A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFTN01*. The type species for the genus is *Candidatus* Minurula purulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticidaceae.

Description of *Candidatus* Mirabana refunitudo sp. nov.

Candidatus Mirabana refunitudo (NL. fem. n. *refunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12578 sp002729195*. The type genome for the species is the GenBank assembly GCA_002729195.1. The GC content of the type genome is 57.74 %

and the genome length is 2.38 Mbp.

Description of *Candidatus* Mirabana gen. nov.

Candidatus Mirabana (NL. fem. n. *Mirabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12578*. The type species for the genus is *Candidatus* Mirabana refunitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Mirabaria dilecicella sp. nov.

Candidatus Mirabaria dilecicella (NL. fem. n. *dilecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS911 sp900546695*. The type genome for the species is the GenBank assembly RS_GCF_900772275.1. The GC content of the type genome is 55.31 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Mirabaria gen. nov.

Candidatus Mirabaria (NL. fem. n. *Mirabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS911*. The type species for the genus is *Candidatus* Mirabaria dilecicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Mirabaria minurivita sp. nov.

Candidatus Mirabaria minurivita (NL. fem. n. *minurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS911 sp003343545*. The type genome for the species is the

GenBank assembly GCA_003343545.1. The GC content of the type genome is 40.17 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Mirabaria occucentia sp. nov.

Candidatus Mirabaria occucentia (NL. fem. n. *occucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS911 sp900557415*. The type genome for the species is the GenBank assembly GCA_900557415.1. The GC content of the type genome is 40.62 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Mirabaria telefessa sp. nov.

Candidatus Mirabaria telefessa (NL. fem. n. *telefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS911 sp900545935*. The type genome for the species is the GenBank assembly RS_GCF_900761195.1. The GC content of the type genome is 53.39 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Mirabia lugubibula sp. nov.

Candidatus Mirabia lugubibula (NL. fem. n. *lugubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-45-9-A sp001771365*. The type genome for the species is the GenBank assembly GCA_001772375.1. The GC content of the type genome is 45.28 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Mirabia gen. nov.

Candidatus Mirabia (NL. fem. n. *Mirabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-45-9-A*. The type species for the genus is *Candidatus* Mirabia lugubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

O2-12-FULL-45-9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligariaceae.

Description of *Candidatus* Mirabida adpagimonia sp. nov.

Candidatus Mirabida adpagimonia (NL. fem. n. *adpagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2689995 sp002689995*. The type genome for the species is the GenBank assembly GCA_002689995.1. The GC content of the type genome is 29.54 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Mirabida gen. nov.

Candidatus Mirabida (NL. fem. n. *Mirabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2689995*. The type species for the genus is *Candidatus* Mirabida adpagimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2689995*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabidaceae.

Description of *Candidatus* Mirabidaceae fam. nov.

Candidatus Mirabidaceae (NL. fem. n. *Mirabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2689995.* The type genus for the taxon is *Candidatus* Mirabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Mirabida desaciforma sp. nov.

Candidatus Mirabida desaciforma (NL. fem. n. *desaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2689995 sp014381925*. The type genome for the species is the GenBank assembly GCA_014381925.1. The GC content of the type genome is 29.69 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Mirabosa attelitudo sp. nov.

Candidatus Mirabosa attelitudo (NL. fem. n. *attelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11579 sp003250455*. The type genome for the species is the GenBank assembly GCA_003250455.1. The GC content of the type genome is 54.83 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Mirabosa gen. nov.

Candidatus Mirabosa (NL. fem. n. *Mirabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11579*. The type species for the genus is *Candidatus* Mirabosa attelitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabosaceae.

Description of *Candidatus* Mirabosaceae fam. nov.

Candidatus Mirabosaceae (NL. fem. n. *Mirabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11579.* The type genus for the taxon is *Candidatus* Mirabosa .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Mirabosa tirunimonas sp. nov.

Candidatus Mirabosa tirunimonas (NL. fem. n. *tirunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11579 sp003486225*. The type genome for the species is the GenBank assembly GCA_003486225.1. The GC content of the type genome is 52.57 %

and the genome length is 2.67 Mbp.

Description of *Candidatus* Mirabula sicunigena sp. nov.

Candidatus Mirabula sicunigena (NL. fem. n. *sicunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7526 sp002478245*. The type genome for the species is the GenBank assembly GCA_002478245.1. The GC content of the type genome is 47.46 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Mirabula gen. nov.

Candidatus Mirabula (NL. fem. n. *Mirabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7526*. The type species for the genus is *Candidatus* Mirabula sicunigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7526*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabulaceae.

Description of *Candidatus* Mirabulaceae fam. nov.

Candidatus Mirabulaceae (NL. fem. n. *Mirabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7526.* The type genus for the taxon is *Candidatus* Mirabula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7526*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Mirabulales.

Description of *Candidatus* Mirabulales ord. nov.

Candidatus Mirabulales (NL. fem. n. *Mirabulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7526.* The type genus for the taxon is *Candidatus* Mirabula .

According to the original version of GTDB R06-RS202, this family belongs to the class

UBA7526. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Mirabulae.

Description of *Candidatus* Mirabulae class. nov.

Candidatus Mirabulae (NL. fem. n. *c__Mirabulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7526.* The type genus for the taxon is *Candidatus* Mirabula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Futatidota.

Description of *Candidatus* Miracana forabetta sp. nov.

Candidatus Miracana forabetta (NL. fem. n. *forabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6803 sp002452795*. The type genome for the species is the GenBank assembly GCA_002452795.1. The GC content of the type genome is 49.5 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Miracana gen. nov.

Candidatus Miracana (NL. fem. n. *Miracana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6803*. The type species for the genus is *Candidatus* Miracana forabetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Miracaria cibicisca sp. nov.

Candidatus Miracaria cibicisca (NL. fem. n. *cibicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BMS3Abin13 sp002897615*. The type genome for the species is the GenBank assembly GCA_002897615.1. The GC content of the type genome is 55.73 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Miracaria gen. nov.

Candidatus Miracaria (NL. fem. n. *Miracaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Abin13*. The type species for the genus is *Candidatus* Miracaria cibicisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Miracaria exsupitura sp. nov.

Candidatus Miracaria exsupitura (NL. fem. n. *exsupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Abin13 sp013151365*. The type genome for the species is the GenBank assembly GCA_013151365.1. The GC content of the type genome is 57.01 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Miracida cululitrix sp. nov.

Candidatus Miracida cululitrix (NL. fem. n. *cululitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28L sp000177555*. The type genome for the species is the GenBank assembly RS_GCF_001553395.1. The GC content of the type genome is 45.99 % and the genome length is 1.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Miracida gen. nov.

Candidatus Miracida (NL. fem. n. *Miracida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *28L*. The type species for the genus is *Candidatus* Miracida cululitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Miracida dececastra sp. nov.

Candidatus Miracida dececastra (NL. fem. n. *dececastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28L sp002892445*. The type genome for the species is the GenBank assembly RS_GCF_002892445.1. The GC content of the type genome is 38.79 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Miracosa milifigena sp. nov.

Candidatus Miracosa milifigena (NL. fem. n. *milifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-605 sp000433255*. The type genome for the species is the GenBank assembly GCA_003537795.1. The GC content of the type genome is 29.77 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Miracosa gen. nov.

Candidatus Miracosa (NL. fem. n. *Miracosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-605*. The type species for the genus is *Candidatus* Miracosa milifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Miracosa pomifousia sp. nov.

Candidatus Miracosa pomifousia (NL. fem. n. *pomifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-605 sp900545005*. The type genome for the species is the GenBank assembly RS_GCF_900761585.1. The GC content of the type genome is 29.28 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Miracosa tolutastra sp. nov.

Candidatus Miracosa tolutastra (NL. fem. n. *tolutastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-605 sp000433475*. The type genome for the species is the GenBank assembly GCA_900549165.1. The GC content of the type genome is 27.22 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Mirifana fetutitio sp. nov.

Candidatus Mirifana fetutitio (NL. fem. n. *fetutitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1184 sp003164335*. The type genome for the species is the GenBank assembly GCA_003164335.1. The GC content of the type genome is 54.73 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Mirifana gen. nov.

Candidatus Mirifana (NL. fem. n. *Mirifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1184*. The type species for the genus is *Candidatus* Mirifana fetutitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mirifana venefatio sp. nov.

Candidatus Mirifana venefatio (NL. fem. n. *venefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1184 sp903888815*. The type genome for the species is the GenBank assembly GCA_903888815.1. The GC content of the type genome is 52.69 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Mirifaria hexamatio sp. nov.

Candidatus Mirifaria hexamatio (NL. fem. n. *hexamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-343-D04 sp003265885*. The type genome for the species is the GenBank assembly RS_GCF_902530045.1. The GC content of the type genome is 35.44 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Mirifaria gen. nov.

Candidatus Mirifaria (NL. fem. n. *Mirifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-343-D04*. The type species for the genus is *Candidatus* Mirifaria hexamatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002719695*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifosaceae.

Description of *Candidatus* Mirifella alticicella sp. nov.

Candidatus Mirifella alticicella (NL. fem. n. *alticicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746335 sp002746335*. The type genome for the species is the GenBank assembly GCA_002746335.1. The GC content of the type genome is 41.64 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Mirifella gen. nov.

Candidatus Mirifella (NL. fem. n. *Mirifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746335*. The type species for the genus is *Candidatus* Mirifella alticicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifellaceae.

Description of *Candidatus* Mirifellaceae fam. nov.

Candidatus Mirifellaceae (NL. fem. n. *Mirifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746335*. The type genus for the taxon is *Candidatus* Mirifella .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Mirifia atrusatica sp. nov.

Candidatus Mirifia atrusatica (NL. fem. n. *atrusatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp900758315*. The type genome for the species is the GenBank assembly GCA_900758315.1. The GC content of the type genome is 54.31 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Mirifia gen. nov.

Candidatus Mirifia (NL. fem. n. *Mirifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NK3B98*. The type species for the genus is *Candidatus* Mirifia atrusatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mirifia categilenta sp. nov.

Candidatus Mirifia categilenta (NL. fem. n. *categilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp900752305*. The type genome for the species is the GenBank assembly GCA_900752305.1. The GC content of the type genome is 58.58 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Mirifia detumousia sp. nov.

Candidatus Mirifia detumousia (NL. fem. n. *detumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp900545815*. The type genome for the species is the

GenBank assembly GCA_900545815.1. The GC content of the type genome is 57.15 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Mirifia echidimonas sp. nov.

Candidatus Mirifia echidimonas (NL. fem. n. *echidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp000421005*. The type genome for the species is the GenBank assembly RS_GCF_000421005.1. The GC content of the type genome is 54.86 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Mirifia elastax sp. nov.

Candidatus Mirifia elastax (NL. fem. n. *elastax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp003150485*. The type genome for the species is the GenBank assembly GCA_003150485.1. The GC content of the type genome is 59.54 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Mirifia masocastra sp. nov.

Candidatus Mirifia masocastra (NL. fem. n. *masocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp001941075*. The type genome for the species is the GenBank assembly GCA_001941075.1. The GC content of the type genome is 58.43 % and the genome length is 1.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Mirifia maxumisca sp. nov.

Candidatus Mirifia maxumisca (NL. fem. n. *maxumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK3B98 sp900314485*. The type genome for the species is the GenBank assembly GCA_900314735.1. The GC content of the type genome is 57.48 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Mirifida monodastra sp. nov.

Candidatus Mirifida monodastra (NL. fem. n. *monodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYMF01 sp009699025*. The type genome for the species is the GenBank assembly GCA_009697575.1. The GC content of the type genome is 66.82 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Mirifida gen. nov.

Candidatus Mirifida (NL. fem. n. *Mirifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYMF01*. The type species for the genus is *Candidatus* Mirifida monodastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifidaceae.

Description of *Candidatus* Mirifidaceae fam. nov.

Candidatus Mirifidaceae (NL. fem. n. *Mirifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYMF01.* The type genus for the taxon is *Candidatus* Mirifida .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Mirifida peripastra sp. nov.

Candidatus Mirifida peripastra (NL. fem. n. *peripastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYMF01 sp903927265*. The type genome for the species is the GenBank assembly GCA_903927265.1. The GC content of the type genome is 62.03 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Mirifosa adcesetta sp. nov.

Candidatus Mirifosa adcesetta (NL. fem. n. *adcesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902521655*. The type genome for the species is the GenBank assembly GCA_902521655.1. The GC content of the type genome is 33.58 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Mirifosa gen. nov.

Candidatus Mirifosa (NL. fem. n. *Mirifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-422-B15*. The type species for the genus is *Candidatus* Mirifosa adcesetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-422-B15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifosaceae.

Description of *Candidatus* Mirifosaceae fam. nov.

Candidatus Mirifosaceae (NL. fem. n. *Mirifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AG-422-B15.* The type genus for the taxon is *Candidatus* Mirifosa .

According to GTDB R06-RS202, this family belongs to the order *Pelagibacterales*.

Description of *Candidatus* Mirifosa adnubugo sp. nov.

Candidatus Mirifosa adnubugo (NL. fem. n. *adnubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902525575*. The type genome for the species is the GenBank assembly GCA_902525575.1. The GC content of the type genome is 33.22 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Mirifosa adsicilega sp. nov.

Candidatus Mirifosa adsicilega (NL. fem. n. *adsicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp014653725*. The type genome for the species is the GenBank assembly GCA_014653725.1. The GC content of the type genome is 32.97 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Mirifosa armigisca sp. nov.

Candidatus Mirifosa armigisca (NL. fem. n. *armigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902544065*. The type genome for the species is the GenBank assembly GCA_902544065.1. The GC content of the type genome is 33.32 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Mirifosa arnogibula sp. nov.

Candidatus Mirifosa arnogibula (NL. fem. n. *arnogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902554325*. The type genome for the species is the GenBank assembly GCA_902554325.1. The GC content of the type genome is 33.25 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Mirifosa capabilega sp. nov.

Candidatus Mirifosa capabilega (NL. fem. n. *capabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902570675*. The type genome for the species is the GenBank assembly GCA_902570675.1. The GC content of the type genome is 32.88 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Mirifosa casigibra sp. nov.

Candidatus Mirifosa casigibra (NL. fem. n. *casigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902617525*. The type genome for the species is the GenBank assembly GCA_902617525.1. The GC content of the type genome is 32.79 %

and the genome length is 1.1 Mbp.

Description of *Candidatus* Mirifosa cepuletta sp. nov.

Candidatus Mirifosa cepuletta (NL. fem. n. *cepuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902518415*. The type genome for the species is the GenBank assembly GCA_902518415.1. The GC content of the type genome is 33.18 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Mirifosa ceromitrix sp. nov.

Candidatus Mirifosa ceromitrix (NL. fem. n. *ceromitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp003213515*. The type genome for the species is the GenBank assembly GCA_003213515.1. The GC content of the type genome is 32.98 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Mirifosa chancicella sp. nov.

Candidatus Mirifosa chancicella (NL. fem. n. *chancicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902524285*. The type genome for the species is the GenBank assembly GCA_902524285.1. The GC content of the type genome is 33.15 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Mirifosa cituvugo sp. nov.

Candidatus Mirifosa cituvugo (NL. fem. n. *cituvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902604225*. The type genome for the species is the GenBank assembly GCA_902604225.1. The GC content of the type genome is 33.57 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Mirifosa cocibibra sp. nov.

Candidatus Mirifosa cocibibra (NL. fem. n. *cocibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902515235*. The type genome for the species is the GenBank assembly GCA_902515235.1. The GC content of the type genome is 33.58 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Mirifosa cucuredo sp. nov.

Candidatus Mirifosa cucuredo (NL. fem. n. *cucuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902564025*. The type genome for the species is the GenBank assembly GCA_902564025.1. The GC content of the type genome is 33.05 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Mirifosa democatio sp. nov.

Candidatus Mirifosa democatio (NL. fem. n. *democatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902524795*. The type genome for the species is the GenBank assembly GCA_902524795.1. The GC content of the type genome is 33.46 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Mirifosa detecilenta sp. nov.

Candidatus Mirifosa detecilenta (NL. fem. n. *detecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp003211835*. The type genome for the species is the GenBank assembly GCA_003211835.1. The GC content of the type genome is 33.27 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Mirifosa diminatio sp. nov.

Candidatus Mirifosa diminatio (NL. fem. n. *diminatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp003213715*. The type genome for the species is the GenBank assembly GCA_003213715.1. The GC content of the type genome is 33.34 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Mirifosa emancugo sp. nov.

Candidatus Mirifosa emancugo (NL. fem. n. *emancugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902598405*. The type genome for the species is the GenBank assembly GCA_902598405.1. The GC content of the type genome is 33.54 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Mirifosa emortitoga sp. nov.

Candidatus Mirifosa emortitoga (NL. fem. n. *emortitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902578305*. The type genome for the species is the GenBank assembly GCA_902578305.1. The GC content of the type genome is 33.08 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Mirifosa feculicula sp. nov.

Candidatus Mirifosa feculicula (NL. fem. n. *feculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902622985*. The type genome for the species is the GenBank assembly GCA_902622985.1. The GC content of the type genome is 33.28 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Mirifosa feculitrix sp. nov.

Candidatus Mirifosa feculitrix (NL. fem. n. *feculitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902533965*. The type genome for the species is the GenBank assembly GCA_902533965.1. The GC content of the type genome is 32.96 %

and the genome length is 0.73 Mbp.

Description of *Candidatus* Mirifosa ficulatica sp. nov.

Candidatus Mirifosa ficulatica (NL. fem. n. *ficulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902523535*. The type genome for the species is the GenBank assembly GCA_902523535.1. The GC content of the type genome is 33.48 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Mirifosa funamugo sp. nov.

Candidatus Mirifosa funamugo (NL. fem. n. *funamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp003282175*. The type genome for the species is the GenBank assembly GCA_902525645.1. The GC content of the type genome is 33.46 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Mirifosa funivastra sp. nov.

Candidatus Mirifosa funivastra (NL. fem. n. *funivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902546615*. The type genome for the species is the GenBank assembly GCA_902540635.1. The GC content of the type genome is 33.23 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Mirifosa impavicula sp. nov.

Candidatus Mirifosa impavicula (NL. fem. n. *impavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902564295*. The type genome for the species is the GenBank assembly GCA_902564295.1. The GC content of the type genome is 33.1 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Mirifosa indecisca sp. nov.

Candidatus Mirifosa indecisca (NL. fem. n. *indecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902590345*. The type genome for the species is the GenBank assembly GCA_902590345.1. The GC content of the type genome is 32.74 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Mirifosa indilimonas sp. nov.

Candidatus Mirifosa indilimonas (NL. fem. n. *indilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902526565*. The type genome for the species is the GenBank assembly GCA_902526565.1. The GC content of the type genome is 33.53 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Mirifosa linigetta sp. nov.

Candidatus Mirifosa linigetta (NL. fem. n. *linigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902547315*. The type genome for the species is the GenBank assembly GCA_902547315.1. The GC content of the type genome is 32.9 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Mirifosa luticilenta sp. nov.

Candidatus Mirifosa luticilenta (NL. fem. n. *luticilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902526005*. The type genome for the species is the GenBank assembly GCA_902588785.1. The GC content of the type genome is 33.4 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Mirifosa malogifica sp. nov.

Candidatus Mirifosa malogifica (NL. fem. n. *malogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902580665*. The type genome for the species is the GenBank assembly GCA_902580665.1. The GC content of the type genome is 33.17 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Mirifosa mimogisca sp. nov.

Candidatus Mirifosa mimogisca (NL. fem. n. *mimogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902523455*. The type genome for the species is the GenBank assembly GCA_902523455.1. The GC content of the type genome is 33.01 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Mirifosa monodedo sp. nov.

Candidatus Mirifosa monodedo (NL. fem. n. *monodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902589175*. The type genome for the species is the GenBank assembly GCA_902622775.1. The GC content of the type genome is 32.89 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Mirifosa nefaritica sp. nov.

Candidatus Mirifosa nefaritica (NL. fem. n. *nefaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp003282485*. The type genome for the species is the GenBank assembly GCA_902518445.1. The GC content of the type genome is 33.38 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Mirifosa negidugo sp. nov.

Candidatus Mirifosa negidugo (NL. fem. n. *negidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902619105*. The type genome for the species is the GenBank assembly GCA_902520455.1. The GC content of the type genome is 33.31 %

and the genome length is 1.01 Mbp.

Description of *Candidatus* Mirifosa nicomigena sp. nov.

Candidatus Mirifosa nicomigena (NL. fem. n. *nicomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902517885*. The type genome for the species is the GenBank assembly GCA_902620495.1. The GC content of the type genome is 33.42 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Mirifosa nutabentia sp. nov.

Candidatus Mirifosa nutabentia (NL. fem. n. *nutabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902613805*. The type genome for the species is the GenBank assembly GCA_902613805.1. The GC content of the type genome is 32.97 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Mirifosa obfenisca sp. nov.

Candidatus Mirifosa obfenisca (NL. fem. n. *obfenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902525595*. The type genome for the species is the GenBank assembly GCA_902525595.1. The GC content of the type genome is 32.9 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Mirifosa obnunimonas sp. nov.

Candidatus Mirifosa obnunimonas (NL. fem. n. *obnunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902571005*. The type genome for the species is the GenBank assembly GCA_902571005.1. The GC content of the type genome is 33.07 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Mirifosa obsorisca sp. nov.

Candidatus Mirifosa obsorisca (NL. fem. n. *obsorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902605215*. The type genome for the species is the GenBank assembly GCA_902605215.1. The GC content of the type genome is 33.55 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Mirifosa paralivita sp. nov.

Candidatus Mirifosa paralivita (NL. fem. n. *paralivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902565955*. The type genome for the species is the GenBank assembly GCA_902565955.1. The GC content of the type genome is 33.1 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Mirifosa plostitudo sp. nov.

Candidatus Mirifosa plostitudo (NL. fem. n. *plostitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902577765*. The type genome for the species is the GenBank assembly GCA_902577765.1. The GC content of the type genome is 33.22 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Mirifosa proclessa sp. nov.

Candidatus Mirifosa proclessa (NL. fem. n. *proclessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902584215*. The type genome for the species is the GenBank assembly GCA_902584215.1. The GC content of the type genome is 33.26 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Mirifosa rorulibula sp. nov.

Candidatus Mirifosa rorulibula (NL. fem. n. *rorulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902610585*. The type genome for the species is the GenBank assembly GCA_902542135.1. The GC content of the type genome is 33.43 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Mirifosa televago sp. nov.

Candidatus Mirifosa televago (NL. fem. n. *televago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902519835*. The type genome for the species is the GenBank assembly GCA_902519835.1. The GC content of the type genome is 33.28 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Mirifosa vitifatica sp. nov.

Candidatus Mirifosa vitifatica (NL. fem. n. *vitifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-422-B15 sp902614655*. The type genome for the species is the GenBank assembly GCA_902609985.1. The GC content of the type genome is 33.5 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Mirifula abnocatio sp. nov.

Candidatus Mirifula abnocatio (NL. fem. n. *abnocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013816895*. The type genome for the species is the GenBank assembly GCA_013816895.1. The GC content of the type genome is 39.86 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Mirifula gen. nov.

Candidatus Mirifula (NL. fem. n. *Mirifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2475*. The type species for the genus is *Candidatus* Mirifula abnocatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-17BO*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogariaceae.

Description of *Candidatus* Mirifula adpeligena sp. nov.

Candidatus Mirifula adpeligena (NL. fem. n. *adpeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013816615*. The type genome for the species is the GenBank assembly GCA_013816615.1. The GC content of the type genome is 34.61 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Mirifula apsolatio sp. nov.

Candidatus Mirifula apsolatio (NL. fem. n. *apsolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013297775*. The type genome for the species is the GenBank assembly GCA_013297775.1. The GC content of the type genome is 37.27 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Mirifula exhedago sp. nov.

Candidatus Mirifula exhedago (NL. fem. n. *exhedago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp002319075*. The type genome for the species is the GenBank assembly RS_GCF_002319075.1. The GC content of the type genome is 38.41 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Mirifula hexamimonia sp. nov.

Candidatus Mirifula hexamimonia (NL. fem. n. *hexamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp002342065*. The type genome for the species is the GenBank assembly GCA_002342065.1. The GC content of the type genome is 34.79 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Mirifula imbecibra sp. nov.

Candidatus Mirifula imbecibra (NL. fem. n. *imbecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013288385*. The type genome for the species is the GenBank assembly GCA_013288385.1. The GC content of the type genome is 32.66 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Mirifula lenunastra sp. nov.

Candidatus Mirifula lenunastra (NL. fem. n. *lenunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp005787585*. The type genome for the species is the GenBank assembly GCA_005787585.1. The GC content of the type genome is 29.52 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Mirifula roraritrix sp. nov.

Candidatus Mirifula roraritrix (NL. fem. n. *roraritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013697245*. The type genome for the species is the GenBank assembly GCA_013697245.1. The GC content of the type genome is 35.1 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Mirifula semapitia sp. nov.

Candidatus Mirifula semapitia (NL. fem. n. *semapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp009927275*. The type genome for the species is the GenBank assembly GCA_009927275.1. The GC content of the type genome is 37.68 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Mirifula sonivilenta sp. nov.

Candidatus Mirifula sonivilenta (NL. fem. n. *sonivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2475 sp013298715*. The type genome for the species is the GenBank assembly GCA_013298715.1. The GC content of the type genome is 32.91 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Mitsuaria altifago sp. nov.

Candidatus Mitsuaria altifago (NL. fem. n. *altifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuaria sp004210455*. The type genome for the species is the GenBank assembly GCA_004210455.1. The GC content of the type genome is 68.38 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Mitsuaria attegilega sp. nov.

Candidatus Mitsuaria attegilega (NL. fem. n. *attegilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuaria sp002761755*. The type genome for the species is the GenBank assembly RS_GCF_002761755.1. The GC content of the type genome is 69.46 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Mitsuaria ecfunedo sp. nov.

Candidatus Mitsuaria ecfunedo (NL. fem. n. *ecfunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuaria sp001653795*. The type genome for the species is the GenBank assembly RS_GCF_001653795.1. The GC content of the type genome is 68.33 % and the genome length is 6.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "forest soil".

Description of *Candidatus* Mitsuaria notabousia sp. nov.

Candidatus Mitsuaria notabousia (NL. fem. n. *notabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuaria sp900113225*. The type genome for the species is the GenBank assembly RS_GCF_900113225.1. The GC content of the type genome is 69.96 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Mitsuokella adcumitia sp. nov.

Candidatus Mitsuokella adcumitia (NL. fem. n. *adcumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuokella sp000469545*. The type genome for the species is the GenBank assembly RS_GCF_000469545.1. The GC content of the type genome is 56.57 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Mitsuokella pericisca sp. nov.

Candidatus Mitsuokella pericisca (NL. fem. n. *pericisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuokella sp900770825*. The type genome for the species is the GenBank assembly GCA_900770825.1. The GC content of the type genome is 55.87 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Mitsuokella subabitas sp. nov.

Candidatus Mitsuokella subabitas (NL. fem. n. *subabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuokella sp003458855*. The type genome for the species is the GenBank assembly GCA_900550725.1. The GC content of the type genome is 57.26 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Mitsuokella vagabisca sp. nov.

Candidatus Mitsuokella vagabisca (NL. fem. n. *vagabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mitsuokella sp900552565*. The type genome for the species is the GenBank assembly GCA_900552565.1. The GC content of the type genome is 54.11 %

and the genome length is 1.84 Mbp.

Description of *Candidatus* Mobilibacterium biveritoga sp. nov.

Candidatus Mobilibacterium biveritoga (NL. fem. n. *biveritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mobilibacterium sp900315625*. The type genome for the species is the GenBank assembly GCA_900315625.1. The GC content of the type genome is 46.59 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Mobilicoccus arrecibra sp. nov.

Candidatus Mobilicoccus arrecibra (NL. fem. n. *arrecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mobilicoccus sp012277275*. The type genome for the species is the GenBank assembly RS_GCF_012277275.1. The GC content of the type genome is 67.03 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Modestobacter apercedo sp. nov.

Candidatus Modestobacter apercedo (NL. fem. n. *apercedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Modestobacter sp000620205*. The type genome for the species is the GenBank assembly RS_GCF_000620205.1. The GC content of the type genome is 73.92 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Modestobacter inabsibra sp. nov.

Candidatus Modestobacter inabsibra (NL. fem. n. *inabsibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Modestobacter sp013408865*. The type genome for the species is the GenBank assembly RS_GCF_013408865.1. The GC content of the type genome is 74.07 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Modestobacter vivifigena sp. nov.

Candidatus Modestobacter vivifigena (NL. fem. n. *vivifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Modestobacter sp900107175*. The type genome for the species is the GenBank assembly RS_GCF_900107175.1. The GC content of the type genome is 72.63 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Modifana celamitica sp. nov.

Candidatus Modifana celamitica (NL. fem. n. *celamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-51-10 sp001823605*. The type genome for the species is the GenBank assembly GCA_001823605.1. The GC content of the type genome is 51.68 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Modifana gen. nov.

Candidatus Modifana (NL. fem. n. *Modifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-51-10*. The type species for the genus is *Candidatus* Modifana celamitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramellaceae.

Description of *Candidatus* Modifana cisalitrix sp. nov.

Candidatus Modifana cisalitrix (NL. fem. n. *cisalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-51-10 sp001823505*. The type genome for the species is the GenBank assembly GCA_001823505.1. The GC content of the type genome is 51.1 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Modifaria cucuritio sp. nov.

Candidatus Modifaria cucuritio (NL. fem. n. *cucuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJXV01 sp903824675*. The type genome for the species is the GenBank assembly GCA_903824675.1. The GC content of the type genome is 57.29 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Modifaria gen. nov.

Candidatus Modifaria (NL. fem. n. *Modifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJXV01*. The type species for the genus is *Candidatus* Modifaria cucuritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Modifariaceae.

Description of *Candidatus* Modifariaceae fam. nov.

Candidatus Modifariaceae (NL. fem. n. *Modifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJXV01.* The type genus for the taxon is *Candidatus* Modifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIKKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defacanales.

Description of *Candidatus* Modifella crabritas sp. nov.

Candidatus Modifella crabritas (NL. fem. n. *crabritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEL01 sp013389015*. The type genome for the species is the GenBank assembly GCA_013389015.1. The GC content of the type genome is 67.79 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Modifella gen. nov.

Candidatus Modifella (NL. fem. n. *Modifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEEL01*. The type species for the genus is *Candidatus* Modifella crabritas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Modifella penurousia sp. nov.

Candidatus Modifella penurousia (NL. fem. n. *penurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEL01 sp902826335*. The type genome for the species is the GenBank assembly GCA_902826335.1. The GC content of the type genome is 65.16 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Modifida denomatio sp. nov.

Candidatus Modifida denomatio (NL. fem. n. *denomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8473 sp009773075*. The type genome for the species is the GenBank assembly GCA_009773075.1. The GC content of the type genome is 42.58 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Modifida gen. nov.

Candidatus Modifida (NL. fem. n. *Modifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8473*. The type species for the genus is *Candidatus* Modifida denomatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Modifidaceae.

Description of *Candidatus* Modifidaceae fam. nov.

Candidatus Modifidaceae (NL. fem. n. *Modifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8473.* The type genus for the taxon is *Candidatus* Modifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Modifidales.

Description of *Candidatus* Modifidales ord. nov.

Candidatus Modifidales (NL. fem. n. *Modifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8473.* The type genus for the taxon is *Candidatus* Modifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *SM23-61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Forinosae.

Description of *Candidatus* Modifida duricicella sp. nov.

Candidatus Modifida duricicella (NL. fem. n. *duricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8473 sp002782605*. The type genome for the species is the GenBank assembly GCA_002789935.1. The GC content of the type genome is 43.18 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Modifida obvolicella sp. nov.

Candidatus Modifida obvolicella (NL. fem. n. *obvolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8473 sp003599365*. The type genome for the species is the GenBank assembly GCA_003599365.1. The GC content of the type genome is 43.36 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Modifosa offirax sp. nov.

Candidatus Modifosa offirax (NL. fem. n. *offirax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGN01 sp013285995*. The type genome for the species is the GenBank assembly GCA_013285995.1. The GC content of the type genome is 42.12 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Modifosa gen. nov.

Candidatus Modifosa (NL. fem. n. *Modifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGN01*. The type species for the genus is *Candidatus* Modifosa offirax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Modifosaceae.

Description of *Candidatus* Modifosaceae fam. nov.

Candidatus Modifosaceae (NL. fem. n. *Modifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDGN01.* The type genus for the taxon is *Candidatus* Modifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Modifosales.

Description of *Candidatus* Modifosales ord. nov.

Candidatus Modifosales (NL. fem. n. *Modifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDGN01.* The type genus for the taxon is *Candidatus* Modifosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Modifula caselibula sp. nov.

Candidatus Modifula caselibula (NL. fem. n. *caselibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-27-15 sp001829125*. The type genome for the species is the GenBank assembly GCA_001830585.1. The GC content of the type genome is 27.0 % and the genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.1 filter".

Description of *Candidatus* Modifula gen. nov.

Candidatus Modifula (NL. fem. n. *Modifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-27-15*. The type species for the genus is *Candidatus* Modifula caselibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-31-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemanaceae.

Description of *Candidatus* Moheibacter diminatica sp. nov.

Candidatus Moheibacter diminatica (NL. fem. n. *diminatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moheibacter sp012522185*. The type genome for the species is the GenBank assembly GCA_012522185.1. The GC content of the type genome is 37.98 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Moheibacter exsufitura sp. nov.

Candidatus Moheibacter exsufitura (NL. fem. n. *exsufitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moheibacter sp014042165*. The type genome for the species is the GenBank assembly RS_GCF_014042165.1. The GC content of the type genome is 36.9 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Molecana cohoricula sp. nov.

Candidatus Molecana cohoricula (NL. fem. n. *cohoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1406 sp001788295*. The type genome for the species is the GenBank assembly GCA_001790165.1. The GC content of the type genome is 40.82 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Molecana gen. nov.

Candidatus Molecana (NL. fem. n. *Molecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1406*. The type species for the genus is *Candidatus* Molecana cohoricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1406*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Molecanaceae.

Description of *Candidatus* Molecanaceae fam. nov.

Candidatus Molecanaceae (NL. fem. n. *Molecanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1406.* The type genus for the taxon is *Candidatus* Molecana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1406*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Molecanales.

Description of *Candidatus* Molecanales ord. nov.

Candidatus Molecanales (NL. fem. n. *Molecanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1406.* The type genus for the taxon is *Candidatus* Molecana .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Molecana pinacicella sp. nov.

Candidatus Molecana pinacicella (NL. fem. n. *pinacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1406 sp002305675*. The type genome for the species is the GenBank assembly GCA_002305675.1. The GC content of the type genome is 52.35 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Molecaria acrolatica sp. nov.

Candidatus Molecaria acrolatica (NL. fem. n. *acrolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp002449955*. The type genome for the species is the GenBank assembly GCA_002449955.1. The GC content of the type genome is 53.88 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Molecaria gen. nov.

Candidatus Molecaria (NL. fem. n. *Molecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6987*. The type species for the genus is *Candidatus* Molecaria acrolatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Molecaria adculiforma sp. nov.

Candidatus Molecaria adculiforma (NL. fem. n. *adculiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902797385*. The type genome for the species is the GenBank assembly GCA_902797385.1. The GC content of the type genome is 55.52 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Molecaria bicubitudo sp. nov.

Candidatus Molecaria bicubitudo (NL. fem. n. *bicubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902789555*. The type genome for the species is the GenBank assembly GCA_902787695.1. The GC content of the type genome is 57.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Molecaria cenoditrix sp. nov.

Candidatus Molecaria cenoditrix (NL. fem. n. *cenoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902803355*. The type genome for the species is the GenBank assembly GCA_902803355.1. The GC content of the type genome is 56.58 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Molecaria omninastra sp. nov.

Candidatus Molecaria omninastra (NL. fem. n. *omninastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902761665*. The type genome for the species is the GenBank assembly GCA_902761665.1. The GC content of the type genome is 57.74 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Molecaria revulugo sp. nov.

Candidatus Molecaria revulugo (NL. fem. n. *revulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902783765*. The type genome for the species is the GenBank assembly GCA_902783765.1. The GC content of the type genome is 54.04 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Molecaria sicubibra sp. nov.

Candidatus Molecaria sicubibra (NL. fem. n. *sicubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6987 sp902793995*. The type genome for the species is the GenBank assembly GCA_902793995.1. The GC content of the type genome is 53.9 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Molecaria vilititica sp. nov.

Candidatus Molecaria vilititica (NL. fem. n. *vilititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6987 sp902796695*. The type genome for the species is the GenBank assembly GCA_902796695.1. The GC content of the type genome is 59.31 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Molecella bicapitrix sp. nov.

Candidatus Molecella bicapitrix (NL. fem. n. *bicapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900544305*. The type genome for the species is the GenBank assembly GCA_900544305.1. The GC content of the type genome is 46.29 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Molecella gen. nov.

Candidatus Molecella (NL. fem. n. *Molecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-279*. The type species for the genus is *Candidatus* Molecella bicapitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Molecella codifousia sp. nov.

Candidatus Molecella codifousia (NL. fem. n. *codifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp000437795*. The type genome for the species is the GenBank assembly GCA_000437795.1. The GC content of the type genome is 50.15 % and the genome length is 2.42 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Molecella exsanicula sp. nov.

Candidatus Molecella exsanicula (NL. fem. n. *exsanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900548875*. The type genome for the species is the GenBank assembly GCA_900548875.1. The GC content of the type genome is 46.67 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Molecella exturilega sp. nov.

Candidatus Molecella exturilega (NL. fem. n. *exturilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900556245*. The type genome for the species is the GenBank assembly GCA_900556245.1. The GC content of the type genome is 48.35 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Molecella inpinitrix sp. nov.

Candidatus Molecella inpinitrix (NL. fem. n. *inpinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900541555*. The type genome for the species is the GenBank assembly GCA_900541555.1. The GC content of the type genome is 47.74 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Molecella lucubicella sp. nov.

Candidatus Molecella lucubicella (NL. fem. n. *lucubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900541935*. The type genome for the species is the GenBank assembly GCA_900541935.1. The GC content of the type genome is 39.63 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Molecella parocousia sp. nov.

Candidatus Molecella parocousia (NL. fem. n. *parocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp900550025*. The type genome for the species is the GenBank assembly RS_GCF_900754335.1. The GC content of the type genome is 48.13 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Molecella velifentia sp. nov.

Candidatus Molecella velifentia (NL. fem. n. *velifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp004561555*. The type genome for the species is the GenBank assembly GCA_004561555.1. The GC content of the type genome is 47.42 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Molecella videlilenta sp. nov.

Candidatus Molecella videlilenta (NL. fem. n. *videlilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-279 sp004555955*. The type genome for the species is the GenBank assembly GCA_004555955.1. The GC content of the type genome is 49.75 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Molecia bigemifica sp. nov.

Candidatus Molecia bigemifica (NL. fem. n. *bigemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVQB01 sp903922605*. The type genome for the species is the GenBank assembly GCA_903922605.1. The GC content of the type genome is 63.77 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Molecia gen. nov.

Candidatus Molecia (NL. fem. n. *Molecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVQB01*. The type species for the genus is *Candidatus* Molecia bigemifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Molecia catalicula sp. nov.

Candidatus Molecia catalicula (NL. fem. n. *catalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVQB01 sp903907995*. The type genome for the species is the GenBank assembly GCA_903865455.1. The GC content of the type genome is 63.94 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Molecia milifilega sp. nov.

Candidatus Molecia milifilega (NL. fem. n. *milifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVQB01 sp903907925*. The type genome for the species is the GenBank assembly GCA_903907925.1. The GC content of the type genome is 61.96 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Molecia pulegago sp. nov.

Candidatus Molecia pulegago (NL. fem. n. *pulegago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVQB01 sp903916195*. The type genome for the species is the GenBank assembly GCA_903916195.1. The GC content of the type genome is 67.21 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Molecida nehalivita sp. nov.

Candidatus Molecida nehalivita (NL. fem. n. *nehalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3067 sp002366835*. The type genome for the species is the GenBank assembly GCA_002366835.1. The GC content of the type genome is 46.5 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Molecida gen. nov.

Candidatus Molecida (NL. fem. n. *Molecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3067*. The type species for the genus is *Candidatus* Molecida nehalivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Molecidaceae.

Description of *Candidatus* Molecidaceae fam. nov.

Candidatus Molecidaceae (NL. fem. n. *Molecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3067*. The type genus for the taxon is *Candidatus* Molecida .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Molecosa domabigena sp. nov.

Candidatus Molecosa domabigena (NL. fem. n. *domabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOTO01 sp903861255*. The type genome for the species is the GenBank assembly GCA_903861255.1. The GC content of the type genome is 40.75 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Molecosa gen. nov.

Candidatus Molecosa (NL. fem. n. *Molecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOTO01*. The type species for the genus is *Candidatus* Molecosa domabigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11393*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifanaceae.

Description of *Candidatus* Momorana abnociforma sp. nov.

Candidatus Momorana abnociforma (NL. fem. n. *abnociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11574 sp002868985*. The type genome for the species is the GenBank assembly GCA_002868985.1. The GC content of the type genome is 43.45 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Momorana gen. nov.

Candidatus Momorana (NL. fem. n. *Momorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11574*. The type species for the genus is *Candidatus* Momorana abnociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11574*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momoranaceae.

Description of *Candidatus* Momoranaceae fam. nov.

Candidatus Momoranaceae (NL. fem. n. *Momoranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11574.* The type genus for the taxon is *Candidatus* Momorana .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Momorana irrotax sp. nov.

Candidatus Momorana irrotax (NL. fem. n. *irrotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11574 sp003486165*. The type genome for the species is the

GenBank assembly GCA_003486165.1. The GC content of the type genome is 43.35 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Momoraria colipatica sp. nov.

Candidatus Momoraria colipatica (NL. fem. n. *colipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRVO01 sp011373995*. The type genome for the species is the GenBank assembly GCA_011373995.1. The GC content of the type genome is 62.85 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Momoraria gen. nov.

Candidatus Momoraria (NL. fem. n. *Momoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRVO01*. The type species for the genus is *Candidatus* Momoraria colipatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRVO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momorariaceae.

Description of *Candidatus* Momorariaceae fam. nov.

Candidatus Momorariaceae (NL. fem. n. *Momorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRVO01.* The type genus for the taxon is *Candidatus* Momoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRVO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Momorariales.

Description of *Candidatus* Momorariales ord. nov.

Candidatus Momorariales (NL. fem. n. *Momorariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRVO01.* The type genus for the taxon is *Candidatus* Momoraria .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Momorella maheledo sp. nov.

Candidatus Momorella maheledo (NL. fem. n. *maheledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXQ01 sp004356985*. The type genome for the species is the GenBank assembly GCA_004356985.1. The GC content of the type genome is 64.7 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Momorella gen. nov.

Candidatus Momorella (NL. fem. n. *Momorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXQ01*. The type species for the genus is *Candidatus* Momorella maheledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momorellaceae.

Description of *Candidatus* Momorellaceae fam. nov.

Candidatus Momorellaceae (NL. fem. n. *Momorellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXQ01.* The type genus for the taxon is *Candidatus* Momorella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SMXQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Momorellales.

Description of *Candidatus* Momorellales ord. nov.

Candidatus Momorellales (NL. fem. n. *Momorellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXQ01.* The type genus for the taxon is *Candidatus* Momorella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Momorida abascago sp. nov.

Candidatus Momorida abascago (NL. fem. n. *abascago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012567545*. The type genome for the species is the GenBank assembly GCA_012567545.1. The GC content of the type genome is 19.61 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida gen. nov.

Candidatus Momorida (NL. fem. n. *Momorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-012562765*. The type species for the genus is *Candidatus* Momorida abascago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Momorida adgenitio sp. nov.

Candidatus Momorida adgenitio (NL. fem. n. *adgenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012567955*. The type genome for the species is the GenBank assembly RS_GCF_012567955.1. The GC content of the type genome is 20.57 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida agravedo sp. nov.

Candidatus Momorida agravedo (NL. fem. n. *agravedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012569045*. The type genome for the species is the GenBank assembly RS_GCF_012569045.1. The GC content of the type genome is 19.87 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida alcedax sp. nov.

Candidatus Momorida alcedax (NL. fem. n. *alcedax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012562765*. The type genome for the species is the GenBank assembly RS_GCF_012562765.1. The GC content of the type genome is 20.32 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Momorida annecitura sp. nov.

Candidatus Momorida annecitura (NL. fem. n. *annecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012571135*. The type genome for the species is the GenBank assembly RS_GCF_012571135.1. The GC content of the type genome is 22.16 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Momorida antiratica sp. nov.

Candidatus Momorida antiratica (NL. fem. n. *antiratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012571605*. The type genome for the species is the GenBank assembly RS_GCF_012571605.1. The GC content of the type genome is 22.95 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida appugisca sp. nov.

Candidatus Momorida appugisca (NL. fem. n. *appugisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012569285*. The type genome for the species is the GenBank assembly RS_GCF_012569285.1. The GC content of the type genome is 20.18 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida apsimimonas sp. nov.

Candidatus Momorida apsimimonas (NL. fem. n. *apsimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-012562765 sp012568445*. The type genome for the species is the GenBank assembly RS_GCF_012568445.1. The GC content of the type genome is 20.47 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida butubigena sp. nov.

Candidatus Momorida butubigena (NL. fem. n. *butubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012568245*. The type genome for the species is the GenBank assembly RS_GCF_012568245.1. The GC content of the type genome is 20.05 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida calipetta sp. nov.

Candidatus Momorida calipetta (NL. fem. n. *calipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012570745*. The type genome for the species is the GenBank assembly RS_GCF_012570745.1. The GC content of the type genome is 19.85 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida catobibra sp. nov.

Candidatus Momorida catobibra (NL. fem. n. *catobibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012562605*. The type genome for the species is the GenBank assembly RS_GCF_012562605.1. The GC content of the type genome is 20.39 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Momorida dehinilenta sp. nov.

Candidatus Momorida dehinilenta (NL. fem. n. *dehinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012568845*. The type genome for the species is the GenBank assembly RS_GCF_012568845.1. The GC content of the type genome is 20.24 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida denoritas sp. nov.

Candidatus Momorida denoritas (NL. fem. n. *denoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012570365*. The type genome for the species is the GenBank assembly RS_GCF_012570365.1. The GC content of the type genome is 19.61 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida desacilega sp. nov.

Candidatus Momorida desacilega (NL. fem. n. *desacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012570145*. The type genome for the species is the GenBank assembly RS_GCF_012570145.1. The GC content of the type genome is 19.98 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida incenatica sp. nov.

Candidatus Momorida incenatica (NL. fem. n. *incenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012571795*. The type genome for the species is the GenBank assembly GCA_012571795.1. The GC content of the type genome is 21.44 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Momorida inculousia sp. nov.

Candidatus Momorida inculousia (NL. fem. n. *inculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012567685*. The type genome for the species is the GenBank assembly RS_GCF_012567685.1. The GC content of the type genome is 20.21 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida inexpigena sp. nov.

Candidatus Momorida inexpigena (NL. fem. n. *inexpigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012569785*. The type genome for the species is the GenBank assembly RS_GCF_012569785.1. The GC content of the type genome is 19.96 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Momorida inoffago sp. nov.

Candidatus Momorida inoffago (NL. fem. n. *inoffago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012562965*. The type genome for the species is the GenBank assembly RS_GCF_012562965.1. The GC content of the type genome is 20.15 % and the genome length is 0.5 Mbp.

Description of *Candidatus* Momorida insenitio sp. nov.

Candidatus Momorida insenitio (NL. fem. n. *insenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012569525*. The type genome for the species is the GenBank assembly RS_GCF_012569525.1. The GC content of the type genome is 20.06 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida invicitas sp. nov.

Candidatus Momorida invicitas (NL. fem. n. *invicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012571345*. The type genome for the species is the GenBank assembly RS_GCF_012571345.1. The GC content of the type genome is 23.33 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida locelousia sp. nov.

Candidatus Momorida locelousia (NL. fem. n. *locelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-012562765 sp012568645*. The type genome for the species is the GenBank assembly RS_GCF_012568645.1. The GC content of the type genome is 19.95 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida ludifilega sp. nov.

Candidatus Momorida ludifilega (NL. fem. n. *ludifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012563145*. The type genome for the species is the GenBank assembly RS_GCF_012563145.1. The GC content of the type genome is 20.78 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Momorida rosarisca sp. nov.

Candidatus Momorida rosarisca (NL. fem. n. *rosarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012569925*. The type genome for the species is the GenBank assembly RS_GCF_012569925.1. The GC content of the type genome is 20.17 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Momorida rubicitudo sp. nov.

Candidatus Momorida rubicitudo (NL. fem. n. *rubicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-012562765 sp012563325*. The type genome for the species is the GenBank assembly RS_GCF_012563325.1. The GC content of the type genome is 20.84 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Momorosa lavabitrix sp. nov.

Candidatus Momorosa lavabitrix (NL. fem. n. *lavabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC2-FULL-38-9 sp002784505*. The type genome for the species is the GenBank assembly GCA_002784505.1. The GC content of the type genome is 39.41 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Momorosa gen. nov.

Candidatus Momorosa (NL. fem. n. *Momorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YC2-FULL-38-9*. The type species for the genus is *Candidatus* Momorosa lavabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Momorosa rorifitrix sp. nov.

Candidatus Momorosa rorifitrix (NL. fem. n. *rorifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YC2-FULL-38-9 sp001790095*. The type genome for the species is the GenBank assembly GCA_001790195.1. The GC content of the type genome is 37.33 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point C".

Description of *Candidatus* Momorula artilastra sp. nov.

Candidatus Momorula artilastra (NL. fem. n. *artilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXWH01 sp014189875*. The type genome for the species is the GenBank assembly GCA_014189875.1. The GC content of the type genome is 62.86 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Momorula gen. nov.

Candidatus Momorula (NL. fem. n. *Momorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXWH01*. The type species for the genus is *Candidatus* Momorula artilastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Momorula categivita sp. nov.

Candidatus Momorula categivita (NL. fem. n. *categivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXWH01 sp903929475*. The type genome for the species is the GenBank assembly GCA_903834585.1. The GC content of the type genome is 58.89 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Momorula diliciforma sp. nov.

Candidatus Momorula diliciforma (NL. fem. n. *diliciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXWH01 sp903882875*. The type genome for the species is the GenBank assembly GCA_903888925.1. The GC content of the type genome is 62.52 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Momorula ratifitrix sp. nov.

Candidatus Momorula ratifitrix (NL. fem. n. *ratifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXWH01 sp005791535*. The type genome for the species is the GenBank assembly GCA_005791535.1. The GC content of the type genome is 60.23 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Monacana catobicula sp. nov.

Candidatus Monacana catobicula (NL. fem. n. *catobicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin134 sp009843565*. The type genome for the species is the GenBank assembly GCA_009843565.1. The GC content of the type genome is 64.07 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Monacana gen. nov.

Candidatus Monacana (NL. fem. n. *Monacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin134*. The type species for the genus is *Candidatus* Monacana catobicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin134*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monacanaceae.

Description of *Candidatus* Monacanaceae fam. nov.

Candidatus Monacanaceae (NL. fem. n. *Monacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin134.* The type genus for the taxon is *Candidatus* Monacana .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Monacana patibifica sp. nov.

Candidatus Monacana patibifica (NL. fem. n. *patibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin134 sp009842675*. The type genome for the species is the GenBank assembly GCA_009844745.1. The GC content of the type genome is 64.8 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Monacana perabitica sp. nov.

Candidatus Monacana perabitica (NL. fem. n. *perabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin134 sp009843865*. The type genome for the species is the GenBank assembly GCA_009840495.1. The GC content of the type genome is 53.63 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Monacana xenopilega sp. nov.

Candidatus Monacana xenopilega (NL. fem. n. *xenopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin134 sp002239105*. The type genome for the species is the GenBank assembly GCA_002239105.1. The GC content of the type genome is 64.29 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Monacaria benemitoga sp. nov.

Candidatus Monacaria benemitoga (NL. fem. n. *benemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLM01 sp007123205*. The type genome for the species is the GenBank assembly GCA_007123205.1. The GC content of the type genome is 63.46 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Monacaria gen. nov.

Candidatus Monacaria (NL. fem. n. *Monacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLM01*. The type species for the genus is *Candidatus* Monacaria benemitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Monacaria cetarilenta sp. nov.

Candidatus Monacaria cetarilenta (NL. fem. n. *cetarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLM01 sp007118795*. The type genome for the species is the GenBank assembly GCA_007125335.1. The GC content of the type genome is 62.91 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Monacia adremibra sp. nov.

Candidatus Monacia adremibra (NL. fem. n. *adremibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *21-14-0-20-44-7 sp002787615*. The type genome for the species is the GenBank assembly GCA_002787615.1. The GC content of the type genome is 43.59 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Monacia gen. nov.

Candidatus Monacia (NL. fem. n. *Monacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-20-44-7*. The type species for the genus is *Candidatus* Monacia adremibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-0-20-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monaciaceae.

Description of *Candidatus* Monaciaceae fam. nov.

Candidatus Monaciaceae (NL. fem. n. *Monaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-14-0-20-44-7.* The type genus for the taxon is *Candidatus* Monacia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Monacida denunitas sp. nov.

Candidatus Monacida denunitas (NL. fem. n. *denunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKZJ01 sp903901375*. The type genome for the species is the GenBank assembly GCA_903898795.1. The GC content of the type genome is 36.29 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Monacida gen. nov.

Candidatus Monacida (NL. fem. n. *Monacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKZJ01*. The type species for the genus is *Candidatus* Monacida denunitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Monacida homunigena sp. nov.

Candidatus Monacida homunigena (NL. fem. n. *homunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKZJ01 sp903831845*. The type genome for the species is the GenBank assembly GCA_903915795.1. The GC content of the type genome is 44.53 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Monacosa ammigiforma sp. nov.

Candidatus Monacosa ammigiforma (NL. fem. n. *ammigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4582 sp002725285*. The type genome for the species is the GenBank assembly GCA_002725285.1. The GC content of the type genome is 48.75 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Monacosa gen. nov.

Candidatus Monacosa (NL. fem. n. *Monacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4582*. The type species for the genus is *Candidatus* Monacosa ammigiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Monacosa detositudo sp. nov.

Candidatus Monacosa detositudo (NL. fem. n. *detositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4582 sp002389265*. The type genome for the species is the GenBank assembly GCA_002390385.1. The GC content of the type genome is 52.64 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Monacosa filifax sp. nov.

Candidatus Monacosa filifax (NL. fem. n. *filifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4582 sp002386885*. The type genome for the species is the GenBank assembly GCA_002386885.1. The GC content of the type genome is 53.16 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Monacosa petulibula sp. nov.

Candidatus Monacosa petulibula (NL. fem. n. *petulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4582 sp012960755*. The type genome for the species is the GenBank assembly GCA_012960755.1. The GC content of the type genome is 49.73 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Monacosa utpotisca sp. nov.

Candidatus Monacosa utpotisca (NL. fem. n. *utpotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4582 sp013204195*. The type genome for the species is the GenBank assembly GCA_013204195.1. The GC content of the type genome is 53.09 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Monaibacterium denoriforma sp. nov.

Candidatus Monaibacterium denoriforma (NL. fem. n. *denoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Monaibacterium sp011290545*. The type genome for the species is the GenBank assembly RS_GCF_011290545.1. The GC content of the type genome is 62.17 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Mongoliibacter cibicibula sp. nov.

Candidatus Mongoliibacter cibicibula (NL. fem. n. *cibicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mongoliibacter sp007692705*. The type genome for the species is the GenBank assembly GCA_007692705.1. The GC content of the type genome is 39.14 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Mongoliimonas decenitrix sp. nov.

Candidatus Mongoliimonas decenitrix (NL. fem. n. *decenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mongoliimonas sp013839525*. The type genome for the species is the GenBank assembly RS_GCF_013839525.1. The GC content of the type genome is 69.87 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Monimana funebousia sp. nov.

Candidatus Monimana funebousia (NL. fem. n. *funebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7239 sp002333095*. The type genome for the species is the GenBank assembly GCA_002472985.1. The GC content of the type genome is 51.45 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Monimana gen. nov.

Candidatus Monimana (NL. fem. n. *Monimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7239*. The type species for the genus is *Candidatus* Monimana funebousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimanaceae.

Description of *Candidatus* Monimanaceae fam. nov.

Candidatus Monimanaceae (NL. fem. n. *Monimanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7239.* The type genus for the taxon is *Candidatus* Monimana .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Monimaria altifitudo sp. nov.

Candidatus Monimaria altifitudo (NL. fem. n. *altifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp902797985*. The type genome for the species is the GenBank assembly GCA_902797985.1. The GC content of the type genome is 31.76 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Monimaria gen. nov.

Candidatus Monimaria (NL. fem. n. *Monimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2883*. The type species for the genus is *Candidatus* Monimaria altifitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monimaria cilicessa sp. nov.

Candidatus Monimaria cilicessa (NL. fem. n. *cilicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp900313115*. The type genome for the species is the GenBank assembly GCA_902760105.1. The GC content of the type genome is 32.31 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Monimaria decunimonia sp. nov.

Candidatus Monimaria decunimonia (NL. fem. n. *decunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp902783125*. The type genome for the species is the GenBank assembly GCA_902783125.1. The GC content of the type genome is 33.0 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Monimaria inmoratio sp. nov.

Candidatus Monimaria inmoratio (NL. fem. n. *inmoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp902767275*. The type genome for the species is the GenBank assembly GCA_902767275.1. The GC content of the type genome is 32.24 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Monimaria monogitio sp. nov.

Candidatus Monimaria monogitio (NL. fem. n. *monogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp002103075*. The type genome for the species is the GenBank assembly GCA_002103075.1. The GC content of the type genome is 31.89 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Monimaria panifimonia sp. nov.

Candidatus Monimaria panifimonia (NL. fem. n. *panifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp902765215*. The type genome for the species is the GenBank assembly GCA_902765215.1. The GC content of the type genome is 36.26 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Monimaria sonivessa sp. nov.

Candidatus Monimaria sonivessa (NL. fem. n. *sonivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp900768915*. The type genome for the species is the GenBank assembly RS_GCF_900768915.1. The GC content of the type genome is 29.79

% and the genome length is 1.63 Mbp.

Description of *Candidatus* Monimaria viragifica sp. nov.

Candidatus Monimaria viragifica (NL. fem. n. *viragifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2883 sp002481545*. The type genome for the species is the GenBank assembly GCA_002481055.1. The GC content of the type genome is 37.13 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Monimella cibicicula sp. nov.

Candidatus Monimella cibicicula (NL. fem. n. *cibicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10092 sp003455995*. The type genome for the species is the GenBank assembly GCA_000999665.1. The GC content of the type genome is 42.3 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Monimella gen. nov.

Candidatus Monimella (NL. fem. n. *Monimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10092*. The type species for the genus is *Candidatus* Monimella cibicicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10092*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimellaceae.

Description of *Candidatus* Monimellaceae fam. nov.

Candidatus Monimellaceae (NL. fem. n. *Monimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10092.* The type genus for the taxon is *Candidatus* Monimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10092*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Monimellales.

Description of *Candidatus* Monimellales ord. nov.

Candidatus Monimellales (NL. fem. n. *Monimellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10092.* The type genus for the taxon is *Candidatus* Monimella .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Monimida mirifatio sp. nov.

Candidatus Monimida mirifatio (NL. fem. n. *mirifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J002 sp003697105*. The type genome for the species is the GenBank assembly GCA_003697105.1. The GC content of the type genome is 48.47 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Monimida gen. nov.

Candidatus Monimida (NL. fem. n. *Monimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J002*. The type species for the genus is *Candidatus* Monimida mirifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimidaceae.

Description of *Candidatus* Monimidaceae fam. nov.

Candidatus Monimidaceae (NL. fem. n. *Monimidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J002.* The type genus for the taxon is *Candidatus* Monimida .

According to the original version of GTDB R06-RS202, this family belongs to the order *J002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monimidales.

Description of *Candidatus* Monimidales ord. nov.

Candidatus Monimidales (NL. fem. n. *Monimidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J002.* The type genus for the taxon is *Candidatus* Monimida .

According to the original version of GTDB R06-RS202, this family belongs to the class *4572-55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lanifulae.

Description of *Candidatus* Monimosa buxanago sp. nov.

Candidatus Monimosa buxanago (NL. fem. n. *buxanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6807 sp002441265*. The type genome for the species is the GenBank assembly GCA_002441265.1. The GC content of the type genome is 60.78 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Monimosa gen. nov.

Candidatus Monimosa (NL. fem. n. *Monimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6807*. The type species for the genus is *Candidatus* Monimosa buxanago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6807*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimosaceae.

Description of *Candidatus* Monimosaceae fam. nov.

Candidatus Monimosaceae (NL. fem. n. *Monimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6807.* The type genus for the taxon is *Candidatus* Monimosa .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Monimula decitago sp. nov.

Candidatus Monimula decitago (NL. fem. n. *decitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1049 sp003452915*. The type genome for the species is the GenBank assembly GCA_001795415.1. The GC content of the type genome is 36.53 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Monimula gen. nov.

Candidatus Monimula (NL. fem. n. *Monimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1049*. The type species for the genus is *Candidatus* Monimula decitago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Monimula habacax sp. nov.

Candidatus Monimula habacax (NL. fem. n. *habacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1049 sp002841455*. The type genome for the species is the GenBank assembly GCA_002841455.1. The GC content of the type genome is 43.81 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Monocana buxanivita sp. nov.

Candidatus Monocana buxanivita (NL. fem. n. *buxanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903862955*. The type genome for the species is the GenBank assembly GCA_903897835.1. The GC content of the type genome is 65.69 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Monocana gen. nov.

Candidatus Monocana (NL. fem. n. *Monocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Opi-474*. The type species for the genus is *Candidatus* Monocana buxanivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monocana denigitrix sp. nov.

Candidatus Monocana denigitrix (NL. fem. n. *denigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903855985*. The type genome for the species is the GenBank assembly GCA_903864675.1. The GC content of the type genome is 66.19 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Monocana ducilessa sp. nov.

Candidatus Monocana ducilessa (NL. fem. n. *ducilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903872505*. The type genome for the species is the GenBank assembly GCA_903862405.1. The GC content of the type genome is 67.48 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Monocana exaggitudo sp. nov.

Candidatus Monocana exaggitudo (NL. fem. n. *exaggitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp003402695*. The type genome for the species is the GenBank assembly GCA_003402695.1. The GC content of the type genome is 65.6 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Monocana fumifitio sp. nov.

Candidatus Monocana fumifitio (NL. fem. n. *fumifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903830425*. The type genome for the species is the GenBank assembly GCA_903885135.1. The GC content of the type genome is 69.73 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Monocana lenocitas sp. nov.

Candidatus Monocana lenocitas (NL. fem. n. *lenocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903825285*. The type genome for the species is the GenBank assembly GCA_903824305.1. The GC content of the type genome is 68.67 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Monocana mavoressa sp. nov.

Candidatus Monocana mavoressa (NL. fem. n. *mavoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903839035*. The type genome for the species is the GenBank assembly GCA_903869915.1. The GC content of the type genome is 65.74 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Monocana revecatica sp. nov.

Candidatus Monocana revecatica (NL. fem. n. *revecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903859715*. The type genome for the species is the GenBank assembly GCA_903877045.1. The GC content of the type genome is 63.93 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Monocana volunigena sp. nov.

Candidatus Monocana volunigena (NL. fem. n. *volunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Opi-474 sp903881475*. The type genome for the species is the GenBank assembly GCA_903883125.1. The GC content of the type genome is 65.55 %

and the genome length is 3.35 Mbp.

Description of *Candidatus* Monocaria adtubax sp. nov.

Candidatus Monocaria adtubax (NL. fem. n. *adtubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900769205*. The type genome for the species is the GenBank assembly RS_GCF_900769205.1. The GC content of the type genome is 49.65 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Monocaria gen. nov.

Candidatus Monocaria (NL. fem. n. *Monocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-475*. The type species for the genus is *Candidatus* Monocaria adtubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Monocaria advinatio sp. nov.

Candidatus Monocaria advinatio (NL. fem. n. *advinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900549225*. The type genome for the species is the GenBank assembly GCA_900549225.1. The GC content of the type genome is 47.48 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Monocaria ambidedo sp. nov.

Candidatus Monocaria ambidedo (NL. fem. n. *ambidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900763875*. The type genome for the species is the GenBank assembly RS_GCF_900763875.1. The GC content of the type genome is 47.49 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Monocaria bifaritoga sp. nov.

Candidatus Monocaria bifaritoga (NL. fem. n. *bifaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp000434435*. The type genome for the species is the GenBank assembly GCA_900548015.1. The GC content of the type genome is 46.74 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Monocaria cinipitudo sp. nov.

Candidatus Monocaria cinipitudo (NL. fem. n. *cinipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900550855*. The type genome for the species is the GenBank assembly GCA_900550855.1. The GC content of the type genome is 47.76 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Monocaria conibugo sp. nov.

Candidatus Monocaria conibugo (NL. fem. n. *conibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp002449145*. The type genome for the species is the GenBank assembly GCA_003513525.1. The GC content of the type genome is 47.26 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Monocaria devecitas sp. nov.

Candidatus Monocaria devecitas (NL. fem. n. *devecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp002297185*. The type genome for the species is the GenBank assembly GCA_002297185.1. The GC content of the type genome is 46.14 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Monocaria dilacousia sp. nov.

Candidatus Monocaria dilacousia (NL. fem. n. *dilacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp002478945*. The type genome for the species is the GenBank assembly GCA_002478945.1. The GC content of the type genome is 45.84 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Monocaria herinago sp. nov.

Candidatus Monocaria herinago (NL. fem. n. *herinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900548005*. The type genome for the species is the GenBank assembly GCA_900548005.1. The GC content of the type genome is 47.9 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Monocaria herinimonas sp. nov.

Candidatus Monocaria herinimonas (NL. fem. n. *herinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900322215*. The type genome for the species is the GenBank assembly GCA_902756965.1. The GC content of the type genome is 47.83 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Monocaria inconitia sp. nov.

Candidatus Monocaria inconitia (NL. fem. n. *inconitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp002308155*. The type genome for the species is the GenBank assembly GCA_002308155.1. The GC content of the type genome is 45.95 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Monocaria inexpibula sp. nov.

Candidatus Monocaria inexpibula (NL. fem. n. *inexpibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-475 sp002476605*. The type genome for the species is the GenBank assembly GCA_002476605.1. The GC content of the type genome is 46.31 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Monocaria infisentia sp. nov.

Candidatus Monocaria infisentia (NL. fem. n. *infisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900551145*. The type genome for the species is the GenBank assembly GCA_900551145.1. The GC content of the type genome is 46.74 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Monocaria invesimonas sp. nov.

Candidatus Monocaria invesimonas (NL. fem. n. *invesimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp002308215*. The type genome for the species is the GenBank assembly GCA_002308215.1. The GC content of the type genome is 37.66 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Monocaria luxuricella sp. nov.

Candidatus Monocaria luxuricella (NL. fem. n. *luxuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900550915*. The type genome for the species is the GenBank assembly RS_GCF_900768835.1. The GC content of the type genome is 46.52 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Monocaria tirocicella sp. nov.

Candidatus Monocaria tirocicella (NL. fem. n. *tirocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-475 sp900547975*. The type genome for the species is the GenBank assembly GCA_900547975.1. The GC content of the type genome is 46.89 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Monocella enuclitia sp. nov.

Candidatus Monocella enuclitia (NL. fem. n. *enuclitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9087 sp003491635*. The type genome for the species is the GenBank assembly GCA_003491635.1. The GC content of the type genome is 51.58 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Monocella gen. nov.

Candidatus Monocella (NL. fem. n. *Monocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9087*. The type species for the genus is *Candidatus* Monocella enuclitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monocellaceae.

Description of *Candidatus* Monocellaceae fam. nov.

Candidatus Monocellaceae (NL. fem. n. *Monocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9087*. The type genus for the taxon is *Candidatus* Monocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monocellales.

Description of *Candidatus* Monocellales ord. nov.

Candidatus Monocellales (NL. fem. n. *Monocellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9087*. The type genus for the taxon is *Candidatus* Monocella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Monocellae.

Description of *Candidatus* Monocellae class. nov.

Candidatus Monocellae (NL. fem. n. *c__Monocellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9087*. The type genus for the taxon is *Candidatus* Monocella .

According to GTDB R06-RS202, this class belongs to the phylum *Actinobacteriota*.

Description of *Candidatus* Monocia insalitica sp. nov.

Candidatus Monocia insalitica (NL. fem. n. *insalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12189 sp003530835*. The type genome for the species is the GenBank assembly GCA_003530835.1. The GC content of the type genome is 45.89 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Monocia gen. nov.

Candidatus Monocia (NL. fem. n. *Monocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12189*. The type species for the genus is *Candidatus* Monocia insalitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monocia noninax sp. nov.

Candidatus Monocia noninax (NL. fem. n. *noninax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12189 sp014189895*. The type genome for the species is the GenBank assembly GCA_903829455.1. The GC content of the type genome is 46.86 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Monocia vilipivita sp. nov.

Candidatus Monocia vilipivita (NL. fem. n. *vilipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12189 sp005788175*. The type genome for the species is the GenBank assembly GCA_005788175.1. The GC content of the type genome is 43.46 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Monocula maledago sp. nov.

Candidatus Monocula maledago (NL. fem. n. *maledago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11650 sp002401285*. The type genome for the species is the GenBank assembly GCA_002401285.1. The GC content of the type genome is 57.34 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Monocula gen. nov.

Candidatus Monocula (NL. fem. n. *Monocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11650*. The type species for the genus is *Candidatus* Monocula maledago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Monocula ratifitudo sp. nov.

Candidatus Monocula ratifitudo (NL. fem. n. *ratifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11650 sp002708395*. The type genome for the species is the GenBank assembly GCA_002708395.1. The GC content of the type genome is 57.21 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Monocula taxilimonas sp. nov.

Candidatus Monocula taxilimonas (NL. fem. n. *taxilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11650 sp002710215*. The type genome for the species is the GenBank assembly GCA_012964995.1. The GC content of the type genome is 57.59 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Monodana bipinitas sp. nov.

Candidatus Monodana bipinitas (NL. fem. n. *bipinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002704045 sp002703375*. The type genome for the species is the GenBank assembly GCA_002703375.1. The GC content of the type genome is 28.83 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Monodana gen. nov.

Candidatus Monodana (NL. fem. n. *Monodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002704045*. The type species for the genus is *Candidatus* Monodana bipinitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002704045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodanaceae.

Description of *Candidatus* Monodanaceae fam. nov.

Candidatus Monodanaceae (NL. fem. n. *Monodanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002704045.* The type genus for the taxon is *Candidatus* Monodana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Monodana protrilenta sp. nov.

Candidatus Monodana protrilenta (NL. fem. n. *protrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002704045 sp002704045*. The type genome for the species is the GenBank assembly GCA_002704045.1. The GC content of the type genome is 28.99 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Monodaria revuletta sp. nov.

Candidatus Monodaria revuletta (NL. fem. n. *revuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-47-50 sp001801885*. The type genome for the species is the GenBank assembly GCA_001801885.1. The GC content of the type genome is 47.09 % and the genome length is 2.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Monodaria gen. nov.

Candidatus Monodaria (NL. fem. n. *Monodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-47-50*. The type species for the genus is *Candidatus* Monodaria revuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Monodida tametax sp. nov.

Candidatus Monodida tametax (NL. fem. n. *tametax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-42-15 sp000998185*. The type genome for the species is the GenBank assembly GCA_000998185.1. The GC content of the type genome is 41.91 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Monodida gen. nov.

Candidatus Monodida (NL. fem. n. *Monodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-42-15*. The type species for the genus is *Candidatus* Monodida tametax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodidaceae.

Description of *Candidatus* Monodidaceae fam. nov.

Candidatus Monodidaceae (NL. fem. n. *Monodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-42-15.* The type genus for the taxon is *Candidatus* Monodida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2196*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Totidulales.

Description of *Candidatus* Monodosa bugilatio sp. nov.

Candidatus Monodosa bugilatio (NL. fem. n. *bugilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6902 sp002451135*. The type genome for the species is the GenBank assembly GCA_003508235.1. The GC content of the type genome is 46.46 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Monodosa gen. nov.

Candidatus Monodosa (NL. fem. n. *Monodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6902*. The type species for the genus is *Candidatus* Monodosa bugilatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Monodosaceae fam. nov.

Candidatus Monodosaceae (NL. fem. n. *Monodosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6902.* The type genus for the taxon is *Candidatus* Monodosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monodosales.

Description of *Candidatus* Monodosales ord. nov.

Candidatus Monodosales (NL. fem. n. *Monodosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6902.* The type genus for the taxon is *Candidatus* Monodosa .

According to the GTDB R06-RS202, this order belongs to the class *Thermodesulfovibrionia*.

Description of *Candidatus* Monodosa nubecitia sp. nov.

Candidatus Monodosa nubecitia (NL. fem. n. *nubecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6902 sp003599025*. The type genome for the species is the GenBank assembly GCA_003599025.1. The GC content of the type genome is 45.88 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Monodula cosidugo sp. nov.

Candidatus Monodula cosidugo (NL. fem. n. *cosidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYF01 sp007128005*. The type genome for the species is the GenBank assembly GCA_007128005.1. The GC content of the type genome is 51.2 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Monodula gen. nov.

Candidatus Monodula (NL. fem. n. *Monodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKYF01*. The type species for the genus is *Candidatus* Monodula cosidugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Monogana rubefitia sp. nov.

Candidatus Monogana rubefitia (NL. fem. n. *rubefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFSY01 sp001785175*. The type genome for the species is the GenBank assembly GCA_001785175.1. The GC content of the type genome is 65.38 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Monogana gen. nov.

Candidatus Monogana (NL. fem. n. *Monogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFSY01*. The type species for the genus is *Candidatus* Monogana rubefitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monogaria desurago sp. nov.

Candidatus Monogaria desurago (NL. fem. n. *desurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG25 sp003242645*. The type genome for the species is the GenBank assembly GCA_003242645.1. The GC content of the type genome is 60.92 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Monogaria gen. nov.

Candidatus Monogaria (NL. fem. n. *Monogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG25*. The type species for the genus is *Candidatus* Monogaria desurago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monogaria locupigena sp. nov.

Candidatus Monogaria locupigena (NL. fem. n. *locupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG25 sp002919265*. The type genome for the species is the GenBank assembly GCA_003242575.1. The GC content of the type genome is 60.64 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Monogella vehicilega sp. nov.

Candidatus Monogella vehicilega (NL. fem. n. *vehicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJAVM01 sp903945435*. The type genome for the species is the GenBank assembly GCA_903934965.1. The GC content of the type genome is 34.54 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Monogella gen. nov.

Candidatus Monogella (NL. fem. n. *Monogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJAVM01*. The type species for the genus is *Candidatus* Monogella vehicilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Monogella volucousia sp. nov.

Candidatus Monogella volucousia (NL. fem. n. *volucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJAVM01 sp903857815*. The type genome for the species is the GenBank assembly GCA_903857815.1. The GC content of the type genome is 34.04 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Monogia bigemitas sp. nov.

Candidatus Monogia bigemitas (NL. fem. n. *bigemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8910 sp012517635*. The type genome for the species is the GenBank assembly GCA_012517635.1. The GC content of the type genome is 38.3 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Monogia gen. nov.

Candidatus Monogia (NL. fem. n. *Monogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8910*. The type species for the genus is *Candidatus* Monogia bigemitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8910*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monogiaceae.

Description of *Candidatus* Monogiaceae fam. nov.

Candidatus Monogiaceae (NL. fem. n. *Monogiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8910.* The type genus for the taxon is *Candidatus* Monogia .

According to GTDB R06-RS202, this family belongs to the order *Caldatribacteriales*.

Description of *Candidatus* Monogia decapibula sp. nov.

Candidatus Monogia decapibula (NL. fem. n. *decapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8910 sp003542295*. The type genome for the species is the GenBank assembly GCA_003486325.1. The GC content of the type genome is 38.87 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Monogia lenocousia sp. nov.

Candidatus Monogia lenocousia (NL. fem. n. *lenocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8910 sp012517485*. The type genome for the species is the GenBank assembly GCA_012517485.1. The GC content of the type genome is 37.56 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Monogia sifunilega sp. nov.

Candidatus Monogia sifunilega (NL. fem. n. *sifunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8910 sp002069605*. The type genome for the species is the GenBank assembly GCA_012837485.1. The GC content of the type genome is 38.28 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Monogida desoritudo sp. nov.

Candidatus Monogida desoritudo (NL. fem. n. *desoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0428 sp003043955*. The type genome for the species is the GenBank assembly GCA_003640345.1. The GC content of the type genome is 40.13 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Monogida gen. nov.

Candidatus Monogida (NL. fem. n. *Monogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F0428*. The type species for the genus is *Candidatus* Monogida

desoritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monoglobus errabifica sp. nov.

Candidatus Monoglobus errabifica (NL. fem. n. *errabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Monoglobus sp900542675*. The type genome for the species is the GenBank assembly GCA_900542675.1. The GC content of the type genome is 44.51 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Monoglobus infanilega sp. nov.

Candidatus Monoglobus infanilega (NL. fem. n. *infanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Monoglobus sp900554105*. The type genome for the species is the GenBank assembly GCA_900554105.1. The GC content of the type genome is 44.24 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Monogosa adpacitoga sp. nov.

Candidatus Monogosa adpacitoga (NL. fem. n. *adpacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077554 sp001464965*. The type genome for the species is the GenBank assembly GCA_001464965.1. The GC content of the type genome is 56.45 % and the genome length is 2.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Monogosa gen. nov.

Candidatus Monogosa (NL. fem. n. *Monogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077554*. The type species for the genus is *Candidatus* Monogosa adpacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga007554*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicarulaceae.

Description of *Candidatus* Monogosales ord. nov.

Candidatus Monogosales (NL. fem. n. *Monogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077554.* The type genus for the taxon is *Candidatus* Monogosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Monogosa affulivita sp. nov.

Candidatus Monogosa affulivita (NL. fem. n. *affulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077554 sp001464585*. The type genome for the species is the GenBank assembly GCA_001464585.1. The GC content of the type genome is 53.05 % and the genome length is 2.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Monogosa alcedousia sp. nov.

Candidatus Monogosa alcedousia (NL. fem. n. *alcedousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077554 sp005240065*. The type genome for the species is the GenBank assembly GCA_005240065.1. The GC content of the type genome is 59.1 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Monogula cobalugo sp. nov.

Candidatus Monogula cobalugo (NL. fem. n. *cobalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DTU052 sp001512495*. The type genome for the species is the GenBank assembly GCA_001512495.1. The GC content of the type genome is 51.29 % and the genome length is 2.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Monogula gen. nov.

Candidatus Monogula (NL. fem. n. *Monogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU052*. The type species for the genus is *Candidatus* Monogula cobalugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU052*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monogulaceae.

Description of *Candidatus* Monogulaceae fam. nov.

Candidatus Monogulaceae (NL. fem. n. *Monogulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU052.* The type genus for the taxon is *Candidatus* Monogula .

According to GTDB R06-RS202, this family belongs to the order *Syntrophomonadales*.

Description of *Candidatus* Monogula obfusatica sp. nov.

Candidatus Monogula obfusatica (NL. fem. n. *obfusatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU052 sp002329495*. The type genome for the species is the GenBank assembly GCA_002329495.1. The GC content of the type genome is 50.83 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Monogula obsolessa sp. nov.

Candidatus Monogula obsolessa (NL. fem. n. *obsolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU052 sp012728655*. The type genome for the species is the GenBank assembly GCA_012728655.1. The GC content of the type genome is 52.22 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Monogula odontitia sp. nov.

Candidatus Monogula odontitia (NL. fem. n. *odontitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU052 sp012729505*. The type genome for the species is the GenBank assembly GCA_012729505.1. The GC content of the type genome is 46.52 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Monopana nubifilega sp. nov.

Candidatus Monopana nubifilega (NL. fem. n. *nubifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AL-N1 sp013122435*. The type genome for the species is the GenBank assembly GCA_013122405.1. The GC content of the type genome is 48.93 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Monopana gen. nov.

Candidatus Monopana (NL. fem. n. *Monopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AL-N1*. The type species for the genus is *Candidatus* Monopana nubifilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monoparia dehiniforma sp. nov.

Candidatus Monoparia dehiniforma (NL. fem. n. *dehiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10174 sp003528115*. The type genome for the species is the GenBank assembly GCA_003528115.1. The GC content of the type genome is 46.26 %

and the genome length is 2.39 Mbp.

Description of *Candidatus* Monoparia gen. nov.

Candidatus Monoparia (NL. fem. n. *Monoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10174*. The type species for the genus is *Candidatus* Monoparia dehiniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Monoposa bicipetta sp. nov.

Candidatus Monoposa bicipetta (NL. fem. n. *bicipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900314555*. The type genome for the species is the GenBank assembly GCA_900314555.1. The GC content of the type genome is 33.4 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Monoposa gen. nov.

Candidatus Monoposa (NL. fem. n. *Monoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-603*. The type species for the genus is *Candidatus* Monoposa bicipetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Monoposa cisaliforma sp. nov.

Candidatus Monoposa cisaliforma (NL. fem. n. *cisaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900315425*. The type genome for the species is the GenBank assembly GCA_900315425.1. The GC content of the type genome is 34.74 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Monoposa cruppilenta sp. nov.

Candidatus Monoposa cruppilenta (NL. fem. n. *cruppilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp902786365*. The type genome for the species is the GenBank assembly GCA_902786365.1. The GC content of the type genome is 35.62 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Monoposa democitrix sp. nov.

Candidatus Monoposa democitrix (NL. fem. n. *democitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp902767015*. The type genome for the species is the GenBank assembly GCA_902767015.1. The GC content of the type genome is 39.71 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Monoposa fefelousia sp. nov.

Candidatus Monoposa fefelousia (NL. fem. n. *fefelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900110975*. The type genome for the species is the GenBank assembly RS_GCF_900110975.1. The GC content of the type genome is 31.86 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Monoposa invigousia sp. nov.

Candidatus Monoposa invigousia (NL. fem. n. *invigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp902773095*. The type genome for the species is the GenBank assembly GCA_902773095.1. The GC content of the type genome is 36.82 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Monoposa renavetta sp. nov.

Candidatus Monoposa renavetta (NL. fem. n. *renavetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900321855*. The type genome for the species is the GenBank assembly GCA_902778195.1. The GC content of the type genome is 36.91 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Monoposa tegimentia sp. nov.

Candidatus Monoposa tegimentia (NL. fem. n. *tegimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900314525*. The type genome for the species is the GenBank assembly GCA_902801535.1. The GC content of the type genome is 33.9 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Monoposa tibicitura sp. nov.

Candidatus Monoposa tibicitura (NL. fem. n. *tibicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-603 sp900066105*. The type genome for the species is the GenBank assembly GCA_900066105.1. The GC content of the type genome is 34.03 % and the genome length is 3.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Monopula filifigena sp. nov.

Candidatus Monopula filifigena (NL. fem. n. *filifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1355 sp003153375*. The type genome for the species is the GenBank assembly GCA_003153375.1. The GC content of the type genome is 61.76 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Monopula gen. nov.

Candidatus Monopula (NL. fem. n. *Monopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PALSA-1355*. The type species for the genus is *Candidatus* Monopula filifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopulaceae.

Description of *Candidatus* Monopulaceae fam. nov.

Candidatus Monopulaceae (NL. fem. n. *Monopulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-1355.* The type genus for the taxon is *Candidatus* Monopula .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Monumana addubigena sp. nov.

Candidatus Monumana addubigena (NL. fem. n. *addubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGW01 sp011334875*. The type genome for the species is the GenBank assembly GCA_011334875.1. The GC content of the type genome is 42.76 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Monumana gen. nov.

Candidatus Monumana (NL. fem. n. *Monumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGW01*. The type species for the genus is *Candidatus* Monumana addubigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monumanaceae.

Description of *Candidatus* Monumanaceae fam. nov.

Candidatus Monumanaceae (NL. fem. n. *Monumanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DTGW01*. The type genus for the taxon is *Candidatus* Monumana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Monumaria ranunigena sp. nov.

Candidatus Monumaria ranunigena (NL. fem. n. *ranunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-G15 sp003648845*. The type genome for the species is the GenBank assembly GCA_003648845.1. The GC content of the type genome is 40.35 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Monumaria gen. nov.

Candidatus Monumaria (NL. fem. n. *Monumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-G15*. The type species for the genus is *Candidatus* Monumaria ranunigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monumariaceae.

Description of *Candidatus* Monumariaceae fam. nov.

Candidatus Monumariaceae (NL. fem. n. *Monumariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-G15*. The type genus for the taxon is *Candidatus* Monumaria .

According to GTDB R06-RS202, this family belongs to the order *Aerophobales*.

Description of *Candidatus* Monumella socagatio sp. nov.

Candidatus Monumella socagatio (NL. fem. n. *socagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790575 sp002773095*. The type genome for the species is the GenBank assembly GCA_002790575.1. The GC content of the type genome is 35.37 %

and the genome length is 0.79 Mbp.

Description of *Candidatus* Monumella gen. nov.

Candidatus Monumella (NL. fem. n. *Monumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002790575*. The type species for the genus is *Candidatus* Monumella socagatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Monumia amfitedo sp. nov.

Candidatus Monumia amfitedo (NL. fem. n. *amfitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp001917735*. The type genome for the species is the GenBank assembly GCA_001917735.1. The GC content of the type genome is 68.03 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; pre rain".

Description of *Candidatus* Monumia gen. nov.

Candidatus Monumia (NL. fem. n. *Monumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *3-1-20CM-2-70-9*. The type species for the genus is *Candidatus* Monumia amfitedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Monumia argumilega sp. nov.

Candidatus Monumia argumilega (NL. fem. n. *argumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005881885*. The type genome for the species is the GenBank assembly GCA_005881885.1. The GC content of the type genome is 67.42 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Monumia ceraritoga sp. nov.

Candidatus Monumia ceraritoga (NL. fem. n. *ceraritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005889075*. The type genome for the species is the GenBank assembly GCA_005881735.1. The GC content of the type genome is 67.54 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Monumia decinigena sp. nov.

Candidatus Monumia decinigena (NL. fem. n. *decinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005889275*. The type genome for the species is the GenBank assembly GCA_005889415.1. The GC content of the type genome is 69.2 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Monumia dicabax sp. nov.

Candidatus Monumia dicabax (NL. fem. n. *dicabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005880575*. The type genome for the species is the GenBank assembly GCA_005880575.1. The GC content of the type genome is 67.43 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Monumia encomatio sp. nov.

Candidatus Monumia encomatio (NL. fem. n. *encomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005889445*. The type genome for the species is the GenBank assembly GCA_005889445.1. The GC content of the type genome is 68.46 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Monumia favilastra sp. nov.

Candidatus Monumia favilastra (NL. fem. n. *favilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp001920645*. The type genome for the species is the GenBank assembly GCA_001920645.1. The GC content of the type genome is 70.41 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 4 days after first rain event (27mm)".

Description of *Candidatus* Monumia frigdago sp. nov.

Candidatus Monumia frigdago (NL. fem. n. *frigdago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005889295*. The type genome for the species is the GenBank assembly GCA_005889295.1. The GC content of the type genome is 66.88 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Monumia habacitica sp. nov.

Candidatus Monumia habacitica (NL. fem. n. *habacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp001919195*. The type genome for the species is the GenBank assembly GCA_005883525.1. The GC content of the type genome is 70.53 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Monumia mavoribula sp. nov.

Candidatus Monumia mavoribula (NL. fem. n. *mavoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005881085*. The type genome for the species is the GenBank assembly GCA_005881085.1. The GC content of the type genome is 67.24 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Monumia peropitas sp. nov.

Candidatus Monumia peropitas (NL. fem. n. *peropitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005883775*. The type genome for the species is the GenBank assembly GCA_005880335.1. The GC content of the type genome is 67.14 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Monumia refunousia sp. nov.

Candidatus Monumia refunousia (NL. fem. n. *refunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005882765*. The type genome for the species is the GenBank assembly GCA_005881975.1. The GC content of the type genome is 66.95 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Monumia venefisca sp. nov.

Candidatus Monumia venefisca (NL. fem. n. *venefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-2-70-9 sp005879975*. The type genome for the species is the GenBank assembly GCA_005879975.1. The GC content of the type genome is 67.35 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Monumida recumitio sp. nov.

Candidatus Monumida recumitio (NL. fem. n. *recumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKBD01 sp903825565*. The type genome for the species is the GenBank assembly GCA_903825565.1. The GC content of the type genome is 58.12 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Monumida gen. nov.

Candidatus Monumida (NL. fem. n. *Monumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKBD01*. The type species for the genus is *Candidatus* Monumida recumitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobellaceae.

Description of *Candidatus* Monumosa sicaratio sp. nov.

Candidatus Monumosa sicaratio (NL. fem. n. *sicaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B30-G15 sp003648085*. The type genome for the species is the GenBank assembly GCA_003648085.1. The GC content of the type genome is 61.9 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Monumosa gen. nov.

Candidatus Monumosa (NL. fem. n. *Monumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B30-G15*. The type species for the genus is *Candidatus* Monumosa sicaratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Monumula almucisca sp. nov.

Candidatus Monumula almucisca (NL. fem. n. *almucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-42-10 sp001773455*. The type genome for the species is the GenBank assembly GCA_001773455.1. The GC content of the type genome is 41.32 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Monumula gen. nov.

Candidatus Monumula (NL. fem. n. *Monumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-42-10*. The type species for the genus is *Candidatus* Monumula almucisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-42-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monumulaceae.

Description of *Candidatus* Monumulaceae fam. nov.

Candidatus Monumulaceae (NL. fem. n. *Monumulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-42-10.* The type genus for the taxon is *Candidatus* Monumula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-42-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monumulales.

Description of *Candidatus* Monumulales ord. nov.

Candidatus Monumulales (NL. fem. n. *Monumulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-42-10.* The type genus for the taxon is *Candidatus* Monumula .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Moorea bonifitia sp. nov.

