A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp001428105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428105.1. The GC content of the type genome is 45.07 % and the genome length is 8.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus denixitrix sp. nov.

Candidatus Paenibacillus denixitrix (NL. fem. n. *denixitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp007829615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007829615.1. The GC content of the type genome is 46.02 % and the genome length is 8.74 Mbp.

Description of *Candidatus* Paenibacillus didacousia sp. nov.

Candidatus Paenibacillus didacousia (NL. fem. n. *didacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp008017805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008017805.1. The GC content of the type genome is 44.37 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Paenibacillus indepilega sp. nov.

Candidatus Paenibacillus indepilega (NL. fem. n. *indepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp010820665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010820665.1. The GC content of the type genome is 44.16 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Paenibacillus insicugo sp. nov.

Candidatus Paenibacillus insicugo (NL. fem. n. *insicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp900103825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900103825.1. The GC content of the type genome is 44.44 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Paenibacillus malivatica sp. nov.

Candidatus Paenibacillus malivatica (NL. fem. n. *malivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp001428045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428045.1. The GC content of the type genome is 44.98 % and the genome length is 8.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus milipifica sp. nov.

Candidatus Paenibacillus milipifica (NL. fem. n. *milipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Paenibacillus_E sp013141785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013141715.1. The GC content of the type genome is 44.63 % and the genome length is 8.81 Mbp.

Description of *Candidatus* Paenibacillus practitudo sp. nov.

Candidatus Paenibacillus practitudo (NL. fem. n. *practitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp001429545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001429545.1. The GC content of the type genome is 44.48 % and the genome length is 7.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paenibacillus roraritica sp. nov.

Candidatus Paenibacillus roraritica (NL. fem. n. *roraritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_E sp001426375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001426375.1. The GC content of the type genome is 44.66 % and the genome length is 8.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Paenibacillus abascitio sp. nov.

Candidatus Paenibacillus abascitio (NL. fem. n. *abascitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_F sp900107975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900107975.1. The GC content of the type genome is 53.75 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Paenibacillus adreciforma sp. nov.

Candidatus Paenibacillus adreciforma (NL. fem. n. *adreciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_F sp009757775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009757775.1. The GC content of the type genome is 49.75 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Paenibacillus derunago sp. nov.

Candidatus Paenibacillus derunago (NL. fem. n. *derunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_F sp000411255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000411255.1. The GC content of the type genome is 52.92 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Paenibacillus irrecax sp. nov.

Candidatus Paenibacillus irrecax (NL. fem. n. *irrecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_F sp001541095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001541095.1. The GC content of the type genome is 49.49 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Paenibacillus adsenetta sp. nov.

Candidatus Paenibacillus adsenetta (NL. fem. n. *adsenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_G sp007786445*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007786445.1. The GC content of the type genome is 50.72 % and the genome length is 7.56 Mbp.

Description of *Candidatus* Paenibacillus decacilega sp. nov.

Candidatus Paenibacillus decacilega (NL. fem. n. *decacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_G sp900101595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900101595.1. The GC content of the type genome is 54.84 % and the genome length is 7.27 Mbp.

Description of *Candidatus* Paenibacillus delecilenta sp. nov.

Candidatus Paenibacillus delecilenta (NL. fem. n. *delecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_G sp009846885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009846885.1. The GC content of the type genome is 53.11 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Paenibacillus taxilousia sp. nov.

Candidatus Paenibacillus taxilousia (NL. fem. n. *taxilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_G sp001399685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001399685.1. The GC content of the type genome is 53.56 % and the genome length is 7.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rhizosphere sample".

Description of *Candidatus* Paenibacillus relecigena sp. nov.

Candidatus Paenibacillus relecigena (NL. fem. n. *relecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_L sp007679495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008764455.1. The GC content of the type genome is 49.77 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Paenibacillus adnepugo sp. nov.

Candidatus Paenibacillus adnepugo (NL. fem. n. *adnepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_O sp900105225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900105225.1. The GC content of the type genome is 50.78 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Paenibacillus cocoletta sp. nov.

Candidatus Paenibacillus cocoletta (NL. fem. n. *cocoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_O sp002243345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900156355.1. The GC content of the type genome is 59.25 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Paenibacillus holovitio sp. nov.

Candidatus Paenibacillus holovitio (NL. fem. n. *holovitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_O sp012676905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_012676905.1. The GC content of the type genome is 63.74 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Paenibacillus apsimitoga sp. nov.

Candidatus Paenibacillus apsimitoga (NL. fem. n. *apsimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp000686845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000686845.1. The GC content of the type genome is 46.04 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Paenibacillus bacifivita sp. nov.

Candidatus Paenibacillus bacifivita (NL. fem. n. *bacifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp013141765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013141765.1. The GC content of the type genome is 44.26 % and the genome length is 7.87 Mbp.

Description of *Candidatus* Paenibacillus dilicastra sp. nov.

Candidatus Paenibacillus dilicastra (NL. fem. n. *dilicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp001956045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001956045.1. The GC content of the type genome is 45.48 % and the genome length is 9.47 Mbp.

Description of *Candidatus* Paenibacillus necubitica sp. nov.

Candidatus Paenibacillus necubitica (NL. fem. n. *necubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp011440305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011440305.1. The GC content of the type genome is 45.12 % and the genome length is 8.38 Mbp.

Description of *Candidatus* Paenibacillus obmutilega sp. nov.

Candidatus Paenibacillus obmutilega (NL. fem. n. *obmutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp002042965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002042965.1. The GC content of the type genome is 49.29 % and the genome length is 7.94 Mbp.

Description of *Candidatus* Paenibacillus obsolitica sp. nov.

Candidatus Paenibacillus obsolitica (NL. fem. n. *obsolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_S sp900114475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900114475.1. The GC content of the type genome is 44.39 % and the genome length is 7.62 Mbp.

Description of *Candidatus* Paenibacillus denigetta sp. nov.

