabilis arcubitura sp. nov.

Candidatus Methylomirabilis arcubitura (NL. fem. n. *arcubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomirabilis sp002634395*. The type genome for the species is the

GenBank assembly GCA_002634395.1. The GC content of the type genome is 58.22 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Methylomirabilis patibilega sp. nov.

Candidatus Methylomirabilis patibilega (NL. fem. n. *patibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomirabilis sp003104975*. The type genome for the species is the GenBank assembly GCA_003104975.1. The GC content of the type genome is 60.1 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Methylomonas adhosifica sp. nov.

Candidatus Methylomonas adhosifica (NL. fem. n. *adhosifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903858105*. The type genome for the species is the GenBank assembly GCA_903858105.1. The GC content of the type genome is 50.56 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Methylomonas adremigena sp. nov.

Candidatus Methylomonas adremigena (NL. fem. n. *adremigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp008632455*. The type genome for the species is the GenBank assembly RS_GCF_008632455.1. The GC content of the type genome is 53.67 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Methylomonas catafitoga sp. nov.

Candidatus Methylomonas catafitoga (NL. fem. n. *catafitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903918375*. The type genome for the species is the GenBank assembly GCA_903903675.1. The GC content of the type genome is 44.4 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Methylomonas cosigibula sp. nov.

Candidatus Methylomonas cosigibula (NL. fem. n. *cosigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp000702925*. The type genome for the species is the GenBank assembly RS_GCF_000702925.2. The GC content of the type genome is 51.82 % and the genome length is 5.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Methylomonas defetibra sp. nov.

Candidatus Methylomonas defetibra (NL. fem. n. *defetibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp000515215*. The type genome for the species is the GenBank assembly RS_GCF_000515215.1. The GC content of the type genome is 51.4 % and the genome length is 5.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylomonas defetitio sp. nov.

Candidatus Methylomonas defetitio (NL. fem. n. *defetitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903902945*. The type genome for the species is the GenBank assembly GCA_903902945.1. The GC content of the type genome is 50.2 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Methylomonas doxolilenta sp. nov.

Candidatus Methylomonas doxolilenta (NL. fem. n. *doxolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903928965*. The type genome for the species is the GenBank assembly GCA_903958375.1. The GC content of the type genome is 53.76 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Methylomonas expopivita sp. nov.

Candidatus Methylomonas expopivita (NL. fem. n. *expopivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp002083615*. The type genome for the species is the GenBank assembly GCA_002083615.1. The GC content of the type genome is 50.41 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Methylomonas lapilitrix sp. nov.

Candidatus Methylomonas lapilitrix (NL. fem. n. *lapilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp002928965*. The type genome for the species is the GenBank assembly GCA_002928965.1. The GC content of the type genome is 48.36 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Methylomonas ludibessa sp. nov.

Candidatus Methylomonas ludibessa (NL. fem. n. *ludibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp002929135*. The type genome for the species is the GenBank assembly GCA_002929135.1. The GC content of the type genome is 56.11 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Methylomonas metabifica sp. nov.

Candidatus Methylomonas metabifica (NL. fem. n. *metabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903881345*. The type genome for the species is the GenBank assembly GCA_903881345.1. The GC content of the type genome is 48.47 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Methylomonas pecunilega sp. nov.

Candidatus Methylomonas pecunilega (NL. fem. n. *pecunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp009925045*. The type genome for the species is the GenBank assembly GCA_009925045.1. The GC content of the type genome is 46.11 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Methylomonas revulousia sp. nov.

Candidatus Methylomonas revulousia (NL. fem. n. *revulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylomonas sp903931355*. The type genome for the species is the GenBank assembly GCA_903931355.1. The GC content of the type genome is 44.44 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Methylophaga adtumugo sp. nov.

Candidatus Methylophaga adtumugo (NL. fem. n. *adtumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp007117275*. The type genome for the species is the GenBank assembly GCA_007117275.1. The GC content of the type genome is 49.65 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Methylophaga benemago sp. nov.

Candidatus Methylophaga benemago (NL. fem. n. *benemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp002706095*. The type genome for the species is the GenBank assembly GCA_002341285.1. The GC content of the type genome is 43.67 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Methylophaga curabitica sp. nov.

Candidatus Methylophaga curabitica (NL. fem. n. *curabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp002354555*. The type genome for the species is the GenBank assembly GCA_002354415.1. The GC content of the type genome is 44.79 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Methylophaga demigitudo sp. nov.

Candidatus Methylophaga demigitudo (NL. fem. n. *demigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp002696735*. The type genome for the species is the GenBank assembly GCA_002375685.1. The GC content of the type genome is 44.67 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Methylophaga reduvitica sp. nov.

Candidatus Methylophaga reduvitica (NL. fem. n. *reduvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp002363955*. The type genome for the species is the GenBank assembly GCA_002341635.1. The GC content of the type genome is 45.53 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Methylophaga scintitio sp. nov.

Candidatus Methylophaga scintitio (NL. fem. n. *scintitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophaga sp009711715*. The type genome for the species is the GenBank assembly GCA_009711715.1. The GC content of the type genome is 51.0 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Methylophilus bicoditas sp. nov.

Candidatus Methylophilus bicoditas (NL. fem. n. *bicoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp002281475*. The type genome for the species is the GenBank assembly GCA_002282135.1. The GC content of the type genome is 43.54 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Methylophilus cuticicula sp. nov.

Candidatus Methylophilus cuticicula (NL. fem. n. *cuticicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp008015755*. The type genome for the species is the GenBank assembly GCA_008015755.1. The GC content of the type genome is 50.49 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Methylophilus diritatio sp. nov.

Candidatus Methylophilus diritatio (NL. fem. n. *diritatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp001464125*. The type genome for the species is the GenBank assembly GCA_001464125.1. The GC content of the type genome is 45.19 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Methylophilus fatilivita sp. nov.

Candidatus Methylophilus fatilivita (NL. fem. n. *fatilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp000384155*. The type genome for the species is the GenBank assembly RS_GCF_000374225.1. The GC content of the type genome is 50.43 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Methylophilus gasomiforma sp. nov.

Candidatus Methylophilus gasomiforma (NL. fem. n. *gasomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp000515275*. The type genome for the species is the GenBank assembly RS_GCF_000515275.1. The GC content of the type genome is 50.25 % and the genome length is 3.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylophilus manomibra sp. nov.

Candidatus Methylophilus manomibra (NL. fem. n. *manomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp001183865*. The type genome for the species is the GenBank assembly RS_GCF_001183865.1. The GC content of the type genome is 49.54 % and the genome length is 3.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tap water incubated with methane".

Description of *Candidatus* Methylophilus pepenitura sp. nov.

Candidatus Methylophilus pepenitura (NL. fem. n. *pepenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp002414145*. The type genome for the species is the GenBank assembly GCA_003454695.1. The GC content of the type genome is 43.09 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Methylophilus semifax sp. nov.

Candidatus Methylophilus semifax (NL. fem. n. *semifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp001424665*. The type genome for the species is the GenBank assembly RS_GCF_001424665.1. The GC content of the type genome is 48.25 % and the genome length is 2.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Methylophilus turicigena sp. nov.

Candidatus Methylophilus turicigena (NL. fem. n. *turicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylophilus sp000525025*. The type genome for the species is the GenBank assembly RS_GCF_000384355.1. The GC content of the type genome is 45.61 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lake Washington".

Description of *Candidatus* Methylopila antomiforma sp. nov.

Candidatus Methylopila antomiforma (NL. fem. n. *antomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopila sp000526315*. The type genome for the species is the GenBank assembly RS_GCF_000526315.1. The GC content of the type genome is 69.35 % and the genome length is 4.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Methylopila repagitia sp. nov.

Candidatus Methylopila repagitia (NL. fem. n. *repagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopila sp002897035*. The type genome for the species is the GenBank assembly RS_GCF_002897035.1. The GC content of the type genome is 69.18 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Methyloprofundus acrotilenta sp. nov.

Candidatus Methyloprofundus acrotilenta (NL. fem. n. *acrotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloprofundus sp002189065*. The type genome for the species is the GenBank assembly RS_GCF_002189065.1. The GC content of the type genome is 39.78 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Methyloprofundus bisulousia sp. nov.

Candidatus Methyloprofundus bisulousia (NL. fem. n. *bisulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloprofundus sp013138555*. The type genome for the species is the GenBank assembly GCA_013138555.1. The GC content of the type genome is 41.07 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Methyloprofundus incorifica sp. nov.

Candidatus Methyloprofundus incorifica (NL. fem. n. *incorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Methyloprofundus sp013138595*. The type genome for the species is the GenBank assembly GCA_013138595.1. The GC content of the type genome is 40.07 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Methyloprofundus macilugo sp. nov.

Candidatus Methyloprofundus macilugo (NL. fem. n. *macilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloprofundus sp900128525*. The type genome for the species is the GenBank assembly RS_GCF_900128525.1. The GC content of the type genome is 39.55 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Methyloprofundus ratifilenta sp. nov.

Candidatus Methyloprofundus ratifilenta (NL. fem. n. *ratifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloprofundus sp012960135*. The type genome for the species is the GenBank assembly GCA_012960135.1. The GC content of the type genome is 41.9 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Methylopumilus apercatio sp. nov.

Candidatus Methylopumilus apercatio (NL. fem. n. *apercatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp009693175*. The type genome for the species is the GenBank assembly GCA_009693175.1. The GC content of the type genome is 35.72 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Methylopumilus catafibula sp. nov.

Candidatus Methylopumilus catafibula (NL. fem. n. *catafibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp903849185*. The type genome for the species is the GenBank assembly GCA_903822165.1. The GC content of the type genome is 36.68 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Methylopumilus cuferedo sp. nov.

Candidatus Methylopumilus cuferedo (NL. fem. n. *cuferedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp009926035*. The type genome for the species is the GenBank assembly GCA_009926035.1. The GC content of the type genome is 36.36 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Methylopumilus favilitura sp. nov.

Candidatus Methylopumilus favilitura (NL. fem. n. *favilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp014190615*. The type genome for the species is the GenBank assembly GCA_014190615.1. The GC content of the type genome is 37.14 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Methylopumilus homunousia sp. nov.

Candidatus Methylopumilus homunousia (NL. fem. n. *homunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp903914945*. The type genome for the species is the GenBank assembly GCA_903835605.1. The GC content of the type genome is 37.11 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Methylopumilus megalicula sp. nov.

Candidatus Methylopumilus megalicula (NL. fem. n. *megalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp003533095*. The type genome for the species is the GenBank assembly GCA_900299015.1. The GC content of the type genome is 36.37 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Methylopumilus supelibula sp. nov.

Candidatus Methylopumilus supelibula (NL. fem. n. *supelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp010031285*. The type genome for the species is the GenBank assembly GCA_010024245.1. The GC content of the type genome is 36.53 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Methylopumilus vecoritrix sp. nov.

Candidatus Methylopumilus vecoritrix (NL. fem. n. *vecoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus sp005797835*. The type genome for the species is the GenBank assembly GCA_005790855.1. The GC content of the type genome is 35.38 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Methylopumilus calipago sp. nov.

Candidatus Methylopumilus calipago (NL. fem. n. *calipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp009926525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009926525.1. The GC content of the type genome is 45.41 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Methylopumilus mirabessa sp. nov.

Candidatus Methylopumilus mirabessa (NL. fem. n. *mirabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp903870165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903870165.1. The GC content of the type genome is 43.32 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Methylopumilus papavessa sp. nov.

Candidatus Methylopumilus papavessa (NL. fem. n. *papavessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp903870995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903834105.1. The GC content of the type genome is 44.69 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Methylopumilus rorarigena sp. nov.

Candidatus Methylopumilus rorarigena (NL. fem. n. *rorarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp903909015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903869245.1. The GC content of the type genome is 43.37 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Methylopumilus selibitio sp. nov.

Candidatus Methylopumilus selibitio (NL. fem. n. *selibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp903953055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903934025.1. The GC content of the type genome is 43.44 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Methylopumilus semibicula sp. nov.

Candidatus Methylopumilus semibicula (NL. fem. n. *semibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylopumilus_A sp903899965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903871485.1. The GC content of the type genome is 45.43 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Methylosinus cenobimonia sp. nov.

Candidatus Methylosinus cenobimonia (NL. fem. n. *cenobimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp009936375*. The type genome for the species is the GenBank assembly RS_GCF_009936375.1. The GC content of the type genome is 64.81 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Methylosinus dehisimonas sp. nov.

Candidatus Methylosinus dehisimonas (NL. fem. n. *dehisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp000745215*. The type genome for the species is the GenBank assembly RS_GCF_000745215.1. The GC content of the type genome is 64.68 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Methylosinus fuligetta sp. nov.

Candidatus Methylosinus fuligetta (NL. fem. n. *fuligetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp000685825*. The type genome for the species is the GenBank assembly RS_GCF_004366495.1. The GC content of the type genome is 64.9 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Methylosinus malififorma sp. nov.

Candidatus Methylosinus malififorma (NL. fem. n. *malififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp000379125*. The type genome for the species is the GenBank assembly RS_GCF_000379125.1. The GC content of the type genome is 64.93 % and the genome length is 4.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lake Washington".

Description of *Candidatus* Methylosinus salubilega sp. nov.

Candidatus Methylosinus salubilega (NL. fem. n. *salubilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp003105285*. The type genome for the species is the GenBank assembly GCA_003105285.1. The GC content of the type genome is 64.1 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Methylosinus solacitrix sp. nov.

Candidatus Methylosinus solacitrix (NL. fem. n. *solacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylosinus sp009811655*. The type genome for the species is the GenBank assembly RS_GCF_009811655.1. The GC content of the type genome is 65.38 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Methylotenera acisciforma sp. nov.

Candidatus Methylotenera acisciforma (NL. fem. n. *acisciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp013141425*. The type genome for the species is the GenBank assembly GCA_013141425.1. The GC content of the type genome is 43.24 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Methylotenera aneclitudo sp. nov.

Candidatus Methylotenera aneclitudo (NL. fem. n. *aneclitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp000799735*. The type genome for the species is the GenBank assembly RS_GCF_000799735.1. The GC content of the type genome is 50.68 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Methylotenera cacomessa sp. nov.