Candidatus Moorea bonifitia (NL. fem. n. *bonifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorea sp010692325*. The type genome for the species is the GenBank assembly GCA_010692325.1. The GC content of the type genome is 43.63 % and the genome length is 7.99 Mbp.

Description of *Candidatus* Moorea obvalivita sp. nov.

Candidatus Moorea obvalivita (NL. fem. n. *obvalivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorea sp010671925*. The type genome for the species is the GenBank assembly GCA_010671925.1. The GC content of the type genome is 43.67 % and the genome length is 9.94 Mbp.

Description of *Candidatus* Moorea omnigicula sp. nov.

Candidatus Moorea omnigicula (NL. fem. n. *omnigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorea sp010692395*. The type genome for the species is the GenBank assembly GCA_010692395.1. The GC content of the type genome is 43.17 % and the genome length is 8.36 Mbp.

Description of *Candidatus* Moorea senipicella sp. nov.

Candidatus Moorea senipicella (NL. fem. n. *senipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorea sp011524395*. The type genome for the species is the GenBank assembly GCA_011524395.1. The GC content of the type genome is 43.1 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Moorella abrumedo sp. nov.

Candidatus Moorella abrumedo (NL. fem. n. *abrumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorella sp002383405*. The type genome for the species is the GenBank assembly GCA_002383405.1. The GC content of the type genome is 56.83 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Moorella pecunitia sp. nov.

Candidatus Moorella pecunitia (NL. fem. n. *pecunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorella sp003116935*. The type genome for the species is the GenBank assembly RS_GCF_003116935.1. The GC content of the type genome is 56.61 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Moorella vicatilega sp. nov.

Candidatus Moorella vicatilega (NL. fem. n. *vicatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moorella sp006538365*. The type genome for the species is the GenBank assembly RS_GCF_006538365.1. The GC content of the type genome is 53.98 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Moraxella volunimonas sp. nov.

Candidatus Moraxella volunimonas (NL. fem. n. *volunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moraxella sp002224245*. The type genome for the species is the GenBank assembly RS_GCF_002224245.2. The GC content of the type genome is 43.09 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Moraxella homulitas sp. nov.

Candidatus Moraxella homulitas (NL. fem. n. *homulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moraxella_A sp002478835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002478835.1. The GC content of the type genome is 44.09 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Morigana bugilitia sp. nov.

Candidatus Morigana bugilitia (NL. fem. n. *bugilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS363 sp900550695*. The type genome for the species is the

GenBank assembly RS_GCF_900772515.1. The GC content of the type genome is 43.33 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Morigana gen. nov.

Candidatus Morigana (NL. fem. n. *Morigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS363*. The type species for the genus is *Candidatus* Morigana bugilitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Morigana manomousia sp. nov.

Candidatus Morigana manomousia (NL. fem. n. *manomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS363 sp900543105*. The type genome for the species is the GenBank assembly GCA_900543105.1. The GC content of the type genome is 45.21 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Morigana obtorifica sp. nov.

Candidatus Morigana obtorifica (NL. fem. n. *obtorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS363 sp900768245*. The type genome for the species is the GenBank assembly RS_GCF_900768245.1. The GC content of the type genome is 41.51 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Morigana sotulitoga sp. nov.

Candidatus Morigana sotulitoga (NL. fem. n. *sotulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS363 sp900541495*. The type genome for the species is the GenBank assembly RS_GCF_900770065.1. The GC content of the type genome is 45.56 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Morigaria conipimonas sp. nov.

Candidatus Morigaria conipimonas (NL. fem. n. *conipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXQG01 sp012974445*. The type genome for the species is the GenBank assembly GCA_012974445.1. The GC content of the type genome is 57.31 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Morigaria gen. nov.

Candidatus Morigaria (NL. fem. n. *Morigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXQG01*. The type species for the genus is *Candidatus* Morigaria conipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXQG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Morigariaceae.

Description of *Candidatus* Morigariaceae fam. nov.

Candidatus Morigariaceae (NL. fem. n. *Morigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXQG01*. The type genus for the taxon is *Candidatus* Morigaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfuromonadales*.

Description of *Candidatus* Morigella cenodastra sp. nov.

Candidatus Morigella cenodastra (NL. fem. n. *cenodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-1 sp000447245*. The type genome for the species is the GenBank assembly GCA_000447245.1. The GC content of the type genome is 41.89 % and the genome length is 2.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5 m depth in an aquifer adjacent to the Colorado River".

Description of *Candidatus* Morigella gen. nov.

Candidatus Morigella (NL. fem. n. *Morigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-1*. The type species for the genus is *Candidatus* Morigella cenodastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Morigellaceae.

Description of *Candidatus* Morigellaceae fam. nov.

Candidatus Morigellaceae (NL. fem. n. *Morigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-1.* The type genus for the taxon is *Candidatus* Morigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripellales.

Description of *Candidatus* Morigia affuletta sp. nov.

Candidatus Morigia affuletta (NL. fem. n. *affuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRA01 sp004298665*. The type genome for the species is the GenBank assembly GCA_004298665.1. The GC content of the type genome is 65.57 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Morigia gen. nov.

Candidatus Morigia (NL. fem. n. *Morigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCRA01*. The type species for the genus is *Candidatus* Morigia affuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Morigiaceae.

Description of *Candidatus* Morigiaceae fam. nov.

Candidatus Morigiaceae (NL. fem. n. *Morigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCRA01*. The type genus for the taxon is *Candidatus* Morigia .

According to GTDB R06-RS202, this family belongs to the order *Baltobacterales*.

Description of *Candidatus* Morigia cinefessa sp. nov.

Candidatus Morigia cinefessa (NL. fem. n. *cinefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRA01 sp004298675*. The type genome for the species is the GenBank assembly GCA_004298675.1. The GC content of the type genome is 66.48 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Morigia minagax sp. nov.

Candidatus Morigia minagax (NL. fem. n. *minagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRA01 sp004297985*. The type genome for the species is the GenBank assembly GCA_004297985.1. The GC content of the type genome is 66.13 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Morigida esculigena sp. nov.

Candidatus Morigida esculigena (NL. fem. n. *esculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10799 sp003452655*. The type genome for the species is the GenBank assembly GCA_003452655.1. The GC content of the type genome is 60.91 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Morigida gen. nov.

Candidatus Morigida (NL. fem. n. *Morigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10799*. The type species for the genus is *Candidatus* Morigida esculigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10799*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Morigidaceae.

Description of *Candidatus* Morigidaceae fam. nov.

Candidatus Morigidaceae (NL. fem. n. *Morigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10799.* The type genus for the taxon is *Candidatus* Morigida .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Morigosa delapatica sp. nov.

Candidatus Morigosa delapatica (NL. fem. n. *delapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3073 sp002774315*. The type genome for the species is the GenBank assembly GCA_002774315.1. The GC content of the type genome is 39.88 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Morigosa gen. nov.

Candidatus Morigosa (NL. fem. n. *Morigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3073*. The type species for the genus is *Candidatus* Morigosa delapatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Morigosaceae.

Description of *Candidatus* Morigosaceae fam. nov.

Candidatus Morigosaceae (NL. fem. n. *Morigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3073.* The type genus for the taxon is *Candidatus* Morigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Morigosales.

Description of *Candidatus* Morigosales ord. nov.

Candidatus Morigosales (NL. fem. n. *Morigosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3073.* The type genus for the taxon is *Candidatus* Morigosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Morigosae.

Description of *Candidatus* Morigosae class. nov.

Candidatus Morigosae (NL. fem. n. *c__Morigosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3073.* The type genus for the taxon is *Candidatus* Morigosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Tigurariota.

Description of *Candidatus* Morigosa semifitas sp. nov.

Candidatus Morigosa semifitas (NL. fem. n. *semifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3073 sp002366725*. The type genome for the species is the GenBank assembly GCA_002245405.1. The GC content of the type genome is 44.19 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Morigula advinitura sp. nov.

Candidatus Morigula advinitura (NL. fem. n. *advinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3633 sp002374095*. The type genome for the species is the GenBank assembly GCA_002374095.1. The GC content of the type genome is 33.19 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Morigula gen. nov.

Candidatus Morigula (NL. fem. n. *Morigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3633*. The type species for the genus is *Candidatus* Morigula advinitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Morigula bicinedo sp. nov.

Candidatus Morigula bicinedo (NL. fem. n. *bicinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3633 sp902803205*. The type genome for the species is the GenBank assembly GCA_902803205.1. The GC content of the type genome is 28.89 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Morigula curotivita sp. nov.

Candidatus Morigula curotivita (NL. fem. n. *curotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3633 sp900313535*. The type genome for the species is the GenBank assembly GCA_900313535.1. The GC content of the type genome is 32.01 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Morigula forabisca sp. nov.

Candidatus Morigula forabisca (NL. fem. n. *forabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3633 sp002392345*. The type genome for the species is the GenBank assembly GCA_002392345.1. The GC content of the type genome is 34.66 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Moritella accomisca sp. nov.

Candidatus Moritella accomisca (NL. fem. n. *accomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moritella sp001574435*. The type genome for the species is the GenBank assembly RS_GCF_001574435.1. The GC content of the type genome is 39.97 % and the genome length is 4.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment from Japan Trench".

Description of *Candidatus* Moritella cosigitrix sp. nov.

Candidatus Moritella cosigitrix (NL. fem. n. *cosigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moritella sp000170855*. The type genome for the species is the GenBank assembly RS_GCF_000170855.1. The GC content of the type genome is 41.0 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Moritella defalitura sp. nov.

Candidatus Moritella defalitura (NL. fem. n. *defalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moritella sp002836355*. The type genome for the species is the GenBank assembly RS_GCF_002836355.1. The GC content of the type genome is 40.85 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Moritella relenatica sp. nov.

Candidatus Moritella relenatica (NL. fem. n. *relenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Moritella sp013215705*. The type genome for the species is the

GenBank assembly GCA_013215705.1. The GC content of the type genome is 40.71 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Motilimonas cerevisca sp. nov.

Candidatus Motilimonas cerevisca (NL. fem. n. *cerevisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Motilimonas sp003596335*. The type genome for the species is the GenBank assembly RS_GCF_003596335.1. The GC content of the type genome is 45.49 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Motiliproteus carucitrix sp. nov.

Candidatus Motiliproteus carucitrix (NL. fem. n. *carucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Motiliproteus sp004195305*. The type genome for the species is the GenBank assembly GCA_004195305.1. The GC content of the type genome is 54.46 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Motiliproteus exsatimonas sp. nov.

Candidatus Motiliproteus exsatimonas (NL. fem. n. *exsatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Motiliproteus sp001968815*. The type genome for the species is the GenBank assembly RS_GCF_001968815.1. The GC content of the type genome is 46.81 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Mucilaginibacter adpecimonia sp. nov.

Candidatus Mucilaginibacter adpecimonia (NL. fem. n. *adpecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp007846095*. The type genome for the species is the GenBank assembly RS_GCF_007846095.1. The GC content of the type genome is 43.04 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Mucilaginibacter adrecitia sp. nov.

Candidatus Mucilaginibacter adrecitia (NL. fem. n. *adrecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp900110415*. The type genome for the species is the GenBank assembly RS_GCF_900110415.1. The GC content of the type genome is 43.06 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Mucilaginibacter adsicicula sp. nov.

Candidatus Mucilaginibacter adsicicula (NL. fem. n. *adsicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp009770985*. The type genome for the species is the GenBank assembly RS_GCF_009770985.1. The GC content of the type genome is 42.09 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Mucilaginibacter alismessa sp. nov.

Candidatus Mucilaginibacter alismessa (NL. fem. n. *alismessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp014200575*. The type genome for the species is the GenBank assembly RS_GCF_014200575.1. The GC content of the type genome is 41.68 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Mucilaginibacter amatrilenta sp. nov.

Candidatus Mucilaginibacter amatrilenta (NL. fem. n. *amatrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp011089895*. The type genome for the species is the GenBank assembly RS_GCF_011089895.1. The GC content of the type genome is 41.98 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Mucilaginibacter anamnicula sp. nov.

Candidatus Mucilaginibacter anamnicula (NL. fem. n. *anamnicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903915155*. The type genome for the species is the GenBank assembly GCA_903915155.1. The GC content of the type genome is 42.36 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Mucilaginibacter andabentia sp. nov.

Candidatus Mucilaginibacter andabentia (NL. fem. n. *andabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013289045*. The type genome for the species is the GenBank assembly GCA_013289045.1. The GC content of the type genome is 44.4 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Mucilaginibacter apsimitura sp. nov.

Candidatus Mucilaginibacter apsimitura (NL. fem. n. *apsimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013286565*. The type genome for the species is the GenBank assembly GCA_013286565.1. The GC content of the type genome is 41.92 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Mucilaginibacter arvecicula sp. nov.

Candidatus Mucilaginibacter arvecicula (NL. fem. n. *arvecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp001636615*. The type genome for the species is the GenBank assembly RS_GCF_001636615.1. The GC content of the type genome is 43.45 % and the genome length is 5.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "forest soil".

Description of *Candidatus* Mucilaginibacter ascalitoga sp. nov.

Candidatus Mucilaginibacter ascalitoga (NL. fem. n. *ascalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013289005*. The type genome for the species is the

GenBank assembly GCA_013289005.1. The GC content of the type genome is 40.3 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Mucilaginibacter aseptedo sp. nov.

Candidatus Mucilaginibacter aseptedo (NL. fem. n. *aseptedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013288685*. The type genome for the species is the GenBank assembly GCA_013288685.1. The GC content of the type genome is 42.78 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Mucilaginibacter benevatio sp. nov.

Candidatus Mucilaginibacter benevatio (NL. fem. n. *benevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp010093045*. The type genome for the species is the GenBank assembly RS_GCF_010093045.1. The GC content of the type genome is 44.81 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Mucilaginibacter bicapago sp. nov.

Candidatus Mucilaginibacter bicapago (NL. fem. n. *bicapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003208075*. The type genome for the species is the GenBank assembly RS_GCF_003208075.1. The GC content of the type genome is 42.27 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Mucilaginibacter bifaritura sp. nov.

Candidatus Mucilaginibacter bifaritura (NL. fem. n. *bifaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903885865*. The type genome for the species is the GenBank assembly GCA_903911175.1. The GC content of the type genome is 42.25 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Mucilaginibacter biverousia sp. nov.

Candidatus Mucilaginibacter biverousia (NL. fem. n. *biverousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013286985*. The type genome for the species is the GenBank assembly GCA_013286985.1. The GC content of the type genome is 40.43 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Mucilaginibacter bulapitas sp. nov.

Candidatus Mucilaginibacter bulapitas (NL. fem. n. *bulapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp007846085*. The type genome for the species is the GenBank assembly RS_GCF_007846085.1. The GC content of the type genome is 43.09 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Mucilaginibacter buxanitas sp. nov.

Candidatus Mucilaginibacter buxanitas (NL. fem. n. *buxanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp014376655*. The type genome for the species is the GenBank assembly GCA_014376655.1. The GC content of the type genome is 41.34 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Mucilaginibacter ceraritica sp. nov.

Candidatus Mucilaginibacter ceraritica (NL. fem. n. *ceraritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003432065*. The type genome for the species is the GenBank assembly RS_GCF_003432065.1. The GC content of the type genome is 44.04 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Mucilaginibacter cinipicula sp. nov.

Candidatus Mucilaginibacter cinipicula (NL. fem. n. *cinipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp002413785*. The type genome for the species is the GenBank assembly GCA_002429195.1. The GC content of the type genome is 41.44 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Mucilaginibacter cituvitura sp. nov.

Candidatus Mucilaginibacter cituvitura (NL. fem. n. *cituvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003576455*. The type genome for the species is the GenBank assembly RS_GCF_003576455.2. The GC content of the type genome is 43.94 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Mucilaginibacter cocodastra sp. nov.

Candidatus Mucilaginibacter cocodastra (NL. fem. n. *cocodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp900142915*. The type genome for the species is the GenBank assembly RS_GCF_900142915.1. The GC content of the type genome is 41.06 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Mucilaginibacter conopimonia sp. nov.

Candidatus Mucilaginibacter conopimonia (NL. fem. n. *conopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013288485*. The type genome for the species is the GenBank assembly GCA_013288485.1. The GC content of the type genome is 42.15 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Mucilaginibacter culibago sp. nov.

Candidatus Mucilaginibacter culibago (NL. fem. n. *culibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp001596135*. The type genome for the species is the GenBank assembly RS_GCF_001596135.1. The GC content of the type genome is 43.34

% and the genome length is 5.62 Mbp.

Description of *Candidatus* Mucilaginibacter decupicella sp. nov.

Candidatus Mucilaginibacter decupicella (NL. fem. n. *decupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013285685*. The type genome for the species is the GenBank assembly GCA_013285685.1. The GC content of the type genome is 45.37 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Mucilaginibacter defetimonas sp. nov.

Candidatus Mucilaginibacter defetimonas (NL. fem. n. *defetimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013287005*. The type genome for the species is the GenBank assembly GCA_013287005.1. The GC content of the type genome is 40.38 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Mucilaginibacter exhonibula sp. nov.

Candidatus Mucilaginibacter exhonibula (NL. fem. n. *exhonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp012849215*. The type genome for the species is the GenBank assembly RS_GCF_012849215.1. The GC content of the type genome is 41.39 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Mucilaginibacter expanetta sp. nov.

Candidatus Mucilaginibacter expanetta (NL. fem. n. *expanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003664165*. The type genome for the species is the GenBank assembly RS_GCF_003664165.1. The GC content of the type genome is 43.01 % and the genome length is 7.72 Mbp.

Description of *Candidatus* Mucilaginibacter gerunitia sp. nov.

Candidatus Mucilaginibacter gerunitia (NL. fem. n. *gerunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp001898335*. The type genome for the species is the GenBank assembly GCA_001898335.1. The GC content of the type genome is 43.73 % and the genome length is 4.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Mucilaginibacter hibisax sp. nov.

Candidatus Mucilaginibacter hibisax (NL. fem. n. *hibisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013408825*. The type genome for the species is the GenBank assembly RS_GCF_013408825.1. The GC content of the type genome is 39.95 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Mucilaginibacter immigetta sp. nov.

Candidatus Mucilaginibacter immigetta (NL. fem. n. *immigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003432115*. The type genome for the species is the GenBank assembly RS_GCF_003432115.1. The GC content of the type genome is 44.6 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Mucilaginibacter incucibula sp. nov.

Candidatus Mucilaginibacter incucibula (NL. fem. n. *incucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp009755275*. The type genome for the species is the GenBank assembly RS_GCF_009755275.1. The GC content of the type genome is 41.63 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Mucilaginibacter inlocibula sp. nov.

Candidatus Mucilaginibacter inlocibula (NL. fem. n. *inlocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903644075*. The type genome for the species is the GenBank assembly RS_GCF_903644075.1. The GC content of the type genome is 42.07 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Mucilaginibacter insibibula sp. nov.

Candidatus Mucilaginibacter insibibula (NL. fem. n. *insibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp014200495*. The type genome for the species is the GenBank assembly RS_GCF_014200495.1. The GC content of the type genome is 41.27 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Mucilaginibacter lanigessa sp. nov.

Candidatus Mucilaginibacter lanigessa (NL. fem. n. *lanigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903891475*. The type genome for the species is the GenBank assembly GCA_903891475.1. The GC content of the type genome is 36.68 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Mucilaginibacter maxumiforma sp. nov.

Candidatus Mucilaginibacter maxumiforma (NL. fem. n. *maxumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903927645*. The type genome for the species is the GenBank assembly GCA_903927645.1. The GC content of the type genome is 35.47 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Mucilaginibacter metabisca sp. nov.

Candidatus Mucilaginibacter metabisca (NL. fem. n. *metabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp003635105*. The type genome for the species is the GenBank assembly RS_GCF_003635105.1. The GC content of the type genome is 41.79

% and the genome length is 4.76 Mbp.

Description of *Candidatus* Mucilaginibacter monocicula sp. nov.

Candidatus Mucilaginibacter monocicula (NL. fem. n. *monocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903887275*. The type genome for the species is the GenBank assembly GCA_903887275.1. The GC content of the type genome is 42.61 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Mucilaginibacter monogessa sp. nov.

Candidatus Mucilaginibacter monogessa (NL. fem. n. *monogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp900103125*. The type genome for the species is the GenBank assembly RS_GCF_900103125.1. The GC content of the type genome is 42.42 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Mucilaginibacter nitelibula sp. nov.

Candidatus Mucilaginibacter nitelibula (NL. fem. n. *nitelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp001705515*. The type genome for the species is the GenBank assembly RS_GCF_001705515.1. The GC content of the type genome is 45.71 % and the genome length is 5.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Amazon soil (pasture)".

Description of *Candidatus* Mucilaginibacter nubecilega sp. nov.

Candidatus Mucilaginibacter nubecilega (NL. fem. n. *nubecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp005938025*. The type genome for the species is the GenBank assembly RS_GCF_005938025.2. The GC content of the type genome is 42.5 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Mucilaginibacter nubigilenta sp. nov.

Candidatus Mucilaginibacter nubigilenta (NL. fem. n. *nubigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013283875*. The type genome for the species is the GenBank assembly RS_GCF_013283875.1. The GC content of the type genome is 46.4 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Mucilaginibacter omninilega sp. nov.

Candidatus Mucilaginibacter omninilega (NL. fem. n. *omninilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp009765905*. The type genome for the species is the GenBank assembly RS_GCF_009765905.1. The GC content of the type genome is 40.08 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Mucilaginibacter onocrugo sp. nov.

Candidatus Mucilaginibacter onocrugo (NL. fem. n. *onocrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903913935*. The type genome for the species is the GenBank assembly GCA_903913935.1. The GC content of the type genome is 42.71 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Mucilaginibacter peradedo sp. nov.

Candidatus Mucilaginibacter peradedo (NL. fem. n. *peradedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903864275*. The type genome for the species is the GenBank assembly GCA_903864275.1. The GC content of the type genome is 42.96 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Mucilaginibacter pluscitio sp. nov.

Candidatus Mucilaginibacter pluscitio (NL. fem. n. *pluscitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp009928685*. The type genome for the species is the GenBank assembly RS_GCF_009928685.1. The GC content of the type genome is 42.71 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Mucilaginibacter recocago sp. nov.

Candidatus Mucilaginibacter recocago (NL. fem. n. *recocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp009754905*. The type genome for the species is the GenBank assembly RS_GCF_009754905.1. The GC content of the type genome is 43.88 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Mucilaginibacter regifousia sp. nov.

Candidatus Mucilaginibacter regifousia (NL. fem. n. *regifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013149275*. The type genome for the species is the GenBank assembly RS_GCF_013149275.1. The GC content of the type genome is 42.76 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Mucilaginibacter resupitrix sp. nov.

Candidatus Mucilaginibacter resupitrix (NL. fem. n. *resupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp002403905*. The type genome for the species is the GenBank assembly GCA_002403905.1. The GC content of the type genome is 41.02 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Mucilaginibacter rubigentia sp. nov.

Candidatus Mucilaginibacter rubigentia (NL. fem. n. *rubigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903866915*. The type genome for the species is the GenBank assembly GCA_903866915.1. The GC content of the type genome is 43.07 %

and the genome length is 3.75 Mbp.

Description of *Candidatus* Mucilaginibacter scaccisca sp. nov.

Candidatus Mucilaginibacter scaccisca (NL. fem. n. *scaccisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013288465*. The type genome for the species is the GenBank assembly GCA_013288465.1. The GC content of the type genome is 41.73 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Mucilaginibacter semifibra sp. nov.

Candidatus Mucilaginibacter semifibra (NL. fem. n. *semifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013287375*. The type genome for the species is the GenBank assembly GCA_013287375.1. The GC content of the type genome is 40.44 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Mucilaginibacter telegatica sp. nov.

Candidatus Mucilaginibacter telegatica (NL. fem. n. *telegatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903893715*. The type genome for the species is the GenBank assembly GCA_903845845.1. The GC content of the type genome is 44.39 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Mucilaginibacter tomacousia sp. nov.

Candidatus Mucilaginibacter tomacousia (NL. fem. n. *tomacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp004054195*. The type genome for the species is the GenBank assembly RS_GCF_004054195.1. The GC content of the type genome is 44.76 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Mucilaginibacter turilibula sp. nov.

Candidatus Mucilaginibacter turilibula (NL. fem. n. *turilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp903863845*. The type genome for the species is the GenBank assembly GCA_903904675.1. The GC content of the type genome is 43.08 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Mucilaginibacter verificula sp. nov.

Candidatus Mucilaginibacter verificula (NL. fem. n. *verificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp014205845*. The type genome for the species is the GenBank assembly RS_GCF_014205845.1. The GC content of the type genome is 42.05 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Mucilaginibacter vicatitudo sp. nov.

Candidatus Mucilaginibacter vicatitudo (NL. fem. n. *vicatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013286235*. The type genome for the species is the GenBank assembly GCA_013286235.1. The GC content of the type genome is 45.83 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Mucilaginibacter videlimonia sp. nov.

Candidatus Mucilaginibacter videlimonia (NL. fem. n. *videlimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013286325*. The type genome for the species is the GenBank assembly GCA_013286325.1. The GC content of the type genome is 39.94 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Mucilaginibacter vinolitoga sp. nov.

Candidatus Mucilaginibacter vinolitoga (NL. fem. n. *vinolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp013288235*. The type genome for the species is the GenBank assembly GCA_013289285.1. The GC content of the type genome is 41.74 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Mucilaginibacter xenopitudo sp. nov.

Candidatus Mucilaginibacter xenopitudo (NL. fem. n. *xenopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucilaginibacter sp002288635*. The type genome for the species is the GenBank assembly RS_GCF_002288635.1. The GC content of the type genome is 43.81 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Mucinivorans repagigena sp. nov.

Candidatus Mucinivorans repagigena (NL. fem. n. *repagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mucinivorans sp002315675*. The type genome for the species is the GenBank assembly GCA_002315675.1. The GC content of the type genome is 39.13 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Mumia maxumifica sp. nov.

Candidatus Mumia maxumifica (NL. fem. n. *maxumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mumia sp014127285*. The type genome for the species is the GenBank assembly RS_GCF_011751845.1. The GC content of the type genome is 70.39 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Munifana adlacitudo sp. nov.

Candidatus Munifana adlacitudo (NL. fem. n. *adlacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11606 sp002699625*. The type genome for the species is the GenBank assembly GCA_002699625.1. The GC content of the type genome is 65.9 %

and the genome length is 2.44 Mbp.

Description of *Candidatus* Munifana gen. nov.

Candidatus Munifana (NL. fem. n. *Munifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11606*. The type species for the genus is *Candidatus* Munifana adlacitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Munifanaceae fam. nov.

Candidatus Munifanaceae (NL. fem. n. *Munifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11606.* The type genus for the taxon is *Candidatus* Munifana .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Munifana feficitia sp. nov.

Candidatus Munifana feficitia (NL. fem. n. *feficitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11606 sp002729125*. The type genome for the species is the GenBank assembly GCA_003444815.1. The GC content of the type genome is 65.18 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Munifana semilicella sp. nov.

Candidatus Munifana semilicella (NL. fem. n. *semilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11606 sp009937405*. The type genome for the species is the GenBank assembly GCA_009937115.1. The GC content of the type genome is 61.63 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Munifana tegumimonia sp. nov.

Candidatus Munifana tegumimonia (NL. fem. n. *tegumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11606 sp002694825*. The type genome for the species is the GenBank assembly GCA_002320305.1. The GC content of the type genome is 65.41 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Munifaria grallifica sp. nov.

Candidatus Munifaria grallifica (NL. fem. n. *grallifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2780 sp002352345*. The type genome for the species is the GenBank assembly GCA_002352345.1. The GC content of the type genome is 44.9 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Munifaria gen. nov.

Candidatus Munifaria (NL. fem. n. *Munifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2780*. The type species for the genus is *Candidatus* Munifaria grallifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2780*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifariaceae.

Description of *Candidatus* Munifariaceae fam. nov.

Candidatus Munifariaceae (NL. fem. n. *Munifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2780.* The type genus for the taxon is *Candidatus* Munifaria .

According to GTDB R06-RS202, this family belongs to the order *Methylococcales*.

Description of *Candidatus* Munifaria semilibula sp. nov.

Candidatus Munifaria semilibula (NL. fem. n. *semilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2780 sp003646305*. The type genome for the species is the GenBank assembly GCA_003646305.1. The GC content of the type genome is 45.8 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Munifella cohuritudo sp. nov.

Candidatus Munifella cohuritudo (NL. fem. n. *cohuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA931 sp002293615*. The type genome for the species is the GenBank assembly GCA_002293385.1. The GC content of the type genome is 51.54 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Munifella gen. nov.

Candidatus Munifella (NL. fem. n. *Munifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA931*. The type species for the genus is *Candidatus* Munifella cohuritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Munifella feculitudo sp. nov.

Candidatus Munifella feculitudo (NL. fem. n. *feculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA931 sp009786085*. The type genome for the species is the GenBank assembly GCA_009786135.1. The GC content of the type genome is 57.72 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Munifella rumifitudo sp. nov.

Candidatus Munifella rumifitudo (NL. fem. n. *rumifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA931 sp009786025*. The type genome for the species is the GenBank assembly GCA_009786025.1. The GC content of the type genome is 56.2 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Munifella vatilimonia sp. nov.

Candidatus Munifella vatilimonia (NL. fem. n. *vatilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA931 sp009778785*. The type genome for the species is the GenBank assembly GCA_009778785.1. The GC content of the type genome is 57.37 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Munifia feditigena sp. nov.

Candidatus Munifia feditigena (NL. fem. n. *feditigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-78166 sp004123195*. The type genome for the species is the GenBank assembly RS_GCF_004123195.1. The GC content of the type genome is 42.33 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Munifia gen. nov.

Candidatus Munifia (NL. fem. n. *Munifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-78166*. The type species for the genus is *Candidatus* Munifia feditigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAOX-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticellaceae.

Description of *Candidatus* Munifia sitelitrix sp. nov.

Candidatus Munifia sitelitrix (NL. fem. n. *sitelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-78166 sp004522215*. The type genome for the species is the GenBank assembly RS_GCF_004522215.1. The GC content of the type genome is 44.52 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Munifida pocilicula sp. nov.

Candidatus Munifida pocilicula (NL. fem. n. *pocilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSB01 sp011331325*. The type genome for the species is the GenBank assembly GCA_011331325.1. The GC content of the type genome is 63.33 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Munifida gen. nov.

Candidatus Munifida (NL. fem. n. *Munifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSSB01*. The type species for the genus is *Candidatus* Munifida pocilicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSSB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifidaceae.

Description of *Candidatus* Munifidaceae fam. nov.

Candidatus Munifidaceae (NL. fem. n. *Munifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSSB01.* The type genus for the taxon is *Candidatus* Munifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSSB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Munifidales.

Description of *Candidatus* Munifidales ord. nov.

Candidatus Munifidales (NL. fem. n. *Munifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DSSB01*. The type genus for the taxon is *Candidatus* Munifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Munifosa capudigena sp. nov.

Candidatus Munifosa capudigena (NL. fem. n. *capudigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-515 sp003155135*. The type genome for the species is the GenBank assembly GCA_003163095.1. The GC content of the type genome is 69.54 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Munifosa gen. nov.

Candidatus Munifosa (NL. fem. n. *Munifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-515*. The type species for the genus is *Candidatus* Munifosa capudigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Munifula immurentia sp. nov.

Candidatus Munifula immurentia (NL. fem. n. *immurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V1-33 sp003402705*. The type genome for the species is the GenBank assembly GCA_003402705.1. The GC content of the type genome is 63.31 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Munifula gen. nov.

Candidatus Munifula (NL. fem. n. *Munifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *V1-33*. The type species for the genus is *Candidatus* Munifula immurentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *V1-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifulaceae.

Description of *Candidatus* Munifulaceae fam. nov.

Candidatus Munifulaceae (NL. fem. n. *Munifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *V1-33.* The type genus for the taxon is *Candidatus* Munifula .

According to GTDB R06-RS202, this family belongs to the order *Verrucomicrobiales*.

Description of *Candidatus* Munimana prodritio sp. nov.

Candidatus Munimana prodritio (NL. fem. n. *prodritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIAN01 sp009691715*. The type genome for the species is the GenBank assembly GCA_009691715.1. The GC content of the type genome is 68.68 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Munimana gen. nov.

Candidatus Munimana (NL. fem. n. *Munimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIAN01*. The type species for the genus is *Candidatus* Munimana prodritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SIAN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimanaceae.

Description of *Candidatus* Munimanaceae fam. nov.

Candidatus Munimanaceae (NL. fem. n. *Munimanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SIAN01*. The type genus for the taxon is *Candidatus* Munimana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B15-G4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Maledanales.

Description of *Candidatus* Munimaria ulcisibula sp. nov.

Candidatus Munimaria ulcisibula (NL. fem. n. *ulcisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHT01 sp013151705*. The type genome for the species is the GenBank assembly GCA_013151705.1. The GC content of the type genome is 51.37 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Munimaria gen. nov.

Candidatus Munimaria (NL. fem. n. *Munimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHT01*. The type species for the genus is *Candidatus* Munimaria ulcisibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimariaceae.

Description of *Candidatus* Munimariaceae fam. nov.

Candidatus Munimariaceae (NL. fem. n. *Munimariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHT01*. The type genus for the taxon is *Candidatus* Munimaria .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Munimella excariforma sp. nov.

Candidatus Munimella excariforma (NL. fem. n. *excariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2717185 sp012103325*. The type genome for the species is the GenBank assembly GCA_012103325.1. The GC content of the type genome is 59.32 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Munimella gen. nov.

Candidatus Munimella (NL. fem. n. *Munimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717185*. The type species for the genus is *Candidatus* Munimella excariforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2717185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimellaceae.

Description of *Candidatus* Munimellaceae fam. nov.

Candidatus Munimellaceae (NL. fem. n. *Munimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2717185.* The type genus for the taxon is *Candidatus* Munimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decenellales.

Description of *Candidatus* Munimella regifilenta sp. nov.

Candidatus Munimella regifilenta (NL. fem. n. *regifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717185 sp002717185*. The type genome for the species is the GenBank assembly GCA_002717185.1. The GC content of the type genome is 55.07 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Munimia acrotitoga sp. nov.

Candidatus Munimia acrotitoga (NL. fem. n. *acrotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2289 sp002419445*. The type genome for the species is the GenBank assembly GCA_002419445.1. The GC content of the type genome is 32.94 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Munimia gen. nov.

Candidatus Munimia (NL. fem. n. *Munimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2289*. The type species for the genus is *Candidatus* Munimia acrotitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Munimia adnaribra sp. nov.

Candidatus Munimia adnaribra (NL. fem. n. *adnaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2289 sp002345425*. The type genome for the species is the GenBank assembly GCA_002345425.1. The GC content of the type genome is 31.52 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Munimia catabifica sp. nov.

Candidatus Munimia catabifica (NL. fem. n. *catabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2289 sp002419505*. The type genome for the species is the GenBank assembly GCA_002424895.1. The GC content of the type genome is 32.33 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Munimia exherentia sp. nov.

Candidatus Munimia exherentia (NL. fem. n. *exherentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2289 sp002839125*. The type genome for the species is the

GenBank assembly GCA_002839125.1. The GC content of the type genome is 31.77 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Munimia lubenatica sp. nov.

Candidatus Munimia lubenatica (NL. fem. n. *lubenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2289 sp002345505*. The type genome for the species is the GenBank assembly GCA_002345505.1. The GC content of the type genome is 31.66 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Munimida conibicella sp. nov.

Candidatus Munimida conibicella (NL. fem. n. *conibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGXB01 sp002838945*. The type genome for the species is the GenBank assembly GCA_002838945.1. The GC content of the type genome is 48.43 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Munimida gen. nov.

Candidatus Munimida (NL. fem. n. *Munimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGXB01*. The type species for the genus is *Candidatus* Munimida conibicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PGXB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimidaceae.

Description of *Candidatus* Munimidaceae fam. nov.

Candidatus Munimidaceae (NL. fem. n. *Munimidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PGXB01.* The type genus for the taxon is *Candidatus* Munimida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GN15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

order *Candidatus* Solacidales.

Description of *Candidatus* Munimida curacentia sp. nov.

Candidatus Munimida curacentia (NL. fem. n. *curacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGXB01 sp003641425*. The type genome for the species is the GenBank assembly GCA_011040955.1. The GC content of the type genome is 48.15 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Munimosa insalivita sp. nov.

Candidatus Munimosa insalivita (NL. fem. n. *insalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFT01 sp013203475*. The type genome for the species is the GenBank assembly GCA_013203475.1. The GC content of the type genome is 62.86 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Munimosa gen. nov.

Candidatus Munimosa (NL. fem. n. *Munimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYFT01*. The type species for the genus is *Candidatus* Munimosa insalivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCN-69-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democulaceae.

Description of *Candidatus* Munimosa rorificella sp. nov.

Candidatus Munimosa rorificella (NL. fem. n. *rorificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFT01 sp009694745*. The type genome for the species is the GenBank assembly GCA_009694745.1. The GC content of the type genome is 64.34 %

and the genome length is 2.79 Mbp.

Description of *Candidatus* Munimosa vereciforma sp. nov.

Candidatus Munimosa vereciforma (NL. fem. n. *vereciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFT01 sp005799825*. The type genome for the species is the GenBank assembly GCA_005793715.1. The GC content of the type genome is 63.76 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Munimula cisalimonas sp. nov.

Candidatus Munimula cisalimonas (NL. fem. n. *cisalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MMGLQ5-1 sp013155265*. The type genome for the species is the GenBank assembly RS_GCF_013155325.1. The GC content of the type genome is 35.88 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Munimula gen. nov.

Candidatus Munimula (NL. fem. n. *Munimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MMGLQ5-1*. The type species for the genus is *Candidatus* Munimula cisalimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Murelana capabitrix sp. nov.

Candidatus Murelana capabitrix (NL. fem. n. *capabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp902783235*. The type genome for the species is the GenBank assembly GCA_902783235.1. The GC content of the type genome is 42.34 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Murelana gen. nov.

Candidatus Murelana (NL. fem. n. *Murelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1394*. The type species for the genus is *Candidatus* Murelana capabitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Murelana desuritrix sp. nov.

Candidatus Murelana desuritrix (NL. fem. n. *desuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp900538575*. The type genome for the species is the GenBank assembly RS_GCF_900752225.1. The GC content of the type genome is 39.58 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Murelana insepitoga sp. nov.

Candidatus Murelana insepitoga (NL. fem. n. *insepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp902796865*. The type genome for the species is the GenBank assembly GCA_902796865.1. The GC content of the type genome is 39.71 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Murelana necubitura sp. nov.

Candidatus Murelana necubitura (NL. fem. n. *necubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp900066845*. The type genome for the species is the GenBank assembly RS_GCF_902362965.1. The GC content of the type genome is 37.01 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Murelana televatica sp. nov.

Candidatus Murelana televatica (NL. fem. n. *televatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp900554975*. The type genome for the species is the GenBank assembly RS_GCF_900759615.1. The GC content of the type genome is 39.28 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Murelana tiguricula sp. nov.

Candidatus Murelana tiguricula (NL. fem. n. *tiguricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1394 sp002305725*. The type genome for the species is the GenBank assembly GCA_002305725.1. The GC content of the type genome is 42.07 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Murelaria inrecisca sp. nov.

Candidatus Murelaria inrecisca (NL. fem. n. *inrecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXZC01 sp903923815*. The type genome for the species is the GenBank assembly GCA_903923815.1. The GC content of the type genome is 67.1 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Murelaria gen. nov.

Candidatus Murelaria (NL. fem. n. *Murelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXZC01*. The type species for the genus is *Candidatus* Murelaria inrecisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXZC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murelariaceae.

Description of *Candidatus* Murelariaceae fam. nov.

Candidatus Murelariaceae (NL. fem. n. *Murelariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAIXZC01*. The type genus for the taxon is *Candidatus* Murelaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIXZC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Murelariales.

Description of *Candidatus* Murelariales ord. nov.

Candidatus Murelariales (NL. fem. n. *Murelariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXZC01*. The type genus for the taxon is *Candidatus* Murelaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Murelella cohurilenta sp. nov.

Candidatus Murelella cohurilenta (NL. fem. n. *cohurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp002723075*. The type genome for the species is the GenBank assembly GCA_002690415.1. The GC content of the type genome is 41.8 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Murelella gen. nov.

Candidatus Murelella (NL. fem. n. *Murelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA724*. The type species for the genus is *Candidatus* Murelella cohurilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Murelella exindago sp. nov.

Candidatus Murelella exindago (NL. fem. n. *exindago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA724 sp902586905*. The type genome for the species is the GenBank assembly GCA_902586905.1. The GC content of the type genome is 39.53 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Murelella fatilessa sp. nov.

Candidatus Murelella fatilessa (NL. fem. n. *fatilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp902536935*. The type genome for the species is the GenBank assembly GCA_902536935.1. The GC content of the type genome is 39.12 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Murelella incucitio sp. nov.

Candidatus Murelella incucitio (NL. fem. n. *incucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp902619855*. The type genome for the species is the GenBank assembly GCA_902619855.1. The GC content of the type genome is 38.81 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Murelella insenousia sp. nov.

Candidatus Murelella insenousia (NL. fem. n. *insenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp902631125*. The type genome for the species is the GenBank assembly GCA_902631125.1. The GC content of the type genome is 38.15 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Murelella papavilenta sp. nov.

Candidatus Murelella papavilenta (NL. fem. n. *papavilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp002430545*. The type genome for the species is the GenBank assembly GCA_002430545.1. The GC content of the type genome is 39.75 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Murelella tetenessa sp. nov.

Candidatus Murelella tetenessa (NL. fem. n. *tetenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp002171575*. The type genome for the species is the GenBank assembly GCA_002171575.2. The GC content of the type genome is 42.24 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Murelella tetenicella sp. nov.

Candidatus Murelella tetenicella (NL. fem. n. *tetenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA724 sp902566635*. The type genome for the species is the GenBank assembly GCA_902566635.1. The GC content of the type genome is 38.41 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Murelia oppugilega sp. nov.

Candidatus Murelia oppugilega (NL. fem. n. *oppugilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J153 sp003693905*. The type genome for the species is the GenBank assembly GCA_003693905.1. The GC content of the type genome is 66.01 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Murelia gen. nov.

Candidatus Murelia (NL. fem. n. *Murelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J153*. The type species for the genus is *Candidatus* Murelia oppugilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J153*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mureliaceae.

Description of *Candidatus* Mureliaceae fam. nov.

Candidatus Mureliaceae (NL. fem. n. *Mureliaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J153.* The type genus for the taxon is *Candidatus* Murelia .

According to GTDB R06-RS202, this family belongs to the order *Kiloniellales*.

Description of *Candidatus* Murelida emortitia sp. nov.

Candidatus Murelida emortitia (NL. fem. n. *emortitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ARS1013 sp002690375*. The type genome for the species is the GenBank assembly GCA_002690375.1. The GC content of the type genome is 47.41 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Murelida gen. nov.

Candidatus Murelida (NL. fem. n. *Murelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ARS1013*. The type species for the genus is *Candidatus* Murelida emortitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ARS1013*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murelidaceae.

Description of *Candidatus* Murelidaceae fam. nov.

Candidatus Murelidaceae (NL. fem. n. *Murelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS1013.* The type genus for the taxon is *Candidatus* Murelida .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Murelosa nefaribula sp. nov.

Candidatus Murelosa nefaribula (NL. fem. n. *nefaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJPN01 sp903822545*. The type genome for the species is the GenBank assembly GCA_903883525.1. The GC content of the type genome is 55.02 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Murelosa gen. nov.

Candidatus Murelosa (NL. fem. n. *Murelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJPN01*. The type species for the genus is *Candidatus* Murelosa nefaribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Murelula adhosicella sp. nov.

Candidatus Murelula adhosicella (NL. fem. n. *adhosicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQY01 sp011362725*. The type genome for the species is the GenBank assembly GCA_011362725.1. The GC content of the type genome is 67.5 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Murelula gen. nov.

Candidatus Murelula (NL. fem. n. *Murelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSQY01*. The type species for the genus is *Candidatus* Murelula adhosicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSQY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murelulaceae.

Description of *Candidatus* Murelulaceae fam. nov.

Candidatus Murelulaceae (NL. fem. n. *Murelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSQY01*. The type genus for the taxon is *Candidatus* Murelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nefaridales.

Description of *Candidatus* Muribaculum adperago sp. nov.

Candidatus Muribaculum adperago (NL. fem. n. *adperago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp001701065*. The type genome for the species is the GenBank assembly GCA_001701065.1. The GC content of the type genome is 47.31 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Muribaculum coturatio sp. nov.

Candidatus Muribaculum coturatio (NL. fem. n. *coturatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp002492595*. The type genome for the species is the GenBank assembly GCA_002491405.1. The GC content of the type genome is 50.59 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Muribaculum cuferimonas sp. nov.

Candidatus Muribaculum cuferimonas (NL. fem. n. *cuferimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp002358615*. The type genome for the species is the GenBank assembly GCA_002358425.1. The GC content of the type genome is 48.59 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Muribaculum delacedo sp. nov.

Candidatus Muribaculum delacedo (NL. fem. n. *delacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp002473395*. The type genome for the species is the GenBank assembly RS_GCF_004801635.1. The GC content of the type genome is 45.65 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Muribaculum diponastra sp. nov.

Candidatus Muribaculum diponastra (NL. fem. n. *diponastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp003150235*. The type genome for the species is the GenBank assembly GCA_900542695.1. The GC content of the type genome is 48.48 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Muribaculum fecunitoga sp. nov.

Candidatus Muribaculum fecunitoga (NL. fem. n. *fecunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp001701195*. The type genome for the species is the GenBank assembly RS_GCF_004570975.1. The GC content of the type genome is 48.41 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Muribaculum ignosigena sp. nov.

Candidatus Muribaculum ignosigena (NL. fem. n. *ignosigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp009775095*. The type genome for the species is the GenBank assembly GCA_009775095.1. The GC content of the type genome is 48.74 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Muribaculum pinacentia sp. nov.

Candidatus Muribaculum pinacentia (NL. fem. n. *pinacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muribaculum sp009177195*. The type genome for the species is the GenBank assembly GCA_009177195.1. The GC content of the type genome is 49.49 %

and the genome length is 2.67 Mbp.

Description of *Candidatus* Muricauda acceratio sp. nov.

Candidatus Muricauda acceratio (NL. fem. n. *acceratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp009903685*. The type genome for the species is the GenBank assembly RS_GCF_009903685.1. The GC content of the type genome is 41.11 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Muricauda armigiforma sp. nov.

Candidatus Muricauda armigiforma (NL. fem. n. *armigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp004804315*. The type genome for the species is the GenBank assembly RS_GCF_004804315.1. The GC content of the type genome is 39.07 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Muricauda aruspousia sp. nov.

Candidatus Muricauda aruspousia (NL. fem. n. *aruspousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp008040165*. The type genome for the species is the GenBank assembly RS_GCF_008040165.1. The GC content of the type genome is 37.83 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Muricauda benifimonia sp. nov.

Candidatus Muricauda benifimonia (NL. fem. n. *benifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003269425*. The type genome for the species is the GenBank assembly RS_GCF_003269425.1. The GC content of the type genome is 38.07 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Muricauda cenaciforma sp. nov.

Candidatus Muricauda cenaciforma (NL. fem. n. *cenaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003382275*. The type genome for the species is the GenBank assembly RS_GCF_003382275.1. The GC content of the type genome is 40.71 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Muricauda cocoditoga sp. nov.

Candidatus Muricauda cocoditoga (NL. fem. n. *cocoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp002699205*. The type genome for the species is the GenBank assembly GCA_002699205.1. The GC content of the type genome is 41.4 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Muricauda dehonitia sp. nov.

Candidatus Muricauda dehonitia (NL. fem. n. *dehonitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003057865*. The type genome for the species is the GenBank assembly RS_GCF_003057865.1. The GC content of the type genome is 41.62 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Muricauda ducilax sp. nov.

Candidatus Muricauda ducilax (NL. fem. n. *ducilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003584165*. The type genome for the species is the GenBank assembly RS_GCF_008017345.1. The GC content of the type genome is 43.37 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Muricauda ecligedo sp. nov.

Candidatus Muricauda ecligedo (NL. fem. n. *ecligedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp004296335*. The type genome for the species is the GenBank assembly RS_GCF_004296335.1. The GC content of the type genome is 41.67 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Muricauda enigmousia sp. nov.

Candidatus Muricauda enigmousia (NL. fem. n. *enigmousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp011068285*. The type genome for the species is the GenBank assembly RS_GCF_011068285.1. The GC content of the type genome is 42.78 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Muricauda expalago sp. nov.

Candidatus Muricauda expalago (NL. fem. n. *expalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003385855*. The type genome for the species is the GenBank assembly RS_GCF_003385855.1. The GC content of the type genome is 43.81 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Muricauda exsusitica sp. nov.

Candidatus Muricauda exsusitica (NL. fem. n. *exsusitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp002813125*. The type genome for the species is the GenBank assembly RS_GCF_002813125.1. The GC content of the type genome is 40.29 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Muricauda genocitudo sp. nov.

Candidatus Muricauda genocitudo (NL. fem. n. *genocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp013911645*. The type genome for the species is the GenBank assembly GCA_013911645.1. The GC content of the type genome is 41.65 %

and the genome length is 3.98 Mbp.

Description of *Candidatus* Muricauda homuledo sp. nov.

Candidatus Muricauda homuledo (NL. fem. n. *homuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp001683915*. The type genome for the species is the GenBank assembly RS_GCF_001683915.1. The GC content of the type genome is 42.91 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single strain isolated from microbial consortium enriched at the cathode of a solar microbial fuel cell originally enriched from seawater collected near Rutgers; NJ".

Description of *Candidatus* Muricauda inaccedo sp. nov.

Candidatus Muricauda inaccedo (NL. fem. n. *inaccedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp013090115*. The type genome for the species is the GenBank assembly RS_GCF_013090115.1. The GC content of the type genome is 38.92 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Muricauda lugubilega sp. nov.

Candidatus Muricauda lugubilega (NL. fem. n. *lugubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp010468565*. The type genome for the species is the GenBank assembly RS_GCF_010468565.1. The GC content of the type genome is 41.75 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Muricauda minagastra sp. nov.

Candidatus Muricauda minagastra (NL. fem. n. *minagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003058265*. The type genome for the species is the GenBank assembly RS_GCF_003058265.1. The GC content of the type genome is 45.67 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Muricauda morigitura sp. nov.

Candidatus Muricauda morigitura (NL. fem. n. *morigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp010993855*. The type genome for the species is the GenBank assembly RS_GCF_010993855.1. The GC content of the type genome is 37.43 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Muricauda negotitura sp. nov.

Candidatus Muricauda negotitura (NL. fem. n. *negotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp002452975*. The type genome for the species is the GenBank assembly RS_GCF_003992595.1. The GC content of the type genome is 42.42 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Muricauda obfiriforma sp. nov.

Candidatus Muricauda obfiriforma (NL. fem. n. *obfiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp000745185*. The type genome for the species is the GenBank assembly RS_GCF_000745185.1. The GC content of the type genome is 42.03 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Muricauda papavicula sp. nov.

Candidatus Muricauda papavicula (NL. fem. n. *papavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp003973595*. The type genome for the species is the GenBank assembly GCA_003973595.1. The GC content of the type genome is 45.9 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Muricauda protredo sp. nov.

Candidatus Muricauda protredo (NL. fem. n. *protredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp013407935*. The type genome for the species is the GenBank assembly RS_GCF_013407935.1. The GC content of the type genome is 43.84 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Muricauda pudibiforma sp. nov.

Candidatus Muricauda pudibiforma (NL. fem. n. *pudibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp010500845*. The type genome for the species is the GenBank assembly RS_GCF_010500845.1. The GC content of the type genome is 42.93 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Muricauda reforisca sp. nov.

Candidatus Muricauda reforisca (NL. fem. n. *reforisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp010993815*. The type genome for the species is the GenBank assembly RS_GCF_010993815.1. The GC content of the type genome is 38.43 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Muricauda tabiticula sp. nov.

Candidatus Muricauda tabiticula (NL. fem. n. *tabiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp002167435*. The type genome for the species is the GenBank assembly GCA_002167435.2. The GC content of the type genome is 41.18 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Muricauda tabitousia sp. nov.

Candidatus Muricauda tabitousia (NL. fem. n. *tabitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Muricauda sp003584135*. The type genome for the species is the GenBank assembly RS_GCF_008017365.1. The GC content of the type genome is 43.38 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Muricauda vinulitrix sp. nov.

Candidatus Muricauda vinulitrix (NL. fem. n. *vinulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda sp002711825*. The type genome for the species is the GenBank assembly GCA_003513625.1. The GC content of the type genome is 41.51 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Muricauda inaspitica sp. nov.

Candidatus Muricauda inaspitica (NL. fem. n. *inaspitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricauda_A sp003712125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003712125.1. The GC content of the type genome is 41.95 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Muricomes derunetta sp. nov.

Candidatus Muricomes derunetta (NL. fem. n. *derunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricomes sp900604355*. The type genome for the species is the GenBank assembly RS_GCF_900764535.1. The GC content of the type genome is 44.39 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Muricomes eclipitudo sp. nov.

Candidatus Muricomes eclipitudo (NL. fem. n. *eclipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricomes sp013911065*. The type genome for the species is the GenBank assembly GCA_013911065.1. The GC content of the type genome is 42.11 %

and the genome length is 4.34 Mbp.

Description of *Candidatus* Muricomes rorariforma sp. nov.

Candidatus Muricomes rorariforma (NL. fem. n. *rorariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricomes sp001517425*. The type genome for the species is the GenBank assembly RS_GCF_001517425.1. The GC content of the type genome is 42.62 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Muricomes vireciforma sp. nov.

Candidatus Muricomes vireciforma (NL. fem. n. *vireciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muricomes sp000509105*. The type genome for the species is the GenBank assembly RS_GCF_902364045.1. The GC content of the type genome is 45.99 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Muriicola agricitia sp. nov.

Candidatus Muriicola agricitia (NL. fem. n. *agricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muriicola sp004139715*. The type genome for the species is the GenBank assembly RS_GCF_004139715.1. The GC content of the type genome is 42.43 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Muriicola depopitudo sp. nov.

Candidatus Muriicola depopitudo (NL. fem. n. *depopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muriicola sp013042255*. The type genome for the species is the GenBank assembly GCA_013043175.1. The GC content of the type genome is 42.64 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Muriicola inpinigena sp. nov.

Candidatus Muriicola inpinigena (NL. fem. n. *inpinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muriicola sp013042125*. The type genome for the species is the GenBank assembly GCA_013042125.1. The GC content of the type genome is 41.0 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Muriicola nefaritudo sp. nov.

Candidatus Muriicola nefaritudo (NL. fem. n. *nefaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Muriicola sp013042315*. The type genome for the species is the GenBank assembly GCA_013042315.1. The GC content of the type genome is 42.61 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Murilana malagessa sp. nov.

Candidatus Murilana malagessa (NL. fem. n. *malagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UWMA-0277 sp012960805*. The type genome for the species is the GenBank assembly GCA_012960805.1. The GC content of the type genome is 33.24 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Murilana gen. nov.

Candidatus Murilana (NL. fem. n. *Murilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UWMA-0277*. The type species for the genus is *Candidatus* Murilana malagessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Murilana rosacugo sp. nov.

Candidatus Murilana rosacugo (NL. fem. n. *rosacugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UWMA-0277 sp014384505*. The type genome for the species is the GenBank assembly GCA_014384505.1. The GC content of the type genome is 32.58 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Murilaria armicigena sp. nov.

Candidatus Murilaria armicigena (NL. fem. n. *armicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA738 sp002315975*. The type genome for the species is the GenBank assembly GCA_002315975.1. The GC content of the type genome is 58.3 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Murilaria gen. nov.

Candidatus Murilaria (NL. fem. n. *Murilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA738*. The type species for the genus is *Candidatus* Murilaria armicigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Murilaria cemenitia sp. nov.

Candidatus Murilaria cemenitia (NL. fem. n. *cemenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA738 sp900763675*. The type genome for the species is the GenBank assembly GCA_900763675.1. The GC content of the type genome is 60.93 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Murilaria cunabilenta sp. nov.

Candidatus Murilaria cunabilenta (NL. fem. n. *cunabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA738 sp003522945*. The type genome for the species is the GenBank assembly GCA_003522945.1. The GC content of the type genome is 59.79 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Murilaria domigitica sp. nov.

Candidatus Murilaria domigitica (NL. fem. n. *domigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA738 sp004557735*. The type genome for the species is the GenBank assembly GCA_004556665.1. The GC content of the type genome is 60.15 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Murilaria renavatica sp. nov.

Candidatus Murilaria renavatica (NL. fem. n. *renavatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA738 sp002404605*. The type genome for the species is the GenBank assembly GCA_002404605.1. The GC content of the type genome is 59.75 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Murilella bacifilega sp. nov.

Candidatus Murilella bacifilega (NL. fem. n. *bacifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-35-18 sp001771135*. The type genome for the species is the GenBank assembly GCA_001771155.1. The GC content of the type genome is 34.97 % and the genome length is 1.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Murilella gen. nov.

Candidatus Murilella (NL. fem. n. *Murilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-35-18*. The type species for the genus is *Candidatus* Murilella bacifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-35-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murilellaceae.

Description of *Candidatus* Murilellaceae fam. nov.

Candidatus Murilellaceae (NL. fem. n. *Murilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-35-18.* The type genus for the taxon is *Candidatus* Murilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CPR3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tolutellales.

Description of *Candidatus* Murilia abnepigena sp. nov.

Candidatus Murilia abnepigena (NL. fem. n. *abnepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-822 sp000432855*. The type genome for the species is the GenBank assembly GCA_000432855.1. The GC content of the type genome is 29.04 % and the genome length is 1.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Murilia gen. nov.

Candidatus Murilia (NL. fem. n. *Murilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-822*. The type species for the genus is *Candidatus* Murilia abnepigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Murilia artifitoga sp. nov.

Candidatus Murilia artifitoga (NL. fem. n. *artifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-822 sp902783265*. The type genome for the species is the GenBank assembly GCA_902783265.1. The GC content of the type genome is 28.66 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Murilia cerofugo sp. nov.

Candidatus Murilia cerofugo (NL. fem. n. *cerofugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-822 sp900546055*. The type genome for the species is the GenBank assembly GCA_900546055.1. The GC content of the type genome is 30.57 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Murilia exsisitudo sp. nov.

Candidatus Murilia exsisitudo (NL. fem. n. *exsisitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-822 sp902783895*. The type genome for the species is the GenBank assembly GCA_902783895.1. The GC content of the type genome is 27.2 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Murilia facunitica sp. nov.

Candidatus Murilia facunitica (NL. fem. n. *facunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-822 sp900318075*. The type genome for the species is the GenBank assembly GCA_900318075.1. The GC content of the type genome is 28.47 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Murilida derelitia sp. nov.

Candidatus Murilida derelitia (NL. fem. n. *derelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBU01 sp005239585*. The type genome for the species is the GenBank assembly GCA_005239585.1. The GC content of the type genome is 43.36 %

and the genome length is 2.54 Mbp.

Description of *Candidatus* Murilida gen. nov.

Candidatus Murilida (NL. fem. n. *Murilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBU01*. The type species for the genus is *Candidatus* Murilida derelitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murilidaceae.

Description of *Candidatus* Murilidaceae fam. nov.

Candidatus Murilidaceae (NL. fem. n. *Murilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBU01*. The type genus for the taxon is *Candidatus* Murilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *MHYJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetifosales.

Description of *Candidatus* Murilosa bonififorma sp. nov.

Candidatus Murilosa bonififorma (NL. fem. n. *bonififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1004 sp900761685*. The type genome for the species is the GenBank assembly RS_GCF_900761685.1. The GC content of the type genome is 52.29 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Murilosa gen. nov.

Candidatus Murilosa (NL. fem. n. *Murilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1004*. The type species for the genus is *Candidatus* Murilosa bonififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Murilosa cerucivita sp. nov.

Candidatus Murilosa cerucivita (NL. fem. n. *cerucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1004 sp900547645*. The type genome for the species is the GenBank assembly RS_GCF_900761755.1. The GC content of the type genome is 57.73 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Murilosa colopitura sp. nov.

Candidatus Murilosa colopitura (NL. fem. n. *colopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1004 sp900548845*. The type genome for the species is the GenBank assembly GCA_900548845.1. The GC content of the type genome is 58.79 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Murilosa legifedo sp. nov.

Candidatus Murilosa legifedo (NL. fem. n. *legifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1004 sp003343805*. The type genome for the species is the GenBank assembly GCA_003343805.1. The GC content of the type genome is 57.86 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Murilula negidibra sp. nov.

Candidatus Murilula negidibra (NL. fem. n. *negidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQJJ01 sp903872065*. The type genome for the species is the GenBank assembly GCA_903872065.1. The GC content of the type genome is 57.94 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Murilula gen. nov.

Candidatus Murilula (NL. fem. n. *Murilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQJJ01*. The type species for the genus is *Candidatus* Murilula negidibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Musulana invinibula sp. nov.

Candidatus Musulana invinibula (NL. fem. n. *invinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1253 sp900550065*. The type genome for the species is the GenBank assembly GCA_900550065.1. The GC content of the type genome is 49.85 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Musulana gen. nov.

Candidatus Musulana (NL. fem. n. *Musulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1253*. The type species for the genus is *Candidatus* Musulana invinibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1253*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulanaceae.

Description of *Candidatus* Musulanaceae fam. nov.

Candidatus Musulanaceae (NL. fem. n. *Musulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1253.* The type genus for the taxon is *Candidatus* Musulana .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales_A*.

Description of *Candidatus* Musularia manufax sp. nov.

Candidatus Musularia manufax (NL. fem. n. *manufax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABJBCQ01 sp903951595*. The type genome for the species is the GenBank assembly GCA_903951595.1. The GC content of the type genome is 57.85 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Musularia gen. nov.

Candidatus Musularia (NL. fem. n. *Musularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABJBCQ01*. The type species for the genus is *Candidatus* Musularia manufax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Musulella cerimimonia sp. nov.

Candidatus Musulella cerimimonia (NL. fem. n. *cerimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10185 sp000994815*. The type genome for the species is the GenBank assembly GCA_003485585.1. The GC content of the type genome is 44.09 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Musulella gen. nov.

Candidatus Musulella (NL. fem. n. *Musulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10185*. The type species for the genus is *Candidatus* Musulella cerimimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Musulellaceae fam. nov.

Candidatus Musulellaceae (NL. fem. n. *Musulellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10185.* The type genus for the taxon is *Candidatus* Musulella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA101185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deceniales.

Description of *Candidatus* Musulia purulimonas sp. nov.

Candidatus Musulia purulimonas (NL. fem. n. *purulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077539 sp013298625*. The type genome for the species is the GenBank assembly GCA_013298625.1. The GC content of the type genome is 69.2 % and the genome length is 9.81 Mbp.

Description of *Candidatus* Musulia gen. nov.

Candidatus Musulia (NL. fem. n. *Musulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077539*. The type species for the genus is *Candidatus* Musulia purulimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musuliaceae.

Description of *Candidatus* Musuliaceae fam. nov.

Candidatus Musuliaceae (NL. fem. n. *Musuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077539.* The type genus for the taxon is *Candidatus* Musulia .

According to GTDB R06-RS202, this family belongs to the order *Polyangiales*.

Description of *Candidatus* Musulia vocamimonia sp. nov.

Candidatus Musulia vocamimonia (NL. fem. n. *vocamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077539 sp001465015*. The type genome for the species is the GenBank assembly GCA_001465015.1. The GC content of the type genome is 67.9 % and the genome length is 9.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Musulida relenousia sp. nov.

Candidatus Musulida relenousia (NL. fem. n. *relenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCM01 sp013288105*. The type genome for the species is the GenBank assembly GCA_013288105.1. The GC content of the type genome is 42.82 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Musulida gen. nov.

Candidatus Musulida (NL. fem. n. *Musulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCM01*. The type species for the genus is *Candidatus* Musulida relenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAKFR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucanaceae.

Description of *Candidatus* Musulosa milipibula sp. nov.

Candidatus Musulosa milipibula (NL. fem. n. *milipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J088 sp003695505*. The type genome for the species is the GenBank assembly GCA_003695505.1. The GC content of the type genome is 62.4 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Musulosa gen. nov.

Candidatus Musulosa (NL. fem. n. *Musulosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J088*. The type species for the genus is *Candidatus* Musulosa milipibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulosaceae.

Description of *Candidatus* Musulosaceae fam. nov.

Candidatus Musulosaceae (NL. fem. n. *Musulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J088.* The type genus for the taxon is *Candidatus* Musulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *J088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Musulosales.

Description of *Candidatus* Musulosales ord. nov.

Candidatus Musulosales (NL. fem. n. *Musulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J088.* The type genus for the taxon is *Candidatus* Musulosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *J088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Musulosae.

Description of *Candidatus* Musulosae class. nov.

Candidatus Musulosae (NL. fem. n. *c__Musulosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J088.* The type genus for the taxon is *Candidatus* Musulosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *J088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Musulosota.

Description of *Candidatus* Musulosota phyl. nov.

Candidatus Musulosota (NL. fem. n. *Musulosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J088.* The type genus for the taxon is *Candidatus* Musulosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Musulula coturetta sp. nov.

Candidatus Musulula coturetta (NL. fem. n. *coturetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITLU01 sp903893315*. The type genome for the species is the GenBank assembly GCA_903893315.1. The GC content of the type genome is 64.13 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Musulula gen. nov.

Candidatus Musulula (NL. fem. n. *Musulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITLU01*. The type species for the genus is *Candidatus* Musulula coturetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuculaceae.

Description of *Candidatus* Mutabana regifetta sp. nov.

Candidatus Mutabana regifetta (NL. fem. n. *regifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5701 sp002420015*. The type genome for the species is the GenBank assembly GCA_003529165.1. The GC content of the type genome is 53.78 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Mutabana gen. nov.

Candidatus Mutabana (NL. fem. n. *Mutabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5701*. The type species for the genus is *Candidatus* Mutabana regifetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mutabaria desepiforma sp. nov.

Candidatus Mutabaria desepiforma (NL. fem. n. *desepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2804 sp902782145*. The type genome for the species is the GenBank assembly GCA_902782145.1. The GC content of the type genome is 58.31 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Mutabaria gen. nov.

Candidatus Mutabaria (NL. fem. n. *Mutabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2804*. The type species for the genus is *Candidatus* Mutabaria desepiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mutabaria ensigatio sp. nov.

Candidatus Mutabaria ensigatio (NL. fem. n. *ensigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2804 sp902796095*. The type genome for the species is the GenBank assembly GCA_902796095.1. The GC content of the type genome is 44.67 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Mutabaria excucibra sp. nov.

Candidatus Mutabaria excucibra (NL. fem. n. *excucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2804 sp902761645*. The type genome for the species is the GenBank assembly GCA_902761645.1. The GC content of the type genome is 40.49 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Mutabaria refacousia sp. nov.

Candidatus Mutabaria refacousia (NL. fem. n. *refacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2804 sp900319705*. The type genome for the species is the GenBank assembly GCA_900319705.1. The GC content of the type genome is 43.61 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Mutabaria viragatica sp. nov.

Candidatus Mutabaria viragatica (NL. fem. n. *viragatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2804 sp900768635*. The type genome for the species is the GenBank assembly RS_GCF_900768635.1. The GC content of the type genome is 41.11 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Mutabia absorimonas sp. nov.

Candidatus Mutabia absorimonas (NL. fem. n. *absorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-36-10 sp000991205*. The type genome for the species is the GenBank assembly GCA_000991205.1. The GC content of the type genome is 36.24 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Mutabia gen. nov.

Candidatus Mutabia (NL. fem. n. *Mutabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-36-10*. The type species for the genus is *Candidatus* Mutabia absorimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Mutabiaceae fam. nov.

Candidatus Mutabiaceae (NL. fem. n. *Mutabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-36-10.* The type genus for the taxon is *Candidatus* Mutabia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugivellales.

Description of *Candidatus* Mutabia denunitudo sp. nov.

Candidatus Mutabia denunitudo (NL. fem. n. *denunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-36-10 sp903855135*. The type genome for the species is the GenBank assembly GCA_903841015.1. The GC content of the type genome is 35.6 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Mutabida indirentia sp. nov.

Candidatus Mutabida indirentia (NL. fem. n. *indirentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS52 sp001577215*. The type genome for the species is the GenBank assembly GCA_001577215.1. The GC content of the type genome is 29.31 % and the genome length is 1.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilm from deap sea brine pool".

Description of *Candidatus* Mutabida gen. nov.

Candidatus Mutabida (NL. fem. n. *Mutabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TCS52*. The type species for the genus is *Candidatus* Mutabida

indirentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS52*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabidaceae.

Description of *Candidatus* Mutabidaceae fam. nov.

Candidatus Mutabidaceae (NL. fem. n. *Mutabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TCS52.* The type genus for the taxon is *Candidatus* Mutabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *AB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tomogidales.

Description of *Candidatus* Mutabosa celamicella sp. nov.

Candidatus Mutabosa celamicella (NL. fem. n. *celamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZDL01 sp903931735*. The type genome for the species is the GenBank assembly GCA_903907775.1. The GC content of the type genome is 60.16 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Mutabosa gen. nov.

Candidatus Mutabosa (NL. fem. n. *Mutabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZDL01*. The type species for the genus is *Candidatus* Mutabosa celamicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Mutabosa defunitrix sp. nov.

Candidatus Mutabosa defunitrix (NL. fem. n. *defunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIZDL01 sp903856295*. The type genome for the species is the GenBank assembly GCA_903928145.1. The GC content of the type genome is 65.15 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Mutabula rubicago sp. nov.

Candidatus Mutabula rubicago (NL. fem. n. *rubicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs120 sp005799265*. The type genome for the species is the GenBank assembly GCA_005808465.1. The GC content of the type genome is 60.56 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Mutabula gen. nov.

Candidatus Mutabula (NL. fem. n. *Mutabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs120*. The type species for the genus is *Candidatus* Mutabula rubicago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Myalgana peribitio sp. nov.

Candidatus Myalgana peribitio (NL. fem. n. *peribitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHN01 sp009783235*. The type genome for the species is the GenBank assembly GCA_009783235.1. The GC content of the type genome is 45.84 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Myalgana gen. nov.

Candidatus Myalgana (NL. fem. n. *Myalgana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHN01*. The type species for the genus is *Candidatus* Myalgana peribitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Myalgaria cibarousia sp. nov.

Candidatus Myalgaria cibarousia (NL. fem. n. *cibarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRZ01 sp007571105*. The type genome for the species is the GenBank assembly GCA_007571105.1. The GC content of the type genome is 56.55 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Myalgaria gen. nov.

Candidatus Myalgaria (NL. fem. n. *Myalgaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKRZ01*. The type species for the genus is *Candidatus* Myalgaria cibarousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Myalgella bipalimonas sp. nov.

Candidatus Myalgella bipalimonas (NL. fem. n. *bipalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULO01 sp012840345*. The type genome for the species is the GenBank assembly GCA_012840345.1. The GC content of the type genome is 57.36 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Myalgella gen. nov.

Candidatus Myalgella (NL. fem. n. *Myalgella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULO01*. The type species for the genus is *Candidatus* Myalgella bipalimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatosaceae.

Description of *Candidatus* Myalgosa inmodax sp. nov.

Candidatus Myalgosa inmodax (NL. fem. n. *inmodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSA01 sp013214665*. The type genome for the species is the GenBank assembly GCA_013214665.1. The GC content of the type genome is 57.82 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Myalgosa gen. nov.

Candidatus Myalgosa (NL. fem. n. *Myalgosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSA01*. The type species for the genus is *Candidatus* Myalgosa inmodax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Myalgula illepitas sp. nov.

Candidatus Myalgula illepitas (NL. fem. n. *illepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10873 sp900753645*. The type genome for the species is the GenBank assembly RS_GCF_900753645.1. The GC content of the type genome is 29.03 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Myalgula gen. nov.

Candidatus Myalgula (NL. fem. n. *Myalgula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10873*. The type species for the genus is *Candidatus* Myalgula illepitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Mycetocola cimitetta sp. nov.

Candidatus Mycetocola cimitetta (NL. fem. n. *cimitetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycetocola_A sp003065425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003065425.1. The GC content of the type genome is 64.88 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Mycetohabitans catecifica sp. nov.

Candidatus Mycetohabitans catecifica (NL. fem. n. *catecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycetohabitans sp900155955*. The type genome for the species is the GenBank assembly RS_GCF_900156195.1. The GC content of the type genome is 60.56 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Mycoavidus exsomatio sp. nov.

Candidatus Mycoavidus exsomatio (NL. fem. n. *exsomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoavidus sp014218255*. The type genome for the species is the GenBank assembly RS_GCF_014218255.1. The GC content of the type genome is 48.93 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Mycobacterium abligimonia sp. nov.

Candidatus Mycobacterium abligimonia (NL. fem. n. *abligimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667585*. The type genome for the species is the GenBank assembly RS_GCF_001667585.1. The GC content of the type genome is 67.42 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Mycobacterium acrocigena sp. nov.

Candidatus Mycobacterium acrocigena (NL. fem. n. *acrocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004298145*. The type genome for the species is the GenBank assembly GCA_004298145.1. The GC content of the type genome is 66.66 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Mycobacterium adbelifica sp. nov.

Candidatus Mycobacterium adbelifica (NL. fem. n. *adbelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp013404075*. The type genome for the species is the GenBank assembly RS_GCF_013404075.1. The GC content of the type genome is 66.29 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Mycobacterium adessatica sp. nov.

Candidatus Mycobacterium adessatica (NL. fem. n. *adessatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667265*. The type genome for the species is the GenBank assembly RS_GCF_001667265.1. The GC content of the type genome is 68.03 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Mycobacterium adnunibula sp. nov.

Candidatus Mycobacterium adnunibula (NL. fem. n. *adnunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001426545*. The type genome for the species is the GenBank assembly RS_GCF_001426545.1. The GC content of the type genome is 67.43 % and the genome length is 6.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mycobacterium adordousia sp. nov.

Candidatus Mycobacterium adordousia (NL. fem. n. *adordousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001499995*. The type genome for the species is the

GenBank assembly RS_GCF_001499995.1. The GC content of the type genome is 69.01 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Mycobacterium advinatica sp. nov.

Candidatus Mycobacterium advinatica (NL. fem. n. *advinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001668575*. The type genome for the species is the GenBank assembly RS_GCF_001668575.1. The GC content of the type genome is 67.01 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Mycobacterium affanitas sp. nov.

Candidatus Mycobacterium affanitas (NL. fem. n. *affanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp011334635*. The type genome for the species is the GenBank assembly GCA_011334635.1. The GC content of the type genome is 66.3 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Mycobacterium affirimonas sp. nov.

Candidatus Mycobacterium affirimonas (NL. fem. n. *affirimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001672815*. The type genome for the species is the GenBank assembly RS_GCF_001672815.1. The GC content of the type genome is 67.78 % and the genome length is 6.53 Mbp.

Description of *Candidatus* Mycobacterium agraventia sp. nov.

Candidatus Mycobacterium agraventia (NL. fem. n. *agraventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp014202335*. The type genome for the species is the GenBank assembly RS_GCF_014202335.1. The GC content of the type genome is 66.12 % and the genome length is 8.62 Mbp.

Description of *Candidatus* Mycobacterium agripibra sp. nov.

Candidatus Mycobacterium agripibra (NL. fem. n. *agripibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001673555*. The type genome for the species is the GenBank assembly RS_GCF_001673555.1. The GC content of the type genome is 66.61 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Mycobacterium almucugo sp. nov.

Candidatus Mycobacterium almucugo (NL. fem. n. *almucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp011694515*. The type genome for the species is the GenBank assembly RS_GCF_011694515.1. The GC content of the type genome is 67.4 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Mycobacterium ambidousia sp. nov.

Candidatus Mycobacterium ambidousia (NL. fem. n. *ambidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001510415*. The type genome for the species is the GenBank assembly GCA_001510415.1. The GC content of the type genome is 67.63 % and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Capian Sea".

Description of *Candidatus* Mycobacterium anaclilega sp. nov.

Candidatus Mycobacterium anaclilega (NL. fem. n. *anaclilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665575*. The type genome for the species is the GenBank assembly RS_GCF_001665575.1. The GC content of the type genome is 68.72 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Mycobacterium anancax sp. nov.

Candidatus Mycobacterium anancax (NL. fem. n. *anancax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp902826815*. The type genome for the species is the GenBank assembly GCA_902826815.1. The GC content of the type genome is 65.8 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Mycobacterium ardifessa sp. nov.

Candidatus Mycobacterium ardifessa (NL. fem. n. *ardifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665395*. The type genome for the species is the GenBank assembly RS_GCF_001665395.1. The GC content of the type genome is 65.57 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Mycobacterium argimentia sp. nov.

Candidatus Mycobacterium argimentia (NL. fem. n. *argimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003402475*. The type genome for the species is the GenBank assembly RS_GCF_003402475.1. The GC content of the type genome is 66.83 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Mycobacterium ascelitica sp. nov.

Candidatus Mycobacterium ascelitica (NL. fem. n. *ascelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp900240945*. The type genome for the species is the GenBank assembly RS_GCF_900240945.1. The GC content of the type genome is 66.35 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Mycobacterium atrusimonia sp. nov.

Candidatus Mycobacterium atrusimonia (NL. fem. n. *atrusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004762045*. The type genome for the species is the GenBank assembly RS_GCF_004762045.1. The GC content of the type genome is 66.43

% and the genome length is 6.61 Mbp.

Description of *Candidatus* Mycobacterium bicaletta sp. nov.

Candidatus Mycobacterium bicaletta (NL. fem. n. *bicaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000426065*. The type genome for the species is the GenBank assembly RS_GCF_000426065.1. The GC content of the type genome is 66.28 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Mycobacterium bicalitrix sp. nov.

Candidatus Mycobacterium bicalitrix (NL. fem. n. *bicalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp009729205*. The type genome for the species is the GenBank assembly RS_GCF_009729205.1. The GC content of the type genome is 64.03 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Mycobacterium bipalimonia sp. nov.

Candidatus Mycobacterium bipalimonia (NL. fem. n. *bipalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp009729095*. The type genome for the species is the GenBank assembly RS_GCF_009729215.1. The GC content of the type genome is 66.23 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Mycobacterium bipatago sp. nov.

Candidatus Mycobacterium bipatago (NL. fem. n. *bipatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004363795*. The type genome for the species is the GenBank assembly RS_GCF_004363795.1. The GC content of the type genome is 66.35 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Mycobacterium bipatigena sp. nov.

Candidatus Mycobacterium bipatigena (NL. fem. n. *bipatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001499855*. The type genome for the species is the GenBank assembly RS_GCF_001499855.1. The GC content of the type genome is 66.92 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Mycobacterium bonitastra sp. nov.

Candidatus Mycobacterium bonitastra (NL. fem. n. *bonitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002887815*. The type genome for the species is the GenBank assembly RS_GCF_002887815.1. The GC content of the type genome is 66.72 % and the genome length is 6.23 Mbp.

Description of *Candidatus* Mycobacterium bovicatio sp. nov.

Candidatus Mycobacterium bovicatio (NL. fem. n. *bovicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003165155*. The type genome for the species is the GenBank assembly GCA_003158025.1. The GC content of the type genome is 64.97 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Mycobacterium cepurimonia sp. nov.

Candidatus Mycobacterium cepurimonia (NL. fem. n. *cepurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667735*. The type genome for the species is the GenBank assembly RS_GCF_001666955.1. The GC content of the type genome is 68.39 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Mycobacterium cibaretta sp. nov.

Candidatus Mycobacterium cibaretta (NL. fem. n. *cibaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001668625*. The type genome for the species is the GenBank assembly RS_GCF_001668625.1. The GC content of the type genome is 70.47 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Mycobacterium cotenitica sp. nov.

Candidatus Mycobacterium cotenitica (NL. fem. n. *cotenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp005787665*. The type genome for the species is the GenBank assembly GCA_005787665.1. The GC content of the type genome is 68.73 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Mycobacterium cuferitrix sp. nov.

Candidatus Mycobacterium cuferitrix (NL. fem. n. *cuferitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002013465*. The type genome for the species is the GenBank assembly RS_GCF_004367265.1. The GC content of the type genome is 64.22 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Mycobacterium decatitudo sp. nov.

Candidatus Mycobacterium decatitudo (NL. fem. n. *decatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp903877095*. The type genome for the species is the GenBank assembly GCA_903847345.1. The GC content of the type genome is 67.64 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Mycobacterium decucitoga sp. nov.

Candidatus Mycobacterium decucitoga (NL. fem. n. *decucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp903884065*. The type genome for the species is the GenBank assembly GCA_903884065.1. The GC content of the type genome is 67.74 %

and the genome length is 4.09 Mbp.

Description of *Candidatus* Mycobacterium dehonitio sp. nov.

Candidatus Mycobacterium dehonitio (NL. fem. n. *dehonitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002946335*. The type genome for the species is the GenBank assembly RS_GCF_010725485.1. The GC content of the type genome is 68.39 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Mycobacterium deparimonas sp. nov.

Candidatus Mycobacterium deparimonas (NL. fem. n. *deparimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001668725*. The type genome for the species is the GenBank assembly RS_GCF_001668725.1. The GC content of the type genome is 68.93 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Mycobacterium desacago sp. nov.

Candidatus Mycobacterium desacago (NL. fem. n. *desacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665685*. The type genome for the species is the GenBank assembly RS_GCF_001665685.1. The GC content of the type genome is 66.33 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Mycobacterium desomatio sp. nov.

Candidatus Mycobacterium desomatio (NL. fem. n. *desomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp009729415*. The type genome for the species is the GenBank assembly RS_GCF_009729295.1. The GC content of the type genome is 65.46 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Mycobacterium desoribra sp. nov.

Candidatus Mycobacterium desoribra (NL. fem. n. *desoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001666835*. The type genome for the species is the GenBank assembly RS_GCF_001666835.1. The GC content of the type genome is 67.69 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Mycobacterium detepicella sp. nov.

Candidatus Mycobacterium detepicella (NL. fem. n. *detepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp903927745*. The type genome for the species is the GenBank assembly GCA_903927745.1. The GC content of the type genome is 68.36 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Mycobacterium didacessa sp. nov.

Candidatus Mycobacterium didacessa (NL. fem. n. *didacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665605*. The type genome for the species is the GenBank assembly RS_GCF_001665605.1. The GC content of the type genome is 67.47 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Mycobacterium dilogilega sp. nov.

Candidatus Mycobacterium dilogilega (NL. fem. n. *dilogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001666755*. The type genome for the species is the GenBank assembly RS_GCF_001672685.1. The GC content of the type genome is 69.81 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Mycobacterium diluventia sp. nov.

Candidatus Mycobacterium diluventia (NL. fem. n. *diluventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000373905*. The type genome for the species is the GenBank assembly RS_GCF_000373905.1. The GC content of the type genome is 65.63 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Mycobacterium dimidousia sp. nov.

Candidatus Mycobacterium dimidousia (NL. fem. n. *dimidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002043095*. The type genome for the species is the GenBank assembly RS_GCF_002043095.1. The GC content of the type genome is 67.23 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Mycobacterium domipisca sp. nov.

Candidatus Mycobacterium domipisca (NL. fem. n. *domipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665875*. The type genome for the species is the GenBank assembly RS_GCF_001665875.1. The GC content of the type genome is 66.36 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Mycobacterium ecligisca sp. nov.

Candidatus Mycobacterium ecligisca (NL. fem. n. *ecligisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001905655*. The type genome for the species is the GenBank assembly RS_GCF_001905655.1. The GC content of the type genome is 66.77 % and the genome length is 5.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "activated sludge".

Description of *Candidatus* Mycobacterium ecnepilenta sp. nov.

Candidatus Mycobacterium ecnepilenta (NL. fem. n. *ecnepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001545925*. The type genome for the species is the

GenBank assembly RS_GCF_001545925.1. The GC content of the type genome is 68.23 % and the genome length is 6.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "abdominal cerebrospinal fluid pseudocyst".

Description of *Candidatus* Mycobacterium effarastra sp. nov.

Candidatus Mycobacterium effarastra (NL. fem. n. *effarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp903862565*. The type genome for the species is the GenBank assembly GCA_903862565.1. The GC content of the type genome is 66.95 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Mycobacterium effinitrix sp. nov.

Candidatus Mycobacterium effinitrix (NL. fem. n. *effinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008329605*. The type genome for the species is the GenBank assembly RS_GCF_008329605.1. The GC content of the type genome is 66.46 % and the genome length is 7.27 Mbp.

Description of *Candidatus* Mycobacterium elastedo sp. nov.

Candidatus Mycobacterium elastedo (NL. fem. n. *elastedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001672915*. The type genome for the species is the GenBank assembly RS_GCF_001672915.1. The GC content of the type genome is 68.43 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Mycobacterium energitica sp. nov.

Candidatus Mycobacterium energitica (NL. fem. n. *energitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp902652685*. The type genome for the species is the GenBank assembly RS_GCF_902652685.1. The GC content of the type genome is 69.33 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Mycobacterium epogdimonia sp. nov.

Candidatus Mycobacterium epogdimonia (NL. fem. n. *epogdimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001021385*. The type genome for the species is the GenBank assembly RS_GCF_001021385.1. The GC content of the type genome is 66.35 % and the genome length is 6.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "PAH contaminated soil".

Description of *Candidatus* Mycobacterium esculitia sp. nov.

Candidatus Mycobacterium esculitia (NL. fem. n. *esculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008709575*. The type genome for the species is the GenBank assembly GCA_008709575.1. The GC content of the type genome is 67.25 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Mycobacterium exaggimonia sp. nov.

Candidatus Mycobacterium exaggimonia (NL. fem. n. *exaggimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000620625*. The type genome for the species is the GenBank assembly RS_GCF_000620625.1. The GC content of the type genome is 66.84 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Mycobacterium excanitura sp. nov.

Candidatus Mycobacterium excanitura (NL. fem. n. *excanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665295*. The type genome for the species is the GenBank assembly RS_GCF_001665295.1. The GC content of the type genome is 68.05 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Mycobacterium exceritudo sp. nov.

Candidatus Mycobacterium exceritudo (NL. fem. n. *exceritudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667185*. The type genome for the species is the GenBank assembly RS_GCF_001667185.1. The GC content of the type genome is 68.47 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Mycobacterium excetibula sp. nov.

Candidatus Mycobacterium excetibula (NL. fem. n. *excetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002838065*. The type genome for the species is the GenBank assembly RS_GCF_002838065.1. The GC content of the type genome is 66.51 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Mycobacterium exforitia sp. nov.

Candidatus Mycobacterium exforitia (NL. fem. n. *exforitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp013449725*. The type genome for the species is the GenBank assembly RS_GCF_013449725.1. The GC content of the type genome is 63.84 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Mycobacterium exorbibra sp. nov.

Candidatus Mycobacterium exorbibra (NL. fem. n. *exorbibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001954135*. The type genome for the species is the GenBank assembly RS_GCF_001954135.1. The GC content of the type genome is 66.31 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Mycobacterium exsufax sp. nov.

Candidatus Mycobacterium exsufax (NL. fem. n. *exsufax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667315*. The type genome for the species is the GenBank assembly RS_GCF_001667315.1. The GC content of the type genome is 67.27 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Mycobacterium fecunimonas sp. nov.

Candidatus Mycobacterium fecunimonas (NL. fem. n. *fecunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665535*. The type genome for the species is the GenBank assembly RS_GCF_001666865.1. The GC content of the type genome is 67.22 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Mycobacterium fetulax sp. nov.

Candidatus Mycobacterium fetulax (NL. fem. n. *fetulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001886515*. The type genome for the species is the GenBank assembly RS_GCF_002335685.1. The GC content of the type genome is 66.46 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Mycobacterium fetulilega sp. nov.

Candidatus Mycobacterium fetulilega (NL. fem. n. *fetulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667075*. The type genome for the species is the GenBank assembly RS_GCF_001667075.1. The GC content of the type genome is 67.63 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Mycobacterium filifitrix sp. nov.

Candidatus Mycobacterium filifitrix (NL. fem. n. *filifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000328565*. The type genome for the species is the GenBank assembly RS_GCF_000328565.1. The GC content of the type genome is 65.14 % and the genome length is 7.22 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "human smegma".

Description of *Candidatus* Mycobacterium fragmitoga sp. nov.

Candidatus Mycobacterium fragmitoga (NL. fem. n. *fragmitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003719305*. The type genome for the species is the GenBank assembly RS_GCF_003719305.1. The GC content of the type genome is 65.82 % and the genome length is 6.96 Mbp.

Description of *Candidatus* Mycobacterium hegumax sp. nov.

Candidatus Mycobacterium hegumax (NL. fem. n. *hegumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001500025*. The type genome for the species is the GenBank assembly RS_GCF_001500025.1. The GC content of the type genome is 67.12 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Mycobacterium hibisedo sp. nov.

Candidatus Mycobacterium hibisedo (NL. fem. n. *hibisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001644575*. The type genome for the species is the GenBank assembly RS_GCF_001644575.1. The GC content of the type genome is 67.4 % and the genome length is 6.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Mycobacterium homogisca sp. nov.

Candidatus Mycobacterium homogisca (NL. fem. n. *homogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001673155*. The type genome for the species is the GenBank assembly RS_GCF_001673155.1. The GC content of the type genome is 66.23 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Mycobacterium idcirimonia sp. nov.

Candidatus Mycobacterium idcirimonia (NL. fem. n. *idcirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667035*. The type genome for the species is the GenBank assembly RS_GCF_001667035.1. The GC content of the type genome is 67.52 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Mycobacterium immusitio sp. nov.

Candidatus Mycobacterium immusitio (NL. fem. n. *immusitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp005222675*. The type genome for the species is the GenBank assembly RS_GCF_005222675.1. The GC content of the type genome is 66.89 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Mycobacterium inambitrix sp. nov.