Candidatus Paenibacillus denigetta (NL. fem. n. *denigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_T sp009789195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009789195.1. The GC content of the type genome is 50.42 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Paenibacillus acrolitica sp. nov.

Candidatus Paenibacillus acrolitica (NL. fem. n. *acrolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp900113915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900113915.1. The GC content of the type genome is 60.43 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Paenibacillus acustitio sp. nov.

Candidatus Paenibacillus acustitio (NL. fem. n. *acustitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp004342525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004342525.1. The GC content of the type genome is 51.73 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Paenibacillus argititio sp. nov.

Candidatus Paenibacillus argititio (NL. fem. n. *argititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp010119935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010119935.1. The GC content of the type genome is 58.1 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Paenibacillus artopetta sp. nov.

Candidatus Paenibacillus artopetta (NL. fem. n. *artopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp900116125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_900116125.1. The GC content of the type genome is 50.56 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Paenibacillus bucoledo sp. nov.

Candidatus Paenibacillus bucoledo (NL. fem. n. *bucoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp900106745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900106745.1. The GC content of the type genome is 50.1 % and the genome length is 6.99 Mbp.

Description of *Candidatus* Paenibacillus dececago sp. nov.

Candidatus Paenibacillus dececago (NL. fem. n. *dececago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp010365285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010365285.1. The GC content of the type genome is 54.57 % and the genome length is 7.52 Mbp.

Description of *Candidatus* Paenibacillus fusifax sp. nov.

Candidatus Paenibacillus fusifax (NL. fem. n. *fusifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp900110075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900110075.1. The GC content of the type genome is 50.37 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Paenibacillus mutabilega sp. nov.

Candidatus Paenibacillus mutabilega (NL. fem. n. *mutabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenibacillus_Z sp009909185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009909185.1. The GC content of the type genome is 58.16 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Paeniglutamicibacter adambitas sp. nov.

Candidatus Paeniglutamicibacter adambitas (NL. fem. n. *adambitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paeniglutamicibacter sp002975435*. The type genome for the species is the GenBank assembly RS_GCF_002975435.1. The GC content of the type genome is 56.34 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Paeniglutamicibacter expecedo sp. nov.

Candidatus Paeniglutamicibacter expecedo (NL. fem. n. *expecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paeniglutamicibacter sp001863355*. The type genome for the species is the GenBank assembly RS_GCF_001863355.1. The GC content of the type genome is 65.81 % and the genome length is 4.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "exercise bar".

Description of *Candidatus* Paeniglutamicibacter exsoressa sp. nov.

Candidatus Paeniglutamicibacter exsoressa (NL. fem. n. *exsoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paeniglutamicibacter sp003287975*. The type genome for the species is the GenBank assembly RS_GCF_003287975.1. The GC content of the type genome is 65.73 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Paeniglutamicibacter volunimonia sp. nov.

Candidatus Paeniglutamicibacter volunimonia (NL. fem. n. *volunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Paeniglutamicibacter sp002224445*. The type genome for the species is the GenBank assembly RS_GCF_012271785.1. The GC content of the type genome is 60.59 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Paenisporosarcina inmolimonia sp. nov.

Candidatus Paenisporosarcina inmolimonia (NL. fem. n. *inmolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenisporosarcina sp000286315*. The type genome for the species is the GenBank assembly RS_GCF_000286315.1. The GC content of the type genome is 36.6 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment-laden stratified basal ice from Taylor Glacier".

Description of *Candidatus* Paenisporosarcina munifitura sp. nov.

Candidatus Paenisporosarcina munifitura (NL. fem. n. *munifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenisporosarcina sp000411295*. The type genome for the species is the GenBank assembly RS_GCF_000411295.1. The GC content of the type genome is 39.25 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Paenisporosarcina nicomimonia sp. nov.

Candidatus Paenisporosarcina nicomimonia (NL. fem. n. *nicomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenisporosarcina sp003058165*. The type genome for the species is the GenBank assembly RS_GCF_003058165.1. The GC content of the type genome is 37.49 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Paenisporosarcina utricastra sp. nov.

Candidatus Paenisporosarcina utricastra (NL. fem. n. *utricastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paenisporosarcina sp000484595*. The type genome for the species is the GenBank assembly RS_GCF_000484595.1. The GC content of the type genome is

37.55 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Palifana amnenigena sp. nov.

Candidatus Palifana amnenigena (NL. fem. n. *amnenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1118 sp003159055*. The type genome for the species is the GenBank assembly GCA_003159055.1. The GC content of the type genome is 63.73 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Palifana gen. nov.

Candidatus Palifana (NL. fem. n. *Palifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1118*. The type species for the genus is *Candidatus* Palifana amnenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Acrotanaceae.

Description of *Candidatus* Palifana forinicula sp. nov.

Candidatus Palifana forinicula (NL. fem. n. *forinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1118 sp003136095*. The type genome for the species is the GenBank assembly GCA_003155595.1. The GC content of the type genome is 66.15 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Palifaria defaribula sp. nov.

Candidatus Palifaria defaribula (NL. fem. n. *defaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPBJ01 sp903863255*. The type genome for the species is the GenBank assembly GCA_903909395.1. The GC content of the type genome is 41.33 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Palifaria gen. nov.

Candidatus Palifaria (NL. fem. n. *Palifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPBJ01*. The type species for the genus is *Candidatus* Palifaria defaribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Palifella appugago sp. nov.

Candidatus Palifella appugago (NL. fem. n. *appugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6164 sp002422305*. The type genome for the species is the GenBank assembly GCA_002422305.1. The GC content of the type genome is 21.37 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Palifella gen. nov.

Candidatus Palifella (NL. fem. n. *Palifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6164*. The type species for the genus is *Candidatus* Palifella appugago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Palifellaceae fam. nov.

Candidatus Palifellaceae (NL. fem. n. *Palifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6164.* The type genus for the taxon is *Candidatus* Palifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BD1-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fusifellales.

Description of *Candidatus* Palifia rinocago sp. nov.