Candidatus Methylotenera cacomessa (NL. fem. n. *cacomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp013816325*. The type genome for the species is the GenBank assembly GCA_013816325.1. The GC content of the type genome is 44.21 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Methylotenera canacedo sp. nov.

Candidatus Methylotenera canacedo (NL. fem. n. *canacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp013141075*. The type genome for the species is the GenBank assembly GCA_013140665.1. The GC content of the type genome is 43.55 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Methylotenera coticiforma sp. nov.

Candidatus Methylotenera coticiforma (NL. fem. n. *coticiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp002842195*. The type genome for the species is the GenBank assembly GCA_002842195.1. The GC content of the type genome is 44.66 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Methylotenera deforetta sp. nov.

Candidatus Methylotenera deforetta (NL. fem. n. *deforetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp005791685*. The type genome for the species is the GenBank assembly GCA_005791685.1. The GC content of the type genome is 50.25 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Methylotenera desulessa sp. nov.

Candidatus Methylotenera desulessa (NL. fem. n. *desulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903833595*. The type genome for the species is the GenBank assembly GCA_903833595.1. The GC content of the type genome is 42.57 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Methylotenera diluvifica sp. nov.

Candidatus Methylotenera diluvifica (NL. fem. n. *diluvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903846555*. The type genome for the species is the GenBank assembly GCA_903846555.1. The GC content of the type genome is 43.68 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Methylotenera direpifica sp. nov.

Candidatus Methylotenera direpifica (NL. fem. n. *direpifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp001803395*. The type genome for the species is the GenBank assembly GCA_001803395.1. The GC content of the type genome is 44.67 % and the genome length is 2.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Methylotenera ficedago sp. nov.

Candidatus Methylotenera ficedago (NL. fem. n. *ficedago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903860085*. The type genome for the species is the GenBank assembly GCA_903887305.1. The GC content of the type genome is 43.93 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Methylotenera fidenago sp. nov.

Candidatus Methylotenera fidenago (NL. fem. n. *fidenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903951385*. The type genome for the species is the GenBank assembly GCA_903858215.1. The GC content of the type genome is 49.86 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Methylotenera funivax sp. nov.

Candidatus Methylotenera funivax (NL. fem. n. *funivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903882525*. The type genome for the species is the GenBank assembly GCA_903850165.1. The GC content of the type genome is 44.33 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Methylotenera incivilega sp. nov.

Candidatus Methylotenera incivilega (NL. fem. n. *incivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp013140755*. The type genome for the species is the GenBank assembly GCA_013140755.1. The GC content of the type genome is 42.8 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Methylotenera isoscitia sp. nov.

Candidatus Methylotenera isoscitia (NL. fem. n. *isoscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp002429455*. The type genome for the species is the GenBank assembly GCA_002429455.1. The GC content of the type genome is 45.62 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Methylotenera lanifilega sp. nov.

Candidatus Methylotenera lanifilega (NL. fem. n. *lanifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp002928535*. The type genome for the species is the GenBank assembly GCA_002928535.1. The GC content of the type genome is 45.13 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Methylotenera lanugibula sp. nov.

Candidatus Methylotenera lanugibula (NL. fem. n. *lanugibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp009693255*. The type genome for the species is the GenBank assembly GCA_009693125.1. The GC content of the type genome is 44.79 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Methylotenera locelicella sp. nov.

Candidatus Methylotenera locelicella (NL. fem. n. *locelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp000744605*. The type genome for the species is the GenBank assembly RS_GCF_000744605.1. The GC content of the type genome is 43.32 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Methylotenera mirabitoga sp. nov.

Candidatus Methylotenera mirabitoga (NL. fem. n. *mirabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp014378495*. The type genome for the species is the GenBank assembly GCA_014378495.1. The GC content of the type genome is 40.94 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Methylotenera momorilenta sp. nov.

Candidatus Methylotenera momorilenta (NL. fem. n. *momorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp002281815*. The type genome for the species is the GenBank assembly GCA_002281815.1. The GC content of the type genome is 45.02 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Methylotenera oblanedo sp. nov.

Candidatus Methylotenera oblanedo (NL. fem. n. *oblanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp004661485*. The type genome for the species is the GenBank assembly RS_GCF_004661485.1. The GC content of the type genome is 44.88

% and the genome length is 2.66 Mbp.

Description of *Candidatus* Methylotenera obsorentia sp. nov.

Candidatus Methylotenera obsorentia (NL. fem. n. *obsorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903854305*. The type genome for the species is the GenBank assembly GCA_903854305.1. The GC content of the type genome is 43.62 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Methylotenera redacousia sp. nov.

Candidatus Methylotenera redacousia (NL. fem. n. *redacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903876765*. The type genome for the species is the GenBank assembly GCA_903873695.1. The GC content of the type genome is 44.46 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Methylotenera retunitrix sp. nov.

Candidatus Methylotenera retunitrix (NL. fem. n. *retunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp013141495*. The type genome for the species is the GenBank assembly GCA_013140655.1. The GC content of the type genome is 44.67 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Methylotenera semigisca sp. nov.

Candidatus Methylotenera semigisca (NL. fem. n. *semigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903838125*. The type genome for the species is the GenBank assembly GCA_903838125.1. The GC content of the type genome is 43.62 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Methylotenera sicunitio sp. nov.

Candidatus Methylotenera sicunitio (NL. fem. n. *sicunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp002842285*. The type genome for the species is the GenBank assembly GCA_002842285.1. The GC content of the type genome is 46.42 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Methylotenera solipilega sp. nov.

Candidatus Methylotenera solipilega (NL. fem. n. *solipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp005777825*. The type genome for the species is the GenBank assembly GCA_005790275.1. The GC content of the type genome is 49.96 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Methylotenera vagabessa sp. nov.

Candidatus Methylotenera vagabessa (NL. fem. n. *vagabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera sp903926935*. The type genome for the species is the GenBank assembly GCA_903926935.1. The GC content of the type genome is 42.25 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Methylotenera arcitedo sp. nov.

Candidatus Methylotenera arcitedo (NL. fem. n. *arcitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera_A sp014378845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014378845.1. The GC content of the type genome is 44.2 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Methylotenera decunentia sp. nov.

Candidatus Methylotenera decunentia (NL. fem. n. *decunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera_A sp011391175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011391175.1. The GC content of the type genome is 44.07 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Methylotenera sonivatio sp. nov.

Candidatus Methylotenera sonivatio (NL. fem. n. *sonivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotenera_A sp002083635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002929155.1. The GC content of the type genome is 42.51 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Methylotetracoccus homicitrix sp. nov.

Candidatus Methylotetracoccus homicitrix (NL. fem. n. *homicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylotetracoccus sp004168015*. The type genome for the species is the GenBank assembly RS_GCF_004168015.1. The GC content of the type genome is 62.95 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Methyloumidiphilus adtagicella sp. nov.

Candidatus Methyloumidiphilus adtagicella (NL. fem. n. *adtagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloumidiphilus sp903857165*. The type genome for the species is the GenBank assembly GCA_903857165.1. The GC content of the type genome is 52.88 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Methyloumidiphilus minagiforma sp. nov.

Candidatus Methyloumidiphilus minagiforma (NL. fem. n. *minagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloumidiphilus sp903859815*. The type genome for the species is the GenBank assembly GCA_903891545.1. The GC content of the type genome is 49.65 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Methyloumidiphilus obfusugo sp. nov.

Candidatus Methyloumidiphilus obfusugo (NL. fem. n. *obfusugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloumidiphilus sp903930145*. The type genome for the species is the GenBank assembly GCA_903930145.1. The GC content of the type genome is 50.01 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Methyloumidiphilus pepenatio sp. nov.

Candidatus Methyloumidiphilus pepenatio (NL. fem. n. *pepenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloumidiphilus sp903934875*. The type genome for the species is the GenBank assembly GCA_903838185.1. The GC content of the type genome is 53.09 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Methyloumidiphilus solacago sp. nov.

Candidatus Methyloumidiphilus solacago (NL. fem. n. *solacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methyloumidiphilus sp903911305*. The type genome for the species is the GenBank assembly GCA_903911305.1. The GC content of the type genome is 49.01 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Methyloversatilis gasomentia sp. nov.

Candidatus Methyloversatilis gasomentia (NL. fem. n. *gasomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Methyloversatilis sp001713355*. The type genome for the species is the GenBank assembly RS_GCF_001713355.1. The GC content of the type genome is 65.02 % and the genome length is 3.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Algal phycosphere".

Description of *Candidatus* Methylovirgula illibastra sp. nov.

Candidatus Methylovirgula illibastra (NL. fem. n. *illibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovirgula sp004298435*. The type genome for the species is the GenBank assembly GCA_004298435.1. The GC content of the type genome is 59.95 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Methylovulum aggesibra sp. nov.

Candidatus Methylovulum aggesibra (NL. fem. n. *aggesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp007280895*. The type genome for the species is the GenBank assembly GCA_007280895.1. The GC content of the type genome is 41.73 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Methylovulum attolago sp. nov.

Candidatus Methylovulum attolago (NL. fem. n. *attolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp004299465*. The type genome for the species is the GenBank assembly GCA_004299465.1. The GC content of the type genome is 50.96 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Methylovulum dececicella sp. nov.

Candidatus Methylovulum dececicella (NL. fem. n. *dececicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp903945605*. The type genome for the species is the GenBank assembly GCA_903945605.1. The GC content of the type genome is 49.41 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Methylovulum didacimonia sp. nov.

Candidatus Methylovulum didacimonia (NL. fem. n. *didacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp903945375*. The type genome for the species is the GenBank assembly GCA_903953015.1. The GC content of the type genome is 43.72 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Methylovulum enuntitrix sp. nov.

Candidatus Methylovulum enuntitrix (NL. fem. n. *enuntitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp002299495*. The type genome for the species is the GenBank assembly GCA_002299495.1. The GC content of the type genome is 51.4 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Methylovulum homagitica sp. nov.

Candidatus Methylovulum homagitica (NL. fem. n. *homagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp002299425*. The type genome for the species is the GenBank assembly GCA_002299425.1. The GC content of the type genome is 52.99 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Methylovulum repepicella sp. nov.

Candidatus Methylovulum repepicella (NL. fem. n. *repepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp002422395*. The type genome for the species is the GenBank assembly GCA_002422395.1. The GC content of the type genome is 48.5 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Methylovulum rosarousia sp. nov.

Candidatus Methylovulum rosarousia (NL. fem. n. *rosarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp903944165*. The type genome for the species is the GenBank assembly GCA_903873595.1. The GC content of the type genome is 41.18 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Methylovulum sicarago sp. nov.

Candidatus Methylovulum sicarago (NL. fem. n. *sicarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp903927955*. The type genome for the species is the GenBank assembly GCA_903912305.1. The GC content of the type genome is 48.8 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Methylovulum valefatio sp. nov.

Candidatus Methylovulum valefatio (NL. fem. n. *valefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Methylovulum sp903928685*. The type genome for the species is the GenBank assembly GCA_903885145.1. The GC content of the type genome is 46.75 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Metucana solipitudo sp. nov.

Candidatus Metucana solipitudo (NL. fem. n. *solipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJM01 sp014380615*. The type genome for the species is the GenBank assembly GCA_014380615.1. The GC content of the type genome is 40.77 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Metucana gen. nov.

Candidatus Metucana (NL. fem. n. *Metucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJM01*. The type species for the genus is *Candidatus* Metucana

solipitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metucaria defacitrix sp. nov.

Candidatus Metucaria defacitrix (NL. fem. n. *defacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2897 sp900316275*. The type genome for the species is the GenBank assembly GCA_902786085.1. The GC content of the type genome is 58.88 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Metucaria gen. nov.

Candidatus Metucaria (NL. fem. n. *Metucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2897*. The type species for the genus is *Candidatus* Metucaria defacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metucaria defosigena sp. nov.

Candidatus Metucaria defosigena (NL. fem. n. *defosigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2897 sp900315155*. The type genome for the species is the GenBank assembly GCA_900315155.1. The GC content of the type genome is 56.95 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Metucaria lavacitas sp. nov.

Candidatus Metucaria lavacitas (NL. fem. n. *lavacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2897 sp002350105*. The type genome for the species is the GenBank assembly GCA_902800785.1. The GC content of the type genome is 57.86 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Metucella astipilenta sp. nov.

Candidatus Metucella astipilenta (NL. fem. n. *astipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPJ01 sp013203785*. The type genome for the species is the GenBank assembly GCA_013203785.1. The GC content of the type genome is 59.52 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Metucella gen. nov.

Candidatus Metucella (NL. fem. n. *Metucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPJ01*. The type species for the genus is *Candidatus* Metucella astipilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMPJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metucellaceae.

Description of *Candidatus* Metucellaceae fam. nov.

Candidatus Metucellaceae (NL. fem. n. *Metucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMPJ01.* The type genus for the taxon is *Candidatus* Metucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Metucia antefastra sp. nov.

Candidatus Metucia antefastra (NL. fem. n. *antefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5078 sp002416505*. The type genome for the species is the GenBank assembly GCA_002416505.1. The GC content of the type genome is 55.64 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Metucia gen. nov.

Candidatus Metucia (NL. fem. n. *Metucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5078*. The type species for the genus is *Candidatus* Metucia antefastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metucia catalitudo sp. nov.

Candidatus Metucia catalitudo (NL. fem. n. *catalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5078 sp903876785*. The type genome for the species is the GenBank assembly GCA_903933845.1. The GC content of the type genome is 58.03 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Metucia monodatica sp. nov.

Candidatus Metucia monodatica (NL. fem. n. *monodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5078 sp001802565*. The type genome for the species is the GenBank assembly GCA_001802565.1. The GC content of the type genome is 57.1 % and the genome length is 3.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Metucia pepenago sp. nov.

Candidatus Metucia pepenago (NL. fem. n. *pepenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5078 sp903889815*. The type genome for the species is the GenBank assembly GCA_903889815.1. The GC content of the type genome is 59.35 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Metucia susicisca sp. nov.

Candidatus Metucia susicisca (NL. fem. n. *susicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5078 sp903862645*. The type genome for the species is the GenBank assembly GCA_903862645.1. The GC content of the type genome is 56.35 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Metucida exsusago sp. nov.

Candidatus Metucida exsusago (NL. fem. n. *exsusago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1515 sp002323935*. The type genome for the species is the GenBank assembly GCA_002323935.1. The GC content of the type genome is 40.35 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Metucida gen. nov.