Candidatus Mycobacterium inambitrix (NL. fem. n. *inambitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp005789055*. The type genome for the species is the GenBank assembly GCA_005789055.1. The GC content of the type genome is 66.26 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Mycobacterium inargitrix sp. nov.

Candidatus Mycobacterium inargitrix (NL. fem. n. *inargitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008329905*. The type genome for the species is the GenBank assembly RS_GCF_008329905.1. The GC content of the type genome is 66.62 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Mycobacterium inbelitia sp. nov.

Candidatus Mycobacterium inbelitia (NL. fem. n. *inbelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008329585*. The type genome for the species is the GenBank assembly RS_GCF_008329585.1. The GC content of the type genome is 66.89 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Mycobacterium incenessa sp. nov.

Candidatus Mycobacterium incenessa (NL. fem. n. *incenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667775*. The type genome for the species is the GenBank assembly RS_GCF_001667775.1. The GC content of the type genome is 67.37 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Mycobacterium incocicella sp. nov.

Candidatus Mycobacterium incocicella (NL. fem. n. *incocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002723835*. The type genome for the species is the GenBank assembly RS_GCF_002723835.1. The GC content of the type genome is 67.64 % and the genome length is 6.53 Mbp.

Description of *Candidatus* Mycobacterium indidiforma sp. nov.

Candidatus Mycobacterium indidiforma (NL. fem. n. *indidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003284965*. The type genome for the species is the GenBank assembly RS_GCF_003284965.1. The GC content of the type genome is 66.66 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Mycobacterium infenago sp. nov.

Candidatus Mycobacterium infenago (NL. fem. n. *infenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp007096635*. The type genome for the species is the GenBank assembly RS_GCF_007096635.1. The GC content of the type genome is 68.06

% and the genome length is 5.78 Mbp.

Description of *Candidatus* Mycobacterium infisitica sp. nov.

Candidatus Mycobacterium infisitica (NL. fem. n. *infisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001673405*. The type genome for the species is the GenBank assembly RS_GCF_001673405.1. The GC content of the type genome is 65.86 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Mycobacterium inlepitrix sp. nov.

Candidatus Mycobacterium inlepitrix (NL. fem. n. *inlepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002863225*. The type genome for the species is the GenBank assembly GCA_002863225.1. The GC content of the type genome is 66.06 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Mycobacterium inmodatio sp. nov.

Candidatus Mycobacterium inmodatio (NL. fem. n. *inmodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003987775*. The type genome for the species is the GenBank assembly GCA_003987775.1. The GC content of the type genome is 66.9 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Mycobacterium inpuritia sp. nov.

Candidatus Mycobacterium inpuritia (NL. fem. n. *inpuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667925*. The type genome for the species is the GenBank assembly RS_GCF_001667925.1. The GC content of the type genome is 66.06 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Mycobacterium inredivita sp. nov.

Candidatus Mycobacterium inredivita (NL. fem. n. *inredivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp009729075*. The type genome for the species is the GenBank assembly RS_GCF_009729075.1. The GC content of the type genome is 66.44 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Mycobacterium invetatio sp. nov.

Candidatus Mycobacterium invetatio (NL. fem. n. *invetatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp900078375*. The type genome for the species is the GenBank assembly GCA_900078375.1. The GC content of the type genome is 66.22 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Mycobacterium irrevugo sp. nov.

Candidatus Mycobacterium irrevugo (NL. fem. n. *irrevugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008329565*. The type genome for the species is the GenBank assembly RS_GCF_008329565.1. The GC content of the type genome is 66.11 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Mycobacterium laculibula sp. nov.

Candidatus Mycobacterium laculibula (NL. fem. n. *laculibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001672975*. The type genome for the species is the GenBank assembly RS_GCF_001672975.1. The GC content of the type genome is 65.87 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Mycobacterium lavacibula sp. nov.

Candidatus Mycobacterium lavacibula (NL. fem. n. *lavacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667015*. The type genome for the species is the GenBank assembly RS_GCF_001667015.1. The GC content of the type genome is 68.85 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Mycobacterium linigimonas sp. nov.

Candidatus Mycobacterium linigimonas (NL. fem. n. *linigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667275*. The type genome for the species is the GenBank assembly RS_GCF_001666915.1. The GC content of the type genome is 68.82 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Mycobacterium lucericula sp. nov.

Candidatus Mycobacterium lucericula (NL. fem. n. *lucericula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000455205*. The type genome for the species is the GenBank assembly RS_GCF_001672675.1. The GC content of the type genome is 68.23 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Mycobacterium molecilenta sp. nov.

Candidatus Mycobacterium molecilenta (NL. fem. n. *molecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667505*. The type genome for the species is the GenBank assembly RS_GCF_001667505.1. The GC content of the type genome is 66.16 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Mycobacterium monocifica sp. nov.

Candidatus Mycobacterium monocifica (NL. fem. n. *monocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp008329535*. The type genome for the species is the GenBank assembly RS_GCF_008329535.1. The GC content of the type genome is 68.76

% and the genome length is 6.7 Mbp.

Description of *Candidatus* Mycobacterium novilifica sp. nov.

Candidatus Mycobacterium novilifica (NL. fem. n. *novilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp903911165*. The type genome for the species is the GenBank assembly GCA_903911165.1. The GC content of the type genome is 66.18 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Mycobacterium oblivessa sp. nov.

Candidatus Mycobacterium oblivessa (NL. fem. n. *oblivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001500125*. The type genome for the species is the GenBank assembly RS_GCF_001500125.1. The GC content of the type genome is 69.21 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Mycobacterium obtenentia sp. nov.

Candidatus Mycobacterium obtenentia (NL. fem. n. *obtenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001672895*. The type genome for the species is the GenBank assembly RS_GCF_001672895.1. The GC content of the type genome is 67.44 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Mycobacterium obtoritrix sp. nov.

Candidatus Mycobacterium obtoritrix (NL. fem. n. *obtoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001984215*. The type genome for the species is the GenBank assembly RS_GCF_001984215.1. The GC content of the type genome is 66.06 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Mycobacterium optabitio sp. nov.

Candidatus Mycobacterium optabitio (NL. fem. n. *optabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667145*. The type genome for the species is the GenBank assembly RS_GCF_001667145.1. The GC content of the type genome is 66.77 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Mycobacterium ossifitica sp. nov.

Candidatus Mycobacterium ossifitica (NL. fem. n. *ossifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001428895*. The type genome for the species is the GenBank assembly RS_GCF_001428895.1. The GC content of the type genome is 67.2 % and the genome length is 6.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Mycobacterium paraliforma sp. nov.

Candidatus Mycobacterium paraliforma (NL. fem. n. *paraliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001954195*. The type genome for the species is the GenBank assembly RS_GCF_001954195.1. The GC content of the type genome is 67.28 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Mycobacterium peribax sp. nov.

Candidatus Mycobacterium peribax (NL. fem. n. *peribax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001494595*. The type genome for the species is the GenBank assembly RS_GCF_001494595.1. The GC content of the type genome is 67.54 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Mycobacterium refinilega sp. nov.

Candidatus Mycobacterium refinilega (NL. fem. n. *refinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001499905*. The type genome for the species is the GenBank assembly RS_GCF_001499905.1. The GC content of the type genome is 66.78 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Mycobacterium relapiforma sp. nov.

Candidatus Mycobacterium relapiforma (NL. fem. n. *relapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004570325*. The type genome for the species is the GenBank assembly RS_GCF_004570325.1. The GC content of the type genome is 69.92 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Mycobacterium repepimonas sp. nov.

Candidatus Mycobacterium repepimonas (NL. fem. n. *repepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001954275*. The type genome for the species is the GenBank assembly RS_GCF_001954045.1. The GC content of the type genome is 67.12 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Mycobacterium resupivita sp. nov.

Candidatus Mycobacterium resupivita (NL. fem. n. *resupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001665255*. The type genome for the species is the GenBank assembly RS_GCF_001665255.1. The GC content of the type genome is 65.79 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Mycobacterium robigedo sp. nov.

Candidatus Mycobacterium robigedo (NL. fem. n. *robigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001667115*. The type genome for the species is the GenBank assembly RS_GCF_001667115.1. The GC content of the type genome is 65.6

% and the genome length is 5.53 Mbp.

Description of *Candidatus* Mycobacterium rosacigena sp. nov.

Candidatus Mycobacterium rosacigena (NL. fem. n. *rosacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001668615*. The type genome for the species is the GenBank assembly RS_GCF_001668615.1. The GC content of the type genome is 66.1 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Mycobacterium rudicatio sp. nov.

Candidatus Mycobacterium rudicatio (NL. fem. n. *rudicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002013375*. The type genome for the species is the GenBank assembly RS_GCF_002013545.1. The GC content of the type genome is 64.29 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Mycobacterium rumifugo sp. nov.

Candidatus Mycobacterium rumifugo (NL. fem. n. *rumifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001499965*. The type genome for the species is the GenBank assembly RS_GCF_001499965.1. The GC content of the type genome is 68.64 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Mycobacterium rutabitio sp. nov.

Candidatus Mycobacterium rutabitio (NL. fem. n. *rutabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp007714185*. The type genome for the species is the GenBank assembly RS_GCF_007714185.1. The GC content of the type genome is 68.68 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Mycobacterium satacitoga sp. nov.

Candidatus Mycobacterium satacitoga (NL. fem. n. *satacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp002013415*. The type genome for the species is the GenBank assembly RS_GCF_002013785.1. The GC content of the type genome is 64.2 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Mycobacterium scorbastra sp. nov.

Candidatus Mycobacterium scorbastra (NL. fem. n. *scorbastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp011620645*. The type genome for the species is the GenBank assembly GCA_011620645.1. The GC content of the type genome is 66.47 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Mycobacterium solifitoga sp. nov.

Candidatus Mycobacterium solifitoga (NL. fem. n. *solifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001673535*. The type genome for the species is the GenBank assembly RS_GCF_001673535.1. The GC content of the type genome is 68.85 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Mycobacterium soliventia sp. nov.

Candidatus Mycobacterium soliventia (NL. fem. n. *soliventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001500065*. The type genome for the species is the GenBank assembly RS_GCF_001500065.1. The GC content of the type genome is 67.02 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Mycobacterium tirocastra sp. nov.

Candidatus Mycobacterium tirocastra (NL. fem. n. *tirocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp003053865*. The type genome for the species is the GenBank assembly RS_GCF_004345925.1. The GC content of the type genome is 66.25 % and the genome length is 6.91 Mbp.

Description of *Candidatus* Mycobacterium tolutigena sp. nov.

Candidatus Mycobacterium tolutigena (NL. fem. n. *tolutigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000455125*. The type genome for the species is the GenBank assembly RS_GCF_000455125.1. The GC content of the type genome is 67.66 % and the genome length is 4.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum sample from patient with suspected TB".

Description of *Candidatus* Mycobacterium tolutitrix sp. nov.

Candidatus Mycobacterium tolutitrix (NL. fem. n. *tolutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004362315*. The type genome for the species is the GenBank assembly RS_GCF_014195025.1. The GC content of the type genome is 66.4 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Mycobacterium utrolibra sp. nov.

Candidatus Mycobacterium utrolibra (NL. fem. n. *utrolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp004745805*. The type genome for the species is the GenBank assembly RS_GCF_004745805.1. The GC content of the type genome is 66.74 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Mycobacterium vehicago sp. nov.

Candidatus Mycobacterium vehicago (NL. fem. n. *vehicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Mycobacterium sp001665235*. The type genome for the species is the GenBank assembly RS_GCF_001665235.1. The GC content of the type genome is 66.34 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Mycobacterium vilitatio sp. nov.

Candidatus Mycobacterium vilitatio (NL. fem. n. *vilitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp000382405*. The type genome for the species is the GenBank assembly RS_GCF_000382405.1. The GC content of the type genome is 65.64 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Mycobacterium virecitura sp. nov.

Candidatus Mycobacterium virecitura (NL. fem. n. *virecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp900240975*. The type genome for the species is the GenBank assembly RS_GCF_001668695.1. The GC content of the type genome is 68.33 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Mycobacterium vocamisca sp. nov.

Candidatus Mycobacterium vocamisca (NL. fem. n. *vocamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp001953975*. The type genome for the species is the GenBank assembly RS_GCF_001666875.1. The GC content of the type genome is 66.36 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Mycobacterium volucatica sp. nov.

Candidatus Mycobacterium volucatica (NL. fem. n. *volucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycobacterium sp011745145*. The type genome for the species is the GenBank assembly RS_GCF_011745145.1. The GC content of the type genome is 66.09 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Mycoplana ceromilenta sp. nov.

Candidatus Mycoplana ceromilenta (NL. fem. n. *ceromilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplana sp900469965*. The type genome for the species is the GenBank assembly GCA_900466295.1. The GC content of the type genome is 66.28 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Mycoplana fetutimonas sp. nov.

Candidatus Mycoplana fetutimonas (NL. fem. n. *fetutimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplana sp013378445*. The type genome for the species is the GenBank assembly RS_GCF_013378445.1. The GC content of the type genome is 63.08 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Mycoplasma ambacessa sp. nov.

Candidatus Mycoplasma ambacessa (NL. fem. n. *ambacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasma sp001199495*. The type genome for the species is the GenBank assembly RS_GCF_001199495.1. The GC content of the type genome is 25.39 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tissue culture".

Description of *Candidatus* Mycoplasma obtesilega sp. nov.

Candidatus Mycoplasma obtesilega (NL. fem. n. *obtesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasma_K sp013215715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013215715.1. The GC content of the type genome is 28.62 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Mycoplasmopsis adgubisca sp. nov.

Candidatus Mycoplasmopsis adgubisca (NL. fem. n. *adgubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasmopsis sp013008635*. The type genome for the species is the GenBank assembly RS_GCF_013008635.1. The GC content of the type genome is 30.09 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Mycoplasmopsis demulitudo sp. nov.

Candidatus Mycoplasmopsis demulitudo (NL. fem. n. *demulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasmopsis_A sp009792315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009792315.1. The GC content of the type genome is 25.49 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Mycoplasmopsis hexamitia sp. nov.

Candidatus Mycoplasmopsis hexamitia (NL. fem. n. *hexamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasmopsis_A sp014352955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014352955.1. The GC content of the type genome is 28.73 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Mycoplasmopsis lenimugo sp. nov.

Candidatus Mycoplasmopsis lenimugo (NL. fem. n. *lenimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Mycoplasmopsis_A sp013348745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_013348745.1. The GC content of the type genome is 26.53 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Myroides dedigicula sp. nov.

Candidatus Myroides dedigicula (NL. fem. n. *dedigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp013874595*. The type genome for the species is the GenBank assembly RS_GCF_011007495.1. The GC content of the type genome is 32.16 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Myroides domigedo sp. nov.

Candidatus Myroides domigedo (NL. fem. n. *domigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp004151275*. The type genome for the species is the GenBank assembly RS_GCF_004151275.1. The GC content of the type genome is 34.61 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Myroides intenetta sp. nov.

Candidatus Myroides intenetta (NL. fem. n. *intenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp014145665*. The type genome for the species is the GenBank assembly RS_GCF_014145665.1. The GC content of the type genome is 37.59 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Myroides malagitas sp. nov.

Candidatus Myroides malagitas (NL. fem. n. *malagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp002286775*. The type genome for the species is the GenBank assembly RS_GCF_002286775.1. The GC content of the type genome is 34.3 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Myroides masocessa sp. nov.

Candidatus Myroides masocessa (NL. fem. n. *masocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp013389595*. The type genome for the species is the GenBank assembly RS_GCF_013389595.1. The GC content of the type genome is 31.21 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Myroides nitelicula sp. nov.

Candidatus Myroides nitelicula (NL. fem. n. *nitelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp014145635*. The type genome for the species is the GenBank assembly RS_GCF_014145635.1. The GC content of the type genome is 35.67 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Myroides recomousia sp. nov.

Candidatus Myroides recomousia (NL. fem. n. *recomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp009711045*. The type genome for the species is the GenBank assembly RS_GCF_009711045.1. The GC content of the type genome is 33.98 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Myroides revecicula sp. nov.

Candidatus Myroides revecicula (NL. fem. n. *revecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp008629655*. The type genome for the species is the GenBank assembly RS_GCF_008629655.1. The GC content of the type genome is 34.45 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Myroides rubigedo sp. nov.

Candidatus Myroides rubigedo (NL. fem. n. *rubigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp009792295*. The type genome for the species is the GenBank assembly RS_GCF_009792295.1. The GC content of the type genome is 36.47 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Myroides scammousia sp. nov.

Candidatus Myroides scammousia (NL. fem. n. *scammousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp002360925*. The type genome for the species is the GenBank assembly GCA_002360925.1. The GC content of the type genome is 33.07 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Myroides xeramibula sp. nov.

Candidatus Myroides xeramibula (NL. fem. n. *xeramibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myroides sp002320285*. The type genome for the species is the GenBank assembly GCA_002320285.1. The GC content of the type genome is 37.33 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Myxococcus bipalessa sp. nov.

Candidatus Myxococcus bipalessa (NL. fem. n. *bipalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp010894405*. The type genome for the species is the GenBank assembly RS_GCF_010894405.1. The GC content of the type genome is 70.2 % and the genome length is 13.43 Mbp.

Description of *Candidatus* Myxococcus catapitio sp. nov.

Candidatus Myxococcus catapitio (NL. fem. n. *catapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Myxococcus sp014656495*. The type genome for the species is the GenBank assembly GCA_014656495.1. The GC content of the type genome is 70.06 % and the genome length is 9.01 Mbp.

Description of *Candidatus* Myxococcus cibicetta sp. nov.

Candidatus Myxococcus cibicetta (NL. fem. n. *cibicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp010894455*. The type genome for the species is the GenBank assembly RS_GCF_010894455.1. The GC content of the type genome is 68.92 % and the genome length is 11.39 Mbp.

Description of *Candidatus* Myxococcus dicimitio sp. nov.

Candidatus Myxococcus dicimitio (NL. fem. n. *dicimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp013372585*. The type genome for the species is the GenBank assembly RS_GCF_013372605.1. The GC content of the type genome is 70.01 % and the genome length is 8.8 Mbp.

Description of *Candidatus* Myxococcus semapitas sp. nov.

Candidatus Myxococcus semapitas (NL. fem. n. *semapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp010998615*. The type genome for the species is the GenBank assembly GCA_006519755.1. The GC content of the type genome is 68.88 % and the genome length is 9.05 Mbp.

Description of *Candidatus* Myxococcus semipitrix sp. nov.

Candidatus Myxococcus semipitrix (NL. fem. n. *semipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp010894435*. The type genome for the species is the GenBank assembly RS_GCF_010894435.1. The GC content of the type genome is 70.3 % and the genome length is 12.67 Mbp.

Description of *Candidatus* Myxococcus sifunetta sp. nov.

Candidatus Myxococcus sifunetta (NL. fem. n. *sifunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxococcus sp013336725*. The type genome for the species is the GenBank assembly RS_GCF_013336705.1. The GC content of the type genome is 68.9 % and the genome length is 11.45 Mbp.

Description of *Candidatus* Myxosarcina dilibivita sp. nov.

Candidatus Myxosarcina dilibivita (NL. fem. n. *dilibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Myxosarcina sp000756305*. The type genome for the species is the GenBank assembly RS_GCF_000756305.1. The GC content of the type genome is 40.1 % and the genome length is 7.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coral reef".

Description of *Candidatus* Naasia aggenedo sp. nov.

Candidatus Naasia aggenedo (NL. fem. n. *aggenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Naasia sp003097495*. The type genome for the species is the GenBank assembly RS_GCF_003097495.1. The GC content of the type genome is 68.64 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Nakamurella cerofitas sp. nov.

Candidatus Nakamurella cerofitas (NL. fem. n. *cerofitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nakamurella sp013002705*. The type genome for the species is the GenBank assembly RS_GCF_013002705.1. The GC content of the type genome is 69.5 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Nakamurella detepimonia sp. nov.

Candidatus Nakamurella detepimonia (NL. fem. n. *detepimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nakamurella sp014303395*. The type genome for the species is the GenBank assembly RS_GCF_014303395.1. The GC content of the type genome is 67.94 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Nakamurella dicimago sp. nov.

Candidatus Nakamurella dicimago (NL. fem. n. *dicimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nakamurella sp009707545*. The type genome for the species is the GenBank assembly RS_GCF_009707545.1. The GC content of the type genome is 71.3 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Nakamurella elasticella sp. nov.

Candidatus Nakamurella elasticella (NL. fem. n. *elasticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nakamurella sp003860405*. The type genome for the species is the GenBank assembly RS_GCF_003860405.1. The GC content of the type genome is 61.55 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Nakamurella spastentia sp. nov.

Candidatus Nakamurella spastentia (NL. fem. n. *spastentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nakamurella sp001897425*. The type genome for the species is the GenBank assembly GCA_001897425.1. The GC content of the type genome is 68.62 % and the genome length is 4.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Nannocystis artolatica sp. nov.

Candidatus Nannocystis artolatica (NL. fem. n. *artolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nannocystis sp013812955*. The type genome for the species is the GenBank assembly GCA_013812955.1. The GC content of the type genome is 69.93 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Nanopelagicus cibicigena sp. nov.

Candidatus Nanopelagicus cibicigena (NL. fem. n. *cibicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp005793655*. The type genome for the species is the GenBank assembly GCA_005793655.1. The GC content of the type genome is 42.03 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Nanopelagicus cineficella sp. nov.

Candidatus Nanopelagicus cineficella (NL. fem. n. *cineficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009698515*. The type genome for the species is the GenBank assembly GCA_009697785.1. The GC content of the type genome is 41.53 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Nanopelagicus citipitura sp. nov.

Candidatus Nanopelagicus citipitura (NL. fem. n. *citipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp903897475*. The type genome for the species is the GenBank assembly GCA_903840365.1. The GC content of the type genome is 40.12 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Nanopelagicus colipessa sp. nov.

Candidatus Nanopelagicus colipessa (NL. fem. n. *colipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp000294575*. The type genome for the species is the GenBank assembly GCA_000294575.1. The GC content of the type genome is 41.69 %

and the genome length is 1.16 Mbp.

Description of *Candidatus* Nanopelagicus decatifica sp. nov.

Candidatus Nanopelagicus decatifica (NL. fem. n. *decatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009700155*. The type genome for the species is the GenBank assembly GCA_009698855.1. The GC content of the type genome is 39.94 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Nanopelagicus denorigena sp. nov.

Candidatus Nanopelagicus denorigena (NL. fem. n. *denorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009705675*. The type genome for the species is the GenBank assembly GCA_009705675.1. The GC content of the type genome is 40.71 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Nanopelagicus domabitio sp. nov.

Candidatus Nanopelagicus domabitio (NL. fem. n. *domabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009702465*. The type genome for the species is the GenBank assembly GCA_009702465.1. The GC content of the type genome is 43.27 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Nanopelagicus immemibula sp. nov.

Candidatus Nanopelagicus immemibula (NL. fem. n. *immemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp000378865*. The type genome for the species is the GenBank assembly GCA_000378865.1. The GC content of the type genome is 41.4 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Nanopelagicus inturax sp. nov.

Candidatus Nanopelagicus inturax (NL. fem. n. *inturax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp000383815*. The type genome for the species is the GenBank assembly GCA_000383815.1. The GC content of the type genome is 42.16 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Nanopelagicus melopicella sp. nov.

Candidatus Nanopelagicus melopicella (NL. fem. n. *melopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp003569185*. The type genome for the species is the GenBank assembly GCA_003569185.1. The GC content of the type genome is 42.12 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Nanopelagicus necopitoga sp. nov.

Candidatus Nanopelagicus necopitoga (NL. fem. n. *necopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp001437855*. The type genome for the species is the GenBank assembly GCA_009704875.1. The GC content of the type genome is 40.71 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Nanopelagicus omnivatio sp. nov.

Candidatus Nanopelagicus omnivatio (NL. fem. n. *omnivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp903892335*. The type genome for the species is the GenBank assembly GCA_903892335.1. The GC content of the type genome is 42.45 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Nanopelagicus refinimonas sp. nov.

Candidatus Nanopelagicus refinimonas (NL. fem. n. *refinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009691185*. The type genome for the species is the GenBank assembly GCA_009691185.1. The GC content of the type genome is 42.14 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Nanopelagicus rudecitura sp. nov.

Candidatus Nanopelagicus rudecitura (NL. fem. n. *rudecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp010030895*. The type genome for the species is the GenBank assembly GCA_010025195.1. The GC content of the type genome is 40.43 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Nanopelagicus sonipilenta sp. nov.

Candidatus Nanopelagicus sonipilenta (NL. fem. n. *sonipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nanopelagicus sp009704285*. The type genome for the species is the GenBank assembly GCA_009704285.1. The GC content of the type genome is 42.19 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Nardonella adluvimonas sp. nov.

Candidatus Nardonella adluvimonas (NL. fem. n. *adluvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nardonella sp004296475*. The type genome for the species is the GenBank assembly RS_GCF_004296475.1. The GC content of the type genome is 17.74 % and the genome length is 0.23 Mbp.

Description of *Candidatus* Nardonella colepetta sp. nov.

Candidatus Nardonella colepetta (NL. fem. n. *colepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nardonella sp004296515*. The type genome for the species is the GenBank assembly RS_GCF_004296515.1. The GC content of the type genome is 17.4

% and the genome length is 0.23 Mbp.

Description of *Candidatus* Nardonella delucitas sp. nov.

Candidatus Nardonella delucitas (NL. fem. n. *delucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nardonella sp004296535*. The type genome for the species is the GenBank assembly RS_GCF_004296535.1. The GC content of the type genome is 16.16 % and the genome length is 0.22 Mbp.

Description of *Candidatus* Navicana deparitica sp. nov.

Candidatus Navicana deparitica (NL. fem. n. *deparitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-20-40-13 sp002774285*. The type genome for the species is the GenBank assembly GCA_002774285.1. The GC content of the type genome is 39.83 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Navicana gen. nov.

Candidatus Navicana (NL. fem. n. *Navicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-20-40-13*. The type species for the genus is *Candidatus* Navicana deparitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-20-40-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navicanaceae.

Description of *Candidatus* Navicanaceae fam. nov.

Candidatus Navicanaceae (NL. fem. n. *Navicanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-20-40-13.* The type genus for the taxon is *Candidatus* Navicana .

According to the original version of GTDB R06-RS202, this family belongs to the order *0-14-0-20-40-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Navicanales.

Description of *Candidatus* Navicanales ord. nov.

Candidatus Navicanales (NL. fem. n. *Navicanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-20-40-13*. The type genus for the taxon is *Candidatus* Navicana .

According to the original version of GTDB R06-RS202, this family belongs to the class *WWE3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Veridulae.

Description of *Candidatus* Navicaria duricicula sp. nov.

Candidatus Navicaria duricicula (NL. fem. n. *duricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZWU01 sp903936775*. The type genome for the species is the GenBank assembly GCA_903932825.1. The GC content of the type genome is 61.56 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Navicaria gen. nov.

Candidatus Navicaria (NL. fem. n. *Navicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZWU01*. The type species for the genus is *Candidatus* Navicaria duricicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *V1-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifulaceae.

Description of *Candidatus* Navicia tenilessa sp. nov.

Candidatus Navicia tenilessa (NL. fem. n. *tenilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-48-16 sp001823155*. The type genome for the species is the GenBank assembly GCA_001825005.1. The GC content of the type genome is 48.4 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2

conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Navicia gen. nov.

Candidatus Navicia (NL. fem. n. *Navicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-48-16*. The type species for the genus is *Candidatus* Navicia tenilessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Navicida hibisicula sp. nov.

Candidatus Navicida hibisicula (NL. fem. n. *hibisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-34-220 sp001780285*. The type genome for the species is the GenBank assembly GCA_001778325.1. The GC content of the type genome is 34.27 % and the genome length is 1.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Navicida gen. nov.

Candidatus Navicida (NL. fem. n. *Navicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-34-220*. The type species for the genus is *Candidatus* Navicida hibisicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12075*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenociaceae.

Description of *Candidatus* Navicosa conifibula sp. nov.

Candidatus Navicosa conifibula (NL. fem. n. *conifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOYC01 sp903862425*. The type genome for the species is the GenBank assembly GCA_903862425.1. The GC content of the type genome is 66.02 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Navicosa gen. nov.

Candidatus Navicosa (NL. fem. n. *Navicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOYC01*. The type species for the genus is *Candidatus* Navicosa conifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Navicosa verifetta sp. nov.

Candidatus Navicosa verifetta (NL. fem. n. *verifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOYC01 sp903837135*. The type genome for the species is the GenBank assembly GCA_903882015.1. The GC content of the type genome is 68.75 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Navifana oscilatio sp. nov.

Candidatus Navifana oscilatio (NL. fem. n. *oscilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B64-G9 sp003647095*. The type genome for the species is the GenBank assembly GCA_003647095.1. The GC content of the type genome is 66.4 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Navifana gen. nov.

Candidatus Navifana (NL. fem. n. *Navifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B64-G9*. The type species for the genus is *Candidatus* Navifana oscilatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

B64-G9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifanaceae.

Description of *Candidatus* Navifanaceae fam. nov.

Candidatus Navifanaceae (NL. fem. n. *Navifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B64-G9.* The type genus for the taxon is *Candidatus* Navifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B64-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Navifanales.

Description of *Candidatus* Navifanales ord. nov.

Candidatus Navifanales (NL. fem. n. *Navifanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B64-G9.* The type genus for the taxon is *Candidatus* Navifana .

According to the original version of GTDB R06-RS202, this family belongs to the class *B64-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Navifanae.

Description of *Candidatus* Navifanae class. nov.

Candidatus Navifanae (NL. fem. n. *c__Navifanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B64-G9.* The type genus for the taxon is *Candidatus* Navifana .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Navifaria bipinigena sp. nov.

Candidatus Navifaria bipinigena (NL. fem. n. *bipinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUXY01 sp009659955*. The type genome for the species is the GenBank assembly GCA_009659955.1. The GC content of the type genome is 43.83 %

and the genome length is 1.32 Mbp.

Description of *Candidatus* Navifaria gen. nov.

Candidatus Navifaria (NL. fem. n. *Navifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUXY01*. The type species for the genus is *Candidatus* Navifaria bipinigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Navifella intesentia sp. nov.

Candidatus Navifella intesentia (NL. fem. n. *intesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN12 sp004366195*. The type genome for the species is the GenBank assembly GCA_004366195.1. The GC content of the type genome is 73.01 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Navifella gen. nov.

Candidatus Navifella (NL. fem. n. *Navifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN12*. The type species for the genus is *Candidatus* Navifella intesentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifellaceae.

Description of *Candidatus* Navifellaceae fam. nov.

Candidatus Navifellaceae (NL. fem. n. *Navifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN12.* The type genus for the taxon is *Candidatus* Navifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Bisacosales.

Description of *Candidatus* Navifella viripitio sp. nov.

Candidatus Navifella viripitio (NL. fem. n. *viripitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN12 sp002898915*. The type genome for the species is the GenBank assembly GCA_002898915.1. The GC content of the type genome is 73.27 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Navifia regificula sp. nov.

Candidatus Navifia regificula (NL. fem. n. *regificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1326 sp003157295*. The type genome for the species is the GenBank assembly GCA_003154175.1. The GC content of the type genome is 44.35 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Navifia gen. nov.

Candidatus Navifia (NL. fem. n. *Navifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1326*. The type species for the genus is *Candidatus* Navifia regificula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11712*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Faticariaceae.

Description of *Candidatus* Navifida cotenitrix sp. nov.

Candidatus Navifida cotenitrix (NL. fem. n. *cotenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6919 sp002450905*. The type genome for the species is the GenBank assembly GCA_002450905.1. The GC content of the type genome is 33.13 %

and the genome length is 3.57 Mbp.

Description of *Candidatus* Navifida gen. nov.

Candidatus Navifida (NL. fem. n. *Navifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6919*. The type species for the genus is *Candidatus* Navifida cotenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifidaceae.

Description of *Candidatus* Navifidaceae fam. nov.

Candidatus Navifidaceae (NL. fem. n. *Navifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6919.* The type genus for the taxon is *Candidatus* Navifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Navifidales.

Description of *Candidatus* Navifidales ord. nov.

Candidatus Navifidales (NL. fem. n. *Navifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6919.* The type genus for the taxon is *Candidatus* Navifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Navifidae.

Description of *Candidatus* Navifidae class. nov.

Candidatus Navifidae (NL. fem. n. *c__Navifidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6919.* The type genus for the taxon is *Candidatus* Navifida .

According to GTDB R06-RS202, this class belongs to the phylum *Spirochaetota*.

Description of *Candidatus* Navifosa infucimonia sp. nov.

Candidatus Navifosa infucimonia (NL. fem. n. *infucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J046 sp003696425*. The type genome for the species is the GenBank assembly GCA_003696425.1. The GC content of the type genome is 45.15 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Navifosa gen. nov.

Candidatus Navifosa (NL. fem. n. *Navifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J046*. The type species for the genus is *Candidatus* Navifosa infucimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J046*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifosaceae.

Description of *Candidatus* Navifosaceae fam. nov.

Candidatus Navifosaceae (NL. fem. n. *Navifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J046.* The type genus for the taxon is *Candidatus* Navifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuciales.

Description of *Candidatus* Navifula adnubitas sp. nov.

Candidatus Navifula adnubitas (NL. fem. n. *adnubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007128085*. The type genome for the species is the

GenBank assembly GCA_007128085.1. The GC content of the type genome is 44.65 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Navifula gen. nov.

Candidatus Navifula (NL. fem. n. *Navifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWJY01*. The type species for the genus is *Candidatus* Navifula adnubitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Navifula adnumugo sp. nov.

Candidatus Navifula adnumugo (NL. fem. n. *adnumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007693915*. The type genome for the species is the GenBank assembly GCA_007693915.1. The GC content of the type genome is 38.33 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Navifula ammodastra sp. nov.

Candidatus Navifula ammodastra (NL. fem. n. *ammodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp003559985*. The type genome for the species is the GenBank assembly GCA_003559985.1. The GC content of the type genome is 45.59 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Navifula asbesentia sp. nov.

Candidatus Navifula asbesentia (NL. fem. n. *asbesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007134625*. The type genome for the species is the GenBank assembly GCA_007134625.1. The GC content of the type genome is 39.14 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Navifula cenacitas sp. nov.

Candidatus Navifula cenacitas (NL. fem. n. *cenacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007695145*. The type genome for the species is the GenBank assembly GCA_007695145.1. The GC content of the type genome is 42.2 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Navifula exoscitudo sp. nov.

Candidatus Navifula exoscitudo (NL. fem. n. *exoscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp003559865*. The type genome for the species is the GenBank assembly GCA_003559865.1. The GC content of the type genome is 44.48 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Navifula milifitudo sp. nov.

Candidatus Navifula milifitudo (NL. fem. n. *milifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007121335*. The type genome for the species is the GenBank assembly GCA_003561755.1. The GC content of the type genome is 46.12 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Navifula modificula sp. nov.

Candidatus Navifula modificula (NL. fem. n. *modificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJY01 sp007695035*. The type genome for the species is the GenBank assembly GCA_007695035.1. The GC content of the type genome is 45.5 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Necoparia volunisca sp. nov.

Candidatus Necoparia volunisca (NL. fem. n. *volunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-42-50 sp001776545*. The type genome for the species is the GenBank assembly GCA_001776395.1. The GC content of the type genome is 41.7 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Necoparia gen. nov.

Candidatus Necoparia (NL. fem. n. *Necoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-42-50*. The type species for the genus is *Candidatus* Necoparia volunisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Necopella obtesisca sp. nov.

Candidatus Necopella obtesisca (NL. fem. n. *obtesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJGX01 sp014191035*. The type genome for the species is the GenBank assembly GCA_014191035.1. The GC content of the type genome is 39.21 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Necopella gen. nov.

Candidatus Necopella (NL. fem. n. *Necopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJGX01*. The type species for the genus is *Candidatus* Necopella obtesisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BJGX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Necopellaceae.

Description of *Candidatus* Necopellaceae fam. nov.

Candidatus Necopellaceae (NL. fem. n. *Necopellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BJGX01*. The type genus for the taxon is *Candidatus* Necopella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAILAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigemosales.

Description of *Candidatus* Necopia hexagitica sp. nov.

Candidatus Necopia hexagitica (NL. fem. n. *hexagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYJE01 sp903926465*. The type genome for the species is the GenBank assembly GCA_903872475.1. The GC content of the type genome is 58.67 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Necopia gen. nov.

Candidatus Necopia (NL. fem. n. *Necopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYJE01*. The type species for the genus is *Candidatus* Necopia hexagitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Necopida refunago sp. nov.

Candidatus Necopida refunago (NL. fem. n. *refunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-40-9 sp000997385*. The type genome for the species is the GenBank assembly GCA_000997385.1. The GC content of the type genome is 39.66 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Necopida gen. nov.

Candidatus Necopida (NL. fem. n. *Necopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-40-9*. The type species for the genus is *Candidatus* Necopida refunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Necoposa molecitia sp. nov.

Candidatus Necoposa molecitia (NL. fem. n. *molecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA142 sp003224855*. The type genome for the species is the GenBank assembly GCA_003224855.1. The GC content of the type genome is 56.34 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Necoposa gen. nov.

Candidatus Necoposa (NL. fem. n. *Necoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA142*. The type species for the genus is *Candidatus* Necoposa molecitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Necopula viburitudo sp. nov.

Candidatus Necopula viburitudo (NL. fem. n. *viburitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKZD01 sp903831805*. The type genome for the species is the GenBank assembly GCA_903855575.1. The GC content of the type genome is 43.58 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Necopula gen. nov.

Candidatus Necopula (NL. fem. n. *Necopula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKZD01*. The type species for the genus is *Candidatus* Necopula viburitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Necubana adpenilenta sp. nov.

Candidatus Necubana adpenilenta (NL. fem. n. *adpenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-91 sp013215025*. The type genome for the species is the GenBank assembly GCA_013215025.1. The GC content of the type genome is 46.12 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Necubana gen. nov.

Candidatus Necubana (NL. fem. n. *Necubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-91*. The type species for the genus is *Candidatus* Necubana adpenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DT-91*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Necubanaceae.

Description of *Candidatus* Necubanaceae fam. nov.

Candidatus Necubanaceae (NL. fem. n. *Necubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DT-91*. The type genus for the taxon is *Candidatus* Necubana .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Necubana effigessa sp. nov.

Candidatus Necubana effigessa (NL. fem. n. *effigessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-91 sp902705865*. The type genome for the species is the GenBank assembly RS_GCF_902705865.1. The GC content of the type genome is 48.05 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Necubana impolilega sp. nov.

Candidatus Necubana impolilega (NL. fem. n. *impolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-91 sp013215055*. The type genome for the species is the GenBank assembly GCA_013215055.1. The GC content of the type genome is 43.37 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Necubana supelifica sp. nov.

Candidatus Necubana supelifica (NL. fem. n. *supelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-91 sp902705835*. The type genome for the species is the GenBank assembly RS_GCF_902705845.1. The GC content of the type genome is 48.08 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Necubaria fusifatio sp. nov.

Candidatus Necubaria fusifatio (NL. fem. n. *fusifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NAT5454 sp002713365*. The type genome for the species is the GenBank assembly GCA_002713365.1. The GC content of the type genome is 38.46 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Necubaria gen. nov.

Candidatus Necubaria (NL. fem. n. *Necubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *NAT5454*. The type species for the genus is *Candidatus* Necubaria fusifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Necubella figilibula sp. nov.

Candidatus Necubella figilibula (NL. fem. n. *figilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-37-13 sp002773495*. The type genome for the species is the GenBank assembly GCA_002773495.1. The GC content of the type genome is 36.51 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Necubella gen. nov.

Candidatus Necubella (NL. fem. n. *Necubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-37-13*. The type species for the genus is *Candidatus* Necubella figilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Necubida hecatago sp. nov.

Candidatus Necubida hecatago (NL. fem. n. *hecatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6796 sp002452815*. The type genome for the species is the GenBank assembly GCA_002452815.1. The GC content of the type genome is 65.37 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Necubida gen. nov.

Candidatus Necubida (NL. fem. n. *Necubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6796*. The type species for the genus is *Candidatus* Necubida hecatago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Necubosa allacitica sp. nov.

Candidatus Necubosa allacitica (NL. fem. n. *allacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11740 sp003222895*. The type genome for the species is the GenBank assembly GCA_003222895.1. The GC content of the type genome is 54.36 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Necubosa gen. nov.

Candidatus Necubosa (NL. fem. n. *Necubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11740*. The type species for the genus is *Candidatus* Necubosa allacitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Necubosa letififorma sp. nov.

Candidatus Necubosa letififorma (NL. fem. n. *letififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11740 sp003487805*. The type genome for the species is the GenBank assembly GCA_003487805.1. The GC content of the type genome is 54.49 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Necubosa menapitas sp. nov.

Candidatus Necubosa menapitas (NL. fem. n. *menapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11740 sp003222855*. The type genome for the species is the

GenBank assembly GCA_003222855.1. The GC content of the type genome is 54.81 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Necubosa nugivitas sp. nov.

Candidatus Necubosa nugivitas (NL. fem. n. *nugivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11740 sp003168335*. The type genome for the species is the GenBank assembly GCA_003168335.1. The GC content of the type genome is 55.87 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Necubula homogessa sp. nov.

Candidatus Necubula homogessa (NL. fem. n. *homogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11501 sp900766735*. The type genome for the species is the GenBank assembly RS_GCF_900766735.1. The GC content of the type genome is 48.43 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Necubula gen. nov.

Candidatus Necubula (NL. fem. n. *Necubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11501*. The type species for the genus is *Candidatus* Necubula homogessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM11501*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Necubulaceae.

Description of *Candidatus* Necubulaceae fam. nov.

Candidatus Necubulaceae (NL. fem. n. *Necubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGM11501.* The type genus for the taxon is *Candidatus* Necubula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1883*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Defasiales.

Description of *Candidatus* Nefanana cinefiforma sp. nov.

Candidatus Nefanana cinefiforma (NL. fem. n. *cinefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UKL13-3 sp001602415*. The type genome for the species is the GenBank assembly GCA_001602415.1. The GC content of the type genome is 37.33 % and the genome length is 3.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "UKL13 co-culture; a single cyanobacterial colony from a depth-integrated water sample grown as a non-axenic culture".

Description of *Candidatus* Nefanana gen. nov.

Candidatus Nefanana (NL. fem. n. *Nefanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UKL13-3*. The type species for the genus is *Candidatus* Nefanana cinefiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Nefananaceae fam. nov.

Candidatus Nefananaceae (NL. fem. n. *Nefananaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UKL13-3.* The type genus for the taxon is *Candidatus* Nefanana .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Nefanaria dilicousia sp. nov.

Candidatus Nefanaria dilicousia (NL. fem. n. *dilicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNS01 sp003564035*. The type genome for the species is the GenBank assembly GCA_003564035.1. The GC content of the type genome is 45.86 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Nefanaria gen. nov.

Candidatus Nefanaria (NL. fem. n. *Nefanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKNS01*. The type species for the genus is *Candidatus* Nefanaria dilicousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefulaceae.

Description of *Candidatus* Nefanaria repagitica sp. nov.

Candidatus Nefanaria repagitica (NL. fem. n. *repagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNS01 sp007120425*. The type genome for the species is the GenBank assembly GCA_003568075.1. The GC content of the type genome is 42.64 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Nefania detepatio sp. nov.

Candidatus Nefania detepatio (NL. fem. n. *detepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLBA01 sp007126575*. The type genome for the species is the GenBank assembly GCA_007121925.1. The GC content of the type genome is 68.27 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Nefania gen. nov.

Candidatus Nefania (NL. fem. n. *Nefania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SLBA01*. The type species for the genus is *Candidatus* Nefania detepatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Nefania nucifitoga sp. nov.

Candidatus Nefania nucifitoga (NL. fem. n. *nucifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLBA01 sp007692605*. The type genome for the species is the GenBank assembly GCA_007692605.1. The GC content of the type genome is 67.74 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Nefania resacifica sp. nov.

Candidatus Nefania resacifica (NL. fem. n. *resacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLBA01 sp007130605*. The type genome for the species is the GenBank assembly GCA_003556885.1. The GC content of the type genome is 67.98 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Nefanida nivomatio sp. nov.

Candidatus Nefanida nivomatio (NL. fem. n. *nivomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-38-85 sp001797275*. The type genome for the species is the GenBank assembly GCA_001797275.1. The GC content of the type genome is 37.86 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Nefanida gen. nov.

Candidatus Nefanida (NL. fem. n. *Nefanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-38-85*. The type species for the genus is *Candidatus* Nefanida nivomatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Nefanula adinvibra sp. nov.

Candidatus Nefanula adinvibra (NL. fem. n. *adinvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAI01 sp014238825*. The type genome for the species is the GenBank assembly GCA_014238825.1. The GC content of the type genome is 36.79 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Nefanula gen. nov.

Candidatus Nefanula (NL. fem. n. *Nefanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAI01*. The type species for the genus is *Candidatus* Nefanula adinvibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABAAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanulaceae.

Description of *Candidatus* Nefanulaceae fam. nov.

Candidatus Nefanulaceae (NL. fem. n. *Nefanulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABAAI01*. The type genus for the taxon is *Candidatus* Nefanula .

According to GTDB R06-RS202, this family belongs to the order *Leptospirales*.

Description of *Candidatus* Nefarana desorigena sp. nov.

Candidatus Nefarana desorigena (NL. fem. n. *desorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3818 sp002369315*. The type genome for the species is the GenBank assembly GCA_003454955.1. The GC content of the type genome is 51.26 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Nefarana gen. nov.

Candidatus Nefarana (NL. fem. n. *Nefarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3818*. The type species for the genus is *Candidatus* Nefarana desorigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nefarana veneficella sp. nov.

Candidatus Nefarana veneficella (NL. fem. n. *veneficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3818 sp900557155*. The type genome for the species is the GenBank assembly RS_GCF_900757755.1. The GC content of the type genome is 49.03 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Nefararia vatilivita sp. nov.

Candidatus Nefararia vatilivita (NL. fem. n. *vatilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-75 sp003550565*. The type genome for the species is the GenBank assembly GCA_003553635.1. The GC content of the type genome is 42.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Nefararia gen. nov.

Candidatus Nefararia (NL. fem. n. *Nefararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-75*. The type species for the genus is *Candidatus* Nefararia vatilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWGO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenodiaceae.

Description of *Candidatus* Nefarella adsecicella sp. nov.

Candidatus Nefarella adsecicella (NL. fem. n. *adsecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXCX01 sp003567575*. The type genome for the species is the GenBank assembly GCA_003567575.1. The GC content of the type genome is 56.87 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Nefarella gen. nov.

Candidatus Nefarella (NL. fem. n. *Nefarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXCX01*. The type species for the genus is *Candidatus* Nefarella adsecicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXCX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefarellaceae.

Description of *Candidatus* Nefarellaceae fam. nov.

Candidatus Nefarellaceae (NL. fem. n. *Nefarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXCX01*. The type genus for the taxon is *Candidatus* Nefarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loraridales.

Description of *Candidatus* Nefarella lanifitudo sp. nov.

Candidatus Nefarella lanifitudo (NL. fem. n. *lanifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXCX01 sp003565195*. The type genome for the species is the GenBank assembly GCA_003565195.1. The GC content of the type genome is 55.92 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Nefarida depopitia sp. nov.

Candidatus Nefarida depopitia (NL. fem. n. *depopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4820 sp002402325*. The type genome for the species is the GenBank assembly GCA_002402325.1. The GC content of the type genome is 36.79 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Nefarida gen. nov.

Candidatus Nefarida (NL. fem. n. *Nefarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4820*. The type species for the genus is *Candidatus* Nefarida depopitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefaridaceae.

Description of *Candidatus* Nefaridaceae fam. nov.

Candidatus Nefaridaceae (NL. fem. n. *Nefaridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4820.* The type genus for the taxon is *Candidatus* Nefarida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nefaridales.

Description of *Candidatus* Nefaridales ord. nov.

Candidatus Nefaridales (NL. fem. n. *Nefaridales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA4820.* The type genus for the taxon is *Candidatus* Nefarida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nefaridae.

Description of *Candidatus* Nefaridae class. nov.

Candidatus Nefaridae (NL. fem. n. *c__Nefaridae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4820.* The type genus for the taxon is *Candidatus* Nefarida .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Nefarosa inmolitio sp. nov.

Candidatus Nefarosa inmolitio (NL. fem. n. *inmolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSOH01 sp013216065*. The type genome for the species is the GenBank assembly GCA_013216065.1. The GC content of the type genome is 50.76 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Nefarosa gen. nov.

Candidatus Nefarosa (NL. fem. n. *Nefarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSOH01*. The type species for the genus is *Candidatus* Nefarosa inmolitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABSOH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefarosaceae.

Description of *Candidatus* Nefarosaceae fam. nov.

Candidatus Nefarosaceae (NL. fem. n. *Nefarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSOH01.* The type genus for the taxon is *Candidatus* Nefarosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABSOH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nefarosales.

Description of *Candidatus* Nefarosales ord. nov.

Candidatus Nefarosales (NL. fem. n. *Nefarosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSOH01.* The type genus for the taxon is *Candidatus* Nefarosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Nefarula genocifica sp. nov.

Candidatus Nefarula genocifica (NL. fem. n. *genocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-43-14 sp001779315*. The type genome for the species is the GenBank assembly GCA_001779135.1. The GC content of the type genome is 42.1 % and the genome length is 1.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Nefarula gen. nov.

Candidatus Nefarula (NL. fem. n. *Nefarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-43-14*. The type species for the genus is *Candidatus* Nefarula genocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Nefarula lametetta sp. nov.

Candidatus Nefarula lametetta (NL. fem. n. *lametetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-43-14 sp000999095*. The type genome for the species is the GenBank assembly GCA_000999095.1. The GC content of the type genome is 43.23 % and the genome length is 1.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Negadavirga gabinentia sp. nov.

Candidatus Negadavirga gabinentia (NL. fem. n. *gabinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negadavirga sp003565295*. The type genome for the species is the GenBank assembly GCA_003565295.1. The GC content of the type genome is 44.02 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Negadavirga prospisca sp. nov.

Candidatus Negadavirga prospisca (NL. fem. n. *prospisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negadavirga sp003347495*. The type genome for the species is the GenBank assembly RS_GCF_003347495.1. The GC content of the type genome is 43.2 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Negativibacillus manibugo sp. nov.

Candidatus Negativibacillus manibugo (NL. fem. n. *manibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negativibacillus sp900547015*. The type genome for the species is the GenBank assembly GCA_900547015.1. The GC content of the type genome is 53.76 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Negativibacillus tegimitudo sp. nov.

Candidatus Negativibacillus tegimitudo (NL. fem. n. *tegimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negativibacillus sp000435195*. The type genome for the species is the GenBank assembly GCA_000435195.1. The GC content of the type genome is 51.54 %

and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Negativibacillus vivifitica sp. nov.

Candidatus Negativibacillus vivifitica (NL. fem. n. *vivifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negativibacillus sp900547455*. The type genome for the species is the GenBank assembly GCA_900547455.1. The GC content of the type genome is 56.78 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Negativicoccus impinatio sp. nov.

Candidatus Negativicoccus impinatio (NL. fem. n. *impinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Negativicoccus sp900556745*. The type genome for the species is the GenBank assembly GCA_900556745.1. The GC content of the type genome is 53.07 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Negidana ardififorma sp. nov.

Candidatus Negidana ardififorma (NL. fem. n. *ardififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R501 sp902809825*. The type genome for the species is the GenBank assembly GCA_902809825.1. The GC content of the type genome is 70.55 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Negidana gen. nov.

Candidatus Negidana (NL. fem. n. *Negidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R501*. The type species for the genus is *Candidatus* Negidana ardififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *R501*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidanaceae.

Description of *Candidatus* Negidanaceae fam. nov.

Candidatus Negidanaceae (NL. fem. n. *Negidanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *R501.* The type genus for the taxon is *Candidatus* Negidana .

According to GTDB R06-RS202, this family belongs to the order *Sulfobacillales*.

Description of *Candidatus* Negidaria obnunatio sp. nov.

Candidatus Negidaria obnunatio (NL. fem. n. *obnunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN01 sp002897715*. The type genome for the species is the GenBank assembly GCA_002897715.1. The GC content of the type genome is 60.46 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Negidaria gen. nov.

Candidatus Negidaria (NL. fem. n. *Negidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN01*. The type species for the genus is *Candidatus* Negidaria obnunatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3ABIN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidariaceae.

Description of *Candidatus* Negidariaceae fam. nov.

Candidatus Negidariaceae (NL. fem. n. *Negidariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3ABIN01.* The type genus for the taxon is *Candidatus* Negidaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *BMS3ABIN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Negidariales.

Description of *Candidatus* Negidariales ord. nov.

Candidatus Negidariales (NL. fem. n. *Negidariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3ABIN01*. The type genus for the taxon is *Candidatus* Negidaria .

According to the GTDB R06-RS202, this order belongs to the class *Thermoleophilia*.

Description of *Candidatus* Negidella impiritrix sp. nov.

Candidatus Negidella impiritrix (NL. fem. n. *impiritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J061 sp003695725*. The type genome for the species is the GenBank assembly GCA_003695725.1. The GC content of the type genome is 36.58 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Negidella gen. nov.

Candidatus Negidella (NL. fem. n. *Negidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J061*. The type species for the genus is *Candidatus* Negidella impiritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J061*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidellaceae.

Description of *Candidatus* Negidellaceae fam. nov.

Candidatus Negidellaceae (NL. fem. n. *Negidellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J061*. The type genus for the taxon is *Candidatus* Negidella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-38-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilanales.

Description of *Candidatus* Negidia puruliforma sp. nov.

Candidatus Negidia puruliforma (NL. fem. n. *puruliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4181 sp002380425*. The type genome for the species is the GenBank assembly GCA_002379665.1. The GC content of the type genome is 52.37 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Negidia gen. nov.

Candidatus Negidia (NL. fem. n. *Negidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4181*. The type species for the genus is *Candidatus* Negidia puruliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4181*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidiaceae.

Description of *Candidatus* Negidiaceae fam. nov.

Candidatus Negidiaceae (NL. fem. n. *Negidiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4181.* The type genus for the taxon is *Candidatus* Negidia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Negidida arcatatio sp. nov.

Candidatus Negidida arcatatio (NL. fem. n. *arcatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5070 sp002414805*. The type genome for the species is the GenBank assembly GCA_002414805.1. The GC content of the type genome is 61.71 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Negidida gen. nov.

Candidatus Negidida (NL. fem. n. *Negidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5070*. The type species for the genus is *Candidatus* Negidida arcatatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5070*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negididaceae.

Description of *Candidatus* Negididaceae fam. nov.

Candidatus Negididaceae (NL. fem. n. *Negididaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5070.* The type genus for the taxon is *Candidatus* Negidida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5070*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Negididales.

Description of *Candidatus* Negididales ord. nov.

Candidatus Negididales (NL. fem. n. *Negididales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5070.* The type genus for the taxon is *Candidatus* Negidida .

According to the GTDB R06-RS202, this order belongs to the class *Fibrobacteria*.

Description of *Candidatus* Negidida vagabibula sp. nov.

Candidatus Negidida vagabibula (NL. fem. n. *vagabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5070 sp903825275*. The type genome for the species is the GenBank assembly GCA_903825275.1. The GC content of the type genome is 56.98 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Negidosa furibilega sp. nov.

Candidatus Negidosa furibilega (NL. fem. n. *furibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-55-11 sp001787585*. The type genome for the species is the GenBank assembly GCA_001787585.1. The GC content of the type genome is 52.5 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Negidosa gen. nov.

Candidatus Negidosa (NL. fem. n. *Negidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-55-11*. The type species for the genus is *Candidatus* Negidosa furibilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Negidosa metapastra sp. nov.

Candidatus Negidosa metapastra (NL. fem. n. *metapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-55-11 sp007376635*. The type genome for the species is the GenBank assembly GCA_007376635.1. The GC content of the type genome is 51.31 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Negidosa repuratica sp. nov.

Candidatus Negidosa repuratica (NL. fem. n. *repuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-55-11 sp001788925*. The type genome for the species is the GenBank assembly GCA_001788995.1. The GC content of the type genome is 54.59 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Negidula cetarastra sp. nov.

Candidatus Negidula cetarastra (NL. fem. n. *cetarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp002784045*. The type genome for the species is the GenBank assembly GCA_002784045.1. The GC content of the type genome is 62.93 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Negidula gen. nov.

Candidatus Negidula (NL. fem. n. *Negidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PFJX01*. The type species for the genus is *Candidatus* Negidula cetarastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Negidula disiditrix sp. nov.

Candidatus Negidula disiditrix (NL. fem. n. *disiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp009772925*. The type genome for the species is the GenBank assembly GCA_009772925.1. The GC content of the type genome is 65.76 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Negidula inexcastra sp. nov.

Candidatus Negidula inexcastra (NL. fem. n. *inexcastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp002281555*. The type genome for the species is the GenBank assembly GCA_002281555.1. The GC content of the type genome is 60.88 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Negidula obfusifica sp. nov.

Candidatus Negidula obfusifica (NL. fem. n. *obfusifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp903918705*. The type genome for the species is the

GenBank assembly GCA_903918705.1. The GC content of the type genome is 64.61 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Negidula semapugo sp. nov.

Candidatus Negidula semapugo (NL. fem. n. *semapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp903835655*. The type genome for the species is the GenBank assembly GCA_903833785.1. The GC content of the type genome is 62.86 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Negidula seposilega sp. nov.

Candidatus Negidula seposilega (NL. fem. n. *seposilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFJX01 sp903883985*. The type genome for the species is the GenBank assembly GCA_903850875.1. The GC content of the type genome is 61.66 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Negotana veridilega sp. nov.

Candidatus Negotana veridilega (NL. fem. n. *veridilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-40-8-A sp001819435*. The type genome for the species is the GenBank assembly GCA_001819435.1. The GC content of the type genome is 36.99 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Negotana gen. nov.

Candidatus Negotana (NL. fem. n. *Negotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-40-8-A*. The type species for the genus is *Candidatus* Negotana veridilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family

RBG-13-40-8-A. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotanaceae.

Description of *Candidatus* Negotanaceae fam. nov.

Candidatus Negotanaceae (NL. fem. n. *Negotanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-40-8-A.* The type genus for the taxon is *Candidatus* Negotana .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Negotaria didacugo sp. nov.

Candidatus Negotaria didacugo (NL. fem. n. *didacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12015 sp003447545*. The type genome for the species is the GenBank assembly GCA_003447545.1. The GC content of the type genome is 59.69 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Negotaria gen. nov.

Candidatus Negotaria (NL. fem. n. *Negotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12015*. The type species for the genus is *Candidatus* Negotaria didacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotariaceae.

Description of *Candidatus* Negotariaceae fam. nov.

Candidatus Negotariaceae (NL. fem. n. *Negotariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12015.* The type genus for the taxon is *Candidatus* Negotaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12015*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Negotariales.

Description of *Candidatus* Negotariales ord. nov.

Candidatus Negotariales (NL. fem. n. *Negotariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12015.* The type genus for the taxon is *Candidatus* Negotaria .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Negotella locupousia sp. nov.

Candidatus Negotella locupousia (NL. fem. n. *locupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHA01 sp007136405*. The type genome for the species is the GenBank assembly GCA_007136405.1. The GC content of the type genome is 62.81 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Negotella gen. nov.

Candidatus Negotella (NL. fem. n. *Negotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLHA01*. The type species for the genus is *Candidatus* Negotella locupousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Negotida bigarimonia sp. nov.

Candidatus Negotida bigarimonia (NL. fem. n. *bigarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1317 sp003154195*. The type genome for the species is the GenBank assembly GCA_003154195.1. The GC content of the type genome is 44.9 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Negotida gen. nov.

Candidatus Negotida (NL. fem. n. *Negotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1317*. The type species for the genus is *Candidatus* Negotida bigarimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homoliaceae.

Description of *Candidatus* Negotosa depetifica sp. nov.

Candidatus Negotosa depetifica (NL. fem. n. *depetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2359 sp002212985*. The type genome for the species is the GenBank assembly RS_GCF_002212985.1. The GC content of the type genome is 45.69 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Negotosa gen. nov.

Candidatus Negotosa (NL. fem. n. *Negotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2359*. The type species for the genus is *Candidatus* Negotosa depetifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotosaceae.

Description of *Candidatus* Negotosaceae fam. nov.

Candidatus Negotosaceae (NL. fem. n. *Negotosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2359.* The type genus for the taxon is *Candidatus* Negotosa .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Negotosa elastatica sp. nov.

Candidatus Negotosa elastatica (NL. fem. n. *elastatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2359 sp002212725*. The type genome for the species is the GenBank assembly RS_GCF_002212725.1. The GC content of the type genome is 46.02 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Negotosa maxilimonia sp. nov.

Candidatus Negotosa maxilimonia (NL. fem. n. *maxilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2359 sp002345145*. The type genome for the species is the GenBank assembly GCA_002344655.1. The GC content of the type genome is 44.41 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Negotula dehisicella sp. nov.

Candidatus Negotula dehisicella (NL. fem. n. *dehisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-274 sp000432155*. The type genome for the species is the GenBank assembly GCA_900546505.1. The GC content of the type genome is 33.33 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Negotula gen. nov.

Candidatus Negotula (NL. fem. n. *Negotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-274*. The type species for the genus is *Candidatus* Negotula dehisicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-274*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotulaceae.

Description of *Candidatus* Negotulaceae fam. nov.

Candidatus Negotulaceae (NL. fem. n. *Negotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-274.* The type genus for the taxon is *Candidatus* Negotula .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Negotula sonivicula sp. nov.

Candidatus Negotula sonivicula (NL. fem. n. *sonivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-274 sp900545305*. The type genome for the species is the GenBank assembly RS_GCF_900757215.1. The GC content of the type genome is 33.58 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Nehalana conibitas sp. nov.

Candidatus Nehalana conibitas (NL. fem. n. *conibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp003567615*. The type genome for the species is the GenBank assembly GCA_003567615.1. The GC content of the type genome is 67.06 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Nehalana gen. nov.

Candidatus Nehalana (NL. fem. n. *Nehalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWLA01*. The type species for the genus is *Candidatus* Nehalana conibitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Nehalana depelisca sp. nov.

Candidatus Nehalana depelisca (NL. fem. n. *depelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp007121555*. The type genome for the species is the GenBank assembly GCA_007121555.1. The GC content of the type genome is 66.97 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Nehalana desepisca sp. nov.

Candidatus Nehalana desepisca (NL. fem. n. *desepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp007129525*. The type genome for the species is the GenBank assembly GCA_007120875.1. The GC content of the type genome is 68.18 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Nehalana edulcibra sp. nov.

Candidatus Nehalana edulcibra (NL. fem. n. *edulcibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp003559555*. The type genome for the species is the GenBank assembly GCA_003559555.1. The GC content of the type genome is 68.03 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Nehalana nugacitura sp. nov.

Candidatus Nehalana nugacitura (NL. fem. n. *nugacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp007121775*. The type genome for the species is the GenBank assembly GCA_007121775.1. The GC content of the type genome is 67.15 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Nehalana sonabilenta sp. nov.

Candidatus Nehalana sonabilenta (NL. fem. n. *sonabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PWLA01 sp007695195*. The type genome for the species is the GenBank assembly GCA_007695195.1. The GC content of the type genome is 67.71 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Nehalana vilipousia sp. nov.

Candidatus Nehalana vilipousia (NL. fem. n. *vilipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp007132965*. The type genome for the species is the GenBank assembly GCA_007132965.1. The GC content of the type genome is 67.93 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Nehalana viragatio sp. nov.

Candidatus Nehalana viragatio (NL. fem. n. *viragatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLA01 sp003562075*. The type genome for the species is the GenBank assembly GCA_003556625.1. The GC content of the type genome is 64.6 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Nehalaria acrobivita sp. nov.

Candidatus Nehalaria acrobivita (NL. fem. n. *acrobivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9214 sp003454335*. The type genome for the species is the GenBank assembly GCA_003454335.1. The GC content of the type genome is 55.31 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Nehalaria gen. nov.

Candidatus Nehalaria (NL. fem. n. *Nehalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9214*. The type species for the genus is *Candidatus* Nehalaria acrobivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Nehalariaceae.

Description of *Candidatus* Nehalariaceae fam. nov.

Candidatus Nehalariaceae (NL. fem. n. *Nehalariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9214.* The type genus for the taxon is *Candidatus* Nehalaria .

According to GTDB R06-RS202, this family belongs to the order *Thiohalobacterales*.

Description of *Candidatus* Nehalella conipitoga sp. nov.

Candidatus Nehalella conipitoga (NL. fem. n. *conipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp002427465*. The type genome for the species is the GenBank assembly GCA_002427465.1. The GC content of the type genome is 55.54 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Nehalella gen. nov.

Candidatus Nehalella (NL. fem. n. *Nehalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5446*. The type species for the genus is *Candidatus* Nehalella conipitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nehalella depupitudo sp. nov.

Candidatus Nehalella depupitudo (NL. fem. n. *depupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900545405*. The type genome for the species is the GenBank assembly GCA_900545405.1. The GC content of the type genome is 62.74 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Nehalella dicimisca sp. nov.

Candidatus Nehalella dicimisca (NL. fem. n. *dicimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900546485*. The type genome for the species is the GenBank assembly GCA_900546485.1. The GC content of the type genome is 59.82 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Nehalella hexamessa sp. nov.

Candidatus Nehalella hexamessa (NL. fem. n. *hexamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900546615*. The type genome for the species is the GenBank assembly GCA_900546615.1. The GC content of the type genome is 60.08 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Nehalella hibisitoga sp. nov.

Candidatus Nehalella hibisitoga (NL. fem. n. *hibisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900759385*. The type genome for the species is the GenBank assembly GCA_900759385.1. The GC content of the type genome is 60.96 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Nehalella humecifica sp. nov.

Candidatus Nehalella humecifica (NL. fem. n. *humecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp004553625*. The type genome for the species is the GenBank assembly GCA_900752405.1. The GC content of the type genome is 60.98 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Nehalella inhericula sp. nov.

Candidatus Nehalella inhericula (NL. fem. n. *inhericula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900752445*. The type genome for the species is the GenBank assembly GCA_900752445.1. The GC content of the type genome is 62.15 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Nehalella masocatio sp. nov.

Candidatus Nehalella masocatio (NL. fem. n. *masocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp012513005*. The type genome for the species is the GenBank assembly GCA_012513005.1. The GC content of the type genome is 44.13 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Nehalella palifitio sp. nov.

Candidatus Nehalella palifitio (NL. fem. n. *palifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900543085*. The type genome for the species is the GenBank assembly GCA_900753255.1. The GC content of the type genome is 62.04 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Nehalella recumicella sp. nov.

Candidatus Nehalella recumicella (NL. fem. n. *recumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900544765*. The type genome for the species is the GenBank assembly GCA_900544765.1. The GC content of the type genome is 59.68 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Nehalella semimitrix sp. nov.

Candidatus Nehalella semimitrix (NL. fem. n. *semimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5446 sp900544295*. The type genome for the species is the GenBank assembly GCA_900762465.1. The GC content of the type genome is 62.54 %

and the genome length is 2.32 Mbp.

Description of *Candidatus* Nehalia visibitio sp. nov.

Candidatus Nehalia visibitio (NL. fem. n. *visibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-68-20 sp001770655*. The type genome for the species is the GenBank assembly GCA_001770315.1. The GC content of the type genome is 68.45 % and the genome length is 2.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Nehalia gen. nov.

Candidatus Nehalia (NL. fem. n. *Nehalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-68-20*. The type species for the genus is *Candidatus* Nehalia visibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Nehalida accumimonia sp. nov.

Candidatus Nehalida accumimonia (NL. fem. n. *accumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-40-12 sp001823315*. The type genome for the species is the GenBank assembly GCA_001823315.1. The GC content of the type genome is 40.06 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Nehalida gen. nov.

Candidatus Nehalida (NL. fem. n. *Nehalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-12-FULL-40-12*. The type species for the genus is *Candidatus* Nehalida accumimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalidaceae.

Description of *Candidatus* Nehalidaceae fam. nov.

Candidatus Nehalidaceae (NL. fem. n. *Nehalidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-40-12.* The type genus for the taxon is *Candidatus* Nehalida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Nehalosa bipinimonia sp. nov.

Candidatus Nehalosa bipinimonia (NL. fem. n. *bipinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFKP01 sp004553715*. The type genome for the species is the GenBank assembly GCA_004553715.1. The GC content of the type genome is 27.95 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Nehalosa gen. nov.

Candidatus Nehalosa (NL. fem. n. *Nehalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFKP01*. The type species for the genus is *Candidatus* Nehalosa bipinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Nehalula velivitia sp. nov.

Candidatus Nehalula velivitia (NL. fem. n. *velivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1006 sp002698305*. The type genome for the species is the GenBank assembly GCA_002698305.1. The GC content of the type genome is 37.38 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Nehalula gen. nov.

Candidatus Nehalula (NL. fem. n. *Nehalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1006*. The type species for the genus is *Candidatus* Nehalula velivitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalulaceae.

Description of *Candidatus* Nehalulaceae fam. nov.

Candidatus Nehalulaceae (NL. fem. n. *Nehalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1006.* The type genus for the taxon is *Candidatus* Nehalula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Neisseria adtesitura sp. nov.

Candidatus Neisseria adtesitura (NL. fem. n. *adtesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp001308015*. The type genome for the species is the GenBank assembly RS_GCF_001308015.1. The GC content of the type genome is 48.32 % and the genome length is 2.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wound".

Description of *Candidatus* Neisseria apporigena sp. nov.

Candidatus Neisseria apporigena (NL. fem. n. *apporigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp001815675*. The type genome for the species is the GenBank assembly RS_GCF_001815675.1. The GC content of the type genome is 51.08 % and the genome length is 2.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sinus".

Description of *Candidatus* Neisseria cerofax sp. nov.

Candidatus Neisseria cerofax (NL. fem. n. *cerofax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp011038745*. The type genome for the species is the GenBank assembly RS_GCF_011038745.1. The GC content of the type genome is 49.56 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Neisseria decunifica sp. nov.

Candidatus Neisseria decunifica (NL. fem. n. *decunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp000227275*. The type genome for the species is the GenBank assembly GCA_001062585.1. The GC content of the type genome is 51.11 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Neisseria defetatio sp. nov.

Candidatus Neisseria defetatio (NL. fem. n. *defetatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp002327085*. The type genome for the species is the GenBank assembly RS_GCF_002327085.1. The GC content of the type genome is 49.22 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Neisseria dilogilenta sp. nov.

Candidatus Neisseria dilogilenta (NL. fem. n. *dilogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp000186165*. The type genome for the species is the GenBank assembly RS_GCF_001064605.1. The GC content of the type genome is 49.84 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Neisseria lucerousia sp. nov.

Candidatus Neisseria lucerousia (NL. fem. n. *lucerousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp000090875*. The type genome for the species is the GenBank assembly RS_GCF_000090875.1. The GC content of the type genome is 52.83 % and the genome length is 2.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Neisseria manufessa sp. nov.

Candidatus Neisseria manufessa (NL. fem. n. *manufessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp000952795*. The type genome for the species is the GenBank assembly RS_GCF_001814135.1. The GC content of the type genome is 51.21 % and the genome length is 2.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "bronchial washing".

Description of *Candidatus* Neisseria medimatio sp. nov.

Candidatus Neisseria medimatio (NL. fem. n. *medimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neisseria sp001809325*. The type genome for the species is the GenBank assembly RS_GCF_001809325.1. The GC content of the type genome is 50.62 % and the genome length is 2.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "bronchial washing".

Description of *Candidatus* Neisseria peracugo sp. nov.

Candidatus Neisseria peracugo (NL. fem. n. *peracugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Neisseria sp002237445*. The type genome for the species is the GenBank assembly RS_GCF_002237445.1. The GC content of the type genome is 58.52 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Neobacillus abascessa sp. nov.

Candidatus Neobacillus abascessa (NL. fem. n. *abascessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001510715*. The type genome for the species is the GenBank assembly RS_GCF_001510715.1. The GC content of the type genome is 42.05 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Neobacillus absegastra sp. nov.

Candidatus Neobacillus absegastra (NL. fem. n. *absegastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001278805*. The type genome for the species is the GenBank assembly RS_GCF_001278805.1. The GC content of the type genome is 42.42 % and the genome length is 5.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Neobacillus acricibra sp. nov.

Candidatus Neobacillus acricibra (NL. fem. n. *acricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp000426085*. The type genome for the species is the GenBank assembly RS_GCF_000426085.1. The GC content of the type genome is 39.1 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Neobacillus acricousia sp. nov.

Candidatus Neobacillus acricousia (NL. fem. n. *acricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001866655*. The type genome for the species is the GenBank assembly RS_GCF_001866655.1. The GC content of the type genome is 38.41 % and the genome length is 5.72 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "mangrove".

Description of *Candidatus* Neobacillus adinviforma sp. nov.

Candidatus Neobacillus adinviforma (NL. fem. n. *adinviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp002567005*. The type genome for the species is the GenBank assembly RS_GCF_002567005.1. The GC content of the type genome is 39.06 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Neobacillus altipiforma sp. nov.

Candidatus Neobacillus altipiforma (NL. fem. n. *altipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp000686805*. The type genome for the species is the GenBank assembly RS_GCF_000686805.1. The GC content of the type genome is 38.6 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Neobacillus ammulimonas sp. nov.

Candidatus Neobacillus ammulimonas (NL. fem. n. *ammulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp000613125*. The type genome for the species is the GenBank assembly RS_GCF_000613125.1. The GC content of the type genome is 42.22 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Neobacillus decunessa sp. nov.

Candidatus Neobacillus decunessa (NL. fem. n. *decunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp002559145*. The type genome for the species is the GenBank assembly RS_GCF_011250595.1. The GC content of the type genome is 38.76 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Neobacillus defalousia sp. nov.

Candidatus Neobacillus defalousia (NL. fem. n. *defalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001273955*. The type genome for the species is the GenBank assembly RS_GCF_001273955.1. The GC content of the type genome is 45.63 % and the genome length is 4.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Neobacillus denixigena sp. nov.

Candidatus Neobacillus denixigena (NL. fem. n. *denixigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp011393025*. The type genome for the species is the GenBank assembly RS_GCF_011393025.1. The GC content of the type genome is 38.81 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Neobacillus epistimonia sp. nov.

Candidatus Neobacillus epistimonia (NL. fem. n. *epistimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp013248975*. The type genome for the species is the GenBank assembly RS_GCF_013248975.1. The GC content of the type genome is 38.49 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Neobacillus gasifisca sp. nov.

Candidatus Neobacillus gasifisca (NL. fem. n. *gasifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp900103525*. The type genome for the species is the GenBank assembly RS_GCF_900103525.1. The GC content of the type genome is 38.04 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Neobacillus indipousia sp. nov.

Candidatus Neobacillus indipousia (NL. fem. n. *indipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001048695*. The type genome for the species is the GenBank assembly RS_GCF_001048695.1. The GC content of the type genome is 38.1 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Neobacillus infabago sp. nov.

Candidatus Neobacillus infabago (NL. fem. n. *infabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp005154805*. The type genome for the species is the GenBank assembly RS_GCF_005154805.1. The GC content of the type genome is 40.15 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Neobacillus insoratio sp. nov.

Candidatus Neobacillus insoratio (NL. fem. n. *insoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001940785*. The type genome for the species is the GenBank assembly RS_GCF_001940785.1. The GC content of the type genome is 38.78 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Underwater soil".

Description of *Candidatus* Neobacillus insubago sp. nov.

Candidatus Neobacillus insubago (NL. fem. n. *insubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp013396335*. The type genome for the species is the GenBank assembly RS_GCF_013396335.1. The GC content of the type genome is 38.36 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Neobacillus intoritudo sp. nov.

Candidatus Neobacillus intoritudo (NL. fem. n. *intoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001685025*. The type genome for the species is the

GenBank assembly RS_GCF_001685025.1. The GC content of the type genome is 42.59 % and the genome length is 5.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Neobacillus legifitudo sp. nov.

Candidatus Neobacillus legifitudo (NL. fem. n. *legifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp000482325*. The type genome for the species is the GenBank assembly RS_GCF_000482325.1. The GC content of the type genome is 38.94 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Neobacillus lubenastra sp. nov.

Candidatus Neobacillus lubenastra (NL. fem. n. *lubenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp900177675*. The type genome for the species is the GenBank assembly RS_GCF_012275205.1. The GC content of the type genome is 38.61 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Neobacillus mirififica sp. nov.

Candidatus Neobacillus mirififica (NL. fem. n. *mirififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp014656545*. The type genome for the species is the GenBank assembly GCA_014656545.1. The GC content of the type genome is 39.53 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Neobacillus musulisca sp. nov.

Candidatus Neobacillus musulisca (NL. fem. n. *musulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp007678255*. The type genome for the species is the GenBank assembly RS_GCF_007678255.1. The GC content of the type genome is 38.58 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Neobacillus nosocitio sp. nov.

Candidatus Neobacillus nosocitio (NL. fem. n. *nosocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp009928415*. The type genome for the species is the GenBank assembly RS_GCF_009928415.1. The GC content of the type genome is 39.09 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Neobacillus pericicella sp. nov.

Candidatus Neobacillus pericicella (NL. fem. n. *pericicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp002272245*. The type genome for the species is the GenBank assembly RS_GCF_002272245.1. The GC content of the type genome is 37.98 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Neobacillus pinigiforma sp. nov.

Candidatus Neobacillus pinigiforma (NL. fem. n. *pinigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp004358205*. The type genome for the species is the GenBank assembly RS_GCF_004358205.1. The GC content of the type genome is 38.59 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Neobacillus pomifivita sp. nov.

Candidatus Neobacillus pomifivita (NL. fem. n. *pomifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp004341175*. The type genome for the species is the GenBank assembly RS_GCF_004341175.1. The GC content of the type genome is 37.92 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Neobacillus rarefugo sp. nov.

Candidatus Neobacillus rarefugo (NL. fem. n. *rarefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp002585305*. The type genome for the species is the GenBank assembly RS_GCF_007828895.1. The GC content of the type genome is 38.74 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Neobacillus rinocitoga sp. nov.

Candidatus Neobacillus rinocitoga (NL. fem. n. *rinocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp011250555*. The type genome for the species is the GenBank assembly RS_GCF_011250555.1. The GC content of the type genome is 39.92 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Neobacillus tubicessa sp. nov.

Candidatus Neobacillus tubicessa (NL. fem. n. *tubicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp000821085*. The type genome for the species is the GenBank assembly RS_GCF_000821085.1. The GC content of the type genome is 44.78 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Neobacillus unetvago sp. nov.

Candidatus Neobacillus unetvago (NL. fem. n. *unetvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neobacillus sp001510665*. The type genome for the species is the GenBank assembly RS_GCF_001510665.1. The GC content of the type genome is 44.03 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Neobacillus visocilenta sp. nov.

Candidatus Neobacillus visocilenta (NL. fem. n. *visocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Neobacillus sp900115925*. The type genome for the species is the GenBank assembly RS_GCF_900115925.1. The GC content of the type genome is 38.6 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Neochlamydia dimaditica sp. nov.

Candidatus Neochlamydia dimaditica (NL. fem. n. *dimaditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neochlamydia sp000813665*. The type genome for the species is the GenBank assembly RS_GCF_000813665.1. The GC content of the type genome is 38.09 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Neochlamydia inforitia sp. nov.

Candidatus Neochlamydia inforitia (NL. fem. n. *inforitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neochlamydia sp011087585*. The type genome for the species is the GenBank assembly RS_GCF_011087585.1. The GC content of the type genome is 38.02 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Neochlamydia irrevicula sp. nov.

Candidatus Neochlamydia irrevicula (NL. fem. n. *irrevicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neochlamydia sp001897225*. The type genome for the species is the GenBank assembly GCA_001897225.1. The GC content of the type genome is 38.12 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Neofamilia inobsitia sp. nov.

Candidatus Neofamilia inobsitia (NL. fem. n. *inobsitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neofamilia sp012728775*. The type genome for the species is the GenBank assembly GCA_012728775.1. The GC content of the type genome is 32.05 %

and the genome length is 1.97 Mbp.

Description of *Candidatus* Neofamilia sanabastra sp. nov.

Candidatus Neofamilia sanabastra (NL. fem. n. *sanabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neofamilia sp012513395*. The type genome for the species is the GenBank assembly GCA_012513395.1. The GC content of the type genome is 33.58 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Neorhizobium adpeletta sp. nov.

Candidatus Neorhizobium adpeletta (NL. fem. n. *adpeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp009617585*. The type genome for the species is the GenBank assembly RS_GCF_009617585.1. The GC content of the type genome is 58.77 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Neorhizobium alluvitio sp. nov.

Candidatus Neorhizobium alluvitio (NL. fem. n. *alluvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp002376235*. The type genome for the species is the GenBank assembly GCA_002376235.1. The GC content of the type genome is 58.99 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Neorhizobium demuledo sp. nov.

Candidatus Neorhizobium demuledo (NL. fem. n. *demuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp003597675*. The type genome for the species is the GenBank assembly RS_GCF_003597675.1. The GC content of the type genome is 60.3 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Neorhizobium exforilenta sp. nov.

Candidatus Neorhizobium exforilenta (NL. fem. n. *exforilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp004053875*. The type genome for the species is the GenBank assembly RS_GCF_004053875.1. The GC content of the type genome is 60.29 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Neorhizobium exsatitrix sp. nov.

Candidatus Neorhizobium exsatitrix (NL. fem. n. *exsatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900469345*. The type genome for the species is the GenBank assembly GCA_900469345.1. The GC content of the type genome is 63.13 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Neorhizobium feditimonia sp. nov.

Candidatus Neorhizobium feditimonia (NL. fem. n. *feditimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp002431175*. The type genome for the species is the GenBank assembly RS_GCF_007829835.1. The GC content of the type genome is 60.24 % and the genome length is 7.03 Mbp.

Description of *Candidatus* Neorhizobium giganitudo sp. nov.

Candidatus Neorhizobium giganitudo (NL. fem. n. *giganitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900111905*. The type genome for the species is the GenBank assembly RS_GCF_900111905.1. The GC content of the type genome is 60.75 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Neorhizobium haricimonas sp. nov.

Candidatus Neorhizobium haricimonas (NL. fem. n. *haricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp000757525*. The type genome for the species is the GenBank assembly RS_GCF_000757525.1. The GC content of the type genome is 60.75 % and the genome length is 6.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "decaying wood from a thermal pond".

Description of *Candidatus* Neorhizobium inhumentia sp. nov.

Candidatus Neorhizobium inhumentia (NL. fem. n. *inhumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp004343585*. The type genome for the species is the GenBank assembly RS_GCF_004343585.1. The GC content of the type genome is 59.51 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Neorhizobium inlumitia sp. nov.

Candidatus Neorhizobium inlumitia (NL. fem. n. *inlumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp000282095*. The type genome for the species is the GenBank assembly RS_GCF_000282095.2. The GC content of the type genome is 61.41 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Neorhizobium inoccitica sp. nov.

Candidatus Neorhizobium inoccitica (NL. fem. n. *inoccitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900469955*. The type genome for the species is the GenBank assembly RS_GCF_900469955.1. The GC content of the type genome is 60.02 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Neorhizobium irreditudo sp. nov.

Candidatus Neorhizobium irreditudo (NL. fem. n. *irreditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900466875*. The type genome for the species is the

GenBank assembly RS_GCF_900466875.1. The GC content of the type genome is 59.82 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Neorhizobium momoribra sp. nov.

Candidatus Neorhizobium momoribra (NL. fem. n. *momoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp902167985*. The type genome for the species is the GenBank assembly RS_GCF_902167985.1. The GC content of the type genome is 61.02 % and the genome length is 6.59 Mbp.

Description of *Candidatus* Neorhizobium musulitio sp. nov.

Candidatus Neorhizobium musulitio (NL. fem. n. *musulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900471605*. The type genome for the species is the GenBank assembly RS_GCF_900467135.1. The GC content of the type genome is 61.93 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Neorhizobium obtemastra sp. nov.

Candidatus Neorhizobium obtemastra (NL. fem. n. *obtemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900472675*. The type genome for the species is the GenBank assembly GCA_900472675.1. The GC content of the type genome is 62.33 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Neorhizobium oppanentia sp. nov.

Candidatus Neorhizobium oppanentia (NL. fem. n. *oppanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp001854865*. The type genome for the species is the GenBank assembly RS_GCF_001854865.1. The GC content of the type genome is 61.26 % and the genome length is 5.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil from surrounding area".

Description of *Candidatus* Neorhizobium peribilega sp. nov.

Candidatus Neorhizobium peribilega (NL. fem. n. *peribilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp002500765*. The type genome for the species is the GenBank assembly GCA_002500765.1. The GC content of the type genome is 59.84 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Neorhizobium recucilega sp. nov.

Candidatus Neorhizobium recucilega (NL. fem. n. *recucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900469445*. The type genome for the species is the GenBank assembly RS_GCF_900469445.1. The GC content of the type genome is 59.33 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Neorhizobium semidivita sp. nov.

Candidatus Neorhizobium semidivita (NL. fem. n. *semidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp900472395*. The type genome for the species is the GenBank assembly RS_GCF_900489895.1. The GC content of the type genome is 58.91 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Neorhizobium subodigena sp. nov.

Candidatus Neorhizobium subodigena (NL. fem. n. *subodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp001005825*. The type genome for the species is the GenBank assembly RS_GCF_005280575.1. The GC content of the type genome is 61.45 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Neorhizobium turibigena sp. nov.

Candidatus Neorhizobium turibigena (NL. fem. n. *turibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp003491345*. The type genome for the species is the GenBank assembly RS_GCF_003491345.1. The GC content of the type genome is 61.19 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Neorhizobium viginitas sp. nov.

Candidatus Neorhizobium viginitas (NL. fem. n. *viginitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neorhizobium sp003425685*. The type genome for the species is the GenBank assembly RS_GCF_003425685.1. The GC content of the type genome is 61.44 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Neptuniibacter murelicella sp. nov.

Candidatus Neptuniibacter murelicella (NL. fem. n. *murelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Neptuniibacter sp002435145*. The type genome for the species is the GenBank assembly GCA_002435145.1. The GC content of the type genome is 42.98 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Nesterenkonia ambidastra sp. nov.

Candidatus Nesterenkonia ambidastra (NL. fem. n. *ambidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp003595215*. The type genome for the species is the GenBank assembly RS_GCF_003595215.1. The GC content of the type genome is 61.82 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Nesterenkonia cnestifica sp. nov.

Candidatus Nesterenkonia cnestifica (NL. fem. n. *cnestifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nesterenkonia sp001758425*. The type genome for the species is the GenBank assembly RS_GCF_001758425.2. The GC content of the type genome is 69.49 % and the genome length is 3.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "permafrost soil".

Description of *Candidatus* Nesterenkonia inoffifica sp. nov.

Candidatus Nesterenkonia inoffifica (NL. fem. n. *inoffifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp000220985*. The type genome for the species is the GenBank assembly RS_GCF_000220985.1. The GC content of the type genome is 71.49 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Nesterenkonia obtesicella sp. nov.

Candidatus Nesterenkonia obtesicella (NL. fem. n. *obtesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp007922635*. The type genome for the species is the GenBank assembly RS_GCF_007922635.1. The GC content of the type genome is 66.41 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Nesterenkonia occalessa sp. nov.

Candidatus Nesterenkonia occalessa (NL. fem. n. *occalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp012641515*. The type genome for the species is the GenBank assembly RS_GCF_012641515.1. The GC content of the type genome is 63.07 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Nesterenkonia reduvilenta sp. nov.

Candidatus Nesterenkonia reduvilenta (NL. fem. n. *reduvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp010119385*. The type genome for the species is the GenBank assembly RS_GCF_010119385.1. The GC content of the type genome is 60.8 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Nesterenkonia utraratio sp. nov.

Candidatus Nesterenkonia utraratio (NL. fem. n. *utraratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nesterenkonia sp008711175*. The type genome for the species is the GenBank assembly RS_GCF_008711175.1. The GC content of the type genome is 63.15 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Nevskia adtubibula sp. nov.

Candidatus Nevskia adtubibula (NL. fem. n. *adtubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nevskia sp903970595*. The type genome for the species is the GenBank assembly GCA_903970595.1. The GC content of the type genome is 65.06 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Nevskia agrapastra sp. nov.

Candidatus Nevskia agrapastra (NL. fem. n. *agrapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nevskia sp903885465*. The type genome for the species is the GenBank assembly GCA_903885465.1. The GC content of the type genome is 64.3 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Nevskia cepuritura sp. nov.

Candidatus Nevskia cepuritura (NL. fem. n. *cepuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nevskia sp013823855*. The type genome for the species is the GenBank assembly GCA_013823855.1. The GC content of the type genome is 67.53 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Nevskia medimax sp. nov.

Candidatus Nevskia medimax (NL. fem. n. *medimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nevskia sp903970615*. The type genome for the species is the GenBank assembly GCA_903970615.1. The GC content of the type genome is 60.12 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Nevskia pavimousia sp. nov.

Candidatus Nevskia pavimousia (NL. fem. n. *pavimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nevskia sp903822975*. The type genome for the species is the GenBank assembly GCA_903822975.1. The GC content of the type genome is 62.7 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Niabella cisorastra sp. nov.

Candidatus Niabella cisorastra (NL. fem. n. *cisorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niabella sp001896965*. The type genome for the species is the GenBank assembly GCA_001896965.1. The GC content of the type genome is 41.29 % and the genome length is 3.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Niallia cicatessa sp. nov.

Candidatus Niallia cicatessa (NL. fem. n. *cicatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niallia sp001076885*. The type genome for the species is the GenBank assembly RS_GCF_001076885.1. The GC content of the type genome is 35.32 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Niallia defulitas sp. nov.

Candidatus Niallia defulitas (NL. fem. n. *defulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niallia sp900199695*. The type genome for the species is the GenBank assembly RS_GCF_000401235.1. The GC content of the type genome is 35.1 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rumen liquor".

Description of *Candidatus* Niallia immedugo sp. nov.