Candidatus Palifia rinocago (NL. fem. n. *rinocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXSI01 sp005792285*. The type genome for the species is the GenBank assembly GCA_009693685.1. The GC content of the type genome is 31.34 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Palifia gen. nov.

Candidatus Palifia (NL. fem. n. *Palifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXSI01*. The type species for the genus is *Candidatus* Palifia rinocago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigellaceae.

Description of *Candidatus* Palifida detepessa sp. nov.

Candidatus Palifida detepessa (NL. fem. n. *detepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRNS01 sp903880015*. The type genome for the species is the GenBank assembly GCA_903870265.1. The GC content of the type genome is 49.38 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Palifida gen. nov.

Candidatus Palifida (NL. fem. n. *Palifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRNS01*. The type species for the genus is *Candidatus* Palifida detepessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRNS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifidaceae.

Description of *Candidatus* Palifidaceae fam. nov.

Candidatus Palifidaceae (NL. fem. n. *Palifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIRNS01*. The type genus for the taxon is *Candidatus* Palifida .

According to GTDB R06-RS202, this family belongs to the order *Endomicrobiales*.

Description of *Candidatus* Palifosa siminatio sp. nov.

Candidatus Palifosa siminatio (NL. fem. n. *siminatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-54-10 sp001820725*. The type genome for the species is the GenBank assembly GCA_001822455.1. The GC content of the type genome is 53.7 % and the genome length is 0.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Palifosa gen. nov.

Candidatus Palifosa (NL. fem. n. *Palifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-54-10*. The type species for the genus is *Candidatus* Palifosa siminatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-52-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitellaceae.

Description of *Candidatus* Palifula minuritas sp. nov.

Candidatus Palifula minuritas (NL. fem. n. *minuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSH01 sp007570945*. The type genome for the species is the GenBank assembly GCA_007570945.1. The GC content of the type genome is 64.89 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Palifula gen. nov.

Candidatus Palifula (NL. fem. n. *Palifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKSH01*. The type species for the genus is *Candidatus* Palifula minuritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RKSH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifulaceae.

Description of *Candidatus* Palifulaceae fam. nov.

Candidatus Palifulaceae (NL. fem. n. *Palifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RKSH01.* The type genus for the taxon is *Candidatus* Palifula .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Palleronia diminilenta sp. nov.

Candidatus Palleronia diminilenta (NL. fem. n. *diminilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Palleronia sp900609015*. The type genome for the species is the GenBank assembly RS_GCF_900609015.1. The GC content of the type genome is 63.24 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Palleronia robigibula sp. nov.

Candidatus Palleronia robigibula (NL. fem. n. *robigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Palleronia sp004358695*. The type genome for the species is the GenBank assembly RS_GCF_004358695.1. The GC content of the type genome is 68.25 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Paludibacter aplesitas sp. nov.

Candidatus Paludibacter aplesitas (NL. fem. n. *aplesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903899865*. The type genome for the species is the GenBank assembly GCA_903899865.1. The GC content of the type genome is 38.46 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Paludibacter aprucibra sp. nov.

Candidatus Paludibacter aprucibra (NL. fem. n. *aprucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903927945*. The type genome for the species is the GenBank assembly GCA_903927945.1. The GC content of the type genome is 39.71 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Paludibacter argumitio sp. nov.

Candidatus Paludibacter argumitio (NL. fem. n. *argumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp001873635*. The type genome for the species is the GenBank assembly GCA_001873635.1. The GC content of the type genome is 38.3 % and the genome length is 2.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Paludibacter celumifica sp. nov.

Candidatus Paludibacter celumifica (NL. fem. n. *celumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp002070265*. The type genome for the species is the GenBank assembly GCA_002070265.1. The GC content of the type genome is 38.9 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Paludibacter defacigena sp. nov.

Candidatus Paludibacter defacigena (NL. fem. n. *defacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903873355*. The type genome for the species is the GenBank assembly GCA_903873355.1. The GC content of the type genome is 37.92 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Paludibacter deparimonia sp. nov.

Candidatus Paludibacter deparimonia (NL. fem. n. *deparimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903901975*. The type genome for the species is the GenBank assembly GCA_903873285.1. The GC content of the type genome is 37.41 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Paludibacter depubimonas sp. nov.

Candidatus Paludibacter depubimonas (NL. fem. n. *depubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp009929375*. The type genome for the species is the GenBank assembly GCA_009929375.1. The GC content of the type genome is 40.53 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Paludibacter eclipentia sp. nov.

Candidatus Paludibacter eclipentia (NL. fem. n. *eclipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp001898935*. The type genome for the species is the GenBank assembly GCA_001898935.1. The GC content of the type genome is 47.13 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Paludibacter lanigimonia sp. nov.

Candidatus Paludibacter lanigimonia (NL. fem. n. *lanigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp002427885*. The type genome for the species is the GenBank assembly GCA_002427885.1. The GC content of the type genome is 37.31 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Paludibacter milipibra sp. nov.

Candidatus Paludibacter milipibra (NL. fem. n. *milipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903929065*. The type genome for the species is the GenBank assembly GCA_903929065.1. The GC content of the type genome is 37.65 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Paludibacter murelitoga sp. nov.

Candidatus Paludibacter murelitoga (NL. fem. n. *murelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp013426815*. The type genome for the species is the GenBank assembly GCA_013426815.1. The GC content of the type genome is 35.49 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Paludibacter nefanedo sp. nov.

Candidatus Paludibacter nefanedo (NL. fem. n. *nefanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp003250325*. The type genome for the species is the GenBank assembly GCA_003250325.1. The GC content of the type genome is 37.05 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Paludibacter nutamisca sp. nov.

Candidatus Paludibacter nutamisca (NL. fem. n. *nutamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903912795*. The type genome for the species is the GenBank assembly GCA_903912795.1. The GC content of the type genome is 36.95 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Paludibacter ratifatio sp. nov.