Candidatus Metucida (NL. fem. n. *Metucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1515*. The type species for the genus is *Candidatus* Metucida exsusago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1515*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metucidaceae.

Description of *Candidatus* Metucidaceae fam. nov.

Candidatus Metucidaceae (NL. fem. n. *Metucidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1515.* The type genus for the taxon is *Candidatus* Metucida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venuniales.

Description of *Candidatus* Metucosa cululitudo sp. nov.

Candidatus Metucosa cululitudo (NL. fem. n. *cululitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG658 sp900321055*. The type genome for the species is the GenBank assembly GCA_900321055.1. The GC content of the type genome is 29.25 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Metucosa gen. nov.

Candidatus Metucosa (NL. fem. n. *Metucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG658*. The type species for the genus is *Candidatus* Metucosa cululitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Metucosa desoritio sp. nov.

Candidatus Metucosa desoritio (NL. fem. n. *desoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG658 sp902761395*. The type genome for the species is the GenBank assembly GCA_902761395.1. The GC content of the type genome is 32.6 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Metucosa sacomastra sp. nov.

Candidatus Metucosa sacomastra (NL. fem. n. *sacomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG658 sp002448285*. The type genome for the species is the GenBank assembly GCA_002369435.1. The GC content of the type genome is 32.24 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Metucula decapitrix sp. nov.

Candidatus Metucula decapitrix (NL. fem. n. *decapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4080 sp002381865*. The type genome for the species is the GenBank assembly GCA_002419375.1. The GC content of the type genome is 34.05 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Metucula gen. nov.

Candidatus Metucula (NL. fem. n. *Metucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4080*. The type species for the genus is *Candidatus* Metucula decapitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Micavibrio extipicula sp. nov.

Candidatus Micavibrio extipicula (NL. fem. n. *extipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micavibrio_A sp002482805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002482805.1. The GC content of the type genome is 51.91 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Microbacter dibapigena sp. nov.

Candidatus Microbacter dibapigena (NL. fem. n. *dibapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacter sp009712605*. The type genome for the species is the GenBank assembly GCA_009712605.1. The GC content of the type genome is 42.46 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Microbacterium abinditrix sp. nov.

Candidatus Microbacterium abinditrix (NL. fem. n. *abinditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001513675*. The type genome for the species is the GenBank assembly RS_GCF_001513675.1. The GC content of the type genome is 69.39 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "garden soil".

Description of *Candidatus* Microbacterium adnecibula sp. nov.

Candidatus Microbacterium adnecibula (NL. fem. n. *adnecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000967865*. The type genome for the species is the GenBank assembly RS_GCF_000967865.1. The GC content of the type genome is 68.26 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rhizosphere of Alyssum serpyllifolium ssp. lusitanicum".

Description of *Candidatus* Microbacterium adpanatica sp. nov.

Candidatus Microbacterium adpanatica (NL. fem. n. *adpanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002848265*. The type genome for the species is the GenBank assembly RS_GCF_002848265.1. The GC content of the type genome is 69.84 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Microbacterium adpiniforma sp. nov.

Candidatus Microbacterium adpiniforma (NL. fem. n. *adpiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003075395*. The type genome for the species is the GenBank assembly RS_GCF_003075395.1. The GC content of the type genome is 69.19 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Microbacterium adrumitas sp. nov.

Candidatus Microbacterium adrumitas (NL. fem. n. *adrumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Microbacterium sp001424225*. The type genome for the species is the GenBank assembly RS_GCF_001424225.1. The GC content of the type genome is 69.78 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Microbacterium adtesousia sp. nov.

Candidatus Microbacterium adtesousia (NL. fem. n. *adtesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000799385*. The type genome for the species is the GenBank assembly RS_GCF_000799385.1. The GC content of the type genome is 70.83 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Microbacterium advorivita sp. nov.

Candidatus Microbacterium advorivita (NL. fem. n. *advorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001897945*. The type genome for the species is the GenBank assembly GCA_001897945.1. The GC content of the type genome is 69.34 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Microbacterium alsiditica sp. nov.

Candidatus Microbacterium alsiditica (NL. fem. n. *alsiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp903645325*. The type genome for the species is the GenBank assembly RS_GCF_903645325.1. The GC content of the type genome is 68.46 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Microbacterium amercatica sp. nov.

Candidatus Microbacterium amercatica (NL. fem. n. *amercatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900155915*. The type genome for the species is the GenBank assembly RS_GCF_900155915.1. The GC content of the type genome is 70.02

% and the genome length is 3.41 Mbp.

Description of *Candidatus* Microbacterium anaclisca sp. nov.

Candidatus Microbacterium anaclisca (NL. fem. n. *anaclisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004366135*. The type genome for the species is the GenBank assembly RS_GCF_004366135.1. The GC content of the type genome is 69.98 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Microbacterium apharitudo sp. nov.

Candidatus Microbacterium apharitudo (NL. fem. n. *apharitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp013410955*. The type genome for the species is the GenBank assembly RS_GCF_013410955.1. The GC content of the type genome is 69.58 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Microbacterium apsoledo sp. nov.

Candidatus Microbacterium apsoledo (NL. fem. n. *apsoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp902506375*. The type genome for the species is the GenBank assembly RS_GCF_902506375.1. The GC content of the type genome is 70.83 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Microbacterium arillicella sp. nov.

Candidatus Microbacterium arillicella (NL. fem. n. *arillicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp008271365*. The type genome for the species is the GenBank assembly RS_GCF_008271365.1. The GC content of the type genome is 69.82 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Microbacterium artilitica sp. nov.

Candidatus Microbacterium artilitica (NL. fem. n. *artilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001724425*. The type genome for the species is the GenBank assembly GCA_001724425.1. The GC content of the type genome is 70.05 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Microbacterium ascelimonas sp. nov.

Candidatus Microbacterium ascelimonas (NL. fem. n. *ascelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp005347485*. The type genome for the species is the GenBank assembly RS_GCF_005347485.1. The GC content of the type genome is 69.52 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Microbacterium assefatica sp. nov.

Candidatus Microbacterium assefatica (NL. fem. n. *assefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp005774735*. The type genome for the species is the GenBank assembly RS_GCF_005774735.1. The GC content of the type genome is 70.01 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Microbacterium attorilenta sp. nov.

Candidatus Microbacterium attorilenta (NL. fem. n. *attorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000685355*. The type genome for the species is the GenBank assembly RS_GCF_000685355.1. The GC content of the type genome is 63.84 % and the genome length is 3.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Water".

Description of *Candidatus* Microbacterium benevastra sp. nov.

Candidatus Microbacterium benevastra (NL. fem. n. *benevastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp007828185*. The type genome for the species is the GenBank assembly RS_GCF_007828185.1. The GC content of the type genome is 69.74 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Microbacterium butubibula sp. nov.

Candidatus Microbacterium butubibula (NL. fem. n. *butubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900156435*. The type genome for the species is the GenBank assembly RS_GCF_900104435.1. The GC content of the type genome is 70.7 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Microbacterium cacomentia sp. nov.

Candidatus Microbacterium cacomentia (NL. fem. n. *cacomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001984105*. The type genome for the species is the GenBank assembly RS_GCF_009832945.1. The GC content of the type genome is 70.72 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Microbacterium capilitio sp. nov.

Candidatus Microbacterium capilitio (NL. fem. n. *capilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001620065*. The type genome for the species is the GenBank assembly RS_GCF_001620065.1. The GC content of the type genome is 69.6 % and the genome length is 3.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water from Great Artesian Basin bore well".

Description of *Candidatus* Microbacterium capuditudo sp. nov.

Candidatus Microbacterium capuditudo (NL. fem. n. *capuditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001428485*. The type genome for the species is the GenBank assembly RS_GCF_001428485.1. The GC content of the type genome is 70.0 % and the genome length is 3.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Microbacterium celumitica sp. nov.

Candidatus Microbacterium celumitica (NL. fem. n. *celumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp011620715*. The type genome for the species is the GenBank assembly GCA_011620715.1. The GC content of the type genome is 68.57 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Microbacterium cibicousia sp. nov.

Candidatus Microbacterium cibicousia (NL. fem. n. *cibicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001639925*. The type genome for the species is the GenBank assembly GCA_001639925.1. The GC content of the type genome is 70.11 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Microbacterium cilicago sp. nov.

Candidatus Microbacterium cilicago (NL. fem. n. *cilicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001889265*. The type genome for the species is the GenBank assembly RS_GCF_001889265.1. The GC content of the type genome is 68.14 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "roots".

Description of *Candidatus* Microbacterium cohurimonia sp. nov.

Candidatus Microbacterium cohurimonia (NL. fem. n. *cohurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Microbacterium sp003121305*. The type genome for the species is the GenBank assembly RS_GCF_003121305.1. The GC content of the type genome is 70.51 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Microbacterium colopibra sp. nov.

Candidatus Microbacterium colopibra (NL. fem. n. *colopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp008727755*. The type genome for the species is the GenBank assembly RS_GCF_008727755.1. The GC content of the type genome is 70.21 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Microbacterium crabribula sp. nov.

Candidatus Microbacterium crabribula (NL. fem. n. *crabribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000380605*. The type genome for the species is the GenBank assembly RS_GCF_000380605.1. The GC content of the type genome is 70.65 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Microbacterium cufericella sp. nov.

Candidatus Microbacterium cufericella (NL. fem. n. *cufericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp008727775*. The type genome for the species is the GenBank assembly RS_GCF_008727775.1. The GC content of the type genome is 70.65 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Microbacterium dehonitica sp. nov.

Candidatus Microbacterium dehonitica (NL. fem. n. *dehonitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004794315*. The type genome for the species is the GenBank assembly RS_GCF_004794315.1. The GC content of the type genome is 70.74 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Microbacterium delapatio sp. nov.

Candidatus Microbacterium delapatio (NL. fem. n. *delapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001897105*. The type genome for the species is the GenBank assembly GCA_001897105.1. The GC content of the type genome is 70.2 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Microbacterium derelitrix sp. nov.

Candidatus Microbacterium derelitrix (NL. fem. n. *derelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003095395*. The type genome for the species is the GenBank assembly RS_GCF_003095395.1. The GC content of the type genome is 69.38 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Microbacterium desepago sp. nov.

Candidatus Microbacterium desepago (NL. fem. n. *desepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002979475*. The type genome for the species is the GenBank assembly RS_GCF_002979475.1. The GC content of the type genome is 68.74 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Microbacterium desomimonas sp. nov.

Candidatus Microbacterium desomimonas (NL. fem. n. *desomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000411455*. The type genome for the species is the GenBank assembly GCA_000255595.2. The GC content of the type genome is 68.03 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Microbacterium detepitas sp. nov.

Candidatus Microbacterium detepitas (NL. fem. n. *detepitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003289625*. The type genome for the species is the GenBank assembly RS_GCF_003289625.1. The GC content of the type genome is 69.91 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Microbacterium dimidilega sp. nov.

Candidatus Microbacterium dimidilega (NL. fem. n. *dimidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003626735*. The type genome for the species is the GenBank assembly RS_GCF_003626735.1. The GC content of the type genome is 67.16 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Microbacterium diminimonia sp. nov.

Candidatus Microbacterium diminimonia (NL. fem. n. *diminimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp006715565*. The type genome for the species is the GenBank assembly RS_GCF_006715565.1. The GC content of the type genome is 69.58 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Microbacterium doxolatio sp. nov.

Candidatus Microbacterium doxolatio (NL. fem. n. *doxolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000333395*. The type genome for the species is the GenBank assembly RS_GCF_000333395.1. The GC content of the type genome is 70.56 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Microbacterium eccisibula sp. nov.

Candidatus Microbacterium eccisibula (NL. fem. n. *eccisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004216995*. The type genome for the species is the GenBank assembly RS_GCF_004216995.1. The GC content of the type genome is 68.83 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Microbacterium effosifica sp. nov.

Candidatus Microbacterium effosifica (NL. fem. n. *effosifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp014201255*. The type genome for the species is the GenBank assembly RS_GCF_014201255.1. The GC content of the type genome is 69.43 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Microbacterium excalax sp. nov.

Candidatus Microbacterium excalax (NL. fem. n. *excalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002362255*. The type genome for the species is the GenBank assembly RS_GCF_002362255.1. The GC content of the type genome is 69.21 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Microbacterium excanentia sp. nov.

Candidatus Microbacterium excanentia (NL. fem. n. *excanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002257455*. The type genome for the species is the GenBank assembly GCA_002257455.1. The GC content of the type genome is 70.59 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Microbacterium exhedivita sp. nov.

Candidatus Microbacterium exhedivita (NL. fem. n. *exhedivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp009649635*. The type genome for the species is the GenBank assembly RS_GCF_009649635.1. The GC content of the type genome is 70.67 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Microbacterium expenatio sp. nov.

Candidatus Microbacterium expenatio (NL. fem. n. *expenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp011620665*. The type genome for the species is the GenBank assembly GCA_011620665.1. The GC content of the type genome is 68.0 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Microbacterium fefelastra sp. nov.

Candidatus Microbacterium fefelastra (NL. fem. n. *fefelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003635115*. The type genome for the species is the GenBank assembly RS_GCF_003635115.1. The GC content of the type genome is 69.91 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Microbacterium fefelatio sp. nov.

Candidatus Microbacterium fefelatio (NL. fem. n. *fefelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp902706225*. The type genome for the species is the GenBank assembly RS_GCF_902706225.1. The GC content of the type genome is 70.0 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Microbacterium feficitio sp. nov.

Candidatus Microbacterium feficitio (NL. fem. n. *feficitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001426925*. The type genome for the species is the GenBank assembly RS_GCF_004514465.1. The GC content of the type genome is 71.79 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Microbacterium femelentia sp. nov.

Candidatus Microbacterium femelentia (NL. fem. n. *femelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001049495*. The type genome for the species is the GenBank assembly RS_GCF_001049495.1. The GC content of the type genome is 69.1 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Microbacterium fiducicula sp. nov.

Candidatus Microbacterium fiducicula (NL. fem. n. *fiducicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000800925*. The type genome for the species is the GenBank assembly RS_GCF_004337555.1. The GC content of the type genome is 68.16 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Microbacterium figililenta sp. nov.