Candidatus Niallia immedugo (NL. fem. n. *immedugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niallia sp009183415*. The type genome for the species is the GenBank assembly RS_GCF_009183415.1. The GC content of the type genome is 34.01 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Niallia pavimisca sp. nov.

Candidatus Niallia pavimisca (NL. fem. n. *pavimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niallia sp011524565*. The type genome for the species is the GenBank assembly GCA_011524565.1. The GC content of the type genome is 38.36 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Niameybacter recociforma sp. nov.

Candidatus Niameybacter recociforma (NL. fem. n. *recociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niameybacter sp900551325*. The type genome for the species is the GenBank assembly GCA_900551325.1. The GC content of the type genome is 33.38 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Niameybacter semibilenta sp. nov.

Candidatus Niameybacter semibilenta (NL. fem. n. *semibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niameybacter sp900549765*. The type genome for the species is the GenBank assembly RS_GCF_900764715.1. The GC content of the type genome is 35.02

% and the genome length is 3.01 Mbp.

Description of *Candidatus* Niastella adhiniforma sp. nov.

Candidatus Niastella adhiniforma (NL. fem. n. *adhiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niastella sp004341975*. The type genome for the species is the GenBank assembly RS_GCF_004341975.1. The GC content of the type genome is 43.75 % and the genome length is 9.76 Mbp.

Description of *Candidatus* Nibribacter adrotentia sp. nov.

Candidatus Nibribacter adrotentia (NL. fem. n. *adrotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nibribacter sp001577755*. The type genome for the species is the GenBank assembly RS_GCF_001577755.1. The GC content of the type genome is 49.21 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nibribacter dibucilega sp. nov.

Candidatus Nibribacter dibucilega (NL. fem. n. *dibucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nibribacter sp009913235*. The type genome for the species is the GenBank assembly RS_GCF_009913235.1. The GC content of the type genome is 50.29 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Nicomana cobalitica sp. nov.

Candidatus Nicomana cobalitica (NL. fem. n. *cobalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZWN01 sp903847405*. The type genome for the species is the GenBank assembly GCA_903847405.1. The GC content of the type genome is 69.45 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Nicomana gen. nov.

Candidatus Nicomana (NL. fem. n. *Nicomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZWN01*. The type species for the genus is *Candidatus* Nicomana cobalitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelulaceae.

Description of *Candidatus* Nicomana haricessa sp. nov.

Candidatus Nicomana haricessa (NL. fem. n. *haricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZWN01 sp903936705*. The type genome for the species is the GenBank assembly GCA_903936705.1. The GC content of the type genome is 62.09 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Nicomana masocimonas sp. nov.

Candidatus Nicomana masocimonas (NL. fem. n. *masocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZWN01 sp903857665*. The type genome for the species is the GenBank assembly GCA_903857665.1. The GC content of the type genome is 69.48 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Nicomaria vicatitura sp. nov.

Candidatus Nicomaria vicatitura (NL. fem. n. *vicatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3910 sp002391465*. The type genome for the species is the GenBank assembly GCA_012523335.1. The GC content of the type genome is 52.26 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Nicomaria gen. nov.

Candidatus Nicomaria (NL. fem. n. *Nicomaria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3910*. The type species for the genus is *Candidatus* Nicomaria vicatitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Nicomella adtesitica sp. nov.

Candidatus Nicomella adtesitica (NL. fem. n. *adtesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-50-16 sp001783695*. The type genome for the species is the GenBank assembly GCA_001783695.1. The GC content of the type genome is 49.65 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Nicomella gen. nov.

Candidatus Nicomella (NL. fem. n. *Nicomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD2-FULL-50-16*. The type species for the genus is *Candidatus* Nicomella adtesitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD2-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicomellaceae.

Description of *Candidatus* Nicomellaceae fam. nov.

Candidatus Nicomellaceae (NL. fem. n. *Nicomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYD2-FULL-50-16.* The type genus for the taxon is *Candidatus* Nicomella .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYD2-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Nicomellales.

Description of *Candidatus* Nicomellales ord. nov.

Candidatus Nicomellales (NL. fem. n. *Nicomellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYD2-FULL-50-16.* The type genus for the taxon is *Candidatus* Nicomella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SAR324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Necopanae.

Description of *Candidatus* Nicomida epicrifica sp. nov.

Candidatus Nicomida epicrifica (NL. fem. n. *epicrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J006 sp003697085*. The type genome for the species is the GenBank assembly GCA_003697085.1. The GC content of the type genome is 57.58 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Nicomida gen. nov.

Candidatus Nicomida (NL. fem. n. *Nicomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J006*. The type species for the genus is *Candidatus* Nicomida epicrifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicomidaceae.

Description of *Candidatus* Nicomidaceae fam. nov.

Candidatus Nicomidaceae (NL. fem. n. *Nicomidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J006.* The type genus for the taxon is *Candidatus* Nicomida .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA8481. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Culilariales.

Description of *Candidatus* Nicomosa subofitia sp. nov.

Candidatus Nicomosa subofitia (NL. fem. n. *subofitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM20899 sp900767005*. The type genome for the species is the GenBank assembly GCA_900767005.1. The GC content of the type genome is 31.51 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Nicomosa gen. nov.

Candidatus Nicomosa (NL. fem. n. *Nicomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM20899*. The type species for the genus is *Candidatus* Nicomosa subofitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nicomula sepositudo sp. nov.

Candidatus Nicomula sepositudo (NL. fem. n. *sepositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQOK01 sp903873415*. The type genome for the species is the GenBank assembly GCA_903908725.1. The GC content of the type genome is 58.89 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Nicomula gen. nov.

Candidatus Nicomula (NL. fem. n. *Nicomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQOK01*. The type species for the genus is *Candidatus* Nicomula sepositudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQOK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Nicomulaceae.

Description of *Candidatus* Nicomulaceae fam. nov.

Candidatus Nicomulaceae (NL. fem. n. *Nicomulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQOK01*. The type genus for the taxon is *Candidatus* Nicomula .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Nicotana ceracicula sp. nov.

Candidatus Nicotana ceracicula (NL. fem. n. *ceracicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1205 sp002309475*. The type genome for the species is the GenBank assembly GCA_902779805.1. The GC content of the type genome is 37.49 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Nicotana gen. nov.

Candidatus Nicotana (NL. fem. n. *Nicotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1205*. The type species for the genus is *Candidatus* Nicotana ceracicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Nicotana monocetta sp. nov.

Candidatus Nicotana monocetta (NL. fem. n. *monocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1205 sp002309615*. The type genome for the species is the GenBank assembly GCA_002309615.1. The GC content of the type genome is 38.63 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Nicotella coninax sp. nov.

Candidatus Nicotella coninax (NL. fem. n. *coninax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-318 sp011047235*. The type genome for the species is the GenBank assembly GCA_011047235.1. The GC content of the type genome is 33.16 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Nicotella gen. nov.

Candidatus Nicotella (NL. fem. n. *Nicotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-318*. The type species for the genus is *Candidatus* Nicotella coninax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-318*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicotellaceae.

Description of *Candidatus* Nicotellaceae fam. nov.

Candidatus Nicotellaceae (NL. fem. n. *Nicotellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-318.* The type genus for the taxon is *Candidatus* Nicotella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-318*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nicotellales.

Description of *Candidatus* Nicotellales ord. nov.

Candidatus Nicotellales (NL. fem. n. *Nicotellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-318.* The type genus for the taxon is *Candidatus* Nicotella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SpSt-318*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nicotellae.

Description of *Candidatus* Nicotellae class. nov.

Candidatus Nicotellae (NL. fem. n. *c__Nicotellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-318.* The type genus for the taxon is *Candidatus* Nicotella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SpSt-318*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Nicotellota.

Description of *Candidatus* Nicotellota phyl. nov.

Candidatus Nicotellota (NL. fem. n. *Nicotellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-318.* The type genus for the taxon is *Candidatus* Nicotella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Nicotida bimetitudo sp. nov.

Candidatus Nicotida bimetitudo (NL. fem. n. *bimetitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2277 sp903886255*. The type genome for the species is the GenBank assembly GCA_903900485.1. The GC content of the type genome is 41.29 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Nicotida gen. nov.

Candidatus Nicotida (NL. fem. n. *Nicotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2277*. The type species for the genus is *Candidatus* Nicotida bimetitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFAQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabulaceae.

Description of *Candidatus* Nicotida ludififorma sp. nov.

Candidatus Nicotida ludififorma (NL. fem. n. *ludififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2277 sp000998275*. The type genome for the species is the GenBank assembly GCA_003483145.1. The GC content of the type genome is 41.93 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Nicotida regificella sp. nov.

Candidatus Nicotida regificella (NL. fem. n. *regificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2277 sp002347045*. The type genome for the species is the GenBank assembly GCA_002412665.1. The GC content of the type genome is 39.54 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Nicotida suboditas sp. nov.

Candidatus Nicotida suboditas (NL. fem. n. *suboditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2277 sp903884375*. The type genome for the species is the GenBank assembly GCA_903828305.1. The GC content of the type genome is 37.37 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Nicotosa adrumatio sp. nov.

Candidatus Nicotosa adrumatio (NL. fem. n. *adrumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4479 sp002389175*. The type genome for the species is the GenBank assembly GCA_002389175.1. The GC content of the type genome is 51.92 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Nicotosa gen. nov.

Candidatus Nicotosa (NL. fem. n. *Nicotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4479*. The type species for the genus is *Candidatus* Nicotosa adrumatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Nicotosa dehisibula sp. nov.

Candidatus Nicotosa dehisibula (NL. fem. n. *dehisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4479 sp002389385*. The type genome for the species is the GenBank assembly GCA_002389715.1. The GC content of the type genome is 49.7 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Nicotula ecfunetta sp. nov.

Candidatus Nicotula ecfunetta (NL. fem. n. *ecfunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCF01 sp002069855*. The type genome for the species is the GenBank assembly GCA_002069855.1. The GC content of the type genome is 39.22 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Nicotula gen. nov.

Candidatus Nicotula (NL. fem. n. *Nicotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCF01*. The type species for the genus is *Candidatus* Nicotula ecfunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWCF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicotulaceae.

Description of *Candidatus* Nicotulaceae fam. nov.

Candidatus Nicotulaceae (NL. fem. n. *Nicotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWCF01*. The type genus for the taxon is *Candidatus* Nicotula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Didaciales.

Description of *Candidatus* Nidifana habacifica sp. nov.

Candidatus Nidifana habacifica (NL. fem. n. *habacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7451 sp002457275*. The type genome for the species is the GenBank assembly GCA_002457275.1. The GC content of the type genome is 55.25 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Nidifana gen. nov.

Candidatus Nidifana (NL. fem. n. *Nidifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7451*. The type species for the genus is *Candidatus* Nidifana habacifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Nidifaria derelicella sp. nov.

Candidatus Nidifaria derelicella (NL. fem. n. *derelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-710 sp000432595*. The type genome for the species is the GenBank assembly GCA_000432595.1. The GC content of the type genome is 27.25 % and the genome length is 1.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Nidifaria gen. nov.

Candidatus Nidifaria (NL. fem. n. *Nidifaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-710*. The type species for the genus is *Candidatus* Nidifaria derelicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Nidifella ceraribra sp. nov.

Candidatus Nidifella ceraribra (NL. fem. n. *ceraribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HY158 sp009660225*. The type genome for the species is the GenBank assembly RS_GCF_009660225.1. The GC content of the type genome is 71.25 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Nidifella gen. nov.

Candidatus Nidifella (NL. fem. n. *Nidifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HY158*. The type species for the genus is *Candidatus* Nidifella ceraribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nidifosa armipitas sp. nov.

Candidatus Nidifosa armipitas (NL. fem. n. *armipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp011522845*. The type genome for the species is the GenBank assembly GCA_011522845.1. The GC content of the type genome is 47.06 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Nidifosa gen. nov.

Candidatus Nidifosa (NL. fem. n. *Nidifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JCVI-SCAAA005*. The type species for the genus is *Candidatus* Nidifosa armipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAC60-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peripidaceae.

Description of *Candidatus* Nidifosa exhonifica sp. nov.

Candidatus Nidifosa exhonifica (NL. fem. n. *exhonifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp003541985*. The type genome for the species is the GenBank assembly GCA_003541985.1. The GC content of the type genome is 45.75 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Nidifosa hexamousia sp. nov.

Candidatus Nidifosa hexamousia (NL. fem. n. *hexamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp000224765*. The type genome for the species is the GenBank assembly GCA_002690525.1. The GC content of the type genome is 45.01 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Nidifosa inaspentia sp. nov.

Candidatus Nidifosa inaspentia (NL. fem. n. *inaspentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp002683655*. The type genome for the species is the GenBank assembly GCA_002683655.1. The GC content of the type genome is 46.27 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Nidifosa lupanilega sp. nov.

Candidatus Nidifosa lupanilega (NL. fem. n. *lupanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp002450295*. The type genome for the species is the GenBank assembly GCA_008081005.1. The GC content of the type genome is 47.43 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Nidifosa sugilivita sp. nov.

Candidatus Nidifosa sugilivita (NL. fem. n. *sugilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCVI-SCAAA005 sp002730365*. The type genome for the species is the GenBank assembly GCA_002730365.1. The GC content of the type genome is 46.52 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Nidifula defenimonas sp. nov.

Candidatus Nidifula defenimonas (NL. fem. n. *defenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB18 sp001567425*. The type genome for the species is the GenBank assembly GCA_008363365.1. The GC content of the type genome is 61.06 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Nidifula gen. nov.

Candidatus Nidifula (NL. fem. n. *Nidifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB18*. The type species for the genus is *Candidatus* Nidifula defenimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nimirana cerucibra sp. nov.

Candidatus Nimirana cerucibra (NL. fem. n. *cerucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-462 sp900291465*. The type genome for the species is the

GenBank assembly GCA_900549695.1. The GC content of the type genome is 53.93 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Nimirana gen. nov.

Candidatus Nimirana (NL. fem. n. *Nimirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-462*. The type species for the genus is *Candidatus* Nimirana cerucibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nimirana dibapitica sp. nov.

Candidatus Nimirana dibapitica (NL. fem. n. *dibapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-462 sp003489705*. The type genome for the species is the GenBank assembly GCA_003489705.1. The GC content of the type genome is 52.5 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Nimirana innasitoga sp. nov.

Candidatus Nimirana innasitoga (NL. fem. n. *innasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-462 sp900765575*. The type genome for the species is the GenBank assembly RS_GCF_900765575.1. The GC content of the type genome is 42.61 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Nimiraria proprilenta sp. nov.

Candidatus Nimiraria proprilenta (NL. fem. n. *proprilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG721 sp004010535*. The type genome for the species is the GenBank assembly RS_GCF_004010535.1. The GC content of the type genome is 62.55 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Nimiraria gen. nov.

Candidatus Nimiraria (NL. fem. n. *Nimiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG721*. The type species for the genus is *Candidatus* Nimiraria proprilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nimiraria verifessa sp. nov.

Candidatus Nimiraria verifessa (NL. fem. n. *verifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG721 sp900321745*. The type genome for the species is the GenBank assembly GCA_902788025.1. The GC content of the type genome is 64.97 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Nimirella bicapiforma sp. nov.

Candidatus Nimirella bicapiforma (NL. fem. n. *bicapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2963 sp003215215*. The type genome for the species is the GenBank assembly GCA_902564675.1. The GC content of the type genome is 41.95 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Nimirella gen. nov.

Candidatus Nimirella (NL. fem. n. *Nimirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2963*. The type species for the genus is *Candidatus* Nimirella bicapiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2963*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nimirellaceae.

Description of *Candidatus* Nimirellaceae fam. nov.

Candidatus Nimirellaceae (NL. fem. n. *Nimirellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2963.* The type genus for the taxon is *Candidatus* Nimirella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2963*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nimirellales.

Description of *Candidatus* Nimirellales ord. nov.

Candidatus Nimirellales (NL. fem. n. *Nimirellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2963.* The type genus for the taxon is *Candidatus* Nimirella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Nimirella bovicitio sp. nov.

Candidatus Nimirella bovicitio (NL. fem. n. *bovicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2963 sp002306835*. The type genome for the species is the GenBank assembly GCA_002722235.1. The GC content of the type genome is 37.67 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Nimirella funebessa sp. nov.

Candidatus Nimirella funebessa (NL. fem. n. *funebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2963 sp002719715*. The type genome for the species is the GenBank assembly GCA_002450435.1. The GC content of the type genome is 42.89 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Nimirella utricimonia sp. nov.

Candidatus Nimirella utricimonia (NL. fem. n. *utricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2963 sp002725515*. The type genome for the species is the GenBank assembly GCA_002725515.1. The GC content of the type genome is 42.3 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Nimirida antecatio sp. nov.

Candidatus Nimirida antecatio (NL. fem. n. *antecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-42-24 sp003250395*. The type genome for the species is the GenBank assembly GCA_003250395.1. The GC content of the type genome is 41.56 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Nimirida gen. nov.

Candidatus Nimirida (NL. fem. n. *Nimirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-42-24*. The type species for the genus is *Candidatus* Nimirida antecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TTA-H9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinigiaceae.

Description of *Candidatus* Nimirida detepatica sp. nov.

Candidatus Nimirida detepatica (NL. fem. n. *detepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-42-24 sp001768515*. The type genome for the species is the GenBank assembly GCA_003477065.1. The GC content of the type genome is 44.58 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Nimirosa ammigicula sp. nov.

Candidatus Nimirosa ammigicula (NL. fem. n. *ammigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNFN01 sp009937385*. The type genome for the species is the GenBank assembly GCA_009937385.1. The GC content of the type genome is 67.75 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Nimirosa gen. nov.

Candidatus Nimirosa (NL. fem. n. *Nimirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNFN01*. The type species for the genus is *Candidatus* Nimirosa ammigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNFN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nimirosaceae.

Description of *Candidatus* Nimirosaceae fam. nov.

Candidatus Nimirosaceae (NL. fem. n. *Nimirosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNFN01.* The type genus for the taxon is *Candidatus* Nimirosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNFN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nimirosales.

Description of *Candidatus* Nimirosales ord. nov.

Candidatus Nimirosales (NL. fem. n. *Nimirosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNFN01.* The type genus for the taxon is *Candidatus* Nimirosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Nimirosa egritatica sp. nov.

Candidatus Nimirosa egritatica (NL. fem. n. *egritatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNFN01 sp003645555*. The type genome for the species is the GenBank assembly GCA_003645555.1. The GC content of the type genome is 63.73 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Nimirula citivessa sp. nov.

Candidatus Nimirula citivessa (NL. fem. n. *citivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-27 sp002279275*. The type genome for the species is the GenBank assembly GCA_002279275.1. The GC content of the type genome is 65.33 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Nimirula gen. nov.

Candidatus Nimirula (NL. fem. n. *Nimirula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-66-27*. The type species for the genus is *Candidatus* Nimirula citivessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Nimirula demulatica sp. nov.

Candidatus Nimirula demulatica (NL. fem. n. *demulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-27 sp001873935*. The type genome for the species is the GenBank assembly GCA_001873935.1. The GC content of the type genome is 65.51 % and the genome length is 2.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Nimirula ficuliforma sp. nov.

Candidatus Nimirula ficuliforma (NL. fem. n. *ficuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-27 sp007280195*. The type genome for the species is the GenBank assembly GCA_007280195.1. The GC content of the type genome is 65.04 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Nimirula grallicella sp. nov.

Candidatus Nimirula grallicella (NL. fem. n. *grallicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-27 sp011391555*. The type genome for the species is the GenBank assembly GCA_011391555.1. The GC content of the type genome is 66.61 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Nimirula homolitudo sp. nov.

Candidatus Nimirula homolitudo (NL. fem. n. *homolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-27 sp001797445*. The type genome for the species is the GenBank assembly GCA_001797575.1. The GC content of the type genome is 66.17 % and the genome length is 2.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Nioella adtesifica sp. nov.

Candidatus Nioella adtesifica (NL. fem. n. *adtesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nioella sp003428585*. The type genome for the species is the GenBank assembly RS_GCF_003428585.1. The GC content of the type genome is 65.8 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Nioella decapitura sp. nov.

Candidatus Nioella decapitura (NL. fem. n. *decapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nioella sp002783145*. The type genome for the species is the GenBank assembly GCA_002783145.1. The GC content of the type genome is 65.16 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Nioella diluvibra sp. nov.

Candidatus Nioella diluvibra (NL. fem. n. *diluvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nioella sp002710305*. The type genome for the species is the GenBank assembly GCA_002693265.1. The GC content of the type genome is 65.48 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Nitelana detoriforma sp. nov.

Candidatus Nitelana detoriforma (NL. fem. n. *detoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVD01 sp903907885*. The type genome for the species is the GenBank assembly GCA_903923975.1. The GC content of the type genome is 34.23 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Nitelana gen. nov.

Candidatus Nitelana (NL. fem. n. *Nitelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGVD01*. The type species for the genus is *Candidatus* Nitelana detoriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Nitelana duponetta sp. nov.

Candidatus Nitelana duponetta (NL. fem. n. *duponetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVD01 sp010027395*. The type genome for the species is the

GenBank assembly GCA_010027395.1. The GC content of the type genome is 35.04 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Nitelaria visibatio sp. nov.

Candidatus Nitelaria visibatio (NL. fem. n. *visibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077529 sp001464525*. The type genome for the species is the GenBank assembly GCA_001464525.1. The GC content of the type genome is 60.47 % and the genome length is 5.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Nitelaria gen. nov.

Candidatus Nitelaria (NL. fem. n. *Nitelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077529*. The type species for the genus is *Candidatus* Nitelaria visibatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Nitelariaceae fam. nov.

Candidatus Nitelariaceae (NL. fem. n. *Nitelariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077529.* The type genus for the taxon is *Candidatus* Nitelaria .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Nitelella delapibra sp. nov.

Candidatus Nitelella delapibra (NL. fem. n. *delapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKI01 sp002070945*. The type genome for the species is the

GenBank assembly GCA_002070945.1. The GC content of the type genome is 57.15 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Nitelella gen. nov.

Candidatus Nitelella (NL. fem. n. *Nitelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZKI01*. The type species for the genus is *Candidatus* Nitelella delapibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Nitelella maxumatica sp. nov.

Candidatus Nitelella maxumatica (NL. fem. n. *maxumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKI01 sp012799905*. The type genome for the species is the GenBank assembly GCA_012799905.1. The GC content of the type genome is 56.74 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Nitelia defetitica sp. nov.

Candidatus Nitelia defetitica (NL. fem. n. *defetitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch29 sp013540605*. The type genome for the species is the GenBank assembly GCA_013540605.1. The GC content of the type genome is 45.32 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Nitelia gen. nov.

Candidatus Nitelia (NL. fem. n. *Nitelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch29*. The type species for the genus is *Candidatus* Nitelia defetitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

family *Candidatus* Niteliaceae.

Description of *Candidatus* Niteliaceae fam. nov.

Candidatus Niteliaceae (NL. fem. n. *Niteliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch29.* The type genus for the taxon is *Candidatus* Nitelia .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ch29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Niteliales.

Description of *Candidatus* Niteliales ord. nov.

Candidatus Niteliales (NL. fem. n. *Niteliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch29.* The type genus for the taxon is *Candidatus* Nitelia .

According to the original version of GTDB R06-RS202, this family belongs to the class *Ch29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Niteliae.

Description of *Candidatus* Niteliae class. nov.

Candidatus Niteliae (NL. fem. n. *c__Niteliae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch29.* The type genus for the taxon is *Candidatus* Nitelia .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_A*.

Description of *Candidatus* Nitelida defesicella sp. nov.

Candidatus Nitelida defesicella (NL. fem. n. *defesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPU01 sp012519645*. The type genome for the species is the GenBank assembly GCA_012519645.1. The GC content of the type genome is 35.79 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Nitelida gen. nov.

Candidatus Nitelida (NL. fem. n. *Nitelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPU01*. The type species for the genus is *Candidatus* Nitelida defesicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYPU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelidaceae.

Description of *Candidatus* Nitelidaceae fam. nov.

Candidatus Nitelidaceae (NL. fem. n. *Nitelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYPU01.* The type genus for the taxon is *Candidatus* Nitelida .

According to GTDB R06-RS202, this family belongs to the order *Peptostreptococcales*.

Description of *Candidatus* Nitelosa inobrugo sp. nov.

Candidatus Nitelosa inobrugo (NL. fem. n. *inobrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J093 sp003695015*. The type genome for the species is the GenBank assembly GCA_003695015.1. The GC content of the type genome is 67.62 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Nitelosa gen. nov.

Candidatus Nitelosa (NL. fem. n. *Nitelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J093*. The type species for the genus is *Candidatus* Nitelosa inobrugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J093*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelosaceae.

Description of *Candidatus* Nitelosaceae fam. nov.

Candidatus Nitelosaceae (NL. fem. n. *Nitelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J093.* The type genus for the taxon is *Candidatus* Nitelosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Nitelula dececitrix sp. nov.

Candidatus Nitelula dececitrix (NL. fem. n. *dececitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLJ01 sp004283005*. The type genome for the species is the GenBank assembly GCA_013001285.1. The GC content of the type genome is 36.15 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Nitelula gen. nov.

Candidatus Nitelula (NL. fem. n. *Nitelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHLJ01*. The type species for the genus is *Candidatus* Nitelula dececitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nitelula dececitura sp. nov.

Candidatus Nitelula dececitura (NL. fem. n. *dececitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLJ01 sp013001965*. The type genome for the species is the GenBank assembly GCA_013001965.1. The GC content of the type genome is 38.68 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Nitelula domigitudo sp. nov.

Candidatus Nitelula domigitudo (NL. fem. n. *domigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLJ01 sp013003555*. The type genome for the species is the GenBank assembly GCA_013042665.1. The GC content of the type genome is 40.17 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Nitelula inreliforma sp. nov.

Candidatus Nitelula inreliforma (NL. fem. n. *inreliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLJ01 sp013042825*. The type genome for the species is the GenBank assembly GCA_013042825.1. The GC content of the type genome is 42.7 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Nitelula minuritrix sp. nov.

Candidatus Nitelula minuritrix (NL. fem. n. *minuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLJ01 sp013042625*. The type genome for the species is the GenBank assembly GCA_013003585.1. The GC content of the type genome is 40.55 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Nitratidesulfovibrio rubigicula sp. nov.

Candidatus Nitratidesulfovibrio rubigicula (NL. fem. n. *rubigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitratidesulfovibrio sp011682075*. The type genome for the species is the GenBank assembly RS_GCF_011682075.1. The GC content of the type genome is 65.79 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Nitratidesulfovibrio turifastra sp. nov.

Candidatus Nitratidesulfovibrio turifastra (NL. fem. n. *turifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitratidesulfovibrio sp000226255*. The type genome for the species is the GenBank assembly GCA_002432265.1. The GC content of the type genome is 67.49

% and the genome length is 3.92 Mbp.

Description of *Candidatus* Nitratireductor acruficella sp. nov.

Candidatus Nitratireductor acruficella (NL. fem. n. *acruficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitratireductor sp003296175*. The type genome for the species is the GenBank assembly RS_GCF_003296175.1. The GC content of the type genome is 61.94 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Nitratireductor fusifitio sp. nov.

Candidatus Nitratireductor fusifitio (NL. fem. n. *fusifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitratireductor sp002697745*. The type genome for the species is the GenBank assembly GCA_002697745.1. The GC content of the type genome is 60.31 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Nitratiruptor conamentia sp. nov.

Candidatus Nitratiruptor conamentia (NL. fem. n. *conamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitratiruptor sp000010325*. The type genome for the species is the GenBank assembly RS_GCF_000010325.1. The GC content of the type genome is 39.69 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Nitrincola inobritudo sp. nov.

Candidatus Nitrincola inobritudo (NL. fem. n. *inobritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrincola sp007693685*. The type genome for the species is the GenBank assembly GCA_007693685.1. The GC content of the type genome is 44.18 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Nitrincola inordibula sp. nov.

Candidatus Nitrincola inordibula (NL. fem. n. *inordibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrincola sp000764495*. The type genome for the species is the GenBank assembly RS_GCF_000764495.1. The GC content of the type genome is 49.96 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Altiplano of Northern Chile".

Description of *Candidatus* Nitrincola inpasax sp. nov.

Candidatus Nitrincola inpasax (NL. fem. n. *inpasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrincola sp007125745*. The type genome for the species is the GenBank assembly GCA_007125745.1. The GC content of the type genome is 45.45 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Nitrincola nutabimonia sp. nov.

Candidatus Nitrincola nutabimonia (NL. fem. n. *nutabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrincola sp008727795*. The type genome for the species is the GenBank assembly RS_GCF_008727795.1. The GC content of the type genome is 50.06 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Nitrobacter culigax sp. nov.

Candidatus Nitrobacter culigax (NL. fem. n. *culigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrobacter sp001896955*. The type genome for the species is the GenBank assembly GCA_001896955.1. The GC content of the type genome is 62.24 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Nitrobacter feculitoga sp. nov.

Candidatus Nitrobacter feculitoga (NL. fem. n. *feculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrobacter sp000152905*. The type genome for the species is the GenBank assembly RS_GCF_000152905.1. The GC content of the type genome is 60.37 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Nitrobacter oppanitio sp. nov.

Candidatus Nitrobacter oppanitio (NL. fem. n. *oppanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrobacter sp001897285*. The type genome for the species is the GenBank assembly GCA_001897285.1. The GC content of the type genome is 62.06 % and the genome length is 3.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Nitrosomonas acrolousia sp. nov.

Candidatus Nitrosomonas acrolousia (NL. fem. n. *acrolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp008015565*. The type genome for the species is the GenBank assembly GCA_008015565.1. The GC content of the type genome is 44.28 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Nitrosomonas adnilax sp. nov.

Candidatus Nitrosomonas adnilax (NL. fem. n. *adnilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900112825*. The type genome for the species is the GenBank assembly RS_GCF_900112825.1. The GC content of the type genome is 45.17 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Nitrosomonas ambusastra sp. nov.

Candidatus Nitrosomonas ambusastra (NL. fem. n. *ambusastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp902826115*. The type genome for the species is the GenBank assembly GCA_902826115.1. The GC content of the type genome is 45.07 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Nitrosomonas arundetta sp. nov.

Candidatus Nitrosomonas arundetta (NL. fem. n. *arundetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900113925*. The type genome for the species is the GenBank assembly RS_GCF_900113925.1. The GC content of the type genome is 44.48 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Nitrosomonas assudibula sp. nov.

Candidatus Nitrosomonas assudibula (NL. fem. n. *assudibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp002435335*. The type genome for the species is the GenBank assembly GCA_002435335.1. The GC content of the type genome is 46.45 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Nitrosomonas bivericula sp. nov.

Candidatus Nitrosomonas bivericula (NL. fem. n. *bivericula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp003011925*. The type genome for the species is the GenBank assembly RS_GCF_003011925.2. The GC content of the type genome is 43.49 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Nitrosomonas direpessa sp. nov.

Candidatus Nitrosomonas direpessa (NL. fem. n. *direpessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp000219585*. The type genome for the species is the GenBank assembly RS_GCF_000219585.1. The GC content of the type genome is 45.44 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Nitrosomonas dirititoga sp. nov.

Candidatus Nitrosomonas dirititoga (NL. fem. n. *dirititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp000175095*. The type genome for the species is the GenBank assembly RS_GCF_000175095.2. The GC content of the type genome is 44.79 % and the genome length is 3.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "laboratory waste water treatment reactor".

Description of *Candidatus* Nitrosomonas docibousia sp. nov.

Candidatus Nitrosomonas docibousia (NL. fem. n. *docibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900100485*. The type genome for the species is the GenBank assembly RS_GCF_900100485.1. The GC content of the type genome is 46.61 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Nitrosomonas duciletta sp. nov.

Candidatus Nitrosomonas duciletta (NL. fem. n. *duciletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp008015595*. The type genome for the species is the GenBank assembly GCA_008015595.1. The GC content of the type genome is 42.9 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Nitrosomonas excetilenta sp. nov.

Candidatus Nitrosomonas excetilenta (NL. fem. n. *excetilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900111165*. The type genome for the species is the GenBank assembly RS_GCF_900111165.1. The GC content of the type genome is 47.35 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Nitrosomonas immaticella sp. nov.

Candidatus Nitrosomonas immaticella (NL. fem. n. *immaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp004345375*. The type genome for the species is the GenBank assembly RS_GCF_004345375.1. The GC content of the type genome is 48.96 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Nitrosomonas indivimonas sp. nov.

Candidatus Nitrosomonas indivimonas (NL. fem. n. *indivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900696615*. The type genome for the species is the GenBank assembly GCA_900696615.1. The GC content of the type genome is 43.91 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Nitrosomonas inredigena sp. nov.

Candidatus Nitrosomonas inredigena (NL. fem. n. *inredigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp900107265*. The type genome for the species is the GenBank assembly RS_GCF_900107265.1. The GC content of the type genome is 44.46 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Nitrosomonas inremugo sp. nov.

Candidatus Nitrosomonas inremugo (NL. fem. n. *inremugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp005779435*. The type genome for the species is the GenBank assembly GCA_005779435.1. The GC content of the type genome is 50.7 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Nitrosomonas irregatio sp. nov.

Candidatus Nitrosomonas irregatio (NL. fem. n. *irregatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp002083595*. The type genome for the species is the GenBank assembly GCA_002083595.1. The GC content of the type genome is 49.24 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Nitrosomonas loceliforma sp. nov.

Candidatus Nitrosomonas loceliforma (NL. fem. n. *loceliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp002083395*. The type genome for the species is the GenBank assembly GCA_002083395.1. The GC content of the type genome is 48.05 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Nitrosomonas maxumibra sp. nov.

Candidatus Nitrosomonas maxumibra (NL. fem. n. *maxumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp003268955*. The type genome for the species is the GenBank assembly RS_GCF_003268955.1. The GC content of the type genome is 43.15 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Nitrosomonas miracisca sp. nov.

Candidatus Nitrosomonas miracisca (NL. fem. n. *miracisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp009833095*. The type genome for the species is the GenBank assembly RS_GCF_009833095.1. The GC content of the type genome is 47.82 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Nitrosomonas peropicella sp. nov.

Candidatus Nitrosomonas peropicella (NL. fem. n. *peropicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nitrosomonas sp902826915*. The type genome for the species is the GenBank assembly GCA_902826915.1. The GC content of the type genome is 44.06 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Nitrosomonas podagitica sp. nov.

Candidatus Nitrosomonas podagitica (NL. fem. n. *podagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp902826055*. The type genome for the species is the GenBank assembly GCA_902826055.1. The GC content of the type genome is 43.3 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Nitrosomonas sarabago sp. nov.

Candidatus Nitrosomonas sarabago (NL. fem. n. *sarabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp003201565*. The type genome for the species is the GenBank assembly RS_GCF_004340695.1. The GC content of the type genome is 45.57 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Nitrosomonas vanitentia sp. nov.

Candidatus Nitrosomonas vanitentia (NL. fem. n. *vanitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp009833125*. The type genome for the species is the GenBank assembly RS_GCF_009833125.1. The GC content of the type genome is 49.31 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Nitrosomonas vilipitrix sp. nov.

Candidatus Nitrosomonas vilipitrix (NL. fem. n. *vilipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosomonas sp003514765*. The type genome for the species is the GenBank assembly GCA_003514765.1. The GC content of the type genome is 44.74 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Nitrosospira ambusugo sp. nov.

Candidatus Nitrosospira ambusugo (NL. fem. n. *ambusugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp900102495*. The type genome for the species is the GenBank assembly RS_GCF_900102495.1. The GC content of the type genome is 53.65 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Nitrosospira aterrilenta sp. nov.

Candidatus Nitrosospira aterrilenta (NL. fem. n. *aterrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp013697655*. The type genome for the species is the GenBank assembly GCA_013697655.1. The GC content of the type genome is 51.43 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Nitrosospira cemenax sp. nov.

Candidatus Nitrosospira cemenax (NL. fem. n. *cemenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp003046405*. The type genome for the species is the GenBank assembly RS_GCF_003046405.1. The GC content of the type genome is 53.45 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Nitrosospira decatitoga sp. nov.

Candidatus Nitrosospira decatitoga (NL. fem. n. *decatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp001899235*. The type genome for the species is the GenBank assembly GCA_001899235.1. The GC content of the type genome is 55.96 % and the genome length is 3.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Nitrosospira deforitudo sp. nov.

Candidatus Nitrosospira deforitudo (NL. fem. n. *deforitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp900110495*. The type genome for the species is the GenBank assembly RS_GCF_900110495.1. The GC content of the type genome is 53.23 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Nitrosospira enimvivita sp. nov.

Candidatus Nitrosospira enimvivita (NL. fem. n. *enimvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp003633815*. The type genome for the species is the GenBank assembly RS_GCF_003633815.1. The GC content of the type genome is 54.8 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Nitrosospira epistitoga sp. nov.

Candidatus Nitrosospira epistitoga (NL. fem. n. *epistitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp003050965*. The type genome for the species is the GenBank assembly RS_GCF_003050965.1. The GC content of the type genome is 54.65 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Nitrosospira hirunessa sp. nov.

Candidatus Nitrosospira hirunessa (NL. fem. n. *hirunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp003053905*. The type genome for the species is the GenBank assembly RS_GCF_900215485.1. The GC content of the type genome is 53.26 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Nitrosospira immodifica sp. nov.

Candidatus Nitrosospira immodifica (NL. fem. n. *immodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp900113575*. The type genome for the species is the GenBank assembly RS_GCF_900113575.1. The GC content of the type genome is 54.84 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Nitrosospira obtunitura sp. nov.

Candidatus Nitrosospira obtunitura (NL. fem. n. *obtunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp013821425*. The type genome for the species is the GenBank assembly GCA_013821425.1. The GC content of the type genome is 54.33 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Nitrosospira sifunitrix sp. nov.

Candidatus Nitrosospira sifunitrix (NL. fem. n. *sifunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp900142705*. The type genome for the species is the GenBank assembly RS_GCF_900142705.1. The GC content of the type genome is 52.78 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Nitrosospira stercitica sp. nov.

Candidatus Nitrosospira stercitica (NL. fem. n. *stercitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp000832065*. The type genome for the species is the GenBank assembly RS_GCF_000832065.1. The GC content of the type genome is 53.14 % and the genome length is 3.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nitrosospira velificella sp. nov.

Candidatus Nitrosospira velificella (NL. fem. n. *velificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrosospira sp900119085*. The type genome for the species is the GenBank assembly RS_GCF_900119085.1. The GC content of the type genome is 63.29

% and the genome length is 2.84 Mbp.

Description of *Candidatus* Nitrospira adalgitoga sp. nov.

Candidatus Nitrospira adalgitoga (NL. fem. n. *adalgitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp009594865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009594865.1. The GC content of the type genome is 58.6 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Nitrospira adnulivita sp. nov.

Candidatus Nitrospira adnulivita (NL. fem. n. *adnulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp902500715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500715.1. The GC content of the type genome is 58.98 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Nitrospira adtagitoga sp. nov.

Candidatus Nitrospira adtagitoga (NL. fem. n. *adtagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp900696505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900696505.1. The GC content of the type genome is 58.19 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Nitrospira cerucitudo sp. nov.

Candidatus Nitrospira cerucitudo (NL. fem. n. *cerucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nitrospira_A sp014055495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014055495.1. The GC content of the type genome is 59.47 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Nitrospira cibarifica sp. nov.

Candidatus Nitrospira cibarifica (NL. fem. n. *cibarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp013696305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013696305.1. The GC content of the type genome is 57.38 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Nitrospira detumatio sp. nov.

Candidatus Nitrospira detumatio (NL. fem. n. *detumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp902500785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500785.1. The GC content of the type genome is 58.65 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Nitrospira insenedo sp. nov.

Candidatus Nitrospira insenedo (NL. fem. n. *insenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp902500995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500995.1. The GC content of the type genome is 59.48 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Nitrospira intacitoga sp. nov.

Candidatus Nitrospira intacitoga (NL. fem. n. *intacitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp009594995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009594995.1. The GC content of the type genome is 58.36 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Nitrospira monumimonas sp. nov.

Candidatus Nitrospira monumimonas (NL. fem. n. *monumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp900170025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900170025.1. The GC content of the type genome is 58.87 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Nitrospira mutabitia sp. nov.

Candidatus Nitrospira mutabitia (NL. fem. n. *mutabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp003456605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011525625.1. The GC content of the type genome is 59.29 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Nitrospira nosocilega sp. nov.

Candidatus Nitrospira nosocilega (NL. fem. n. *nosocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp014055465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014055465.1. The GC

content of the type genome is 58.28 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Nitrospira sitelimonia sp. nov.

Candidatus Nitrospira sitelimonia (NL. fem. n. *sitelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp009594855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009594855.1. The GC content of the type genome is 58.79 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Nitrospira visificula sp. nov.

Candidatus Nitrospira visificula (NL. fem. n. *visificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_A sp001567445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001567445.1. The GC content of the type genome is 60.36 % and the genome length is 3.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Nitrospira inhoribra sp. nov.

Candidatus Nitrospira inhoribra (NL. fem. n. *inhoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_C sp014055525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014055525.1. The GC content of the type genome is 58.34 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Nitrospira irrecugo sp. nov.

Candidatus Nitrospira irrecugo (NL. fem. n. *irrecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_C sp002420105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002420105.1. The GC content of the type genome is 62.41 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Nitrospira retecedo sp. nov.

Candidatus Nitrospira retecedo (NL. fem. n. *retecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_C sp011405515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011405515.1. The GC content of the type genome is 55.98 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Nitrospira abligitudo sp. nov.

Candidatus Nitrospira abligitudo (NL. fem. n. *abligitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp014534095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014534095.1. The GC content of the type genome is 58.99 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Nitrospira astipugo sp. nov.

Candidatus Nitrospira astipugo (NL. fem. n. *astipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp002083555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002083555.1. The GC content of the type genome is 58.02 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Nitrospira conubisca sp. nov.

Candidatus Nitrospira conubisca (NL. fem. n. *conubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp002869855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002869855.2. The GC content of the type genome is 57.84 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Nitrospira nubigugo sp. nov.

Candidatus Nitrospira nubigugo (NL. fem. n. *nubigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp013140455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013140455.1. The GC content of the type genome is 57.59 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Nitrospira ratifitoga sp. nov.

Candidatus Nitrospira ratifitoga (NL. fem. n. *ratifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp002435325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002435405.1. The GC content of the type genome is 57.84 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Nitrospira taraxago sp. nov.

Candidatus Nitrospira taraxago (NL. fem. n. *taraxago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_D sp900299245*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900299245.1. The GC content of the type genome is 59.11 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Nitrospira abrumilega sp. nov.

Candidatus Nitrospira abrumilega (NL. fem. n. *abrumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005793285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005793285.1. The GC content of the type genome is 57.13 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Nitrospira adpositrix sp. nov.

Candidatus Nitrospira adpositrix (NL. fem. n. *adpositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp012030925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012030925.1. The GC content of the type genome is 55.13 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Nitrospira alceditoga sp. nov.

Candidatus Nitrospira alceditoga (NL. fem. n. *alceditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp011331925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011331925.1. The GC content of the type genome is 55.32 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Nitrospira appugitudo sp. nov.

Candidatus Nitrospira appugitudo (NL. fem. n. *appugitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500755.1. The GC content of the type genome is 54.87 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Nitrospira bacifibula sp. nov.

Candidatus Nitrospira bacifibula (NL. fem. n. *bacifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005116965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005116965.1. The GC content of the type genome is 55.24 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Nitrospira bicinitica sp. nov.

Candidatus Nitrospira bicinitica (NL. fem. n. *bicinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002451055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002451055.1. The GC content of the type genome is 57.08 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Nitrospira cemenentia sp. nov.

Candidatus Nitrospira cemenentia (NL. fem. n. *cemenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002331625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002331625.1. The GC content of the type genome is 55.3 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Nitrospira cepulitio sp. nov.

Candidatus Nitrospira cepulitio (NL. fem. n. *cepulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500805.1. The GC content of the type genome is 55.19 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Nitrospira coninastra sp. nov.

Candidatus Nitrospira coninastra (NL. fem. n. *coninastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500795.1. The GC content of the type genome is 54.72 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Nitrospira dapifedo sp. nov.

Candidatus Nitrospira dapifedo (NL. fem. n. *dapifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp012032965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012032965.1. The GC content of the type genome is 54.69 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Nitrospira desomastra sp. nov.

Candidatus Nitrospira desomastra (NL. fem. n. *desomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002254365*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002254365.1. The GC content of the type genome is 54.93 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Nitrospira detotitia sp. nov.

Candidatus Nitrospira detotitia (NL. fem. n. *detotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002083365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002083365.1. The GC content of the type genome is 56.08 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Nitrospira energousia sp. nov.

Candidatus Nitrospira energousia (NL. fem. n. *energousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500745.1. The GC content of the type genome is 54.98 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Nitrospira immemibra sp. nov.

Candidatus Nitrospira immemibra (NL. fem. n. *immemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp011090425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011090425.1. The GC content of the type genome is 55.92 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Nitrospira inaspisca sp. nov.

Candidatus Nitrospira inaspisca (NL. fem. n. *inaspisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002083565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002083565.1. The GC content of the type genome is 57.02 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Nitrospira lutulitura sp. nov.

Candidatus Nitrospira lutulitura (NL. fem. n. *lutulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005116745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005116745.1. The GC content of the type genome is 54.96 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Nitrospira maligago sp. nov.

Candidatus Nitrospira maligago (NL. fem. n. *maligago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002869845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002869845.2. The GC content of the type genome is 55.28 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Nitrospira minagitia sp. nov.

Candidatus Nitrospira minagitia (NL. fem. n. *minagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005116955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005116955.1. The GC content of the type genome is 55.15 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Nitrospira munimessa sp. nov.

Candidatus Nitrospira munimessa (NL. fem. n. *munimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp900696515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002483475.1. The GC content of the type genome is 56.3 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Nitrospira myalgilenta sp. nov.

Candidatus Nitrospira myalgilenta (NL. fem. n. *myalgilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500825.1. The GC content of the type genome is 54.96 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Nitrospira progritica sp. nov.

Candidatus Nitrospira progritica (NL. fem. n. *progritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp001464735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001464735.1. The GC content of the type genome is 55.07 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Nitrospira rorarastra sp. nov.

Candidatus Nitrospira rorarastra (NL. fem. n. *rorarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002420115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002420045.1. The GC content of the type genome is 55.02 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Nitrospira scammessa sp. nov.

Candidatus Nitrospira scammessa (NL. fem. n. *scammessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp902500775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902500775.1. The GC content of the type genome is 54.5 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Nitrospira subacitrix sp. nov.

Candidatus Nitrospira subacitrix (NL. fem. n. *subacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005116895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005116895.1. The GC content of the type genome is 55.18 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Nitrospira subofibra sp. nov.

Candidatus Nitrospira subofibra (NL. fem. n. *subofibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp005239465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005239465.1. The GC content of the type genome is 56.83 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Nitrospira tetenilenta sp. nov.

Candidatus Nitrospira tetenilenta (NL. fem. n. *tetenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002331335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002331335.1. The GC content of the type genome is 57.89 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Nitrospira vocamitia sp. nov.

Candidatus Nitrospira vocamitia (NL. fem. n. *vocamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospira_F sp002083405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002083405.1. The GC content of the type genome is 56.77 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Nitrospirillum expenitia sp. nov.

Candidatus Nitrospirillum expenitia (NL. fem. n. *expenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrospirillum sp000333275*. The type genome for the species is the GenBank assembly RS_GCF_000333275.1. The GC content of the type genome is 67.52 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Nitrotoga cohonitica sp. nov.

Candidatus Nitrotoga cohonitica (NL. fem. n. *cohonitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp003402315*. The type genome for the species is the GenBank assembly GCA_003402315.1. The GC content of the type genome is 48.71 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Nitrotoga colopilenta sp. nov.

Candidatus Nitrotoga colopilenta (NL. fem. n. *colopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp009885195*. The type genome for the species is the GenBank assembly GCA_009885195.1. The GC content of the type genome is 55.79 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Nitrotoga evangibula sp. nov.

Candidatus Nitrotoga evangibula (NL. fem. n. *evangibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp003402345*. The type genome for the species is the GenBank assembly GCA_003402345.1. The GC content of the type genome is 48.6 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Nitrotoga invesousia sp. nov.

Candidatus Nitrotoga invesousia (NL. fem. n. *invesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp013168275*. The type genome for the species is the GenBank assembly RS_GCF_013168275.1. The GC content of the type genome is 48.86 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Nitrotoga murilitudo sp. nov.

Candidatus Nitrotoga murilitudo (NL. fem. n. *murilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp003402285*. The type genome for the species is the GenBank assembly GCA_003402285.1. The GC content of the type genome is 47.47 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Nitrotoga repagitura sp. nov.

Candidatus Nitrotoga repagitura (NL. fem. n. *repagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp002470125*. The type genome for the species is the GenBank assembly GCA_002470125.1. The GC content of the type genome is 51.26 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Nitrotoga saxopilenta sp. nov.

Candidatus Nitrotoga saxopilenta (NL. fem. n. *saxopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp003402375*. The type genome for the species is the GenBank assembly GCA_003402375.1. The GC content of the type genome is 48.8 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Nitrotoga vehicicella sp. nov.

Candidatus Nitrotoga vehicicella (NL. fem. n. *vehicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nitrotoga sp903878125*. The type genome for the species is the GenBank assembly GCA_903878125.1. The GC content of the type genome is 50.02 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Niveibacterium dimacitrix sp. nov.

Candidatus Niveibacterium dimacitrix (NL. fem. n. *dimacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niveibacterium sp009781175*. The type genome for the species is the GenBank assembly GCA_009781175.1. The GC content of the type genome is 59.62 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Niveibacterium halucedo sp. nov.

Candidatus Niveibacterium halucedo (NL. fem. n. *halucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niveibacterium sp013184235*. The type genome for the species is the GenBank assembly RS_GCF_013184235.1. The GC content of the type genome is 64.12

% and the genome length is 4.92 Mbp.

Description of *Candidatus* Niveispirillum coticitia sp. nov.

Candidatus Niveispirillum coticitia (NL. fem. n. *coticitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niveispirillum sp009495745*. The type genome for the species is the GenBank assembly RS_GCF_009495745.1. The GC content of the type genome is 63.41 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Niveispirillum ocissugo sp. nov.

Candidatus Niveispirillum ocissugo (NL. fem. n. *ocissugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niveispirillum sp001296005*. The type genome for the species is the GenBank assembly RS_GCF_001296005.1. The GC content of the type genome is 63.73 % and the genome length is 5.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Niveispirillum socagivita sp. nov.

Candidatus Niveispirillum socagivita (NL. fem. n. *socagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Niveispirillum sp900188385*. The type genome for the species is the GenBank assembly RS_GCF_900188305.1. The GC content of the type genome is 63.55 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Nivomana megalilega sp. nov.

Candidatus Nivomana megalilega (NL. fem. n. *megalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-40-21 sp001873945*. The type genome for the species is the GenBank assembly GCA_001873945.1. The GC content of the type genome is 40.16 % and the genome length is 2.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Nivomana gen. nov.

Candidatus Nivomana (NL. fem. n. *Nivomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-40-21*. The type species for the genus is *Candidatus* Nivomana megalilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nivomanaceae.

Description of *Candidatus* Nivomanaceae fam. nov.

Candidatus Nivomanaceae (NL. fem. n. *Nivomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-40-21.* The type genus for the taxon is *Candidatus* Nivomana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nivomanales.

Description of *Candidatus* Nivomanales ord. nov.

Candidatus Nivomanales (NL. fem. n. *Nivomanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-40-21.* The type genus for the taxon is *Candidatus* Nivomana .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG2-30-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nivomanae.

Description of *Candidatus* Nivomanae class. nov.

Candidatus Nivomanae (NL. fem. n. *c__Nivomanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-40-21.* The type genus for the taxon is *Candidatus* Nivomana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the phylum *Candidatus* Casigariota.

Description of *Candidatus* Nivomaria apharitura sp. nov.

Candidatus Nivomaria apharitura (NL. fem. n. *apharitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903866605*. The type genome for the species is the GenBank assembly GCA_903866605.1. The GC content of the type genome is 38.76 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Nivomaria gen. nov.

Candidatus Nivomaria (NL. fem. n. *Nivomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1547*. The type species for the genus is *Candidatus* Nivomaria apharitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nivomaria arcitisca sp. nov.

Candidatus Nivomaria arcitisca (NL. fem. n. *arcitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp002429375*. The type genome for the species is the GenBank assembly GCA_002429375.1. The GC content of the type genome is 49.2 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Nivomaria carunicella sp. nov.

Candidatus Nivomaria carunicella (NL. fem. n. *carunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903952435*. The type genome for the species is the GenBank assembly GCA_903952435.1. The GC content of the type genome is 38.79 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Nivomaria cunabetta sp. nov.

Candidatus Nivomaria cunabetta (NL. fem. n. *cunabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp002839415*. The type genome for the species is the GenBank assembly GCA_002839415.1. The GC content of the type genome is 39.63 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Nivomaria excocibula sp. nov.

Candidatus Nivomaria excocibula (NL. fem. n. *excocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp004322265*. The type genome for the species is the GenBank assembly GCA_004322265.1. The GC content of the type genome is 45.67 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Nivomaria ficedugo sp. nov.

Candidatus Nivomaria ficedugo (NL. fem. n. *ficedugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903900345*. The type genome for the species is the GenBank assembly GCA_903900345.1. The GC content of the type genome is 41.51 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Nivomaria ininnitura sp. nov.

Candidatus Nivomaria ininnitura (NL. fem. n. *ininnitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903844835*. The type genome for the species is the GenBank assembly GCA_903844835.1. The GC content of the type genome is 41.71 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Nivomaria inlepitudo sp. nov.

Candidatus Nivomaria inlepitudo (NL. fem. n. *inlepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp002427805*. The type genome for the species is the GenBank assembly GCA_002427805.1. The GC content of the type genome is 45.81 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Nivomaria lanugimonia sp. nov.

Candidatus Nivomaria lanugimonia (NL. fem. n. *lanugimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903899655*. The type genome for the species is the GenBank assembly GCA_903899655.1. The GC content of the type genome is 40.07 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Nivomaria lorariforma sp. nov.

Candidatus Nivomaria lorariforma (NL. fem. n. *lorariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp014379635*. The type genome for the species is the GenBank assembly GCA_014379635.1. The GC content of the type genome is 46.62 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Nivomaria mutabitrix sp. nov.

Candidatus Nivomaria mutabitrix (NL. fem. n. *mutabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903861015*. The type genome for the species is the GenBank assembly GCA_903861015.1. The GC content of the type genome is 46.9 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Nivomaria rubefitoga sp. nov.

Candidatus Nivomaria rubefitoga (NL. fem. n. *rubefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1547 sp903832635*. The type genome for the species is the GenBank assembly GCA_903837715.1. The GC content of the type genome is 40.19 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Nivomaria solifitia sp. nov.

Candidatus Nivomaria solifitia (NL. fem. n. *solifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp013334475*. The type genome for the species is the GenBank assembly GCA_013334475.1. The GC content of the type genome is 43.19 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Nivomaria tirunatio sp. nov.

Candidatus Nivomaria tirunatio (NL. fem. n. *tirunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp001873625*. The type genome for the species is the GenBank assembly GCA_002788895.1. The GC content of the type genome is 40.51 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Nivomaria valefitura sp. nov.

Candidatus Nivomaria valefitura (NL. fem. n. *valefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp903889015*. The type genome for the species is the GenBank assembly GCA_903889015.1. The GC content of the type genome is 40.13 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Nivomaria xeramilenta sp. nov.

Candidatus Nivomaria xeramilenta (NL. fem. n. *xeramilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1547 sp002413425*. The type genome for the species is the GenBank assembly GCA_002404315.1. The GC content of the type genome is 47.31 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Nivomella detosedo sp. nov.

Candidatus Nivomella detosedo (NL. fem. n. *detosedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1127 sp002311595*. The type genome for the species is the GenBank assembly GCA_009392685.1. The GC content of the type genome is 57.28 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Nivomella gen. nov.

Candidatus Nivomella (NL. fem. n. *Nivomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1127*. The type species for the genus is *Candidatus* Nivomella detosedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nivomellaceae.

Description of *Candidatus* Nivomellaceae fam. nov.

Candidatus Nivomellaceae (NL. fem. n. *Nivomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1127.* The type genus for the taxon is *Candidatus* Nivomella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nivomellales.

Description of *Candidatus* Nivomellales ord. nov.

Candidatus Nivomellales (NL. fem. n. *Nivomellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1127.* The type genus for the taxon is *Candidatus* Nivomella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Nivomia adsecax sp. nov.

Candidatus Nivomia adsecax (NL. fem. n. *adsecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM51-8 sp900546435*. The type genome for the species is the GenBank assembly GCA_900546435.1. The GC content of the type genome is 41.13 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Nivomia gen. nov.

Candidatus Nivomia (NL. fem. n. *Nivomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AM51-8*. The type species for the genus is *Candidatus* Nivomia adsecax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nivomia nefarax sp. nov.

Candidatus Nivomia nefarax (NL. fem. n. *nefarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM51-8 sp003478275*. The type genome for the species is the GenBank assembly GCA_902364995.1. The GC content of the type genome is 44.95 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Nivomia obfenessa sp. nov.

Candidatus Nivomia obfenessa (NL. fem. n. *obfenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM51-8 sp900761925*. The type genome for the species is the GenBank assembly GCA_900761925.1. The GC content of the type genome is 52.98 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Nivomida acculicula sp. nov.

Candidatus Nivomida acculicula (NL. fem. n. *acculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP36 sp013215915*. The type genome for the species is the GenBank assembly GCA_013215915.1. The GC content of the type genome is 26.37 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Nivomida gen. nov.

Candidatus Nivomida (NL. fem. n. *Nivomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NORP36*. The type species for the genus is *Candidatus* Nivomida acculicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nivomida horomitudo sp. nov.

Candidatus Nivomida horomitudo (NL. fem. n. *horomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP36 sp002733685*. The type genome for the species is the GenBank assembly GCA_002733685.1. The GC content of the type genome is 28.64 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Nivomida imbecastra sp. nov.

Candidatus Nivomida imbecastra (NL. fem. n. *imbecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP36 sp002163065*. The type genome for the species is the GenBank assembly GCA_002163065.1. The GC content of the type genome is 30.62 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Nivomida licenilenta sp. nov.

Candidatus Nivomida licenilenta (NL. fem. n. *licenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP36 sp004566295*. The type genome for the species is the

GenBank assembly GCA_013215945.1. The GC content of the type genome is 28.7 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Nivomida ornitousia sp. nov.

Candidatus Nivomida ornitousia (NL. fem. n. *ornitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP36 sp013215985*. The type genome for the species is the GenBank assembly GCA_013215985.1. The GC content of the type genome is 26.32 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Nivomosa citipicula sp. nov.

Candidatus Nivomosa citipicula (NL. fem. n. *citipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401425 sp002401425*. The type genome for the species is the GenBank assembly GCA_002401425.1. The GC content of the type genome is 34.72 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Nivomosa gen. nov.

Candidatus Nivomosa (NL. fem. n. *Nivomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401425*. The type species for the genus is *Candidatus* Nivomosa citipicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2401425*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nivomosaceae.

Description of *Candidatus* Nivomosaceae fam. nov.

Candidatus Nivomosaceae (NL. fem. n. *Nivomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2401425.* The type genus for the taxon is *Candidatus* Nivomosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2401425*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Nivomosales.

Description of *Candidatus* Nivomosales ord. nov.

Candidatus Nivomosales (NL. fem. n. *Nivomosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2401425.* The type genus for the taxon is *Candidatus* Nivomosa .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Nivomula cruppisca sp. nov.

Candidatus Nivomula cruppisca (NL. fem. n. *cruppisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2882 sp003446735*. The type genome for the species is the GenBank assembly GCA_003446735.1. The GC content of the type genome is 44.01 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Nivomula gen. nov.

Candidatus Nivomula (NL. fem. n. *Nivomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2882*. The type species for the genus is *Candidatus* Nivomula cruppisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nivomula desonatio sp. nov.

Candidatus Nivomula desonatio (NL. fem. n. *desonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2882 sp900317505*. The type genome for the species is the GenBank assembly GCA_900313995.1. The GC content of the type genome is 42.72 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Nivomula hibisimonas sp. nov.

Candidatus Nivomula hibisimonas (NL. fem. n. *hibisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2882 sp900542015*. The type genome for the species is the GenBank assembly GCA_900542015.1. The GC content of the type genome is 46.42 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Nivomula mirifimonia sp. nov.

Candidatus Nivomula mirifimonia (NL. fem. n. *mirifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2882 sp900549665*. The type genome for the species is the GenBank assembly RS_GCF_900772505.1. The GC content of the type genome is 42.28 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Nivomula rosarilega sp. nov.

Candidatus Nivomula rosarilega (NL. fem. n. *rosarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2882 sp002362385*. The type genome for the species is the GenBank assembly GCA_002362385.1. The GC content of the type genome is 44.7 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Nocardia adlapilega sp. nov.

Candidatus Nocardia adlapilega (NL. fem. n. *adlapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp000482385*. The type genome for the species is the GenBank assembly RS_GCF_000482385.1. The GC content of the type genome is 65.14 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Nocardia annubigena sp. nov.

Candidatus Nocardia annubigena (NL. fem. n. *annubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp000381925*. The type genome for the species is the GenBank assembly RS_GCF_000381925.1. The GC content of the type genome is 69.19 % and the genome length is 9.14 Mbp.

Description of *Candidatus* Nocardia betacigena sp. nov.

Candidatus Nocardia betacigena (NL. fem. n. *betacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009829295*. The type genome for the species is the GenBank assembly RS_GCF_009829295.1. The GC content of the type genome is 68.04 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Nocardia bigaritrix sp. nov.

Candidatus Nocardia bigaritrix (NL. fem. n. *bigaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009604425*. The type genome for the species is the GenBank assembly RS_GCF_009604425.1. The GC content of the type genome is 69.4 % and the genome length is 8.62 Mbp.

Description of *Candidatus* Nocardia bisulilenta sp. nov.

Candidatus Nocardia bisulilenta (NL. fem. n. *bisulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp000526215*. The type genome for the species is the GenBank assembly RS_GCF_000526215.1. The GC content of the type genome is 68.9 % and the genome length is 8.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Nocardia casabitudo sp. nov.

Candidatus Nocardia casabitudo (NL. fem. n. *casabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nocardia sp009760405*. The type genome for the species is the GenBank assembly RS_GCF_009760405.1. The GC content of the type genome is 68.0 % and the genome length is 9.31 Mbp.

Description of *Candidatus* Nocardia curacisca sp. nov.

Candidatus Nocardia curacisca (NL. fem. n. *curacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009604405*. The type genome for the species is the GenBank assembly RS_GCF_009604405.1. The GC content of the type genome is 67.22 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Nocardia decomitudo sp. nov.

Candidatus Nocardia decomitudo (NL. fem. n. *decomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009829325*. The type genome for the species is the GenBank assembly RS_GCF_009829325.1. The GC content of the type genome is 68.49 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Nocardia deculigena sp. nov.

Candidatus Nocardia deculigena (NL. fem. n. *deculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp013315795*. The type genome for the species is the GenBank assembly RS_GCF_013315795.1. The GC content of the type genome is 68.5 % and the genome length is 8.5 Mbp.

Description of *Candidatus* Nocardia deculilega sp. nov.

Candidatus Nocardia deculilega (NL. fem. n. *deculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp013361595*. The type genome for the species is the GenBank assembly GCA_013361595.1. The GC content of the type genome is 68.29 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Nocardia demagilenta sp. nov.

Candidatus Nocardia demagilenta (NL. fem. n. *demagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp003123685*. The type genome for the species is the GenBank assembly RS_GCF_003123685.1. The GC content of the type genome is 67.36 % and the genome length is 9.37 Mbp.

Description of *Candidatus* Nocardia mirabicula sp. nov.

Candidatus Nocardia mirabicula (NL. fem. n. *mirabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009649815*. The type genome for the species is the GenBank assembly RS_GCF_009649815.1. The GC content of the type genome is 65.81 % and the genome length is 9.05 Mbp.

Description of *Candidatus* Nocardia molecago sp. nov.

Candidatus Nocardia molecago (NL. fem. n. *molecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp013839555*. The type genome for the species is the GenBank assembly RS_GCF_013839555.1. The GC content of the type genome is 67.83 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Nocardia molecitoga sp. nov.

Candidatus Nocardia molecitoga (NL. fem. n. *molecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp013744875*. The type genome for the species is the GenBank assembly RS_GCF_013744875.1. The GC content of the type genome is 67.8 % and the genome length is 8.34 Mbp.

Description of *Candidatus* Nocardia rubecifica sp. nov.

Candidatus Nocardia rubecifica (NL. fem. n. *rubecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp009708175*. The type genome for the species is the GenBank assembly RS_GCF_009708175.1. The GC content of the type genome is 67.86 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Nocardia serotatica sp. nov.

Candidatus Nocardia serotatica (NL. fem. n. *serotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardia sp014360565*. The type genome for the species is the GenBank assembly GCA_014360565.1. The GC content of the type genome is 67.48 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Nocardioides abinvilega sp. nov.

Candidatus Nocardioides abinvilega (NL. fem. n. *abinvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000364605*. The type genome for the species is the GenBank assembly RS_GCF_000364605.1. The GC content of the type genome is 69.99 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Nocardioides absocitura sp. nov.

Candidatus Nocardioides absocitura (NL. fem. n. *absocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp011300215*. The type genome for the species is the GenBank assembly RS_GCF_011300215.1. The GC content of the type genome is 69.74 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Nocardioides aconticella sp. nov.

Candidatus Nocardioides aconticella (NL. fem. n. *aconticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nocardioides sp011045035*. The type genome for the species is the GenBank assembly RS_GCF_011045035.1. The GC content of the type genome is 69.75 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Nocardioides adcumicella sp. nov.

Candidatus Nocardioides adcumicella (NL. fem. n. *adcumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014127485*. The type genome for the species is the GenBank assembly RS_GCF_014127485.1. The GC content of the type genome is 73.02 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Nocardioides adpelitica sp. nov.

Candidatus Nocardioides adpelitica (NL. fem. n. *adpelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp011046535*. The type genome for the species is the GenBank assembly RS_GCF_011046535.1. The GC content of the type genome is 73.3 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Nocardioides adsesitura sp. nov.

Candidatus Nocardioides adsesitura (NL. fem. n. *adsesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp002698575*. The type genome for the species is the GenBank assembly GCA_002698575.1. The GC content of the type genome is 70.81 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Nocardioides ambidilega sp. nov.

Candidatus Nocardioides ambidilega (NL. fem. n. *ambidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp902805925*. The type genome for the species is the GenBank assembly GCA_902805925.1. The GC content of the type genome is 72.82 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Nocardioides ammuliforma sp. nov.

Candidatus Nocardioides ammuliforma (NL. fem. n. *ammuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004803405*. The type genome for the species is the GenBank assembly RS_GCF_004803405.1. The GC content of the type genome is 70.45 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Nocardioides anarrisca sp. nov.

Candidatus Nocardioides anarrisca (NL. fem. n. *anarrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000620645*. The type genome for the species is the GenBank assembly RS_GCF_000620645.1. The GC content of the type genome is 71.71 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Nocardioides ancipitudo sp. nov.

Candidatus Nocardioides ancipitudo (NL. fem. n. *ancipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009858265*. The type genome for the species is the GenBank assembly RS_GCF_009858265.1. The GC content of the type genome is 69.39 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Nocardioides antirivita sp. nov.

Candidatus Nocardioides antirivita (NL. fem. n. *antirivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013815725*. The type genome for the species is the GenBank assembly GCA_013815725.1. The GC content of the type genome is 69.67 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Nocardioides bifisatio sp. nov.

Candidatus Nocardioides bifisatio (NL. fem. n. *bifisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004919085*. The type genome for the species is the GenBank assembly RS_GCF_004919085.1. The GC content of the type genome is 73.63 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Nocardioides boviciforma sp. nov.

Candidatus Nocardioides boviciforma (NL. fem. n. *boviciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013177455*. The type genome for the species is the GenBank assembly RS_GCF_013177455.1. The GC content of the type genome is 73.42 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Nocardioides categimonas sp. nov.

Candidatus Nocardioides categimonas (NL. fem. n. *categimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001428565*. The type genome for the species is the GenBank assembly RS_GCF_001428565.1. The GC content of the type genome is 70.27 % and the genome length is 5.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Nocardioides cenotedo sp. nov.

Candidatus Nocardioides cenotedo (NL. fem. n. *cenotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001425175*. The type genome for the species is the GenBank assembly RS_GCF_001428725.1. The GC content of the type genome is 71.41 % and the genome length is 5.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Nocardioides cetarago sp. nov.

Candidatus Nocardioides cetarago (NL. fem. n. *cetarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014360585*. The type genome for the species is the GenBank assembly GCA_014360585.1. The GC content of the type genome is 68.9 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Nocardioides colimousia sp. nov.

Candidatus Nocardioides colimousia (NL. fem. n. *colimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001426745*. The type genome for the species is the GenBank assembly RS_GCF_001429525.1. The GC content of the type genome is 69.47 % and the genome length is 5.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nocardioides colutitio sp. nov.

Candidatus Nocardioides colutitio (NL. fem. n. *colutitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001627335*. The type genome for the species is the GenBank assembly GCA_001627175.1. The GC content of the type genome is 71.68 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 149 - depth 100m".

Description of *Candidatus* Nocardioides decatilega sp. nov.

Candidatus Nocardioides decatilega (NL. fem. n. *decatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009780515*. The type genome for the species is the GenBank assembly GCA_009783825.1. The GC content of the type genome is 71.48 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Nocardioides defalimonas sp. nov.

Candidatus Nocardioides defalimonas (NL. fem. n. *defalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013155365*. The type genome for the species is the GenBank assembly RS_GCF_013155365.1. The GC content of the type genome is 73.0 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Nocardioides dehinentia sp. nov.

Candidatus Nocardioides dehinentia (NL. fem. n. *dehinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp902506435*. The type genome for the species is the GenBank assembly RS_GCF_902506435.1. The GC content of the type genome is 73.42 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Nocardioides delebigena sp. nov.

Candidatus Nocardioides delebigena (NL. fem. n. *delebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013155375*. The type genome for the species is the GenBank assembly RS_GCF_013155375.1. The GC content of the type genome is 72.68 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Nocardioides delucibra sp. nov.

Candidatus Nocardioides delucibra (NL. fem. n. *delucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp008123405*. The type genome for the species is the GenBank assembly GCA_008123405.1. The GC content of the type genome is 70.37 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Nocardioides dimacetta sp. nov.

Candidatus Nocardioides dimacetta (NL. fem. n. *dimacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009701885*. The type genome for the species is the GenBank assembly GCA_009701885.1. The GC content of the type genome is 72.75 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Nocardioides diponitoga sp. nov.

Candidatus Nocardioides diponitoga (NL. fem. n. *diponitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004919105*. The type genome for the species is the GenBank assembly RS_GCF_004919105.1. The GC content of the type genome is 72.71 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Nocardioides edissedo sp. nov.

Candidatus Nocardioides edissedo (NL. fem. n. *edissedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001429555*. The type genome for the species is the GenBank assembly GCA_001429555.1. The GC content of the type genome is 68.3 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Nocardioides effarifica sp. nov.

Candidatus Nocardioides effarifica (NL. fem. n. *effarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001425025*. The type genome for the species is the GenBank assembly RS_GCF_001425025.1. The GC content of the type genome is 71.85 % and the genome length is 4.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Nocardioides emancimonia sp. nov.

Candidatus Nocardioides emancimonia (NL. fem. n. *emancimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp002729525*. The type genome for the species is the GenBank assembly GCA_002729525.1. The GC content of the type genome is 71.42 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Nocardioides excamiforma sp. nov.

Candidatus Nocardioides excamiforma (NL. fem. n. *excamiforma* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009823805*. The type genome for the species is the GenBank assembly RS_GCF_009823805.1. The GC content of the type genome is 72.74 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Nocardioides expasilenta sp. nov.

Candidatus Nocardioides expasilenta (NL. fem. n. *expasilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003600895*. The type genome for the species is the GenBank assembly RS_GCF_003600895.1. The GC content of the type genome is 69.37 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Nocardioides genocax sp. nov.

Candidatus Nocardioides genocax (NL. fem. n. *genocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014212315*. The type genome for the species is the GenBank assembly RS_GCF_014212315.1. The GC content of the type genome is 72.31 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Nocardioides genufitio sp. nov.

Candidatus Nocardioides genufitio (NL. fem. n. *genufitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009702305*. The type genome for the species is the GenBank assembly GCA_009702305.1. The GC content of the type genome is 71.51 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Nocardioides halucago sp. nov.

Candidatus Nocardioides halucago (NL. fem. n. *halucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp900101045*. The type genome for the species is the GenBank assembly RS_GCF_900101045.1. The GC content of the type genome is 69.53 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Nocardioides halucousia sp. nov.

Candidatus Nocardioides halucousia (NL. fem. n. *halucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001428825*. The type genome for the species is the GenBank assembly RS_GCF_001428765.1. The GC content of the type genome is 71.48 % and the genome length is 5.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Nocardioides hecatastra sp. nov.

Candidatus Nocardioides hecatastra (NL. fem. n. *hecatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp008761635*. The type genome for the species is the GenBank assembly RS_GCF_008761635.1. The GC content of the type genome is 71.6 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Nocardioides hexapitrix sp. nov.

Candidatus Nocardioides hexapitrix (NL. fem. n. *hexapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp011420305*. The type genome for the species is the GenBank assembly RS_GCF_011421535.1. The GC content of the type genome is 72.68 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Nocardioides homilastra sp. nov.

Candidatus Nocardioides homilastra (NL. fem. n. *homilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000192415*. The type genome for the species is the GenBank assembly GCA_000192415.1. The GC content of the type genome is 69.55 %

and the genome length is 5.93 Mbp.

Description of *Candidatus* Nocardioides horomitura sp. nov.

Candidatus Nocardioides horomitura (NL. fem. n. *horomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000015265*. The type genome for the species is the GenBank assembly RS_GCF_000015265.1. The GC content of the type genome is 71.44 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Nocardioides immodicella sp. nov.

Candidatus Nocardioides immodicella (NL. fem. n. *immodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp008373755*. The type genome for the species is the GenBank assembly RS_GCF_008373755.1. The GC content of the type genome is 69.5 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Nocardioides inconousia sp. nov.

Candidatus Nocardioides inconousia (NL. fem. n. *inconousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001428125*. The type genome for the species is the GenBank assembly RS_GCF_001428125.1. The GC content of the type genome is 72.06 % and the genome length is 3.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nocardioides inexpicella sp. nov.

Candidatus Nocardioides inexpicella (NL. fem. n. *inexpicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014108865*. The type genome for the species is the GenBank assembly RS_GCF_014108865.1. The GC content of the type genome is 68.66 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Nocardioides inforatica sp. nov.

Candidatus Nocardioides inforatica (NL. fem. n. *inforatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009699265*. The type genome for the species is the GenBank assembly GCA_009699265.1. The GC content of the type genome is 71.82 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Nocardioides inhabitia sp. nov.

Candidatus Nocardioides inhabitia (NL. fem. n. *inhabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp006715835*. The type genome for the species is the GenBank assembly RS_GCF_006715835.1. The GC content of the type genome is 69.34 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Nocardioides inlepimonas sp. nov.

Candidatus Nocardioides inlepimonas (NL. fem. n. *inlepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003660455*. The type genome for the species is the GenBank assembly RS_GCF_003660455.1. The GC content of the type genome is 72.44 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Nocardioides irrevitia sp. nov.

Candidatus Nocardioides irrevitia (NL. fem. n. *irrevitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003633575*. The type genome for the species is the GenBank assembly RS_GCF_003633575.1. The GC content of the type genome is 72.88 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Nocardioides lacinago sp. nov.

Candidatus Nocardioides lacinago (NL. fem. n. *lacinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001423135*. The type genome for the species is the GenBank assembly RS_GCF_001422955.1. The GC content of the type genome is 73.97 % and the genome length is 4.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Nocardioides lavabitudo sp. nov.

Candidatus Nocardioides lavabitudo (NL. fem. n. *lavabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001429625*. The type genome for the species is the GenBank assembly RS_GCF_001429625.1. The GC content of the type genome is 72.2 % and the genome length is 4.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nocardioides legifatio sp. nov.

Candidatus Nocardioides legifatio (NL. fem. n. *legifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000519005*. The type genome for the species is the GenBank assembly RS_GCF_000519005.1. The GC content of the type genome is 72.3 % and the genome length is 4.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Nocardioides manibitica sp. nov.

Candidatus Nocardioides manibitica (NL. fem. n. *manibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004522095*. The type genome for the species is the GenBank assembly RS_GCF_004522095.1. The GC content of the type genome is 72.62 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Nocardioides megalentia sp. nov.

Candidatus Nocardioides megalentia (NL. fem. n. *megalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013155335*. The type genome for the species is the GenBank assembly RS_GCF_013155335.1. The GC content of the type genome is 71.86 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Nocardioides melilago sp. nov.

Candidatus Nocardioides melilago (NL. fem. n. *melilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp006715725*. The type genome for the species is the GenBank assembly RS_GCF_006715725.1. The GC content of the type genome is 72.07 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Nocardioides monopitas sp. nov.

Candidatus Nocardioides monopitas (NL. fem. n. *monopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003710085*. The type genome for the species is the GenBank assembly RS_GCF_003710085.1. The GC content of the type genome is 73.24 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Nocardioides necubitia sp. nov.

Candidatus Nocardioides necubitia (NL. fem. n. *necubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp012272695*. The type genome for the species is the GenBank assembly RS_GCF_012272695.1. The GC content of the type genome is 69.03 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Nocardioides nubifentia sp. nov.

Candidatus Nocardioides nubifentia (NL. fem. n. *nubifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp000620705*. The type genome for the species is the GenBank assembly RS_GCF_000620705.1. The GC content of the type genome is 71.62

% and the genome length is 4.68 Mbp.

Description of *Candidatus* Nocardioides ontolimonia sp. nov.

Candidatus Nocardioides ontolimonia (NL. fem. n. *ontolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004137345*. The type genome for the species is the GenBank assembly RS_GCF_004137345.1. The GC content of the type genome is 70.65 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Nocardioides opuscibra sp. nov.

Candidatus Nocardioides opuscibra (NL. fem. n. *opuscibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004522105*. The type genome for the species is the GenBank assembly RS_GCF_004522105.1. The GC content of the type genome is 72.84 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Nocardioides penuressa sp. nov.

Candidatus Nocardioides penuressa (NL. fem. n. *penuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014180715*. The type genome for the species is the GenBank assembly RS_GCF_014180715.1. The GC content of the type genome is 71.07 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Nocardioides refunessa sp. nov.

Candidatus Nocardioides refunessa (NL. fem. n. *refunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp009557055*. The type genome for the species is the GenBank assembly RS_GCF_009601105.1. The GC content of the type genome is 72.58 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Nocardioides regifentia sp. nov.

Candidatus Nocardioides regifentia (NL. fem. n. *regifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp014265965*. The type genome for the species is the GenBank assembly RS_GCF_014265965.1. The GC content of the type genome is 72.62 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Nocardioides regigivita sp. nov.

Candidatus Nocardioides regigivita (NL. fem. n. *regigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp006007965*. The type genome for the species is the GenBank assembly RS_GCF_005217835.1. The GC content of the type genome is 70.42 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Nocardioides repepessa sp. nov.

Candidatus Nocardioides repepessa (NL. fem. n. *repepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp008373765*. The type genome for the species is the GenBank assembly RS_GCF_008373765.1. The GC content of the type genome is 71.01 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Nocardioides repuditudo sp. nov.

Candidatus Nocardioides repuditudo (NL. fem. n. *repuditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp006715515*. The type genome for the species is the GenBank assembly RS_GCF_006715515.1. The GC content of the type genome is 69.47 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Nocardioides ruriciforma sp. nov.

Candidatus Nocardioides ruriciforma (NL. fem. n. *ruriciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp006494815*. The type genome for the species is the GenBank assembly RS_GCF_006494815.1. The GC content of the type genome is 71.69 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Nocardioides sifunitudo sp. nov.

Candidatus Nocardioides sifunitudo (NL. fem. n. *sifunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp902805885*. The type genome for the species is the GenBank assembly GCA_902805885.1. The GC content of the type genome is 72.73 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Nocardioides subucitudo sp. nov.

Candidatus Nocardioides subucitudo (NL. fem. n. *subucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013624415*. The type genome for the species is the GenBank assembly RS_GCF_013624435.1. The GC content of the type genome is 72.14 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Nocardioides tabifessa sp. nov.

Candidatus Nocardioides tabifessa (NL. fem. n. *tabifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp002117935*. The type genome for the species is the GenBank assembly RS_GCF_002117935.1. The GC content of the type genome is 71.01 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Nocardioides tabifimonas sp. nov.

Candidatus Nocardioides tabifimonas (NL. fem. n. *tabifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp004014875*. The type genome for the species is the GenBank assembly RS_GCF_004014875.1. The GC content of the type genome is 68.94

% and the genome length is 3.32 Mbp.

Description of *Candidatus* Nocardioides tabifitia sp. nov.

Candidatus Nocardioides tabifitia (NL. fem. n. *tabifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003053885*. The type genome for the species is the GenBank assembly RS_GCF_003053885.1. The GC content of the type genome is 70.44 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Nocardioides taraxitoga sp. nov.

Candidatus Nocardioides taraxitoga (NL. fem. n. *taraxitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp011250565*. The type genome for the species is the GenBank assembly RS_GCF_011250565.1. The GC content of the type genome is 73.03 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Nocardioides tolutago sp. nov.

Candidatus Nocardioides tolutago (NL. fem. n. *tolutago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp002865585*. The type genome for the species is the GenBank assembly RS_GCF_002865585.1. The GC content of the type genome is 71.24 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Nocardioides viburivita sp. nov.

Candidatus Nocardioides viburivita (NL. fem. n. *viburivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp001427795*. The type genome for the species is the GenBank assembly RS_GCF_001427545.1. The GC content of the type genome is 69.35 % and the genome length is 5.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Nocardioides volucitoga sp. nov.

Candidatus Nocardioides volucitoga (NL. fem. n. *volucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp013778305*. The type genome for the species is the GenBank assembly RS_GCF_013778305.1. The GC content of the type genome is 72.21 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Nocardioides volunitrix sp. nov.

Candidatus Nocardioides volunitrix (NL. fem. n. *volunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardioides sp003054165*. The type genome for the species is the GenBank assembly RS_GCF_003054165.1. The GC content of the type genome is 71.67 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Nocardiopsis anancitas sp. nov.

Candidatus Nocardiopsis anancitas (NL. fem. n. *anancitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp000515115*. The type genome for the species is the GenBank assembly RS_GCF_000515115.1. The GC content of the type genome is 71.07 % and the genome length is 4.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Nocardiopsis armidilenta sp. nov.

Candidatus Nocardiopsis armidilenta (NL. fem. n. *armidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp003386285*. The type genome for the species is the GenBank assembly RS_GCF_003386285.1. The GC content of the type genome is 71.73 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Nocardiopsis assudibra sp. nov.

Candidatus Nocardiopsis assudibra (NL. fem. n. *assudibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp001279585*. The type genome for the species is the GenBank assembly RS_GCF_001279585.1. The GC content of the type genome is 72.03 % and the genome length is 6.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "olive tree plantation soil".

Description of *Candidatus* Nocardiopsis decupicula sp. nov.

Candidatus Nocardiopsis decupicula (NL. fem. n. *decupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp900143625*. The type genome for the species is the GenBank assembly RS_GCF_900143625.1. The GC content of the type genome is 68.81 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Nocardiopsis excetitica sp. nov.

Candidatus Nocardiopsis excetitica (NL. fem. n. *excetitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp001942255*. The type genome for the species is the GenBank assembly RS_GCF_001942255.1. The GC content of the type genome is 71.12 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Nocardiopsis pulegugo sp. nov.

Candidatus Nocardiopsis pulegugo (NL. fem. n. *pulegugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp009830945*. The type genome for the species is the GenBank assembly RS_GCF_009830935.1. The GC content of the type genome is 72.28 % and the genome length is 6.23 Mbp.

Description of *Candidatus* Nocardiopsis rudicicula sp. nov.

Candidatus Nocardiopsis rudicicula (NL. fem. n. *rudicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp001905145*. The type genome for the species is the GenBank assembly RS_GCF_001905145.1. The GC content of the type genome is 71.87 % and the genome length is 6.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Nocardiopsis timefago sp. nov.

Candidatus Nocardiopsis timefago (NL. fem. n. *timefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nocardiopsis sp003634495*. The type genome for the species is the GenBank assembly RS_GCF_003634495.1. The GC content of the type genome is 71.74 % and the genome length is 7.45 Mbp.

Description of *Candidatus* Nocenana ecfacentia sp. nov.

Candidatus Nocenana ecfacentia (NL. fem. n. *ecfacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBQJ01 sp902796785*. The type genome for the species is the GenBank assembly RS_GCF_902796785.1. The GC content of the type genome is 68.69 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Nocenana gen. nov.

Candidatus Nocenana (NL. fem. n. *Nocenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBQJ01*. The type species for the genus is *Candidatus* Nocenana ecfacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADBQJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocenanaceae.

Description of *Candidatus* Nocenanaceae fam. nov.

Candidatus Nocenanaceae (NL. fem. n. *Nocenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CADBQJ01*. The type genus for the taxon is *Candidatus* Nocenana .

According to GTDB R06-RS202, this family belongs to the order *Fibrobacterales*.

Description of *Candidatus* Nocenaria inmacax sp. nov.

Candidatus Nocenaria inmacax (NL. fem. n. *inmacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEO01 sp011049115*. The type genome for the species is the GenBank assembly GCA_011049115.1. The GC content of the type genome is 54.35 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Nocenaria gen. nov.

Candidatus Nocenaria (NL. fem. n. *Nocenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEO01*. The type species for the genus is *Candidatus* Nocenaria inmacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADEO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocenariaceae.

Description of *Candidatus* Nocenariaceae fam. nov.

Candidatus Nocenariaceae (NL. fem. n. *Nocenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADEO01*. The type genus for the taxon is *Candidatus* Nocenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DQWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacellales.

Description of *Candidatus* Nocenaria tomogigena sp. nov.

Candidatus Nocenaria tomogigena (NL. fem. n. *tomogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAADEO01 sp013153415*. The type genome for the species is the GenBank assembly GCA_013153415.1. The GC content of the type genome is 57.72 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Nocenella detesitudo sp. nov.

Candidatus Nocenella detesitudo (NL. fem. n. *detesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *9FT-COMBO-53-11 sp001772805*. The type genome for the species is the GenBank assembly GCA_001772805.1. The GC content of the type genome is 51.93 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Nocenella gen. nov.

Candidatus Nocenella (NL. fem. n. *Nocenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *9FT-COMBO-53-11*. The type species for the genus is *Candidatus* Nocenella detesitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *9FT-COMBO-53-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocenellaceae.

Description of *Candidatus* Nocenellaceae fam. nov.

Candidatus Nocenellaceae (NL. fem. n. *Nocenellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *9FT-COMBO-53-11.* The type genus for the taxon is *Candidatus* Nocenella .

According to the original version of GTDB R06-RS202, this family belongs to the order *9FT-COMBO-53-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocenellales.

Description of *Candidatus* Nocenellales ord. nov.

Candidatus Nocenellales (NL. fem. n. *Nocenellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *9FT-COMBO-53-11*. The type genus for the taxon is *Candidatus* Nocenella .

According to the original version of GTDB R06-RS202, this family belongs to the class *WWE3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Veridulae.

Description of *Candidatus* Nocenella velivetta sp. nov.

Candidatus Nocenella velivetta (NL. fem. n. *velivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *9FT-COMBO-53-11 sp011057755*. The type genome for the species is the GenBank assembly GCA_011057755.1. The GC content of the type genome is 52.78 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Nocenia alembivita sp. nov.

Candidatus Nocenia alembivita (NL. fem. n. *alembivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp013812465*. The type genome for the species is the GenBank assembly GCA_013812465.1. The GC content of the type genome is 67.67 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Nocenia gen. nov.

Candidatus Nocenia (NL. fem. n. *Nocenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GMQP-bins7*. The type species for the genus is *Candidatus* Nocenia alembivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nocenia bipatilenta sp. nov.

Candidatus Nocenia bipatilenta (NL. fem. n. *bipatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp013817555*. The type genome for the species is the GenBank assembly GCA_013817555.1. The GC content of the type genome is 67.25 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Nocenia cibicugo sp. nov.

Candidatus Nocenia cibicugo (NL. fem. n. *cibicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp005888365*. The type genome for the species is the GenBank assembly GCA_005888365.1. The GC content of the type genome is 68.49 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Nocenia defenitrix sp. nov.

Candidatus Nocenia defenitrix (NL. fem. n. *defenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp013698195*. The type genome for the species is the GenBank assembly GCA_013698195.1. The GC content of the type genome is 67.74 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Nocenia eclecousia sp. nov.

Candidatus Nocenia eclecousia (NL. fem. n. *eclecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp004366385*. The type genome for the species is the GenBank assembly GCA_004366385.1. The GC content of the type genome is 72.02 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Nocenia immacitica sp. nov.

Candidatus Nocenia immacitica (NL. fem. n. *immacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp013811645*. The type genome for the species is the GenBank assembly GCA_013811645.1. The GC content of the type genome is 67.92 %

and the genome length is 1.41 Mbp.

Description of *Candidatus* Nocenia relapugo sp. nov.

Candidatus Nocenia relapugo (NL. fem. n. *relapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GMQP-bins7 sp013697465*. The type genome for the species is the GenBank assembly GCA_013697465.1. The GC content of the type genome is 68.29 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Nocenida accenugo sp. nov.

Candidatus Nocenida accenugo (NL. fem. n. *accenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp009919365*. The type genome for the species is the GenBank assembly GCA_009919365.1. The GC content of the type genome is 62.83 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Nocenida gen. nov.

Candidatus Nocenida (NL. fem. n. *Nocenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10416*. The type species for the genus is *Candidatus* Nocenida accenugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocenidaceae.