Candidatus Paludibacter ratifatio (NL. fem. n. *ratifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp002427615*. The type genome for the species is the GenBank assembly GCA_002383435.1. The GC content of the type genome is 38.64 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Paludibacter sacomilega sp. nov.

Candidatus Paludibacter sacomilega (NL. fem. n. *sacomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp010365115*. The type genome for the species is the GenBank assembly GCA_010365115.1. The GC content of the type genome is 35.24 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Paludibacter satacilenta sp. nov.

Candidatus Paludibacter satacilenta (NL. fem. n. *satacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903830915*. The type genome for the species is the GenBank assembly GCA_903830915.1. The GC content of the type genome is 37.66 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Paludibacter sicaratica sp. nov.

Candidatus Paludibacter sicaratica (NL. fem. n. *sicaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp012519425*. The type genome for the species is the GenBank assembly GCA_012519425.1. The GC content of the type genome is 40.15 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Paludibacter vitabitoga sp. nov.

Candidatus Paludibacter vitabitoga (NL. fem. n. *vitabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludibacter sp903911085*. The type genome for the species is the GenBank assembly GCA_903961455.1. The GC content of the type genome is 34.92 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Paludisphaera homagimonas sp. nov.

Candidatus Paludisphaera homagimonas (NL. fem. n. *homagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludisphaera sp001898385*. The type genome for the species is the GenBank assembly GCA_001898385.1. The GC content of the type genome is 70.51 % and the genome length is 7.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Paludisphaera modifago sp. nov.

Candidatus Paludisphaera modifago (NL. fem. n. *modifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludisphaera sp011065895*. The type genome for the species is the GenBank assembly RS_GCF_011065895.1. The GC content of the type genome is 66.36 % and the genome length is 8.05 Mbp.

Description of *Candidatus* Paludisphaera obmutax sp. nov.

Candidatus Paludisphaera obmutax (NL. fem. n. *obmutax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludisphaera sp001610895*. The type genome for the species is the GenBank assembly RS_GCF_001610895.1. The GC content of the type genome is 69.28 % and the genome length is 6.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sugar beet rhizosphere".

Description of *Candidatus* Paludisphaera patibago sp. nov.

Candidatus Paludisphaera patibago (NL. fem. n. *patibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paludisphaera sp011064595*. The type genome for the species is the GenBank assembly RS_GCF_011064595.1. The GC content of the type genome is 70.37 % and the genome length is 7.97 Mbp.

Description of *Candidatus* Panacibacter cinipago sp. nov.

Candidatus Panacibacter cinipago (NL. fem. n. *cinipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Panacibacter sp002390845*. The type genome for the species is the GenBank assembly GCA_002390845.1. The GC content of the type genome is 39.17 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Panacibacter diluditas sp. nov.

Candidatus Panacibacter diluditas (NL. fem. n. *diluditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Panacibacter sp002478885*. The type genome for the species is the GenBank assembly GCA_002478885.1. The GC content of the type genome is 43.68 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Panacibacter xenodentia sp. nov.

Candidatus Panacibacter xenodentia (NL. fem. n. *xenodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Panacibacter sp013106755*. The type genome for the species is the GenBank assembly RS_GCF_013106755.1. The GC content of the type genome is 38.88 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Pandoraea cotenastra sp. nov.

Candidatus Pandoraea cotenastra (NL. fem. n. *cotenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pandoraea sp004297875*. The type genome for the species is the GenBank assembly GCA_004297875.1. The GC content of the type genome is 63.11 %

and the genome length is 4.42 Mbp.

Description of *Candidatus* Pandoraea denecentia sp. nov.

Candidatus Pandoraea denecentia (NL. fem. n. *denecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pandoraea sp002179965*. The type genome for the species is the GenBank assembly RS_GCF_002179865.1. The GC content of the type genome is 63.12 % and the genome length is 6.23 Mbp.

Description of *Candidatus* Panifana cineficula sp. nov.

Candidatus Panifana cineficula (NL. fem. n. *cineficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-42-12 sp001778055*. The type genome for the species is the GenBank assembly GCA_001778015.1. The GC content of the type genome is 44.19 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Panifana gen. nov.

Candidatus Panifana (NL. fem. n. *Panifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-42-12*. The type species for the genus is *Candidatus* Panifana cineficula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-42-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifanaceae.

Description of *Candidatus* Panifanaceae fam. nov.

Candidatus Panifanaceae (NL. fem. n. *Panifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-42-12.* The type genus for the taxon is *Candidatus* Panifana .

According to the original version of GTDB R06-RS202, this family belongs to the order

BM507. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Panifana diminibra sp. nov.

Candidatus Panifana diminibra (NL. fem. n. *diminibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-42-12 sp000997945*. The type genome for the species is the GenBank assembly GCA_000997945.1. The GC content of the type genome is 41.73 % and the genome length is 1.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Panifaria cicatugo sp. nov.

Candidatus Panifaria cicatugo (NL. fem. n. *cicatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9926 sp002697205*. The type genome for the species is the GenBank assembly GCA_002697205.1. The GC content of the type genome is 49.45 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Panifaria gen. nov.

Candidatus Panifaria (NL. fem. n. *Panifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9926*. The type species for the genus is *Candidatus* Panifaria cicatugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Panifaria favonibula sp. nov.

Candidatus Panifaria favonibula (NL. fem. n. *favonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA9926 sp002728935*. The type genome for the species is the GenBank assembly GCA_002728935.1. The GC content of the type genome is 52.76 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Panifaria hexapicella sp. nov.

Candidatus Panifaria hexapicella (NL. fem. n. *hexapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9926 sp003451575*. The type genome for the species is the GenBank assembly GCA_003451575.1. The GC content of the type genome is 53.24 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Panifaria inmacisca sp. nov.

Candidatus Panifaria inmacisca (NL. fem. n. *inmacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9926 sp012960535*. The type genome for the species is the GenBank assembly GCA_012960535.1. The GC content of the type genome is 49.43 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Panifaria paropitas sp. nov.