Candidatus Microbacterium figililenta (NL. fem. n. *figililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp006715145*. The type genome for the species is the GenBank assembly RS_GCF_006715145.1. The GC content of the type genome is 68.46 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Microbacterium forabigena sp. nov.

Candidatus Microbacterium forabigena (NL. fem. n. *forabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp006715675*. The type genome for the species is the GenBank assembly RS_GCF_006715675.1. The GC content of the type genome is 70.14 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Microbacterium funebisca sp. nov.

Candidatus Microbacterium funebisca (NL. fem. n. *funebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Microbacterium sp010634855*. The type genome for the species is the GenBank assembly RS_GCF_010634855.1. The GC content of the type genome is 69.98 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Microbacterium furibicella sp. nov.

Candidatus Microbacterium furibicella (NL. fem. n. *furibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001792815*. The type genome for the species is the GenBank assembly RS_GCF_001792815.1. The GC content of the type genome is 70.47 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Microbacterium fusififica sp. nov.

Candidatus Microbacterium fusififica (NL. fem. n. *fusififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp005502885*. The type genome for the species is the GenBank assembly RS_GCF_005502885.1. The GC content of the type genome is 69.34 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Microbacterium futatessa sp. nov.

Candidatus Microbacterium futatessa (NL. fem. n. *futatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001422925*. The type genome for the species is the GenBank assembly RS_GCF_001422925.1. The GC content of the type genome is 70.0 % and the genome length is 4.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Microbacterium gasificella sp. nov.

Candidatus Microbacterium gasificella (NL. fem. n. *gasificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001619615*. The type genome for the species is the GenBank assembly RS_GCF_001619615.1. The GC content of the type genome is 70.27 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Ulu Slim Hot Spring".

Description of *Candidatus* Microbacterium gralletta sp. nov.

Candidatus Microbacterium gralletta (NL. fem. n. *gralletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003999995*. The type genome for the species is the GenBank assembly RS_GCF_003999995.1. The GC content of the type genome is 69.94 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Microbacterium habaciforma sp. nov.

Candidatus Microbacterium habaciforma (NL. fem. n. *habaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003248845*. The type genome for the species is the GenBank assembly GCA_003248845.1. The GC content of the type genome is 70.01 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Microbacterium herinigena sp. nov.

Candidatus Microbacterium herinigena (NL. fem. n. *herinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp013409015*. The type genome for the species is the GenBank assembly RS_GCF_013409015.1. The GC content of the type genome is 69.11 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Microbacterium holisedo sp. nov.

Candidatus Microbacterium holisedo (NL. fem. n. *holisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp009758255*. The type genome for the species is the GenBank assembly RS_GCF_009758255.1. The GC content of the type genome is 69.34 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Microbacterium homogicula sp. nov.

Candidatus Microbacterium homogicula (NL. fem. n. *homogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001426995*. The type genome for the species is the GenBank assembly RS_GCF_008369345.1. The GC content of the type genome is 68.77 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Microbacterium humecousia sp. nov.

Candidatus Microbacterium humecousia (NL. fem. n. *humecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002313585*. The type genome for the species is the GenBank assembly GCA_002320745.1. The GC content of the type genome is 67.04 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Microbacterium impacitrix sp. nov.

Candidatus Microbacterium impacitrix (NL. fem. n. *impacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001262495*. The type genome for the species is the GenBank assembly RS_GCF_001262495.1. The GC content of the type genome is 69.51 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Microbacterium incunicella sp. nov.

Candidatus Microbacterium incunicella (NL. fem. n. *incunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001427525*. The type genome for the species is the GenBank assembly RS_GCF_001427525.1. The GC content of the type genome is 68.68 % and the genome length is 4.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Microbacterium indecitrix sp. nov.

Candidatus Microbacterium indecitrix (NL. fem. n. *indecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900114345*. The type genome for the species is the GenBank assembly RS_GCF_900114345.1. The GC content of the type genome is 68.92 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Microbacterium indevousia sp. nov.

Candidatus Microbacterium indevousia (NL. fem. n. *indevousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001314225*. The type genome for the species is the GenBank assembly RS_GCF_001314225.1. The GC content of the type genome is 71.01 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "activated sludge".

Description of *Candidatus* Microbacterium ingurilenta sp. nov.

Candidatus Microbacterium ingurilenta (NL. fem. n. *ingurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003248605*. The type genome for the species is the GenBank assembly GCA_003248605.1. The GC content of the type genome is 70.11 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Microbacterium inhosisca sp. nov.

Candidatus Microbacterium inhosisca (NL. fem. n. *inhosisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002979435*. The type genome for the species is the GenBank assembly RS_GCF_002979435.1. The GC content of the type genome is 68.82 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Microbacterium innecivita sp. nov.

Candidatus Microbacterium innecivita (NL. fem. n. *innecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002703245*. The type genome for the species is the

GenBank assembly GCA_002703245.1. The GC content of the type genome is 68.51 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Microbacterium insopifica sp. nov.

Candidatus Microbacterium insopifica (NL. fem. n. *insopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003248655*. The type genome for the species is the GenBank assembly GCA_003248655.1. The GC content of the type genome is 69.24 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Microbacterium irrevitoga sp. nov.

Candidatus Microbacterium irrevitoga (NL. fem. n. *irrevitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004010105*. The type genome for the species is the GenBank assembly RS_GCF_004010105.1. The GC content of the type genome is 69.88 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Microbacterium lapicessa sp. nov.

Candidatus Microbacterium lapicessa (NL. fem. n. *lapicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003610405*. The type genome for the species is the GenBank assembly RS_GCF_003610405.1. The GC content of the type genome is 69.77 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Microbacterium letificella sp. nov.

Candidatus Microbacterium letificella (NL. fem. n. *letificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001898315*. The type genome for the species is the GenBank assembly GCA_001898315.1. The GC content of the type genome is 69.57 % and the genome length is 3.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Microbacterium leviditoga sp. nov.

Candidatus Microbacterium leviditoga (NL. fem. n. *leviditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001898325*. The type genome for the species is the GenBank assembly GCA_001898325.1. The GC content of the type genome is 67.01 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Microbacterium licenedo sp. nov.

Candidatus Microbacterium licenedo (NL. fem. n. *licenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp012847295*. The type genome for the species is the GenBank assembly RS_GCF_014595845.1. The GC content of the type genome is 69.84 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Microbacterium ludifitura sp. nov.

Candidatus Microbacterium ludifitura (NL. fem. n. *ludifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000383475*. The type genome for the species is the GenBank assembly RS_GCF_003384875.1. The GC content of the type genome is 69.76 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Microbacterium lupanetta sp. nov.

Candidatus Microbacterium lupanetta (NL. fem. n. *lupanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900078385*. The type genome for the species is the GenBank assembly GCA_900078385.1. The GC content of the type genome is 70.92 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Microbacterium luticatio sp. nov.

Candidatus Microbacterium luticatio (NL. fem. n. *luticatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002837415*. The type genome for the species is the GenBank assembly RS_GCF_002837415.1. The GC content of the type genome is 68.9 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Microbacterium manubax sp. nov.

Candidatus Microbacterium manubax (NL. fem. n. *manubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002979655*. The type genome for the species is the GenBank assembly RS_GCF_004794415.1. The GC content of the type genome is 68.69 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Microbacterium masocigena sp. nov.

Candidatus Microbacterium masocigena (NL. fem. n. *masocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001595495*. The type genome for the species is the GenBank assembly RS_GCF_002114135.1. The GC content of the type genome is 70.22 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Microbacterium mirabousia sp. nov.

Candidatus Microbacterium mirabousia (NL. fem. n. *mirabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp000425985*. The type genome for the species is the GenBank assembly RS_GCF_002975345.1. The GC content of the type genome is 67.55 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Microbacterium momoritio sp. nov.

Candidatus Microbacterium momoritio (NL. fem. n. *momoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp011326725*. The type genome for the species is the GenBank assembly RS_GCF_009709595.1. The GC content of the type genome is 69.9 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Microbacterium monacedo sp. nov.

Candidatus Microbacterium monacedo (NL. fem. n. *monacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp009858275*. The type genome for the species is the GenBank assembly RS_GCF_009858275.1. The GC content of the type genome is 69.73 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Microbacterium monumitudo sp. nov.

Candidatus Microbacterium monumitudo (NL. fem. n. *monumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001427145*. The type genome for the species is the GenBank assembly RS_GCF_001427145.1. The GC content of the type genome is 69.79 % and the genome length is 3.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Microbacterium morigifica sp. nov.

Candidatus Microbacterium morigifica (NL. fem. n. *morigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp007667425*. The type genome for the species is the GenBank assembly RS_GCF_007667425.1. The GC content of the type genome is 69.32 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Microbacterium musulibula sp. nov.

Candidatus Microbacterium musulibula (NL. fem. n. *musulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp009745985*. The type genome for the species is the GenBank assembly RS_GCF_009745985.1. The GC content of the type genome is 69.51

% and the genome length is 4.03 Mbp.

Description of *Candidatus* Microbacterium nefanisca sp. nov.

Candidatus Microbacterium nefanisca (NL. fem. n. *nefanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp013408285*. The type genome for the species is the GenBank assembly RS_GCF_013408285.1. The GC content of the type genome is 69.85 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Microbacterium nefarimonas sp. nov.

Candidatus Microbacterium nefarimonas (NL. fem. n. *nefarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002456035*. The type genome for the species is the GenBank assembly RS_GCF_904066215.1. The GC content of the type genome is 70.13 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Microbacterium notacago sp. nov.

Candidatus Microbacterium notacago (NL. fem. n. *notacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp014171575*. The type genome for the species is the GenBank assembly RS_GCF_014171575.1. The GC content of the type genome is 68.5 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Microbacterium notacessa sp. nov.

Candidatus Microbacterium notacessa (NL. fem. n. *notacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003524435*. The type genome for the species is the GenBank assembly GCA_003524435.1. The GC content of the type genome is 62.67 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Microbacterium nugacifica sp. nov.

Candidatus Microbacterium nugacifica (NL. fem. n. *nugacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004794515*. The type genome for the species is the GenBank assembly RS_GCF_004794515.1. The GC content of the type genome is 68.53 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Microbacterium nugigatio sp. nov.

Candidatus Microbacterium nugigatio (NL. fem. n. *nugigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003293595*. The type genome for the species is the GenBank assembly RS_GCF_004794085.1. The GC content of the type genome is 69.47 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Microbacterium obrigatio sp. nov.

Candidatus Microbacterium obrigatio (NL. fem. n. *obrigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004794465*. The type genome for the species is the GenBank assembly RS_GCF_004794465.1. The GC content of the type genome is 68.91 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Microbacterium obsecitica sp. nov.

Candidatus Microbacterium obsecitica (NL. fem. n. *obsecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001878835*. The type genome for the species is the GenBank assembly RS_GCF_001878835.1. The GC content of the type genome is 69.17 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Microbacterium obsoritio sp. nov.

Candidatus Microbacterium obsoritio (NL. fem. n. *obsoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp012524205*. The type genome for the species is the GenBank assembly RS_GCF_012524205.1. The GC content of the type genome is 69.57 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Microbacterium octusitica sp. nov.

Candidatus Microbacterium octusitica (NL. fem. n. *octusitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003850245*. The type genome for the species is the GenBank assembly RS_GCF_003850245.1. The GC content of the type genome is 69.73 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Microbacterium panificula sp. nov.

Candidatus Microbacterium panificula (NL. fem. n. *panificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002979415*. The type genome for the species is the GenBank assembly RS_GCF_002979415.1. The GC content of the type genome is 69.43 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Microbacterium panifilega sp. nov.

Candidatus Microbacterium panifilega (NL. fem. n. *panifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003931875*. The type genome for the species is the GenBank assembly RS_GCF_003931875.1. The GC content of the type genome is 71.63 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Microbacterium paralitura sp. nov.

Candidatus Microbacterium paralitura (NL. fem. n. *paralitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp011046485*. The type genome for the species is the GenBank assembly RS_GCF_011046485.1. The GC content of the type genome is 69.99

% and the genome length is 3.91 Mbp.

Description of *Candidatus* Microbacterium parocigena sp. nov.

Candidatus Microbacterium parocigena (NL. fem. n. *parocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp004362195*. The type genome for the species is the GenBank assembly RS_GCF_004362195.1. The GC content of the type genome is 70.57 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Microbacterium pepenessa sp. nov.

Candidatus Microbacterium pepenessa (NL. fem. n. *pepenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900102175*. The type genome for the species is the GenBank assembly RS_GCF_900102175.1. The GC content of the type genome is 70.7 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Microbacterium peraditura sp. nov.

Candidatus Microbacterium peraditura (NL. fem. n. *peraditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003387575*. The type genome for the species is the GenBank assembly RS_GCF_003387575.1. The GC content of the type genome is 69.31 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Microbacterium repagiforma sp. nov.

Candidatus Microbacterium repagiforma (NL. fem. n. *repagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003254645*. The type genome for the species is the GenBank assembly RS_GCF_003208015.1. The GC content of the type genome is 68.5 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Microbacterium resuribra sp. nov.

Candidatus Microbacterium resuribra (NL. fem. n. *resuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001650405*. The type genome for the species is the GenBank assembly RS_GCF_001650405.1. The GC content of the type genome is 69.64 % and the genome length is 3.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Air".

Description of *Candidatus* Microbacterium rorulitoga sp. nov.

Candidatus Microbacterium rorulitoga (NL. fem. n. *rorulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp003476465*. The type genome for the species is the GenBank assembly GCA_003476465.1. The GC content of the type genome is 68.31 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Microbacterium senacitura sp. nov.

Candidatus Microbacterium senacitura (NL. fem. n. *senacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900163665*. The type genome for the species is the GenBank assembly RS_GCF_003335195.1. The GC content of the type genome is 67.92 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Microbacterium subinastra sp. nov.

Candidatus Microbacterium subinastra (NL. fem. n. *subinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900156455*. The type genome for the species is the GenBank assembly RS_GCF_900156455.1. The GC content of the type genome is 70.32 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Microbacterium tegumifica sp. nov.

Candidatus Microbacterium tegumifica (NL. fem. n. *tegumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900098805*. The type genome for the species is the GenBank assembly GCA_002358725.1. The GC content of the type genome is 69.36 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Microbacterium totiditudo sp. nov.