Description of *Candidatus* Nocenidaceae fam. nov.

Candidatus Nocenidaceae (NL. fem. n. *Nocenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10416.* The type genus for the taxon is *Candidatus* Nocenida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatiales.

Description of *Candidatus* Nocenida acroticula sp. nov.

Candidatus Nocenida acroticula (NL. fem. n. *acroticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp003670455*. The type genome for the species is the GenBank assembly GCA_003670455.1. The GC content of the type genome is 63.47 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Nocenida addubago sp. nov.

Candidatus Nocenida addubago (NL. fem. n. *addubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp003476885*. The type genome for the species is the GenBank assembly GCA_003476885.1. The GC content of the type genome is 62.59 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Nocenida adrenilenta sp. nov.

Candidatus Nocenida adrenilenta (NL. fem. n. *adrenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp009925905*. The type genome for the species is the GenBank assembly GCA_009925905.1. The GC content of the type genome is 61.83 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Nocenida alsidibra sp. nov.

Candidatus Nocenida alsidibra (NL. fem. n. *alsidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp009919005*. The type genome for the species is the GenBank assembly GCA_009919005.1. The GC content of the type genome is 61.71 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Nocenida exorcitrix sp. nov.

Candidatus Nocenida exorcitrix (NL. fem. n. *exorcitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp009692905*. The type genome for the species is the GenBank assembly GCA_009692905.1. The GC content of the type genome is 63.88 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Nocenida humecitio sp. nov.

Candidatus Nocenida humecitio (NL. fem. n. *humecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp003670745*. The type genome for the species is the GenBank assembly GCA_003670745.1. The GC content of the type genome is 66.68 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Nocenida inmenifica sp. nov.

Candidatus Nocenida inmenifica (NL. fem. n. *inmenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903820655*. The type genome for the species is the GenBank assembly GCA_903820655.1. The GC content of the type genome is 63.4 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Nocenida invetitura sp. nov.

Candidatus Nocenida invetitura (NL. fem. n. *invetitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903938075*. The type genome for the species is the GenBank assembly GCA_903938075.1. The GC content of the type genome is 63.07 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Nocenida lavacisca sp. nov.

Candidatus Nocenida lavacisca (NL. fem. n. *lavacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10416 sp903944295*. The type genome for the species is the GenBank assembly GCA_903944295.1. The GC content of the type genome is 62.61 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Nocenida penicitura sp. nov.

Candidatus Nocenida penicitura (NL. fem. n. *penicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903937225*. The type genome for the species is the GenBank assembly GCA_903937225.1. The GC content of the type genome is 62.54 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Nocenida reforentia sp. nov.

Candidatus Nocenida reforentia (NL. fem. n. *reforentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903864185*. The type genome for the species is the GenBank assembly GCA_903917495.1. The GC content of the type genome is 62.96 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Nocenida resacessa sp. nov.

Candidatus Nocenida resacessa (NL. fem. n. *resacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903847005*. The type genome for the species is the GenBank assembly GCA_903847005.1. The GC content of the type genome is 66.16 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Nocenida tegumitrix sp. nov.

Candidatus Nocenida tegumitrix (NL. fem. n. *tegumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp003670475*. The type genome for the species is the GenBank assembly GCA_003670475.1. The GC content of the type genome is 63.03 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Nocenida vitifitio sp. nov.

Candidatus Nocenida vitifitio (NL. fem. n. *vitifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10416 sp903851225*. The type genome for the species is the GenBank assembly GCA_903851225.1. The GC content of the type genome is 63.27 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Nocenosa catabastra sp. nov.

Candidatus Nocenosa catabastra (NL. fem. n. *catabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-472 sp003251795*. The type genome for the species is the GenBank assembly GCA_003251795.1. The GC content of the type genome is 58.18 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Nocenosa gen. nov.

Candidatus Nocenosa (NL. fem. n. *Nocenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-472*. The type species for the genus is *Candidatus* Nocenosa catabastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPGG2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenanaceae.

Description of *Candidatus* Nocenula aglasedo sp. nov.

Candidatus Nocenula aglasedo (NL. fem. n. *aglasedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMII01 sp900299055*. The type genome for the species is the GenBank assembly GCA_900299055.1. The GC content of the type genome is 52.62 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Nocenula gen. nov.

Candidatus Nocenula (NL. fem. n. *Nocenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMII01*. The type species for the genus is *Candidatus* Nocenula aglasedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuciaceae.

Description of *Candidatus* Nocenula argumivita sp. nov.

Candidatus Nocenula argumivita (NL. fem. n. *argumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMII01 sp900299035*. The type genome for the species is the GenBank assembly GCA_900299035.1. The GC content of the type genome is 60.07 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Nocenula pacifitica sp. nov.

Candidatus Nocenula pacifitica (NL. fem. n. *pacifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMII01 sp903920005*. The type genome for the species is the GenBank assembly GCA_903920005.1. The GC content of the type genome is 52.84 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Nocenula viragousia sp. nov.

Candidatus Nocenula viragousia (NL. fem. n. *viragousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMII01 sp903904735*. The type genome for the species is the GenBank assembly GCA_903904735.1. The GC content of the type genome is 53.94 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Nocumana depecimonia sp. nov.

Candidatus Nocumana depecimonia (NL. fem. n. *depecimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8131 sp002293265*. The type genome for the species is the GenBank assembly GCA_002293265.1. The GC content of the type genome is 45.64 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Nocumana gen. nov.

Candidatus Nocumana (NL. fem. n. *Nocumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8131*. The type species for the genus is *Candidatus* Nocumana depecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Nocumanaceae fam. nov.

Candidatus Nocumanaceae (NL. fem. n. *Nocumanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8131*. The type genus for the taxon is *Candidatus* Nocumana .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Nocumana practessa sp. nov.

Candidatus Nocumana practessa (NL. fem. n. *practessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8131 sp003509825*. The type genome for the species is the GenBank assembly GCA_003509825.1. The GC content of the type genome is 56.06 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Nocumaria giganedo sp. nov.

Candidatus Nocumaria giganedo (NL. fem. n. *giganedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-014075295 sp014075295*. The type genome for the species is the GenBank assembly GCA_014075295.1. The GC content of the type genome is 49.89 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Nocumaria gen. nov.

Candidatus Nocumaria (NL. fem. n. *Nocumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-014075295*. The type species for the genus is *Candidatus* Nocumaria giganedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-014075295*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumariaceae.

Description of *Candidatus* Nocumariaceae fam. nov.

Candidatus Nocumariaceae (NL. fem. n. *Nocumariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-014075295.* The type genus for the taxon is *Candidatus* Nocumaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RKRQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Perexulales.

Description of *Candidatus* Nocumida feficitica sp. nov.

Candidatus Nocumida feficitica (NL. fem. n. *feficitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYQO01 sp903928345*. The type genome for the species is the GenBank assembly GCA_903928345.1. The GC content of the type genome is 65.45 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Nocumida gen. nov.

Candidatus Nocumida (NL. fem. n. *Nocumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYQO01*. The type species for the genus is *Candidatus* Nocumida feficitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYQO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumidaceae.

Description of *Candidatus* Nocumidaceae fam. nov.

Candidatus Nocumidaceae (NL. fem. n. *Nocumidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYQO01.* The type genus for the taxon is *Candidatus* Nocumida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIYQO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumidales.

Description of *Candidatus* Nocumidales ord. nov.

Candidatus Nocumidales (NL. fem. n. *Nocumidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYQO01.* The type genus for the taxon is *Candidatus* Nocumida .

According to the original version of GTDB R06-RS202, this family belongs to the class *CAIYQO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nocumidae.

Description of *Candidatus* Nocumidae class. nov.

Candidatus Nocumidae (NL. fem. n. *c__Nocumidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYQO01.* The type genus for the taxon is *Candidatus* Nocumida .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Nocumula vivifetta sp. nov.

Candidatus Nocumula vivifetta (NL. fem. n. *vivifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAI01 sp009780275*. The type genome for the species is the GenBank assembly GCA_009780275.1. The GC content of the type genome is 48.87 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Nocumula gen. nov.

Candidatus Nocumula (NL. fem. n. *Nocumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAI01*. The type species for the genus is *Candidatus* Nocumula vivifetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nodosilinea arvecitura sp. nov.

Candidatus Nodosilinea arvecitura (NL. fem. n. *arvecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp003022385*. The type genome for the species is the GenBank assembly RS_GCF_003022385.1. The GC content of the type genome is 57.32 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Nodosilinea cicarimonia sp. nov.

Candidatus Nodosilinea cicarimonia (NL. fem. n. *cicarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp003564835*. The type genome for the species is the GenBank assembly RS_GCF_012911975.1. The GC content of the type genome is 55.05 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Nodosilinea dicibitas sp. nov.

Candidatus Nodosilinea dicibitas (NL. fem. n. *dicibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Nodosilinea sp012031045*. The type genome for the species is the GenBank assembly GCA_012031045.1. The GC content of the type genome is 54.61 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Nodosilinea hexapatio sp. nov.

Candidatus Nodosilinea hexapatio (NL. fem. n. *hexapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp007694115*. The type genome for the species is the GenBank assembly GCA_007694115.1. The GC content of the type genome is 59.01 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Nodosilinea optumitudo sp. nov.

Candidatus Nodosilinea optumitudo (NL. fem. n. *optumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp000763385*. The type genome for the species is the GenBank assembly RS_GCF_000763385.1. The GC content of the type genome is 59.44 % and the genome length is 6.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Spirulina culture pond".

Description of *Candidatus* Nodosilinea papavastra sp. nov.

Candidatus Nodosilinea papavastra (NL. fem. n. *papavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp003249105*. The type genome for the species is the GenBank assembly GCA_003249105.1. The GC content of the type genome is 57.41 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Nodosilinea pavicax sp. nov.

Candidatus Nodosilinea pavicax (NL. fem. n. *pavicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp003017855*. The type genome for the species is the GenBank assembly RS_GCF_003017855.1. The GC content of the type genome is 56.72 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Nodosilinea verecitoga sp. nov.

Candidatus Nodosilinea verecitoga (NL. fem. n. *verecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodosilinea sp007135385*. The type genome for the species is the GenBank assembly GCA_007692715.1. The GC content of the type genome is 55.39 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Nodularia cerifitudo sp. nov.

Candidatus Nodularia cerifitudo (NL. fem. n. *cerifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodularia sp002218065*. The type genome for the species is the GenBank assembly RS_GCF_002218065.1. The GC content of the type genome is 41.23 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Nodularia dibapimonia sp. nov.

Candidatus Nodularia dibapimonia (NL. fem. n. *dibapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodularia sp007692755*. The type genome for the species is the GenBank assembly GCA_007692755.1. The GC content of the type genome is 41.19 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Nodularia dilacibula sp. nov.

Candidatus Nodularia dilacibula (NL. fem. n. *dilacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodularia sp903911355*. The type genome for the species is the GenBank assembly GCA_903889945.1. The GC content of the type genome is 42.17 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Nodularia domigitrix sp. nov.

Candidatus Nodularia domigitrix (NL. fem. n. *domigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nodularia sp003556955*. The type genome for the species is the GenBank assembly GCA_003556955.1. The GC content of the type genome is 40.87 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Noninana dimaciforma sp. nov.

Candidatus Noninana dimaciforma (NL. fem. n. *dimaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGN01 sp014584315*. The type genome for the species is the GenBank assembly GCA_014584315.1. The GC content of the type genome is 70.23 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Noninana gen. nov.

Candidatus Noninana (NL. fem. n. *Noninana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGN01*. The type species for the genus is *Candidatus* Noninana dimaciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Noninana feditatica sp. nov.

Candidatus Noninana feditatica (NL. fem. n. *feditatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGN01 sp900696545*. The type genome for the species is the GenBank assembly GCA_900696545.1. The GC content of the type genome is 68.78 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Noninaria canacitio sp. nov.

Candidatus Noninaria canacitio (NL. fem. n. *canacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C00003106 sp001751015*. The type genome for the species is the GenBank assembly GCA_001750905.1. The GC content of the type genome is 48.91 % and the genome length is 2.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sample #5133; Elevator 3A push core 47; collected at Hydrate Ridge North during Jason II dive J2-593 from an area of active seepage marked by bubble ebullition and surface expression of white microbial mat".

Description of *Candidatus* Noninaria gen. nov.

Candidatus Noninaria (NL. fem. n. *Noninaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C00003106*. The type species for the genus is *Candidatus* Noninaria canacitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003106*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninariaceae.

Description of *Candidatus* Noninariaceae fam. nov.

Candidatus Noninariaceae (NL. fem. n. *Noninariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *C00003106.* The type genus for the taxon is *Candidatus* Noninaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubidales.

Description of *Candidatus* Noninella arcebedo sp. nov.

Candidatus Noninella arcebedo (NL. fem. n. *arcebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1444 sp002329525*. The type genome for the species is the GenBank assembly GCA_002329525.1. The GC content of the type genome is 56.16 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Noninella gen. nov.

Candidatus Noninella (NL. fem. n. *Noninella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1444*. The type species for the genus is *Candidatus* Noninella arcebedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1444*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninellaceae.

Description of *Candidatus* Noninellaceae fam. nov.

Candidatus Noninellaceae (NL. fem. n. *Noninellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1444.* The type genus for the taxon is *Candidatus* Noninella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1444*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Noninellales.

Description of *Candidatus* Noninellales ord. nov.

Candidatus Noninellales (NL. fem. n. *Noninellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1444.* The type genus for the taxon is *Candidatus* Noninella .

According to the GTDB R06-RS202, this order belongs to the class *Negativicutes*.

Description of *Candidatus* Noninella favilax sp. nov.

Candidatus Noninella favilax (NL. fem. n. *favilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1444 sp012798135*. The type genome for the species is the GenBank assembly GCA_012798135.1. The GC content of the type genome is 54.22 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Noninia argitiforma sp. nov.

Candidatus Noninia argitiforma (NL. fem. n. *argitiforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-37 sp003599755*. The type genome for the species is the GenBank assembly GCA_003599755.1. The GC content of the type genome is 59.06 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Noninia gen. nov.

Candidatus Noninia (NL. fem. n. *Noninia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-37*. The type species for the genus is *Candidatus* Noninia argitiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noniniaceae.

Description of *Candidatus* Noniniaceae fam. nov.

Candidatus Noniniaceae (NL. fem. n. *Noniniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-37.* The type genus for the taxon is *Candidatus* Noninia .

According to GTDB R06-RS202, this family belongs to the order *Sungbacterales*.

Description of *Candidatus* Noninida adessitica sp. nov.

Candidatus Noninida adessitica (NL. fem. n. *adessitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp001510075*. The type genome for the species is the GenBank assembly GCA_001510075.1. The GC content of the type genome is 58.17 % and the genome length is 1.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Capian Sea".

Description of *Candidatus* Noninida gen. nov.

Candidatus Noninida (NL. fem. n. *Noninida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Casp-alpha2*. The type species for the genus is *Candidatus* Noninida adessitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Noninidaceae fam. nov.

Candidatus Noninidaceae (NL. fem. n. *Noninidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Casp-alpha2.* The type genus for the taxon is *Candidatus* Noninida .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Noninida atlanax sp. nov.

Candidatus Noninida atlanax (NL. fem. n. *atlanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp002938075*. The type genome for the species is the GenBank assembly GCA_002938075.1. The GC content of the type genome is 62.11 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Noninida catalago sp. nov.

Candidatus Noninida catalago (NL. fem. n. *catalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp013204265*. The type genome for the species is the GenBank assembly GCA_013204265.1. The GC content of the type genome is 57.81 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Noninida cucuritrix sp. nov.

Candidatus Noninida cucuritrix (NL. fem. n. *cucuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp002938315*. The type genome for the species is the GenBank assembly GCA_002938315.1. The GC content of the type genome is 57.29 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Noninida inlecigena sp. nov.

Candidatus Noninida inlecigena (NL. fem. n. *inlecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp013203955*. The type genome for the species is the GenBank assembly GCA_013203955.1. The GC content of the type genome is 57.73 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Noninida monumentia sp. nov.

Candidatus Noninida monumentia (NL. fem. n. *monumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp002686255*. The type genome for the species is the GenBank assembly GCA_002420445.1. The GC content of the type genome is 62.58 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Noninida ranunax sp. nov.

Candidatus Noninida ranunax (NL. fem. n. *ranunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-alpha2 sp014382345*. The type genome for the species is the GenBank assembly GCA_014382345.1. The GC content of the type genome is 59.77 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Noninosa exhiligena sp. nov.

Candidatus Noninosa exhiligena (NL. fem. n. *exhiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1227 sp002314645*. The type genome for the species is the GenBank assembly GCA_002314645.1. The GC content of the type genome is 38.99 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Noninosa gen. nov.

Candidatus Noninosa (NL. fem. n. *Noninosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1227*. The type species for the genus is *Candidatus* Noninosa exhiligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Noninosa holovitas sp. nov.

Candidatus Noninosa holovitas (NL. fem. n. *holovitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1227 sp002309175*. The type genome for the species is the GenBank assembly GCA_002309175.1. The GC content of the type genome is 50.88 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Noninosa minagessa sp. nov.

Candidatus Noninosa minagessa (NL. fem. n. *minagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1227 sp002314555*. The type genome for the species is the GenBank assembly GCA_002314555.1. The GC content of the type genome is 40.88 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Noninosa ratifisca sp. nov.

Candidatus Noninosa ratifisca (NL. fem. n. *ratifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1227 sp012520505*. The type genome for the species is the GenBank assembly GCA_012520505.1. The GC content of the type genome is 36.0 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Noninosa semapivita sp. nov.

Candidatus Noninosa semapivita (NL. fem. n. *semapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1227 sp900545655*. The type genome for the species is the GenBank assembly RS_GCF_900763975.1. The GC content of the type genome is 43.98 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Noninula dicibedo sp. nov.

Candidatus Noninula dicibedo (NL. fem. n. *dicibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED2 sp002168225*. The type genome for the species is the GenBank assembly GCA_003521505.1. The GC content of the type genome is 58.5 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Noninula gen. nov.

Candidatus Noninula (NL. fem. n. *Noninula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED2*. The type species for the genus is *Candidatus* Noninula dicibedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninulaceae.

Description of *Candidatus* Noninulaceae fam. nov.

Candidatus Noninulaceae (NL. fem. n. *Noninulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED2.* The type genus for the taxon is *Candidatus* Noninula .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales_C*.

Description of *Candidatus* Nonlabens agnomitudo sp. nov.

Candidatus Nonlabens agnomitudo (NL. fem. n. *agnomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp012974865*. The type genome for the species is the GenBank assembly RS_GCF_012974865.1. The GC content of the type genome is 36.68 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Nonlabens cimitimonia sp. nov.

Candidatus Nonlabens cimitimonia (NL. fem. n. *cimitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp003966335*. The type genome for the species is the GenBank assembly RS_GCF_003966335.1. The GC content of the type genome is 40.7 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Nonlabens exhilastra sp. nov.

Candidatus Nonlabens exhilastra (NL. fem. n. *exhilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp001413925*. The type genome for the species is the GenBank assembly RS_GCF_001413925.1. The GC content of the type genome is 40.94 % and the genome length is 3.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment".

Description of *Candidatus* Nonlabens inoccibra sp. nov.

Candidatus Nonlabens inoccibra (NL. fem. n. *inoccibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp002831625*. The type genome for the species is the GenBank assembly RS_GCF_002831625.1. The GC content of the type genome is 37.13 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Nonlabens insenibra sp. nov.

Candidatus Nonlabens insenibra (NL. fem. n. *insenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp900101765*. The type genome for the species is the

GenBank assembly RS_GCF_900101765.1. The GC content of the type genome is 39.47 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Nonlabens smegmax sp. nov.

Candidatus Nonlabens smegmax (NL. fem. n. *smegmax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonlabens sp000153385*. The type genome for the species is the GenBank assembly RS_GCF_000153385.1. The GC content of the type genome is 34.95 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Nonomuraea alsisedo sp. nov.

Candidatus Nonomuraea alsisedo (NL. fem. n. *alsisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp005893125*. The type genome for the species is the GenBank assembly RS_GCF_005893125.1. The GC content of the type genome is 69.56 % and the genome length is 14.33 Mbp.

Description of *Candidatus* Nonomuraea butubitrix sp. nov.

Candidatus Nonomuraea butubitrix (NL. fem. n. *butubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp013363975*. The type genome for the species is the GenBank assembly RS_GCF_013363975.1. The GC content of the type genome is 72.31 % and the genome length is 9.76 Mbp.

Description of *Candidatus* Nonomuraea cibaratica sp. nov.

Candidatus Nonomuraea cibaratica (NL. fem. n. *cibaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp003236395*. The type genome for the species is the GenBank assembly RS_GCF_003236395.1. The GC content of the type genome is 71.31 % and the genome length is 9.87 Mbp.

Description of *Candidatus* Nonomuraea colipilenta sp. nov.

Candidatus Nonomuraea colipilenta (NL. fem. n. *colipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp008017515*. The type genome for the species is the GenBank assembly RS_GCF_008017515.1. The GC content of the type genome is 71.4 % and the genome length is 9.42 Mbp.

Description of *Candidatus* Nonomuraea delebibula sp. nov.

Candidatus Nonomuraea delebibula (NL. fem. n. *delebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp008065375*. The type genome for the species is the GenBank assembly RS_GCF_008065375.1. The GC content of the type genome is 70.32 % and the genome length is 12.43 Mbp.

Description of *Candidatus* Nonomuraea denixugo sp. nov.

Candidatus Nonomuraea denixugo (NL. fem. n. *denixugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp013362835*. The type genome for the species is the GenBank assembly GCA_013362835.1. The GC content of the type genome is 71.13 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Nonomuraea depetitas sp. nov.

Candidatus Nonomuraea depetitas (NL. fem. n. *depetitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp013283785*. The type genome for the species is the GenBank assembly RS_GCF_013283785.1. The GC content of the type genome is 70.98 % and the genome length is 11.67 Mbp.

Description of *Candidatus* Nonomuraea metapifica sp. nov.

Candidatus Nonomuraea metapifica (NL. fem. n. *metapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp008086045*. The type genome for the species is the GenBank assembly RS_GCF_008086045.1. The GC content of the type genome is 71.34 % and the genome length is 13.15 Mbp.

Description of *Candidatus* Nonomuraea vanidetta sp. nov.

Candidatus Nonomuraea vanidetta (NL. fem. n. *vanidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nonomuraea sp001083785*. The type genome for the species is the GenBank assembly RS_GCF_001083785.1. The GC content of the type genome is 71.68 % and the genome length is 9.99 Mbp.

Description of *Candidatus* Nordella manomimonia sp. nov.

Candidatus Nordella manomimonia (NL. fem. n. *manomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nordella sp005884715*. The type genome for the species is the GenBank assembly GCA_005884715.1. The GC content of the type genome is 60.49 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Nordella recogivita sp. nov.

Candidatus Nordella recogivita (NL. fem. n. *recogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nordella sp011046735*. The type genome for the species is the GenBank assembly RS_GCF_011046735.1. The GC content of the type genome is 61.99 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Nordella umbilatio sp. nov.

Candidatus Nordella umbilatio (NL. fem. n. *umbilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nordella sp003576695*. The type genome for the species is the GenBank assembly RS_GCF_003576695.1. The GC content of the type genome is 62.98

% and the genome length is 5.78 Mbp.

Description of *Candidatus* Nordella verifitoga sp. nov.

Candidatus Nordella verifitoga (NL. fem. n. *verifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nordella sp003574785*. The type genome for the species is the GenBank assembly RS_GCF_003574785.1. The GC content of the type genome is 62.75 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Nordella xenopetta sp. nov.

Candidatus Nordella xenopetta (NL. fem. n. *xenopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nordella sp005502925*. The type genome for the species is the GenBank assembly RS_GCF_005502345.1. The GC content of the type genome is 62.78 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Nosocana aminnilenta sp. nov.

Candidatus Nosocana aminnilenta (NL. fem. n. *aminnilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5416 sp002409525*. The type genome for the species is the GenBank assembly GCA_002409525.1. The GC content of the type genome is 42.74 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Nosocana gen. nov.

Candidatus Nosocana (NL. fem. n. *Nosocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5416*. The type species for the genus is *Candidatus* Nosocana aminnilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nosocana semilitrix sp. nov.

Candidatus Nosocana semilitrix (NL. fem. n. *semilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5416 sp900539175*. The type genome for the species is the GenBank assembly RS_GCF_900753015.1. The GC content of the type genome is 43.55 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Nosocaria inexpitudo sp. nov.

Candidatus Nosocaria inexpitudo (NL. fem. n. *inexpitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-37-8 sp000992085*. The type genome for the species is the GenBank assembly GCA_000992085.1. The GC content of the type genome is 36.55 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Nosocaria gen. nov.

Candidatus Nosocaria (NL. fem. n. *Nosocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-37-8*. The type species for the genus is *Candidatus* Nosocaria inexpitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Nosocariaceae fam. nov.

Candidatus Nosocariaceae (NL. fem. n. *Nosocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-37-8.* The type genus for the taxon is *Candidatus* Nosocaria .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Nosocella nugigax sp. nov.

Candidatus Nosocella nugigax (NL. fem. n. *nugigax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVUX01 sp903909215*. The type genome for the species is the GenBank assembly GCA_903820065.1. The GC content of the type genome is 52.6 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Nosocella gen. nov.

Candidatus Nosocella (NL. fem. n. *Nosocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVUX01*. The type species for the genus is *Candidatus* Nosocella nugigax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nosocia loripicella sp. nov.

Candidatus Nosocia loripicella (NL. fem. n. *loripicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDE01 sp012512925*. The type genome for the species is the GenBank assembly GCA_012512925.1. The GC content of the type genome is 57.56 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Nosocia gen. nov.

Candidatus Nosocia (NL. fem. n. *Nosocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDE01*. The type species for the genus is *Candidatus* Nosocia loripicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYDE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosociaceae.

Description of *Candidatus* Nosociaceae fam. nov.

Candidatus Nosociaceae (NL. fem. n. *Nosociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYDE01*. The type genus for the taxon is *Candidatus* Nosocia .

According to GTDB R06-RS202, this family belongs to the order *Desulfuromonadales*.

Description of *Candidatus* Nosocia obverugo sp. nov.

Candidatus Nosocia obverugo (NL. fem. n. *obverugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDE01 sp012729375*. The type genome for the species is the GenBank assembly GCA_012729375.1. The GC content of the type genome is 58.99 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Nosocida nosocitica sp. nov.

Candidatus Nosocida nosocitica (NL. fem. n. *nosocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVPW01 sp903907895*. The type genome for the species is the GenBank assembly GCA_903907895.1. The GC content of the type genome is 66.76 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Nosocida gen. nov.

Candidatus Nosocida (NL. fem. n. *Nosocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVPW01*. The type species for the genus is *Candidatus* Nosocida nosocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIVPW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocidaceae.

Description of *Candidatus* Nosocidaceae fam. nov.

Candidatus Nosocidaceae (NL. fem. n. *Nosocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAIVPW01*. The type genus for the taxon is *Candidatus* Nosocida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIVPW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nosocidales.

Description of *Candidatus* Nosocidales ord. nov.

Candidatus Nosocidales (NL. fem. n. *Nosocidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIVPW01*. The type genus for the taxon is *Candidatus* Nosocida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Nosocosa rosarago sp. nov.

Candidatus Nosocosa rosarago (NL. fem. n. *rosarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-174 sp003551905*. The type genome for the species is the GenBank assembly GCA_003551905.1. The GC content of the type genome is 44.53 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Nosocosa gen. nov.

Candidatus Nosocosa (NL. fem. n. *Nosocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-174*. The type species for the genus is *Candidatus* Nosocosa rosarago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B1SED10-174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocosaceae.

Description of *Candidatus* Nosocosaceae fam. nov.

Candidatus Nosocosaceae (NL. fem. n. *Nosocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B1SED10-174*. The type genus for the taxon is *Candidatus* Nosocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B1SED10-174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nosocosales.

Description of *Candidatus* Nosocosales ord. nov.

Candidatus Nosocosales (NL. fem. n. *Nosocosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B1SED10-174.* The type genus for the taxon is *Candidatus* Nosocosa .

According to the GTDB R06-RS202, this order belongs to the class *Halanaerobiia*.

Description of *Candidatus* Nosocula verifibula sp. nov.

Candidatus Nosocula verifibula (NL. fem. n. *verifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7388 sp002470695*. The type genome for the species is the GenBank assembly GCA_003529685.1. The GC content of the type genome is 51.92 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Nosocula gen. nov.

Candidatus Nosocula (NL. fem. n. *Nosocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7388*. The type species for the genus is *Candidatus* Nosocula verifibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Nostoc adlubentia sp. nov.

Candidatus Nostoc adlubentia (NL. fem. n. *adlubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp002949795*. The type genome for the species is the GenBank

assembly RS_GCF_002949795.1. The GC content of the type genome is 41.61 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Nostoc adrecatica sp. nov.

Candidatus Nostoc adrecatica (NL. fem. n. *adrecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp003326205*. The type genome for the species is the GenBank assembly GCA_003326205.1. The GC content of the type genome is 41.02 % and the genome length is 8.46 Mbp.

Description of *Candidatus* Nostoc cicatago sp. nov.

Candidatus Nostoc cicatago (NL. fem. n. *cicatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp013393905*. The type genome for the species is the GenBank assembly RS_GCF_013393905.1. The GC content of the type genome is 41.5 % and the genome length is 9.88 Mbp.

Description of *Candidatus* Nostoc clancago sp. nov.

Candidatus Nostoc clancago (NL. fem. n. *clancago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp013343235*. The type genome for the species is the GenBank assembly RS_GCF_013343235.1. The GC content of the type genome is 41.29 % and the genome length is 7.89 Mbp.

Description of *Candidatus* Nostoc cohoricella sp. nov.

Candidatus Nostoc cohoricella (NL. fem. n. *cohoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp002246015*. The type genome for the species is the GenBank assembly RS_GCF_002246015.1. The GC content of the type genome is 41.72 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Nostoc depupimonas sp. nov.

Candidatus Nostoc depupimonas (NL. fem. n. *depupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp014222285*. The type genome for the species is the GenBank assembly RS_GCF_014222285.1. The GC content of the type genome is 41.38 % and the genome length is 8.5 Mbp.

Description of *Candidatus* Nostoc emortimonia sp. nov.

Candidatus Nostoc emortimonia (NL. fem. n. *emortimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp005869855*. The type genome for the species is the GenBank assembly RS_GCF_005869855.1. The GC content of the type genome is 40.61 % and the genome length is 7.62 Mbp.

Description of *Candidatus* Nostoc lucifago sp. nov.

Candidatus Nostoc lucifago (NL. fem. n. *lucifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp003326245*. The type genome for the species is the GenBank assembly RS_GCF_003326245.1. The GC content of the type genome is 41.39 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Nostoc milipessa sp. nov.

Candidatus Nostoc milipessa (NL. fem. n. *milipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp001712795*. The type genome for the species is the GenBank assembly RS_GCF_001712795.1. The GC content of the type genome is 41.69 % and the genome length is 9.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Symbiotic tissue of Blasia pusilla L.".

Description of *Candidatus* Nostoc monimiforma sp. nov.

Candidatus Nostoc monimiforma (NL. fem. n. *monimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp010091925*. The type genome for the species is the GenBank assembly RS_GCF_010091925.1. The GC content of the type genome is 41.87 % and the genome length is 7.43 Mbp.

Description of *Candidatus* Nostoc pericedo sp. nov.

Candidatus Nostoc pericedo (NL. fem. n. *pericedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc sp002949735*. The type genome for the species is the GenBank assembly RS_GCF_002245975.1. The GC content of the type genome is 41.4 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Nostoc famelatica sp. nov.

Candidatus Nostoc famelatica (NL. fem. n. *famelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc_B sp001698435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001698435.1. The GC content of the type genome is 40.58 % and the genome length is 6.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "co-culture originated from a tropical freshwater lake".

Description of *Candidatus* Nostoc musulibra sp. nov.

Candidatus Nostoc musulibra (NL. fem. n. *musulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Nostoc_C sp002368335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002368335.1. The GC content of the type genome is 41.15 % and the genome length is 8.59 Mbp.

Description of *Candidatus* Notabana bifisitudo sp. nov.

Candidatus Notabana bifisitudo (NL. fem. n. *bifisitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRF01 sp013202715*. The type genome for the species is the GenBank assembly GCA_013202715.1. The GC content of the type genome is 38.77 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Notabana gen. nov.

Candidatus Notabana (NL. fem. n. *Notabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRF01*. The type species for the genus is *Candidatus* Notabana bifisitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenanaceae.

Description of *Candidatus* Notabaria lucubimonas sp. nov.

Candidatus Notabaria lucubimonas (NL. fem. n. *lucubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715585 sp002715585*. The type genome for the species is the GenBank assembly GCA_002715585.2. The GC content of the type genome is 29.73 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Notabaria gen. nov.

Candidatus Notabaria (NL. fem. n. *Notabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002715585*. The type species for the genus is *Candidatus* Notabaria lucubimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Notabaria myalgitas sp. nov.

Candidatus Notabaria myalgitas (NL. fem. n. *myalgitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715585 sp902609885*. The type genome for the species is the GenBank assembly GCA_902609885.1. The GC content of the type genome is 29.6 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Notabaria resuritudo sp. nov.

Candidatus Notabaria resuritudo (NL. fem. n. *resuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715585 sp002697665*. The type genome for the species is the GenBank assembly GCA_902577805.1. The GC content of the type genome is 29.66 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Notabella conibilenta sp. nov.

Candidatus Notabella conibilenta (NL. fem. n. *conibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU053 sp012520115*. The type genome for the species is the GenBank assembly GCA_012520115.1. The GC content of the type genome is 47.95 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Notabella gen. nov.

Candidatus Notabella (NL. fem. n. *Notabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU053*. The type species for the genus is *Candidatus* Notabella conibilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Notabella nefanousia sp. nov.

Candidatus Notabella nefanousia (NL. fem. n. *nefanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU053 sp009779455*. The type genome for the species is the GenBank assembly GCA_009779455.1. The GC content of the type genome is 48.26 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Notabella subucessa sp. nov.

Candidatus Notabella subucessa (NL. fem. n. *subucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU053 sp001512765*. The type genome for the species is the GenBank assembly GCA_002385725.1. The GC content of the type genome is 47.49 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Notabia casigiforma sp. nov.

Candidatus Notabia casigiforma (NL. fem. n. *casigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILVY01 sp903837785*. The type genome for the species is the GenBank assembly GCA_903837785.1. The GC content of the type genome is 62.74 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Notabia gen. nov.

Candidatus Notabia (NL. fem. n. *Notabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILVY01*. The type species for the genus is *Candidatus* Notabia casigiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bacifosaceae.

Description of *Candidatus* Notabida abnocicella sp. nov.

Candidatus Notabida abnocicella (NL. fem. n. *abnocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900556635*. The type genome for the species is the GenBank assembly GCA_900556635.1. The GC content of the type genome is 55.62 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Notabida gen. nov.

Candidatus Notabida (NL. fem. n. *Notabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-170*. The type species for the genus is *Candidatus* Notabida abnocicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Notabida bisacitrix sp. nov.

Candidatus Notabida bisacitrix (NL. fem. n. *bisacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900545925*. The type genome for the species is the GenBank assembly GCA_900545925.1. The GC content of the type genome is 55.78 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Notabida blactitudo sp. nov.

Candidatus Notabida blactitudo (NL. fem. n. *blactitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp004555655*. The type genome for the species is the GenBank assembly GCA_004555655.1. The GC content of the type genome is 59.52 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Notabida derecicella sp. nov.

Candidatus Notabida derecicella (NL. fem. n. *derecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900548625*. The type genome for the species is the GenBank assembly GCA_900548625.1. The GC content of the type genome is 59.06 %

and the genome length is 2.25 Mbp.

Description of *Candidatus* Notabida giganitura sp. nov.

Candidatus Notabida giganitura (NL. fem. n. *giganitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp000432135*. The type genome for the species is the GenBank assembly GCA_000432135.1. The GC content of the type genome is 58.4 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Notabida haricifica sp. nov.

Candidatus Notabida haricifica (NL. fem. n. *haricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp002437575*. The type genome for the species is the GenBank assembly GCA_002437575.1. The GC content of the type genome is 57.8 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Notabida metucedo sp. nov.

Candidatus Notabida metucedo (NL. fem. n. *metucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900553545*. The type genome for the species is the GenBank assembly GCA_900553545.1. The GC content of the type genome is 60.56 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Notabida modifibra sp. nov.

Candidatus Notabida modifibra (NL. fem. n. *modifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp000436735*. The type genome for the species is the GenBank assembly GCA_000436735.1. The GC content of the type genome is 58.69 % and the genome length is 2.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Notabida papavitas sp. nov.

Candidatus Notabida papavitas (NL. fem. n. *papavitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp002404795*. The type genome for the species is the GenBank assembly GCA_004554295.1. The GC content of the type genome is 61.97 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Notabida rosacousia sp. nov.

Candidatus Notabida rosacousia (NL. fem. n. *rosacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900549635*. The type genome for the species is the GenBank assembly GCA_900753425.1. The GC content of the type genome is 57.2 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Notabida rubecitura sp. nov.

Candidatus Notabida rubecitura (NL. fem. n. *rubecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp002298695*. The type genome for the species is the GenBank assembly GCA_002298695.1. The GC content of the type genome is 59.48 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Notabida semifigena sp. nov.

Candidatus Notabida semifigena (NL. fem. n. *semifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900751035*. The type genome for the species is the GenBank assembly GCA_900751035.1. The GC content of the type genome is 58.19 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Notabida semilimonas sp. nov.

Candidatus Notabida semilimonas (NL. fem. n. *semilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp003516765*. The type genome for the species is the GenBank assembly GCA_900759595.1. The GC content of the type genome is 57.54 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Notabida unetvastra sp. nov.

Candidatus Notabida unetvastra (NL. fem. n. *unetvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-170 sp900555665*. The type genome for the species is the GenBank assembly GCA_900555665.1. The GC content of the type genome is 59.9 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Notabosa dimadilega sp. nov.

Candidatus Notabosa dimadilega (NL. fem. n. *dimadilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NP-7 sp005883865*. The type genome for the species is the GenBank assembly GCA_005883865.1. The GC content of the type genome is 68.42 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Notabosa gen. nov.

Candidatus Notabosa (NL. fem. n. *Notabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NP-7*. The type species for the genus is *Candidatus* Notabosa dimadilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NP-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabosaceae.

Description of *Candidatus* Notabosaceae fam. nov.

Candidatus Notabosaceae (NL. fem. n. *Notabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NP-7*. The type genus for the taxon is *Candidatus* Notabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minagiales.

Description of *Candidatus* Notabula miracax sp. nov.

Candidatus Notabula miracax (NL. fem. n. *miracax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFAQ01 sp001776275*. The type genome for the species is the GenBank assembly GCA_001776275.1. The GC content of the type genome is 39.94 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Notabula gen. nov.

Candidatus Notabula (NL. fem. n. *Notabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFAQ01*. The type species for the genus is *Candidatus* Notabula miracax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFAQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabulaceae.

Description of *Candidatus* Notabulaceae fam. nov.

Candidatus Notabulaceae (NL. fem. n. *Notabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MFAQ01*. The type genus for the taxon is *Candidatus* Notabula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Notacana capucitudo sp. nov.

Candidatus Notacana capucitudo (NL. fem. n. *capucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-2-70-7 sp003222205*. The type genome for the species is the GenBank assembly GCA_001919115.1. The GC content of the type genome is 70.07 % and the genome length is 1.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 4 days after first rain event (27mm)".

Description of *Candidatus* Notacana gen. nov.

Candidatus Notacana (NL. fem. n. *Notacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-2-70-7*. The type species for the genus is *Candidatus* Notacana capucitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Notacaria lubenicella sp. nov.

Candidatus Notacaria lubenicella (NL. fem. n. *lubenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLKC01 sp007134775*. The type genome for the species is the GenBank assembly GCA_007134775.1. The GC content of the type genome is 66.82 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Notacaria gen. nov.

Candidatus Notacaria (NL. fem. n. *Notacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLKC01*. The type species for the genus is *Candidatus* Notacaria lubenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Notacella fumifax sp. nov.

Candidatus Notacella fumifax (NL. fem. n. *fumifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-44-7 sp000999595*. The type genome for the species is the GenBank assembly GCA_000999595.1. The GC content of the type genome is 43.48 % and the genome length is 1.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Notacella gen. nov.

Candidatus Notacella (NL. fem. n. *Notacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-44-7*. The type species for the genus is *Candidatus* Notacella fumifax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notacellaceae.

Description of *Candidatus* Notacellaceae fam. nov.

Candidatus Notacellaceae (NL. fem. n. *Notacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-44-7.* The type genus for the taxon is *Candidatus* Notacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Notacellales.

Description of *Candidatus* Notacellales ord. nov.

Candidatus Notacellales (NL. fem. n. *Notacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-44-7.* The type genus for the taxon is *Candidatus* Notacella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Notacia funebivita sp. nov.

Candidatus Notacia funebivita (NL. fem. n. *funebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGS01 sp011053475*. The type genome for the species is the GenBank assembly GCA_011053475.1. The GC content of the type genome is 44.95 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Notacia gen. nov.

Candidatus Notacia (NL. fem. n. *Notacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGS01*. The type species for the genus is *Candidatus* Notacia funebivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notaciaceae.

Description of *Candidatus* Notaciaceae fam. nov.

Candidatus Notaciaceae (NL. fem. n. *Notaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGS01.* The type genus for the taxon is *Candidatus* Notacia .

According to GTDB R06-RS202, this family belongs to the order *Aminicenantales*.

Description of *Candidatus* Notacia obsuritica sp. nov.

Candidatus Notacia obsuritica (NL. fem. n. *obsuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGS01 sp011389315*. The type genome for the species is the GenBank assembly GCA_011389315.1. The GC content of the type genome is 48.22 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Notacia veridugo sp. nov.

Candidatus Notacia veridugo (NL. fem. n. *veridugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGS01 sp011333465*. The type genome for the species is the GenBank assembly GCA_011333465.1. The GC content of the type genome is 45.89 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Notacida afranitudo sp. nov.

Candidatus Notacida afranitudo (NL. fem. n. *afranitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMC01 sp012840075*. The type genome for the species is the GenBank assembly GCA_012840075.1. The GC content of the type genome is 34.62 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Notacida gen. nov.

Candidatus Notacida (NL. fem. n. *Notacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMC01*. The type species for the genus is *Candidatus* Notacida afranitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notacidaceae.

Description of *Candidatus* Notacidaceae fam. nov.

Candidatus Notacidaceae (NL. fem. n. *Notacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMC01.* The type genus for the taxon is *Candidatus* Notacida .

According to GTDB R06-RS202, this family belongs to the order *Acetivibrionales*.

Description of *Candidatus* Notacosa hemidilenta sp. nov.

Candidatus Notacosa hemidilenta (NL. fem. n. *hemidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-1484045 sp001484045*. The type genome for the species is the GenBank assembly RS_GCF_001484045.1. The GC content of the type genome is 28.49 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Notacosa gen. nov.

Candidatus Notacosa (NL. fem. n. *Notacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-1484045*. The type species for the genus is *Candidatus* Notacosa hemidilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCF-1484045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notacosaceae.

Description of *Candidatus* Notacosaceae fam. nov.

Candidatus Notacosaceae (NL. fem. n. *Notacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCF-1484045.* The type genus for the taxon is *Candidatus* Notacosa .

According to GTDB R06-RS202, this family belongs to the order *Mycoplasmatales*.

Description of *Candidatus* Noviherbaspirillum armiditudo sp. nov.

Candidatus Noviherbaspirillum armiditudo (NL. fem. n. *armiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp010974945*. The type genome for the species is the GenBank assembly RS_GCF_010974945.1. The GC content of the type genome is 63.28 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Noviherbaspirillum armipisca sp. nov.

Candidatus Noviherbaspirillum armipisca (NL. fem. n. *armipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp008929045*. The type genome for the species is the GenBank assembly RS_GCF_008929045.1. The GC content of the type genome is 60.01 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Noviherbaspirillum attemigena sp. nov.

Candidatus Noviherbaspirillum attemigena (NL. fem. n. *attemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp003591035*. The type genome for the species is the GenBank assembly RS_GCF_003591035.1. The GC content of the type genome is 57.54 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Noviherbaspirillum feficicula sp. nov.

Candidatus Noviherbaspirillum feficicula (NL. fem. n. *feficicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp003590875*. The type genome for the species is the GenBank assembly RS_GCF_003590875.1. The GC content of the type genome is 59.94 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Noviherbaspirillum inhorivita sp. nov.

Candidatus Noviherbaspirillum inhorivita (NL. fem. n. *inhorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp004570315*. The type genome for the species is the GenBank assembly RS_GCF_004570315.1. The GC content of the type genome is 63.81 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Noviherbaspirillum luxurisca sp. nov.

Candidatus Noviherbaspirillum luxurisca (NL. fem. n. *luxurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp001428545*. The type genome for the species is the GenBank assembly RS_GCF_001428545.1. The GC content of the type genome is

56.8 % and the genome length is 6.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Noviherbaspirillum robigifica sp. nov.

Candidatus Noviherbaspirillum robigifica (NL. fem. n. *robigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp004804275*. The type genome for the species is the GenBank assembly RS_GCF_004804275.1. The GC content of the type genome is 59.18 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Noviherbaspirillum tenebisca sp. nov.

Candidatus Noviherbaspirillum tenebisca (NL. fem. n. *tenebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Noviherbaspirillum sp007874125*. The type genome for the species is the GenBank assembly RS_GCF_007874125.1. The GC content of the type genome is 61.89 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Novilana pulegiforma sp. nov.

Candidatus Novilana pulegiforma (NL. fem. n. *pulegiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABSP01 sp011390345*. The type genome for the species is the GenBank assembly GCA_011390345.1. The GC content of the type genome is 55.71 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Novilana gen. nov.

Candidatus Novilana (NL. fem. n. *Novilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABSP01*. The type species for the genus is *Candidatus* Novilana pulegiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Novilaria delacicula sp. nov.

Candidatus Novilaria delacicula (NL. fem. n. *delacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2226 sp001777915*. The type genome for the species is the GenBank assembly GCA_001781595.1. The GC content of the type genome is 53.99 % and the genome length is 2.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Novilaria gen. nov.

Candidatus Novilaria (NL. fem. n. *Novilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2226*. The type species for the genus is *Candidatus* Novilaria delacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EtOH8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuranaceae.

Description of *Candidatus* Novilella echogedo sp. nov.

Candidatus Novilella echogedo (NL. fem. n. *echogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7675 sp002483085*. The type genome for the species is the GenBank assembly GCA_002483085.1. The GC content of the type genome is 51.27 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Novilella gen. nov.

Candidatus Novilella (NL. fem. n. *Novilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7675*. The type species for the genus is *Candidatus* Novilella echogedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7675*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Novilellaceae.

Description of *Candidatus* Novilellaceae fam. nov.

Candidatus Novilellaceae (NL. fem. n. *Novilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7675.* The type genus for the taxon is *Candidatus* Novilella .

According to GTDB R06-RS202, this family belongs to the order *Kapabacteriales*.

Description of *Candidatus* Novilida abascitoga sp. nov.

Candidatus Novilida abascitoga (NL. fem. n. *abascitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009702205*. The type genome for the species is the GenBank assembly GCA_009702205.1. The GC content of the type genome is 44.17 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Novilida gen. nov.

Candidatus Novilida (NL. fem. n. *Novilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA044-D11*. The type species for the genus is *Candidatus* Novilida abascitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Novilida alcibicula sp. nov.

Candidatus Novilida alcibicula (NL. fem. n. *alcibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009701575*. The type genome for the species is the GenBank assembly GCA_009701575.1. The GC content of the type genome is 44.64 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Novilida appecilega sp. nov.

Candidatus Novilida appecilega (NL. fem. n. *appecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903875815*. The type genome for the species is the GenBank assembly GCA_903875815.1. The GC content of the type genome is 51.32 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Novilida artopigena sp. nov.

Candidatus Novilida artopigena (NL. fem. n. *artopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp000485495*. The type genome for the species is the GenBank assembly GCA_000485495.1. The GC content of the type genome is 44.21 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Novilida cacalimonia sp. nov.

Candidatus Novilida cacalimonia (NL. fem. n. *cacalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009698045*. The type genome for the species is the GenBank assembly GCA_009698785.1. The GC content of the type genome is 48.45 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Novilida curacicula sp. nov.

Candidatus Novilida curacicula (NL. fem. n. *curacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903938735*. The type genome for the species is the GenBank assembly GCA_903904925.1. The GC content of the type genome is 52.69 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Novilida deparivita sp. nov.

Candidatus Novilida deparivita (NL. fem. n. *deparivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp002367715*. The type genome for the species is the GenBank assembly GCA_013204505.1. The GC content of the type genome is 45.49 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Novilida depopitrix sp. nov.

Candidatus Novilida depopitrix (NL. fem. n. *depopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903836945*. The type genome for the species is the GenBank assembly GCA_903824055.1. The GC content of the type genome is 46.28 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Novilida deveciforma sp. nov.

Candidatus Novilida deveciforma (NL. fem. n. *deveciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903898855*. The type genome for the species is the GenBank assembly GCA_903898855.1. The GC content of the type genome is 49.66 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Novilida dilibitica sp. nov.

Candidatus Novilida dilibitica (NL. fem. n. *dilibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903919375*. The type genome for the species is the GenBank assembly GCA_903842615.1. The GC content of the type genome is 50.97 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Novilida dilogitoga sp. nov.

Candidatus Novilida dilogitoga (NL. fem. n. *dilogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009701525*. The type genome for the species is the GenBank assembly GCA_009701525.1. The GC content of the type genome is 44.38 %

and the genome length is 0.97 Mbp.

Description of *Candidatus* Novilida exforimonia sp. nov.

Candidatus Novilida exforimonia (NL. fem. n. *exforimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp002340925*. The type genome for the species is the GenBank assembly GCA_002340925.1. The GC content of the type genome is 44.99 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Novilida fetutimonia sp. nov.

Candidatus Novilida fetutimonia (NL. fem. n. *fetutimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009726125*. The type genome for the species is the GenBank assembly GCA_009697845.1. The GC content of the type genome is 44.69 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Novilida humecastra sp. nov.

Candidatus Novilida humecastra (NL. fem. n. *humecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903871555*. The type genome for the species is the GenBank assembly GCA_903825515.1. The GC content of the type genome is 44.56 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Novilida immodibula sp. nov.

Candidatus Novilida immodibula (NL. fem. n. *immodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903822245*. The type genome for the species is the GenBank assembly GCA_903822245.1. The GC content of the type genome is 44.92 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Novilida lutulessa sp. nov.

Candidatus Novilida lutulessa (NL. fem. n. *lutulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903838035*. The type genome for the species is the GenBank assembly GCA_903860895.1. The GC content of the type genome is 49.32 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Novilida maligilega sp. nov.

Candidatus Novilida maligilega (NL. fem. n. *maligilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp007280395*. The type genome for the species is the GenBank assembly GCA_007280395.1. The GC content of the type genome is 44.92 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Novilida subucitrix sp. nov.

Candidatus Novilida subucitrix (NL. fem. n. *subucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp009705075*. The type genome for the species is the GenBank assembly GCA_009703905.1. The GC content of the type genome is 44.95 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Novilida tigurago sp. nov.

Candidatus Novilida tigurago (NL. fem. n. *tigurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA044-D11 sp903842675*. The type genome for the species is the GenBank assembly GCA_903873865.1. The GC content of the type genome is 46.49 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Novilosa agrapifica sp. nov.

Candidatus Novilosa agrapifica (NL. fem. n. *agrapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BICA1-8 sp000802045*. The type genome for the species is the GenBank assembly GCA_000802045.1. The GC content of the type genome is 37.19 % and the genome length is 3.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock".

Description of *Candidatus* Novilosa gen. nov.

Candidatus Novilosa (NL. fem. n. *Novilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BICA1-8*. The type species for the genus is *Candidatus* Novilosa agrapifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BICA1-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Novilosaceae.

Description of *Candidatus* Novilosaceae fam. nov.

Candidatus Novilosaceae (NL. fem. n. *Novilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BICA1-8.* The type genus for the taxon is *Candidatus* Novilosa .

According to GTDB R06-RS202, this family belongs to the order *Peptococcales*.

Description of *Candidatus* Novilosa uxorcifica sp. nov.

Candidatus Novilosa uxorcifica (NL. fem. n. *uxorcifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BICA1-8 sp000961765*. The type genome for the species is the GenBank assembly GCA_000961765.1. The GC content of the type genome is 37.04 % and the genome length is 4.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Novilula manubousia sp. nov.

Candidatus Novilula manubousia (NL. fem. n. *manubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXHT01 sp005773095*. The type genome for the species is the GenBank assembly GCA_005773095.1. The GC content of the type genome is 60.14 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Novilula gen. nov.

Candidatus Novilula (NL. fem. n. *Novilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXHT01*. The type species for the genus is *Candidatus* Novilula manubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopulaceae.

Description of *Candidatus* Novosphingobium adbelibra sp. nov.

Candidatus Novosphingobium adbelibra (NL. fem. n. *adbelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002280675*. The type genome for the species is the GenBank assembly GCA_002280675.1. The GC content of the type genome is 59.61 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Novosphingobium admodifica sp. nov.

Candidatus Novosphingobium admodifica (NL. fem. n. *admodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009746585*. The type genome for the species is the GenBank assembly RS_GCF_009746585.1. The GC content of the type genome is 63.98 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Novosphingobium adtubitura sp. nov.

Candidatus Novosphingobium adtubitura (NL. fem. n. *adtubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009909235*. The type genome for the species is the GenBank assembly RS_GCF_009909235.1. The GC content of the type genome is 64.84 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Novosphingobium ambusessa sp. nov.

Candidatus Novosphingobium ambusessa (NL. fem. n. *ambusessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp006874585*. The type genome for the species is the GenBank assembly RS_GCF_006874585.1. The GC content of the type genome is 65.33 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Novosphingobium antimicella sp. nov.

Candidatus Novosphingobium antimicella (NL. fem. n. *antimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001519065*. The type genome for the species is the GenBank assembly RS_GCF_001519065.1. The GC content of the type genome is 64.58 % and the genome length is 4.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Novosphingobium appagitrix sp. nov.

Candidatus Novosphingobium appagitrix (NL. fem. n. *appagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002256775*. The type genome for the species is the GenBank assembly GCA_002256775.1. The GC content of the type genome is 61.67 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Novosphingobium apposessa sp. nov.

Candidatus Novosphingobium apposessa (NL. fem. n. *apposessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009885425*. The type genome for the species is

the GenBank assembly GCA_009885425.1. The GC content of the type genome is 62.89 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Novosphingobium apsegitica sp. nov.

Candidatus Novosphingobium apsegitica (NL. fem. n. *apsegitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp003208305*. The type genome for the species is the GenBank assembly RS_GCF_003208305.1. The GC content of the type genome is 64.71 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Novosphingobium arcifatio sp. nov.

Candidatus Novosphingobium arcifatio (NL. fem. n. *arcifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903970225*. The type genome for the species is the GenBank assembly GCA_903970225.1. The GC content of the type genome is 65.41 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Novosphingobium bifisitia sp. nov.

Candidatus Novosphingobium bifisitia (NL. fem. n. *bifisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001421325*. The type genome for the species is the GenBank assembly RS_GCF_001421325.1. The GC content of the type genome is 64.14 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Novosphingobium bonitessa sp. nov.

Candidatus Novosphingobium bonitessa (NL. fem. n. *bonitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001898925*. The type genome for the species is the GenBank assembly RS_GCF_012275515.1. The GC content of the type genome is 63.15 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Novosphingobium caselilenta sp. nov.

Candidatus Novosphingobium caselilenta (NL. fem. n. *caselilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903893935*. The type genome for the species is the GenBank assembly GCA_903893935.1. The GC content of the type genome is 65.04 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Novosphingobium celamastra sp. nov.

Candidatus Novosphingobium celamastra (NL. fem. n. *celamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp013149295*. The type genome for the species is the GenBank assembly RS_GCF_013149295.1. The GC content of the type genome is 62.9 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Novosphingobium cenacitia sp. nov.

Candidatus Novosphingobium cenacitia (NL. fem. n. *cenacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903834285*. The type genome for the species is the GenBank assembly GCA_903834285.1. The GC content of the type genome is 65.08 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Novosphingobium cerifitura sp. nov.

Candidatus Novosphingobium cerifitura (NL. fem. n. *cerifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009856825*. The type genome for the species is the GenBank assembly RS_GCF_009856825.1. The GC content of the type genome is 65.07 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Novosphingobium cisalilega sp. nov.

Candidatus Novosphingobium cisalilega (NL. fem. n. *cisalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp000281975*. The type genome for the species is the GenBank assembly RS_GCF_000281975.1. The GC content of the type genome is 65.91 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Novosphingobium citiventia sp. nov.

Candidatus Novosphingobium citiventia (NL. fem. n. *citiventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp013791705*. The type genome for the species is the GenBank assembly GCA_013791705.1. The GC content of the type genome is 65.79 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Novosphingobium conamatio sp. nov.

Candidatus Novosphingobium conamatio (NL. fem. n. *conamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009926135*. The type genome for the species is the GenBank assembly GCA_009926135.1. The GC content of the type genome is 62.77 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Novosphingobium cucurigena sp. nov.

Candidatus Novosphingobium cucurigena (NL. fem. n. *cucurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp004341845*. The type genome for the species is the GenBank assembly RS_GCF_004341845.1. The GC content of the type genome is 64.35 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Novosphingobium decapigena sp. nov.

Candidatus Novosphingobium decapigena (NL. fem. n. *decapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Novosphingobium sp002916655*. The type genome for the species is the GenBank assembly RS_GCF_002916655.1. The GC content of the type genome is 64.07 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Novosphingobium defalibula sp. nov.

Candidatus Novosphingobium defalibula (NL. fem. n. *defalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002336765*. The type genome for the species is the GenBank assembly GCA_002336765.1. The GC content of the type genome is 64.48 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Novosphingobium eccilitica sp. nov.

Candidatus Novosphingobium eccilitica (NL. fem. n. *eccilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001725355*. The type genome for the species is the GenBank assembly GCA_001725355.1. The GC content of the type genome is 65.95 % and the genome length is 4.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Novosphingobium ensigedo sp. nov.

Candidatus Novosphingobium ensigedo (NL. fem. n. *ensigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp003208375*. The type genome for the species is the GenBank assembly RS_GCF_003208375.1. The GC content of the type genome is 65.08 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Novosphingobium exhededo sp. nov.

Candidatus Novosphingobium exhededo (NL. fem. n. *exhededo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp902506425*. The type genome for the species is the GenBank assembly RS_GCF_902506425.1. The GC content of the type genome is 64.99 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Novosphingobium expisimonas sp. nov.

Candidatus Novosphingobium expisimonas (NL. fem. n. *expisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903858875*. The type genome for the species is the GenBank assembly GCA_903858875.1. The GC content of the type genome is 62.67 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Novosphingobium giganax sp. nov.

Candidatus Novosphingobium giganax (NL. fem. n. *giganax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903848655*. The type genome for the species is the GenBank assembly GCA_903848655.1. The GC content of the type genome is 63.61 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Novosphingobium haricibra sp. nov.

Candidatus Novosphingobium haricibra (NL. fem. n. *haricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp008107685*. The type genome for the species is the GenBank assembly RS_GCF_008107685.1. The GC content of the type genome is 64.45 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Novosphingobium homilisca sp. nov.

Candidatus Novosphingobium homilisca (NL. fem. n. *homilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp003454795*. The type genome for the species is the GenBank assembly RS_GCF_012641315.1. The GC content of the type genome is 63.62 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Novosphingobium impilago sp. nov.

Candidatus Novosphingobium impilago (NL. fem. n. *impilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903911985*. The type genome for the species is the GenBank assembly GCA_903911985.1. The GC content of the type genome is 64.89 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Novosphingobium insinitia sp. nov.

Candidatus Novosphingobium insinitia (NL. fem. n. *insinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903828025*. The type genome for the species is the GenBank assembly GCA_903828025.1. The GC content of the type genome is 65.7 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Novosphingobium labecifica sp. nov.

Candidatus Novosphingobium labecifica (NL. fem. n. *labecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001519055*. The type genome for the species is the GenBank assembly RS_GCF_001519055.1. The GC content of the type genome is 63.94 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Novosphingobium luceligena sp. nov.

Candidatus Novosphingobium luceligena (NL. fem. n. *luceligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp902706195*. The type genome for the species is the GenBank assembly RS_GCF_902706195.1. The GC content of the type genome is 64.25 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Novosphingobium mahemiforma sp. nov.

Candidatus Novosphingobium mahemiforma (NL. fem. n. *mahemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002336885*. The type genome for the species is the GenBank assembly GCA_002336885.1. The GC content of the type genome is 65.96 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Novosphingobium maxilatica sp. nov.

Candidatus Novosphingobium maxilatica (NL. fem. n. *maxilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002454125*. The type genome for the species is the GenBank assembly GCA_002454125.1. The GC content of the type genome is 65.57 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Novosphingobium murelisca sp. nov.

Candidatus Novosphingobium murelisca (NL. fem. n. *murelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp000253255*. The type genome for the species is the GenBank assembly RS_GCF_000253255.1. The GC content of the type genome is 63.26 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Novosphingobium nosocago sp. nov.

Candidatus Novosphingobium nosocago (NL. fem. n. *nosocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp005145025*. The type genome for the species is the GenBank assembly RS_GCF_005145025.1. The GC content of the type genome is 65.89 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Novosphingobium nutamilega sp. nov.

Candidatus Novosphingobium nutamilega (NL. fem. n. *nutamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp004342985*. The type genome for the species is the GenBank assembly RS_GCF_004368805.1. The GC content of the type genome is 65.51 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Novosphingobium oblivimonia sp. nov.

Candidatus Novosphingobium oblivimonia (NL. fem. n. *oblivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp900176395*. The type genome for the species is the GenBank assembly RS_GCF_900176395.1. The GC content of the type genome is 62.66 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Novosphingobium obtorimonia sp. nov.

Candidatus Novosphingobium obtorimonia (NL. fem. n. *obtorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp012927405*. The type genome for the species is the GenBank assembly RS_GCF_012927405.1. The GC content of the type genome is 65.01 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Novosphingobium ocissivita sp. nov.

Candidatus Novosphingobium ocissivita (NL. fem. n. *ocissivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp013141325*. The type genome for the species is the GenBank assembly GCA_013141325.1. The GC content of the type genome is 65.7 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Novosphingobium octipifica sp. nov.

Candidatus Novosphingobium octipifica (NL. fem. n. *octipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001295795*. The type genome for the species is the GenBank assembly RS_GCF_001295795.1. The GC content of the type genome is 59.38 % and the genome length is 4.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Novosphingobium omnipilenta sp. nov.

Candidatus Novosphingobium omnipilenta (NL. fem. n. *omnipilenta* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp012641335*. The type genome for the species is the GenBank assembly RS_GCF_012641335.1. The GC content of the type genome is 61.84 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Novosphingobium penurugo sp. nov.

Candidatus Novosphingobium penurugo (NL. fem. n. *penurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903923465*. The type genome for the species is the GenBank assembly GCA_903923465.1. The GC content of the type genome is 66.86 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Novosphingobium pepenetta sp. nov.

Candidatus Novosphingobium pepenetta (NL. fem. n. *pepenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp000876675*. The type genome for the species is the GenBank assembly RS_GCF_000876675.2. The GC content of the type genome is 63.68 % and the genome length is 6.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "podzolic fallow soil sampled from the ARRIAM experimental field".

Description of *Candidatus* Novosphingobium pomifilenta sp. nov.

Candidatus Novosphingobium pomifilenta (NL. fem. n. *pomifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp004364785*. The type genome for the species is the GenBank assembly RS_GCF_004364785.1. The GC content of the type genome is 65.01 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Novosphingobium pulegatio sp. nov.

Candidatus Novosphingobium pulegatio (NL. fem. n. *pulegatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp004211435*. The type genome for the species is the GenBank assembly GCA_004211435.1. The GC content of the type genome is 66.4 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Novosphingobium recocicella sp. nov.

Candidatus Novosphingobium recocicella (NL. fem. n. *recocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp009707465*. The type genome for the species is the GenBank assembly RS_GCF_009707465.1. The GC content of the type genome is 65.65 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Novosphingobium recumimonas sp. nov.

Candidatus Novosphingobium recumimonas (NL. fem. n. *recumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002198665*. The type genome for the species is the GenBank assembly RS_GCF_002198665.1. The GC content of the type genome is 63.7 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Novosphingobium resacitura sp. nov.

Candidatus Novosphingobium resacitura (NL. fem. n. *resacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp013822005*. The type genome for the species is the GenBank assembly GCA_013822005.1. The GC content of the type genome is 64.92 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Novosphingobium resuricula sp. nov.

Candidatus Novosphingobium resuricula (NL. fem. n. *resuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002855555*. The type genome for the species is the GenBank assembly RS_GCF_002855555.1. The GC content of the type genome is

64.98 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Novosphingobium rudecilega sp. nov.

Candidatus Novosphingobium rudecilega (NL. fem. n. *rudecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903832325*. The type genome for the species is the GenBank assembly GCA_903861275.1. The GC content of the type genome is 64.95 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Novosphingobium rudicitura sp. nov.

Candidatus Novosphingobium rudicitura (NL. fem. n. *rudicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp900113255*. The type genome for the species is the GenBank assembly RS_GCF_900113255.1. The GC content of the type genome is 65.41 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Novosphingobium satacitas sp. nov.

Candidatus Novosphingobium satacitas (NL. fem. n. *satacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp900117425*. The type genome for the species is the GenBank assembly RS_GCF_001296055.1. The GC content of the type genome is 65.55 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Novosphingobium secunigena sp. nov.

Candidatus Novosphingobium secunigena (NL. fem. n. *secunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp001298105*. The type genome for the species is the GenBank assembly RS_GCF_013410485.1. The GC content of the type genome is 64.8 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Novosphingobium smegmilenta sp. nov.

Candidatus Novosphingobium smegmilenta (NL. fem. n. *smegmilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp000813185*. The type genome for the species is the GenBank assembly RS_GCF_000813185.1. The GC content of the type genome is 65.38 % and the genome length is 5.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sunken wood".

Description of *Candidatus* Novosphingobium socagousia sp. nov.

Candidatus Novosphingobium socagousia (NL. fem. n. *socagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002440635*. The type genome for the species is the GenBank assembly GCA_002440635.1. The GC content of the type genome is 63.79 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Novosphingobium sonivago sp. nov.

Candidatus Novosphingobium sonivago (NL. fem. n. *sonivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002556635*. The type genome for the species is the GenBank assembly RS_GCF_002556635.1. The GC content of the type genome is 65.83 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Novosphingobium terebicula sp. nov.

Candidatus Novosphingobium terebicula (NL. fem. n. *terebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp903868655*. The type genome for the species is the GenBank assembly GCA_903868655.1. The GC content of the type genome is 60.82 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Novosphingobium vacilessa sp. nov.

Candidatus Novosphingobium vacilessa (NL. fem. n. *vacilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp002256985*. The type genome for the species is the GenBank assembly GCA_002256795.1. The GC content of the type genome is 62.4 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Novosphingobium vaniditrix sp. nov.

Candidatus Novosphingobium vaniditrix (NL. fem. n. *vaniditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp003171715*. The type genome for the species is the GenBank assembly RS_GCF_003171715.1. The GC content of the type genome is 64.25 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Novosphingobium viginitrix sp. nov.

Candidatus Novosphingobium viginitrix (NL. fem. n. *viginitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp000272475*. The type genome for the species is the GenBank assembly RS_GCF_000272475.1. The GC content of the type genome is 62.71 % and the genome length is 4.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "grapevine crown gall tumor".

Description of *Candidatus* Novosphingobium vinulatica sp. nov.

Candidatus Novosphingobium vinulatica (NL. fem. n. *vinulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingobium sp014200275*. The type genome for the species is the GenBank assembly RS_GCF_012932465.1. The GC content of the type genome is 65.73 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Novosphingopyxis dehinatica sp. nov.

Candidatus Novosphingopyxis dehinatica (NL. fem. n. *dehinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Novosphingopyxis sp002683755*. The type genome for the species is

the GenBank assembly RS_GCF_014334095.1. The GC content of the type genome is 62.81 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Nubecana lucifitia sp. nov.

Candidatus Nubecana lucifitia (NL. fem. n. *lucifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11894 sp012799165*. The type genome for the species is the GenBank assembly GCA_012799165.1. The GC content of the type genome is 49.97 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Nubecana gen. nov.

Candidatus Nubecana (NL. fem. n. *Nubecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11894*. The type species for the genus is *Candidatus* Nubecana lucifitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nubecana recogisca sp. nov.

Candidatus Nubecana recogisca (NL. fem. n. *recogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11894 sp902773665*. The type genome for the species is the GenBank assembly GCA_902790765.1. The GC content of the type genome is 56.46 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Nubecaria excanitica sp. nov.

Candidatus Nubecaria excanitica (NL. fem. n. *excanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKR01 sp009781495*. The type genome for the species is the GenBank assembly GCA_009781495.1. The GC content of the type genome is 54.69 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Nubecaria gen. nov.

Candidatus Nubecaria (NL. fem. n. *Nubecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKR01*. The type species for the genus is *Candidatus* Nubecaria excanitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nubecaria rubigitas sp. nov.

Candidatus Nubecaria rubigitas (NL. fem. n. *rubigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKR01 sp009786315*. The type genome for the species is the GenBank assembly GCA_009786315.1. The GC content of the type genome is 54.31 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Nubecaria xeropibula sp. nov.

Candidatus Nubecaria xeropibula (NL. fem. n. *xeropibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKR01 sp009782175*. The type genome for the species is the GenBank assembly GCA_009782175.1. The GC content of the type genome is 53.01 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Nubecella halucitia sp. nov.

Candidatus Nubecella halucitia (NL. fem. n. *halucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12489 sp003477305*. The type genome for the species is the GenBank assembly GCA_003477305.1. The GC content of the type genome is 57.63 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Nubecella gen. nov.

Candidatus Nubecella (NL. fem. n. *Nubecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12489*. The type species for the genus is *Candidatus* Nubecella halucitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Nubecella maledatica sp. nov.

Candidatus Nubecella maledatica (NL. fem. n. *maledatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12489 sp903844055*. The type genome for the species is the GenBank assembly GCA_903837855.1. The GC content of the type genome is 60.41 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Nubecia desuretta sp. nov.

Candidatus Nubecia desuretta (NL. fem. n. *desuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10146 sp001001925*. The type genome for the species is the GenBank assembly GCA_001001925.1. The GC content of the type genome is 44.96 % and the genome length is 0.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Nubecia gen. nov.

Candidatus Nubecia (NL. fem. n. *Nubecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10146*. The type species for the genus is *Candidatus* Nubecia desuretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubeciaceae.

Description of *Candidatus* Nubeciaceae fam. nov.

Candidatus Nubeciaceae (NL. fem. n. *Nubeciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10146.* The type genus for the taxon is *Candidatus* Nubecia .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Nubecida cenacastra sp. nov.

Candidatus Nubecida cenacastra (NL. fem. n. *cenacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2696645 sp002696645*. The type genome for the species is the GenBank assembly GCA_002706145.1. The GC content of the type genome is 55.17 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Nubecida gen. nov.

Candidatus Nubecida (NL. fem. n. *Nubecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2696645*. The type species for the genus is *Candidatus* Nubecida cenacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2696645*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubecidaceae.

Description of *Candidatus* Nubecidaceae fam. nov.

Candidatus Nubecidaceae (NL. fem. n. *Nubecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2696645.* The type genus for the taxon is *Candidatus* Nubecida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decenellales.

Description of *Candidatus* Nubecida nivomivita sp. nov.

Candidatus Nubecida nivomivita (NL. fem. n. *nivomivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2696645 sp012926505*. The type genome for the species is the GenBank assembly RS_GCF_012926505.1. The GC content of the type genome is 61.08 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Nubecida vilipibra sp. nov.

Candidatus Nubecida vilipibra (NL. fem. n. *vilipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2696645 sp002709955*. The type genome for the species is the GenBank assembly GCA_002337615.1. The GC content of the type genome is 55.97 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Nubecosa arbavicella sp. nov.

Candidatus Nubecosa arbavicella (NL. fem. n. *arbavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10119 sp900299405*. The type genome for the species is the GenBank assembly GCA_900299405.1. The GC content of the type genome is 46.6 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Nubecosa gen. nov.

Candidatus Nubecosa (NL. fem. n. *Nubecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10119*. The type species for the genus is *Candidatus* Nubecosa arbavicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Nubecosa benivitrix sp. nov.

Candidatus Nubecosa benivitrix (NL. fem. n. *benivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10119 sp001002135*. The type genome for the species is the GenBank assembly GCA_003524865.1. The GC content of the type genome is 46.49 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Nubecosa denorivita sp. nov.

Candidatus Nubecosa denorivita (NL. fem. n. *denorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10119 sp001787405*. The type genome for the species is the GenBank assembly GCA_001787395.1. The GC content of the type genome is 38.77 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Nubifaria lenunago sp. nov.

Candidatus Nubifaria lenunago (NL. fem. n. *lenunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED109 sp002720535*. The type genome for the species is the GenBank assembly RS_GCF_902635775.1. The GC content of the type genome is 29.89 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Nubifaria gen. nov.

Candidatus Nubifaria (NL. fem. n. *Nubifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED109*. The type species for the genus is *Candidatus* Nubifaria lenunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifariaceae.

Description of *Candidatus* Nubifariaceae fam. nov.

Candidatus Nubifariaceae (NL. fem. n. *Nubifariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED109.* The type genus for the taxon is *Candidatus* Nubifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nubifariales.

Description of *Candidatus* Nubifariales ord. nov.

Candidatus Nubifariales (NL. fem. n. *Nubifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED109.* The type genus for the taxon is *Candidatus* Nubifaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Nubifaria lubenatio sp. nov.

Candidatus Nubifaria lubenatio (NL. fem. n. *lubenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED109 sp002937655*. The type genome for the species is the GenBank assembly GCA_002937655.1. The GC content of the type genome is 29.26 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Nubifaria sifuniforma sp. nov.

Candidatus Nubifaria sifuniforma (NL. fem. n. *sifuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED109 sp002171375*. The type genome for the species is the GenBank assembly GCA_002705225.1. The GC content of the type genome is 29.4 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Nubifella hexamiforma sp. nov.

Candidatus Nubifella hexamiforma (NL. fem. n. *hexamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NICIL-2 sp011055195*. The type genome for the species is the GenBank assembly GCA_011055195.1. The GC content of the type genome is 56.31 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Nubifella gen. nov.

Candidatus Nubifella (NL. fem. n. *Nubifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NICIL-2*. The type species for the genus is *Candidatus* Nubifella hexamiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NICIL-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifellaceae.

Description of *Candidatus* Nubifellaceae fam. nov.

Candidatus Nubifellaceae (NL. fem. n. *Nubifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NICIL-2.* The type genus for the taxon is *Candidatus* Nubifella .

According to GTDB R06-RS202, this family belongs to the order *Kapabacteriales*.

Description of *Candidatus* Nubifella imbecago sp. nov.

Candidatus Nubifella imbecago (NL. fem. n. *imbecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NICIL-2 sp003695605*. The type genome for the species is the GenBank assembly GCA_003695605.1. The GC content of the type genome is 56.86 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Nubifella mirifitudo sp. nov.

Candidatus Nubifella mirifitudo (NL. fem. n. *mirifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NICIL-2 sp002898675*. The type genome for the species is the GenBank assembly GCA_011051275.1. The GC content of the type genome is 57.14 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Nubifia viginigena sp. nov.

Candidatus Nubifia viginigena (NL. fem. n. *viginigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMUS01 sp903844665*. The type genome for the species is the GenBank assembly GCA_903842095.1. The GC content of the type genome is 58.95 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Nubifia gen. nov.

Candidatus Nubifia (NL. fem. n. *Nubifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMUS01*. The type species for the genus is *Candidatus* Nubifia viginigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nubifida licenousia sp. nov.

Candidatus Nubifida licenousia (NL. fem. n. *licenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11524 sp900769075*. The type genome for the species is the GenBank assembly RS_GCF_900769075.1. The GC content of the type genome is 60.62 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Nubifida gen. nov.

Candidatus Nubifida (NL. fem. n. *Nubifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11524*. The type species for the genus is *Candidatus* Nubifida licenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Subabosaceae.

Description of *Candidatus* Nubifida pimenigena sp. nov.

Candidatus Nubifida pimenigena (NL. fem. n. *pimenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11524 sp000437595*. The type genome for the species is the GenBank assembly GCA_000437595.1. The GC content of the type genome is 58.14 % and the genome length is 2.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Nubifosa desoriforma sp. nov.

Candidatus Nubifosa desoriforma (NL. fem. n. *desoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2162 sp002335405*. The type genome for the species is the GenBank assembly GCA_002327645.1. The GC content of the type genome is 48.44 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Nubifosa gen. nov.

Candidatus Nubifosa (NL. fem. n. *Nubifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2162*. The type species for the genus is *Candidatus* Nubifosa desoriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2162*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifosaceae.

Description of *Candidatus* Nubifosaceae fam. nov.

Candidatus Nubifosaceae (NL. fem. n. *Nubifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2162.* The type genus for the taxon is *Candidatus* Nubifosa .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Nubifula delebatio sp. nov.

Candidatus Nubifula delebatio (NL. fem. n. *delebatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4465 sp002470835*. The type genome for the species is the GenBank assembly GCA_002470835.1. The GC content of the type genome is 38.67 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Nubifula gen. nov.

Candidatus Nubifula (NL. fem. n. *Nubifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4465*. The type species for the genus is *Candidatus* Nubifula delebatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nubifula didaciforma sp. nov.

Candidatus Nubifula didaciforma (NL. fem. n. *didaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4465 sp002292365*. The type genome for the species is the GenBank assembly GCA_002292365.1. The GC content of the type genome is 37.87 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Nubifula facunibra sp. nov.

Candidatus Nubifula facunibra (NL. fem. n. *facunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4465 sp013204595*. The type genome for the species is the GenBank assembly GCA_013204595.1. The GC content of the type genome is 38.8 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Nubifula sitelilega sp. nov.

Candidatus Nubifula sitelilega (NL. fem. n. *sitelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4465 sp002691385*. The type genome for the species is the GenBank assembly GCA_002691385.1. The GC content of the type genome is 36.24 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Nubifula televessa sp. nov.

Candidatus Nubifula televessa (NL. fem. n. *televessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4465 sp902605755*. The type genome for the species is the GenBank assembly GCA_902605755.1. The GC content of the type genome is 34.9 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Nubigana laxititrix sp. nov.

Candidatus Nubigana laxititrix (NL. fem. n. *laxititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA01 sp001314545*. The type genome for the species is the GenBank assembly GCA_001314545.1. The GC content of the type genome is 51.72 % and the genome length is 3.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-A from microbial mat sample; contains cyanobacterium Phormidesmis priestleyi ANA and associated heterotrophs".

Description of *Candidatus* Nubigana gen. nov.

Candidatus Nubigana (NL. fem. n. *Nubigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HLUCCA01*. The type species for the genus is *Candidatus* Nubigana laxititrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HLUCCA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubiganaceae.

Description of *Candidatus* Nubiganaceae fam. nov.

Candidatus Nubiganaceae (NL. fem. n. *Nubiganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HLUCCA01.* The type genus for the taxon is *Candidatus* Nubigana .

According to GTDB R06-RS202, this family belongs to the order *Balneolales*.

Description of *Candidatus* Nubigaria intabax sp. nov.

Candidatus Nubigaria intabax (NL. fem. n. *intabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCKK01 sp004124475*. The type genome for the species is the GenBank assembly RS_GCF_004124475.1. The GC content of the type genome is 40.77 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Nubigaria gen. nov.

Candidatus Nubigaria (NL. fem. n. *Nubigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCKK01*. The type species for the genus is *Candidatus* Nubigaria intabax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCKK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigariaceae.

Description of *Candidatus* Nubigariaceae fam. nov.

Candidatus Nubigariaceae (NL. fem. n. *Nubigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCKK01.* The type genus for the taxon is *Candidatus* Nubigaria .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Nubigella cetarisca sp. nov.

Candidatus Nubigella cetarisca (NL. fem. n. *cetarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED8 sp002690705*. The type genome for the species is the GenBank assembly GCA_002690705.1. The GC content of the type genome is 45.99 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Nubigella gen. nov.

Candidatus Nubigella (NL. fem. n. *Nubigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED8*. The type species for the genus is *Candidatus* Nubigella cetarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Nubigella laculatica sp. nov.

Candidatus Nubigella laculatica (NL. fem. n. *laculatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED8 sp002721825*. The type genome for the species is the GenBank assembly GCA_002721825.1. The GC content of the type genome is 43.33 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Nubigia cicaritura sp. nov.

Candidatus Nubigia cicaritura (NL. fem. n. *cicaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R-RK-3 sp002198715*. The type genome for the species is the GenBank assembly RS_GCF_002198685.1. The GC content of the type genome is 64.98 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Nubigia gen. nov.

Candidatus Nubigia (NL. fem. n. *Nubigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *R-RK-3*. The type species for the genus is *Candidatus* Nubigia cicaritura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nubigula fetutitica sp. nov.

Candidatus Nubigula fetutitica (NL. fem. n. *fetutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-49-10 sp001771275*. The type genome for the species is the GenBank assembly GCA_001772265.1. The GC content of the type genome is 48.73 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Nubigula gen. nov.

Candidatus Nubigula (NL. fem. n. *Nubigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-49-10*. The type species for the genus is *Candidatus* Nubigula fetutitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10110*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifosaceae.

Description of *Candidatus* Nucifana anapliforma sp. nov.

Candidatus Nucifana anapliforma (NL. fem. n. *anapliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2918 sp902783615*. The type genome for the species is the GenBank assembly GCA_902783615.1. The GC content of the type genome is 47.6 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Nucifana gen. nov.

Candidatus Nucifana (NL. fem. n. *Nucifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2918*. The type species for the genus is *Candidatus* Nucifana anapliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nucifana butubitica sp. nov.

Candidatus Nucifana butubitica (NL. fem. n. *butubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2918 sp902779085*. The type genome for the species is the GenBank assembly GCA_902779085.1. The GC content of the type genome is 43.48 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Nucifana fetulimonia sp. nov.

Candidatus Nucifana fetulimonia (NL. fem. n. *fetulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2918 sp002349865*. The type genome for the species is the GenBank assembly GCA_002349865.1. The GC content of the type genome is 43.65 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Nucifana fumifitura sp. nov.

Candidatus Nucifana fumifitura (NL. fem. n. *fumifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2918 sp900313715*. The type genome for the species is the GenBank assembly GCA_900313715.1. The GC content of the type genome is 44.15 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Nucifaria ablacigena sp. nov.

Candidatus Nucifaria ablacigena (NL. fem. n. *ablacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10566 sp012837565*. The type genome for the species is the

GenBank assembly GCA_012837565.1. The GC content of the type genome is 33.97 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Nucifaria gen. nov.

Candidatus Nucifaria (NL. fem. n. *Nucifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10566*. The type species for the genus is *Candidatus* Nucifaria ablacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Nucifaria futatousia sp. nov.

Candidatus Nucifaria futatousia (NL. fem. n. *futatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10566 sp002399025*. The type genome for the species is the GenBank assembly GCA_002408835.1. The GC content of the type genome is 32.49 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Nucifaria nefaretta sp. nov.

Candidatus Nucifaria nefaretta (NL. fem. n. *nefaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10566 sp002407855*. The type genome for the species is the GenBank assembly GCA_002424235.1. The GC content of the type genome is 32.82 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Nucifaria nicotitica sp. nov.

Candidatus Nucifaria nicotitica (NL. fem. n. *nicotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10566 sp002399565*. The type genome for the species is the GenBank assembly GCA_009929725.1. The GC content of the type genome is 31.59 %

and the genome length is 2.41 Mbp.

Description of *Candidatus* Nucifaria peracax sp. nov.

Candidatus Nucifaria peracax (NL. fem. n. *peracax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10566 sp002423895*. The type genome for the species is the GenBank assembly GCA_002423895.1. The GC content of the type genome is 30.75 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Nucifella adambugo sp. nov.

Candidatus Nucifella adambugo (NL. fem. n. *adambugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp013298845*. The type genome for the species is the GenBank assembly GCA_013298845.1. The GC content of the type genome is 48.18 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Nucifella gen. nov.

Candidatus Nucifella (NL. fem. n. *Nucifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M3007*. The type species for the genus is *Candidatus* Nucifella adambugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nucifella defaligena sp. nov.

Candidatus Nucifella defaligena (NL. fem. n. *defaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp903905445*. The type genome for the species is the GenBank assembly GCA_903905445.1. The GC content of the type genome is 46.26 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Nucifella documimonia sp. nov.

Candidatus Nucifella documimonia (NL. fem. n. *documimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp903933805*. The type genome for the species is the GenBank assembly GCA_903933805.1. The GC content of the type genome is 47.88 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Nucifella favilifica sp. nov.

Candidatus Nucifella favilifica (NL. fem. n. *favilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp011331955*. The type genome for the species is the GenBank assembly GCA_011331955.1. The GC content of the type genome is 51.27 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Nucifella gerunago sp. nov.

Candidatus Nucifella gerunago (NL. fem. n. *gerunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp011368025*. The type genome for the species is the GenBank assembly GCA_011368025.1. The GC content of the type genome is 54.93 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Nucifella luticilega sp. nov.

Candidatus Nucifella luticilega (NL. fem. n. *luticilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp903836265*. The type genome for the species is the GenBank assembly GCA_903932335.1. The GC content of the type genome is 51.07 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Nucifella monacitudo sp. nov.

Candidatus Nucifella monacitudo (NL. fem. n. *monacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp006226345*. The type genome for the species is the GenBank assembly GCA_006226345.1. The GC content of the type genome is 52.35 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Nucifella semidisca sp. nov.

Candidatus Nucifella semidisca (NL. fem. n. *semidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp903925535*. The type genome for the species is the GenBank assembly GCA_903925535.1. The GC content of the type genome is 51.09 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Nucifella triclax sp. nov.

Candidatus Nucifella triclax (NL. fem. n. *triclax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M3007 sp014379065*. The type genome for the species is the GenBank assembly GCA_014379065.1. The GC content of the type genome is 48.78 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Nucifia deculivita sp. nov.

Candidatus Nucifia deculivita (NL. fem. n. *deculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-77 sp011053895*. The type genome for the species is the GenBank assembly GCA_011047785.1. The GC content of the type genome is 64.57 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Nucifia gen. nov.

Candidatus Nucifia (NL. fem. n. *Nucifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-77*. The type species for the genus is *Candidatus* Nucifia deculivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUEL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dececiaceae.

Description of *Candidatus* Nucifia ficulitica sp. nov.

Candidatus Nucifia ficulitica (NL. fem. n. *ficulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-77 sp011362935*. The type genome for the species is the GenBank assembly GCA_011362935.1. The GC content of the type genome is 64.69 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Nucifia incoritura sp. nov.

Candidatus Nucifia incoritura (NL. fem. n. *incoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-77 sp014360895*. The type genome for the species is the GenBank assembly GCA_014360895.1. The GC content of the type genome is 64.64 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Nucifida insemifica sp. nov.

Candidatus Nucifida insemifica (NL. fem. n. *insemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3382 sp002358965*. The type genome for the species is the GenBank assembly GCA_002358965.1. The GC content of the type genome is 51.42 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Nucifida gen. nov.

Candidatus Nucifida (NL. fem. n. *Nucifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3382*. The type species for the genus is *Candidatus* Nucifida insemifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA932. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Nucifida recumifica sp. nov.

Candidatus Nucifida recumifica (NL. fem. n. *recumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3382 sp002159555*. The type genome for the species is the GenBank assembly RS_GCF_002159555.1. The GC content of the type genome is 49.06 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Nucifosa nefanitudo sp. nov.

Candidatus Nucifosa nefanitudo (NL. fem. n. *nefanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1543 sp002779605*. The type genome for the species is the GenBank assembly GCA_002779605.1. The GC content of the type genome is 58.76 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Nucifosa gen. nov.

Candidatus Nucifosa (NL. fem. n. *Nucifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1543*. The type species for the genus is *Candidatus* Nucifosa nefanitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nucifosa tegimax sp. nov.

Candidatus Nucifosa tegimax (NL. fem. n. *tegimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1543 sp001871195*. The type genome for the species is the GenBank assembly GCA_002774215.1. The GC content of the type genome is 55.36 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Nucifula volubimonas sp. nov.

Candidatus Nucifula volubimonas (NL. fem. n. *volubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-45-9 sp001793855*. The type genome for the species is the GenBank assembly GCA_001793855.1. The GC content of the type genome is 44.75 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Nucifula gen. nov.

Candidatus Nucifula (NL. fem. n. *Nucifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-45-9*. The type species for the genus is *Candidatus* Nucifula volubimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-45-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nucifulaceae.

Description of *Candidatus* Nucifulaceae fam. nov.

Candidatus Nucifulaceae (NL. fem. n. *Nucifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-45-9.* The type genus for the taxon is *Candidatus* Nucifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Nugacana benevousia sp. nov.

Candidatus Nugacana benevousia (NL. fem. n. *benevousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPP01 sp011046605*. The type genome for the species is the GenBank assembly GCA_011046605.1. The GC content of the type genome is 54.25 %

and the genome length is 2.52 Mbp.

Description of *Candidatus* Nugacana gen. nov.

Candidatus Nugacana (NL. fem. n. *Nugacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPP01*. The type species for the genus is *Candidatus* Nugacana benevousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugacanaceae.

Description of *Candidatus* Nugacanaceae fam. nov.

Candidatus Nugacanaceae (NL. fem. n. *Nugacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSPP01*. The type genus for the taxon is *Candidatus* Nugacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugacanales.

Description of *Candidatus* Nugacanales ord. nov.