Candidatus Panifaria paropitas (NL. fem. n. *paropitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9926 sp002689445*. The type genome for the species is the GenBank assembly GCA_002689445.1. The GC content of the type genome is 51.54 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Panifella armicatica sp. nov.

Candidatus Panifella armicatica (NL. fem. n. *armicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014238535*. The type genome for the species is the GenBank assembly GCA_014238535.1. The GC content of the type genome is 46.99 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Panifella gen. nov.

Candidatus Panifella (NL. fem. n. *Panifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAW01*. The type species for the genus is *Candidatus* Panifella armicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABAAW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifellaceae.

Description of *Candidatus* Panifellaceae fam. nov.

Candidatus Panifellaceae (NL. fem. n. *Panifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABAAW01.* The type genus for the taxon is *Candidatus* Panifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABSOH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nefarosales.

Description of *Candidatus* Panifella bacifitica sp. nov.

Candidatus Panifella bacifitica (NL. fem. n. *bacifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014239005*. The type genome for the species is the GenBank assembly GCA_014239005.1. The GC content of the type genome is 56.44 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Panifella depetatica sp. nov.

Candidatus Panifella depetatica (NL. fem. n. *depetatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014238625*. The type genome for the species is the GenBank assembly GCA_014238625.1. The GC content of the type genome is 47.03 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Panifella epitricula sp. nov.

Candidatus Panifella epitricula (NL. fem. n. *epitricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014238935*. The type genome for the species is the GenBank assembly GCA_014238935.1. The GC content of the type genome is 58.28 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Panifella ineffitura sp. nov.

Candidatus Panifella ineffitura (NL. fem. n. *ineffitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014238315*. The type genome for the species is the GenBank assembly GCA_014238315.1. The GC content of the type genome is 50.07 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Panifella obmuressa sp. nov.

Candidatus Panifella obmuressa (NL. fem. n. *obmuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAW01 sp014237925*. The type genome for the species is the GenBank assembly GCA_014237925.1. The GC content of the type genome is 56.25 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Panifia inhonugo sp. nov.

Candidatus Panifia inhonugo (NL. fem. n. *inhonugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B13-G15 sp003646705*. The type genome for the species is the GenBank assembly GCA_003646705.1. The GC content of the type genome is 61.89 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Panifia gen. nov.

Candidatus Panifia (NL. fem. n. *Panifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B13-G15*. The type species for the genus is *Candidatus* Panifia inhonugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B13-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifiaceae.

Description of *Candidatus* Panifiaceae fam. nov.

Candidatus Panifiaceae (NL. fem. n. *Panifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B13-G15.* The type genus for the taxon is *Candidatus* Panifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *B13-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panifiales.

Description of *Candidatus* Panifiales ord. nov.

Candidatus Panifiales (NL. fem. n. *Panifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B13-G15.* The type genus for the taxon is *Candidatus* Panifia .

According to the original version of GTDB R06-RS202, this family belongs to the class *BSN033*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Debucellae.

Description of *Candidatus* Panifida curabimonas sp. nov.

Candidatus Panifida curabimonas (NL. fem. n. *curabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1384 sp002305395*. The type genome for the species is the GenBank assembly GCA_002305395.1. The GC content of the type genome is 44.02 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Panifida gen. nov.

Candidatus Panifida (NL. fem. n. *Panifida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1384*. The type species for the genus is *Candidatus* Panifida curabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifidaceae.

Description of *Candidatus* Panifidaceae fam. nov.

Candidatus Panifidaceae (NL. fem. n. *Panifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1384.* The type genus for the taxon is *Candidatus* Panifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panifidales.

Description of *Candidatus* Panifidales ord. nov.

Candidatus Panifidales (NL. fem. n. *Panifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1384.* The type genus for the taxon is *Candidatus* Panifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Panifidae class. nov.

Candidatus Panifidae (NL. fem. n. *c__Panifidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1384.* The type genus for the taxon is *Candidatus* Panifida .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Panifosa penicicula sp. nov.

Candidatus Panifosa penicicula (NL. fem. n. *penicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUXW01 sp009659925*. The type genome for the species is the GenBank assembly GCA_009659925.1. The GC content of the type genome is 56.1 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Panifosa gen. nov.

Candidatus Panifosa (NL. fem. n. *Panifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUXW01*. The type species for the genus is *Candidatus* Panifosa penicicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Panifosa siligessa sp. nov.

Candidatus Panifosa siligessa (NL. fem. n. *siligessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUXW01 sp013153715*. The type genome for the species is the GenBank assembly GCA_009659965.1. The GC content of the type genome is 53.98 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Panifula binocimonas sp. nov.

Candidatus Panifula binocimonas (NL. fem. n. *binocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-22 sp001796285*. The type genome for the species is the GenBank assembly GCA_001794895.1. The GC content of the type genome is 44.72 % and the genome length is 1.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Panifula gen. nov.

Candidatus Panifula (NL. fem. n. *Panifula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-22*. The type species for the genus is *Candidatus* Panifula binocimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Pannonibacter refunentia sp. nov.

Candidatus Pannonibacter refunentia (NL. fem. n. *refunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pannonibacter sp009915765*. The type genome for the species is the GenBank assembly RS_GCF_009915685.1. The GC content of the type genome is 67.23 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Panopana nivomitura sp. nov.

Candidatus Panopana nivomitura (NL. fem. n. *nivomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11699 sp003482855*. The type genome for the species is the GenBank assembly GCA_003482855.1. The GC content of the type genome is 39.2 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Panopana gen. nov.

Candidatus Panopana (NL. fem. n. *Panopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11699*. The type species for the genus is *Candidatus* Panopana nivomitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Panoparia vinolimonia sp. nov.

Candidatus Panoparia vinolimonia (NL. fem. n. *vinolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002688135 sp002688135*. The type genome for the species is the GenBank assembly GCA_002688135.1. The GC content of the type genome is 41.56 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Panoparia gen. nov.