Candidatus Microbacterium totiditudo (NL. fem. n. *totiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp007679045*. The type genome for the species is the GenBank assembly RS_GCF_007679235.1. The GC content of the type genome is 70.23 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Microbacterium utroligena sp. nov.

Candidatus Microbacterium utroligena (NL. fem. n. *utroligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002245215*. The type genome for the species is the GenBank assembly RS_GCF_002245215.1. The GC content of the type genome is 70.29 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Microbacterium vanitastra sp. nov.

Candidatus Microbacterium vanitastra (NL. fem. n. *vanitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp001423485*. The type genome for the species is the GenBank assembly RS_GCF_001423485.1. The GC content of the type genome is 67.85 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Microbacterium vanitetta sp. nov.

Candidatus Microbacterium vanitetta (NL. fem. n. *vanitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002812725*. The type genome for the species is the

GenBank assembly RS_GCF_002911615.1. The GC content of the type genome is 68.27 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Microbacterium visifilenta sp. nov.

Candidatus Microbacterium visifilenta (NL. fem. n. *visifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp002970975*. The type genome for the species is the GenBank assembly RS_GCF_002970975.1. The GC content of the type genome is 70.75 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Microbacterium vocifilenta sp. nov.

Candidatus Microbacterium vocifilenta (NL. fem. n. *vocifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium sp900102005*. The type genome for the species is the GenBank assembly RS_GCF_004358865.1. The GC content of the type genome is 69.37 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Microbacterium bucolivita sp. nov.

Candidatus Microbacterium bucolivita (NL. fem. n. *bucolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium_A sp011751785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011751765.1. The GC content of the type genome is 61.96 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Microbacterium visocentia sp. nov.

Candidatus Microbacterium visocentia (NL. fem. n. *visocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbacterium_A sp011751795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011751795.1. The GC content of the type genome is 63.3 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Microbispora apsegetta sp. nov.

Candidatus Microbispora apsegetta (NL. fem. n. *apsegetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbispora sp002027145*. The type genome for the species is the GenBank assembly RS_GCF_002027145.1. The GC content of the type genome is 71.28 % and the genome length is 9.43 Mbp.

Description of *Candidatus* Microbispora ascalifica sp. nov.

Candidatus Microbispora ascalifica (NL. fem. n. *ascalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbispora sp000511135*. The type genome for the species is the GenBank assembly RS_GCF_000511135.2. The GC content of the type genome is 72.34 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Microbispora indotivita sp. nov.

Candidatus Microbispora indotivita (NL. fem. n. *indotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbispora sp012999535*. The type genome for the species is the GenBank assembly RS_GCF_012999535.1. The GC content of the type genome is 71.46 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Microbispora rudecax sp. nov.

Candidatus Microbispora rudecax (NL. fem. n. *rudecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbispora sp008728085*. The type genome for the species is the GenBank assembly RS_GCF_008728085.1. The GC content of the type genome is 71.58 % and the genome length is 8.45 Mbp.

Description of *Candidatus* Microbispora vanititia sp. nov.

Candidatus Microbispora vanititia (NL. fem. n. *vanititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbispora sp014161445*. The type genome for the species is the GenBank assembly RS_GCF_012999525.1. The GC content of the type genome is 71.32 % and the genome length is 8.83 Mbp.

Description of *Candidatus* Microbulbifer abantatio sp. nov.

Candidatus Microbulbifer abantatio (NL. fem. n. *abantatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp013367775*. The type genome for the species is the GenBank assembly RS_GCF_013367775.1. The GC content of the type genome is 57.64 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Microbulbifer adsucibula sp. nov.

Candidatus Microbulbifer adsucibula (NL. fem. n. *adsucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp000708675*. The type genome for the species is the GenBank assembly RS_GCF_000708675.1. The GC content of the type genome is 56.7 % and the genome length is 4.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Microbulbifer camiletta sp. nov.

Candidatus Microbulbifer camiletta (NL. fem. n. *camiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp007183175*. The type genome for the species is the GenBank assembly RS_GCF_007183175.1. The GC content of the type genome is 49.55 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Microbulbifer coticax sp. nov.

Candidatus Microbulbifer coticax (NL. fem. n. *coticax* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp001641755*. The type genome for the species is the GenBank assembly RS_GCF_001507605.1. The GC content of the type genome is 59.88 % and the genome length is 3.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Erba brine-seawater interface".

Description of *Candidatus* Microbulbifer hexamitudo sp. nov.

Candidatus Microbulbifer hexamitudo (NL. fem. n. *hexamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp009363535*. The type genome for the species is the GenBank assembly RS_GCF_009363535.1. The GC content of the type genome is 50.17 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Microbulbifer inlacilega sp. nov.

Candidatus Microbulbifer inlacilega (NL. fem. n. *inlacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp003076275*. The type genome for the species is the GenBank assembly RS_GCF_003076275.1. The GC content of the type genome is 48.75 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Microbulbifer intenedo sp. nov.

Candidatus Microbulbifer intenedo (NL. fem. n. *intenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp009903625*. The type genome for the species is the GenBank assembly RS_GCF_009903625.1. The GC content of the type genome is 56.86 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Microbulbifer sicaribra sp. nov.

Candidatus Microbulbifer sicaribra (NL. fem. n. *sicaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microbulbifer sp001639145*. The type genome for the species is the GenBank assembly RS_GCF_001639145.1. The GC content of the type genome is 58.36 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Microcoleus absurisca sp. nov.

Candidatus Microcoleus absurisca (NL. fem. n. *absurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp013179805*. The type genome for the species is the GenBank assembly RS_GCF_013179805.1. The GC content of the type genome is 45.61 % and the genome length is 7.55 Mbp.

Description of *Candidatus* Microcoleus catalentia sp. nov.

Candidatus Microcoleus catalentia (NL. fem. n. *catalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp004294385*. The type genome for the species is the GenBank assembly GCA_004293745.1. The GC content of the type genome is 44.31 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Microcoleus cilicedo sp. nov.

Candidatus Microcoleus cilicedo (NL. fem. n. *cilicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp013299185*. The type genome for the species is the GenBank assembly GCA_013299185.1. The GC content of the type genome is 45.34 % and the genome length is 7.52 Mbp.

Description of *Candidatus* Microcoleus colipugo sp. nov.

Candidatus Microcoleus colipugo (NL. fem. n. *colipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp004293365*. The type genome for the species is the GenBank assembly GCA_004293835.1. The GC content of the type genome is 45.91 %

and the genome length is 6.54 Mbp.

Description of *Candidatus* Microcoleus decitatica sp. nov.

Candidatus Microcoleus decitatica (NL. fem. n. *decitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp004292955*. The type genome for the species is the GenBank assembly GCA_004292955.1. The GC content of the type genome is 45.44 % and the genome length is 7.3 Mbp.

Description of *Candidatus* Microcoleus depecitia sp. nov.

Candidatus Microcoleus depecitia (NL. fem. n. *depecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp004292745*. The type genome for the species is the GenBank assembly GCA_004292745.1. The GC content of the type genome is 44.58 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Microcoleus ignobibra sp. nov.

Candidatus Microcoleus ignobibra (NL. fem. n. *ignobibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp013299165*. The type genome for the species is the GenBank assembly GCA_013299165.1. The GC content of the type genome is 45.81 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Microcoleus luculitica sp. nov.

Candidatus Microcoleus luculitica (NL. fem. n. *luculitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp000317475*. The type genome for the species is the GenBank assembly RS_GCF_000317475.1. The GC content of the type genome is 45.78 % and the genome length is 8.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil in orchid house".

Description of *Candidatus* Microcoleus nefanitrix sp. nov.

Candidatus Microcoleus nefanitrix (NL. fem. n. *nefanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp003542015*. The type genome for the species is the GenBank assembly GCA_003542015.1. The GC content of the type genome is 44.88 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Microcoleus penecisca sp. nov.

Candidatus Microcoleus penecisca (NL. fem. n. *penecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp003003725*. The type genome for the species is the GenBank assembly RS_GCF_003003715.1. The GC content of the type genome is 45.28 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Microcoleus resurugo sp. nov.

Candidatus Microcoleus resurugo (NL. fem. n. *resurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp012034575*. The type genome for the species is the GenBank assembly GCA_012031535.1. The GC content of the type genome is 45.51 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Microcoleus telegousia sp. nov.

Candidatus Microcoleus telegousia (NL. fem. n. *telegousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcoleus sp012035135*. The type genome for the species is the GenBank assembly GCA_012035135.1. The GC content of the type genome is 44.99 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Microcystis coninentia sp. nov.

Candidatus Microcystis coninentia (NL. fem. n. *coninentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcystis sp002282935*. The type genome for the species is the GenBank assembly GCA_009995725.1. The GC content of the type genome is 42.5 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Microcystis tametibula sp. nov.

Candidatus Microcystis tametibula (NL. fem. n. *tametibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microcystis sp000297435*. The type genome for the species is the GenBank assembly RS_GCF_008579225.1. The GC content of the type genome is 42.66 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Microlunatus altivetta sp. nov.

Candidatus Microlunatus altivetta (NL. fem. n. *altivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microlunatus_A sp007362775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007362775.1. The GC content of the type genome is 66.86 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Microlunatus paropigena sp. nov.

Candidatus Microlunatus paropigena (NL. fem. n. *paropigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microlunatus_A sp009707365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009707365.1. The GC content of the type genome is 67.07 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Micromonospora adnunicula sp. nov.

Candidatus Micromonospora adnunicula (NL. fem. n. *adnunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp002754655*. The type genome for the species is the GenBank assembly RS_GCF_002754655.1. The GC content of the type genome is 70.96 % and the genome length is 6.59 Mbp.

Description of *Candidatus* Micromonospora alticago sp. nov.

Candidatus Micromonospora alticago (NL. fem. n. *alticago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004348525*. The type genome for the species is the GenBank assembly RS_GCF_004348525.1. The GC content of the type genome is 72.4 % and the genome length is 6.96 Mbp.

Description of *Candidatus* Micromonospora ammixax sp. nov.

Candidatus Micromonospora ammixax (NL. fem. n. *ammixax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp010560025*. The type genome for the species is the GenBank assembly RS_GCF_010560025.1. The GC content of the type genome is 71.21 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Micromonospora amneniforma sp. nov.

Candidatus Micromonospora amneniforma (NL. fem. n. *amneniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp005402585*. The type genome for the species is the GenBank assembly RS_GCF_005402585.1. The GC content of the type genome is 71.46 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Micromonospora ancipatio sp. nov.

Candidatus Micromonospora ancipatio (NL. fem. n. *ancipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003434305*. The type genome for the species is the GenBank assembly RS_GCF_003434305.1. The GC content of the type genome is 73.28

% and the genome length is 7.09 Mbp.

Description of *Candidatus* Micromonospora argititoga sp. nov.

Candidatus Micromonospora argititoga (NL. fem. n. *argititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp008868175*. The type genome for the species is the GenBank assembly RS_GCF_008868175.1. The GC content of the type genome is 73.5 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Micromonospora ascelentia sp. nov.

Candidatus Micromonospora ascelentia (NL. fem. n. *ascelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004217235*. The type genome for the species is the GenBank assembly RS_GCF_004217235.1. The GC content of the type genome is 71.71 % and the genome length is 7.62 Mbp.

Description of *Candidatus* Micromonospora bicinilega sp. nov.

Candidatus Micromonospora bicinilega (NL. fem. n. *bicinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp002846275*. The type genome for the species is the GenBank assembly RS_GCF_002846275.1. The GC content of the type genome is 71.47 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Micromonospora bipatitoga sp. nov.

Candidatus Micromonospora bipatitoga (NL. fem. n. *bipatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004345505*. The type genome for the species is the GenBank assembly RS_GCF_004345505.1. The GC content of the type genome is 73.35 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Micromonospora bovicitas sp. nov.

Candidatus Micromonospora bovicitas (NL. fem. n. *bovicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp009908295*. The type genome for the species is the GenBank assembly RS_GCF_009908295.1. The GC content of the type genome is 72.79 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Micromonospora detosilega sp. nov.

Candidatus Micromonospora detosilega (NL. fem. n. *detosilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004307965*. The type genome for the species is the GenBank assembly RS_GCF_004307965.1. The GC content of the type genome is 71.68 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Micromonospora dicimitoga sp. nov.

Candidatus Micromonospora dicimitoga (NL. fem. n. *dicimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004217535*. The type genome for the species is the GenBank assembly RS_GCF_004217535.1. The GC content of the type genome is 72.85 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Micromonospora dilacugo sp. nov.

Candidatus Micromonospora dilacugo (NL. fem. n. *dilacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004348325*. The type genome for the species is the GenBank assembly RS_GCF_004348325.1. The GC content of the type genome is 71.6 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Micromonospora effosibra sp. nov.

Candidatus Micromonospora effosibra (NL. fem. n. *effosibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004348595*. The type genome for the species is the GenBank assembly RS_GCF_004348595.1. The GC content of the type genome is 72.2 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Micromonospora exforetta sp. nov.

Candidatus Micromonospora exforetta (NL. fem. n. *exforetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp001905095*. The type genome for the species is the GenBank assembly RS_GCF_001905095.1. The GC content of the type genome is 71.5 % and the genome length is 9.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Micromonospora expurastra sp. nov.

Candidatus Micromonospora expurastra (NL. fem. n. *expurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003027925*. The type genome for the species is the GenBank assembly RS_GCF_003027925.1. The GC content of the type genome is 72.98 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Micromonospora fragmivita sp. nov.

Candidatus Micromonospora fragmivita (NL. fem. n. *fragmivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp013694245*. The type genome for the species is the GenBank assembly RS_GCF_013694245.1. The GC content of the type genome is 73.69 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Micromonospora genufugo sp. nov.

Candidatus Micromonospora genufugo (NL. fem. n. *genufugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp000158815*. The type genome for the species is the

GenBank assembly RS_GCF_000158815.1. The GC content of the type genome is 72.33 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Micromonospora idciritoga sp. nov.

Candidatus Micromonospora idciritoga (NL. fem. n. *idciritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp008119785*. The type genome for the species is the GenBank assembly RS_GCF_008119785.1. The GC content of the type genome is 71.92 % and the genome length is 9.17 Mbp.

Description of *Candidatus* Micromonospora idciritudo sp. nov.