Candidatus Nugacanales (NL. fem. n. *Nugacanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSPP01*. The type genus for the taxon is *Candidatus* Nugacana .

According to the original version of GTDB R06-RS202, this family belongs to the class *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripellae.

Description of *Candidatus* Nugacaria conarifica sp. nov.

Candidatus Nugacaria conarifica (NL. fem. n. *conarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-84 sp003553485*. The type genome for the species is the

GenBank assembly GCA_003553485.1. The GC content of the type genome is 39.98 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Nugacaria gen. nov.

Candidatus Nugacaria (NL. fem. n. *Nugacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-84*. The type species for the genus is *Candidatus* Nugacaria conarifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nugacaria lenocatica sp. nov.

Candidatus Nugacaria lenocatica (NL. fem. n. *lenocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-84 sp003554225*. The type genome for the species is the GenBank assembly GCA_003554225.1. The GC content of the type genome is 46.32 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Nugacaria musulatica sp. nov.

Candidatus Nugacaria musulatica (NL. fem. n. *musulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-84 sp007134885*. The type genome for the species is the GenBank assembly GCA_007134885.1. The GC content of the type genome is 44.64 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Nugacaria proscousia sp. nov.

Candidatus Nugacaria proscousia (NL. fem. n. *proscousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-84 sp003554685*. The type genome for the species is the GenBank assembly GCA_003554685.1. The GC content of the type genome is 44.61 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Nugacella delucilenta sp. nov.

Candidatus Nugacella delucilenta (NL. fem. n. *delucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHMH01 sp003258795*. The type genome for the species is the GenBank assembly RS_GCF_900768495.1. The GC content of the type genome is 32.17 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Nugacella gen. nov.

Candidatus Nugacella (NL. fem. n. *Nugacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHMH01*. The type species for the genus is *Candidatus* Nugacella delucilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nugacia cilicimonas sp. nov.

Candidatus Nugacia cilicimonas (NL. fem. n. *cilicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GUT77 sp001462255*. The type genome for the species is the GenBank assembly GCA_001462255.1. The GC content of the type genome is 52.45 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "termite gut".

Description of *Candidatus* Nugacia gen. nov.

Candidatus Nugacia (NL. fem. n. *Nugacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GUT77*. The type species for the genus is *Candidatus* Nugacia cilicimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nugacia futaticula sp. nov.

Candidatus Nugacia futaticula (NL. fem. n. *futaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GUT77 sp009786415*. The type genome for the species is the GenBank assembly GCA_009786415.1. The GC content of the type genome is 54.88 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Nugacia lanugitoga sp. nov.

Candidatus Nugacia lanugitoga (NL. fem. n. *lanugitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GUT77 sp009786575*. The type genome for the species is the GenBank assembly GCA_009786575.1. The GC content of the type genome is 55.53 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Nugacosa inredetta sp. nov.

Candidatus Nugacosa inredetta (NL. fem. n. *inredetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUZ01 sp013698395*. The type genome for the species is the GenBank assembly GCA_013698395.1. The GC content of the type genome is 69.86 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Nugacosa gen. nov.

Candidatus Nugacosa (NL. fem. n. *Nugacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCUZ01*. The type species for the genus is *Candidatus* Nugacosa inredetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCUZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugacosaceae.

Description of *Candidatus* Nugacosaceae fam. nov.

Candidatus Nugacosaceae (NL. fem. n. *Nugacosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCUZ01*. The type genus for the taxon is *Candidatus* Nugacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACCUZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugacosales.

Description of *Candidatus* Nugacosales ord. nov.

Candidatus Nugacosales (NL. fem. n. *Nugacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCUZ01*. The type genus for the taxon is *Candidatus* Nugacosa .

According to the GTDB R06-RS202, this order belongs to the class *Actinomycetia*.

Description of *Candidatus* Nugacula almititica sp. nov.

Candidatus Nugacula almititica (NL. fem. n. *almititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12068 sp000992325*. The type genome for the species is the GenBank assembly GCA_000992325.1. The GC content of the type genome is 37.33 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Nugacula gen. nov.

Candidatus Nugacula (NL. fem. n. *Nugacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12068*. The type species for the genus is *Candidatus* Nugacula almititica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Nugacula anarrousia sp. nov.

Candidatus Nugacula anarrousia (NL. fem. n. *anarrousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12068 sp013336225*. The type genome for the species is the GenBank assembly GCA_013336225.1. The GC content of the type genome is 39.31 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Nugacula cerucugo sp. nov.

Candidatus Nugacula cerucugo (NL. fem. n. *cerucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12068 sp000991645*. The type genome for the species is the GenBank assembly GCA_000991645.1. The GC content of the type genome is 36.06 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Nugacula culibitas sp. nov.

Candidatus Nugacula culibitas (NL. fem. n. *culibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12068 sp000991245*. The type genome for the species is the GenBank assembly GCA_000991525.1. The GC content of the type genome is 36.42 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Nugacula vicatilenta sp. nov.

Candidatus Nugacula vicatilenta (NL. fem. n. *vicatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12068 sp003507445*. The type genome for the species is the GenBank assembly GCA_003507445.1. The GC content of the type genome is 36.97 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Nugigana divoratio sp. nov.

Candidatus Nugigana divoratio (NL. fem. n. *divoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-50-23 sp001774555*. The type genome for the species is the GenBank assembly GCA_001774555.1. The GC content of the type genome is 49.85 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Nugigana gen. nov.

Candidatus Nugigana (NL. fem. n. *Nugigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-50-23*. The type species for the genus is *Candidatus* Nugigana divoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFAQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabulaceae.

Description of *Candidatus* Nugigaria viragimonia sp. nov.

Candidatus Nugigaria viragimonia (NL. fem. n. *viragimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B7-G16 sp003644405*. The type genome for the species is the GenBank assembly GCA_003644405.1. The GC content of the type genome is 34.9 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Nugigaria gen. nov.

Candidatus Nugigaria (NL. fem. n. *Nugigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B7-G16*. The type species for the genus is *Candidatus* Nugigaria viragimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homoliaceae.

Description of *Candidatus* Nugigella mimogilega sp. nov.

Candidatus Nugigella mimogilega (NL. fem. n. *mimogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHZ01 sp012744235*. The type genome for the species is the GenBank assembly GCA_012744235.1. The GC content of the type genome is 43.96 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Nugigella gen. nov.

Candidatus Nugigella (NL. fem. n. *Nugigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHZ01*. The type species for the genus is *Candidatus* Nugigella mimogilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYHZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigellaceae.

Description of *Candidatus* Nugigellaceae fam. nov.

Candidatus Nugigellaceae (NL. fem. n. *Nugigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYHZ01.* The type genus for the taxon is *Candidatus* Nugigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYHZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugigellales.

Description of *Candidatus* Nugigellales ord. nov.

Candidatus Nugigellales (NL. fem. n. *Nugigellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYHZ01.* The type genus for the taxon is *Candidatus* Nugigella .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Nugigia salubastra sp. nov.

Candidatus Nugigia salubastra (NL. fem. n. *salubastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCT01 sp002070185*. The type genome for the species is the GenBank assembly GCA_002070185.1. The GC content of the type genome is 48.83 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Nugigia gen. nov.

Candidatus Nugigia (NL. fem. n. *Nugigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCT01*. The type species for the genus is *Candidatus* Nugigia salubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWCT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigiaceae.

Description of *Candidatus* Nugigiaceae fam. nov.

Candidatus Nugigiaceae (NL. fem. n. *Nugigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWCT01.* The type genus for the taxon is *Candidatus* Nugigia .

According to the original version of GTDB R06-RS202, this family belongs to the order *MWCT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugigiales.

Description of *Candidatus* Nugigiales ord. nov.

Candidatus Nugigiales (NL. fem. n. *Nugigiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWCT01.* The type genus for the taxon is *Candidatus* Nugigia .

According to the GTDB R06-RS202, this order belongs to the class *Sumerlaeia*.

Description of *Candidatus* Nugigida bonitimonia sp. nov.

Candidatus Nugigida bonitimonia (NL. fem. n. *bonitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6955 sp002716405*. The type genome for the species is the GenBank assembly GCA_002716405.1. The GC content of the type genome is 38.32 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Nugigida gen. nov.

Candidatus Nugigida (NL. fem. n. *Nugigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6955*. The type species for the genus is *Candidatus* Nugigida bonitimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Nugigida desucicella sp. nov.

Candidatus Nugigida desucicella (NL. fem. n. *desucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6955 sp002707835*. The type genome for the species is the GenBank assembly GCA_002707835.1. The GC content of the type genome is 38.58 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Nugigosa monopax sp. nov.

Candidatus Nugigosa monopax (NL. fem. n. *monopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABMKH01 sp902386935*. The type genome for the species is the GenBank assembly GCA_900169515.1. The GC content of the type genome is 33.19 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Nugigosa gen. nov.

Candidatus Nugigosa (NL. fem. n. *Nugigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABMKH01*. The type species for the genus is *Candidatus* Nugigosa monopax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nugigula dupunitoga sp. nov.

Candidatus Nugigula dupunitoga (NL. fem. n. *dupunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-60-25 sp001791275*. The type genome for the species is the GenBank assembly GCA_001791145.1. The GC content of the type genome is 59.85 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Nugigula gen. nov.

Candidatus Nugigula (NL. fem. n. *Nugigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-60-25*. The type species for the genus is *Candidatus* Nugigula dupunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Nugigulaceae fam. nov.

Candidatus Nugigulaceae (NL. fem. n. *Nugigulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-60-25.* The type genus for the taxon is *Candidatus* Nugigula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Nugigula effulibula sp. nov.

Candidatus Nugigula effulibula (NL. fem. n. *effulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-60-25 sp003576745*. The type genome for the species is the GenBank assembly GCA_003576745.1. The GC content of the type genome is 54.64 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Nugivana vanidigena sp. nov.

Candidatus Nugivana vanidigena (NL. fem. n. *vanidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9934 sp003453595*. The type genome for the species is the GenBank assembly GCA_001791655.1. The GC content of the type genome is 40.77 % and the genome length is 0.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Nugivana gen. nov.

Candidatus Nugivana (NL. fem. n. *Nugivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9934*. The type species for the genus is *Candidatus* Nugivana vanidigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9934*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivanaceae.

Description of *Candidatus* Nugivanaceae fam. nov.

Candidatus Nugivanaceae (NL. fem. n. *Nugivanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9934.* The type genus for the taxon is *Candidatus* Nugivana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Nugivaria negotilenta sp. nov.

Candidatus Nugivaria negotilenta (NL. fem. n. *negotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA826 sp002718095*. The type genome for the species is the GenBank assembly GCA_002707945.1. The GC content of the type genome is 34.78 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Nugivaria gen. nov.

Candidatus Nugivaria (NL. fem. n. *Nugivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA826*. The type species for the genus is *Candidatus* Nugivaria negotilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Nugivariaceae fam. nov.

Candidatus Nugivariaceae (NL. fem. n. *Nugivariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA826.* The type genus for the taxon is *Candidatus* Nugivaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Nugivella citivimonas sp. nov.

Candidatus Nugivella citivimonas (NL. fem. n. *citivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1558 sp002785295*. The type genome for the species is the GenBank assembly GCA_002322975.1. The GC content of the type genome is 36.67 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Nugivella gen. nov.

Candidatus Nugivella (NL. fem. n. *Nugivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1558*. The type species for the genus is *Candidatus* Nugivella citivimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivellaceae.

Description of *Candidatus* Nugivellaceae fam. nov.

Candidatus Nugivellaceae (NL. fem. n. *Nugivellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1558.* The type genus for the taxon is *Candidatus* Nugivella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugivellales.

Description of *Candidatus* Nugivellales ord. nov.

Candidatus Nugivellales (NL. fem. n. *Nugivellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1558.* The type genus for the taxon is *Candidatus* Nugivella .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Nugivia adlicitura sp. nov.

Candidatus Nugivia adlicitura (NL. fem. n. *adlicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WMHbin7 sp902725215*. The type genome for the species is the GenBank assembly RS_GCF_902725215.1. The GC content of the type genome is 59.52

% and the genome length is 3.57 Mbp.

Description of *Candidatus* Nugivia gen. nov.

Candidatus Nugivia (NL. fem. n. *Nugivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WMHbin7*. The type species for the genus is *Candidatus* Nugivia adlicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WMHbin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugiviaceae.

Description of *Candidatus* Nugiviaceae fam. nov.

Candidatus Nugiviaceae (NL. fem. n. *Nugiviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WMHbin7.* The type genus for the taxon is *Candidatus* Nugivia .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Nugivia octobousia sp. nov.

Candidatus Nugivia octobousia (NL. fem. n. *octobousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WMHbin7 sp002753155*. The type genome for the species is the GenBank assembly GCA_002753155.1. The GC content of the type genome is 59.84 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Nugivida vinulisca sp. nov.

Candidatus Nugivida vinulisca (NL. fem. n. *vinulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU014 sp900016865*. The type genome for the species is the GenBank assembly GCA_002386085.1. The GC content of the type genome is 53.56 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Nugivida gen. nov.

Candidatus Nugivida (NL. fem. n. *Nugivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU014*. The type species for the genus is *Candidatus* Nugivida vinulisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU014*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugividaceae.

Description of *Candidatus* Nugividaceae fam. nov.

Candidatus Nugividaceae (NL. fem. n. *Nugividaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU014.* The type genus for the taxon is *Candidatus* Nugivida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU014*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugividales.

Description of *Candidatus* Nugividales ord. nov.

Candidatus Nugividales (NL. fem. n. *Nugividales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU014.* The type genus for the taxon is *Candidatus* Nugivida .

According to the original version of GTDB R06-RS202, this family belongs to the class *SHA-98*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Taxilidae.

Description of *Candidatus* Nugivosa adcubago sp. nov.

Candidatus Nugivosa adcubago (NL. fem. n. *adcubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp013215825*. The type genome for the species is the GenBank assembly GCA_013215825.1. The GC content of the type genome is 39.96 %

and the genome length is 2.35 Mbp.

Description of *Candidatus* Nugivosa gen. nov.

Candidatus Nugivosa (NL. fem. n. *Nugivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002733105*. The type species for the genus is *Candidatus* Nugivosa adcubago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nugivosa antiritudo sp. nov.

Candidatus Nugivosa antiritudo (NL. fem. n. *antiritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp002733715*. The type genome for the species is the GenBank assembly GCA_002733715.1. The GC content of the type genome is 40.23 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Nugivosa capabisca sp. nov.

Candidatus Nugivosa capabisca (NL. fem. n. *capabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp003645385*. The type genome for the species is the GenBank assembly GCA_003645385.1. The GC content of the type genome is 40.2 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Nugivosa denecibra sp. nov.

Candidatus Nugivosa denecibra (NL. fem. n. *denecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp011053005*. The type genome for the species is the GenBank assembly GCA_011053005.1. The GC content of the type genome is 40.11 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Nugivosa dicibifica sp. nov.

Candidatus Nugivosa dicibifica (NL. fem. n. *dicibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp003645305*. The type genome for the species is the GenBank assembly GCA_003645305.1. The GC content of the type genome is 41.83 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Nugivosa expopatica sp. nov.

Candidatus Nugivosa expopatica (NL. fem. n. *expopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp002733335*. The type genome for the species is the GenBank assembly GCA_002733335.1. The GC content of the type genome is 40.17 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Nugivosa faviledo sp. nov.

Candidatus Nugivosa faviledo (NL. fem. n. *faviledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp002733105*. The type genome for the species is the GenBank assembly GCA_002733105.1. The GC content of the type genome is 40.04 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Nugivosa lavabitio sp. nov.

Candidatus Nugivosa lavabitio (NL. fem. n. *lavabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp013215775*. The type genome for the species is the GenBank assembly GCA_013215775.1. The GC content of the type genome is 40.52 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Nugivosa megaletta sp. nov.

Candidatus Nugivosa megaletta (NL. fem. n. *megaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp002402245*. The type genome for the species is the GenBank assembly GCA_002402245.1. The GC content of the type genome is 39.91 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Nugivosa ridibibula sp. nov.

Candidatus Nugivosa ridibibula (NL. fem. n. *ridibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp013139345*. The type genome for the species is the GenBank assembly GCA_013139345.1. The GC content of the type genome is 40.13 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Nugivosa susicitoga sp. nov.

Candidatus Nugivosa susicitoga (NL. fem. n. *susicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733105 sp002733505*. The type genome for the species is the GenBank assembly GCA_002733505.1. The GC content of the type genome is 41.07 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Nugivula rubicitrix sp. nov.

Candidatus Nugivula rubicitrix (NL. fem. n. *rubicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABVY01 sp011777135*. The type genome for the species is the GenBank assembly GCA_011777135.1. The GC content of the type genome is 46.89 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Nugivula gen. nov.

Candidatus Nugivula (NL. fem. n. *Nugivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABVY01*. The type species for the genus is *Candidatus* Nugivula rubicitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABVY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivulaceae.

Description of *Candidatus* Nugivulaceae fam. nov.

Candidatus Nugivulaceae (NL. fem. n. *Nugivulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABVY01*. The type genus for the taxon is *Candidatus* Nugivula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIYYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Perexidales.

Description of *Candidatus* Nugivula vitifax sp. nov.

Candidatus Nugivula vitifax (NL. fem. n. *vitifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABVY01 sp011056555*. The type genome for the species is the GenBank assembly GCA_011056555.1. The GC content of the type genome is 48.62 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Nutabana ensigibula sp. nov.

Candidatus Nutabana ensigibula (NL. fem. n. *ensigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1370 sp009774615*. The type genome for the species is the GenBank assembly GCA_009774615.1. The GC content of the type genome is 44.8 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Nutabana gen. nov.

Candidatus Nutabana (NL. fem. n. *Nutabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1370*. The type species for the genus is *Candidatus* Nutabana ensigibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nutabana mirabiforma sp. nov.

Candidatus Nutabana mirabiforma (NL. fem. n. *mirabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1370 sp900551135*. The type genome for the species is the GenBank assembly GCA_900551135.1. The GC content of the type genome is 44.69 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Nutabana sanabatio sp. nov.

Candidatus Nutabana sanabatio (NL. fem. n. *sanabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1370 sp900542035*. The type genome for the species is the GenBank assembly GCA_900542035.1. The GC content of the type genome is 44.92 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Nutabaria utrolitas sp. nov.

Candidatus Nutabaria utrolitas (NL. fem. n. *utrolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W111 sp011191985*. The type genome for the species is the GenBank assembly GCA_011191985.1. The GC content of the type genome is 53.47 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Nutabaria gen. nov.

Candidatus Nutabaria (NL. fem. n. *Nutabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W111*. The type species for the genus is *Candidatus* Nutabaria utrolitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *W111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nutabariaceae.

Description of *Candidatus* Nutabariaceae fam. nov.

Candidatus Nutabariaceae (NL. fem. n. *Nutabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *W111*. The type genus for the taxon is *Candidatus* Nutabaria .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Nutabella cobalimonia sp. nov.

Candidatus Nutabella cobalimonia (NL. fem. n. *cobalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABZFP01 sp014237395*. The type genome for the species is the GenBank assembly GCA_014237395.1. The GC content of the type genome is 56.0 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Nutabella gen. nov.

Candidatus Nutabella (NL. fem. n. *Nutabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABZFP01*. The type species for the genus is *Candidatus* Nutabella cobalimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5852*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forabidaceae.

Description of *Candidatus* Nutabia bicubousia sp. nov.

Candidatus Nutabia bicubousia (NL. fem. n. *bicubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-41-12 sp002787075*. The type genome for the species is the GenBank assembly GCA_001872435.1. The GC content of the type genome is 40.97 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Nutabia gen. nov.

Candidatus Nutabia (NL. fem. n. *Nutabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-41-12*. The type species for the genus is *Candidatus* Nutabia bicubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacosaceae.

Description of *Candidatus* Nutabida appacousia sp. nov.

Candidatus Nutabida appacousia (NL. fem. n. *appacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903847325*. The type genome for the species is the GenBank assembly GCA_903847325.1. The GC content of the type genome is 51.04 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Nutabida gen. nov.

Candidatus Nutabida (NL. fem. n. *Nutabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBD-18*. The type species for the genus is *Candidatus* Nutabida appacousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nutabida ascalastra sp. nov.

Candidatus Nutabida ascalastra (NL. fem. n. *ascalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp013205565*. The type genome for the species is the GenBank assembly GCA_013205565.1. The GC content of the type genome is 53.03 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Nutabida debucugo sp. nov.

Candidatus Nutabida debucugo (NL. fem. n. *debucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903821335*. The type genome for the species is the GenBank assembly GCA_903903435.1. The GC content of the type genome is 58.25 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Nutabida doxolitica sp. nov.

Candidatus Nutabida doxolitica (NL. fem. n. *doxolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp003507735*. The type genome for the species is the GenBank assembly RS_GCF_010499255.1. The GC content of the type genome is 50.86 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Nutabida ensigimonas sp. nov.

Candidatus Nutabida ensigimonas (NL. fem. n. *ensigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903903735*. The type genome for the species is the GenBank assembly GCA_903903735.1. The GC content of the type genome is 53.14 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Nutabida insufilenta sp. nov.

Candidatus Nutabida insufilenta (NL. fem. n. *insufilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903929925*. The type genome for the species is the GenBank assembly GCA_903929925.1. The GC content of the type genome is 53.09 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Nutabida lupanousia sp. nov.

Candidatus Nutabida lupanousia (NL. fem. n. *lupanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903932425*. The type genome for the species is the GenBank assembly GCA_903932425.1. The GC content of the type genome is 52.67 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Nutabida lutuliforma sp. nov.

Candidatus Nutabida lutuliforma (NL. fem. n. *lutuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp003003055*. The type genome for the species is the GenBank assembly GCA_903884595.1. The GC content of the type genome is 51.04 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Nutabida maxumitio sp. nov.

Candidatus Nutabida maxumitio (NL. fem. n. *maxumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp002292845*. The type genome for the species is the GenBank assembly GCA_002292845.1. The GC content of the type genome is 52.27 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Nutabida peridicula sp. nov.

Candidatus Nutabida peridicula (NL. fem. n. *peridicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903865015*. The type genome for the species is the GenBank assembly GCA_903865015.1. The GC content of the type genome is 50.83 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Nutabida periditoga sp. nov.

Candidatus Nutabida periditoga (NL. fem. n. *periditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903958565*. The type genome for the species is the GenBank assembly GCA_903953995.1. The GC content of the type genome is 53.11 %

and the genome length is 3.25 Mbp.

Description of *Candidatus* Nutabida ranunentia sp. nov.

Candidatus Nutabida ranunentia (NL. fem. n. *ranunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903894155*. The type genome for the species is the GenBank assembly GCA_903911485.1. The GC content of the type genome is 62.07 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Nutabida saxopicella sp. nov.

Candidatus Nutabida saxopicella (NL. fem. n. *saxopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp903924715*. The type genome for the species is the GenBank assembly GCA_903924715.1. The GC content of the type genome is 51.79 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Nutabida vehemisca sp. nov.

Candidatus Nutabida vehemisca (NL. fem. n. *vehemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBD-18 sp002737415*. The type genome for the species is the GenBank assembly GCA_002737415.1. The GC content of the type genome is 53.08 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Nutabosa nicomimonas sp. nov.

Candidatus Nutabosa nicomimonas (NL. fem. n. *nicomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWMF01 sp903913785*. The type genome for the species is the GenBank assembly GCA_903913785.1. The GC content of the type genome is 43.57 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Nutabosa gen. nov.

Candidatus Nutabosa (NL. fem. n. *Nutabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWMF01*. The type species for the genus is *Candidatus* Nutabosa nicomimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6821*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Retecariaceae.

Description of *Candidatus* Nutabosa roraritas sp. nov.

Candidatus Nutabosa roraritas (NL. fem. n. *roraritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWMF01 sp008932965*. The type genome for the species is the GenBank assembly GCA_008932965.1. The GC content of the type genome is 42.77 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Nutabula nutabicella sp. nov.

Candidatus Nutabula nutabicella (NL. fem. n. *nutabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002779425 sp002779425*. The type genome for the species is the GenBank assembly GCA_002790255.1. The GC content of the type genome is 32.87 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Nutabula gen. nov.

Candidatus Nutabula (NL. fem. n. *Nutabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002779425*. The type species for the genus is *Candidatus* Nutabula nutabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Nutamana adhinugo sp. nov.

Candidatus Nutamana adhinugo (NL. fem. n. *adhinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1361 sp002070905*. The type genome for the species is the GenBank assembly GCA_002070905.1. The GC content of the type genome is 37.06 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Nutamana gen. nov.

Candidatus Nutamana (NL. fem. n. *Nutamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1361*. The type species for the genus is *Candidatus* Nutamana adhinugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Nutamana defunisca sp. nov.

Candidatus Nutamana defunisca (NL. fem. n. *defunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1361 sp002306335*. The type genome for the species is the GenBank assembly GCA_002071265.1. The GC content of the type genome is 35.23 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Nutamana lucerivita sp. nov.

Candidatus Nutamana lucerivita (NL. fem. n. *lucerivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1361 sp002069815*. The type genome for the species is the GenBank assembly GCA_002069815.1. The GC content of the type genome is 37.02 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Nutamaria manibitoga sp. nov.

Candidatus Nutamaria manibitoga (NL. fem. n. *manibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11703 sp001822075*. The type genome for the species is the GenBank assembly GCA_001822155.1. The GC content of the type genome is 36.77 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Nutamaria gen. nov.

Candidatus Nutamaria (NL. fem. n. *Nutamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11703*. The type species for the genus is *Candidatus* Nutamaria manibitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Nutamia bicinilenta sp. nov.

Candidatus Nutamia bicinilenta (NL. fem. n. *bicinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB20 sp001567355*. The type genome for the species is the GenBank assembly GCA_001567355.1. The GC content of the type genome is 49.56 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Nutamia gen. nov.

Candidatus Nutamia (NL. fem. n. *Nutamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB20*. The type species for the genus is *Candidatus* Nutamia bicinilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Nutamiaceae.

Description of *Candidatus* Nutamiaceae fam. nov.

Candidatus Nutamiaceae (NL. fem. n. *Nutamiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB20.* The type genus for the taxon is *Candidatus* Nutamia .

According to the original version of GTDB R06-RS202, this family belongs to the order *B142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lapilulales.

Description of *Candidatus* Nutamosa blactifica sp. nov.

Candidatus Nutamosa blactifica (NL. fem. n. *blactifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEC01 sp903881665*. The type genome for the species is the GenBank assembly GCA_903881665.1. The GC content of the type genome is 36.98 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Nutamosa gen. nov.

Candidatus Nutamosa (NL. fem. n. *Nutamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINEC01*. The type species for the genus is *Candidatus* Nutamosa blactifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehiciaceae.

Description of *Candidatus* Nutamosa chernifica sp. nov.

Candidatus Nutamosa chernifica (NL. fem. n. *chernifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEC01 sp903847585*. The type genome for the species is the

GenBank assembly GCA_903847585.1. The GC content of the type genome is 35.69 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Nutamosa detorisca sp. nov.

Candidatus Nutamosa detorisca (NL. fem. n. *detorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEC01 sp903922455*. The type genome for the species is the GenBank assembly GCA_903892015.1. The GC content of the type genome is 37.81 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Nutamula semigatica sp. nov.

Candidatus Nutamula semigatica (NL. fem. n. *semigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9722 sp900315015*. The type genome for the species is the GenBank assembly GCA_003520225.1. The GC content of the type genome is 38.49 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Nutamula gen. nov.

Candidatus Nutamula (NL. fem. n. *Nutamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9722*. The type species for the genus is *Candidatus* Nutamula semigatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obambella forinigena sp. nov.

Candidatus Obambella forinigena (NL. fem. n. *forinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXZI01 sp012719955*. The type genome for the species is the GenBank assembly GCA_012719955.1. The GC content of the type genome is 63.52 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Obambella gen. nov.

Candidatus Obambella (NL. fem. n. *Obambella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXZI01*. The type species for the genus is *Candidatus* Obambella forinigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifidaceae.

Description of *Candidatus* Obambia lubenedo sp. nov.

Candidatus Obambia lubenedo (NL. fem. n. *lubenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCW01 sp013287905*. The type genome for the species is the GenBank assembly GCA_013287905.1. The GC content of the type genome is 42.08 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Obambia gen. nov.

Candidatus Obambia (NL. fem. n. *Obambia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCW01*. The type species for the genus is *Candidatus* Obambia lubenedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obambida tabitimonas sp. nov.

Candidatus Obambida tabitimonas (NL. fem. n. *tabitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1762 sp002314755*. The type genome for the species is the GenBank assembly GCA_002314755.1. The GC content of the type genome is 50.93 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Obambida gen. nov.

Candidatus Obambida (NL. fem. n. *Obambida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1762*. The type species for the genus is *Candidatus* Obambida tabitimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obambosa benepitudo sp. nov.

Candidatus Obambosa benepitudo (NL. fem. n. *benepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM522 sp002869665*. The type genome for the species is the GenBank assembly GCA_002869665.1. The GC content of the type genome is 56.23 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Obambosa gen. nov.

Candidatus Obambosa (NL. fem. n. *Obambosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM522*. The type species for the genus is *Candidatus* Obambosa benepitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfenaria obtenessa sp. nov.

Candidatus Obfenaria obtenessa (NL. fem. n. *obtenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSYB01 sp009773645*. The type genome for the species is the GenBank assembly GCA_009773645.1. The GC content of the type genome is 55.33 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Obfenaria gen. nov.

Candidatus Obfenaria (NL. fem. n. *Obfenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSYB01*. The type species for the genus is *Candidatus* Obfenaria obtenessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfenella cenacitura sp. nov.

Candidatus Obfenella cenacitura (NL. fem. n. *cenacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHNF01 sp004295085*. The type genome for the species is the GenBank assembly GCA_004295085.1. The GC content of the type genome is 70.96 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Obfenella gen. nov.

Candidatus Obfenella (NL. fem. n. *Obfenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHNF01*. The type species for the genus is *Candidatus* Obfenella cenacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Obfenia bisacitia sp. nov.

Candidatus Obfenia bisacitia (NL. fem. n. *bisacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMKK01 sp014380115*. The type genome for the species is the GenBank assembly GCA_014380115.1. The GC content of the type genome is 65.96 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Obfenia gen. nov.

Candidatus Obfenia (NL. fem. n. *Obfenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMKK01*. The type species for the genus is *Candidatus* Obfenia bisacitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfenosa tenebitas sp. nov.

Candidatus Obfenosa tenebitas (NL. fem. n. *tenebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGM01 sp013286045*. The type genome for the species is the GenBank assembly GCA_013286045.1. The GC content of the type genome is 57.03 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Obfenosa gen. nov.

Candidatus Obfenosa (NL. fem. n. *Obfenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGM01*. The type species for the genus is *Candidatus* Obfenosa tenebitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Obfenula tenemax sp. nov.

Candidatus Obfenula tenemax (NL. fem. n. *tenemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J095 sp003695455*. The type genome for the species is the GenBank assembly GCA_003695455.1. The GC content of the type genome is 56.54 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Obfenula gen. nov.

Candidatus Obfenula (NL. fem. n. *Obfenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *J095*. The type species for the genus is *Candidatus* Obfenula tenemax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifariaceae.

Description of *Candidatus* Obfirana disidicula sp. nov.

Candidatus Obfirana disidicula (NL. fem. n. *disidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFC01 sp012511955*. The type genome for the species is the GenBank assembly GCA_012511955.1. The GC content of the type genome is 40.98 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Obfirana gen. nov.

Candidatus Obfirana (NL. fem. n. *Obfirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFC01*. The type species for the genus is *Candidatus* Obfirana disidicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfirella cibaritio sp. nov.

Candidatus Obfirella cibaritio (NL. fem. n. *cibaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1422 sp012515135*. The type genome for the species is the GenBank assembly GCA_012515135.1. The GC content of the type genome is 43.03 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Obfirella gen. nov.

Candidatus Obfirella (NL. fem. n. *Obfirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1422*. The type species for the genus is *Candidatus* Obfirella cibaritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfirella velivatio sp. nov.

Candidatus Obfirella velivatio (NL. fem. n. *velivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1422 sp002304835*. The type genome for the species is the GenBank assembly GCA_002304835.1. The GC content of the type genome is 42.51 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Obfirida ludifilenta sp. nov.

Candidatus Obfirida ludifilenta (NL. fem. n. *ludifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6189 sp002422745*. The type genome for the species is the GenBank assembly GCA_002422745.1. The GC content of the type genome is 58.25 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Obfirida gen. nov.

Candidatus Obfirida (NL. fem. n. *Obfirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6189*. The type species for the genus is *Candidatus* Obfirida ludifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipariaceae.

Description of *Candidatus* Obfirosa camililenta sp. nov.

Candidatus Obfirosa camililenta (NL. fem. n. *camililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ESFC-1 sp000380225*. The type genome for the species is the GenBank assembly RS_GCF_000380225.1. The GC content of the type genome is 46.51

% and the genome length is 5.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "shipworm (Teredinidae) gill".

Description of *Candidatus* Obfirosa gen. nov.

Candidatus Obfirosa (NL. fem. n. *Obfirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ESFC-1*. The type species for the genus is *Candidatus* Obfirosa camililenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfirula tubicago sp. nov.

Candidatus Obfirula tubicago (NL. fem. n. *tubicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTT01 sp012031335*. The type genome for the species is the GenBank assembly GCA_012031335.1. The GC content of the type genome is 38.74 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Obfirula gen. nov.

Candidatus Obfirula (NL. fem. n. *Obfirula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTT01*. The type species for the genus is *Candidatus* Obfirula tubicago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4181*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidiaceae.

Description of *Candidatus* Obfusana utricilenta sp. nov.

Candidatus Obfusana utricilenta (NL. fem. n. *utricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2784 sp002352285*. The type genome for the species is the GenBank assembly GCA_002352285.1. The GC content of the type genome is 62.4 %

and the genome length is 2.63 Mbp.

Description of *Candidatus* Obfusana gen. nov.

Candidatus Obfusana (NL. fem. n. *Obfusana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2784*. The type species for the genus is *Candidatus* Obfusana utricilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfusaria asporitas sp. nov.

Candidatus Obfusaria asporitas (NL. fem. n. *asporitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JN-1 sp003600355*. The type genome for the species is the GenBank assembly RS_GCF_003600355.1. The GC content of the type genome is 30.98 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Obfusaria gen. nov.

Candidatus Obfusaria (NL. fem. n. *Obfusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JN-1*. The type species for the genus is *Candidatus* Obfusaria asporitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obfusaria bipiniforma sp. nov.

Candidatus Obfusaria bipiniforma (NL. fem. n. *bipiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JN-1 sp003718715*. The type genome for the species is the GenBank assembly RS_GCF_003718715.1. The GC content of the type genome is 30.68 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Obfusella embamibula sp. nov.

Candidatus Obfusella embamibula (NL. fem. n. *embamibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J25 sp004343725*. The type genome for the species is the GenBank assembly RS_GCF_004343725.1. The GC content of the type genome is 49.56 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Obfusella gen. nov.

Candidatus Obfusella (NL. fem. n. *Obfusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J25*. The type species for the genus is *Candidatus* Obfusella embamibula .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Obfusida adhosastra sp. nov.

Candidatus Obfusida adhosastra (NL. fem. n. *adhosastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-41-10 sp001805465*. The type genome for the species is the GenBank assembly GCA_001805465.1. The GC content of the type genome is 39.71 % and the genome length is 1.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Obfusida gen. nov.

Candidatus Obfusida (NL. fem. n. *Obfusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-41-10*. The type species for the genus is *Candidatus* Obfusida adhosastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Obfusosa domigilenta sp. nov.

Candidatus Obfusosa domigilenta (NL. fem. n. *domigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707145 sp002707145*. The type genome for the species is the GenBank assembly GCA_002707145.1. The GC content of the type genome is 33.98 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Obfusosa gen. nov.

Candidatus Obfusosa (NL. fem. n. *Obfusosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707145*. The type species for the genus is *Candidatus* Obfusosa domigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7430*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desaciaceae.

Description of *Candidatus* Oblanana fumifatica sp. nov.

Candidatus Oblanana fumifatica (NL. fem. n. *fumifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-20-45-22 sp002774355*. The type genome for the species is the GenBank assembly GCA_002774355.1. The GC content of the type genome is 44.57 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Oblanana gen. nov.

Candidatus Oblanana (NL. fem. n. *Oblanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-20-45-22*. The type species for the genus is *Candidatus* Oblanana fumifatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunellaceae.

Description of *Candidatus* Oblanaria desucitura sp. nov.

Candidatus Oblanaria desucitura (NL. fem. n. *desucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXAH01 sp003565945*. The type genome for the species is the GenBank assembly GCA_003565945.1. The GC content of the type genome is 39.49 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Oblanaria gen. nov.

Candidatus Oblanaria (NL. fem. n. *Oblanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXAH01*. The type species for the genus is *Candidatus* Oblanaria desucitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homoliaceae.

Description of *Candidatus* Oblanida irredastra sp. nov.

Candidatus Oblanida irredastra (NL. fem. n. *irredastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6166 sp002435795*. The type genome for the species is the GenBank assembly GCA_002435795.1. The GC content of the type genome is 41.7 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Oblanida gen. nov.

Candidatus Oblanida (NL. fem. n. *Oblanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6166*. The type species for the genus is *Candidatus* Oblanida irredastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblanula dupunilenta sp. nov.

Candidatus Oblanula dupunilenta (NL. fem. n. *dupunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8783 sp003516955*. The type genome for the species is the GenBank assembly GCA_003516955.1. The GC content of the type genome is 68.2 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Oblanula gen. nov.

Candidatus Oblanula (NL. fem. n. *Oblanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8783*. The type species for the genus is *Candidatus* Oblanula dupunilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblivana demogitica sp. nov.

Candidatus Oblivana demogitica (NL. fem. n. *demogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J038 sp003696565*. The type genome for the species is the GenBank assembly GCA_003696565.1. The GC content of the type genome is 45.76 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Oblivana gen. nov.

Candidatus Oblivana (NL. fem. n. *Oblivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J038*. The type species for the genus is *Candidatus* Oblivana demogitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Oblivana sacopilenta sp. nov.

Candidatus Oblivana sacopilenta (NL. fem. n. *sacopilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J038 sp007693385*. The type genome for the species is the GenBank assembly GCA_007693385.1. The GC content of the type genome is 58.52 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Oblivaria remulilenta sp. nov.

Candidatus Oblivaria remulilenta (NL. fem. n. *remulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJK01 sp009782285*. The type genome for the species is the GenBank assembly GCA_009782285.1. The GC content of the type genome is 51.36 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Oblivaria gen. nov.

Candidatus Oblivaria (NL. fem. n. *Oblivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRJK01*. The type species for the genus is *Candidatus* Oblivaria remulilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblivaria sonabitio sp. nov.

Candidatus Oblivaria sonabitio (NL. fem. n. *sonabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJK01 sp009778415*. The type genome for the species is the GenBank assembly GCA_009778415.1. The GC content of the type genome is 51.84 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Oblivella adhorifica sp. nov.

Candidatus Oblivella adhorifica (NL. fem. n. *adhorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-360 sp003165465*. The type genome for the species is the GenBank assembly GCA_003165465.1. The GC content of the type genome is 58.0 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Oblivella gen. nov.

Candidatus Oblivella (NL. fem. n. *Oblivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-360*. The type species for the genus is *Candidatus* Oblivella adhorifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Oblivella catapessa sp. nov.

Candidatus Oblivella catapessa (NL. fem. n. *catapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-360 sp003161495*. The type genome for the species is the GenBank assembly GCA_003161495.1. The GC content of the type genome is 56.85 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Oblivosa fetuligena sp. nov.

Candidatus Oblivosa fetuligena (NL. fem. n. *fetuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGU01 sp011525915*. The type genome for the species is the GenBank assembly GCA_011525915.1. The GC content of the type genome is 54.07 % and the genome length is 7.46 Mbp.

Description of *Candidatus* Oblivosa gen. nov.

Candidatus Oblivosa (NL. fem. n. *Oblivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGU01*. The type species for the genus is *Candidatus* Oblivosa

fetuligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblivosa momoritas sp. nov.

Candidatus Oblivosa momoritas (NL. fem. n. *momoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGU01 sp013112725*. The type genome for the species is the GenBank assembly GCA_013112725.1. The GC content of the type genome is 56.13 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Oblivosa nubigicella sp. nov.

Candidatus Oblivosa nubigicella (NL. fem. n. *nubigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGU01 sp900696625*. The type genome for the species is the GenBank assembly GCA_900696625.1. The GC content of the type genome is 56.31 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Oblivosa oblucigena sp. nov.

Candidatus Oblivosa oblucigena (NL. fem. n. *oblucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGU01 sp014584575*. The type genome for the species is the GenBank assembly GCA_014584575.1. The GC content of the type genome is 56.41 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Oblivula tegimilega sp. nov.

Candidatus Oblivula tegimilega (NL. fem. n. *tegimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-38 sp005883255*. The type genome for the species is the GenBank assembly GCA_005883255.1. The GC content of the type genome is 73.64 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Oblivula gen. nov.

Candidatus Oblivula (NL. fem. n. *Oblivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-38*. The type species for the genus is *Candidatus* Oblivula tegimilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblocana impolousia sp. nov.

Candidatus Oblocana impolousia (NL. fem. n. *impolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14087 sp902784055*. The type genome for the species is the GenBank assembly GCA_902784055.1. The GC content of the type genome is 34.11 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Oblocana gen. nov.

Candidatus Oblocana (NL. fem. n. *Oblocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14087*. The type species for the genus is *Candidatus* Oblocana impolousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG11792*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepulaceae.

Description of *Candidatus* Oblocana invesessa sp. nov.

Candidatus Oblocana invesessa (NL. fem. n. *invesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14087 sp902796345*. The type genome for the species is the GenBank assembly GCA_902796345.1. The GC content of the type genome is 33.37 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Oblocana siticitura sp. nov.

Candidatus Oblocana siticitura (NL. fem. n. *siticitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14087 sp902795615*. The type genome for the species is the GenBank assembly GCA_902795615.1. The GC content of the type genome is 33.74 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Oblocaria herinisca sp. nov.

Candidatus Oblocaria herinisca (NL. fem. n. *herinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEV01 sp002071245*. The type genome for the species is the GenBank assembly GCA_002071245.1. The GC content of the type genome is 40.67 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Oblocaria gen. nov.

Candidatus Oblocaria (NL. fem. n. *Oblocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWEV01*. The type species for the genus is *Candidatus* Oblocaria herinisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblocella atricibra sp. nov.

Candidatus Oblocella atricibra (NL. fem. n. *atricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SABI01 sp009929055*. The type genome for the species is the GenBank assembly GCA_009929055.1. The GC content of the type genome is 37.14 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Oblocella gen. nov.

Candidatus Oblocella (NL. fem. n. *Oblocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SABI01*. The type species for the genus is *Candidatus* Oblocella atricibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblocia musuletta sp. nov.

Candidatus Oblocia musuletta (NL. fem. n. *musuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACPJA01 sp902634075*. The type genome for the species is the GenBank assembly GCA_902634075.1. The GC content of the type genome is 37.57 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Oblocia gen. nov.

Candidatus Oblocia (NL. fem. n. *Oblocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACPJA01*. The type species for the genus is *Candidatus* Oblocia musuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11654*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refaciaceae.

Description of *Candidatus* Oblocida adcesitio sp. nov.

Candidatus Oblocida adcesitio (NL. fem. n. *adcesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAD01 sp009780375*. The type genome for the species is the GenBank assembly GCA_009780375.1. The GC content of the type genome is 38.07 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Oblocida gen. nov.

Candidatus Oblocida (NL. fem. n. *Oblocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WRAD01*. The type species for the genus is *Candidatus* Oblocida adcesitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Oblocida addivitura sp. nov.

Candidatus Oblocida addivitura (NL. fem. n. *addivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAD01 sp009784375*. The type genome for the species is the GenBank assembly GCA_009784375.1. The GC content of the type genome is 38.89 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Oblocida adtumibula sp. nov.

Candidatus Oblocida adtumibula (NL. fem. n. *adtumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAD01 sp009784665*. The type genome for the species is the GenBank assembly GCA_009784665.1. The GC content of the type genome is 43.98 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Oblocida cululugo sp. nov.

Candidatus Oblocida cululugo (NL. fem. n. *cululugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAD01 sp009784555*. The type genome for the species is the GenBank assembly GCA_009784555.1. The GC content of the type genome is 48.8 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Oblocida emortibra sp. nov.

Candidatus Oblocida emortibra (NL. fem. n. *emortibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WRAD01 sp009780065*. The type genome for the species is the GenBank assembly GCA_009780065.1. The GC content of the type genome is 40.36 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Oblonana alsulousia sp. nov.

Candidatus Oblonana alsulousia (NL. fem. n. *alsulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVSN01 sp903908595*. The type genome for the species is the GenBank assembly GCA_903908595.1. The GC content of the type genome is 51.46 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Oblonana gen. nov.

Candidatus Oblonana (NL. fem. n. *Oblonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVSN01*. The type species for the genus is *Candidatus* Oblonana alsulousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Oblonaria adtolitudo sp. nov.

Candidatus Oblonaria adtolitudo (NL. fem. n. *adtolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRR01 sp007118345*. The type genome for the species is the GenBank assembly GCA_007118345.1. The GC content of the type genome is 70.01 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Oblonaria gen. nov.

Candidatus Oblonaria (NL. fem. n. *Oblonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKRR01*. The type species for the genus is *Candidatus* Oblonaria adtolitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblonia resaliforma sp. nov.

Candidatus Oblonia resaliforma (NL. fem. n. *resaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITMJ01 sp903893545*. The type genome for the species is the GenBank assembly GCA_903893545.1. The GC content of the type genome is 46.74 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Oblonia gen. nov.

Candidatus Oblonia (NL. fem. n. *Oblonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITMJ01*. The type species for the genus is *Candidatus* Oblonia resaliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Oblonula cerimiforma sp. nov.

Candidatus Oblonula cerimiforma (NL. fem. n. *cerimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1387 sp900551295*. The type genome for the species is the GenBank assembly GCA_900551295.1. The GC content of the type genome is 45.52 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Oblonula gen. nov.

Candidatus Oblonula (NL. fem. n. *Oblonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1387*. The type species for the genus is *Candidatus* Oblonula cerimiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAG-382. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Oblucana dinupitudo sp. nov.

Candidatus Oblucana dinupitudo (NL. fem. n. *dinupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13868 sp902767365*. The type genome for the species is the GenBank assembly GCA_902767365.1. The GC content of the type genome is 25.36 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Oblucana gen. nov.

Candidatus Oblucana (NL. fem. n. *Oblucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13868*. The type species for the genus is *Candidatus* Oblucana dinupitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Oblucana intacicella sp. nov.

Candidatus Oblucana intacicella (NL. fem. n. *intacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13868 sp902793375*. The type genome for the species is the GenBank assembly GCA_902793375.1. The GC content of the type genome is 25.86 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Oblucaria angipisca sp. nov.

Candidatus Oblucaria angipisca (NL. fem. n. *angipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACLZJ01 sp014253075*. The type genome for the species is the

GenBank assembly RS_GCF_014253075.1. The GC content of the type genome is 56.42 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Oblucaria gen. nov.

Candidatus Oblucaria (NL. fem. n. *Oblucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACLZJ01*. The type species for the genus is *Candidatus* Oblucaria angipisca .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Oblucella defunugo sp. nov.

Candidatus Oblucella defunugo (NL. fem. n. *defunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724675 sp002724675*. The type genome for the species is the GenBank assembly GCA_002724675.1. The GC content of the type genome is 62.56 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Oblucella gen. nov.

Candidatus Oblucella (NL. fem. n. *Oblucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2724675*. The type species for the genus is *Candidatus* Oblucella defunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifiaceae.

Description of *Candidatus* Oblucia ignobax sp. nov.

Candidatus Oblucia ignobax (NL. fem. n. *ignobax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OHK22 sp013538855*. The type genome for the species is the GenBank assembly GCA_013538855.1. The GC content of the type genome is 62.59 %

and the genome length is 6.34 Mbp.

Description of *Candidatus* Oblucia gen. nov.

Candidatus Oblucia (NL. fem. n. *Oblucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OHK22*. The type species for the genus is *Candidatus* Oblucia ignobax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblucida inbecago sp. nov.

Candidatus Oblucida inbecago (NL. fem. n. *inbecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHUA01 sp009377445*. The type genome for the species is the GenBank assembly GCA_009377445.1. The GC content of the type genome is 65.93 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Oblucida gen. nov.

Candidatus Oblucida (NL. fem. n. *Oblucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHUA01*. The type species for the genus is *Candidatus* Oblucida inbecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenellaceae.

Description of *Candidatus* Oblucosa locupitia sp. nov.

Candidatus Oblucosa locupitia (NL. fem. n. *locupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDO01 sp002070605*. The type genome for the species is the GenBank assembly GCA_002070605.1. The GC content of the type genome is 37.02 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Oblucosa gen. nov.

Candidatus Oblucosa (NL. fem. n. *Oblucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDO01*. The type species for the genus is *Candidatus* Oblucosa locupitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-31-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemanaceae.

Description of *Candidatus* Oblucula annicivita sp. nov.

Candidatus Oblucula annicivita (NL. fem. n. *annicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA08 sp003129565*. The type genome for the species is the GenBank assembly RS_GCF_003129565.1. The GC content of the type genome is 63.26 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Oblucula gen. nov.

Candidatus Oblucula (NL. fem. n. *Oblucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HLUCCA08*. The type species for the genus is *Candidatus* Oblucula annicivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oblucula cituvitio sp. nov.

Candidatus Oblucula cituvitio (NL. fem. n. *cituvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA08 sp001314655*. The type genome for the species is the GenBank assembly GCA_001314655.1. The GC content of the type genome is 67.62 % and the genome length is 3.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-A from microbial mat sample; contains cyanobacterium Phormidesmis priestleyi ANA and

associated heterotrophs".

Description of *Candidatus* Oblucula fatifivita sp. nov.

Candidatus Oblucula fatifivita (NL. fem. n. *fatifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA08 sp009908505*. The type genome for the species is the GenBank assembly GCA_009908505.1. The GC content of the type genome is 65.05 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Oblucula rubicitas sp. nov.

Candidatus Oblucula rubicitas (NL. fem. n. *rubicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA08 sp002094885*. The type genome for the species is the GenBank assembly RS_GCF_002094885.1. The GC content of the type genome is 67.56 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Obmurana defacicula sp. nov.

Candidatus Obmurana defacicula (NL. fem. n. *defacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUS01 sp012520055*. The type genome for the species is the GenBank assembly GCA_012520055.1. The GC content of the type genome is 28.5 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Obmurana gen. nov.

Candidatus Obmurana (NL. fem. n. *Obmurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUS01*. The type species for the genus is *Candidatus* Obmurana defacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Obmurana oppanetta sp. nov.

Candidatus Obmurana oppanetta (NL. fem. n. *oppanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUS01 sp012841465*. The type genome for the species is the GenBank assembly GCA_012841465.1. The GC content of the type genome is 27.31 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Obmurella arcitago sp. nov.

Candidatus Obmurella arcitago (NL. fem. n. *arcitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7108 sp001858025*. The type genome for the species is the GenBank assembly RS_GCF_001858025.1. The GC content of the type genome is 39.19 % and the genome length is 5.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "saltwater lake".

Description of *Candidatus* Obmurella gen. nov.

Candidatus Obmurella (NL. fem. n. *Obmurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7108*. The type species for the genus is *Candidatus* Obmurella arcitago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obmurella doxolicella sp. nov.

Candidatus Obmurella doxolicella (NL. fem. n. *doxolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7108 sp000332135*. The type genome for the species is the GenBank assembly RS_GCF_000332135.1. The GC content of the type genome is 38.78 % and the genome length is 5.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "intertidal zone".

Description of *Candidatus* Obmurida decuciforma sp. nov.

Candidatus Obmurida decuciforma (NL. fem. n. *decuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDL01 sp013817045*. The type genome for the species is the GenBank assembly GCA_013817045.1. The GC content of the type genome is 64.3 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Obmurida gen. nov.

Candidatus Obmurida (NL. fem. n. *Obmurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDDL01*. The type species for the genus is *Candidatus* Obmurida decuciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Obmurida excaritura sp. nov.

Candidatus Obmurida excaritura (NL. fem. n. *excaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDL01 sp013694625*. The type genome for the species is the GenBank assembly GCA_013694625.1. The GC content of the type genome is 63.87 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Obmurosa adfabibula sp. nov.

Candidatus Obmurosa adfabibula (NL. fem. n. *adfabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXGI01 sp012267505*. The type genome for the species is the GenBank assembly GCA_012267505.1. The GC content of the type genome is 68.39 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Obmurosa gen. nov.

Candidatus Obmurosa (NL. fem. n. *Obmurosa* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXGI01*. The type species for the genus is *Candidatus* Obmurosa adfabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Obmurula panififica sp. nov.

Candidatus Obmurula panififica (NL. fem. n. *panififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *L3-3HA sp008710095*. The type genome for the species is the GenBank assembly RS_GCF_008710095.1. The GC content of the type genome is 57.1 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Obmurula gen. nov.

Candidatus Obmurula (NL. fem. n. *Obmurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *L3-3HA*. The type species for the genus is *Candidatus* Obmurula panififica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obmutana benivicula sp. nov.

Candidatus Obmutana benivicula (NL. fem. n. *benivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1926 sp002337215*. The type genome for the species is the GenBank assembly GCA_002337215.1. The GC content of the type genome is 66.45 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Obmutana gen. nov.

Candidatus Obmutana (NL. fem. n. *Obmutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1926*. The type species for the genus is *Candidatus* Obmutana benivicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Obmutana tricliforma sp. nov.

Candidatus Obmutana tricliforma (NL. fem. n. *tricliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1926 sp002480345*. The type genome for the species is the GenBank assembly GCA_002480345.1. The GC content of the type genome is 67.85 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Obmutaria fecunivita sp. nov.

Candidatus Obmutaria fecunivita (NL. fem. n. *fecunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6128 sp002423325*. The type genome for the species is the GenBank assembly GCA_002423325.1. The GC content of the type genome is 65.15 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Obmutaria gen. nov.

Candidatus Obmutaria (NL. fem. n. *Obmutaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6128*. The type species for the genus is *Candidatus* Obmutaria fecunivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Obmutella adpanisca sp. nov.

Candidatus Obmutella adpanisca (NL. fem. n. *adpanisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVH01 sp003563465*. The type genome for the species is the GenBank assembly GCA_003563465.1. The GC content of the type genome is 61.37 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Obmutella gen. nov.

Candidatus Obmutella (NL. fem. n. *Obmutella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWVH01*. The type species for the genus is *Candidatus* Obmutella adpanisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLCP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depasariaceae.

Description of *Candidatus* Obmutia atricimonas sp. nov.

Candidatus Obmutia atricimonas (NL. fem. n. *atricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUA01 sp012841765*. The type genome for the species is the GenBank assembly GCA_012841765.1. The GC content of the type genome is 27.64 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Obmutia gen. nov.

Candidatus Obmutia (NL. fem. n. *Obmutia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUA01*. The type species for the genus is *Candidatus* Obmutia atricimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Obmutida encoledo sp. nov.

Candidatus Obmutida encoledo (NL. fem. n. *encoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRO01 sp013141125*. The type genome for the species is the GenBank assembly GCA_013141125.1. The GC content of the type genome is 48.52 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Obmutida gen. nov.

Candidatus Obmutida (NL. fem. n. *Obmutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRO01*. The type species for the genus is *Candidatus* Obmutida encoledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obmutula epogditio sp. nov.

Candidatus Obmutula epogditio (NL. fem. n. *epogditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-33 sp013215105*. The type genome for the species is the GenBank assembly GCA_013215105.1. The GC content of the type genome is 31.63 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Obmutula gen. nov.

Candidatus Obmutula (NL. fem. n. *Obmutula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-33*. The type species for the genus is *Candidatus* Obmutula epogditio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnoxana offunetta sp. nov.

Candidatus Obnoxana offunetta (NL. fem. n. *offunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHL01 sp013298365*. The type genome for the species is the GenBank assembly GCA_013298365.1. The GC content of the type genome is 36.82 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Obnoxana gen. nov.

Candidatus Obnoxana (NL. fem. n. *Obnoxana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHL01*. The type species for the genus is *Candidatus* Obnoxana offunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J057*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepiaceae.

Description of *Candidatus* Obnoxaria dedigugo sp. nov.

Candidatus Obnoxaria dedigugo (NL. fem. n. *dedigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1309 sp002307185*. The type genome for the species is the GenBank assembly GCA_002307185.1. The GC content of the type genome is 42.62 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Obnoxaria gen. nov.

Candidatus Obnoxaria (NL. fem. n. *Obnoxaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1309*. The type species for the genus is *Candidatus* Obnoxaria dedigugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnoxaria innecibra sp. nov.

Candidatus Obnoxaria innecibra (NL. fem. n. *innecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1309 sp001897035*. The type genome for the species is the GenBank assembly GCA_001897035.1. The GC content of the type genome is 45.0 % and the genome length is 3.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Obnoxida hexamicella sp. nov.

Candidatus Obnoxida hexamicella (NL. fem. n. *hexamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWCR01 sp011333995*. The type genome for the species is the GenBank assembly GCA_011333995.1. The GC content of the type genome is 33.13 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Obnoxida gen. nov.

Candidatus Obnoxida (NL. fem. n. *Obnoxida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWCR01*. The type species for the genus is *Candidatus* Obnoxida hexamicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Obnoxida intenivita sp. nov.

Candidatus Obnoxida intenivita (NL. fem. n. *intenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWCR01 sp903911245*. The type genome for the species is the GenBank assembly GCA_903911245.1. The GC content of the type genome is 42.38 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Obnoxosa solivitica sp. nov.

Candidatus Obnoxosa solivitica (NL. fem. n. *solivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6921 sp002450895*. The type genome for the species is the GenBank assembly GCA_002450895.1. The GC content of the type genome is 56.63 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Obnoxosa gen. nov.

Candidatus Obnoxosa (NL. fem. n. *Obnoxosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6921*. The type species for the genus is *Candidatus* Obnoxosa solivitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicotariaceae.

Description of *Candidatus* Obnoxula admutago sp. nov.

Candidatus Obnoxula admutago (NL. fem. n. *admutago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5578 sp902795975*. The type genome for the species is the GenBank assembly GCA_902795975.1. The GC content of the type genome is 24.0 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Obnoxula gen. nov.

Candidatus Obnoxula (NL. fem. n. *Obnoxula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5578*. The type species for the genus is *Candidatus* Obnoxula admutago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Obnoxula xenodicella sp. nov.

Candidatus Obnoxula xenodicella (NL. fem. n. *xenodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5578 sp002425325*. The type genome for the species is the GenBank assembly GCA_002425325.1. The GC content of the type genome is 24.45 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Obnunana acrufilega sp. nov.

Candidatus Obnunana acrufilega (NL. fem. n. *acrufilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAZXM01 sp012959865*. The type genome for the species is the GenBank assembly GCA_012959865.1. The GC content of the type genome is 61.13 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Obnunana gen. nov.

Candidatus Obnunana (NL. fem. n. *Obnunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAZXM01*. The type species for the genus is *Candidatus* Obnunana acrufilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4427*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapiaceae.

Description of *Candidatus* Obnunana assefitica sp. nov.

Candidatus Obnunana assefitica (NL. fem. n. *assefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAZXM01 sp012959665*. The type genome for the species is the GenBank assembly GCA_012959665.1. The GC content of the type genome is 62.12 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Obnunana deparitoga sp. nov.

Candidatus Obnunana deparitoga (NL. fem. n. *deparitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAZXM01 sp014240165*. The type genome for the species is the GenBank assembly GCA_014240165.1. The GC content of the type genome is 63.21 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Obnunaria abrumetta sp. nov.

Candidatus Obnunaria abrumetta (NL. fem. n. *abrumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KA00274 sp001552885*. The type genome for the species is the GenBank assembly RS_GCF_001552885.1. The GC content of the type genome is 39.07 % and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Obnunaria gen. nov.

Candidatus Obnunaria (NL. fem. n. *Obnunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KA00274*. The type species for the genus is *Candidatus* Obnunaria abrumetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnunaria semodilenta sp. nov.

Candidatus Obnunaria semodilenta (NL. fem. n. *semodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KA00274 sp902373515*. The type genome for the species is the GenBank assembly GCA_902373515.1. The GC content of the type genome is 42.0 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Obnunella admoditas sp. nov.

Candidatus Obnunella admoditas (NL. fem. n. *admoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAGGB01 sp900769285*. The type genome for the species is the

GenBank assembly RS_GCF_900769285.1. The GC content of the type genome is 65.71 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Obnunella gen. nov.

Candidatus Obnunella (NL. fem. n. *Obnunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAAGGB01*. The type species for the genus is *Candidatus* Obnunella admoditas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Obnunia cocolastra sp. nov.

Candidatus Obnunia cocolastra (NL. fem. n. *cocolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6145 sp002423205*. The type genome for the species is the GenBank assembly GCA_002423205.1. The GC content of the type genome is 56.6 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Obnunia gen. nov.

Candidatus Obnunia (NL. fem. n. *Obnunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6145*. The type species for the genus is *Candidatus* Obnunia cocolastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnunia smegmatica sp. nov.

Candidatus Obnunia smegmatica (NL. fem. n. *smegmatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6145 sp009926935*. The type genome for the species is the GenBank assembly GCA_009926935.1. The GC content of the type genome is 52.89 %

and the genome length is 2.04 Mbp.

Description of *Candidatus* Obnunosa echidibula sp. nov.

Candidatus Obnunosa echidibula (NL. fem. n. *echidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-430 sp009885515*. The type genome for the species is the GenBank assembly GCA_009885515.1. The GC content of the type genome is 58.36 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Obnunosa gen. nov.

Candidatus Obnunosa (NL. fem. n. *Obnunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-430*. The type species for the genus is *Candidatus* Obnunosa echidibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnunosa excucitas sp. nov.

Candidatus Obnunosa excucitas (NL. fem. n. *excucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-430 sp013140995*. The type genome for the species is the GenBank assembly GCA_013140995.1. The GC content of the type genome is 62.5 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Obnunosa exheritudo sp. nov.

Candidatus Obnunosa exheritudo (NL. fem. n. *exheritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-430 sp003246795*. The type genome for the species is the GenBank assembly GCA_003246795.1. The GC content of the type genome is 64.43 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Obnunosa relenitica sp. nov.

Candidatus Obnunosa relenitica (NL. fem. n. *relenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-430 sp902826695*. The type genome for the species is the GenBank assembly GCA_902826695.1. The GC content of the type genome is 62.73 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Obnunula dinupilega sp. nov.

Candidatus Obnunula dinupilega (NL. fem. n. *dinupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFU01 sp009778675*. The type genome for the species is the GenBank assembly GCA_009778675.1. The GC content of the type genome is 43.04 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Obnunula gen. nov.

Candidatus Obnunula (NL. fem. n. *Obnunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFU01*. The type species for the genus is *Candidatus* Obnunula dinupilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnupana volucessa sp. nov.

Candidatus Obnupana volucessa (NL. fem. n. *volucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSUX01 sp011328915*. The type genome for the species is the GenBank assembly GCA_011328915.1. The GC content of the type genome is 60.62 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Obnupana gen. nov.

Candidatus Obnupana (NL. fem. n. *Obnupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSUX01*. The type species for the genus is *Candidatus* Obnupana volucessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnuparia antimitrix sp. nov.

Candidatus Obnuparia antimitrix (NL. fem. n. *antimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-80 sp002010725*. The type genome for the species is the GenBank assembly GCA_002010725.1. The GC content of the type genome is 44.6 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Obnuparia gen. nov.

Candidatus Obnuparia (NL. fem. n. *Obnuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-80*. The type species for the genus is *Candidatus* Obnuparia antimitrix .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Obnuparia cobalibra sp. nov.

Candidatus Obnuparia cobalibra (NL. fem. n. *cobalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-80 sp011042725*. The type genome for the species is the GenBank assembly GCA_011042725.1. The GC content of the type genome is 42.76 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Obnuparia expurisca sp. nov.

Candidatus Obnuparia expurisca (NL. fem. n. *expurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-80 sp003648765*. The type genome for the species is the

GenBank assembly GCA_003648765.1. The GC content of the type genome is 43.45 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Obnupia egregiforma sp. nov.

Candidatus Obnupia egregiforma (NL. fem. n. *egregiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKE01 sp009885695*. The type genome for the species is the GenBank assembly GCA_009885695.1. The GC content of the type genome is 57.84 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Obnupia gen. nov.

Candidatus Obnupia (NL. fem. n. *Obnupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKE01*. The type species for the genus is *Candidatus* Obnupia egregiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnupida loripimonia sp. nov.

Candidatus Obnupida loripimonia (NL. fem. n. *loripimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFJ01 sp009778865*. The type genome for the species is the GenBank assembly GCA_009778865.1. The GC content of the type genome is 40.18 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Obnupida gen. nov.

Candidatus Obnupida (NL. fem. n. *Obnupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFJ01*. The type species for the genus is *Candidatus* Obnupida loripimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnuposa exhedicella sp. nov.

Candidatus Obnuposa exhedicella (NL. fem. n. *exhedicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11783 sp902772615*. The type genome for the species is the GenBank assembly GCA_902772615.1. The GC content of the type genome is 52.45 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Obnuposa gen. nov.

Candidatus Obnuposa (NL. fem. n. *Obnuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11783*. The type species for the genus is *Candidatus* Obnuposa exhedicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obnupula desacitrix sp. nov.

Candidatus Obnupula desacitrix (NL. fem. n. *desacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGK01 sp007117465*. The type genome for the species is the GenBank assembly GCA_007117465.1. The GC content of the type genome is 36.51 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Obnupula gen. nov.

Candidatus Obnupula (NL. fem. n. *Obnupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKGK01*. The type species for the genus is *Candidatus* Obnupula desacitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SK-Y3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifanaceae.

Description of *Candidatus* Obrigana ignomifica sp. nov.

Candidatus Obrigana ignomifica (NL. fem. n. *ignomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401725 sp002401725*. The type genome for the species is the GenBank assembly GCA_002401725.1. The GC content of the type genome is 36.54 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Obrigana gen. nov.

Candidatus Obrigana (NL. fem. n. *Obrigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401725*. The type species for the genus is *Candidatus* Obrigana ignomifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obrigella murileda sp. nov.

Candidatus Obrigella murileda (NL. fem. n. *murileda* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10939 sp002408385*. The type genome for the species is the GenBank assembly GCA_002408385.1. The GC content of the type genome is 69.52 % and the genome length is 7.65 Mbp.

Description of *Candidatus* Obrigella gen. nov.

Candidatus Obrigella (NL. fem. n. *Obrigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10939*. The type species for the genus is *Candidatus* Obrigella murileda .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5297*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homogidaceae.

Description of *Candidatus* Obrigia apperitura sp. nov.

Candidatus Obrigia apperitura (NL. fem. n. *apperitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKZY01 sp903832025*. The type genome for the species is the GenBank assembly GCA_903832025.1. The GC content of the type genome is 61.81 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Obrigia gen. nov.

Candidatus Obrigia (NL. fem. n. *Obrigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKZY01*. The type species for the genus is *Candidatus* Obrigia apperitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Obrigida anxifatio sp. nov.

Candidatus Obrigida anxifatio (NL. fem. n. *anxifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYG01 sp013696595*. The type genome for the species is the GenBank assembly GCA_013696595.1. The GC content of the type genome is 68.57 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Obrigida gen. nov.

Candidatus Obrigida (NL. fem. n. *Obrigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYG01*. The type species for the genus is *Candidatus* Obrigida anxifatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obrigosa andabousia sp. nov.

Candidatus Obrigosa andabousia (NL. fem. n. *andabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1178 sp003167475*. The type genome for the species is the GenBank assembly GCA_003167475.1. The GC content of the type genome is 48.27 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Obrigosa gen. nov.

Candidatus Obrigosa (NL. fem. n. *Obrigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1178*. The type species for the genus is *Candidatus* Obrigosa andabousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1178*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Obrigosaceae.

Description of *Candidatus* Obrigosaceae fam. nov.

Candidatus Obrigosaceae (NL. fem. n. *Obrigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1178.* The type genus for the taxon is *Candidatus* Obrigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decinulales.

Description of *Candidatus* Obrigula rosaribra sp. nov.

Candidatus Obrigula rosaribra (NL. fem. n. *rosaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXCK01 sp003566635*. The type genome for the species is the GenBank assembly GCA_003566635.1. The GC content of the type genome is 39.49 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Obrigula gen. nov.

Candidatus Obrigula (NL. fem. n. *Obrigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXCK01*. The type species for the genus is *Candidatus* Obrigula rosaribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapicellaceae.

Description of *Candidatus* Obsatana effacilega sp. nov.

Candidatus Obsatana effacilega (NL. fem. n. *effacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-34-10 sp002773945*. The type genome for the species is the GenBank assembly GCA_002773945.1. The GC content of the type genome is 33.53 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Obsatana gen. nov.

Candidatus Obsatana (NL. fem. n. *Obsatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-34-10*. The type species for the genus is *Candidatus* Obsatana effacilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucolulaceae.

Description of *Candidatus* Obsatella adfirousia sp. nov.

Candidatus Obsatella adfirousia (NL. fem. n. *adfirousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXRA01 sp903921725*. The type genome for the species is the GenBank assembly GCA_903921725.1. The GC content of the type genome is 64.82 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Obsatella gen. nov.

Candidatus Obsatella (NL. fem. n. *Obsatella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXRA01*. The type species for the genus is *Candidatus* Obsatella adfirousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagosaceae.

Description of *Candidatus* Obsatia retecousia sp. nov.

Candidatus Obsatia retecousia (NL. fem. n. *retecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11857 sp902773225*. The type genome for the species is the GenBank assembly GCA_902773225.1. The GC content of the type genome is 47.34 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Obsatia gen. nov.

Candidatus Obsatia (NL. fem. n. *Obsatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11857*. The type species for the genus is *Candidatus* Obsatia retecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsatida almititia sp. nov.

Candidatus Obsatida almititia (NL. fem. n. *almititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S-15 sp009909615*. The type genome for the species is the GenBank assembly RS_GCF_009909615.1. The GC content of the type genome is 35.59 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Obsatida gen. nov.

Candidatus Obsatida (NL. fem. n. *Obsatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S-15*. The type species for the genus is *Candidatus* Obsatida almititia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsecana tiguratio sp. nov.

Candidatus Obsecana tiguratio (NL. fem. n. *tiguratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAURS01 sp012032135*. The type genome for the species is the GenBank assembly GCA_012032135.1. The GC content of the type genome is 47.98 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Obsecana gen. nov.

Candidatus Obsecana (NL. fem. n. *Obsecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAURS01*. The type species for the genus is *Candidatus* Obsecana tiguratio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsecaria adlacisca sp. nov.

Candidatus Obsecaria adlacisca (NL. fem. n. *adlacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZF01 sp009692425*. The type genome for the species is the GenBank assembly GCA_009692425.1. The GC content of the type genome is 69.08 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Obsecaria gen. nov.

Candidatus Obsecaria (NL. fem. n. *Obsecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZF01*. The type species for the genus is *Candidatus* Obsecaria adlacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Obsecia sanabitudo sp. nov.

Candidatus Obsecia sanabitudo (NL. fem. n. *sanabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYYZ01 sp012515115*. The type genome for the species is the GenBank assembly GCA_012515115.1. The GC content of the type genome is 65.76 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Obsecia gen. nov.

Candidatus Obsecia (NL. fem. n. *Obsecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYYZ01*. The type species for the genus is *Candidatus* Obsecia sanabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Obsecida diminitia sp. nov.

Candidatus Obsecida diminitia (NL. fem. n. *diminitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINXC01 sp903854655*. The type genome for the species is the GenBank assembly GCA_903854655.1. The GC content of the type genome is 62.45 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Obsecida gen. nov.

Candidatus Obsecida (NL. fem. n. *Obsecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINXC01*. The type species for the genus is *Candidatus* Obsecida

diminitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsigana ineffiforma sp. nov.

Candidatus Obsigana ineffiforma (NL. fem. n. *ineffiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNP01 sp013824325*. The type genome for the species is the GenBank assembly GCA_013824325.1. The GC content of the type genome is 41.36 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Obsigana gen. nov.

Candidatus Obsigana (NL. fem. n. *Obsigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNP01*. The type species for the genus is *Candidatus* Obsigana ineffiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Obsigaria conametta sp. nov.

Candidatus Obsigaria conametta (NL. fem. n. *conametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705055 sp002705055*. The type genome for the species is the GenBank assembly GCA_002705055.1. The GC content of the type genome is 66.94 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Obsigaria gen. nov.

Candidatus Obsigaria (NL. fem. n. *Obsigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2705055*. The type species for the genus is *Candidatus* Obsigaria conametta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Obsigella herinax sp. nov.

Candidatus Obsigella herinax (NL. fem. n. *herinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBVG01 sp903958995*. The type genome for the species is the GenBank assembly GCA_903958995.1. The GC content of the type genome is 34.94 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Obsigella gen. nov.

Candidatus Obsigella (NL. fem. n. *Obsigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBVG01*. The type species for the genus is *Candidatus* Obsigella herinax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKLP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecellaceae.

Description of *Candidatus* Obsigia alectilega sp. nov.

Candidatus Obsigia alectilega (NL. fem. n. *alectilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYYF01 sp012515535*. The type genome for the species is the GenBank assembly GCA_012515535.1. The GC content of the type genome is 73.57 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Obsigia gen. nov.

Candidatus Obsigia (NL. fem. n. *Obsigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYYF01*. The type species for the genus is *Candidatus* Obsigia

alectilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsigida adremetta sp. nov.

Candidatus Obsigida adremetta (NL. fem. n. *adremetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2684655 sp002684655*. The type genome for the species is the GenBank assembly GCA_002684655.1. The GC content of the type genome is 66.16 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Obsigida gen. nov.

Candidatus Obsigida (NL. fem. n. *Obsigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2684655*. The type species for the genus is *Candidatus* Obsigida adremetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifulaceae.

Description of *Candidatus* Obsigida aseptatica sp. nov.

Candidatus Obsigida aseptatica (NL. fem. n. *aseptatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2684655 sp011051855*. The type genome for the species is the GenBank assembly GCA_011051855.1. The GC content of the type genome is 68.88 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Obsigosa dicibitrix sp. nov.

Candidatus Obsigosa dicibitrix (NL. fem. n. *dicibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-52 sp005885015*. The type genome for the species is the GenBank

assembly GCA_005885015.1. The GC content of the type genome is 69.2 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Obsigosa gen. nov.

Candidatus Obsigosa (NL. fem. n. *Obsigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-52*. The type species for the genus is *Candidatus* Obsigosa dicibitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Obsigula adnicousia sp. nov.

Candidatus Obsigula adnicousia (NL. fem. n. *adnicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEN01 sp011390055*. The type genome for the species is the GenBank assembly GCA_011390055.1. The GC content of the type genome is 68.69 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Obsigula gen. nov.

Candidatus Obsigula (NL. fem. n. *Obsigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEEN01*. The type species for the genus is *Candidatus* Obsigula adnicousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsigula lutulilenta sp. nov.

Candidatus Obsigula lutulilenta (NL. fem. n. *lutulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEN01 sp902826345*. The type genome for the species is the GenBank assembly GCA_902826345.1. The GC content of the type genome is 68.01 %

and the genome length is 4.45 Mbp.

Description of *Candidatus* Obsigula ratifitica sp. nov.

Candidatus Obsigula ratifitica (NL. fem. n. *ratifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEN01 sp902825995*. The type genome for the species is the GenBank assembly GCA_902825995.1. The GC content of the type genome is 66.9 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Obsolana intacilenta sp. nov.

Candidatus Obsolana intacilenta (NL. fem. n. *intacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-45-15 sp002787235*. The type genome for the species is the GenBank assembly GCA_002787235.1. The GC content of the type genome is 45.39 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Obsolana gen. nov.

Candidatus Obsolana (NL. fem. n. *Obsolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-45-15*. The type species for the genus is *Candidatus* Obsolana intacilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsolaria utraritio sp. nov.

Candidatus Obsolaria utraritio (NL. fem. n. *utraritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTPS01 sp011353845*. The type genome for the species is the GenBank assembly GCA_011353845.1. The GC content of the type genome is 66.24 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Obsolaria gen. nov.

Candidatus Obsolaria (NL. fem. n. *Obsolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPS01*. The type species for the genus is *Candidatus* Obsolaria utraritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSQY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Murelulaceae.

Description of *Candidatus* Obsolella adessastra sp. nov.

Candidatus Obsolella adessastra (NL. fem. n. *adessastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIJ01 sp013298675*. The type genome for the species is the GenBank assembly GCA_013298675.1. The GC content of the type genome is 56.91 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Obsolella gen. nov.

Candidatus Obsolella (NL. fem. n. *Obsolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIJ01*. The type species for the genus is *Candidatus* Obsolella adessastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsolia octipessa sp. nov.

Candidatus Obsolia octipessa (NL. fem. n. *octipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPU01 sp013203665*. The type genome for the species is the GenBank assembly GCA_013203665.1. The GC content of the type genome is 34.54 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Obsolia gen. nov.

Candidatus Obsolia (NL. fem. n. *Obsolia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPU01*. The type species for the genus is *Candidatus* Obsolia octipessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Obsolida nehalatio sp. nov.

Candidatus Obsolida nehalatio (NL. fem. n. *nehalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQJ01 sp013203315*. The type genome for the species is the GenBank assembly GCA_013203315.1. The GC content of the type genome is 42.94 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Obsolida gen. nov.

Candidatus Obsolida (NL. fem. n. *Obsolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQJ01*. The type species for the genus is *Candidatus* Obsolida nehalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sitelellaceae.

Description of *Candidatus* Obsolosa bicipatio sp. nov.

Candidatus Obsolosa bicipatio (NL. fem. n. *bicipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8801 sp003505795*. The type genome for the species is the GenBank assembly GCA_003505795.1. The GC content of the type genome is 69.1 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Obsolosa gen. nov.

Candidatus Obsolosa (NL. fem. n. *Obsolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8801*. The type species for the genus is *Candidatus* Obsolosa bicipatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsolula epicrilega sp. nov.

Candidatus Obsolula epicrilega (NL. fem. n. *epicrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AGPOR5 sp003635305*. The type genome for the species is the GenBank assembly GCA_003635305.1. The GC content of the type genome is 53.89 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Obsolula gen. nov.

Candidatus Obsolula (NL. fem. n. *Obsolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AGPOR5*. The type species for the genus is *Candidatus* Obsolula epicrilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WGA-3G*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebosaceae.

Description of *Candidatus* Obsoraria laculitudo sp. nov.

Candidatus Obsoraria laculitudo (NL. fem. n. *laculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-100 sp002049785*. The type genome for the species is the GenBank assembly GCA_002049785.1. The GC content of the type genome is 43.14 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Obsoraria gen. nov.

Candidatus Obsoraria (NL. fem. n. *Obsoraria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-100*. The type species for the genus is *Candidatus* Obsoraria laculitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Obsoria exhorentia sp. nov.

Candidatus Obsoria exhorentia (NL. fem. n. *exhorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ChocPot-Mid sp003731675*. The type genome for the species is the GenBank assembly GCA_003731675.1. The GC content of the type genome is 33.79 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Obsoria gen. nov.

Candidatus Obsoria (NL. fem. n. *Obsoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ChocPot-Mid*. The type species for the genus is *Candidatus* Obsoria exhorentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Obsorida detosatica sp. nov.

Candidatus Obsorida detosatica (NL. fem. n. *detosatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Y40 sp013343715*. The type genome for the species is the GenBank assembly RS_GCF_013343715.1. The GC content of the type genome is 40.63 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Obsorida gen. nov.

Candidatus Obsorida (NL. fem. n. *Obsorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Y40*. The type species for the genus is *Candidatus* Obsorida detosatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-18226*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Robigidaceae.

Description of *Candidatus* Obsorosa adfiratica sp. nov.

Candidatus Obsorosa adfiratica (NL. fem. n. *adfiratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715885 sp014239655*. The type genome for the species is the GenBank assembly GCA_014239655.1. The GC content of the type genome is 30.48 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Obsorosa gen. nov.

Candidatus Obsorosa (NL. fem. n. *Obsorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002715885*. The type species for the genus is *Candidatus* Obsorosa adfiratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Obsorosa adhorilenta sp. nov.

Candidatus Obsorosa adhorilenta (NL. fem. n. *adhorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715885 sp902579065*. The type genome for the species is the GenBank assembly GCA_902579065.1. The GC content of the type genome is 29.58 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Obsorosa argimilega sp. nov.

Candidatus Obsorosa argimilega (NL. fem. n. *argimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715885 sp002689735*. The type genome for the species is the GenBank assembly GCA_002689735.1. The GC content of the type genome is 30.53 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Obsorosa inrecitrix sp. nov.

Candidatus Obsorosa inrecitrix (NL. fem. n. *inrecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002715885 sp002715885*. The type genome for the species is the GenBank assembly GCA_002715885.1. The GC content of the type genome is 30.32 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Obsorula adnulastra sp. nov.

Candidatus Obsorula adnulastra (NL. fem. n. *adnulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECO01 sp007694015*. The type genome for the species is the GenBank assembly GCA_007694015.1. The GC content of the type genome is 68.46 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Obsorula gen. nov.

Candidatus Obsorula (NL. fem. n. *Obsorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECO01*. The type species for the genus is *Candidatus* Obsorula adnulastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsuria ulcisatio sp. nov.

Candidatus Obsuria ulcisatio (NL. fem. n. *ulcisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An114 sp002161055*. The type genome for the species is the GenBank assembly RS_GCF_002161055.1. The GC content of the type genome is 31.21 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Obsuria gen. nov.

Candidatus Obsuria (NL. fem. n. *Obsuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An114*. The type species for the genus is *Candidatus* Obsuria ulcisatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsurosa aminnitas sp. nov.

Candidatus Obsurosa aminnitas (NL. fem. n. *aminnitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002729875 sp002688175*. The type genome for the species is the GenBank assembly GCA_002688175.1. The GC content of the type genome is 53.12 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Obsurosa gen. nov.

Candidatus Obsurosa (NL. fem. n. *Obsurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002729875*. The type species for the genus is *Candidatus* Obsurosa aminnitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Obsurosa nefarousia sp. nov.

Candidatus Obsurosa nefarousia (NL. fem. n. *nefarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-002729875 sp002729875*. The type genome for the species is the GenBank assembly GCA_002729875.1. The GC content of the type genome is 53.05 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Obsurula anatredo sp. nov.

Candidatus Obsurula anatredo (NL. fem. n. *anatredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXMD01 sp903853735*. The type genome for the species is the GenBank assembly GCA_903853735.1. The GC content of the type genome is 50.63 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Obsurula gen. nov.

Candidatus Obsurula (NL. fem. n. *Obsurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXMD01*. The type species for the genus is *Candidatus* Obsurula anatredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obsurula levifilega sp. nov.

Candidatus Obsurula levifilega (NL. fem. n. *levifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXMD01 sp903920415*. The type genome for the species is the GenBank assembly GCA_903920415.1. The GC content of the type genome is 49.12 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Obtecana inveciforma sp. nov.

Candidatus Obtecana inveciforma (NL. fem. n. *inveciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNJM01 sp013821865*. The type genome for the species is the GenBank assembly GCA_013821865.1. The GC content of the type genome is 65.58 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Obtecana gen. nov.

Candidatus Obtecana (NL. fem. n. *Obtecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNJM01*. The type species for the genus is *Candidatus* Obtecana inveciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtecella cituvitrix sp. nov.

Candidatus Obtecella cituvitrix (NL. fem. n. *cituvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEO01 sp013287015*. The type genome for the species is the GenBank assembly GCA_013287015.1. The GC content of the type genome is 43.27 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Obtecella gen. nov.

Candidatus Obtecella (NL. fem. n. *Obtecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEO01*. The type species for the genus is *Candidatus* Obtecella cituvitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtecida acustibula sp. nov.

Candidatus Obtecida acustibula (NL. fem. n. *acustibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6918 sp002450925*. The type genome for the species is the GenBank assembly GCA_002450925.1. The GC content of the type genome is 54.78 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Obtecida gen. nov.

Candidatus Obtecida (NL. fem. n. *Obtecida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6918*. The type species for the genus is *Candidatus* Obtecida acustibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtecida amatredo sp. nov.

Candidatus Obtecida amatredo (NL. fem. n. *amatredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6918 sp002421825*. The type genome for the species is the GenBank assembly GCA_002421825.1. The GC content of the type genome is 63.28 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Obtecida fumacetta sp. nov.

Candidatus Obtecida fumacetta (NL. fem. n. *fumacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6918 sp002327405*. The type genome for the species is the GenBank assembly GCA_002327405.1. The GC content of the type genome is 62.74 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Obtecida genocitica sp. nov.

Candidatus Obtecida genocitica (NL. fem. n. *genocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6918 sp008923285*. The type genome for the species is the GenBank assembly RS_GCF_008923285.1. The GC content of the type genome is 63.13 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Obtecula antomago sp. nov.

Candidatus Obtecula antomago (NL. fem. n. *antomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZQQ01 sp902783355*. The type genome for the species is the GenBank assembly GCA_902783355.1. The GC content of the type genome is 65.41 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Obtecula gen. nov.

Candidatus Obtecula (NL. fem. n. *Obtecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZQQ01*. The type species for the genus is *Candidatus* Obtecula antomago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Obtemaria exsufilenta sp. nov.

Candidatus Obtemaria exsufilenta (NL. fem. n. *exsufilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R196 sp004764705*. The type genome for the species is the GenBank assembly RS_GCF_004764705.1. The GC content of the type genome is 57.72 % and the genome length is 9.45 Mbp.

Description of *Candidatus* Obtemaria gen. nov.

Candidatus Obtemaria (NL. fem. n. *Obtemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R196*. The type species for the genus is *Candidatus* Obtemaria exsufilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtemella affamicula sp. nov.

Candidatus Obtemella affamicula (NL. fem. n. *affamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7657 sp002483465*. The type genome for the species is the GenBank assembly GCA_002483465.1. The GC content of the type genome is 53.96 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Obtemella gen. nov.

Candidatus Obtemella (NL. fem. n. *Obtemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7657*. The type species for the genus is *Candidatus* Obtemella affamicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtemella tametitoga sp. nov.

Candidatus Obtemella tametitoga (NL. fem. n. *tametitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7657 sp900696495*. The type genome for the species is the GenBank assembly GCA_900696495.1. The GC content of the type genome is 55.61 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Obtemia abrepitoga sp. nov.

Candidatus Obtemia abrepitoga (NL. fem. n. *abrepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTA01 sp004322275*. The type genome for the species is the GenBank assembly GCA_004322275.1. The GC content of the type genome is 58.66 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Obtemia gen. nov.

Candidatus Obtemia (NL. fem. n. *Obtemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTA01*. The type species for the genus is *Candidatus* Obtemia abrepitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM512*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vagabosaceae.

Description of *Candidatus* Obtemia conibibula sp. nov.

Candidatus Obtemia conibibula (NL. fem. n. *conibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTA01 sp009724975*. The type genome for the species is the GenBank assembly GCA_009724975.1. The GC content of the type genome is 58.63 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Obtemida salubisca sp. nov.

Candidatus Obtemida salubisca (NL. fem. n. *salubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZXR01 sp014240065*. The type genome for the species is the GenBank assembly GCA_014240065.1. The GC content of the type genome is 65.94 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Obtemida gen. nov.

Candidatus Obtemida (NL. fem. n. *Obtemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZXR01*. The type species for the genus is *Candidatus* Obtemida salubisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtemosa anactetta sp. nov.

Candidatus Obtemosa anactetta (NL. fem. n. *anactetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAF01 sp013695575*. The type genome for the species is the GenBank assembly GCA_013695575.1. The GC content of the type genome is 69.68 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Obtemosa gen. nov.

Candidatus Obtemosa (NL. fem. n. *Obtemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAF01*. The type species for the genus is *Candidatus* Obtemosa anactetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Obtenaria arcipax sp. nov.

Candidatus Obtenaria arcipax (NL. fem. n. *arcipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMVS01 sp004357435*. The type genome for the species is the GenBank assembly GCA_004357435.1. The GC content of the type genome is 51.88 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Obtenaria gen. nov.

Candidatus Obtenaria (NL. fem. n. *Obtenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMVS01*. The type species for the genus is *Candidatus* Obtenaria arcipax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtenella dimacitoga sp. nov.

Candidatus Obtenella dimacitoga (NL. fem. n. *dimacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2266 sp011057845*. The type genome for the species is the GenBank assembly GCA_011057845.1. The GC content of the type genome is 62.29 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Obtenella gen. nov.

Candidatus Obtenella (NL. fem. n. *Obtenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2266*. The type species for the genus is *Candidatus* Obtenella dimacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Obtenella pinifivita sp. nov.

Candidatus Obtenella pinifivita (NL. fem. n. *pinifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2266 sp002347125*. The type genome for the species is the GenBank assembly GCA_002347125.1. The GC content of the type genome is 62.28 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Obtenosa dilecentia sp. nov.

Candidatus Obtenosa dilecentia (NL. fem. n. *dilecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-18 sp001779915*. The type genome for the species is the GenBank assembly GCA_001779915.1. The GC content of the type genome is 44.51 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Obtenosa gen. nov.

Candidatus Obtenosa (NL. fem. n. *Obtenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-18*. The type species for the genus is *Candidatus* Obtenosa dilecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-02-FULL-48-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicariaceae.

Description of *Candidatus* Obtenula viginitio sp. nov.

Candidatus Obtenula viginitio (NL. fem. n. *viginitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJANL01 sp903941105*. The type genome for the species is the GenBank assembly GCA_903941105.1. The GC content of the type genome is 66.43 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Obtenula gen. nov.

Candidatus Obtenula (NL. fem. n. *Obtenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJANL01*. The type species for the genus is *Candidatus* Obtenula viginitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtesana adsucimonia sp. nov.