Candidatus Panoparia (NL. fem. n. *Panoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002688135*. The type species for the genus is *Candidatus* Panoparia vinolimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002688135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panopariaceae.

Description of *Candidatus* Panopariaceae fam. nov.

Candidatus Panopariaceae (NL. fem. n. *Panopariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002688135.* The type genus for the taxon is *Candidatus* Panoparia .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Panopella catagastra sp. nov.

Candidatus Panopella catagastra (NL. fem. n. *catagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2337 sp002344825*. The type genome for the species is the GenBank assembly GCA_003535755.1. The GC content of the type genome is 46.78 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Panopella gen. nov.

Candidatus Panopella (NL. fem. n. *Panopella* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2337*. The type species for the genus is *Candidatus* Panopella catagastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panopellaceae.

Description of *Candidatus* Panopellaceae fam. nov.

Candidatus Panopellaceae (NL. fem. n. *Panopellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2337.* The type genus for the taxon is *Candidatus* Panopella .

According to GTDB R06-RS202, this family belongs to the order *Omnitrophales*.

Description of *Candidatus* Panoposa curotitio sp. nov.

Candidatus Panoposa curotitio (NL. fem. n. *curotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11575 sp900754775*. The type genome for the species is the GenBank assembly RS_GCF_900754775.1. The GC content of the type genome is 64.19 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Panoposa gen. nov.

Candidatus Panoposa (NL. fem. n. *Panoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11575*. The type species for the genus is *Candidatus* Panoposa curotitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Panoposa nicomitrix sp. nov.

Candidatus Panoposa nicomitrix (NL. fem. n. *nicomitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11575 sp002068815*. The type genome for the species is the GenBank assembly GCA_012513775.1. The GC content of the type genome is 64.81 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Panoposa resuritia sp. nov.

Candidatus Panoposa resuritia (NL. fem. n. *resuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11575 sp012514855*. The type genome for the species is the GenBank assembly GCA_012514855.1. The GC content of the type genome is 64.49 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Pantoea advicitoga sp. nov.

Candidatus Pantoea advicitoga (NL. fem. n. *advicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp011752625*. The type genome for the species is the GenBank assembly RS_GCF_011752625.1. The GC content of the type genome is 52.91 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Pantoea armidisca sp. nov.

Candidatus Pantoea armidisca (NL. fem. n. *armidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp009829915*. The type genome for the species is the GenBank assembly RS_GCF_009829915.1. The GC content of the type genome is 40.64 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Pantoea cerifatica sp. nov.

Candidatus Pantoea cerifatica (NL. fem. n. *cerifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp002920175*. The type genome for the species is the GenBank assembly GCA_900538725.1. The GC content of the type genome is 58.83 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Pantoea deforentia sp. nov.

Candidatus Pantoea deforentia (NL. fem. n. *deforentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp900215435*. The type genome for the species is the GenBank assembly RS_GCF_002749715.1. The GC content of the type genome is 53.53 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Pantoea diluvedo sp. nov.

Candidatus Pantoea diluvedo (NL. fem. n. *diluvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp003813865*. The type genome for the species is the GenBank assembly RS_GCF_003813865.1. The GC content of the type genome is 56.96 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Pantoea dimaditio sp. nov.

Candidatus Pantoea dimaditio (NL. fem. n. *dimaditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp003236715*. The type genome for the species is the GenBank assembly RS_GCF_003236715.1. The GC content of the type genome is 57.2 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Pantoea dimidisca sp. nov.

Candidatus Pantoea dimidisca (NL. fem. n. *dimidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp000295955*. The type genome for the species is the GenBank assembly RS_GCF_011752615.1. The GC content of the type genome is 52.83 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Pantoea domigibula sp. nov.

Candidatus Pantoea domigibula (NL. fem. n. *domigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp003512445*. The type genome for the species is the GenBank assembly RS_GCF_009905795.1. The GC content of the type genome is 55.26 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pantoea expopitoga sp. nov.

Candidatus Pantoea expopitoga (NL. fem. n. *expopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp009830035*. The type genome for the species is the GenBank assembly RS_GCF_009830035.1. The GC content of the type genome is 55.21 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Pantoea faticiforma sp. nov.

Candidatus Pantoea faticiforma (NL. fem. n. *faticiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp000468095*. The type genome for the species is the GenBank assembly GCA_009728735.1. The GC content of the type genome is 54.1 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Pantoea ficulicella sp. nov.

Candidatus Pantoea ficulicella (NL. fem. n. *ficulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp002419935*. The type genome for the species is the GenBank assembly GCA_002419935.1. The GC content of the type genome is 54.96 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pantoea inabsentia sp. nov.

Candidatus Pantoea inabsentia (NL. fem. n. *inabsentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp001485295*. The type genome for the species is the GenBank assembly GCA_001485295.1. The GC content of the type genome is 55.91 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Pantoea inobritio sp. nov.

Candidatus Pantoea inobritio (NL. fem. n. *inobritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp002434205*. The type genome for the species is the GenBank assembly GCA_002434205.1. The GC content of the type genome is 56.14 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Pantoea istinitoga sp. nov.

Candidatus Pantoea istinitoga (NL. fem. n. *istinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp000175935*. The type genome for the species is the GenBank assembly RS_GCF_000175935.2. The GC content of the type genome is 54.33 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Pantoea lucerimonia sp. nov.

Candidatus Pantoea lucerimonia (NL. fem. n. *lucerimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp002359495*. The type genome for the species is the GenBank assembly GCA_002359495.1. The GC content of the type genome is 57.0 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Pantoea remeditas sp. nov.

Candidatus Pantoea remeditas (NL. fem. n. *remeditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pantoea sp008632075*. The type genome for the species is the GenBank assembly RS_GCF_008631595.1. The GC content of the type genome is 54.93 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Pantoea repepicula sp. nov.