Candidatus Micromonospora idciritudo (NL. fem. n. *idciritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003172955*. The type genome for the species is the GenBank assembly RS_GCF_003172955.1. The GC content of the type genome is 72.3 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Micromonospora intabisca sp. nov.

Candidatus Micromonospora intabisca (NL. fem. n. *intabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp009707425*. The type genome for the species is the GenBank assembly RS_GCF_009707425.1. The GC content of the type genome is 72.78 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Micromonospora linigitudo sp. nov.

Candidatus Micromonospora linigitudo (NL. fem. n. *linigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003725545*. The type genome for the species is the GenBank assembly RS_GCF_003725545.1. The GC content of the type genome is 73.13 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Micromonospora luceritrix sp. nov.

Candidatus Micromonospora luceritrix (NL. fem. n. *luceritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003667505*. The type genome for the species is the GenBank assembly RS_GCF_003667455.1. The GC content of the type genome is 72.15 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Micromonospora nitelimonas sp. nov.

Candidatus Micromonospora nitelimonas (NL. fem. n. *nitelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp002285795*. The type genome for the species is the GenBank assembly RS_GCF_002285795.1. The GC content of the type genome is 72.91 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Micromonospora nubigastra sp. nov.

Candidatus Micromonospora nubigastra (NL. fem. n. *nubigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003030345*. The type genome for the species is the GenBank assembly RS_GCF_003030345.1. The GC content of the type genome is 72.38 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Micromonospora nugigitio sp. nov.

Candidatus Micromonospora nugigitio (NL. fem. n. *nugigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003751085*. The type genome for the species is the GenBank assembly RS_GCF_003751085.1. The GC content of the type genome is 70.63 % and the genome length is 8.9 Mbp.

Description of *Candidatus* Micromonospora obfirigena sp. nov.

Candidatus Micromonospora obfirigena (NL. fem. n. *obfirigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp000982955*. The type genome for the species is the GenBank assembly RS_GCF_000982955.1. The GC content of the type genome is 73.39 % and the genome length is 6.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Micromonospora obrigilenta sp. nov.

Candidatus Micromonospora obrigilenta (NL. fem. n. *obrigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp008868155*. The type genome for the species is the GenBank assembly RS_GCF_008868155.1. The GC content of the type genome is 71.42 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Micromonospora obtemitica sp. nov.

Candidatus Micromonospora obtemitica (NL. fem. n. *obtemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp012034245*. The type genome for the species is the GenBank assembly RS_GCF_012034245.1. The GC content of the type genome is 72.73 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Micromonospora omnipimonas sp. nov.

Candidatus Micromonospora omnipimonas (NL. fem. n. *omnipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003172935*. The type genome for the species is the GenBank assembly RS_GCF_003172935.1. The GC content of the type genome is 72.02 % and the genome length is 7.88 Mbp.

Description of *Candidatus* Micromonospora paropessa sp. nov.

Candidatus Micromonospora paropessa (NL. fem. n. *paropessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003664255*. The type genome for the species is the

GenBank assembly RS_GCF_003664255.1. The GC content of the type genome is 73.19 % and the genome length is 7.81 Mbp.

Description of *Candidatus* Micromonospora penicimonia sp. nov.

Candidatus Micromonospora penicimonia (NL. fem. n. *penicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp002140155*. The type genome for the species is the GenBank assembly RS_GCF_002140155.1. The GC content of the type genome is 73.07 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Micromonospora relecitio sp. nov.

Candidatus Micromonospora relecitio (NL. fem. n. *relecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp003762835*. The type genome for the species is the GenBank assembly RS_GCF_003762835.1. The GC content of the type genome is 72.38 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Micromonospora subinigena sp. nov.

Candidatus Micromonospora subinigena (NL. fem. n. *subinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp012726175*. The type genome for the species is the GenBank assembly RS_GCF_012726175.1. The GC content of the type genome is 69.96 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Micromonospora subinitas sp. nov.

Candidatus Micromonospora subinitas (NL. fem. n. *subinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp009712475*. The type genome for the species is the GenBank assembly RS_GCF_009712475.1. The GC content of the type genome is 70.87 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Micromonospora sugilibula sp. nov.

Candidatus Micromonospora sugilibula (NL. fem. n. *sugilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micromonospora sp004348675*. The type genome for the species is the GenBank assembly RS_GCF_004348675.1. The GC content of the type genome is 71.71 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Micropelagos bucelitoga sp. nov.

Candidatus Micropelagos bucelitoga (NL. fem. n. *bucelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropelagos sp003535555*. The type genome for the species is the GenBank assembly GCA_009937005.1. The GC content of the type genome is 45.05 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Micropelagos cerifentia sp. nov.

Candidatus Micropelagos cerifentia (NL. fem. n. *cerifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropelagos sp002683515*. The type genome for the species is the GenBank assembly GCA_002683515.1. The GC content of the type genome is 45.08 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Micropelagos malagimonas sp. nov.

Candidatus Micropelagos malagimonas (NL. fem. n. *malagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropelagos sp000293845*. The type genome for the species is the GenBank assembly RS_GCF_000293845.2. The GC content of the type genome is 47.4 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Micropelagos masocentia sp. nov.

Candidatus Micropelagos masocentia (NL. fem. n. *masocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropelagos sp002450335*. The type genome for the species is the GenBank assembly GCA_002430505.1. The GC content of the type genome is 46.11 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Micropelagos peripilega sp. nov.

Candidatus Micropelagos peripilega (NL. fem. n. *peripilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropelagos sp002700915*. The type genome for the species is the GenBank assembly GCA_002700915.1. The GC content of the type genome is 45.66 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Micropruina algifilenta sp. nov.

Candidatus Micropruina algifilenta (NL. fem. n. *algifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Micropruina sp013693855*. The type genome for the species is the GenBank assembly GCA_013693855.1. The GC content of the type genome is 70.09 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Microscilla adnilibra sp. nov.

Candidatus Microscilla adnilibra (NL. fem. n. *adnilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microscilla sp001890965*. The type genome for the species is the GenBank assembly GCA_001890965.1. The GC content of the type genome is 38.66 % and the genome length is 11.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "non-axenic enrichment culture inoculated from diseased coral".

Description of *Candidatus* Microscilla affanilega sp. nov.

Candidatus Microscilla affanilega (NL. fem. n. *affanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Microscilla sp003483885*. The type genome for the species is the GenBank assembly GCA_003483885.1. The GC content of the type genome is 39.73 % and the genome length is 11.44 Mbp.

Description of *Candidatus* Microterricola actutivita sp. nov.

Candidatus Microterricola actutivita (NL. fem. n. *actutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microterricola sp000799285*. The type genome for the species is the GenBank assembly RS_GCF_000799285.1. The GC content of the type genome is 62.04 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Microterricola adselitio sp. nov.

Candidatus Microterricola adselitio (NL. fem. n. *adselitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microterricola sp003610585*. The type genome for the species is the GenBank assembly RS_GCF_003610585.1. The GC content of the type genome is 67.98 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Microterricola catapetta sp. nov.

Candidatus Microterricola catapetta (NL. fem. n. *catapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microterricola sp001425085*. The type genome for the species is the GenBank assembly RS_GCF_001425085.1. The GC content of the type genome is 67.69 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Microthrix vilitastra sp. nov.

Candidatus Microthrix vilitastra (NL. fem. n. *vilitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microthrix sp002473265*. The type genome for the species is the GenBank assembly GCA_002473265.1. The GC content of the type genome is 68.28 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Microvirga advecibra sp. nov.

Candidatus Microvirga advecibra (NL. fem. n. *advecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp003290125*. The type genome for the species is the GenBank assembly RS_GCF_003290125.1. The GC content of the type genome is 62.17 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Microvirga advecicella sp. nov.

Candidatus Microvirga advecicella (NL. fem. n. *advecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp009363855*. The type genome for the species is the GenBank assembly RS_GCF_009363855.1. The GC content of the type genome is 67.71 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Microvirga anarretta sp. nov.

Candidatus Microvirga anarretta (NL. fem. n. *anarretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp000739015*. The type genome for the species is the GenBank assembly RS_GCF_000739015.1. The GC content of the type genome is 62.94 % and the genome length is 5.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Biological Soil Crust".

Description of *Candidatus* Microvirga conopitio sp. nov.

Candidatus Microvirga conopitio (NL. fem. n. *conopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp009910705*. The type genome for the species is the GenBank assembly RS_GCF_009910705.1. The GC content of the type genome is 65.07 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Microvirga detotatica sp. nov.

Candidatus Microvirga detotatica (NL. fem. n. *detotatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp011777495*. The type genome for the species is the GenBank assembly RS_GCF_011777495.1. The GC content of the type genome is 62.22 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Microvirga incunitura sp. nov.

Candidatus Microvirga incunitura (NL. fem. n. *incunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp000745135*. The type genome for the species is the GenBank assembly RS_GCF_000745135.1. The GC content of the type genome is 67.33 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Microvirga momorax sp. nov.

Candidatus Microvirga momorax (NL. fem. n. *momorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp003151255*. The type genome for the species is the GenBank assembly RS_GCF_003151255.1. The GC content of the type genome is 64.01 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Microvirga obtunicula sp. nov.

Candidatus Microvirga obtunicula (NL. fem. n. *obtunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp003075415*. The type genome for the species is the GenBank assembly RS_GCF_003075415.1. The GC content of the type genome is 61.27 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Microvirga stercivita sp. nov.

Candidatus Microvirga stercivita (NL. fem. n. *stercivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Microvirga sp013520865*. The type genome for the species is the GenBank assembly RS_GCF_013520865.1. The GC content of the type genome is 63.83 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Mikella foricessa sp. nov.

Candidatus Mikella foricessa (NL. fem. n. *foricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mikella sp900090215*. The type genome for the species is the GenBank assembly RS_GCF_900090215.1. The GC content of the type genome is 32.57 % and the genome length is 0.3 Mbp.

Description of *Candidatus* Milifana videlatica sp. nov.

Candidatus Milifana videlatica (NL. fem. n. *videlatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718455 sp002718455*. The type genome for the species is the GenBank assembly GCA_002718455.1. The GC content of the type genome is 30.68 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Milifana gen. nov.

Candidatus Milifana (NL. fem. n. *Milifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718455*. The type species for the genus is *Candidatus* Milifana videlatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED-70*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinanaceae.

Description of *Candidatus* Milifaria relenitia sp. nov.

Candidatus Milifaria relenitia (NL. fem. n. *relenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG11204 sp902766845*. The type genome for the species is the GenBank assembly GCA_902783225.1. The GC content of the type genome is 62.71 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Milifaria gen. nov.

Candidatus Milifaria (NL. fem. n. *Milifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11204*. The type species for the genus is *Candidatus* Milifaria relenitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milifella devecastra sp. nov.

Candidatus Milifella devecastra (NL. fem. n. *devecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp903826865*. The type genome for the species is the GenBank assembly GCA_903826865.1. The GC content of the type genome is 54.3 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Milifella gen. nov.

Candidatus Milifella (NL. fem. n. *Milifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5540*. The type species for the genus is *Candidatus* Milifella devecastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milifella didacisca sp. nov.

Candidatus Milifella didacisca (NL. fem. n. *didacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp014381785*. The type genome for the species is the GenBank assembly GCA_014381785.1. The GC content of the type genome is 54.71 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Milifella exsisicula sp. nov.

Candidatus Milifella exsisicula (NL. fem. n. *exsisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp002423675*. The type genome for the species is the GenBank assembly GCA_002423675.1. The GC content of the type genome is 53.04 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Milifella murelitica sp. nov.

Candidatus Milifella murelitica (NL. fem. n. *murelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp009905215*. The type genome for the species is the GenBank assembly RS_GCF_009905215.1. The GC content of the type genome is 53.13 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Milifella refunitrix sp. nov.

Candidatus Milifella refunitrix (NL. fem. n. *refunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp903831085*. The type genome for the species is the GenBank assembly GCA_903863605.1. The GC content of the type genome is 55.61 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Milifella vicatastra sp. nov.

Candidatus Milifella vicatastra (NL. fem. n. *vicatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5540 sp013141415*. The type genome for the species is the GenBank assembly GCA_013141415.1. The GC content of the type genome is 54.6 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Milifia morigitrix sp. nov.

Candidatus Milifia morigitrix (NL. fem. n. *morigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-4-48-99 sp003021505*. The type genome for the species is the GenBank assembly GCA_003021405.1. The GC content of the type genome is 48.26 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Milifia gen. nov.

Candidatus Milifia (NL. fem. n. *Milifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QS-4-48-99*. The type species for the genus is *Candidatus* Milifia morigitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milifida docibigena sp. nov.

Candidatus Milifida docibigena (NL. fem. n. *docibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMM01 sp903875225*. The type genome for the species is the GenBank assembly GCA_903880145.1. The GC content of the type genome is 69.46 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Milifida gen. nov.

Candidatus Milifida (NL. fem. n. *Milifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUMM01*. The type species for the genus is *Candidatus* Milifida docibigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXON01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucellaceae.

Description of *Candidatus* Milifida homogicella sp. nov.

Candidatus Milifida homogicella (NL. fem. n. *homogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMM01 sp903844155*. The type genome for the species is the GenBank assembly GCA_903864985.1. The GC content of the type genome is 68.69 % and the genome length is 7.98 Mbp.

Description of *Candidatus* Milifida vehematica sp. nov.

Candidatus Milifida vehematica (NL. fem. n. *vehematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMM01 sp009692605*. The type genome for the species is the GenBank assembly GCA_009692605.1. The GC content of the type genome is 67.96 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Milifida vicatugo sp. nov.

Candidatus Milifida vicatugo (NL. fem. n. *vicatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMM01 sp903900265*. The type genome for the species is the GenBank assembly GCA_903865785.1. The GC content of the type genome is 66.79 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Milifosa alsiditudo sp. nov.

Candidatus Milifosa alsiditudo (NL. fem. n. *alsiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQK01 sp003819755*. The type genome for the species is the GenBank assembly GCA_003819755.1. The GC content of the type genome is 59.04 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Milifosa gen. nov.

Candidatus Milifosa (NL. fem. n. *Milifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPQK01*. The type species for the genus is *Candidatus* Milifosa alsiditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RPQK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Milifosaceae.

Description of *Candidatus* Milifosaceae fam. nov.