Candidatus Obtesana adsucimonia (NL. fem. n. *adsucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch132 sp013178185*. The type genome for the species is the GenBank assembly GCA_013178185.1. The GC content of the type genome is 51.67 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Obtesana gen. nov.

Candidatus Obtesana (NL. fem. n. *Obtesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch132*. The type species for the genus is *Candidatus* Obtesana adsucimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtesaria catecimonas sp. nov.

Candidatus Obtesaria catecimonas (NL. fem. n. *catecimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQV01 sp003818595*. The type genome for the species is the GenBank assembly GCA_003818595.1. The GC content of the type genome is 48.02 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Obtesaria gen. nov.

Candidatus Obtesaria (NL. fem. n. *Obtesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPQV01*. The type species for the genus is *Candidatus* Obtesaria catecimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Zgenome-0027*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refinellaceae.

Description of *Candidatus* Obtesia adtagitio sp. nov.

Candidatus Obtesia adtagitio (NL. fem. n. *adtagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXE01 sp013297545*. The type genome for the species is the GenBank assembly GCA_013297545.1. The GC content of the type genome is 65.69 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Obtesia gen. nov.

Candidatus Obtesia (NL. fem. n. *Obtesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXE01*. The type species for the genus is *Candidatus* Obtesia adtagitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtesia furibifica sp. nov.

Candidatus Obtesia furibifica (NL. fem. n. *furibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXE01 sp004292755*. The type genome for the species is the GenBank assembly GCA_004292755.1. The GC content of the type genome is 63.85 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Obtesida omnivicella sp. nov.

Candidatus Obtesida omnivicella (NL. fem. n. *omnivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZK01 sp012514895*. The type genome for the species is the GenBank assembly GCA_012514895.1. The GC content of the type genome is 69.79 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Obtesida gen. nov.

Candidatus Obtesida (NL. fem. n. *Obtesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZK01*. The type species for the genus is *Candidatus* Obtesida omnivicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1343*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapellaceae.

Description of *Candidatus* Obtesosa tenebilenta sp. nov.

Candidatus Obtesosa tenebilenta (NL. fem. n. *tenebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7485 sp002478485*. The type genome for the species is the GenBank assembly GCA_002478485.1. The GC content of the type genome is 48.1 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Obtesosa gen. nov.

Candidatus Obtesosa (NL. fem. n. *Obtesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7485*. The type species for the genus is *Candidatus* Obtesosa tenebilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtorana admuribra sp. nov.

Candidatus Obtorana admuribra (NL. fem. n. *admuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1764 sp002315535*. The type genome for the species is the GenBank assembly GCA_002315535.1. The GC content of the type genome is 42.85 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Obtorana gen. nov.

Candidatus Obtorana (NL. fem. n. *Obtorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1764*. The type species for the genus is *Candidatus* Obtorana admuribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtorella acrobitoga sp. nov.

Candidatus Obtorella acrobitoga (NL. fem. n. *acrobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRE01 sp013813775*. The type genome for the species is the GenBank assembly GCA_013813775.1. The GC content of the type genome is 62.87 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Obtorella gen. nov.

Candidatus Obtorella (NL. fem. n. *Obtorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRE01*. The type species for the genus is *Candidatus* Obtorella acrobitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtoria necopiforma sp. nov.

Candidatus Obtoria necopiforma (NL. fem. n. *necopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-350 sp003152195*. The type genome for the species is the GenBank assembly GCA_003152195.1. The GC content of the type genome is 58.46 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Obtoria gen. nov.

Candidatus Obtoria (NL. fem. n. *Obtoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-350*. The type species for the genus is *Candidatus* Obtoria necopiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtorida cacomitoga sp. nov.

Candidatus Obtorida cacomitoga (NL. fem. n. *cacomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM705 sp002869165*. The type genome for the species is the GenBank assembly GCA_002869165.1. The GC content of the type genome is 33.52 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Obtorida gen. nov.

Candidatus Obtorida (NL. fem. n. *Obtorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM705*. The type species for the genus is *Candidatus* Obtorida cacomitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12075*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenociaceae.

Description of *Candidatus* Obtorosa aplesitoga sp. nov.

Candidatus Obtorosa aplesitoga (NL. fem. n. *aplesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7102 sp002492415*. The type genome for the species is the GenBank assembly GCA_002492415.1. The GC content of the type genome is 59.72 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Obtorosa gen. nov.

Candidatus Obtorosa (NL. fem. n. *Obtorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7102*. The type species for the genus is *Candidatus* Obtorosa aplesitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1750*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabulaceae.

Description of *Candidatus* Obtorosa cacomiforma sp. nov.

Candidatus Obtorosa cacomiforma (NL. fem. n. *cacomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7102 sp002315655*. The type genome for the species is the GenBank assembly GCA_002315655.1. The GC content of the type genome is 54.93 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Obtorosa funebastra sp. nov.

Candidatus Obtorosa funebastra (NL. fem. n. *funebastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7102 sp900760085*. The type genome for the species is the GenBank assembly RS_GCF_900760085.1. The GC content of the type genome is 66.24 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Obtorula inreditica sp. nov.

Candidatus Obtorula inreditica (NL. fem. n. *inreditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-45 sp003599275*. The type genome for the species is the GenBank assembly GCA_003599275.1. The GC content of the type genome is 47.56 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Obtorula gen. nov.

Candidatus Obtorula (NL. fem. n. *Obtorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-45*. The type species for the genus is *Candidatus* Obtorula inreditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Obtunaria lanifatio sp. nov.

Candidatus Obtunaria lanifatio (NL. fem. n. *lanifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDII01 sp013003805*. The type genome for the species is the GenBank assembly GCA_013003805.1. The GC content of the type genome is 63.81 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Obtunaria gen. nov.

Candidatus Obtunaria (NL. fem. n. *Obtunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDII01*. The type species for the genus is *Candidatus* Obtunaria lanifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Obtunella vigenousia sp. nov.

Candidatus Obtunella vigenousia (NL. fem. n. *vigenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEH01 sp902826305*. The type genome for the species is the GenBank assembly GCA_902826305.1. The GC content of the type genome is 68.58 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Obtunella gen. nov.

Candidatus Obtunella (NL. fem. n. *Obtunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEEH01*. The type species for the genus is *Candidatus* Obtunella vigenousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtunia inlapilenta sp. nov.

Candidatus Obtunia inlapilenta (NL. fem. n. *inlapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-42-7 sp001803645*. The type genome for the species is the GenBank assembly GCA_001803645.1. The GC content of the type genome is 42.06 % and the genome length is 2.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Obtunia gen. nov.

Candidatus Obtunia (NL. fem. n. *Obtunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-42-7*. The type species for the genus is *Candidatus* Obtunia inlapilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6898*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunellaceae.

Description of *Candidatus* Obtunida isoscilenta sp. nov.

Candidatus Obtunida isoscilenta (NL. fem. n. *isoscilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAT2750 sp002708345*. The type genome for the species is the GenBank assembly GCA_002708345.1. The GC content of the type genome is 58.19 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Obtunida gen. nov.

Candidatus Obtunida (NL. fem. n. *Obtunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SAT2750*. The type species for the genus is *Candidatus* Obtunida isoscilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obtunosa semapax sp. nov.

Candidatus Obtunosa semapax (NL. fem. n. *semapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJD01 sp011338025*. The type genome for the species is the GenBank assembly GCA_011338025.1. The GC content of the type genome is 50.5 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Obtunosa gen. nov.

Candidatus Obtunosa (NL. fem. n. *Obtunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJD01*. The type species for the genus is *Candidatus* Obtunosa semapax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicellaceae.

Description of *Candidatus* Obtunula obvolitoga sp. nov.

Candidatus Obtunula obvolitoga (NL. fem. n. *obvolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-40-8 sp002770795*. The type genome for the species is the GenBank assembly GCA_002770795.1. The GC content of the type genome is 39.72 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Obtunula gen. nov.

Candidatus Obtunula (NL. fem. n. *Obtunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-40-8*. The type species for the genus is *Candidatus* Obtunula obvolitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002770795*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conoposaceae.

Description of *Candidatus* Obvalana arvecimonas sp. nov.

Candidatus Obvalana arvecimonas (NL. fem. n. *arvecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9848 sp902797395*. The type genome for the species is the GenBank assembly GCA_902797395.1. The GC content of the type genome is 46.02 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Obvalana gen. nov.

Candidatus Obvalana (NL. fem. n. *Obvalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9848*. The type species for the genus is *Candidatus* Obvalana arvecimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvalana insinitoga sp. nov.

Candidatus Obvalana insinitoga (NL. fem. n. *insinitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9848 sp003454065*. The type genome for the species is the GenBank assembly GCA_003454065.1. The GC content of the type genome is 48.0 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Obvalaria excetastra sp. nov.

Candidatus Obvalaria excetastra (NL. fem. n. *excetastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-19 sp002837195*. The type genome for the species is the GenBank assembly RS_GCF_002837195.1. The GC content of the type genome is 52.75 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Obvalaria gen. nov.

Candidatus Obvalaria (NL. fem. n. *Obvalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-19*. The type species for the genus is *Candidatus* Obvalaria excetastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvalaria musulimonas sp. nov.

Candidatus Obvalaria musulimonas (NL. fem. n. *musulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-19 sp001922585*. The type genome for the species is the GenBank assembly RS_GCF_001922585.1. The GC content of the type genome is 59.86 % and the genome length is 3.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rice paddies".

Description of *Candidatus* Obvalia refunetta sp. nov.

Candidatus Obvalia refunetta (NL. fem. n. *refunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUCF01 sp012959965*. The type genome for the species is the GenBank assembly GCA_012959965.1. The GC content of the type genome is 43.12 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Obvalia gen. nov.

Candidatus Obvalia (NL. fem. n. *Obvalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUCF01*. The type species for the genus is *Candidatus* Obvalia refunetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvalula denoribra sp. nov.

Candidatus Obvalula denoribra (NL. fem. n. *denoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKB01 sp013287215*. The type genome for the species is the GenBank assembly GCA_013287215.1. The GC content of the type genome is 49.91 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Obvalula gen. nov.

Candidatus Obvalula (NL. fem. n. *Obvalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKB01*. The type species for the genus is *Candidatus* Obvalula denoribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvalula nugigiforma sp. nov.

Candidatus Obvalula nugigiforma (NL. fem. n. *nugigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKB01 sp009885755*. The type genome for the species is the

GenBank assembly GCA_009885755.1. The GC content of the type genome is 49.26 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Obverana absegicella sp. nov.

Candidatus Obverana absegicella (NL. fem. n. *absegicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHQ01 sp011370785*. The type genome for the species is the GenBank assembly GCA_011370785.1. The GC content of the type genome is 38.59 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Obverana gen. nov.

Candidatus Obverana (NL. fem. n. *Obverana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHQ01*. The type species for the genus is *Candidatus* Obverana absegicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obveraria adpelicula sp. nov.

Candidatus Obveraria adpelicula (NL. fem. n. *adpelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *992a sp001940245*. The type genome for the species is the GenBank assembly RS_GCF_001940245.1. The GC content of the type genome is 40.07 % and the genome length is 2.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Obveraria gen. nov.

Candidatus Obveraria (NL. fem. n. *Obveraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *992a*. The type species for the genus is *Candidatus* Obveraria adpelicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obverella arremousia sp. nov.

Candidatus Obverella arremousia (NL. fem. n. *arremousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDG01 sp007693605*. The type genome for the species is the GenBank assembly GCA_007693605.1. The GC content of the type genome is 49.45 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Obverella gen. nov.

Candidatus Obverella (NL. fem. n. *Obverella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDG01*. The type species for the genus is *Candidatus* Obverella arremousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeroposaceae.

Description of *Candidatus* Obverula advorilega sp. nov.

Candidatus Obverula advorilega (NL. fem. n. *advorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTNP01 sp011389075*. The type genome for the species is the GenBank assembly GCA_011389075.1. The GC content of the type genome is 54.06 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Obverula gen. nov.

Candidatus Obverula (NL. fem. n. *Obverula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTNP01*. The type species for the genus is *Candidatus* Obverula advorilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvolana pinifilenta sp. nov.

Candidatus Obvolana pinifilenta (NL. fem. n. *pinifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CU05-9 sp007556525*. The type genome for the species is the GenBank assembly RS_GCF_007556525.1. The GC content of the type genome is 55.34 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Obvolana gen. nov.

Candidatus Obvolana (NL. fem. n. *Obvolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CU05-9*. The type species for the genus is *Candidatus* Obvolana pinifilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvolella arcipedo sp. nov.

Candidatus Obvolella arcipedo (NL. fem. n. *arcipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PTKV01 sp002937895*. The type genome for the species is the GenBank assembly GCA_002937895.1. The GC content of the type genome is 27.0 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Obvolella gen. nov.

Candidatus Obvolella (NL. fem. n. *Obvolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PTKV01*. The type species for the genus is *Candidatus* Obvolella arcipedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Obvolia pedifigena sp. nov.

Candidatus Obvolia pedifigena (NL. fem. n. *pedifigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAS01 sp013695295*. The type genome for the species is the GenBank assembly GCA_013695295.1. The GC content of the type genome is 71.19 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Obvolia gen. nov.

Candidatus Obvolia (NL. fem. n. *Obvolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAS01*. The type species for the genus is *Candidatus* Obvolia pedifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvolida odontitoga sp. nov.

Candidatus Obvolida odontitoga (NL. fem. n. *odontitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7957 sp003511825*. The type genome for the species is the GenBank assembly GCA_003511825.1. The GC content of the type genome is 55.91 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Obvolida gen. nov.

Candidatus Obvolida (NL. fem. n. *Obvolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7957*. The type species for the genus is *Candidatus* Obvolida odontitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Obvolosa inlusicella sp. nov.

Candidatus Obvolosa inlusicella (NL. fem. n. *inlusicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2219 sp009783195*. The type genome for the species is the GenBank assembly GCA_009783195.1. The GC content of the type genome is 54.54 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Obvolosa gen. nov.

Candidatus Obvolosa (NL. fem. n. *Obvolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2219*. The type species for the genus is *Candidatus* Obvolosa inlusicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Obvolosa palifibra sp. nov.

Candidatus Obvolosa palifibra (NL. fem. n. *palifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2219 sp002327765*. The type genome for the species is the GenBank assembly GCA_002327765.1. The GC content of the type genome is 66.88 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Obvolula dibapibula sp. nov.

Candidatus Obvolula dibapibula (NL. fem. n. *dibapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W693 sp011170385*. The type genome for the species is the GenBank assembly GCA_011170385.1. The GC content of the type genome is 51.0 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Obvolula gen. nov.

Candidatus Obvolula (NL. fem. n. *Obvolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *W693*. The type species for the genus is *Candidatus* Obvolula dibapibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5627*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilosaceae.

Description of *Candidatus* Occalana tabificella sp. nov.

Candidatus Occalana tabificella (NL. fem. n. *tabificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-49 sp005883905*. The type genome for the species is the GenBank assembly GCA_005883905.1. The GC content of the type genome is 71.46 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Occalana gen. nov.

Candidatus Occalana (NL. fem. n. *Occalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-49*. The type species for the genus is *Candidatus* Occalana tabificella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occalaria colubisca sp. nov.

Candidatus Occalaria colubisca (NL. fem. n. *colubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFW01 sp009787435*. The type genome for the species is the GenBank assembly GCA_009787435.1. The GC content of the type genome is 33.13 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Occalaria gen. nov.

Candidatus Occalaria (NL. fem. n. *Occalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFW01*. The type species for the genus is *Candidatus* Occalaria

colubisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Occalella ciloticella sp. nov.

Candidatus Occalella ciloticella (NL. fem. n. *ciloticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1347 sp007747215*. The type genome for the species is the GenBank assembly RS_GCF_007747215.1. The GC content of the type genome is 71.33 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Occalella gen. nov.

Candidatus Occalella (NL. fem. n. *Occalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1347*. The type species for the genus is *Candidatus* Occalella ciloticella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occalella repecitio sp. nov.

Candidatus Occalella repecitio (NL. fem. n. *repecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1347 sp003136315*. The type genome for the species is the GenBank assembly GCA_003136315.1. The GC content of the type genome is 61.32 % and the genome length is 11.59 Mbp.

Description of *Candidatus* Occalia inmutitura sp. nov.

Candidatus Occalia inmutitura (NL. fem. n. *inmutitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MT45 sp900100325*. The type genome for the species is the GenBank

assembly RS_GCF_900100325.1. The GC content of the type genome is 67.3 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Occalia gen. nov.

Candidatus Occalia (NL. fem. n. *Occalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MT45*. The type species for the genus is *Candidatus* Occalia inmutitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occalia sacopisca sp. nov.

Candidatus Occalia sacopisca (NL. fem. n. *sacopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MT45 sp900230215*. The type genome for the species is the GenBank assembly RS_GCF_900230215.1. The GC content of the type genome is 66.94 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Occalida munifugo sp. nov.

Candidatus Occalida munifugo (NL. fem. n. *munifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-14-A sp001780895*. The type genome for the species is the GenBank assembly GCA_001780895.1. The GC content of the type genome is 45.81 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Occalida gen. nov.

Candidatus Occalida (NL. fem. n. *Occalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-46-14-A*. The type species for the genus is *Candidatus* Occalida munifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Casigellaceae.

Description of *Candidatus* Occalula fumacilenta sp. nov.

Candidatus Occalula fumacilenta (NL. fem. n. *fumacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVSB01 sp013697275*. The type genome for the species is the GenBank assembly GCA_013697275.1. The GC content of the type genome is 69.87 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Occalula gen. nov.

Candidatus Occalula (NL. fem. n. *Occalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVSB01*. The type species for the genus is *Candidatus* Occalula fumacilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occalula visocigena sp. nov.

Candidatus Occalula visocigena (NL. fem. n. *visocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVSB01 sp014534155*. The type genome for the species is the GenBank assembly GCA_014534155.1. The GC content of the type genome is 72.59 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Occenaria bifisitas sp. nov.

Candidatus Occenaria bifisitas (NL. fem. n. *bifisitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708715 sp002691285*. The type genome for the species is the GenBank assembly GCA_002691285.1. The GC content of the type genome is 32.76 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Occenaria gen. nov.

Candidatus Occenaria (NL. fem. n. *Occenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002708715*. The type species for the genus is *Candidatus* Occenaria bifisitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Occenaria ininnisca sp. nov.

Candidatus Occenaria ininnisca (NL. fem. n. *ininnisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708715 sp002694025*. The type genome for the species is the GenBank assembly GCA_002694025.1. The GC content of the type genome is 32.29 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Occenaria peracilega sp. nov.

Candidatus Occenaria peracilega (NL. fem. n. *peracilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708715 sp002708715*. The type genome for the species is the GenBank assembly GCA_002708715.1. The GC content of the type genome is 31.69 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Occenaria subadastra sp. nov.

Candidatus Occenaria subadastra (NL. fem. n. *subadastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708715 sp902602795*. The type genome for the species is the GenBank assembly GCA_902602795.1. The GC content of the type genome is 32.65 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Occenida arbavicula sp. nov.

Candidatus Occenida arbavicula (NL. fem. n. *arbavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-61-12 sp001873705*. The type genome for the species is the GenBank assembly GCA_001873705.1. The GC content of the type genome is 60.77 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Occenida gen. nov.

Candidatus Occenida (NL. fem. n. *Occenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-61-12*. The type species for the genus is *Candidatus* Occenida arbavicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-9756*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deculellaceae.

Description of *Candidatus* Occenosa demadugo sp. nov.

Candidatus Occenosa demadugo (NL. fem. n. *demadugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs238 sp005776545*. The type genome for the species is the GenBank assembly GCA_005776545.1. The GC content of the type genome is 54.88 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Occenosa gen. nov.

Candidatus Occenosa (NL. fem. n. *Occenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-120-MAGs238*. The type species for the genus is *Candidatus* Occenosa demadugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Occenula imbecivita sp. nov.

Candidatus Occenula imbecivita (NL. fem. n. *imbecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACPJY01 sp902634405*. The type genome for the species is the GenBank assembly GCA_902634405.1. The GC content of the type genome is 39.29 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Occenula gen. nov.

Candidatus Occenula (NL. fem. n. *Occenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACPJY01*. The type species for the genus is *Candidatus* Occenula imbecivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occucana venabiforma sp. nov.

Candidatus Occucana venabiforma (NL. fem. n. *venabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJA01 sp009782435*. The type genome for the species is the GenBank assembly GCA_009782435.1. The GC content of the type genome is 51.62 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Occucana gen. nov.

Candidatus Occucana (NL. fem. n. *Occucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRJA01*. The type species for the genus is *Candidatus* Occucana venabiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occucaria butubitio sp. nov.

Candidatus Occucaria butubitio (NL. fem. n. *butubitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ML8-F1 sp002029975*. The type genome for the species is the GenBank assembly GCA_002029975.1. The GC content of the type genome is 50.39 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Occucaria gen. nov.

Candidatus Occucaria (NL. fem. n. *Occucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ML8-F1*. The type species for the genus is *Candidatus* Occucaria butubitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occucella conamiforma sp. nov.

Candidatus Occucella conamiforma (NL. fem. n. *conamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-12 sp005877615*. The type genome for the species is the GenBank assembly GCA_005877615.1. The GC content of the type genome is 63.06 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Occucella gen. nov.

Candidatus Occucella (NL. fem. n. *Occucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NS-12*. The type species for the genus is *Candidatus* Occucella conamiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NS-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavulaceae.

Description of *Candidatus* Occucella dilogousia sp. nov.

Candidatus Occucella dilogousia (NL. fem. n. *dilogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-12 sp005877855*. The type genome for the species is the GenBank assembly GCA_005877855.1. The GC content of the type genome is 62.05 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Occucella ignomilega sp. nov.

Candidatus Occucella ignomilega (NL. fem. n. *ignomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-12 sp005877505*. The type genome for the species is the GenBank assembly GCA_005877505.1. The GC content of the type genome is 62.5 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Occucella veriditia sp. nov.

Candidatus Occucella veriditia (NL. fem. n. *veriditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-12 sp005877565*. The type genome for the species is the GenBank assembly GCA_005877565.1. The GC content of the type genome is 62.11 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Occucida apharatica sp. nov.

Candidatus Occucida apharatica (NL. fem. n. *apharatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPVD01 sp903868375*. The type genome for the species is the GenBank assembly GCA_903868375.1. The GC content of the type genome is 47.66 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Occucida gen. nov.

Candidatus Occucida (NL. fem. n. *Occucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPVD01*. The type species for the genus is *Candidatus* Occucida

apharatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-49-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunanaceae.

Description of *Candidatus* Occucosa altipitoga sp. nov.

Candidatus Occucosa altipitoga (NL. fem. n. *altipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKMO01 sp007121025*. The type genome for the species is the GenBank assembly GCA_007121025.1. The GC content of the type genome is 56.1 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Occucosa gen. nov.

Candidatus Occucosa (NL. fem. n. *Occucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKMO01*. The type species for the genus is *Candidatus* Occucosa altipitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibariaceae.

Description of *Candidatus* Occumana meriditoga sp. nov.

Candidatus Occumana meriditoga (NL. fem. n. *meriditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UWMA-0041 sp012965625*. The type genome for the species is the GenBank assembly GCA_012965625.1. The GC content of the type genome is 38.13 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Occumana gen. nov.

Candidatus Occumana (NL. fem. n. *Occumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UWMA-0041*. The type species for the genus is *Candidatus* Occumana meriditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NORP154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinariaceae.

Description of *Candidatus* Occumaria appugessa sp. nov.

Candidatus Occumaria appugessa (NL. fem. n. *appugessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFD01 sp902826515*. The type genome for the species is the GenBank assembly GCA_902826515.1. The GC content of the type genome is 70.19 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Occumaria gen. nov.

Candidatus Occumaria (NL. fem. n. *Occumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFD01*. The type species for the genus is *Candidatus* Occumaria appugessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Occumaria semapatio sp. nov.

Candidatus Occumaria semapatio (NL. fem. n. *semapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFD01 sp902826065*. The type genome for the species is the GenBank assembly GCA_902826065.1. The GC content of the type genome is 70.77 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Occumella caselitrix sp. nov.

Candidatus Occumella caselitrix (NL. fem. n. *caselitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQCE01 sp903870185*. The type genome for the species is the GenBank assembly GCA_903870185.1. The GC content of the type genome is 40.62 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Occumella gen. nov.

Candidatus Occumella (NL. fem. n. *Occumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQCE01*. The type species for the genus is *Candidatus* Occumella caselitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occumia homiletta sp. nov.

Candidatus Occumia homiletta (NL. fem. n. *homiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMO01 sp009841045*. The type genome for the species is the GenBank assembly GCA_009841045.1. The GC content of the type genome is 60.49 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Occumia gen. nov.

Candidatus Occumia (NL. fem. n. *Occumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXMO01*. The type species for the genus is *Candidatus* Occumia homiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6926*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paropulaceae.

Description of *Candidatus* Occumia subadivita sp. nov.

Candidatus Occumia subadivita (NL. fem. n. *subadivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMO01 sp012271225*. The type genome for the species is the GenBank assembly GCA_012271225.1. The GC content of the type genome is 64.63 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Occumida accogatica sp. nov.

Candidatus Occumida accogatica (NL. fem. n. *accogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDA01 sp013287845*. The type genome for the species is the GenBank assembly GCA_013287845.1. The GC content of the type genome is 35.93 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Occumida gen. nov.

Candidatus Occumida (NL. fem. n. *Occumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDA01*. The type species for the genus is *Candidatus* Occumida accogatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Occumosa abluvedo sp. nov.

Candidatus Occumosa abluvedo (NL. fem. n. *abluvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDEG01 sp013816505*. The type genome for the species is the GenBank assembly GCA_013816505.1. The GC content of the type genome is 58.44 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Occumosa gen. nov.

Candidatus Occumosa (NL. fem. n. *Occumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDEG01*. The type species for the genus is *Candidatus* Occumosa

abluvedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Occumula obsolitia sp. nov.

Candidatus Occumula obsolitia (NL. fem. n. *obsolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13409 sp902788795*. The type genome for the species is the GenBank assembly GCA_902788795.1. The GC content of the type genome is 52.58 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Occumula gen. nov.

Candidatus Occumula (NL. fem. n. *Occumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13409*. The type species for the genus is *Candidatus* Occumula obsolitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oceanicaulis duponicula sp. nov.

Candidatus Oceanicaulis duponicula (NL. fem. n. *duponicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicaulis sp003046365*. The type genome for the species is the GenBank assembly RS_GCF_004364605.1. The GC content of the type genome is 61.71 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Oceanicaulis episcitia sp. nov.

Candidatus Oceanicaulis episcitia (NL. fem. n. *episcitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicaulis sp001657295*. The type genome for the species is the GenBank assembly GCA_001657295.1. The GC content of the type genome is 65.4 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "enrichment culture inoculated with black band disease microbial mat".

Description of *Candidatus* Oceanicaulis viragessa sp. nov.

Candidatus Oceanicaulis viragessa (NL. fem. n. *viragessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicaulis sp007571185*. The type genome for the species is the GenBank assembly GCA_007571025.1. The GC content of the type genome is 57.92 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Oceanicaulis visibax sp. nov.

Candidatus Oceanicaulis visibax (NL. fem. n. *visibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicaulis sp008630495*. The type genome for the species is the GenBank assembly RS_GCF_008630495.1. The GC content of the type genome is 66.8 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Oceanicaulis visocatica sp. nov.

Candidatus Oceanicaulis visocatica (NL. fem. n. *visocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicaulis sp000152745*. The type genome for the species is the GenBank assembly GCA_002683955.1. The GC content of the type genome is 63.21 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Oceanicoccus adsifax sp. nov.

Candidatus Oceanicoccus adsifax (NL. fem. n. *adsifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicoccus sp000169075*. The type genome for the species is the GenBank assembly RS_GCF_000169075.1. The GC content of the type genome is 47.16 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Oceanicoccus triscatica sp. nov.

Candidatus Oceanicoccus triscatica (NL. fem. n. *triscatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicoccus sp900120175*. The type genome for the species is the GenBank assembly RS_GCF_900120175.1. The GC content of the type genome is 45.9 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Oceanicola adporimonia sp. nov.

Candidatus Oceanicola adporimonia (NL. fem. n. *adporimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicola sp008710275*. The type genome for the species is the GenBank assembly RS_GCF_008710275.1. The GC content of the type genome is 67.71 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Oceanicola tranvastra sp. nov.

Candidatus Oceanicola tranvastra (NL. fem. n. *tranvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanicola sp006363825*. The type genome for the species is the GenBank assembly RS_GCF_006363825.1. The GC content of the type genome is 65.98 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Oceaniglobus adlacitas sp. nov.

Candidatus Oceaniglobus adlacitas (NL. fem. n. *adlacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceaniglobus sp009992615*. The type genome for the species is the GenBank assembly GCA_009992615.1. The GC content of the type genome is 62.19 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Oceaniglobus omninivita sp. nov.

Candidatus Oceaniglobus omninivita (NL. fem. n. *omninivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceaniglobus sp008085915*. The type genome for the species is the GenBank assembly RS_GCF_008085915.1. The GC content of the type genome is 60.64 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Oceanimonas insibitia sp. nov.

Candidatus Oceanimonas insibitia (NL. fem. n. *insibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanimonas sp000243075*. The type genome for the species is the GenBank assembly RS_GCF_000243075.1. The GC content of the type genome is 61.08 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Oceanisphaera desupiforma sp. nov.

Candidatus Oceanisphaera desupiforma (NL. fem. n. *desupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanisphaera sp012518835*. The type genome for the species is the GenBank assembly GCA_012518835.1. The GC content of the type genome is 47.79 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Oceanispirochaeta desurivita sp. nov.

Candidatus Oceanispirochaeta desurivita (NL. fem. n. *desurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanispirochaeta sp003249275*. The type genome for the species is the GenBank assembly GCA_003249275.1. The GC content of the type genome is 50.75 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Oceanispirochaeta lanugiforma sp. nov.

Candidatus Oceanispirochaeta lanugiforma (NL. fem. n. *lanugiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanispirochaeta sp002408085*. The type genome for the species is the GenBank assembly GCA_002408085.1. The GC content of the type genome is 50.51

% and the genome length is 4.55 Mbp.

Description of *Candidatus* Oceanispirochaeta saxopiforma sp. nov.

Candidatus Oceanispirochaeta saxopiforma (NL. fem. n. *saxopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanispirochaeta sp008329965*. The type genome for the species is the GenBank assembly RS_GCF_008329965.1. The GC content of the type genome is 43.24 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Oceanispirochaeta taxilitas sp. nov.

Candidatus Oceanispirochaeta taxilitas (NL. fem. n. *taxilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanispirochaeta sp002084805*. The type genome for the species is the GenBank assembly GCA_002084805.1. The GC content of the type genome is 43.07 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Oceanispirochaeta verecatica sp. nov.

Candidatus Oceanispirochaeta verecatica (NL. fem. n. *verecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanispirochaeta sp003346715*. The type genome for the species is the GenBank assembly RS_GCF_013166715.1. The GC content of the type genome is 42.89 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Oceanitalea refacastra sp. nov.

Candidatus Oceanitalea refacastra (NL. fem. n. *refacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanitalea sp006349365*. The type genome for the species is the GenBank assembly RS_GCF_006349365.1. The GC content of the type genome is 73.27 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Oceanobacillus inarditia sp. nov.

Candidatus Oceanobacillus inarditia (NL. fem. n. *inarditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanobacillus sp001659985*. The type genome for the species is the GenBank assembly RS_GCF_001659985.1. The GC content of the type genome is 35.75 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Oceanobacillus lanifitura sp. nov.

Candidatus Oceanobacillus lanifitura (NL. fem. n. *lanifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanobacillus sp003352005*. The type genome for the species is the GenBank assembly RS_GCF_003352005.1. The GC content of the type genome is 37.09 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Oceanobacillus nefaratica sp. nov.

Candidatus Oceanobacillus nefaratica (NL. fem. n. *nefaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanobacillus sp009389585*. The type genome for the species is the GenBank assembly RS_GCF_009389585.1. The GC content of the type genome is 38.56 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Oceanobacillus scammastra sp. nov.

Candidatus Oceanobacillus scammastra (NL. fem. n. *scammastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanobacillus sp009733865*. The type genome for the species is the GenBank assembly RS_GCF_009733865.1. The GC content of the type genome is 37.53 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Oceanobacter famelilenta sp. nov.

Candidatus Oceanobacter famelilenta (NL. fem. n. *famelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanobacter sp002723385*. The type genome for the species is the GenBank assembly GCA_002723385.1. The GC content of the type genome is 53.2 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Oceanospirillum arremisca sp. nov.

Candidatus Oceanospirillum arremisca (NL. fem. n. *arremisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oceanospirillum sp014164585*. The type genome for the species is the GenBank assembly RS_GCF_014164585.1. The GC content of the type genome is 47.18 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Ochrobactrum bicodatio sp. nov.

Candidatus Ochrobactrum bicodatio (NL. fem. n. *bicodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum sp900470195*. The type genome for the species is the GenBank assembly RS_GCF_900472385.1. The GC content of the type genome is 57.38 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Ochrobactrum inhumicella sp. nov.

Candidatus Ochrobactrum inhumicella (NL. fem. n. *inhumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum sp900473915*. The type genome for the species is the GenBank assembly RS_GCF_900473915.1. The GC content of the type genome is 57.65 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Ochrobactrum loraredo sp. nov.

Candidatus Ochrobactrum loraredo (NL. fem. n. *loraredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum sp006345815*. The type genome for the species is the GenBank assembly RS_GCF_006345815.1. The GC content of the type genome is 55.16

% and the genome length is 4.6 Mbp.

Description of *Candidatus* Ochrobactrum luceriforma sp. nov.

Candidatus Ochrobactrum luceriforma (NL. fem. n. *luceriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum sp003176975*. The type genome for the species is the GenBank assembly RS_GCF_902825325.1. The GC content of the type genome is 55.85 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Ochrobactrum videligena sp. nov.

Candidatus Ochrobactrum videligena (NL. fem. n. *videligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum sp002975205*. The type genome for the species is the GenBank assembly RS_GCF_002975205.1. The GC content of the type genome is 55.88 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Ochrobactrum actutugo sp. nov.

Candidatus Ochrobactrum actutugo (NL. fem. n. *actutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum_A sp004368705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004368705.1. The GC content of the type genome is 52.65 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Ochrobactrum innulilega sp. nov.

Candidatus Ochrobactrum innulilega (NL. fem. n. *innulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum_A sp014397025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014397025.1. The GC

content of the type genome is 52.13 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Ochrobactrum anastilenta sp. nov.

Candidatus Ochrobactrum anastilenta (NL. fem. n. *anastilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum_B sp014138095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014138095.1. The GC content of the type genome is 56.49 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Ochrobactrum peradibra sp. nov.

Candidatus Ochrobactrum peradibra (NL. fem. n. *peradibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ochrobactrum_B sp900465685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014138065.1. The GC content of the type genome is 56.64 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Ocissella encolilega sp. nov.

Candidatus Ocissella encolilega (NL. fem. n. *encolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2723085 sp002723085*. The type genome for the species is the GenBank assembly GCA_002723085.1. The GC content of the type genome is 30.04 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Ocissella gen. nov.

Candidatus Ocissella (NL. fem. n. *Ocissella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2723085*. The type species for the genus is *Candidatus* Ocissella encolilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Ocissia inmutousia sp. nov.

Candidatus Ocissia inmutousia (NL. fem. n. *inmutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICD01 sp009694865*. The type genome for the species is the GenBank assembly GCA_009694865.1. The GC content of the type genome is 46.51 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Ocissia gen. nov.

Candidatus Ocissia (NL. fem. n. *Ocissia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICD01*. The type species for the genus is *Candidatus* Ocissia inmutousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Ocissosa arrugiforma sp. nov.

Candidatus Ocissosa arrugiforma (NL. fem. n. *arrugiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQN01 sp012519285*. The type genome for the species is the GenBank assembly GCA_012519285.1. The GC content of the type genome is 51.78 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Ocissosa gen. nov.

Candidatus Ocissosa (NL. fem. n. *Ocissosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQN01*. The type species for the genus is *Candidatus* Ocissosa

arrugiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM11417*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibicariaceae.

Description of *Candidatus* Octacana algebetta sp. nov.

Candidatus Octacana algebetta (NL. fem. n. *algebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHU01 sp013297645*. The type genome for the species is the GenBank assembly GCA_013297645.1. The GC content of the type genome is 67.99 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Octacana gen. nov.

Candidatus Octacana (NL. fem. n. *Octacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHU01*. The type species for the genus is *Candidatus* Octacana algebetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octacella cicilitas sp. nov.

Candidatus Octacella cicilitas (NL. fem. n. *cicilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LCBW01 sp000997465*. The type genome for the species is the GenBank assembly GCA_000997465.1. The GC content of the type genome is 40.81 % and the genome length is 0.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Octacella gen. nov.

Candidatus Octacella (NL. fem. n. *Octacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LCBW01*. The type species for the genus is *Candidatus* Octacella

cicilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HR35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanosaceae.

Description of *Candidatus* Octacia decupibula sp. nov.

Candidatus Octacia decupibula (NL. fem. n. *decupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J084 sp003695555*. The type genome for the species is the GenBank assembly GCA_003695555.1. The GC content of the type genome is 64.5 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Octacia gen. nov.

Candidatus Octacia (NL. fem. n. *Octacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J084*. The type species for the genus is *Candidatus* Octacia decupibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octacida decamitas sp. nov.

Candidatus Octacida decamitas (NL. fem. n. *decamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-55-8 sp001769835*. The type genome for the species is the GenBank assembly GCA_001769835.1. The GC content of the type genome is 55.17 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.1 filter".

Description of *Candidatus* Octacida gen. nov.

Candidatus Octacida (NL. fem. n. *Octacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-55-8*. The type species for the genus is *Candidatus* Octacida

decamitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Octacosa arbavitudo sp. nov.

Candidatus Octacosa arbavitudo (NL. fem. n. *arbavitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-20-63-9 sp002796105*. The type genome for the species is the GenBank assembly GCA_002796105.1. The GC content of the type genome is 63.48 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Octacosa gen. nov.

Candidatus Octacosa (NL. fem. n. *Octacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-20-63-9*. The type species for the genus is *Candidatus* Octacosa arbavitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetariaceae.

Description of *Candidatus* Octacula curabisca sp. nov.

Candidatus Octacula curabisca (NL. fem. n. *curabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12018 sp003447595*. The type genome for the species is the GenBank assembly GCA_003447595.1. The GC content of the type genome is 40.99 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Octacula gen. nov.

Candidatus Octacula (NL. fem. n. *Octacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA12018*. The type species for the genus is *Candidatus* Octacula curabisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octadecabacter irregibra sp. nov.

Candidatus Octadecabacter irregibra (NL. fem. n. *irregibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Octadecabacter sp003533975*. The type genome for the species is the GenBank assembly GCA_003533975.1. The GC content of the type genome is 55.23 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Octinana antefitura sp. nov.

Candidatus Octinana antefitura (NL. fem. n. *antefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVQ01 sp009694195*. The type genome for the species is the GenBank assembly GCA_009694195.1. The GC content of the type genome is 65.67 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Octinana gen. nov.

Candidatus Octinana (NL. fem. n. *Octinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVQ01*. The type species for the genus is *Candidatus* Octinana antefitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-67-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susiculaceae.

Description of *Candidatus* Octinaria ancepisca sp. nov.

Candidatus Octinaria ancepisca (NL. fem. n. *ancepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DTIX01 sp011334465*. The type genome for the species is the GenBank assembly GCA_011334465.1. The GC content of the type genome is 63.16 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Octinaria gen. nov.

Candidatus Octinaria (NL. fem. n. *Octinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIX01*. The type species for the genus is *Candidatus* Octinaria ancepisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octinella antirentia sp. nov.

Candidatus Octinella antirentia (NL. fem. n. *antirentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6183 sp004293295*. The type genome for the species is the GenBank assembly GCA_004293295.1. The GC content of the type genome is 38.45 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Octinella gen. nov.

Candidatus Octinella (NL. fem. n. *Octinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6183*. The type species for the genus is *Candidatus* Octinella antirentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Octinella omnimitica sp. nov.

Candidatus Octinella omnimitica (NL. fem. n. *omnimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6183 sp002422865*. The type genome for the species is the

GenBank assembly GCA_002422865.1. The GC content of the type genome is 36.78 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Octinia dececatica sp. nov.

Candidatus Octinia dececatica (NL. fem. n. *dececatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBK01 sp011046085*. The type genome for the species is the GenBank assembly GCA_011046085.1. The GC content of the type genome is 40.97 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Octinia gen. nov.

Candidatus Octinia (NL. fem. n. *Octinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBK01*. The type species for the genus is *Candidatus* Octinia dececatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacanaceae.

Description of *Candidatus* Octinida adambitudo sp. nov.

Candidatus Octinida adambitudo (NL. fem. n. *adambitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRS01 sp012518645*. The type genome for the species is the GenBank assembly GCA_012518645.1. The GC content of the type genome is 47.51 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Octinida gen. nov.

Candidatus Octinida (NL. fem. n. *Octinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRS01*. The type species for the genus is *Candidatus* Octinida adambitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

DTU010. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Octinula subinessa sp. nov.

Candidatus Octinula subinessa (NL. fem. n. *subinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-315 sp011046845*. The type genome for the species is the GenBank assembly GCA_011046845.1. The GC content of the type genome is 68.93 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Octinula gen. nov.

Candidatus Octinula (NL. fem. n. *Octinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-315*. The type species for the genus is *Candidatus* Octinula subinessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *13-1-40CM-64-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refululaceae.

Description of *Candidatus* Octipana immatibra sp. nov.

Candidatus Octipana immatibra (NL. fem. n. *immatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDO01 sp903847385*. The type genome for the species is the GenBank assembly GCA_903847385.1. The GC content of the type genome is 72.05 % and the genome length is 9.48 Mbp.

Description of *Candidatus* Octipana gen. nov.

Candidatus Octipana (NL. fem. n. *Octipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINDO01*. The type species for the genus is *Candidatus* Octipana immatibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democellaceae.

Description of *Candidatus* Octiparia domipastra sp. nov.

Candidatus Octiparia domipastra (NL. fem. n. *domipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6114 sp002423435*. The type genome for the species is the GenBank assembly GCA_002423435.1. The GC content of the type genome is 52.99 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Octiparia gen. nov.

Candidatus Octiparia (NL. fem. n. *Octiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6114*. The type species for the genus is *Candidatus* Octiparia domipastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octipella cibicilega sp. nov.

Candidatus Octipella cibicilega (NL. fem. n. *cibicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1202 sp900549565*. The type genome for the species is the GenBank assembly GCA_900549565.1. The GC content of the type genome is 65.31 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Octipella gen. nov.

Candidatus Octipella (NL. fem. n. *Octipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1202*. The type species for the genus is *Candidatus* Octipella cibicilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octipia inperivita sp. nov.

Candidatus Octipia inperivita (NL. fem. n. *inperivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAXT01 sp013696805*. The type genome for the species is the GenBank assembly GCA_013696805.1. The GC content of the type genome is 67.8 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Octipia gen. nov.

Candidatus Octipia (NL. fem. n. *Octipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VAXT01*. The type species for the genus is *Candidatus* Octipia inperivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octipia inrepibra sp. nov.

Candidatus Octipia inrepibra (NL. fem. n. *inrepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAXT01 sp005883245*. The type genome for the species is the GenBank assembly GCA_005883245.1. The GC content of the type genome is 68.98 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Octipula effigiforma sp. nov.

Candidatus Octipula effigiforma (NL. fem. n. *effigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA11 sp002919115*. The type genome for the species is the GenBank assembly GCA_002919115.1. The GC content of the type genome is 71.9 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Octipula gen. nov.

Candidatus Octipula (NL. fem. n. *Octipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA11*. The type species for the genus is *Candidatus* Octipula effigiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Octobana ignositrix sp. nov.

Candidatus Octobana ignositrix (NL. fem. n. *ignositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCR01 sp013359125*. The type genome for the species is the GenBank assembly GCA_013359125.1. The GC content of the type genome is 58.56 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Octobana gen. nov.

Candidatus Octobana (NL. fem. n. *Octobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCR01*. The type species for the genus is *Candidatus* Octobana ignositrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-DC*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebiaceae.

Description of *Candidatus* Octobella anamnetta sp. nov.

Candidatus Octobella anamnetta (NL. fem. n. *anamnetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5158 sp013286085*. The type genome for the species is the GenBank assembly GCA_013286085.1. The GC content of the type genome is 40.6 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Octobella gen. nov.

Candidatus Octobella (NL. fem. n. *Octobella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5158*. The type species for the genus is *Candidatus* Octobella anamnetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Octobella defesilega sp. nov.

Candidatus Octobella defesilega (NL. fem. n. *defesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5158 sp013288815*. The type genome for the species is the GenBank assembly GCA_013288815.1. The GC content of the type genome is 38.13 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Octobella irrefilenta sp. nov.

Candidatus Octobella irrefilenta (NL. fem. n. *irrefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5158 sp903970525*. The type genome for the species is the GenBank assembly GCA_903970525.1. The GC content of the type genome is 39.77 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Octobella levifedo sp. nov.

Candidatus Octobella levifedo (NL. fem. n. *levifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5158 sp002413665*. The type genome for the species is the GenBank assembly GCA_002413665.1. The GC content of the type genome is 36.89 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Octobula cnestilega sp. nov.

Candidatus Octobula cnestilega (NL. fem. n. *cnestilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILLX01 sp903835185*. The type genome for the species is the GenBank assembly GCA_903835185.1. The GC content of the type genome is 50.08 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Octobula gen. nov.

Candidatus Octobula (NL. fem. n. *Octobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILLX01*. The type species for the genus is *Candidatus* Octobula cnestilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBAT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutidaceae.

Description of *Candidatus* Octodana reforax sp. nov.

Candidatus Octodana reforax (NL. fem. n. *reforax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KA00134 sp001574395*. The type genome for the species is the GenBank assembly RS_GCF_001574395.1. The GC content of the type genome is 35.1 % and the genome length is 1.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Octodana gen. nov.

Candidatus Octodana (NL. fem. n. *Octodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KA00134*. The type species for the genus is *Candidatus* Octodana reforax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octodaria linigifica sp. nov.

Candidatus Octodaria linigifica (NL. fem. n. *linigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBVW01 sp903959175*. The type genome for the species is the GenBank assembly GCA_903959175.1. The GC content of the type genome is 72.3 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Octodaria gen. nov.

Candidatus Octodaria (NL. fem. n. *Octodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBVW01*. The type species for the genus is *Candidatus* Octodaria linigifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXON01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucellaceae.

Description of *Candidatus* Octodella inperimonas sp. nov.

Candidatus Octodella inperimonas (NL. fem. n. *inperimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLQ01 sp012799255*. The type genome for the species is the GenBank assembly GCA_012799255.1. The GC content of the type genome is 45.49 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Octodella gen. nov.

Candidatus Octodella (NL. fem. n. *Octodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLQ01*. The type species for the genus is *Candidatus* Octodella inperimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Octodida exorbax sp. nov.

Candidatus Octodida exorbax (NL. fem. n. *exorbax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJ6 sp014584595*. The type genome for the species is the GenBank assembly GCA_014584595.1. The GC content of the type genome is 40.53 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Octodida gen. nov.

Candidatus Octodida (NL. fem. n. *Octodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJ6*. The type species for the genus is *Candidatus* Octodida exorbax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotosaceae.

Description of *Candidatus* Octodosa obmuricula sp. nov.

Candidatus Octodosa obmuricula (NL. fem. n. *obmuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alg239-R122 sp900537065*. The type genome for the species is the GenBank assembly RS_GCF_900537065.1. The GC content of the type genome is 54.03 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Octodosa gen. nov.

Candidatus Octodosa (NL. fem. n. *Octodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Alg239-R122*. The type species for the genus is *Candidatus* Octodosa obmuricula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octodula lapilicella sp. nov.

Candidatus Octodula lapilicella (NL. fem. n. *lapilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFHP01 sp009391535*. The type genome for the species is the GenBank assembly GCA_009391535.1. The GC content of the type genome is 41.08 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Octodula gen. nov.

Candidatus Octodula (NL. fem. n. *Octodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFHP01*. The type species for the genus is *Candidatus* Octodula lapilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Terebanaceae.

Description of *Candidatus* Octopana procritura sp. nov.

Candidatus Octopana procritura (NL. fem. n. *procritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin26 sp004376075*. The type genome for the species is the GenBank assembly GCA_004376075.1. The GC content of the type genome is 54.62 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Octopana gen. nov.

Candidatus Octopana (NL. fem. n. *Octopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin26*. The type species for the genus is *Candidatus* Octopana procritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogellaceae.

Description of *Candidatus* Octopia bicapimonas sp. nov.

Candidatus Octopia bicapimonas (NL. fem. n. *bicapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAXR01 sp003053505*. The type genome for the species is the GenBank assembly RS_GCF_003053505.1. The GC content of the type genome is 56.86 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Octopia gen. nov.

Candidatus Octopia (NL. fem. n. *Octopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAXR01*. The type species for the genus is *Candidatus* Octopia bicapimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octopia resacivita sp. nov.

Candidatus Octopia resacivita (NL. fem. n. *resacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAXR01 sp012797715*. The type genome for the species is the GenBank assembly GCA_012797715.1. The GC content of the type genome is 58.81 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Octopida allibetta sp. nov.

Candidatus Octopida allibetta (NL. fem. n. *allibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7396 sp002470645*. The type genome for the species is the GenBank assembly GCA_002470645.1. The GC content of the type genome is 26.5 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Octopida gen. nov.

Candidatus Octopida (NL. fem. n. *Octopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7396*. The type species for the genus is *Candidatus* Octopida

allibetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Octoposa idciritica sp. nov.

Candidatus Octoposa idciritica (NL. fem. n. *idciritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11551 sp902770245*. The type genome for the species is the GenBank assembly GCA_902770245.1. The GC content of the type genome is 49.27 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Octoposa gen. nov.

Candidatus Octoposa (NL. fem. n. *Octoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11551*. The type species for the genus is *Candidatus* Octoposa idciritica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octopula inforilenta sp. nov.

Candidatus Octopula inforilenta (NL. fem. n. *inforilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSL01 sp012518315*. The type genome for the species is the GenBank assembly GCA_012518315.1. The GC content of the type genome is 49.72 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Octopula gen. nov.

Candidatus Octopula (NL. fem. n. *Octopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSL01*. The type species for the genus is *Candidatus* Octopula inforilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Octupella adambimonas sp. nov.

Candidatus Octupella adambimonas (NL. fem. n. *adambimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-47-17 sp002786495*. The type genome for the species is the GenBank assembly GCA_002786495.1. The GC content of the type genome is 47.47 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Octupella gen. nov.

Candidatus Octupella (NL. fem. n. *Octupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-47-17*. The type species for the genus is *Candidatus* Octupella adambimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Octupia octopicella sp. nov.

Candidatus Octupia octopicella (NL. fem. n. *octopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AKCV01 sp000272025*. The type genome for the species is the GenBank assembly RS_GCF_000272025.2. The GC content of the type genome is 63.72 % and the genome length is 3.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "textile wastewater".

Description of *Candidatus* Octupia gen. nov.

Candidatus Octupia (NL. fem. n. *Octupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AKCV01*. The type species for the genus is *Candidatus* Octupia octopicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octuposa argimicella sp. nov.

Candidatus Octuposa argimicella (NL. fem. n. *argimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Im94 sp009749525*. The type genome for the species is the GenBank assembly RS_GCF_009749525.1. The GC content of the type genome is 63.6 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Octuposa gen. nov.

Candidatus Octuposa (NL. fem. n. *Octuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Im94*. The type species for the genus is *Candidatus* Octuposa argimicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octupula demadibra sp. nov.

Candidatus Octupula demadibra (NL. fem. n. *demadibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCUO01 sp902805915*. The type genome for the species is the GenBank assembly GCA_902805915.1. The GC content of the type genome is 66.92 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Octupula gen. nov.

Candidatus Octupula (NL. fem. n. *Octupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCUO01*. The type species for the genus is *Candidatus* Octupula demadibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octusaria inobledo sp. nov.

Candidatus Octusaria inobledo (NL. fem. n. *inobledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14903 sp902803795*. The type genome for the species is the GenBank assembly GCA_902803795.1. The GC content of the type genome is 24.53 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Octusaria gen. nov.

Candidatus Octusaria (NL. fem. n. *Octusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14903*. The type species for the genus is *Candidatus* Octusaria inobledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Octusella expurilenta sp. nov.

Candidatus Octusella expurilenta (NL. fem. n. *expurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVYY01 sp012517575*. The type genome for the species is the GenBank assembly GCA_012517575.1. The GC content of the type genome is 37.48 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Octusella gen. nov.

Candidatus Octusella (NL. fem. n. *Octusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVYY01*. The type species for the genus is *Candidatus* Octusella expurilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Octusella inmenibra sp. nov.

Candidatus Octusella inmenibra (NL. fem. n. *inmenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVYY01 sp002068215*. The type genome for the species is the GenBank assembly GCA_002068215.1. The GC content of the type genome is 37.54 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Octusida istinitudo sp. nov.

Candidatus Octusida istinitudo (NL. fem. n. *istinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1320 sp003142795*. The type genome for the species is the GenBank assembly GCA_003142795.1. The GC content of the type genome is 46.64 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Octusida gen. nov.

Candidatus Octusida (NL. fem. n. *Octusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1320*. The type species for the genus is *Candidatus* Octusida istinitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanulaceae.

Description of *Candidatus* Octusosa decenatica sp. nov.

Candidatus Octusosa decenatica (NL. fem. n. *decenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJD01 sp011524975*. The type genome for the species is the GenBank assembly GCA_011524975.1. The GC content of the type genome is 60.37 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Octusosa gen. nov.

Candidatus Octusosa (NL. fem. n. *Octusosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJD01*. The type species for the genus is *Candidatus* Octusosa decenatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Octusula defosimonas sp. nov.

Candidatus Octusula defosimonas (NL. fem. n. *defosimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-48 sp005885025*. The type genome for the species is the GenBank assembly GCA_005885025.1. The GC content of the type genome is 67.62 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Octusula gen. nov.

Candidatus Octusula (NL. fem. n. *Octusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-48*. The type species for the genus is *Candidatus* Octusula defosimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Odollana adfunitica sp. nov.

Candidatus Odollana adfunitica (NL. fem. n. *adfunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12957 sp900760695*. The type genome for the species is the GenBank assembly RS_GCF_900760695.1. The GC content of the type genome is 43.19 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Odollana gen. nov.

Candidatus Odollana (NL. fem. n. *Odollana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12957*. The type species for the genus is *Candidatus* Odollana adfunitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAKW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Milipariaceae.

Description of *Candidatus* Odollaria exadvitoga sp. nov.

Candidatus Odollaria exadvitoga (NL. fem. n. *exadvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JNUCC-1 sp009741735*. The type genome for the species is the GenBank assembly RS_GCF_009741735.1. The GC content of the type genome is 43.26 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Odollaria gen. nov.

Candidatus Odollaria (NL. fem. n. *Odollaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JNUCC-1*. The type species for the genus is *Candidatus* Odollaria exadvitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Odollella colepatio sp. nov.

Candidatus Odollella colepatio (NL. fem. n. *colepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBB01 sp013288845*. The type genome for the species is the GenBank assembly GCA_013288845.1. The GC content of the type genome is 39.85 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Odollella gen. nov.

Candidatus Odollella (NL. fem. n. *Odollella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBB01*. The type species for the genus is *Candidatus* Odollella colepatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Odollia abpatastra sp. nov.

Candidatus Odollia abpatastra (NL. fem. n. *abpatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721615 sp002721615*. The type genome for the species is the GenBank assembly GCA_002721615.1. The GC content of the type genome is 30.33 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Odollia gen. nov.

Candidatus Odollia (NL. fem. n. *Odollia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721615*. The type species for the genus is *Candidatus* Odollia abpatastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED-70*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinanaceae.

Description of *Candidatus* Odollia demulitrix sp. nov.

Candidatus Odollia demulitrix (NL. fem. n. *demulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721615 sp002708085*. The type genome for the species is the GenBank assembly GCA_002708085.1. The GC content of the type genome is 29.88 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Odollosa gen. nov.

Candidatus Odollosa (NL. fem. n. *Odollosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSD5*. The type species for the genus is *Candidatus* Odollosa profundum_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Odontaria luticimonia sp. nov.

Candidatus Odontaria luticimonia (NL. fem. n. *luticimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXR01 sp009693235*. The type genome for the species is the GenBank assembly GCA_009693235.1. The GC content of the type genome is 59.68 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Odontaria gen. nov.

Candidatus Odontaria (NL. fem. n. *Odontaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHXR01*. The type species for the genus is *Candidatus* Odontaria luticimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Odontida maligimonas sp. nov.

Candidatus Odontida maligimonas (NL. fem. n. *maligimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1446 sp002329245*. The type genome for the species is the GenBank assembly GCA_002329245.1. The GC content of the type genome is 54.82 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Odontida gen. nov.

Candidatus Odontida (NL. fem. n. *Odontida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1446*. The type species for the genus is *Candidatus* Odontida maligimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Odontosa idciressa sp. nov.

Candidatus Odontosa idciressa (NL. fem. n. *idciressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCC1774 sp003231495*. The type genome for the species is the GenBank assembly RS_GCF_003231495.1. The GC content of the type genome is 50.23 % and the genome length is 5.93 Mbp.

Description of *Candidatus* Odontosa gen. nov.

Candidatus Odontosa (NL. fem. n. *Odontosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RCC1774*. The type species for the genus is *Candidatus* Odontosa idciressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Odontula inmutugo sp. nov.

Candidatus Odontula inmutugo (NL. fem. n. *inmutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B73-G16 sp003646585*. The type genome for the species is the GenBank assembly GCA_003646585.1. The GC content of the type genome is 54.88 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Odontula gen. nov.

Candidatus Odontula (NL. fem. n. *Odontula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B73-G16*. The type species for the genus is *Candidatus* Odontula

inmutugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B13-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifiaceae.

Description of *Candidatus* Odoribacter aruspimonas sp. nov.

Candidatus Odoribacter aruspimonas (NL. fem. n. *aruspimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp900548135*. The type genome for the species is the GenBank assembly GCA_900548135.1. The GC content of the type genome is 40.63 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Odoribacter crusmiforma sp. nov.

Candidatus Odoribacter crusmiforma (NL. fem. n. *crusmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp900762515*. The type genome for the species is the GenBank assembly GCA_900762515.1. The GC content of the type genome is 39.81 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Odoribacter dicibigena sp. nov.

Candidatus Odoribacter dicibigena (NL. fem. n. *dicibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp002293375*. The type genome for the species is the GenBank assembly GCA_002293375.1. The GC content of the type genome is 50.73 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Odoribacter maledigena sp. nov.

Candidatus Odoribacter maledigena (NL. fem. n. *maledigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp900544025*. The type genome for the species is the

GenBank assembly GCA_900544025.1. The GC content of the type genome is 44.43 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Odoribacter murelitudo sp. nov.

Candidatus Odoribacter murelitudo (NL. fem. n. *murelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp900541415*. The type genome for the species is the GenBank assembly GCA_900541415.1. The GC content of the type genome is 44.65 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Odoribacter semigitrix sp. nov.

Candidatus Odoribacter semigitrix (NL. fem. n. *semigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Odoribacter sp009935865*. The type genome for the species is the GenBank assembly GCA_013316155.1. The GC content of the type genome is 44.36 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Oecophyllibacter daducastra sp. nov.

Candidatus Oecophyllibacter daducastra (NL. fem. n. *daducastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oecophyllibacter sp004843345*. The type genome for the species is the GenBank assembly RS_GCF_004843345.1. The GC content of the type genome is 42.6 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Oecophyllibacter insementia sp. nov.

Candidatus Oecophyllibacter insementia (NL. fem. n. *insementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oecophyllibacter sp006542395*. The type genome for the species is the GenBank assembly RS_GCF_006542395.2. The GC content of the type genome is 60.35 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Oecophyllibacter melilicella sp. nov.

Candidatus Oecophyllibacter melilicella (NL. fem. n. *melilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oecophyllibacter sp004843165*. The type genome for the species is the GenBank assembly RS_GCF_004843165.1. The GC content of the type genome is 43.02 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Oenococcus admulatio sp. nov.

Candidatus Oenococcus admulatio (NL. fem. n. *admulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oenococcus sp004010835*. The type genome for the species is the GenBank assembly RS_GCF_004010835.2. The GC content of the type genome is 36.88 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Oerskovia effulousia sp. nov.

Candidatus Oerskovia effulousia (NL. fem. n. *effulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oerskovia sp005937995*. The type genome for the species is the GenBank assembly RS_GCF_005937995.2. The GC content of the type genome is 72.21 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Offirana inpuditrix sp. nov.

Candidatus Offirana inpuditrix (NL. fem. n. *inpuditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cloacimonetes-1 sp002841975*. The type genome for the species is the GenBank assembly GCA_002841975.1. The GC content of the type genome is 44.88 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Offirana gen. nov.

Candidatus Offirana (NL. fem. n. *Offirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cloacimonetes-1*. The type species for the genus is *Candidatus* Offirana inpuditrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offirella holisitica sp. nov.

Candidatus Offirella holisitica (NL. fem. n. *holisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLJ01 sp012799365*. The type genome for the species is the GenBank assembly GCA_012799365.1. The GC content of the type genome is 49.12 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Offirella gen. nov.

Candidatus Offirella (NL. fem. n. *Offirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLJ01*. The type species for the genus is *Candidatus* Offirella holisitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offirosa assubago sp. nov.

Candidatus Offirosa assubago (NL. fem. n. *assubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10427 sp003500135*. The type genome for the species is the GenBank assembly GCA_003500135.1. The GC content of the type genome is 41.04 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Offirosa gen. nov.

Candidatus Offirosa (NL. fem. n. *Offirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10427*. The type species for the genus is *Candidatus* Offirosa assubago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offularia intamago sp. nov.

Candidatus Offularia intamago (NL. fem. n. *intamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA949 sp002293245*. The type genome for the species is the GenBank assembly GCA_002293245.1. The GC content of the type genome is 50.22 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Offularia gen. nov.

Candidatus Offularia (NL. fem. n. *Offularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA949*. The type species for the genus is *Candidatus* Offularia intamago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offulella ectenibula sp. nov.

Candidatus Offulella ectenibula (NL. fem. n. *ectenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-28 sp003599395*. The type genome for the species is the GenBank assembly GCA_003599395.1. The GC content of the type genome is 34.28 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Offulella gen. nov.

Candidatus Offulella (NL. fem. n. *Offulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-28*. The type species for the genus is *Candidatus* Offulella ectenibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offulella nugivetta sp. nov.

Candidatus Offulella nugivetta (NL. fem. n. *nugivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-28 sp011049495*. The type genome for the species is the GenBank assembly GCA_011049495.1. The GC content of the type genome is 34.65 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Offulia crabrentia sp. nov.

Candidatus Offulia crabrentia (NL. fem. n. *crabrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNG01 sp009784845*. The type genome for the species is the GenBank assembly GCA_009784845.1. The GC content of the type genome is 48.95 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Offulia gen. nov.

Candidatus Offulia (NL. fem. n. *Offulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRNG01*. The type species for the genus is *Candidatus* Offulia crabrentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacidaceae.

Description of *Candidatus* Offulia depasugo sp. nov.

Candidatus Offulia depasugo (NL. fem. n. *depasugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNG01 sp009776735*. The type genome for the species is the GenBank assembly GCA_009776735.1. The GC content of the type genome is 44.34 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Offulia exturibula sp. nov.

Candidatus Offulia exturibula (NL. fem. n. *exturibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNG01 sp009786345*. The type genome for the species is the GenBank assembly GCA_009786345.1. The GC content of the type genome is 44.68 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Offulia recogicula sp. nov.

Candidatus Offulia recogicula (NL. fem. n. *recogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNG01 sp009779655*. The type genome for the species is the GenBank assembly GCA_009779655.1. The GC content of the type genome is 47.17 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Offulia sonabifica sp. nov.

Candidatus Offulia sonabifica (NL. fem. n. *sonabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNG01 sp009783135*. The type genome for the species is the GenBank assembly GCA_009783135.1. The GC content of the type genome is 48.1 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Offulida cetarivita sp. nov.

Candidatus Offulida cetarivita (NL. fem. n. *cetarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LW23 sp003054695*. The type genome for the species is the GenBank assembly RS_GCF_003054695.1. The GC content of the type genome is 61.72 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Offulida gen. nov.

Candidatus Offulida (NL. fem. n. *Offulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LW23*. The type species for the genus is *Candidatus* Offulida cetarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1321*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolulaceae.

Description of *Candidatus* Offunana caravousia sp. nov.

Candidatus Offunana caravousia (NL. fem. n. *caravousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726245 sp014381825*. The type genome for the species is the GenBank assembly GCA_014381825.1. The GC content of the type genome is 55.58 % and the genome length is 9.69 Mbp.

Description of *Candidatus* Offunana gen. nov.

Candidatus Offunana (NL. fem. n. *Offunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2726245*. The type species for the genus is *Candidatus* Offunana caravousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offunana videlicella sp. nov.

Candidatus Offunana videlicella (NL. fem. n. *videlicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726245 sp002726245*. The type genome for the species is the GenBank assembly GCA_002726245.1. The GC content of the type genome is 57.15 % and the genome length is 7.61 Mbp.

Description of *Candidatus* Offunaria cadavugo sp. nov.

Candidatus Offunaria cadavugo (NL. fem. n. *cadavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10349 sp003485905*. The type genome for the species is the GenBank assembly GCA_003485905.1. The GC content of the type genome is 45.76 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Offunaria gen. nov.

Candidatus Offunaria (NL. fem. n. *Offunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10349*. The type species for the genus is *Candidatus* Offunaria cadavugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offunella obmuratio sp. nov.

Candidatus Offunella obmuratio (NL. fem. n. *obmuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVN01 sp013698165*. The type genome for the species is the GenBank assembly GCA_013698165.1. The GC content of the type genome is 39.76 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Offunella gen. nov.

Candidatus Offunella (NL. fem. n. *Offunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCVN01*. The type species for the genus is *Candidatus* Offunella obmuratio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offunida dilemago sp. nov.

Candidatus Offunida dilemago (NL. fem. n. *dilemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-22 sp003105195*. The type genome for the species is the GenBank assembly GCA_003105195.1. The GC content of the type genome is 69.83 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Offunida gen. nov.

Candidatus Offunida (NL. fem. n. *Offunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-22*. The type species for the genus is *Candidatus* Offunida dilemago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offunula democibula sp. nov.

Candidatus Offunula democibula (NL. fem. n. *democibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EhC02 sp002282555*. The type genome for the species is the GenBank assembly GCA_002282555.1. The GC content of the type genome is 62.19 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Offunula gen. nov.

Candidatus Offunula (NL. fem. n. *Offunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *EhC02*. The type species for the genus is *Candidatus* Offunula democibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Offunula mirabatica sp. nov.

Candidatus Offunula mirabatica (NL. fem. n. *mirabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EhC02 sp001650895*. The type genome for the species is the GenBank assembly RS_GCF_001650895.1. The GC content of the type genome is 63.47 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Ohtaekwangia detumicula sp. nov.

Candidatus Ohtaekwangia detumicula (NL. fem. n. *detumicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ohtaekwangia sp902168185*. The type genome for the species is the GenBank assembly GCA_902168185.1. The GC content of the type genome is 42.07 % and the genome length is 7.77 Mbp.

Description of *Candidatus* Ohtaekwangia incesimonia sp. nov.

Candidatus Ohtaekwangia incesimonia (NL. fem. n. *incesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ohtaekwangia sp902168205*. The type genome for the species is the GenBank assembly GCA_902168205.1. The GC content of the type genome is 43.8 % and the genome length is 7.3 Mbp.

Description of *Candidatus* Ohtaekwangia semipitas sp. nov.

Candidatus Ohtaekwangia semipitas (NL. fem. n. *semipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ohtaekwangia sp002432545*. The type genome for the species is the GenBank assembly GCA_002432545.1. The GC content of the type genome is 43.47 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Okeania infatifica sp. nov.

Candidatus Okeania infatifica (NL. fem. n. *infatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okeania sp014132355*. The type genome for the species is the GenBank assembly GCA_014132355.1. The GC content of the type genome is 36.81 % and the genome length is 10.98 Mbp.

Description of *Candidatus* Okeania loraritudo sp. nov.

Candidatus Okeania loraritudo (NL. fem. n. *loraritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okeania sp010672585*. The type genome for the species is the GenBank assembly GCA_010672585.1. The GC content of the type genome is 36.59 % and the genome length is 9.48 Mbp.

Description of *Candidatus* Okeania peridigena sp. nov.

Candidatus Okeania peridigena (NL. fem. n. *peridigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okeania sp010672525*. The type genome for the species is the GenBank assembly GCA_010672525.1. The GC content of the type genome is 36.55 % and the genome length is 10.01 Mbp.

Description of *Candidatus* Okeania relenilega sp. nov.

Candidatus Okeania relenilega (NL. fem. n. *relenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okeania sp010672455*. The type genome for the species is the GenBank assembly GCA_010672455.1. The GC content of the type genome is 36.56 % and the genome length is 10.88 Mbp.

Description of *Candidatus* Okeania simininforma sp. nov.

Candidatus Okeania simininforma (NL. fem. n. *simininforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okeania sp010692555*. The type genome for the species is the GenBank assembly GCA_010692555.1. The GC content of the type genome is 36.84 % and the genome length is 11.06 Mbp.

Description of *Candidatus* Okibacterium vigenugo sp. nov.

Candidatus Okibacterium vigenugo (NL. fem. n. *vigenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Okibacterium sp001984125*. The type genome for the species is the GenBank assembly RS_GCF_001984125.1. The GC content of the type genome is 67.66 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Olegusella baropigena sp. nov.

Candidatus Olegusella baropigena (NL. fem. n. *baropigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olegusella sp900314685*. The type genome for the species is the GenBank assembly GCA_002349685.1. The GC content of the type genome is 64.54 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Olegusella bipenousia sp. nov.

Candidatus Olegusella bipenousia (NL. fem. n. *bipenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olegusella sp900315165*. The type genome for the species is the GenBank assembly GCA_002350025.1. The GC content of the type genome is 63.64 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Olegusella citocigena sp. nov.

Candidatus Olegusella citocigena (NL. fem. n. *citocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olegusella sp002407925*. The type genome for the species is the GenBank assembly GCA_002400225.1. The GC content of the type genome is 54.57 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Olegusella obtemicula sp. nov.

Candidatus Olegusella obtemicula (NL. fem. n. *obtemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olegusella sp000466405*. The type genome for the species is the GenBank assembly RS_GCF_000466405.1. The GC content of the type genome is 49.16 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Oleiagrimonas turificula sp. nov.

Candidatus Oleiagrimonas turificula (NL. fem. n. *turificula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleiagrimonas sp011759385*. The type genome for the species is the GenBank assembly RS_GCF_011759385.1. The GC content of the type genome is 64.27 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Oleibacter cenacibula sp. nov.

Candidatus Oleibacter cenacibula (NL. fem. n. *cenacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleibacter sp002724925*. The type genome for the species is the GenBank assembly GCA_002338435.1. The GC content of the type genome is 51.57 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Oleibacter cisoritrix sp. nov.

Candidatus Oleibacter cisoritrix (NL. fem. n. *cisoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleibacter sp002733645*. The type genome for the species is the GenBank assembly GCA_002733645.1. The GC content of the type genome is 47.58 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Oleibacter exculigena sp. nov.

Candidatus Oleibacter exculigena (NL. fem. n. *exculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleibacter sp006212115*. The type genome for the species is the GenBank assembly GCA_006212115.1. The GC content of the type genome is 51.52 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Oleibacter labecitica sp. nov.

Candidatus Oleibacter labecitica (NL. fem. n. *labecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleibacter sp002298335*. The type genome for the species is the GenBank assembly GCA_002320395.1. The GC content of the type genome is 55.35 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Oleibacter pacifastra sp. nov.

Candidatus Oleibacter pacifastra (NL. fem. n. *pacifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleibacter sp002331105*. The type genome for the species is the GenBank assembly GCA_002324035.1. The GC content of the type genome is 51.7 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Oleispira funebitudo sp. nov.

Candidatus Oleispira funebitudo (NL. fem. n. *funebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleispira sp002632185*. The type genome for the species is the GenBank assembly GCA_002632185.1. The GC content of the type genome is 42.59 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Oleispira rutabifica sp. nov.

Candidatus Oleispira rutabifica (NL. fem. n. *rutabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oleispira sp002708475*. The type genome for the species is the GenBank assembly GCA_003527285.1. The GC content of the type genome is 40.98 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Oligella cocibitas sp. nov.

Candidatus Oligella cocibitas (NL. fem. n. *cocibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oligella sp012511555*. The type genome for the species is the GenBank assembly GCA_012511555.1. The GC content of the type genome is 43.67 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Oligella peribibula sp. nov.

Candidatus Oligella peribibula (NL. fem. n. *peribibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oligella sp012511095*. The type genome for the species is the GenBank assembly GCA_012511095.1. The GC content of the type genome is 42.87 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Oligella taxilibula sp. nov.

Candidatus Oligella taxilibula (NL. fem. n. *taxilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oligella sp012518515*. The type genome for the species is the GenBank assembly GCA_012518515.1. The GC content of the type genome is 43.66 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Oligoflexus agnometta sp. nov.

Candidatus Oligoflexus agnometta (NL. fem. n. *agnometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oligoflexus sp014378195*. The type genome for the species is the GenBank assembly GCA_014378195.1. The GC content of the type genome is 49.47 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Oligoflexus exhoribula sp. nov.

Candidatus Oligoflexus exhoribula (NL. fem. n. *exhoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oligoflexus sp014377445*. The type genome for the species is the GenBank assembly GCA_014377445.1. The GC content of the type genome is 50.38 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Olleya camilitoga sp. nov.

Candidatus Olleya camilitoga (NL. fem. n. *camilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olleya sp002323495*. The type genome for the species is the GenBank assembly RS_GCF_007827365.1. The GC content of the type genome is 32.0 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Olleya rorifetta sp. nov.

Candidatus Olleya rorifetta (NL. fem. n. *rorifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olleya sp000518525*. The type genome for the species is the GenBank assembly RS_GCF_000518505.1. The GC content of the type genome is 31.07 % and the genome length is 3.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Olleya spastitoga sp. nov.

Candidatus Olleya spastitoga (NL. fem. n. *spastitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olleya sp004843725*. The type genome for the species is the GenBank assembly RS_GCF_004843725.1. The GC content of the type genome is 32.67 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Olleya tresvicella sp. nov.

Candidatus Olleya tresvicella (NL. fem. n. *tresvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olleya sp002831645*. The type genome for the species is the GenBank assembly RS_GCF_002831645.1. The GC content of the type genome is 32.76 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Olsenella assifibra sp. nov.

Candidatus Olsenella assifibra (NL. fem. n. *assifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp001189515*. The type genome for the species is the GenBank assembly RS_GCF_001189515.2. The GC content of the type genome is 62.08 % and the genome length is 3.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Olsenella cacalatica sp. nov.

Candidatus Olsenella cacalatica (NL. fem. n. *cacalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp900316105*. The type genome for the species is the GenBank assembly GCA_002350085.1. The GC content of the type genome is 61.38 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Olsenella colopago sp. nov.

Candidatus Olsenella colopago (NL. fem. n. *colopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp003862195*. The type genome for the species is the GenBank assembly GCA_903789455.1. The GC content of the type genome is 65.58 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Olsenella desepessa sp. nov.

Candidatus Olsenella desepessa (NL. fem. n. *desepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp001457795*. The type genome for the species is the GenBank assembly RS_GCF_001457795.1. The GC content of the type genome is 66.24 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Olsenella gemebessa sp. nov.

Candidatus Olsenella gemebessa (NL. fem. n. *gemebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp900538935*. The type genome for the species is the GenBank assembly GCA_900538935.1. The GC content of the type genome is 65.95 %

and the genome length is 2.11 Mbp.

Description of *Candidatus* Olsenella penuriforma sp. nov.

Candidatus Olsenella penuriforma (NL. fem. n. *penuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp900313175*. The type genome for the species is the GenBank assembly GCA_900313175.1. The GC content of the type genome is 67.25 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Olsenella renavivita sp. nov.

Candidatus Olsenella renavivita (NL. fem. n. *renavivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp902787335*. The type genome for the species is the GenBank assembly GCA_902763695.1. The GC content of the type genome is 67.55 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Olsenella tirocitio sp. nov.

Candidatus Olsenella tirocitio (NL. fem. n. *tirocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella sp900555995*. The type genome for the species is the GenBank assembly RS_GCF_009695875.1. The GC content of the type genome is 64.87 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Olsenella adsecitica sp. nov.

Candidatus Olsenella adsecitica (NL. fem. n. *adsecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900768455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900768455.1. The GC content of the type genome is 62.94 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Olsenella catecisca sp. nov.

Candidatus Olsenella catecisca (NL. fem. n. *catecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900119625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902786115.1. The GC content of the type genome is 62.35 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Olsenella citivago sp. nov.

Candidatus Olsenella citivago (NL. fem. n. *citivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp000752675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003469355.1. The GC content of the type genome is 62.46 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Olsenella fraglifica sp. nov.

Candidatus Olsenella fraglifica (NL. fem. n. *fraglifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp004557505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004557505.1. The GC content of the type genome is 65.02 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Olsenella lacinetta sp. nov.

Candidatus Olsenella lacinetta (NL. fem. n. *lacinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900548775*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902764095.1. The GC content of the type genome is 64.02 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Olsenella repepedo sp. nov.

Candidatus Olsenella repepedo (NL. fem. n. *repepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900111695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900111695.1. The GC content of the type genome is 62.61 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Olsenella subadugo sp. nov.

Candidatus Olsenella subadugo (NL. fem. n. *subadugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900770865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900770865.1. The GC content of the type genome is 63.32 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Olsenella utriniforma sp. nov.

Candidatus Olsenella utriniforma (NL. fem. n. *utriniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp900605015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900605015.1. The GC content of the type genome is 62.28 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Olsenella vinuletta sp. nov.

Candidatus Olsenella vinuletta (NL. fem. n. *vinuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_B sp902773995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902774565.1. The GC content of the type genome is 62.87 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Olsenella adsesentia sp. nov.

Candidatus Olsenella adsesentia (NL. fem. n. *adsesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_D sp002331575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002331575.1. The GC content of the type genome is 63.88 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Olsenella catabimonia sp. nov.

Candidatus Olsenella catabimonia (NL. fem. n. *catabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp900540955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900762855.1. The GC content of the type genome is 65.41 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Olsenella defositio sp. nov.

Candidatus Olsenella defositio (NL. fem. n. *defositio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002159535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002159535.1. The GC content of the type genome is 68.09 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Olsenella denupatica sp. nov.

Candidatus Olsenella denupatica (NL. fem. n. *denupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp003150175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900544015.1. The GC content of the type genome is 65.93 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Olsenella expisisca sp. nov.

Candidatus Olsenella expisisca (NL. fem. n. *expisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002407785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002407785.1. The GC content of the type genome is 64.08 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Olsenella impugimonas sp. nov.

Candidatus Olsenella impugimonas (NL. fem. n. *impugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp012027725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012027725.1. The GC content of the type genome is 67.59 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Olsenella inlibitia sp. nov.

Candidatus Olsenella inlibitia (NL. fem. n. *inlibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002159735*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002159735.1. The GC content of the type genome is 67.55 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Olsenella intesilenta sp. nov.

Candidatus Olsenella intesilenta (NL. fem. n. *intesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002305805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002305805.1. The GC content of the type genome is 66.38 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Olsenella maledivita sp. nov.

Candidatus Olsenella maledivita (NL. fem. n. *maledivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002440065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002440065.1. The GC content of the type genome is 65.16 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Olsenella redacibula sp. nov.

Candidatus Olsenella redacibula (NL. fem. n. *redacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002159495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002159495.1. The GC content of the type genome is 67.86 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Olsenella satacilega sp. nov.

Candidatus Olsenella satacilega (NL. fem. n. *satacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp003609875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900548445.1. The GC content of the type genome is 65.73 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Olsenella tenilousia sp. nov.

Candidatus Olsenella tenilousia (NL. fem. n. *tenilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002159625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002159625.1. The GC content of the type genome is 66.98 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Olsenella vatilousia sp. nov.

Candidatus Olsenella vatilousia (NL. fem. n. *vatilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Olsenella_E sp002160255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900553575.1. The GC content of the type genome is 69.04 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Omnifana offunibula sp. nov.

Candidatus Omnifana offunibula (NL. fem. n. *offunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBT01 sp012730015*. The type genome for the species is the GenBank assembly GCA_012730015.1. The GC content of the type genome is 43.55 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Omnifana gen. nov.

Candidatus Omnifana (NL. fem. n. *Omnifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBT01*. The type species for the genus is *Candidatus* Omnifana offunibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnifida offunibra sp. nov.

Candidatus Omnifida offunibra (NL. fem. n. *offunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OEQK01 sp900240405*. The type genome for the species is the GenBank assembly RS_GCF_900240405.1. The GC content of the type genome is 36.99 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Omnifida gen. nov.

Candidatus Omnifida (NL. fem. n. *Omnifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OEQK01*. The type species for the genus is *Candidatus* Omnifida offunibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnifula funebitoga sp. nov.

Candidatus Omnifula funebitoga (NL. fem. n. *funebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOM01 sp011047005*. The type genome for the species is the GenBank assembly GCA_011047005.1. The GC content of the type genome is 69.82 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Omnifula gen. nov.

Candidatus Omnifula (NL. fem. n. *Omnifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOM01*. The type species for the genus is *Candidatus* Omnifula funebitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Omnigana odontentia sp. nov.

Candidatus Omnigana odontentia (NL. fem. n. *odontentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BCD5 sp013112825*. The type genome for the species is the GenBank assembly GCA_013112825.1. The GC content of the type genome is 36.34 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Omnigana gen. nov.

Candidatus Omnigana (NL. fem. n. *Omnigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BCD5*. The type species for the genus is *Candidatus* Omnigana odontentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnigana sicubibula sp. nov.

Candidatus Omnigana sicubibula (NL. fem. n. *sicubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BCD5 sp013359255*. The type genome for the species is the GenBank assembly GCA_013359255.1. The GC content of the type genome is 35.79 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Omnigaria denomousia sp. nov.

Candidatus Omnigaria denomousia (NL. fem. n. *denomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alpha-05 sp900079695*. The type genome for the species is the GenBank assembly GCA_900079695.1. The GC content of the type genome is 68.47 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Omnigaria gen. nov.

Candidatus Omnigaria (NL. fem. n. *Omnigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Alpha-05*. The type species for the genus is *Candidatus* Omnigaria denomousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnigaria ignobitica sp. nov.

Candidatus Omnigaria ignobitica (NL. fem. n. *ignobitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alpha-05 sp002307145*. The type genome for the species is the GenBank assembly GCA_002307145.1. The GC content of the type genome is 66.4 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Omnigaria recoratio sp. nov.

Candidatus Omnigaria recoratio (NL. fem. n. *recoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alpha-05 sp003250275*. The type genome for the species is the GenBank assembly GCA_003250275.1. The GC content of the type genome is 68.62 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Omnigaria susicedo sp. nov.

Candidatus Omnigaria susicedo (NL. fem. n. *susicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alpha-05 sp003246625*. The type genome for the species is the

GenBank assembly GCA_003246625.1. The GC content of the type genome is 67.08 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Omnigaria videlitia sp. nov.

Candidatus Omnigaria videlitia (NL. fem. n. *videlitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Alpha-05 sp001603335*. The type genome for the species is the GenBank assembly GCA_001603335.1. The GC content of the type genome is 66.92 % and the genome length is 2.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Omnigia calipiforma sp. nov.

Candidatus Omnigia calipiforma (NL. fem. n. *calipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXOZ01 sp903921295*. The type genome for the species is the GenBank assembly GCA_903921295.1. The GC content of the type genome is 67.32 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Omnigia gen. nov.

Candidatus Omnigia (NL. fem. n. *Omnigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXOZ01*. The type species for the genus is *Candidatus* Omnigia calipiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnigosa volucitica sp. nov.

Candidatus Omnigosa volucitica (NL. fem. n. *volucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-49-17 sp001795695*. The type genome for the species is the GenBank assembly GCA_001795695.1. The GC content of the type genome is 49.16

% and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Omnigosa gen. nov.

Candidatus Omnigosa (NL. fem. n. *Omnigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-49-17*. The type species for the genus is *Candidatus* Omnigosa volucitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Omnigula haricitura sp. nov.

Candidatus Omnigula haricitura (NL. fem. n. *haricitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B29-G16 sp003644895*. The type genome for the species is the GenBank assembly GCA_003644895.1. The GC content of the type genome is 39.2 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Omnigula gen. nov.

Candidatus Omnigula (NL. fem. n. *Omnigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B29-G16*. The type species for the genus is *Candidatus* Omnigula haricitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homicosaceae.

Description of *Candidatus* Omnimana adfunatica sp. nov.

Candidatus Omnimana adfunatica (NL. fem. n. *adfunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-43-11 sp002778635*. The type genome for the species is the GenBank assembly GCA_002778635.1. The GC content of the type genome is 42.57 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Omnimana gen. nov.

Candidatus Omnimana (NL. fem. n. *Omnimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-43-11*. The type species for the genus is *Candidatus* Omnimana adfunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-47-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacellaceae.

Description of *Candidatus* Omnimella infisibula sp. nov.

Candidatus Omnimella infisibula (NL. fem. n. *infisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QY30 sp002440945*. The type genome for the species is the GenBank assembly GCA_002440945.1. The GC content of the type genome is 65.1 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Omnimella gen. nov.

Candidatus Omnimella (NL. fem. n. *Omnimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QY30*. The type species for the genus is *Candidatus* Omnimella infisibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnimella irregugo sp. nov.

Candidatus Omnimella irregugo (NL. fem. n. *irregugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QY30 sp002356635*. The type genome for the species is the GenBank assembly RS_GCF_002356635.1. The GC content of the type genome is 65.73 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Omnimia turicitoga sp. nov.

Candidatus Omnimia turicitoga (NL. fem. n. *turicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-486 sp003251635*. The type genome for the species is the GenBank assembly GCA_003251635.1. The GC content of the type genome is 38.39 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Omnimia gen. nov.

Candidatus Omnimia (NL. fem. n. *Omnimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-486*. The type species for the genus is *Candidatus* Omnimia turicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Omnimosa armifilega sp. nov.

Candidatus Omnimosa armifilega (NL. fem. n. *armifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVYX01 sp011772755*. The type genome for the species is the GenBank assembly GCA_011772755.1. The GC content of the type genome is 64.71 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Omnimosa gen. nov.

Candidatus Omnimosa (NL. fem. n. *Omnimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVYX01*. The type species for the genus is *Candidatus* Omnimosa armifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Omninaria domabentia sp. nov.

Candidatus Omninaria domabentia (NL. fem. n. *domabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-41-10 sp002773695*. The type genome for the species is the GenBank assembly GCA_002773695.1. The GC content of the type genome is 41.47 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Omninaria gen. nov.

Candidatus Omninaria (NL. fem. n. *Omninaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-41-10*. The type species for the genus is *Candidatus* Omninaria domabentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilidaceae.

Description of *Candidatus* Omninella crastago sp. nov.

Candidatus Omninella crastago (NL. fem. n. *crastago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLN01 sp014379585*. The type genome for the species is the GenBank assembly GCA_014379585.1. The GC content of the type genome is 51.09 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Omninella gen. nov.

Candidatus Omninella (NL. fem. n. *Omninella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMLN01*. The type species for the genus is *Candidatus* Omninella

crastago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omninia tegumedo sp. nov.

Candidatus Omninia tegumedo (NL. fem. n. *tegumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-38-26 sp001782075*. The type genome for the species is the GenBank assembly GCA_001782075.1. The GC content of the type genome is 38.01 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Omninia gen. nov.

Candidatus Omninia (NL. fem. n. *Omninia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-38-26*. The type species for the genus is *Candidatus* Omninia tegumedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Omninida arrabessa sp. nov.

Candidatus Omninida arrabessa (NL. fem. n. *arrabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11371 sp003486305*. The type genome for the species is the GenBank assembly GCA_003486305.1. The GC content of the type genome is 45.25 % and the genome length is 8.48 Mbp.

Description of *Candidatus* Omninida gen. nov.

Candidatus Omninida (NL. fem. n. *Omninida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA11371*. The type species for the genus is *Candidatus* Omninida arrabessa .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Omninosa ephemicula sp. nov.

Candidatus Omninosa ephemicula (NL. fem. n. *ephemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFVC01 sp009922595*. The type genome for the species is the GenBank assembly GCA_009922595.1. The GC content of the type genome is 50.48 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Omninosa gen. nov.

Candidatus Omninosa (NL. fem. n. *Omninosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFVC01*. The type species for the genus is *Candidatus* Omninosa ephemicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omninula oblucentia sp. nov.

Candidatus Omninula oblucentia (NL. fem. n. *oblucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG2 sp003222065*. The type genome for the species is the GenBank assembly GCA_003222065.1. The GC content of the type genome is 64.24 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Omninula gen. nov.

Candidatus Omninula (NL. fem. n. *Omninula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG2*. The type species for the genus is *Candidatus* Omninula oblucentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnipana didacastra sp. nov.

Candidatus Omnipana didacastra (NL. fem. n. *didacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPV01 sp013202595*. The type genome for the species is the GenBank assembly GCA_013202595.1. The GC content of the type genome is 65.44 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Omnipana gen. nov.

Candidatus Omnipana (NL. fem. n. *Omnipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPV01*. The type species for the genus is *Candidatus* Omnipana didacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11373*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigaranaceae.

Description of *Candidatus* Omniparia aplesibula sp. nov.

Candidatus Omniparia aplesibula (NL. fem. n. *aplesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIU01 sp014382715*. The type genome for the species is the GenBank assembly GCA_014382715.1. The GC content of the type genome is 48.27 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Omniparia gen. nov.

Candidatus Omniparia (NL. fem. n. *Omniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNIU01*. The type species for the genus is *Candidatus* Omniparia aplesibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omniparia atropilenta sp. nov.