Candidatus Pantoea repepicula (NL. fem. n. *repepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp001187905*. The type genome for the species is the GenBank assembly RS_GCF_000282675.1. The GC content of the type genome is 54.35 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pantoea solivisca sp. nov.

Candidatus Pantoea solivisca (NL. fem. n. *solivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pantoea sp900115075*. The type genome for the species is the GenBank assembly RS_GCF_900115075.1. The GC content of the type genome is 55.18 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Papavana ablepessa sp. nov.

Candidatus Papavana ablepessa (NL. fem. n. *ablepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902784545*. The type genome for the species is the GenBank assembly GCA_902784545.1. The GC content of the type genome is 51.4 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Papavana gen. nov.

Candidatus Papavana (NL. fem. n. *Papavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1248*. The type species for the genus is *Candidatus* Papavana ablepessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAG-272. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Papavana cilicicula sp. nov.

Candidatus Papavana cilicicula (NL. fem. n. *cilicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902797235*. The type genome for the species is the GenBank assembly GCA_902783045.1. The GC content of the type genome is 50.73 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Papavana conamugo sp. nov.

Candidatus Papavana conamugo (NL. fem. n. *conamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902762505*. The type genome for the species is the GenBank assembly GCA_902781685.1. The GC content of the type genome is 53.97 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Papavana forabitio sp. nov.

Candidatus Papavana forabitio (NL. fem. n. *forabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902778145*. The type genome for the species is the GenBank assembly GCA_902778145.1. The GC content of the type genome is 53.96 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Papavana futatitudo sp. nov.

Candidatus Papavana futatitudo (NL. fem. n. *futatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp002308615*. The type genome for the species is the GenBank assembly GCA_002308615.1. The GC content of the type genome is 49.4 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Papavana innulatio sp. nov.

Candidatus Papavana innulatio (NL. fem. n. *innulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902773455*. The type genome for the species is the GenBank assembly GCA_902773455.1. The GC content of the type genome is 51.18 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Papavana nehalimonia sp. nov.

Candidatus Papavana nehalimonia (NL. fem. n. *nehalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1248 sp902782785*. The type genome for the species is the GenBank assembly GCA_902782785.1. The GC content of the type genome is 50.25 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Papavaria cibicitio sp. nov.

Candidatus Papavaria cibicitio (NL. fem. n. *cibicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp903910215*. The type genome for the species is the GenBank assembly GCA_903910215.1. The GC content of the type genome is 59.95 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Papavaria gen. nov.

Candidatus Papavaria (NL. fem. n. *Papavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA964*. The type species for the genus is *Candidatus* Papavaria cibicitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Papavaria endivessa sp. nov.

Candidatus Papavaria endivessa (NL. fem. n. *endivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp010029775*. The type genome for the species is the GenBank assembly GCA_010029775.1. The GC content of the type genome is 63.35 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Papavaria fetulitoga sp. nov.

Candidatus Papavaria fetulitoga (NL. fem. n. *fetulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp903885195*. The type genome for the species is the GenBank assembly GCA_903927455.1. The GC content of the type genome is 64.14 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Papavaria genocimonia sp. nov.

Candidatus Papavaria genocimonia (NL. fem. n. *genocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp009692285*. The type genome for the species is the GenBank assembly GCA_009692285.1. The GC content of the type genome is 46.5 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Papavaria ignigitoga sp. nov.

Candidatus Papavaria ignigitoga (NL. fem. n. *ignigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp010027845*. The type genome for the species is the GenBank assembly GCA_010027845.1. The GC content of the type genome is 62.19 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Papavaria immurilega sp. nov.

Candidatus Papavaria immurilega (NL. fem. n. *immurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA964 sp009926865*. The type genome for the species is the GenBank assembly GCA_009926865.1. The GC content of the type genome is 56.76 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Papavaria noninimonia sp. nov.

Candidatus Papavaria noninimonia (NL. fem. n. *noninimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp010031985*. The type genome for the species is the GenBank assembly GCA_009918215.1. The GC content of the type genome is 63.13 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Papavaria sicubicella sp. nov.

Candidatus Papavaria sicubicella (NL. fem. n. *sicubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp002292945*. The type genome for the species is the GenBank assembly GCA_002292945.1. The GC content of the type genome is 67.0 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Papavaria tirunifica sp. nov.

Candidatus Papavaria tirunifica (NL. fem. n. *tirunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp009923475*. The type genome for the species is the GenBank assembly GCA_009923475.1. The GC content of the type genome is 70.79 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Papavaria vinolivita sp. nov.

Candidatus Papavaria vinolivita (NL. fem. n. *vinolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA964 sp903938365*. The type genome for the species is the GenBank assembly GCA_903940975.1. The GC content of the type genome is 68.65 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Papavella ammatitas sp. nov.

Candidatus Papavella ammatitas (NL. fem. n. *ammatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp002404375*. The type genome for the species is the GenBank assembly GCA_002404375.1. The GC content of the type genome is 61.13 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Papavella gen. nov.

Candidatus Papavella (NL. fem. n. *Papavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4720*. The type species for the genus is *Candidatus* Papavella ammatitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Papavella apsuritudo sp. nov.

Candidatus Papavella apsuritudo (NL. fem. n. *apsuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp013816855*. The type genome for the species is the GenBank assembly GCA_013816855.1. The GC content of the type genome is 60.53 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Papavella defasastra sp. nov.

Candidatus Papavella defasastra (NL. fem. n. *defasastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp003221805*. The type genome for the species is the GenBank assembly GCA_003221805.1. The GC content of the type genome is 60.93 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Papavella detepilega sp. nov.

Candidatus Papavella detepilega (NL. fem. n. *detepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp003134685*. The type genome for the species is the GenBank assembly GCA_003170215.1. The GC content of the type genome is 61.66 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Papavella diluditio sp. nov.

Candidatus Papavella diluditio (NL. fem. n. *diluditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp003223425*. The type genome for the species is the GenBank assembly GCA_003220835.1. The GC content of the type genome is 60.02 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Papavella expugimonas sp. nov.