Candidatus Milifosaceae (NL. fem. n. *Milifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPQK01.* The type genus for the taxon is *Candidatus* Milifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *RPQK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Milifosales.

Description of *Candidatus* Milifosales ord. nov.

Candidatus Milifosales (NL. fem. n. *Milifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPQK01.* The type genus for the taxon is *Candidatus* Milifosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomulae.

Description of *Candidatus* Milifula nehalitoga sp. nov.

Candidatus Milifula nehalitoga (NL. fem. n. *nehalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-3-00-41-53 sp002780895*. The type genome for the species is the GenBank assembly GCA_002790775.1. The GC content of the type genome is 40.63 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Milifula gen. nov.

Candidatus Milifula (NL. fem. n. *Milifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-3-00-41-53*. The type species for the genus is *Candidatus* Milifula

nehalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridulaceae.

Description of *Candidatus* Milipana aggubimonia sp. nov.

Candidatus Milipana aggubimonia (NL. fem. n. *aggubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQDA01 sp903858055*. The type genome for the species is the GenBank assembly GCA_903858055.1. The GC content of the type genome is 69.41 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Milipana gen. nov.

Candidatus Milipana (NL. fem. n. *Milipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQDA01*. The type species for the genus is *Candidatus* Milipana aggubimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milipana mavoribra sp. nov.

Candidatus Milipana mavoribra (NL. fem. n. *mavoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQDA01 sp903870415*. The type genome for the species is the GenBank assembly GCA_903894625.1. The GC content of the type genome is 64.61 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Miliparia nocumitio sp. nov.

Candidatus Miliparia nocumitio (NL. fem. n. *nocumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAKW01 sp003343605*. The type genome for the species is the

GenBank assembly GCA_003343605.1. The GC content of the type genome is 51.41 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Miliparia gen. nov.

Candidatus Miliparia (NL. fem. n. *Miliparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAKW01*. The type species for the genus is *Candidatus* Miliparia nocumitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAKW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Milipariaceae.

Description of *Candidatus* Milipariaceae fam. nov.

Candidatus Milipariaceae (NL. fem. n. *Milipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QAKW01.* The type genus for the taxon is *Candidatus* Miliparia .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Milipella desurigena sp. nov.

Candidatus Milipella desurigena (NL. fem. n. *desurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-113 sp002050035*. The type genome for the species is the GenBank assembly GCA_002050035.1. The GC content of the type genome is 58.97 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Milipella gen. nov.

Candidatus Milipella (NL. fem. n. *Milipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-113*. The type species for the genus is *Candidatus* Milipella desurigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family

4484-113. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Milipellaceae.

Description of *Candidatus* Milipellaceae fam. nov.

Candidatus Milipellaceae (NL. fem. n. *Milipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-113.* The type genus for the taxon is *Candidatus* Milipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Milipellales.

Description of *Candidatus* Milipellales ord. nov.

Candidatus Milipellales (NL. fem. n. *Milipellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-113.* The type genus for the taxon is *Candidatus* Milipella .

According to the original version of GTDB R06-RS202, this family belongs to the class *4484-113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Milipellae.

Description of *Candidatus* Milipellae class. nov.

Candidatus Milipellae (NL. fem. n. *c__Milipellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-113.* The type genus for the taxon is *Candidatus* Milipella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP7_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Sonivanota.

Description of *Candidatus* Milipia attesiforma sp. nov.

Candidatus Milipia attesiforma (NL. fem. n. *attesiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-238 sp900754805*. The type genome for the species is the GenBank assembly RS_GCF_900754805.1. The GC content of the type genome is 46.3 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Milipia gen. nov.

Candidatus Milipia (NL. fem. n. *Milipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-238*. The type species for the genus is *Candidatus* Milipia attesiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milipia denicousia sp. nov.

Candidatus Milipia denicousia (NL. fem. n. *denicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-238 sp000435615*. The type genome for the species is the GenBank assembly GCA_900541405.1. The GC content of the type genome is 45.53 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Milipia gabinifica sp. nov.

Candidatus Milipia gabinifica (NL. fem. n. *gabinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-238 sp900542245*. The type genome for the species is the GenBank assembly RS_GCF_900754975.1. The GC content of the type genome is 52.0 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Milipia minagago sp. nov.

Candidatus Milipia minagago (NL. fem. n. *minagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-238 sp002439735*. The type genome for the species is the GenBank assembly GCA_002439735.1. The GC content of the type genome is 50.95 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Milipia venunigena sp. nov.

Candidatus Milipia venunigena (NL. fem. n. *venunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-238 sp900551415*. The type genome for the species is the GenBank assembly GCA_900551415.1. The GC content of the type genome is 50.68 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Milipida anaclitio sp. nov.

Candidatus Milipida anaclitio (NL. fem. n. *anaclitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp900555645*. The type genome for the species is the GenBank assembly GCA_900555645.1. The GC content of the type genome is 48.25 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Milipida gen. nov.

Candidatus Milipida (NL. fem. n. *Milipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6398*. The type species for the genus is *Candidatus* Milipida anaclitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milipida domicigena sp. nov.

Candidatus Milipida domicigena (NL. fem. n. *domicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp002437495*. The type genome for the species is the GenBank assembly GCA_002436905.1. The GC content of the type genome is 49.17 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Milipida lucubetta sp. nov.

Candidatus Milipida lucubetta (NL. fem. n. *lucubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp003150315*. The type genome for the species is the GenBank assembly RS_GCF_900766425.1. The GC content of the type genome is 44.27 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Milipida molecax sp. nov.

Candidatus Milipida molecax (NL. fem. n. *molecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp002451695*. The type genome for the species is the GenBank assembly GCA_002321235.1. The GC content of the type genome is 51.37 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Milipida nicomitia sp. nov.

Candidatus Milipida nicomitia (NL. fem. n. *nicomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp900314335*. The type genome for the species is the GenBank assembly GCA_902803875.1. The GC content of the type genome is 55.0 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Milipida nutabivita sp. nov.

Candidatus Milipida nutabivita (NL. fem. n. *nutabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6398 sp900550635*. The type genome for the species is the GenBank assembly RS_GCF_900754685.1. The GC content of the type genome is 48.79 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Miliposa bovicitia sp. nov.

Candidatus Miliposa bovicitia (NL. fem. n. *bovicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5209 sp002840365*. The type genome for the species is the GenBank assembly GCA_002840365.1. The GC content of the type genome is 33.9 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Miliposa gen. nov.

Candidatus Miliposa (NL. fem. n. *Miliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5209*. The type species for the genus is *Candidatus* Miliposa bovicitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Miliposa lucelitudo sp. nov.

Candidatus Miliposa lucelitudo (NL. fem. n. *lucelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5209 sp002412645*. The type genome for the species is the GenBank assembly GCA_002347525.1. The GC content of the type genome is 34.11 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Milipula abantibra sp. nov.

Candidatus Milipula abantibra (NL. fem. n. *abantibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp903821715*. The type genome for the species is the GenBank assembly GCA_903821715.1. The GC content of the type genome is 57.46 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Milipula gen. nov.

Candidatus Milipula (NL. fem. n. *Milipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED14*. The type species for the genus is *Candidatus* Milipula abantibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Milipula colubitio sp. nov.

Candidatus Milipula colubitio (NL. fem. n. *colubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp001438205*. The type genome for the species is the GenBank assembly GCA_001438175.1. The GC content of the type genome is 49.01 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Milipula ensifibula sp. nov.

Candidatus Milipula ensifibula (NL. fem. n. *ensifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp003451355*. The type genome for the species is the GenBank assembly GCA_003451355.1. The GC content of the type genome is 57.91 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Milipula feditax sp. nov.

Candidatus Milipula feditax (NL. fem. n. *feditax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp002292855*. The type genome for the species is the GenBank assembly GCA_002292855.1. The GC content of the type genome is 56.05 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Milipula ficulimonia sp. nov.

Candidatus Milipula ficulimonia (NL. fem. n. *ficulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp003507115*. The type genome for the species is the GenBank assembly GCA_003507115.1. The GC content of the type genome is 54.65 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Milipula indecimonas sp. nov.

Candidatus Milipula indecimonas (NL. fem. n. *indecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp005786915*. The type genome for the species is the GenBank assembly GCA_005786915.1. The GC content of the type genome is 60.52 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Milipula lenocitio sp. nov.

Candidatus Milipula lenocitio (NL. fem. n. *lenocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp002737315*. The type genome for the species is the GenBank assembly GCA_002737315.1. The GC content of the type genome is 55.0 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Milipula monumedo sp. nov.

Candidatus Milipula monumedo (NL. fem. n. *monumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp002381225*. The type genome for the species is the GenBank assembly GCA_002346905.1. The GC content of the type genome is 54.6 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Milipula obmutousia sp. nov.

Candidatus Milipula obmutousia (NL. fem. n. *obmutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp013205365*. The type genome for the species is the GenBank assembly GCA_013205365.1. The GC content of the type genome is 55.0 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Milipula peracilenta sp. nov.

Candidatus Milipula peracilenta (NL. fem. n. *peracilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp002167805*. The type genome for the species is the GenBank assembly GCA_002167805.1. The GC content of the type genome is 36.09 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Milipula repepiforma sp. nov.

Candidatus Milipula repepiforma (NL. fem. n. *repepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp002682945*. The type genome for the species is the GenBank assembly GCA_002682945.1. The GC content of the type genome is 36.5 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Milipula sonabicula sp. nov.

Candidatus Milipula sonabicula (NL. fem. n. *sonabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED14 sp003444795*. The type genome for the species is the GenBank assembly GCA_003444795.1. The GC content of the type genome is 52.97 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Mimogaria fraglivita sp. nov.

Candidatus Mimogaria fraglivita (NL. fem. n. *fraglivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2779 sp002084135*. The type genome for the species is the GenBank assembly GCA_002084135.1. The GC content of the type genome is 50.04 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Mimogaria gen. nov.

Candidatus Mimogaria (NL. fem. n. *Mimogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2779*. The type species for the genus is *Candidatus* Mimogaria

fraglivita .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Mimogaria inhumugo sp. nov.

Candidatus Mimogaria inhumugo (NL. fem. n. *inhumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2779 sp002748225*. The type genome for the species is the GenBank assembly GCA_002748225.1. The GC content of the type genome is 50.76 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Mimogaria inurbiforma sp. nov.

Candidatus Mimogaria inurbiforma (NL. fem. n. *inurbiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2779 sp900608495*. The type genome for the species is the GenBank assembly RS_GCF_900608495.1. The GC content of the type genome is 47.05 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Mimogaria peribatio sp. nov.

Candidatus Mimogaria peribatio (NL. fem. n. *peribatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2779 sp003644105*. The type genome for the species is the GenBank assembly GCA_003641715.1. The GC content of the type genome is 47.97 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Mimogaria roraredo sp. nov.

Candidatus Mimogaria roraredo (NL. fem. n. *roraredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2779 sp002352375*. The type genome for the species is the GenBank assembly GCA_002352375.1. The GC content of the type genome is 46.87 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Mimogella citipugo sp. nov.

Candidatus Mimogella citipugo (NL. fem. n. *citipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5359 sp002410925*. The type genome for the species is the GenBank assembly GCA_002410925.1. The GC content of the type genome is 49.01 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Mimogella gen. nov.

Candidatus Mimogella (NL. fem. n. *Mimogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5359*. The type species for the genus is *Candidatus* Mimogella citipugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogellaceae.

Description of *Candidatus* Mimogellaceae fam. nov.

Candidatus Mimogellaceae (NL. fem. n. *Mimogellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5359.* The type genus for the taxon is *Candidatus* Mimogella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Mimogellales.

Description of *Candidatus* Mimogellales ord. nov.

Candidatus Mimogellales (NL. fem. n. *Mimogellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5359.* The type genus for the taxon is *Candidatus* Mimogella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Mimogellae.

Description of *Candidatus* Mimogellae class. nov.

Candidatus Mimogellae (NL. fem. n. *c__Mimogellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5359.* The type genus for the taxon is *Candidatus* Mimogella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Taxilellota.

Description of *Candidatus* Mimogia visifessa sp. nov.

Candidatus Mimogia visifessa (NL. fem. n. *visifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-33-38 sp001769505*. The type genome for the species is the GenBank assembly GCA_001769695.1. The GC content of the type genome is 32.81 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Mimogia gen. nov.

Candidatus Mimogia (NL. fem. n. *Mimogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-33-38*. The type species for the genus is *Candidatus* Mimogia visifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-33-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogiaceae.

Description of *Candidatus* Mimogiaceae fam. nov.

Candidatus Mimogiaceae (NL. fem. n. *Mimogiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-33-38.* The type genus for the taxon is *Candidatus* Mimogia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Mimogida oppanilega sp. nov.

Candidatus Mimogida oppanilega (NL. fem. n. *oppanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9568 sp003497135*. The type genome for the species is the GenBank assembly GCA_003497135.1. The GC content of the type genome is 43.31 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Mimogida gen. nov.

Candidatus Mimogida (NL. fem. n. *Mimogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9568*. The type species for the genus is *Candidatus* Mimogida oppanilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9568*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogidaceae.

Description of *Candidatus* Mimogidaceae fam. nov.

Candidatus Mimogidaceae (NL. fem. n. *Mimogidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9568.* The type genus for the taxon is *Candidatus* Mimogida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Mimogosa penecedo sp. nov.

Candidatus Mimogosa penecedo (NL. fem. n. *penecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AcAMD-5 sp009704345*. The type genome for the species is the GenBank assembly GCA_009704345.1. The GC content of the type genome is 46.23 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Mimogosa gen. nov.

Candidatus Mimogosa (NL. fem. n. *Mimogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AcAMD-5*. The type species for the genus is *Candidatus* Mimogosa penecedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AcAMD-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogosaceae.

Description of *Candidatus* Mimogosaceae fam. nov.

Candidatus Mimogosaceae (NL. fem. n. *Mimogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AcAMD-5.* The type genus for the taxon is *Candidatus* Mimogosa .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Mimogosa vigenitudo sp. nov.

Candidatus Mimogosa vigenitudo (NL. fem. n. *vigenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AcAMD-5 sp002293025*. The type genome for the species is the GenBank assembly GCA_002293025.1. The GC content of the type genome is 44.41 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Mimogula atricitas sp. nov.