Candidatus Omniparia atropilenta (NL. fem. n. *atropilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIU01 sp011051075*. The type genome for the species is the GenBank assembly GCA_011051075.1. The GC content of the type genome is 54.51 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Omniparia paralibra sp. nov.

Candidatus Omniparia paralibra (NL. fem. n. *paralibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIU01 sp014382905*. The type genome for the species is the GenBank assembly GCA_014382905.1. The GC content of the type genome is 50.12 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Omnipella devecentia sp. nov.

Candidatus Omnipella devecentia (NL. fem. n. *devecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401635 sp002401635*. The type genome for the species is the GenBank assembly GCA_002401635.1. The GC content of the type genome is 43.09 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Omnipella gen. nov.

Candidatus Omnipella (NL. fem. n. *Omnipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401635*. The type species for the genus is *Candidatus* Omnipella devecentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnipida dilemitica sp. nov.

Candidatus Omnipida dilemitica (NL. fem. n. *dilemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTH01 sp012518435*. The type genome for the species is the GenBank assembly GCA_012518435.1. The GC content of the type genome is 51.59 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Omnipida gen. nov.

Candidatus Omnipida (NL. fem. n. *Omnipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTH01*. The type species for the genus is *Candidatus* Omnipida dilemitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defarosaceae.

Description of *Candidatus* Omnipida inmodisca sp. nov.

Candidatus Omnipida inmodisca (NL. fem. n. *inmodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTH01 sp012523785*. The type genome for the species is the GenBank assembly GCA_012523785.1. The GC content of the type genome is 49.74 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Omniposa acrociforma sp. nov.

Candidatus Omniposa acrociforma (NL. fem. n. *acrociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1033 sp003152165*. The type genome for the species is the GenBank assembly GCA_003152165.1. The GC content of the type genome is 68.29 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Omniposa gen. nov.

Candidatus Omniposa (NL. fem. n. *Omniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1033*. The type species for the genus is *Candidatus* Omniposa acrociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Omniposa illapifica sp. nov.

Candidatus Omniposa illapifica (NL. fem. n. *illapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1033 sp003169655*. The type genome for the species is the GenBank assembly GCA_003169655.1. The GC content of the type genome is 69.25 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Omnivana demigago sp. nov.

Candidatus Omnivana demigago (NL. fem. n. *demigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWET01 sp903911805*. The type genome for the species is the GenBank assembly GCA_903911805.1. The GC content of the type genome is 30.28 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Omnivana gen. nov.

Candidatus Omnivana (NL. fem. n. *Omnivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWET01*. The type species for the genus is *Candidatus* Omnivana demigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Omnivaria remulitoga sp. nov.

Candidatus Omnivaria remulitoga (NL. fem. n. *remulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINVI01 sp903854075*. The type genome for the species is the GenBank assembly GCA_903854075.1. The GC content of the type genome is 46.65 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Omnivaria gen. nov.

Candidatus Omnivaria (NL. fem. n. *Omnivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINVI01*. The type species for the genus is *Candidatus* Omnivaria remulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2013-40CM-41-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocifellaceae.

Description of *Candidatus* Omnivella celumentia sp. nov.

Candidatus Omnivella celumentia (NL. fem. n. *celumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1297 sp003142915*. The type genome for the species is the GenBank assembly GCA_003142915.1. The GC content of the type genome is 35.75 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Omnivella gen. nov.

Candidatus Omnivella (NL. fem. n. *Omnivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1297*. The type species for the genus is *Candidatus* Omnivella celumentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnivia colubousia sp. nov.

Candidatus Omnivia colubousia (NL. fem. n. *colubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGS01 sp009781075*. The type genome for the species is the GenBank assembly GCA_009781075.1. The GC content of the type genome is 35.18 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Omnivia gen. nov.

Candidatus Omnivia (NL. fem. n. *Omnivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGS01*. The type species for the genus is *Candidatus* Omnivia colubousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnivia effunessa sp. nov.

Candidatus Omnivia effunessa (NL. fem. n. *effunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGS01 sp009787075*. The type genome for the species is the GenBank assembly GCA_009787075.1. The GC content of the type genome is 36.87 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Omnivida obfusitoga sp. nov.

Candidatus Omnivida obfusitoga (NL. fem. n. *obfusitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSC3 sp013693815*. The type genome for the species is the GenBank assembly GCA_013693815.1. The GC content of the type genome is 65.04 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Omnivida gen. nov.

Candidatus Omnivida (NL. fem. n. *Omnivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSC3*. The type species for the genus is *Candidatus* Omnivida obfusitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnivosa revecitoga sp. nov.

Candidatus Omnivosa revecitoga (NL. fem. n. *revecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-582 sp003251015*. The type genome for the species is the GenBank assembly GCA_003251015.1. The GC content of the type genome is 37.78 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Omnivosa gen. nov.

Candidatus Omnivosa (NL. fem. n. *Omnivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-582*. The type species for the genus is *Candidatus* Omnivosa revecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Omnivula nubifivita sp. nov.

Candidatus Omnivula nubifivita (NL. fem. n. *nubifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VUNI01 sp009695765*. The type genome for the species is the GenBank assembly RS_GCF_009695765.1. The GC content of the type genome is 41.69 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Omnivula gen. nov.

Candidatus Omnivula (NL. fem. n. *Omnivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VUNI01*. The type species for the genus is *Candidatus* Omnivula nubifivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Onocraria devecifica sp. nov.

Candidatus Onocraria devecifica (NL. fem. n. *devecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5124 sp000503875*. The type genome for the species is the GenBank assembly GCA_000503875.1. The GC content of the type genome is 31.06 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Onocraria gen. nov.

Candidatus Onocraria (NL. fem. n. *Onocraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5124*. The type species for the genus is *Candidatus* Onocraria devecifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Onocraria incivitia sp. nov.

Candidatus Onocraria incivitia (NL. fem. n. *incivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5124 sp002414185*. The type genome for the species is the GenBank assembly GCA_002414185.1. The GC content of the type genome is 31.3 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Onocrella ciminicula sp. nov.

Candidatus Onocrella ciminicula (NL. fem. n. *ciminicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QIAB01 sp003225455*. The type genome for the species is the GenBank assembly GCA_003225455.1. The GC content of the type genome is 55.75 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Onocrella gen. nov.

Candidatus Onocrella (NL. fem. n. *Onocrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QIAB01*. The type species for the genus is *Candidatus* Onocrella ciminicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Onocria admigimonia sp. nov.

Candidatus Onocria admigimonia (NL. fem. n. *admigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11416 sp900768525*. The type genome for the species is the GenBank assembly RS_GCF_900768525.1. The GC content of the type genome is 45.31 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Onocria gen. nov.

Candidatus Onocria (NL. fem. n. *Onocria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11416*. The type species for the genus is *Candidatus* Onocria admigimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Onocria vigenentia sp. nov.

Candidatus Onocria vigenentia (NL. fem. n. *vigenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11416 sp900766495*. The type genome for the species is the GenBank assembly RS_GCF_900766495.1. The GC content of the type genome is 45.37 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Onocrida sacomicella sp. nov.

Candidatus Onocrida sacomicella (NL. fem. n. *sacomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-39-34 sp002787355*. The type genome for the species is the GenBank assembly GCA_002787355.1. The GC content of the type genome is 38.78 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Onocrida gen. nov.

Candidatus Onocrida (NL. fem. n. *Onocrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-39-34*. The type species for the genus is *Candidatus* Onocrida sacomicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Onocrosa conaressa sp. nov.

Candidatus Onocrosa conaressa (NL. fem. n. *conaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMLU01 sp903842365*. The type genome for the species is the GenBank assembly GCA_903842365.1. The GC content of the type genome is 41.62 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Onocrosa gen. nov.

Candidatus Onocrosa (NL. fem. n. *Onocrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMLU01*. The type species for the genus is *Candidatus* Onocrosa conaressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lutulidaceae.

Description of *Candidatus* Onocrula pavicedo sp. nov.

Candidatus Onocrula pavicedo (NL. fem. n. *pavicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWTC01 sp003563005*. The type genome for the species is the GenBank assembly GCA_003563005.1. The GC content of the type genome is 65.46 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Onocrula gen. nov.

Candidatus Onocrula (NL. fem. n. *Onocrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWTC01*. The type species for the genus is *Candidatus* Onocrula pavicedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ontolana andabitudo sp. nov.

Candidatus Ontolana andabitudo (NL. fem. n. *andabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDH01 sp012729405*. The type genome for the species is the GenBank assembly GCA_012729405.1. The GC content of the type genome is 40.29 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Ontolana gen. nov.

Candidatus Ontolana (NL. fem. n. *Ontolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDH01*. The type species for the genus is *Candidatus* Ontolana andabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Ontolaria dilecago sp. nov.

Candidatus Ontolaria dilecago (NL. fem. n. *dilecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXQM01 sp012974295*. The type genome for the species is the GenBank assembly GCA_012974295.1. The GC content of the type genome is 49.85 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Ontolaria gen. nov.

Candidatus Ontolaria (NL. fem. n. *Ontolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXQM01*. The type species for the genus is *Candidatus* Ontolaria dilecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogellaceae.

Description of *Candidatus* Ontolella bicipiforma sp. nov.

Candidatus Ontolella bicipiforma (NL. fem. n. *bicipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6490 sp002435365*. The type genome for the species is the GenBank assembly GCA_002435365.1. The GC content of the type genome is 40.22 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Ontolella gen. nov.

Candidatus Ontolella (NL. fem. n. *Ontolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6490*. The type species for the genus is *Candidatus* Ontolella bicipiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ontolia vivifitoga sp. nov.

Candidatus Ontolia vivifitoga (NL. fem. n. *vivifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-34-12 sp001784555*. The type genome for the species is the GenBank assembly GCA_001784555.1. The GC content of the type genome is 34.0 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ontolia gen. nov.

Candidatus Ontolia (NL. fem. n. *Ontolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-34-12*. The type species for the genus is *Candidatus* Ontolia vivifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colopariaceae.

Description of *Candidatus* Ontolida curabitia sp. nov.

Candidatus Ontolida curabitia (NL. fem. n. *curabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-189 sp003223325*. The type genome for the species is the GenBank assembly GCA_003223325.1. The GC content of the type genome is 57.44 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Ontolida gen. nov.

Candidatus Ontolida (NL. fem. n. *Ontolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-189*. The type species for the genus is *Candidatus* Ontolida curabitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Ontolida ensifilega sp. nov.

Candidatus Ontolida ensifilega (NL. fem. n. *ensifilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-189 sp003223315*. The type genome for the species is the GenBank assembly GCA_003223315.1. The GC content of the type genome is 58.63 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Ontolida resulimonia sp. nov.

Candidatus Ontolida resulimonia (NL. fem. n. *resulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-189 sp003224175*. The type genome for the species is the GenBank assembly GCA_003224175.1. The GC content of the type genome is 57.79 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Ontolida rubicitio sp. nov.

Candidatus Ontolida rubicitio (NL. fem. n. *rubicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-189 sp003140295*. The type genome for the species is the GenBank assembly GCA_003140295.1. The GC content of the type genome is 58.98 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Ontolosa roraritia sp. nov.

Candidatus Ontolosa roraritia (NL. fem. n. *roraritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQWB01 sp009785555*. The type genome for the species is the GenBank assembly GCA_009785555.1. The GC content of the type genome is 46.29 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Ontolosa gen. nov.

Candidatus Ontolosa (NL. fem. n. *Ontolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WQWB01*. The type species for the genus is *Candidatus* Ontolosa roraritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Ontolula apoplilega sp. nov.

Candidatus Ontolula apoplilega (NL. fem. n. *apoplilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-181 sp003563895*. The type genome for the species is the GenBank assembly GCA_003563895.1. The GC content of the type genome is 55.42 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Ontolula gen. nov.

Candidatus Ontolula (NL. fem. n. *Ontolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED11-181*. The type species for the genus is *Candidatus* Ontolula apoplilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Opercana cerifibra sp. nov.

Candidatus Opercana cerifibra (NL. fem. n. *cerifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W11650 sp003858485*. The type genome for the species is the GenBank assembly RS_GCF_003858485.1. The GC content of the type genome is 39.3 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Opercana gen. nov.

Candidatus Opercana (NL. fem. n. *Opercana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W11650*. The type species for the genus is *Candidatus* Opercana cerifibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opercana elastitas sp. nov.

Candidatus Opercana elastitas (NL. fem. n. *elastitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W11650 sp002999035*. The type genome for the species is the GenBank assembly RS_GCF_002999035.1. The GC content of the type genome is 45.33 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Opercaria alcalatio sp. nov.

Candidatus Opercaria alcalatio (NL. fem. n. *alcalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYOJ01 sp007280875*. The type genome for the species is the GenBank assembly GCA_007280875.1. The GC content of the type genome is 49.53 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Opercaria gen. nov.

Candidatus Opercaria (NL. fem. n. *Opercaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYOJ01*. The type species for the genus is *Candidatus* Opercaria alcalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepariaceae.

Description of *Candidatus* Opercaria apposilega sp. nov.

Candidatus Opercaria apposilega (NL. fem. n. *apposilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYOJ01 sp014382125*. The type genome for the species is the GenBank assembly GCA_014382125.1. The GC content of the type genome is 44.55 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Opercella inremigena sp. nov.

Candidatus Opercella inremigena (NL. fem. n. *inremigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRL01 sp004298065*. The type genome for the species is the GenBank assembly GCA_004298065.1. The GC content of the type genome is 63.69 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Opercella gen. nov.

Candidatus Opercella (NL. fem. n. *Opercella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCRL01*. The type species for the genus is *Candidatus* Opercella inremigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opercia resupousia sp. nov.

Candidatus Opercia resupousia (NL. fem. n. *resupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-65-34 sp001785115*. The type genome for the species is the GenBank assembly GCA_001785115.1. The GC content of the type genome is 64.86 % and the genome length is 2.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Opercia gen. nov.

Candidatus Opercia (NL. fem. n. *Opercia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-65-34*. The type species for the genus is *Candidatus* Opercia

resupousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opercida filifastra sp. nov.

Candidatus Opercida filifastra (NL. fem. n. *filifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-53-21 sp902826595*. The type genome for the species is the GenBank assembly GCA_902826595.1. The GC content of the type genome is 54.22 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Opercida gen. nov.

Candidatus Opercida (NL. fem. n. *Opercida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-53-21*. The type species for the genus is *Candidatus* Opercida filifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siligiaceae.

Description of *Candidatus* Opercida vicatimonia sp. nov.

Candidatus Opercida vicatimonia (NL. fem. n. *vicatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-53-21 sp001775255*. The type genome for the species is the GenBank assembly GCA_001775255.1. The GC content of the type genome is 52.76 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Opitutus vavasax sp. nov.

Candidatus Opitutus vavasax (NL. fem. n. *vavasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Opitutus sp903877135*. The type genome for the species is the GenBank assembly GCA_903877135.1. The GC content of the type genome is 63.5 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Oppanana edissitas sp. nov.

Candidatus Oppanana edissitas (NL. fem. n. *edissitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1774 sp002314635*. The type genome for the species is the GenBank assembly GCA_002314635.1. The GC content of the type genome is 57.0 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Oppanana gen. nov.

Candidatus Oppanana (NL. fem. n. *Oppanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1774*. The type species for the genus is *Candidatus* Oppanana edissitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppanaria nimirimonas sp. nov.

Candidatus Oppanaria nimirimonas (NL. fem. n. *nimirimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHV01 sp012744355*. The type genome for the species is the GenBank assembly GCA_012744355.1. The GC content of the type genome is 34.91 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Oppanaria gen. nov.

Candidatus Oppanaria (NL. fem. n. *Oppanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHV01*. The type species for the genus is *Candidatus* Oppanaria nimirimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppanella inlumigena sp. nov.

Candidatus Oppanella inlumigena (NL. fem. n. *inlumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIW01 sp013001485*. The type genome for the species is the GenBank assembly GCA_013001485.1. The GC content of the type genome is 64.58 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Oppanella gen. nov.

Candidatus Oppanella (NL. fem. n. *Oppanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDIW01*. The type species for the genus is *Candidatus* Oppanella inlumigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Oppanella innupitia sp. nov.

Candidatus Oppanella innupitia (NL. fem. n. *innupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIW01 sp013003515*. The type genome for the species is the GenBank assembly GCA_013003515.1. The GC content of the type genome is 65.65 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Oppania odolledo sp. nov.

Candidatus Oppania odolledo (NL. fem. n. *odolledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1393 sp002305255*. The type genome for the species is the GenBank assembly GCA_002305255.1. The GC content of the type genome is 61.17 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Oppania gen. nov.

Candidatus Oppania (NL. fem. n. *Oppania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1393*. The type species for the genus is *Candidatus* Oppania odolledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemanaceae.

Description of *Candidatus* Oppanida ignosentia sp. nov.

Candidatus Oppanida ignosentia (NL. fem. n. *ignosentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10818 sp900772445*. The type genome for the species is the GenBank assembly RS_GCF_900772445.1. The GC content of the type genome is 25.86 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Oppanida gen. nov.

Candidatus Oppanida (NL. fem. n. *Oppanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10818*. The type species for the genus is *Candidatus* Oppanida ignosentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Oppanosa octodibra sp. nov.

Candidatus Oppanosa octodibra (NL. fem. n. *octodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKY01 sp009777895*. The type genome for the species is the GenBank assembly GCA_009777895.1. The GC content of the type genome is 50.0 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Oppanosa gen. nov.

Candidatus Oppanosa (NL. fem. n. *Oppanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKY01*. The type species for the genus is *Candidatus* Oppanosa octodibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppanula adsibentia sp. nov.

Candidatus Oppanula adsibentia (NL. fem. n. *adsibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIO01 sp014381105*. The type genome for the species is the GenBank assembly GCA_014381105.1. The GC content of the type genome is 36.04 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Oppanula gen. nov.

Candidatus Oppanula (NL. fem. n. *Oppanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMIO01*. The type species for the genus is *Candidatus* Oppanula adsibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Opporaria alluvitia sp. nov.

Candidatus Opporaria alluvitia (NL. fem. n. *alluvitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILTG01 sp903837125*. The type genome for the species is the GenBank assembly GCA_903837125.1. The GC content of the type genome is 35.21 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Opporaria gen. nov.

Candidatus Opporaria (NL. fem. n. *Opporaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILTG01*. The type species for the genus is *Candidatus* Opporaria alluvitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Opporella nefanitia sp. nov.

Candidatus Opporella nefanitia (NL. fem. n. *nefanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7523 sp002479415*. The type genome for the species is the GenBank assembly GCA_002479415.1. The GC content of the type genome is 43.83 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Opporella gen. nov.

Candidatus Opporella (NL. fem. n. *Opporella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7523*. The type species for the genus is *Candidatus* Opporella nefanitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opporida revulitica sp. nov.

Candidatus Opporida revulitica (NL. fem. n. *revulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDLZ01 sp013001705*. The type genome for the species is the GenBank assembly GCA_013001705.1. The GC content of the type genome is 49.51 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Opporida gen. nov.

Candidatus Opporida (NL. fem. n. *Opporida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDLZ01*. The type species for the genus is *Candidatus* Opporida revulitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDKJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidellaceae.

Description of *Candidatus* Opporosa malogitas sp. nov.

Candidatus Opporosa malogitas (NL. fem. n. *malogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZZR01 sp902530215*. The type genome for the species is the GenBank assembly GCA_902530215.1. The GC content of the type genome is 29.46 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Opporosa gen. nov.

Candidatus Opporosa (NL. fem. n. *Opporosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABZZR01*. The type species for the genus is *Candidatus* Opporosa malogitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opporula adgesentia sp. nov.

Candidatus Opporula adgesentia (NL. fem. n. *adgesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705995 sp002705995*. The type genome for the species is the GenBank assembly GCA_002705995.1. The GC content of the type genome is 38.45 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Opporula gen. nov.

Candidatus Opporula (NL. fem. n. *Opporula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2705995*. The type species for the genus is *Candidatus* Opporula adgesentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppugana homagessa sp. nov.

Candidatus Oppugana homagessa (NL. fem. n. *homagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITIQ01 sp013361525*. The type genome for the species is the GenBank assembly GCA_013361525.1. The GC content of the type genome is 66.21 % and the genome length is 11.91 Mbp.

Description of *Candidatus* Oppugana gen. nov.

Candidatus Oppugana (NL. fem. n. *Oppugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITIQ01*. The type species for the genus is *Candidatus* Oppugana homagessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppugana ignicousia sp. nov.

Candidatus Oppugana ignicousia (NL. fem. n. *ignicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITIQ01 sp903892415*. The type genome for the species is the GenBank assembly GCA_903892415.1. The GC content of the type genome is 63.35 % and the genome length is 10.85 Mbp.

Description of *Candidatus* Oppugella diminastra sp. nov.

Candidatus Oppugella diminastra (NL. fem. n. *diminastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QYPU01 sp007280145*. The type genome for the species is the GenBank assembly GCA_007280145.1. The GC content of the type genome is 47.38 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Oppugella gen. nov.

Candidatus Oppugella (NL. fem. n. *Oppugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYPU01*. The type species for the genus is *Candidatus* Oppugella diminastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Oppugia amatrilega sp. nov.

Candidatus Oppugia amatrilega (NL. fem. n. *amatrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6235 sp002441525*. The type genome for the species is the GenBank assembly GCA_002441525.1. The GC content of the type genome is 38.44 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Oppugia gen. nov.

Candidatus Oppugia (NL. fem. n. *Oppugia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6235*. The type species for the genus is *Candidatus* Oppugia amatrilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5453*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifosaceae.

Description of *Candidatus* Oppugia ambecastra sp. nov.

Candidatus Oppugia ambecastra (NL. fem. n. *ambecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6235 sp002423145*. The type genome for the species is the GenBank assembly GCA_002423145.1. The GC content of the type genome is 37.09 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Oppugida irredatica sp. nov.

Candidatus Oppugida irredatica (NL. fem. n. *irredatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWQG01 sp003556835*. The type genome for the species is the GenBank assembly GCA_003556835.1. The GC content of the type genome is 58.82 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Oppugida gen. nov.

Candidatus Oppugida (NL. fem. n. *Oppugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWQG01*. The type species for the genus is *Candidatus* Oppugida irredatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppugosa adcomitrix sp. nov.

Candidatus Oppugosa adcomitrix (NL. fem. n. *adcomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHOV01 sp003946655*. The type genome for the species is the GenBank assembly RS_GCF_003946655.1. The GC content of the type genome is 49.01 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Oppugosa gen. nov.

Candidatus Oppugosa (NL. fem. n. *Oppugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHOV01*. The type species for the genus is *Candidatus* Oppugosa adcomitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oppugosa aplesago sp. nov.

Candidatus Oppugosa aplesago (NL. fem. n. *aplesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHOV01 sp003946675*. The type genome for the species is the GenBank assembly RS_GCF_003946675.1. The GC content of the type genome is 40.81 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Oppugosa imbecicella sp. nov.

Candidatus Oppugosa imbecicella (NL. fem. n. *imbecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHOV01 sp003946645*. The type genome for the species is the GenBank assembly RS_GCF_003946645.1. The GC content of the type genome is 41.74 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Optabana indupitica sp. nov.

Candidatus Optabana indupitica (NL. fem. n. *indupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4001 sp902805855*. The type genome for the species is the GenBank assembly GCA_902805855.1. The GC content of the type genome is 69.97 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Optabana gen. nov.

Candidatus Optabana (NL. fem. n. *Optabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4001*. The type species for the genus is *Candidatus* Optabana indupitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Optabana macilitia sp. nov.

Candidatus Optabana macilitia (NL. fem. n. *macilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4001 sp002384855*. The type genome for the species is the GenBank assembly GCA_002384855.1. The GC content of the type genome is 71.15 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Optabaria practatica sp. nov.

Candidatus Optabaria practatica (NL. fem. n. *practatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RACS-047 sp013316045*. The type genome for the species is the GenBank assembly GCA_013316045.1. The GC content of the type genome is 46.89 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Optabaria gen. nov.

Candidatus Optabaria (NL. fem. n. *Optabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RACS-047*. The type species for the genus is *Candidatus* Optabaria practatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Optabia viliticula sp. nov.

Candidatus Optabia viliticula (NL. fem. n. *viliticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYN01 sp009692785*. The type genome for the species is the GenBank assembly GCA_009692785.1. The GC content of the type genome is 69.3 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Optabia gen. nov.

Candidatus Optabia (NL. fem. n. *Optabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYN01*. The type species for the genus is *Candidatus* Optabia viliticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Optabida enuntilenta sp. nov.

Candidatus Optabida enuntilenta (NL. fem. n. *enuntilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLM01 sp012799315*. The type genome for the species is the GenBank assembly GCA_012799315.1. The GC content of the type genome is 40.63 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Optabida gen. nov.

Candidatus Optabida (NL. fem. n. *Optabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLM01*. The type species for the genus is *Candidatus* Optabida enuntilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Optumella viginitia sp. nov.

Candidatus Optumella viginitia (NL. fem. n. *viginitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5005 sp002398405*. The type genome for the species is the GenBank assembly GCA_002398405.1. The GC content of the type genome is 66.38 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Optumella gen. nov.

Candidatus Optumella (NL. fem. n. *Optumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA5005*. The type species for the genus is *Candidatus* Optumella viginitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Optumosa assubitas sp. nov.

Candidatus Optumosa assubitas (NL. fem. n. *assubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJU01 sp012800195*. The type genome for the species is the GenBank assembly GCA_012800195.1. The GC content of the type genome is 36.41 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Optumosa gen. nov.

Candidatus Optumosa (NL. fem. n. *Optumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZJU01*. The type species for the genus is *Candidatus* Optumosa assubitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BICA1-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Novilosaceae.

Description of *Candidatus* Optumula chancisca sp. nov.

Candidatus Optumula chancisca (NL. fem. n. *chancisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGM01 sp900696535*. The type genome for the species is the GenBank assembly GCA_900696535.1. The GC content of the type genome is 69.04 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Optumula gen. nov.

Candidatus Optumula (NL. fem. n. *Optumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGM01*. The type species for the genus is *Candidatus* Optumula

chancisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibariaceae.

Description of *Candidatus* Opuscella bicoditoga sp. nov.

Candidatus Opuscella bicoditoga (NL. fem. n. *bicoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JG1575 sp002838815*. The type genome for the species is the GenBank assembly RS_GCF_002838815.1. The GC content of the type genome is 52.33 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Opuscella gen. nov.

Candidatus Opuscella (NL. fem. n. *Opuscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JG1575*. The type species for the genus is *Candidatus* Opuscella bicoditoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opuscella sitelugo sp. nov.

Candidatus Opuscella sitelugo (NL. fem. n. *sitelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JG1575 sp012511315*. The type genome for the species is the GenBank assembly GCA_012511315.1. The GC content of the type genome is 39.54 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Opuscia gen. nov.

Candidatus Opuscia (NL. fem. n. *Opuscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6211*. The type species for the genus is *Candidatus* Opuscia butzleri_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opuscia refacitrix sp. nov.

Candidatus Opuscia refacitrix (NL. fem. n. *refacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6211 sp002421845*. The type genome for the species is the GenBank assembly GCA_002421845.1. The GC content of the type genome is 32.33 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Opuscida bacififica sp. nov.

Candidatus Opuscida bacififica (NL. fem. n. *bacififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3376 sp002359055*. The type genome for the species is the GenBank assembly GCA_002359055.1. The GC content of the type genome is 34.06 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Opuscida gen. nov.

Candidatus Opuscida (NL. fem. n. *Opuscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3376*. The type species for the genus is *Candidatus* Opuscida bacififica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Opuscosa inpudessa sp. nov.

Candidatus Opuscosa inpudessa (NL. fem. n. *inpudessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTJ01 sp012031475*. The type genome for the species is the GenBank assembly GCA_012031475.1. The GC content of the type genome is 53.16 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Opuscosa gen. nov.

Candidatus Opuscosa (NL. fem. n. *Opuscosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTJ01*. The type species for the genus is *Candidatus* Opuscosa inpudessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oratrana inhabitica sp. nov.

Candidatus Oratrana inhabitica (NL. fem. n. *inhabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCC01 sp013359315*. The type genome for the species is the GenBank assembly GCA_013359315.1. The GC content of the type genome is 34.67 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Oratrana gen. nov.

Candidatus Oratrana (NL. fem. n. *Oratrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCC01*. The type species for the genus is *Candidatus* Oratrana inhabitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oratraria retunitia sp. nov.

Candidatus Oratraria retunitia (NL. fem. n. *retunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWV01 sp013334845*. The type genome for the species is the GenBank assembly GCA_013334845.1. The GC content of the type genome is 41.6 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Oratraria gen. nov.

Candidatus Oratraria (NL. fem. n. *Oratraria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWV01*. The type species for the genus is *Candidatus* Oratraria retunitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Oratrella doxolitudo sp. nov.

Candidatus Oratrella doxolitudo (NL. fem. n. *doxolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXJQ01 sp005779345*. The type genome for the species is the GenBank assembly GCA_005779345.1. The GC content of the type genome is 70.16 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Oratrella gen. nov.

Candidatus Oratrella (NL. fem. n. *Oratrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXJQ01*. The type species for the genus is *Candidatus* Oratrella doxolitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-610*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpellaceae.

Description of *Candidatus* Oratria offiritia sp. nov.

Candidatus Oratria offiritia (NL. fem. n. *offiritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-67-20 sp001805695*. The type genome for the species is the GenBank assembly GCA_001805695.1. The GC content of the type genome is 66.7 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Oratria gen. nov.

Candidatus Oratria (NL. fem. n. *Oratria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-67-20*. The type species for the genus is *Candidatus* Oratria offiritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetariaceae.

Description of *Candidatus* Oratrida exsanatica sp. nov.

Candidatus Oratrida exsanatica (NL. fem. n. *exsanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAU-1491 sp011777505*. The type genome for the species is the GenBank assembly RS_GCF_011777505.1. The GC content of the type genome is 32.72 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Oratrida gen. nov.

Candidatus Oratrida (NL. fem. n. *Oratrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAU-1491*. The type species for the genus is *Candidatus* Oratrida exsanatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oratrida sarabentia sp. nov.

Candidatus Oratrida sarabentia (NL. fem. n. *sarabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAU-1491 sp005047595*. The type genome for the species is the GenBank assembly RS_GCF_005047595.1. The GC content of the type genome is 32.4 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Oratrosa optumousia sp. nov.

Candidatus Oratrosa optumousia (NL. fem. n. *optumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQU01 sp012837645*. The type genome for the species is the GenBank assembly GCA_012837645.1. The GC content of the type genome is 31.27 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Oratrosa gen. nov.

Candidatus Oratrosa (NL. fem. n. *Oratrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUQU01*. The type species for the genus is *Candidatus* Oratrosa optumousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5453*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifosaceae.

Description of *Candidatus* Oratrosa viginiforma sp. nov.

Candidatus Oratrosa viginiforma (NL. fem. n. *viginiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQU01 sp012800005*. The type genome for the species is the GenBank assembly GCA_012800005.1. The GC content of the type genome is 29.25 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Orgetana inpasitica sp. nov.

Candidatus Orgetana inpasitica (NL. fem. n. *inpasitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSL01 sp009380095*. The type genome for the species is the GenBank assembly GCA_009380095.1. The GC content of the type genome is 72.27 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Orgetana gen. nov.

Candidatus Orgetana (NL. fem. n. *Orgetana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSL01*. The type species for the genus is *Candidatus* Orgetana inpasitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Orgetaria cacomatio sp. nov.

Candidatus Orgetaria cacomatio (NL. fem. n. *cacomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B6-G9 sp003650365*. The type genome for the species is the GenBank assembly GCA_003650365.1. The GC content of the type genome is 39.12 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Orgetaria gen. nov.

Candidatus Orgetaria (NL. fem. n. *Orgetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B6-G9*. The type species for the genus is *Candidatus* Orgetaria cacomatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Orgetella morigugo sp. nov.

Candidatus Orgetella morigugo (NL. fem. n. *morigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZA01 sp013696185*. The type genome for the species is the GenBank assembly GCA_013696185.1. The GC content of the type genome is 72.1 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Orgetella gen. nov.

Candidatus Orgetella (NL. fem. n. *Orgetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZA01*. The type species for the genus is *Candidatus* Orgetella morigugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Orgetosa artilibula sp. nov.

Candidatus Orgetosa artilibula (NL. fem. n. *artilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFY01 sp902826705*. The type genome for the species is the GenBank assembly GCA_902826705.1. The GC content of the type genome is 71.27 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Orgetosa gen. nov.

Candidatus Orgetosa (NL. fem. n. *Orgetosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFY01*. The type species for the genus is *Candidatus* Orgetosa artilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Orgetula inexpiforma sp. nov.

Candidatus Orgetula inexpiforma (NL. fem. n. *inexpiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYV01 sp902810695*. The type genome for the species is the GenBank assembly RS_GCF_902810695.1. The GC content of the type genome is 61.48 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Orgetula gen. nov.

Candidatus Orgetula (NL. fem. n. *Orgetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYV01*. The type species for the genus is *Candidatus* Orgetula inexpiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oribacterium adrenilega sp. nov.

Candidatus Oribacterium adrenilega (NL. fem. n. *adrenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp013394775*. The type genome for the species is the GenBank assembly RS_GCF_013394775.1. The GC content of the type genome is 54.65 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Oribacterium advorilenta sp. nov.

Candidatus Oribacterium advorilenta (NL. fem. n. *advorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900772695*. The type genome for the species is the GenBank assembly GCA_900772695.1. The GC content of the type genome is 54.35 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Oribacterium cerebifica sp. nov.

Candidatus Oribacterium cerebifica (NL. fem. n. *cerebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900315665*. The type genome for the species is the GenBank assembly GCA_902794815.1. The GC content of the type genome is 48.17 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Oribacterium didacivita sp. nov.

Candidatus Oribacterium didacivita (NL. fem. n. *didacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp002431355*. The type genome for the species is the

GenBank assembly GCA_002431355.1. The GC content of the type genome is 52.64 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Oribacterium gemebimonas sp. nov.

Candidatus Oribacterium gemebimonas (NL. fem. n. *gemebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp002449915*. The type genome for the species is the GenBank assembly GCA_902796485.1. The GC content of the type genome is 47.41 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Oribacterium giganugo sp. nov.

Candidatus Oribacterium giganugo (NL. fem. n. *giganugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900113415*. The type genome for the species is the GenBank assembly RS_GCF_900113415.1. The GC content of the type genome is 41.47 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Oribacterium inrefivita sp. nov.

Candidatus Oribacterium inrefivita (NL. fem. n. *inrefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp002396005*. The type genome for the species is the GenBank assembly GCA_002396005.1. The GC content of the type genome is 42.48 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Oribacterium maligatio sp. nov.

Candidatus Oribacterium maligatio (NL. fem. n. *maligatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900107835*. The type genome for the species is the GenBank assembly RS_GCF_900107835.1. The GC content of the type genome is 42.22 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Oribacterium manupitio sp. nov.

Candidatus Oribacterium manupitio (NL. fem. n. *manupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp000513555*. The type genome for the species is the GenBank assembly RS_GCF_000513555.1. The GC content of the type genome is 43.44 % and the genome length is 3.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rumen contents of cattle consuming a high forage diet (Rhodes grass; Chloris gayana) in the semi-arid tropics".

Description of *Candidatus* Oribacterium monogousia sp. nov.

Candidatus Oribacterium monogousia (NL. fem. n. *monogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp002007235*. The type genome for the species is the GenBank assembly RS_GCF_002007235.1. The GC content of the type genome is 42.79 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Oribacterium munifigena sp. nov.

Candidatus Oribacterium munifigena (NL. fem. n. *munifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp000160135*. The type genome for the species is the GenBank assembly RS_GCF_000160135.1. The GC content of the type genome is 54.68 % and the genome length is 2.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Oribacterium pacifugo sp. nov.

Candidatus Oribacterium pacifugo (NL. fem. n. *pacifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900770445*. The type genome for the species is the GenBank assembly GCA_900770445.1. The GC content of the type genome is 54.36 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Oribacterium pocilitas sp. nov.

Candidatus Oribacterium pocilitas (NL. fem. n. *pocilitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp000424445*. The type genome for the species is the GenBank assembly RS_GCF_000424445.1. The GC content of the type genome is 43.02 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Oribacterium ratifivita sp. nov.

Candidatus Oribacterium ratifivita (NL. fem. n. *ratifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp900318695*. The type genome for the species is the GenBank assembly GCA_902797645.1. The GC content of the type genome is 45.31 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Oribacterium repuditrix sp. nov.

Candidatus Oribacterium repuditrix (NL. fem. n. *repuditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp004554245*. The type genome for the species is the GenBank assembly GCA_900768305.1. The GC content of the type genome is 54.41 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Oribacterium semapago sp. nov.

Candidatus Oribacterium semapago (NL. fem. n. *semapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp000702885*. The type genome for the species is the GenBank assembly RS_GCF_000702885.1. The GC content of the type genome is 42.46 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Oribacterium sicarimonia sp. nov.

Candidatus Oribacterium sicarimonia (NL. fem. n. *sicarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oribacterium sp002371295*. The type genome for the species is the GenBank assembly GCA_002371295.1. The GC content of the type genome is 44.14 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Oricola adleciforma sp. nov.

Candidatus Oricola adleciforma (NL. fem. n. *adleciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oricola sp002698425*. The type genome for the species is the GenBank assembly GCA_002698425.1. The GC content of the type genome is 63.26 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Oricola infabicula sp. nov.

Candidatus Oricola infabicula (NL. fem. n. *infabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oricola sp002706335*. The type genome for the species is the GenBank assembly GCA_002706335.1. The GC content of the type genome is 61.83 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Oricola obtemibra sp. nov.

Candidatus Oricola obtemibra (NL. fem. n. *obtemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oricola sp013358405*. The type genome for the species is the GenBank assembly RS_GCF_013358405.1. The GC content of the type genome is 63.54 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Ornitella adnumentia sp. nov.

Candidatus Ornitella adnumentia (NL. fem. n. *adnumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACADW01 sp013388445*. The type genome for the species is the GenBank assembly GCA_013388445.1. The GC content of the type genome is 61.31 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Ornitella gen. nov.

Candidatus Ornitella (NL. fem. n. *Ornitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACADW01*. The type species for the genus is *Candidatus* Ornitella adnumentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomulaceae.

Description of *Candidatus* Ornithinibacillus coninitia sp. nov.

Candidatus Ornithinibacillus coninitia (NL. fem. n. *coninitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinibacillus sp009728145*. The type genome for the species is the GenBank assembly RS_GCF_009728145.1. The GC content of the type genome is 35.87 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Ornithinibacillus depocicula sp. nov.

Candidatus Ornithinibacillus depocicula (NL. fem. n. *depocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinibacillus sp003454625*. The type genome for the species is the GenBank assembly GCA_003454625.1. The GC content of the type genome is 36.22 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Ornithinibacillus derunentia sp. nov.

Candidatus Ornithinibacillus derunentia (NL. fem. n. *derunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinibacillus sp000577245*. The type genome for the species is the GenBank assembly RS_GCF_000577245.1. The GC content of the type genome is 36.0 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Ornithinibacillus serotitio sp. nov.

Candidatus Ornithinibacillus serotitio (NL. fem. n. *serotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinibacillus sp014287465*. The type genome for the species is the GenBank assembly RS_GCF_014287465.1. The GC content of the type genome is 37.08 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Ornithinicoccus fetifax sp. nov.

Candidatus Ornithinicoccus fetifax (NL. fem. n. *fetifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinicoccus sp007197575*. The type genome for the species is the GenBank assembly RS_GCF_007197575.1. The GC content of the type genome is 69.21 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Ornithinicoccus insufitas sp. nov.

Candidatus Ornithinicoccus insufitas (NL. fem. n. *insufitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinicoccus sp012515595*. The type genome for the species is the GenBank assembly GCA_012515595.1. The GC content of the type genome is 71.63 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Ornithinimicrobium conibibra sp. nov.

Candidatus Ornithinimicrobium conibibra (NL. fem. n. *conibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinimicrobium sp001942405*. The type genome for the species is the GenBank assembly RS_GCF_001942405.1. The GC content of the type genome is 73.02 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Ornithinimicrobium defesugo sp. nov.

Candidatus Ornithinimicrobium defesugo (NL. fem. n. *defesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinimicrobium sp003577095*. The type genome for the species is the GenBank assembly GCA_003577095.1. The GC content of the type genome is 73.54 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Ornithinimicrobium luticibula sp. nov.

Candidatus Ornithinimicrobium luticibula (NL. fem. n. *luticibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ornithinimicrobium sp003351765*. The type genome for the species is the GenBank assembly RS_GCF_003351765.1. The GC content of the type genome is 72.45 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Ornitia ignigibula sp. nov.

Candidatus Ornitia ignigibula (NL. fem. n. *ignigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFHR01 sp004555545*. The type genome for the species is the GenBank assembly GCA_004555545.1. The GC content of the type genome is 33.28 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Ornitia gen. nov.

Candidatus Ornitia (NL. fem. n. *Ornitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFHR01*. The type species for the genus is *Candidatus* Ornitia ignigibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ornitida astapastra sp. nov.

Candidatus Ornitida astapastra (NL. fem. n. *astapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BW-2 sp008375315*. The type genome for the species is the GenBank

assembly RS_GCF_008375315.1. The GC content of the type genome is 52.6 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Ornitida gen. nov.

Candidatus Ornitida (NL. fem. n. *Ornitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BW-2*. The type species for the genus is *Candidatus* Ornitida astapastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ornitosa adverimonas sp. nov.

Candidatus Ornitosa adverimonas (NL. fem. n. *adverimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747695 sp002747695*. The type genome for the species is the GenBank assembly GCA_002747695.1. The GC content of the type genome is 37.82 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Ornitosa gen. nov.

Candidatus Ornitosa (NL. fem. n. *Ornitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747695*. The type species for the genus is *Candidatus* Ornitosa adverimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ornitosa tabififorma sp. nov.

Candidatus Ornitosa tabififorma (NL. fem. n. *tabififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747695 sp011391075*. The type genome for the species is the GenBank assembly GCA_011391075.1. The GC content of the type genome is 34.91 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Oscilana invoritia sp. nov.

Candidatus Oscilana invoritia (NL. fem. n. *invoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1775 sp002314595*. The type genome for the species is the GenBank assembly GCA_002314595.1. The GC content of the type genome is 35.15 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Oscilana gen. nov.

Candidatus Oscilana (NL. fem. n. *Oscilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1775*. The type species for the genus is *Candidatus* Oscilana invoritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Firm-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resulosaceae.

Description of *Candidatus* Oscilella rurigimonas sp. nov.

Candidatus Oscilella rurigimonas (NL. fem. n. *rurigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD12-FULL-57-12 sp001799275*. The type genome for the species is the GenBank assembly GCA_001799275.1. The GC content of the type genome is 56.76 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Oscilella gen. nov.

Candidatus Oscilella (NL. fem. n. *Oscilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YD12-FULL-57-12*. The type species for the genus is *Candidatus* Oscilella rurigimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM004*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocariaceae.

Description of *Candidatus* Oscilia desacicula sp. nov.

Candidatus Oscilia desacicula (NL. fem. n. *desacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MYP5 sp012911815*. The type genome for the species is the GenBank assembly RS_GCF_012911815.1. The GC content of the type genome is 46.07 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Oscilia gen. nov.

Candidatus Oscilia (NL. fem. n. *Oscilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MYP5*. The type species for the genus is *Candidatus* Oscilia desacicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oscilida inrevicula sp. nov.

Candidatus Oscilida inrevicula (NL. fem. n. *inrevicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1143 sp903911905*. The type genome for the species is the GenBank assembly GCA_903911905.1. The GC content of the type genome is 69.08 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Oscilida gen. nov.

Candidatus Oscilida (NL. fem. n. *Oscilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1143*. The type species for the genus is *Candidatus* Oscilida inrevicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Oscilida obmurousia sp. nov.

Candidatus Oscilida obmurousia (NL. fem. n. *obmurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1143 sp003153055*. The type genome for the species is the GenBank assembly GCA_003153055.1. The GC content of the type genome is 67.66 % and the genome length is 9.28 Mbp.

Description of *Candidatus* Oscillatoria exsupibula sp. nov.

Candidatus Oscillatoria exsupibula (NL. fem. n. *exsupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillatoria sp011390515*. The type genome for the species is the GenBank assembly GCA_011390515.1. The GC content of the type genome is 47.98 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Oscillibacter apoplitura sp. nov.

Candidatus Oscillibacter apoplitura (NL. fem. n. *apoplitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillibacter sp003245395*. The type genome for the species is the GenBank assembly GCA_003245395.1. The GC content of the type genome is 56.01 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Oscillibacter denigimonas sp. nov.

Candidatus Oscillibacter denigimonas (NL. fem. n. *denigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillibacter sp002455655*. The type genome for the species is the GenBank assembly GCA_002455655.1. The GC content of the type genome is 56.85 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Oscillochloris cituvitas sp. nov.

Candidatus Oscillochloris cituvitas (NL. fem. n. *cituvitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Oscillochloris sp004138175*. The type genome for the species is the GenBank assembly RS_GCF_004138175.2. The GC content of the type genome is 65.21 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Oscillochloris delucatica sp. nov.

Candidatus Oscillochloris delucatica (NL. fem. n. *delucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillochloris sp903877945*. The type genome for the species is the GenBank assembly GCA_903883065.1. The GC content of the type genome is 62.12 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Oscillochloris noviletta sp. nov.

Candidatus Oscillochloris noviletta (NL. fem. n. *noviletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillochloris sp903887465*. The type genome for the species is the GenBank assembly GCA_903901705.1. The GC content of the type genome is 64.76 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Oscillochloris pinigitura sp. nov.

Candidatus Oscillochloris pinigitura (NL. fem. n. *pinigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oscillochloris sp903920315*. The type genome for the species is the GenBank assembly GCA_903920315.1. The GC content of the type genome is 60.73 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Oscilosa venucifica sp. nov.

Candidatus Oscilosa venucifica (NL. fem. n. *venucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-165 sp005879785*. The type genome for the species is the GenBank assembly GCA_005879785.1. The GC content of the type genome is 68.62 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Oscilosa gen. nov.

Candidatus Oscilosa (NL. fem. n. *Oscilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-165*. The type species for the genus is *Candidatus* Oscilosa venucifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Oscilula smegmisca sp. nov.

Candidatus Oscilula smegmisca (NL. fem. n. *smegmisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNS01 sp012798185*. The type genome for the species is the GenBank assembly GCA_012798185.1. The GC content of the type genome is 44.33 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Oscilula gen. nov.

Candidatus Oscilula (NL. fem. n. *Oscilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNS01*. The type species for the genus is *Candidatus* Oscilula smegmisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Ossararia adnulatica sp. nov.

Candidatus Ossararia adnulatica (NL. fem. n. *adnulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746155 sp002746155*. The type genome for the species is the GenBank assembly GCA_002746155.1. The GC content of the type genome is 39.39 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Ossararia gen. nov.

Candidatus Ossararia (NL. fem. n. *Ossararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746155*. The type species for the genus is *Candidatus* Ossararia adnulatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002770795*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conoposaceae.

Description of *Candidatus* Ossarida accapousia sp. nov.

Candidatus Ossarida accapousia (NL. fem. n. *accapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTL01 sp012521625*. The type genome for the species is the GenBank assembly GCA_012521625.1. The GC content of the type genome is 38.28 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ossarida gen. nov.

Candidatus Ossarida (NL. fem. n. *Ossarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTL01*. The type species for the genus is *Candidatus* Ossarida accapousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossarida foricisca sp. nov.

Candidatus Ossarida foricisca (NL. fem. n. *foricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTL01 sp012518035*. The type genome for the species is the GenBank assembly GCA_012518035.1. The GC content of the type genome is 38.53 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Ossarida secunibra sp. nov.

Candidatus Ossarida secunibra (NL. fem. n. *secunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTL01 sp012735585*. The type genome for the species is the GenBank assembly GCA_012735585.1. The GC content of the type genome is 33.11 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ossarosa licenitica sp. nov.

Candidatus Ossarosa licenitica (NL. fem. n. *licenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12650 sp900761725*. The type genome for the species is the GenBank assembly RS_GCF_900761725.1. The GC content of the type genome is 44.54 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ossarosa gen. nov.

Candidatus Ossarosa (NL. fem. n. *Ossarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12650*. The type species for the genus is *Candidatus* Ossarosa licenitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Ossarula inbecatica sp. nov.

Candidatus Ossarula inbecatica (NL. fem. n. *inbecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-2-50-31-20 sp002786785*. The type genome for the species is the GenBank assembly GCA_002786785.1. The GC content of the type genome is 30.78 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Ossarula gen. nov.

Candidatus Ossarula (NL. fem. n. *Ossarula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-2-50-31-20*. The type species for the genus is *Candidatus* Ossarula inbecatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossicana ossicitura sp. nov.

Candidatus Ossicana ossicitura (NL. fem. n. *ossicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM-1111 sp900299295*. The type genome for the species is the GenBank assembly GCA_900299295.1. The GC content of the type genome is 38.28 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Ossicana gen. nov.

Candidatus Ossicana (NL. fem. n. *Ossicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AM-1111*. The type species for the genus is *Candidatus* Ossicana ossicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-17BO*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogariaceae.

Description of *Candidatus* Ossicella adcubatica sp. nov.

Candidatus Ossicella adcubatica (NL. fem. n. *adcubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJL01 sp014239365*. The type genome for the species is the GenBank assembly GCA_014239365.1. The GC content of the type genome is 56.79 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Ossicella gen. nov.

Candidatus Ossicella (NL. fem. n. *Ossicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJL01*. The type species for the genus is *Candidatus* Ossicella adcubatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1100*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilanaceae.

Description of *Candidatus* Ossicella semimedo sp. nov.

Candidatus Ossicella semimedo (NL. fem. n. *semimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJL01 sp014382585*. The type genome for the species is the GenBank assembly GCA_014382585.1. The GC content of the type genome is 56.63 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Ossicia diponetta sp. nov.

Candidatus Ossicia diponetta (NL. fem. n. *diponetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *U0105 sp003820355*. The type genome for the species is the GenBank assembly RS_GCF_003820355.1. The GC content of the type genome is 45.28 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Ossicia gen. nov.

Candidatus Ossicia (NL. fem. n. *Ossicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *U0105*. The type species for the genus is *Candidatus* Ossicia diponetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossicida nimiritica sp. nov.

Candidatus Ossicida nimiritica (NL. fem. n. *nimiritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V1-115 sp003402735*. The type genome for the species is the GenBank assembly GCA_003402735.1. The GC content of the type genome is 61.77 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Ossicida gen. nov.

Candidatus Ossicida (NL. fem. n. *Ossicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *V1-115*. The type species for the genus is *Candidatus* Ossicida nimiritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Ossicosa subacibula sp. nov.

Candidatus Ossicosa subacibula (NL. fem. n. *subacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJS01 sp014380515*. The type genome for the species is the GenBank assembly GCA_014380515.1. The GC content of the type genome is 53.15 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Ossicosa gen. nov.

Candidatus Ossicosa (NL. fem. n. *Ossicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJS01*. The type species for the genus is *Candidatus* Ossicosa subacibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossifana insemicella sp. nov.

Candidatus Ossifana insemicella (NL. fem. n. *insemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WRHW01 sp009783055*. The type genome for the species is the GenBank assembly GCA_009783055.1. The GC content of the type genome is 44.95 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Ossifana gen. nov.

Candidatus Ossifana (NL. fem. n. *Ossifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHW01*. The type species for the genus is *Candidatus* Ossifana insemicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossifaria derecigena sp. nov.

Candidatus Ossifaria derecigena (NL. fem. n. *derecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMQW01 sp014376785*. The type genome for the species is the GenBank assembly GCA_014376785.1. The GC content of the type genome is 51.59 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Ossifaria gen. nov.

Candidatus Ossifaria (NL. fem. n. *Ossifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMQW01*. The type species for the genus is *Candidatus* Ossifaria derecigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Ossifida alectimonas sp. nov.

Candidatus Ossifida alectimonas (NL. fem. n. *alectimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CCMM004 sp004005435*. The type genome for the species is the

GenBank assembly RS_GCF_004005435.1. The GC content of the type genome is 69.43 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Ossifida gen. nov.

Candidatus Ossifida (NL. fem. n. *Ossifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CCMM004*. The type species for the genus is *Candidatus* Ossifida alectimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossifula virecentia sp. nov.

Candidatus Ossifula virecentia (NL. fem. n. *virecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNH01 sp013824165*. The type genome for the species is the GenBank assembly GCA_013824165.1. The GC content of the type genome is 66.41 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Ossifula gen. nov.

Candidatus Ossifula (NL. fem. n. *Ossifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNH01*. The type species for the genus is *Candidatus* Ossifula virecentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossucana fragmitas sp. nov.

Candidatus Ossucana fragmitas (NL. fem. n. *fragmitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QZLE01 sp004796365*. The type genome for the species is the GenBank assembly GCA_004796365.1. The GC content of the type genome is 41.13 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Ossucana gen. nov.

Candidatus Ossucana (NL. fem. n. *Ossucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QZLE01*. The type species for the genus is *Candidatus* Ossucana fragmitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QZLD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemiaceae.

Description of *Candidatus* Ossucella affanitudo sp. nov.

Candidatus Ossucella affanitudo (NL. fem. n. *affanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA866 sp900543295*. The type genome for the species is the GenBank assembly GCA_900543295.1. The GC content of the type genome is 50.1 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ossucella gen. nov.

Candidatus Ossucella (NL. fem. n. *Ossucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA866*. The type species for the genus is *Candidatus* Ossucella affanitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ossucella arancisca sp. nov.

Candidatus Ossucella arancisca (NL. fem. n. *arancisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA866 sp002295325*. The type genome for the species is the GenBank assembly GCA_002295325.1. The GC content of the type genome is 36.51 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Ossucia colipitoga sp. nov.

Candidatus Ossucia colipitoga (NL. fem. n. *colipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAV01 sp013695255*. The type genome for the species is the GenBank assembly GCA_013695255.1. The GC content of the type genome is 71.92 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Ossucia gen. nov.

Candidatus Ossucia (NL. fem. n. *Ossucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAV01*. The type species for the genus is *Candidatus* Ossucia colipitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Ossucida acrolitrix sp. nov.

Candidatus Ossucida acrolitrix (NL. fem. n. *acrolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-73-3 sp001304155*. The type genome for the species is the GenBank assembly GCA_001304155.1. The GC content of the type genome is 45.22 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Ossucida gen. nov.

Candidatus Ossucida (NL. fem. n. *Ossucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-73-3*. The type species for the genus is *Candidatus* Ossucida acrolitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depecosaceae.

Description of *Candidatus* Ottowia adlenigena sp. nov.

Candidatus Ottowia adlenigena (NL. fem. n. *adlenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp001897615*. The type genome for the species is the GenBank assembly GCA_001897615.1. The GC content of the type genome is 68.66 % and the genome length is 3.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Ottowia baropilega sp. nov.

Candidatus Ottowia baropilega (NL. fem. n. *baropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp001262075*. The type genome for the species is the GenBank assembly RS_GCF_900240305.1. The GC content of the type genome is 63.52 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Ottowia femelivita sp. nov.

Candidatus Ottowia femelivita (NL. fem. n. *femelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp003859965*. The type genome for the species is the GenBank assembly RS_GCF_003859965.1. The GC content of the type genome is 67.02 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Ottowia fetifisca sp. nov.

Candidatus Ottowia fetifisca (NL. fem. n. *fetifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp008017535*. The type genome for the species is the GenBank assembly RS_GCF_008017535.1. The GC content of the type genome is 66.22 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Ottowia pericilega sp. nov.

Candidatus Ottowia pericilega (NL. fem. n. *pericilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp009778355*. The type genome for the species is the GenBank assembly GCA_009778355.1. The GC content of the type genome is 65.47 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Ottowia subinatica sp. nov.

Candidatus Ottowia subinatica (NL. fem. n. *subinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp900320815*. The type genome for the species is the GenBank assembly GCA_902773235.1. The GC content of the type genome is 61.6 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Ottowia supelilega sp. nov.

Candidatus Ottowia supelilega (NL. fem. n. *supelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ottowia sp004299095*. The type genome for the species is the GenBank assembly GCA_004299095.1. The GC content of the type genome is 65.04 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Owenweeksia regigigena sp. nov.

Candidatus Owenweeksia regigigena (NL. fem. n. *regigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Owenweeksia sp002695025*. The type genome for the species is the GenBank assembly GCA_002715525.1. The GC content of the type genome is 45.94 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Oxalobacter bugiletta sp. nov.

Candidatus Oxalobacter bugiletta (NL. fem. n. *bugiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oxalobacter sp009783065*. The type genome for the species is the GenBank assembly GCA_009783065.1. The GC content of the type genome is 48.15 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Oxalobacter cicatimonia sp. nov.

Candidatus Oxalobacter cicatimonia (NL. fem. n. *cicatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oxalobacter sp900760095*. The type genome for the species is the GenBank assembly GCA_900760095.1. The GC content of the type genome is 50.45 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Oxalobacter subabicella sp. nov.

Candidatus Oxalobacter subabicella (NL. fem. n. *subabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Oxalobacter sp012512465*. The type genome for the species is the GenBank assembly GCA_012512465.1. The GC content of the type genome is 52.36 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Ozemobacter reduvicella sp. nov.

Candidatus Ozemobacter reduvicella (NL. fem. n. *reduvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ozemobacter sp012517355*. The type genome for the species is the GenBank assembly GCA_012517355.1. The GC content of the type genome is 67.77 % and the genome length is 7.11 Mbp.

Description of *Candidatus* PRUG endivitas sp. nov.

Candidatus PRUG endivitas (NL. fem. n. *endivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *PRUG sp002075085*. The type genome for the species is the GenBank assembly RS_GCF_002075085.1. The GC content of the type genome is 24.19 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pabilana boniticula sp. nov.

Candidatus Pabilana boniticula (NL. fem. n. *boniticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1590 sp900759105*. The type genome for the species is the GenBank assembly RS_GCF_900759105.1. The GC content of the type genome is 44.78 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Pabilana gen. nov.

Candidatus Pabilana (NL. fem. n. *Pabilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1590*. The type species for the genus is *Candidatus* Pabilana boniticula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pabilana decupedo sp. nov.

Candidatus Pabilana decupedo (NL. fem. n. *decupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1590 sp900553245*. The type genome for the species is the GenBank assembly RS_GCF_900755305.1. The GC content of the type genome is 46.1 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Pabilana fatililega sp. nov.

Candidatus Pabilana fatililega (NL. fem. n. *fatililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1590 sp900552455*. The type genome for the species is the GenBank assembly RS_GCF_900759535.1. The GC content of the type genome is 54.82 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Pabilaria frigditas sp. nov.

Candidatus Pabilaria frigditas (NL. fem. n. *frigditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLL01 sp011371545*. The type genome for the species is the GenBank assembly GCA_011371545.1. The GC content of the type genome is 45.53 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Pabilaria gen. nov.

Candidatus Pabilaria (NL. fem. n. *Pabilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLL01*. The type species for the genus is *Candidatus* Pabilaria frigditas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pabilariaceae.

Description of *Candidatus* Pabilariaceae fam. nov.

Candidatus Pabilariaceae (NL. fem. n. *Pabilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLL01*. The type genus for the taxon is *Candidatus* Pabilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTLL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pabilariales.

Description of *Candidatus* Pabilariales ord. nov.

Candidatus Pabilariales (NL. fem. n. *Pabilariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLL01*. The type genus for the taxon is *Candidatus* Pabilaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vehemidae.

Description of *Candidatus* Pabilella perabicella sp. nov.

Candidatus Pabilella perabicella (NL. fem. n. *perabicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7407 sp000317045*. The type genome for the species is the GenBank assembly RS_GCF_000317045.1. The GC content of the type genome is 58.46 % and the genome length is 4.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Pabilella gen. nov.

Candidatus Pabilella (NL. fem. n. *Pabilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7407*. The type species for the genus is *Candidatus* Pabilella perabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PCC-7407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pabilellaceae.

Description of *Candidatus* Pabilellaceae fam. nov.

Candidatus Pabilellaceae (NL. fem. n. *Pabilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PCC-7407.* The type genus for the taxon is *Candidatus* Pabilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *PCC-7407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pabilellales.

Description of *Candidatus* Pabilellales ord. nov.

Candidatus Pabilellales (NL. fem. n. *Pabilellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PCC-7407.* The type genus for the taxon is *Candidatus* Pabilella .

According to the GTDB R06-RS202, this order belongs to the class *Cyanobacteriia*.

Description of *Candidatus* Pabilia risibitrix sp. nov.

Candidatus Pabilia risibitrix (NL. fem. n. *risibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-51-34 sp001820785*. The type genome for the species is the GenBank assembly GCA_001820715.1. The GC content of the type genome is 51.17 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Pabilia gen. nov.

Candidatus Pabilia (NL. fem. n. *Pabilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-51-34*. The type species for the genus is *Candidatus* Pabilia risibitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conamulaceae.

Description of *Candidatus* Pabilida adrotessa sp. nov.

Candidatus Pabilida adrotessa (NL. fem. n. *adrotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD2-11 sp012267435*. The type genome for the species is the GenBank assembly GCA_012267435.1. The GC content of the type genome is 68.96 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Pabilida gen. nov.

Candidatus Pabilida (NL. fem. n. *Pabilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BD2-11*. The type species for the genus is *Candidatus* Pabilida adrotessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Pabilida camilisca sp. nov.

Candidatus Pabilida camilisca (NL. fem. n. *camilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD2-11 sp002238605*. The type genome for the species is the GenBank assembly GCA_002238605.1. The GC content of the type genome is 67.96 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pabilida depetugo sp. nov.

Candidatus Pabilida depetugo (NL. fem. n. *depetugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD2-11 sp009840525*. The type genome for the species is the GenBank assembly GCA_009840525.1. The GC content of the type genome is 68.05 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Pabilida ruricitas sp. nov.

Candidatus Pabilida ruricitas (NL. fem. n. *ruricitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD2-11 sp009843625*. The type genome for the species is the GenBank assembly GCA_009843625.1. The GC content of the type genome is 67.95 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Pabilosa adsucitura sp. nov.

Candidatus Pabilosa adsucitura (NL. fem. n. *adsucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1258 sp007280825*. The type genome for the species is the GenBank assembly GCA_007280825.1. The GC content of the type genome is 34.85 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Pabilosa gen. nov.

Candidatus Pabilosa (NL. fem. n. *Pabilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1258*. The type species for the genus is *Candidatus* Pabilosa adsucitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pabilosa siligugo sp. nov.

Candidatus Pabilosa siligugo (NL. fem. n. *siligugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1258 sp012026935*. The type genome for the species is the GenBank assembly GCA_012026935.1. The GC content of the type genome is 35.04 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Pabilosa televetta sp. nov.

Candidatus Pabilosa televetta (NL. fem. n. *televetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1258 sp003155655*. The type genome for the species is the GenBank assembly GCA_003162015.1. The GC content of the type genome is 34.78 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Pabilosa utrolifica sp. nov.

Candidatus Pabilosa utrolifica (NL. fem. n. *utrolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1258 sp002839795*. The type genome for the species is the GenBank assembly GCA_002839795.1. The GC content of the type genome is 39.57 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Pabilula colopatica sp. nov.

Candidatus Pabilula colopatica (NL. fem. n. *colopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UMGS1441 sp900543365*. The type genome for the species is the GenBank assembly RS_GCF_900754295.1. The GC content of the type genome is 31.74 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Pabilula gen. nov.

Candidatus Pabilula (NL. fem. n. *Pabilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1441*. The type species for the genus is *Candidatus* Pabilula colopatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-274*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotulaceae.

Description of *Candidatus* Pabilula navifitudo sp. nov.

Candidatus Pabilula navifitudo (NL. fem. n. *navifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1441 sp900551755*. The type genome for the species is the GenBank assembly GCA_900551755.1. The GC content of the type genome is 32.48 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Paceibacter monumousia sp. nov.

Candidatus Paceibacter monumousia (NL. fem. n. *monumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paceibacter sp001872265*. The type genome for the species is the GenBank assembly GCA_002792815.1. The GC content of the type genome is 39.43 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Pacifana adpinitura sp. nov.

Candidatus Pacifana adpinitura (NL. fem. n. *adpinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-45-11b sp001817115*. The type genome for the species is the

GenBank assembly GCA_001817115.1. The GC content of the type genome is 45.39 % and the genome length is 0.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Pacifana gen. nov.

Candidatus Pacifana (NL. fem. n. *Pacifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-45-11b*. The type species for the genus is *Candidatus* Pacifana adpinitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolidaceae.

Description of *Candidatus* Pacifana vigenessa sp. nov.

Candidatus Pacifana vigenessa (NL. fem. n. *vigenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-45-11b sp001817055*. The type genome for the species is the GenBank assembly GCA_001817095.1. The GC content of the type genome is 45.16 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Pacifaria oppaniforma sp. nov.

Candidatus Pacifaria oppaniforma (NL. fem. n. *oppaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCPX01 sp004298615*. The type genome for the species is the GenBank assembly GCA_004298615.1. The GC content of the type genome is 43.14 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pacifaria gen. nov.

Candidatus Pacifaria (NL. fem. n. *Pacifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCPX01*. The type species for the genus is *Candidatus* Pacifaria oppaniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCPX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifariaceae.

Description of *Candidatus* Pacifariaceae fam. nov.

Candidatus Pacifariaceae (NL. fem. n. *Pacifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCPX01*. The type genus for the taxon is *Candidatus* Pacifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCPX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pacifariales.

Description of *Candidatus* Pacifariales ord. nov.

Candidatus Pacifariales (NL. fem. n. *Pacifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCPX01*. The type genus for the taxon is *Candidatus* Pacifaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Pacifella homiliforma sp. nov.

Candidatus Pacifella homiliforma (NL. fem. n. *homiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM303 sp002869085*. The type genome for the species is the GenBank assembly GCA_002869085.1. The GC content of the type genome is 61.3 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Pacifella gen. nov.

Candidatus Pacifella (NL. fem. n. *Pacifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM303*. The type species for the genus is *Candidatus* Pacifella homiliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM303*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifellaceae.

Description of *Candidatus* Pacifellaceae fam. nov.

Candidatus Pacifellaceae (NL. fem. n. *Pacifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM303.* The type genus for the taxon is *Candidatus* Pacifella .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Pacificimonas celamilenta sp. nov.

Candidatus Pacificimonas celamilenta (NL. fem. n. *celamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pacificimonas sp002375465*. The type genome for the species is the GenBank assembly GCA_002375465.1. The GC content of the type genome is 61.45 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Pacifida cululilega sp. nov.

Candidatus Pacifida cululilega (NL. fem. n. *cululilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJY01 sp011337985*. The type genome for the species is the GenBank assembly GCA_011337985.1. The GC content of the type genome is 50.89 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Pacifida gen. nov.

Candidatus Pacifida (NL. fem. n. *Pacifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DTJY01*. The type species for the genus is *Candidatus* Pacifida culululiega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifidaceae.

Description of *Candidatus* Pacifidaceae fam. nov.

Candidatus Pacifidaceae (NL. fem. n. *Pacifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJY01*. The type genus for the taxon is *Candidatus* Pacifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTJY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pacifidales.

Description of *Candidatus* Pacifidales ord. nov.

Candidatus Pacifidales (NL. fem. n. *Pacifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJY01*. The type genus for the taxon is *Candidatus* Pacifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Susicellae.

Description of *Candidatus* Pacifosa depubitica sp. nov.

Candidatus Pacifosa depubitica (NL. fem. n. *depubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10110 sp003524745*. The type genome for the species is the GenBank assembly GCA_003475955.1. The GC content of the type genome is 44.47 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Pacifosa gen. nov.

Candidatus Pacifosa (NL. fem. n. *Pacifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10110*. The type species for the genus is *Candidatus* Pacifosa depubitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10110*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifosaceae.

Description of *Candidatus* Pacifosaceae fam. nov.

Candidatus Pacifosaceae (NL. fem. n. *Pacifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10110.* The type genus for the taxon is *Candidatus* Pacifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *Kazan-3B-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decitellales.

Description of *Candidatus* Pacifula reforitudo sp. nov.

Candidatus Pacifula reforitudo (NL. fem. n. *reforitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-43-22 sp001795615*. The type genome for the species is the GenBank assembly GCA_001794105.1. The GC content of the type genome is 41.66 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Pacifula gen. nov.

Candidatus Pacifula (NL. fem. n. *Pacifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-43-22*. The type species for the genus is *Candidatus* Pacifula reforitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Pacifula turicastra sp. nov.

Candidatus Pacifula turicastra (NL. fem. n. *turicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-43-22 sp001794435*. The type genome for the species is the GenBank assembly GCA_001795625.1. The GC content of the type genome is 43.04 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Paenalcaligenes figilatio sp. nov.

Candidatus Paenalcaligenes figilatio (NL. fem. n. *figilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenalcaligenes sp004791645*. The type genome for the species is the GenBank assembly RS_GCF_004791645.1. The GC content of the type genome is 50.08 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Paenalcaligenes macilago sp. nov.

Candidatus Paenalcaligenes macilago (NL. fem. n. *macilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenalcaligenes sp012839585*. The type genome for the species is the GenBank assembly GCA_012839585.1. The GC content of the type genome is 49.08 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Paenalcaligenes siligimonas sp. nov.

Candidatus Paenalcaligenes siligimonas (NL. fem. n. *siligimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenalcaligenes sp012518715*. The type genome for the species is the GenBank assembly GCA_012518715.1. The GC content of the type genome is 48.28 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Paenarthrobacter allobilega sp. nov.

Candidatus Paenarthrobacter allobilega (NL. fem. n. *allobilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp000526335*. The type genome for the species is the GenBank assembly RS_GCF_000526335.1. The GC content of the type genome is 61.94 % and the genome length is 5.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Paenarthrobacter benepitas sp. nov.

Candidatus Paenarthrobacter benepitas (NL. fem. n. *benepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp000281065*. The type genome for the species is the GenBank assembly RS_GCF_000281065.1. The GC content of the type genome is 62.0 % and the genome length is 4.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tobacco waste".

Description of *Candidatus* Paenarthrobacter cilicibula sp. nov.

Candidatus Paenarthrobacter cilicibula (NL. fem. n. *cilicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp900106835*. The type genome for the species is the GenBank assembly RS_GCF_900108925.1. The GC content of the type genome is 62.62 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Paenarthrobacter conigiforma sp. nov.

Candidatus Paenarthrobacter conigiforma (NL. fem. n. *conigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp013179505*. The type genome for the species is the GenBank assembly RS_GCF_013179505.1. The GC content of the type genome is 62.46 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Paenarthrobacter cululitio sp. nov.

Candidatus Paenarthrobacter cululitio (NL. fem. n. *cululitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp001512285*. The type genome for the species is the GenBank assembly RS_GCF_001512285.1. The GC content of the type genome is 62.16 % and the genome length is 4.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizosperic soil".

Description of *Candidatus* Paenarthrobacter medimilega sp. nov.

Candidatus Paenarthrobacter medimilega (NL. fem. n. *medimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp002224285*. The type genome for the species is the GenBank assembly RS_GCF_002224285.1. The GC content of the type genome is 62.65 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Paenarthrobacter munimentia sp. nov.

Candidatus Paenarthrobacter munimentia (NL. fem. n. *munimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp002979775*. The type genome for the species is the GenBank assembly RS_GCF_002979575.1. The GC content of the type genome is 62.09 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Paenarthrobacter nugaciforma sp. nov.

Candidatus Paenarthrobacter nugaciforma (NL. fem. n. *nugaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp902706295*. The type genome for the species is the GenBank assembly RS_GCF_902706295.1. The GC content of the type genome is 62.68 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Paenarthrobacter panopifica sp. nov.

Candidatus Paenarthrobacter panopifica (NL. fem. n. *panopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp902506065*. The type genome for the species is the GenBank assembly RS_GCF_902506065.1. The GC content of the type genome is 62.03 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Paenarthrobacter redunetta sp. nov.

Candidatus Paenarthrobacter redunetta (NL. fem. n. *redunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenarthrobacter sp006964045*. The type genome for the species is the GenBank assembly RS_GCF_011605365.1. The GC content of the type genome is 61.94 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Paenibacillus adobrifica sp. nov.

Candidatus Paenibacillus adobrifica (NL. fem. n. *adobrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp013359945*. The type genome for the species is the GenBank assembly RS_GCF_013359945.1. The GC content of the type genome is 48.09 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Paenibacillus advicentia sp. nov.

Candidatus Paenibacillus advicentia (NL. fem. n. *advicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp009870785*. The type genome for the species is the GenBank assembly RS_GCF_009870785.1. The GC content of the type genome is 41.48 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Paenibacillus arnacitio sp. nov.

Candidatus Paenibacillus arnacitio (NL. fem. n. *arnacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001517085*. The type genome for the species is the GenBank assembly RS_GCF_001517085.1. The GC content of the type genome is 51.25

% and the genome length is 7.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "polluted soil".

Description of *Candidatus* Paenibacillus baropibra sp. nov.

Candidatus Paenibacillus baropibra (NL. fem. n. *baropibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001955925*. The type genome for the species is the GenBank assembly RS_GCF_000517865.1. The GC content of the type genome is 51.84 % and the genome length is 7.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pasteurized milk".

Description of *Candidatus* Paenibacillus bicipibula sp. nov.

Candidatus Paenibacillus bicipibula (NL. fem. n. *bicipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp003854965*. The type genome for the species is the GenBank assembly RS_GCF_013393385.1. The GC content of the type genome is 51.64 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Paenibacillus buxanitura sp. nov.

Candidatus Paenibacillus buxanitura (NL. fem. n. *buxanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000499205*. The type genome for the species is the GenBank assembly RS_GCF_000499205.1. The GC content of the type genome is 45.88 % and the genome length is 7.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Landfill leachate".

Description of *Candidatus* Paenibacillus capabatio sp. nov.

Candidatus Paenibacillus capabatio (NL. fem. n. *capabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758585*. The type genome for the species is the GenBank assembly RS_GCF_001954425.1. The GC content of the type genome is 43.55 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Paenibacillus casabessa sp. nov.

Candidatus Paenibacillus casabessa (NL. fem. n. *casabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001315105*. The type genome for the species is the GenBank assembly RS_GCF_001315105.1. The GC content of the type genome is 48.6 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Paenibacillus cementica sp. nov.

Candidatus Paenibacillus cementica (NL. fem. n. *cementica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900109515*. The type genome for the species is the GenBank assembly RS_GCF_900101205.1. The GC content of the type genome is 45.68 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Paenibacillus cerucago sp. nov.

Candidatus Paenibacillus cerucago (NL. fem. n. *cerucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758625*. The type genome for the species is the GenBank assembly RS_GCF_000758625.1. The GC content of the type genome is 51.9 % and the genome length is 7.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Pasteurized 2% fat milk".

Description of *Candidatus* Paenibacillus codifilega sp. nov.

Candidatus Paenibacillus codifilega (NL. fem. n. *codifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900110055*. The type genome for the species is the GenBank assembly RS_GCF_003182535.1. The GC content of the type genome is 46.26 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Paenibacillus conipitudo sp. nov.

Candidatus Paenibacillus conipitudo (NL. fem. n. *conipitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp009870825*. The type genome for the species is the GenBank assembly RS_GCF_009870825.1. The GC content of the type genome is 51.99 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Paenibacillus culigugo sp. nov.

Candidatus Paenibacillus culigugo (NL. fem. n. *culigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp002573715*. The type genome for the species is the GenBank assembly RS_GCF_001955975.1. The GC content of the type genome is 48.51 % and the genome length is 7.66 Mbp.

Description of *Candidatus* Paenibacillus daducedo sp. nov.

Candidatus Paenibacillus daducedo (NL. fem. n. *daducedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp002968835*. The type genome for the species is the GenBank assembly RS_GCF_002968835.1. The GC content of the type genome is 46.01 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Paenibacillus denecisca sp. nov.

Candidatus Paenibacillus denecisca (NL. fem. n. *denecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001955915*. The type genome for the species is the GenBank assembly RS_GCF_000517965.1. The GC content of the type genome is 52.48 % and the genome length is 7.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pasteurized milk".

Description of *Candidatus* Paenibacillus detepastra sp. nov.

Candidatus Paenibacillus detepastra (NL. fem. n. *detepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001955855*. The type genome for the species is the GenBank assembly RS_GCF_001955855.1. The GC content of the type genome is 46.07 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Paenibacillus dilogicula sp. nov.

Candidatus Paenibacillus dilogicula (NL. fem. n. *dilogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp002264395*. The type genome for the species is the GenBank assembly RS_GCF_002264385.1. The GC content of the type genome is 43.57 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Paenibacillus dimadastra sp. nov.

Candidatus Paenibacillus dimadastra (NL. fem. n. *dimadastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp009664975*. The type genome for the species is the GenBank assembly RS_GCF_009664975.1. The GC content of the type genome is 46.04 % and the genome length is 7.08 Mbp.

Description of *Candidatus* Paenibacillus diponitia sp. nov.

Candidatus Paenibacillus diponitia (NL. fem. n. *diponitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001860525*. The type genome for the species is the GenBank assembly RS_GCF_001860525.1. The GC content of the type genome is 49.21 % and the genome length is 7.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rock".

Description of *Candidatus* Paenibacillus doxolisca sp. nov.

Candidatus Paenibacillus doxolisca (NL. fem. n. *doxolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000732325*. The type genome for the species is the

GenBank assembly RS_GCF_000732325.1. The GC content of the type genome is 45.72 % and the genome length is 5.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Paenibacillus excogibula sp. nov.

Candidatus Paenibacillus excogibula (NL. fem. n. *excogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000987955*. The type genome for the species is the GenBank assembly RS_GCF_000987955.1. The GC content of the type genome is 50.33 % and the genome length is 6.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Alang ship breaking yard".

Description of *Candidatus* Paenibacillus exsisilega sp. nov.

Candidatus Paenibacillus exsisilega (NL. fem. n. *exsisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000374185*. The type genome for the species is the GenBank assembly RS_GCF_000374185.1. The GC content of the type genome is 50.65 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Paenibacillus hexamifica sp. nov.

Candidatus Paenibacillus hexamifica (NL. fem. n. *hexamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900289175*. The type genome for the species is the GenBank assembly RS_GCF_900289175.1. The GC content of the type genome is 44.68 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Paenibacillus immodibra sp. nov.

Candidatus Paenibacillus immodibra (NL. fem. n. *immodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp002257645*. The type genome for the species is the GenBank assembly RS_GCF_002257645.1. The GC content of the type genome is 52.28 % and the genome length is 7.87 Mbp.

Description of *Candidatus* Paenibacillus inrepitas sp. nov.

Candidatus Paenibacillus inrepitas (NL. fem. n. *inrepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp005577435*. The type genome for the species is the GenBank assembly RS_GCF_005577435.1. The GC content of the type genome is 51.19 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Paenibacillus letifitura sp. nov.

Candidatus Paenibacillus letifitura (NL. fem. n. *letifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758545*. The type genome for the species is the GenBank assembly RS_GCF_000758545.1. The GC content of the type genome is 43.69 % and the genome length is 6.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pasteurized 2% milk".

Description of *Candidatus* Paenibacillus maxilisca sp. nov.

Candidatus Paenibacillus maxilisca (NL. fem. n. *maxilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001682855*. The type genome for the species is the GenBank assembly RS_GCF_001682855.1. The GC content of the type genome is 47.72 % and the genome length is 6.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus obnoxitio sp. nov.

Candidatus Paenibacillus obnoxitio (NL. fem. n. *obnoxitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp002438345*. The type genome for the species is the GenBank assembly GCA_002438345.1. The GC content of the type genome is 43.48 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Paenibacillus offunicella sp. nov.

Candidatus Paenibacillus offunicella (NL. fem. n. *offunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp003268635*. The type genome for the species is the GenBank assembly RS_GCF_003268635.1. The GC content of the type genome is 44.77 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Paenibacillus panopibra sp. nov.

Candidatus Paenibacillus panopibra (NL. fem. n. *panopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758525*. The type genome for the species is the GenBank assembly RS_GCF_000758525.1. The GC content of the type genome is 49.14 % and the genome length is 7.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Pasteurized 2% milk".

Description of *Candidatus* Paenibacillus paracedo sp. nov.

Candidatus Paenibacillus paracedo (NL. fem. n. *paracedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000316035*. The type genome for the species is the GenBank assembly RS_GCF_000316035.1. The GC content of the type genome is 46.03 % and the genome length is 6.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "subarctic grassland soil".

Description of *Candidatus* Paenibacillus peropetta sp. nov.

Candidatus Paenibacillus peropetta (NL. fem. n. *peropetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001426865*. The type genome for the species is the GenBank assembly RS_GCF_007680105.1. The GC content of the type genome is 44.95 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Paenibacillus regifatio sp. nov.

Candidatus Paenibacillus regifatio (NL. fem. n. *regifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000949425*. The type genome for the species is the GenBank assembly RS_GCF_000949425.1. The GC content of the type genome is 41.33 % and the genome length is 5.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus repagilenta sp. nov.

Candidatus Paenibacillus repagilenta (NL. fem. n. *repagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758565*. The type genome for the species is the GenBank assembly RS_GCF_013141775.1. The GC content of the type genome is 51.07 % and the genome length is 8.46 Mbp.

Description of *Candidatus* Paenibacillus rubecastra sp. nov.

Candidatus Paenibacillus rubecastra (NL. fem. n. *rubecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000787385*. The type genome for the species is the GenBank assembly RS_GCF_000787385.1. The GC content of the type genome is 53.48 % and the genome length is 5.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "commercial bioreactor (Baku Baku) treating food wastes".

Description of *Candidatus* Paenibacillus scellitura sp. nov.

Candidatus Paenibacillus scellitura (NL. fem. n. *scellitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900116105*. The type genome for the species is the GenBank assembly RS_GCF_900116105.1. The GC content of the type genome is 44.94 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Paenibacillus semigitoga sp. nov.

Candidatus Paenibacillus semigitoga (NL. fem. n. *semigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp000758605*. The type genome for the species is the GenBank assembly RS_GCF_000758605.1. The GC content of the type genome is 51.08 % and the genome length is 7.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pasteurized 2% fat milk".

Description of *Candidatus* Paenibacillus solivitio sp. nov.

Candidatus Paenibacillus solivitio (NL. fem. n. *solivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp004916975*. The type genome for the species is the GenBank assembly RS_GCF_004916975.1. The GC content of the type genome is 47.41 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Paenibacillus tegumousia sp. nov.

Candidatus Paenibacillus tegumousia (NL. fem. n. *tegumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp012912005*. The type genome for the species is the GenBank assembly RS_GCF_012912005.1. The GC content of the type genome is 46.01 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Paenibacillus timefitrix sp. nov.

Candidatus Paenibacillus timefitrix (NL. fem. n. *timefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp001955535*. The type genome for the species is the GenBank assembly RS_GCF_900106725.1. The GC content of the type genome is 45.46 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Paenibacillus totiditica sp. nov.

Candidatus Paenibacillus totiditica (NL. fem. n. *totiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900101225*. The type genome for the species is the

GenBank assembly RS_GCF_900101225.1. The GC content of the type genome is 45.57 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Paenibacillus velifax sp. nov.

Candidatus Paenibacillus velifax (NL. fem. n. *velifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp900111565*. The type genome for the species is the GenBank assembly RS_GCF_900111565.1. The GC content of the type genome is 54.93 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Paenibacillus xenoditoga sp. nov.

Candidatus Paenibacillus xenoditoga (NL. fem. n. *xenoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus sp009807035*. The type genome for the species is the GenBank assembly RS_GCF_009807035.1. The GC content of the type genome is 48.54 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Paenibacillus cenacentia sp. nov.

Candidatus Paenibacillus cenacentia (NL. fem. n. *cenacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp002439285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002439285.1. The GC content of the type genome is 49.55 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Paenibacillus dapifimonia sp. nov.

Candidatus Paenibacillus dapifimonia (NL. fem. n. *dapifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp003060825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_003060825.1. The GC content of the type genome is 48.68 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Paenibacillus denunibula sp. nov.

Candidatus Paenibacillus denunibula (NL. fem. n. *denunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp003994465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003994465.1. The GC content of the type genome is 48.09 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Paenibacillus excomitura sp. nov.

Candidatus Paenibacillus excomitura (NL. fem. n. *excomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp900766135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900766135.1. The GC content of the type genome is 54.29 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Paenibacillus monopedo sp. nov.

Candidatus Paenibacillus monopedo (NL. fem. n. *monopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp900069005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013393165.1. The GC content of the type genome is 47.87 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Paenibacillus obsurax sp. nov.

Candidatus Paenibacillus obsurax (NL. fem. n. *obsurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_A sp000159955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000159955.1. The GC content of the type genome is 52.03 % and the genome length is 5.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Paenibacillus bicubitia sp. nov.

Candidatus Paenibacillus bicubitia (NL. fem. n. *bicubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_B sp900539405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013266915.1. The GC content of the type genome is 54.96 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Paenibacillus cilotitoga sp. nov.

Candidatus Paenibacillus cilotitoga (NL. fem. n. *cilotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_B sp001894745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900102125.1. The GC content of the type genome is 46.61 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Paenibacillus tiguricella sp. nov.

Candidatus Paenibacillus tiguricella (NL. fem. n. *tiguricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_B sp007786455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007786455.1. The GC content of the type genome is 43.08 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Paenibacillus tirocatio sp. nov.

Candidatus Paenibacillus tirocatio (NL. fem. n. *tirocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_B sp000283315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000283315.1. The GC content of the type genome is 48.66 % and the genome length is 6.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus accogitica sp. nov.

Candidatus Paenibacillus accogitica (NL. fem. n. *accogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp001956095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001956095.1. The GC content of the type genome is 45.48 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Paenibacillus addivitica sp. nov.

Candidatus Paenibacillus addivitica (NL. fem. n. *addivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp000023585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000023585.1. The GC content of the type genome is 50.28 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Paenibacillus adobrago sp. nov.

Candidatus Paenibacillus adobrago (NL. fem. n. *adobrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Paenibacillus_C sp001428245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428245.1. The GC content of the type genome is 47.14 % and the genome length is 6.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus advinousia sp. nov.

Candidatus Paenibacillus advinousia (NL. fem. n. *advinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp012935325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012935325.2. The GC content of the type genome is 47.35 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Paenibacillus agripivita sp. nov.

Candidatus Paenibacillus agripivita (NL. fem. n. *agripivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp011947265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011947265.1. The GC content of the type genome is 51.34 % and the genome length is 7.01 Mbp.

Description of *Candidatus* Paenibacillus arrabivita sp. nov.

Candidatus Paenibacillus arrabivita (NL. fem. n. *arrabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp001280845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001280845.1. The GC content of the type genome is 44.29 % and the genome length is 7.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Fujian Academy of Agricultural Sciences".

Description of *Candidatus* Paenibacillus biveratio sp. nov.

Candidatus Paenibacillus biveratio (NL. fem. n. *biveratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp001956295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001956295.1. The GC content of the type genome is 44.28 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Paenibacillus bovicago sp. nov.

Candidatus Paenibacillus bovicago (NL. fem. n. *bovicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp003217535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003217535.1. The GC content of the type genome is 47.68 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Paenibacillus calipatica sp. nov.

Candidatus Paenibacillus calipatica (NL. fem. n. *calipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp002741035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001422685.1. The GC content of the type genome is 48.2 % and the genome length is 7.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Paenibacillus casabax sp. nov.

Candidatus Paenibacillus casabax (NL. fem. n. *casabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Paenibacillus_C sp001682865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001273905.1. The GC content of the type genome is 48.11 % and the genome length is 7.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus cerebitrix sp. nov.

Candidatus Paenibacillus cerebitrix (NL. fem. n. *cerebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp003591485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003591485.1. The GC content of the type genome is 50.65 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Paenibacillus impavatio sp. nov.

Candidatus Paenibacillus impavatio (NL. fem. n. *impavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp005222705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005222705.1. The GC content of the type genome is 52.08 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Paenibacillus rubigiforma sp. nov.

Candidatus Paenibacillus rubigiforma (NL. fem. n. *rubigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp004345425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004345425.1. The GC content of the type genome is 51.33 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Paenibacillus rurigilega sp. nov.

Candidatus Paenibacillus rurigilega (NL. fem. n. *rurigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_C sp009737085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009737085.1. The GC content of the type genome is 49.9 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Paenibacillus diminago sp. nov.

Candidatus Paenibacillus diminago (NL. fem. n. *diminago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_D sp004134985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004134985.1. The GC content of the type genome is 48.35 % and the genome length is 7.71 Mbp.

Description of *Candidatus* Paenibacillus inaccago sp. nov.

Candidatus Paenibacillus inaccago (NL. fem. n. *inaccago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_D sp003851045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003851045.1. The GC content of the type genome is 57.88 % and the genome length is 8.23 Mbp.

Description of *Candidatus* Paenibacillus adcucitica sp. nov.

Candidatus Paenibacillus adcucitica (NL. fem. n. *adcucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp009882985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_009882985.1. The GC content of the type genome is 46.14 % and the genome length is 8.18 Mbp.

Description of *Candidatus* Paenibacillus adveretta sp. nov.

Candidatus Paenibacillus adveretta (NL. fem. n. *adveretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp013141725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013141725.1. The GC content of the type genome is 47.2 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Paenibacillus attoretta sp. nov.

Candidatus Paenibacillus attoretta (NL. fem. n. *attoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp013141695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013141695.1. The GC content of the type genome is 45.06 % and the genome length is 9.2 Mbp.

Description of *Candidatus* Paenibacillus bonifisca sp. nov.

Candidatus Paenibacillus bonifisca (NL. fem. n. *bonifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp014534655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014534655.1. The GC content of the type genome is 47.07 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Paenibacillus codifitura sp. nov.

Candidatus Paenibacillus codifitura (NL. fem. n. *codifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp000620565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000620565.1. The GC content of the type genome is 45.11 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Paenibacillus curotilega sp. nov.

Candidatus Paenibacillus curotilega (NL. fem. n. *curotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