Candidatus Mimogula atricitas (NL. fem. n. *atricitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1924 sp009827215*. The type genome for the species is the GenBank assembly GCA_009827215.1. The GC content of the type genome is 56.25 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Mimogula gen. nov.

Candidatus Mimogula (NL. fem. n. *Mimogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1924*. The type species for the genus is *Candidatus* Mimogula atricitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Mimogula demigitrix sp. nov.

Candidatus Mimogula demigitrix (NL. fem. n. *demigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1924 sp002337545*. The type genome for the species is the GenBank assembly GCA_002337265.1. The GC content of the type genome is 59.77 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Mimogula obmurastra sp. nov.

Candidatus Mimogula obmurastra (NL. fem. n. *obmurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1924 sp002401225*. The type genome for the species is the GenBank assembly GCA_002401225.1. The GC content of the type genome is 52.8 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Mimogula semunitia sp. nov.

Candidatus Mimogula semunitia (NL. fem. n. *semunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1924 sp002364005*. The type genome for the species is the GenBank assembly GCA_002416105.1. The GC content of the type genome is 61.57 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Minagana fraglugo sp. nov.

Candidatus Minagana fraglugo (NL. fem. n. *fraglugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-660 sp003133285*. The type genome for the species is the GenBank assembly GCA_003133285.1. The GC content of the type genome is 68.4 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Minagana gen. nov.

Candidatus Minagana (NL. fem. n. *Minagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-660*. The type species for the genus is *Candidatus* Minagana fraglugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minaganaceae.

Description of *Candidatus* Minaganaceae fam. nov.

Candidatus Minaganaceae (NL. fem. n. *Minaganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-660.* The type genus for the taxon is *Candidatus* Minagana .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Minagana rorifisca sp. nov.

Candidatus Minagana rorifisca (NL. fem. n. *rorifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-660 sp903831865*. The type genome for the species is the GenBank assembly GCA_903831865.1. The GC content of the type genome is 67.78 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Minagaria culibitura sp. nov.

Candidatus Minagaria culibitura (NL. fem. n. *culibitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1942 sp002337085*. The type genome for the species is the GenBank assembly GCA_002337085.1. The GC content of the type genome is 41.44 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Minagaria gen. nov.

Candidatus Minagaria (NL. fem. n. *Minagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1942*. The type species for the genus is *Candidatus* Minagaria culibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Minagaria hexapax sp. nov.

Candidatus Minagaria hexapax (NL. fem. n. *hexapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1942 sp002336965*. The type genome for the species is the GenBank assembly GCA_002336965.1. The GC content of the type genome is 41.44 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Minagaria remeditio sp. nov.

Candidatus Minagaria remeditio (NL. fem. n. *remeditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1942 sp009773395*. The type genome for the species is the GenBank assembly GCA_009773395.1. The GC content of the type genome is 46.27 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Minagella chernibra sp. nov.

Candidatus Minagella chernibra (NL. fem. n. *chernibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp902567685*. The type genome for the species is the GenBank assembly GCA_902567685.1. The GC content of the type genome is 29.44 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Minagella gen. nov.

Candidatus Minagella (NL. fem. n. *Minagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G40*. The type species for the genus is *Candidatus* Minagella chernibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Minagella dedigibula sp. nov.

Candidatus Minagella dedigibula (NL. fem. n. *dedigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp003213115*. The type genome for the species is the GenBank assembly GCA_902554215.1. The GC content of the type genome is 29.78 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Minagella inhosedo sp. nov.

Candidatus Minagella inhosedo (NL. fem. n. *inhosedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp002171845*. The type genome for the species is the GenBank assembly GCA_002171845.1. The GC content of the type genome is 31.33 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Minagella inpenitrix sp. nov.

Candidatus Minagella inpenitrix (NL. fem. n. *inpenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp002457515*. The type genome for the species is the GenBank assembly GCA_002457515.1. The GC content of the type genome is 29.61 %

and the genome length is 0.91 Mbp.

Description of *Candidatus* Minagella intenimonia sp. nov.

Candidatus Minagella intenimonia (NL. fem. n. *intenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp902602655*. The type genome for the species is the GenBank assembly GCA_902602655.1. The GC content of the type genome is 29.65 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Minagella lavabitica sp. nov.

Candidatus Minagella lavabitica (NL. fem. n. *lavabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp902597875*. The type genome for the species is the GenBank assembly GCA_902597875.1. The GC content of the type genome is 29.46 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Minagella obvaletta sp. nov.

Candidatus Minagella obvaletta (NL. fem. n. *obvaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G40 sp902515355*. The type genome for the species is the GenBank assembly GCA_902515355.1. The GC content of the type genome is 29.7 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Minagia gemebitia sp. nov.

Candidatus Minagia gemebitia (NL. fem. n. *gemebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-3 sp011047475*. The type genome for the species is the GenBank assembly GCA_011047475.1. The GC content of the type genome is 69.32 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Minagia gen. nov.

Candidatus Minagia (NL. fem. n. *Minagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-3*. The type species for the genus is *Candidatus* Minagia gemebitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagiaceae.

Description of *Candidatus* Minagiaceae fam. nov.

Candidatus Minagiaceae (NL. fem. n. *Minagiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-3.* The type genus for the taxon is *Candidatus* Minagia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minagiales.

Description of *Candidatus* Minagiales ord. nov.

Candidatus Minagiales (NL. fem. n. *Minagiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-3.* The type genus for the taxon is *Candidatus* Minagia .

According to the original version of GTDB R06-RS202, this family belongs to the class *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Minagiae.

Description of *Candidatus* Minagiae class. nov.

Candidatus Minagiae (NL. fem. n. *c__Minagiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-3.* The type genus for the taxon is *Candidatus* Minagia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Minagiota.

Description of *Candidatus* Minagiota phyl. nov.

Candidatus Minagiota (NL. fem. n. *Minagiota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-3.* The type genus for the taxon is *Candidatus* Minagia .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Minagia totidago sp. nov.

Candidatus Minagia totidago (NL. fem. n. *totidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-3 sp001443485*. The type genome for the species is the GenBank assembly GCA_001443485.1. The GC content of the type genome is 68.26 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Minagida rorarimonas sp. nov.

Candidatus Minagida rorarimonas (NL. fem. n. *rorarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NAK82 sp011362805*. The type genome for the species is the GenBank assembly GCA_011362805.1. The GC content of the type genome is 58.01 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Minagida gen. nov.

Candidatus Minagida (NL. fem. n. *Minagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NAK82*. The type species for the genus is *Candidatus* Minagida rorarimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAK82*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagidaceae.

Description of *Candidatus* Minagidaceae fam. nov.

Candidatus Minagidaceae (NL. fem. n. *Minagidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NAK82*. The type genus for the taxon is *Candidatus* Minagida .

According to the original version of GTDB R06-RS202, this family belongs to the order *4572-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bovicidales.

Description of *Candidatus* Minagida timefousia sp. nov.

Candidatus Minagida timefousia (NL. fem. n. *timefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NAK82 sp003130875*. The type genome for the species is the GenBank assembly GCA_003130875.1. The GC content of the type genome is 58.72 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Minagosa admutitrix sp. nov.

Candidatus Minagosa admutitrix (NL. fem. n. *admutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1872 sp014237695*. The type genome for the species is the GenBank assembly GCA_014237695.1. The GC content of the type genome is 59.41 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Minagosa gen. nov.

Candidatus Minagosa (NL. fem. n. *Minagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1872*. The type species for the genus is *Candidatus* Minagosa admutitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Minagosa bucolentia sp. nov.

Candidatus Minagosa bucolentia (NL. fem. n. *bucolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1872 sp009774055*. The type genome for the species is the GenBank assembly GCA_009774055.1. The GC content of the type genome is 59.96 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Minagosa infabivita sp. nov.

Candidatus Minagosa infabivita (NL. fem. n. *infabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1872 sp902373635*. The type genome for the species is the GenBank assembly GCA_902373635.1. The GC content of the type genome is 60.16 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Minagosa inperax sp. nov.

Candidatus Minagosa inperax (NL. fem. n. *inperax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1872 sp900555795*. The type genome for the species is the GenBank assembly GCA_900555795.1. The GC content of the type genome is 61.11 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Minagosa viburedo sp. nov.

Candidatus Minagosa viburedo (NL. fem. n. *viburedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1872 sp900549475*. The type genome for the species is the GenBank assembly GCA_900549475.1. The GC content of the type genome is 57.24 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Minagula solifetta sp. nov.

Candidatus Minagula solifetta (NL. fem. n. *solifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *S15-B10 sp001626655*. The type genome for the species is the GenBank assembly GCA_001626655.1. The GC content of the type genome is 54.35 % and the genome length is 1.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 34 - depth 200m".

Description of *Candidatus* Minagula gen. nov.

Candidatus Minagula (NL. fem. n. *Minagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S15-B10*. The type species for the genus is *Candidatus* Minagula solifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S15-B10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagulaceae.

Description of *Candidatus* Minagulaceae fam. nov.

Candidatus Minagulaceae (NL. fem. n. *Minagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *S15-B10.* The type genus for the taxon is *Candidatus* Minagula .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Minagula vagabousia sp. nov.

Candidatus Minagula vagabousia (NL. fem. n. *vagabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S15-B10 sp002448795*. The type genome for the species is the GenBank assembly GCA_002346965.1. The GC content of the type genome is 48.21 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Miniphocibacter exentitia sp. nov.

Candidatus Miniphocibacter exentitia (NL. fem. n. *exentitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Miniphocibacter sp012841535*. The type genome for the species is the GenBank assembly GCA_012841535.1. The GC content of the type genome is 28.93 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Minurana retunilenta sp. nov.

Candidatus Minurana retunilenta (NL. fem. n. *retunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSYL01 sp011367535*. The type genome for the species is the GenBank assembly GCA_011334745.1. The GC content of the type genome is 29.91 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Minurana gen. nov.

Candidatus Minurana (NL. fem. n. *Minurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSYL01*. The type species for the genus is *Candidatus* Minurana retunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minuranaceae.

Description of *Candidatus* Minuranaceae fam. nov.

Candidatus Minuranaceae (NL. fem. n. *Minuranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSYL01.* The type genus for the taxon is *Candidatus* Minurana .

According to the original version of GTDB R06-RS202, this family belongs to the order *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decinulales.

Description of *Candidatus* Minuraria ambifilenta sp. nov.

Candidatus Minuraria ambifilenta (NL. fem. n. *ambifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MedAcidi-G2B sp012959995*. The type genome for the species is the GenBank assembly GCA_012959995.1. The GC content of the type genome is 55.75 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Minuraria gen. nov.

Candidatus Minuraria (NL. fem. n. *Minuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MedAcidi-G2B*. The type species for the genus is *Candidatus* Minuraria ambifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MedAcidi-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamidaceae.

Description of *Candidatus* Minuraria cacopitica sp. nov.

Candidatus Minuraria cacopitica (NL. fem. n. *cacopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2B sp902634555*. The type genome for the species is the GenBank assembly RS_GCF_902634555.1. The GC content of the type genome is 44.97 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Minuraria ignobigena sp. nov.

Candidatus Minuraria ignobigena (NL. fem. n. *ignobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2B sp000817115*. The type genome for the species is the GenBank assembly GCA_000817115.1. The GC content of the type genome is 44.77 % and the genome length is 1.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "deep chlorophyll maximum in the Mediterranean off the coast of Alicante; Spain; 75m below sea surface".

Description of *Candidatus* Minuraria sacopedo sp. nov.

Candidatus Minuraria sacopedo (NL. fem. n. *sacopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2B sp003215175*. The type genome for the species is the GenBank assembly GCA_002321535.1. The GC content of the type genome is 44.51 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Minurida arrecatio sp. nov.

Candidatus Minurida arrecatio (NL. fem. n. *arrecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715645 sp902529805*. The type genome for the species is the GenBank assembly GCA_902529805.1. The GC content of the type genome is 27.95 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Minurida gen. nov.

Candidatus Minurida (NL. fem. n. *Minurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715645*. The type species for the genus is *Candidatus* Minurida arrecatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Minurida carunitas sp. nov.

Candidatus Minurida carunitas (NL. fem. n. *carunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715645 sp902628365*. The type genome for the species is the GenBank assembly GCA_902584065.1. The GC content of the type genome is 27.98 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Minurida pluscimonia sp. nov.

Candidatus Minurida pluscimonia (NL. fem. n. *pluscimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715645 sp002715645*. The type genome for the species is the GenBank assembly GCA_002715645.1. The GC content of the type genome is 27.6 %

and the genome length is 1.27 Mbp.

Description of *Candidatus* Minurosa andabitoga sp. nov.

Candidatus Minurosa andabitoga (NL. fem. n. *andabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCADC1-2-3 sp003445555*. The type genome for the species is the GenBank assembly GCA_003445555.1. The GC content of the type genome is 43.26 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Minurosa gen. nov.

Candidatus Minurosa (NL. fem. n. *Minurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCADC1-2-3*. The type species for the genus is *Candidatus* Minurosa andabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Nap2-2B*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenariaceae.

Description of *Candidatus* Minurosa gabinicula sp. nov.

Candidatus Minurosa gabinicula (NL. fem. n. *gabinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCADC1-2-3 sp000681355*. The type genome for the species is the GenBank assembly GCA_000740805.1. The GC content of the type genome is 43.05 % and the genome length is 1.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "1 cell amplified by MDA; sorted single cells from oil sands tailings pond".

Description of *Candidatus* Minurosa laculisca sp. nov.

Candidatus Minurosa laculisca (NL. fem. n. *laculisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCADC1-2-3 sp002402825*. The type genome for the species is the

GenBank assembly GCA_002402825.1. The GC content of the type genome is 42.21 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Minurosa sicinitura sp. nov.

Candidatus Minurosa sicinitura (NL. fem. n. *sicinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCADC1-2-3 sp002327235*. The type genome for the species is the GenBank assembly GCA_002327235.1. The GC content of the type genome is 43.09 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Minurula purulax sp. nov.

Candidatus Minurula purulax (NL. fem. n. *purulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTN01 sp009923445*. The type genome for the species is the GenBank assembly GCA_009927175.1. The GC content of the type genome is 41.6 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Minurula gen. nov.

Candidatus Minurula (NL. fem. n. *Minurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).