Candidatus Papavella expugimonas (NL. fem. n. *expugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp902812375*. The type genome for the species is the GenBank assembly RS_GCF_902812375.1. The GC content of the type genome is 59.92 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Papavella futatibra sp. nov.

Candidatus Papavella futatibra (NL. fem. n. *futatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp003131365*. The type genome for the species is the GenBank assembly GCA_002427925.1. The GC content of the type genome is 61.95 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Papavella monacitura sp. nov.

Candidatus Papavella monacitura (NL. fem. n. *monacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4720 sp013816695*. The type genome for the species is the GenBank assembly GCA_013816695.1. The GC content of the type genome is 57.81 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Papavella penecago sp. nov.

Candidatus Papavella penecago (NL. fem. n. *penecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp013813715*. The type genome for the species is the GenBank assembly GCA_013813715.1. The GC content of the type genome is 62.59 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Papavella reforimonia sp. nov.

Candidatus Papavella reforimonia (NL. fem. n. *reforimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4720 sp013813605*. The type genome for the species is the GenBank assembly GCA_013813605.1. The GC content of the type genome is 63.66 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Papavia cadavitudo sp. nov.

Candidatus Papavia cadavitudo (NL. fem. n. *cadavitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp002350725*. The type genome for the species is the GenBank assembly GCA_002350725.1. The GC content of the type genome is 33.44 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Papavia gen. nov.

Candidatus Papavia (NL. fem. n. *Papavia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1221*. The type species for the genus is *Candidatus* Papavia cadavitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Papavia delapastra sp. nov.

Candidatus Papavia delapastra (NL. fem. n. *delapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp002309425*. The type genome for the species is the GenBank assembly GCA_002309425.1. The GC content of the type genome is 35.82 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Papavia enuclicella sp. nov.

Candidatus Papavia enuclicella (NL. fem. n. *enuclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp902761735*. The type genome for the species is the GenBank assembly GCA_902761735.1. The GC content of the type genome is 33.65 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Papavia ludifitia sp. nov.

Candidatus Papavia ludifitia (NL. fem. n. *ludifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp902760645*. The type genome for the species is the GenBank assembly GCA_902783425.1. The GC content of the type genome is 34.13 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Papavia tomacax sp. nov.

Candidatus Papavia tomacax (NL. fem. n. *tomacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp902777385*. The type genome for the species is the GenBank assembly GCA_902777385.1. The GC content of the type genome is 33.66 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Papavia uxorcibula sp. nov.

Candidatus Papavia uxorcibula (NL. fem. n. *uxorcibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp900770525*. The type genome for the species is the GenBank assembly RS_GCF_900770525.1. The GC content of the type genome is 33.79 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Papavia vocamiforma sp. nov.

Candidatus Papavia vocamiforma (NL. fem. n. *vocamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1221 sp900320675*. The type genome for the species is the GenBank assembly GCA_002352745.1. The GC content of the type genome is 34.49 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Papavida tabifilenta sp. nov.

Candidatus Papavida tabifilenta (NL. fem. n. *tabifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3079 sp002366635*. The type genome for the species is the GenBank assembly GCA_002366635.1. The GC content of the type genome is 51.17 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Papavida gen. nov.

Candidatus Papavida (NL. fem. n. *Papavida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3079*. The type species for the genus is *Candidatus* Papavida tabifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Papavosa desomibula sp. nov.

Candidatus Papavosa desomibula (NL. fem. n. *desomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKC01 sp007121695*. The type genome for the species is the GenBank assembly GCA_007124155.1. The GC content of the type genome is 57.42 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Papavosa gen. nov.

Candidatus Papavosa (NL. fem. n. *Papavosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKC01*. The type species for the genus is *Candidatus* Papavosa desomibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papavosaceae.

Description of *Candidatus* Papavosaceae fam. nov.

Candidatus Papavosaceae (NL. fem. n. *Papavosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKKC01.* The type genus for the taxon is *Candidatus* Papavosa .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_C*.

Description of *Candidatus* Papavosa favonivita sp. nov.

Candidatus Papavosa favonivita (NL. fem. n. *favonivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKC01 sp007128315*. The type genome for the species is the GenBank assembly GCA_003566595.1. The GC content of the type genome is 56.61 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Papavosa inmoliforma sp. nov.

Candidatus Papavosa inmoliforma (NL. fem. n. *inmoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SKKC01 sp007694005*. The type genome for the species is the GenBank assembly GCA_007694005.1. The GC content of the type genome is 57.26 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Papavula bonitax sp. nov.

Candidatus Papavula bonitax (NL. fem. n. *bonitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGR01 sp013152225*. The type genome for the species is the GenBank assembly GCA_013152225.1. The GC content of the type genome is 44.18 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Papavula gen. nov.

Candidatus Papavula (NL. fem. n. *Papavula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGR01*. The type species for the genus is *Candidatus* Papavula bonitax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papavulaceae.

Description of *Candidatus* Papavulaceae fam. nov.

Candidatus Papavulaceae (NL. fem. n. *Papavulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGR01*. The type genus for the taxon is *Candidatus* Papavula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Renavosales.

Description of *Candidatus* Papavula ignifibula sp. nov.

Candidatus Papavula ignifibula (NL. fem. n. *ignifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAADGR01 sp011682565*. The type genome for the species is the GenBank assembly GCA_011682565.1. The GC content of the type genome is 44.39 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Papilana adoscilenta sp. nov.

Candidatus Papilana adoscilenta (NL. fem. n. *adoscilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1859 sp002338345*. The type genome for the species is the GenBank assembly GCA_002338345.1. The GC content of the type genome is 49.18 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Papilana gen. nov.

Candidatus Papilana (NL. fem. n. *Papilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1859*. The type species for the genus is *Candidatus* Papilana adoscilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Papilana avuncifica sp. nov.

Candidatus Papilana avuncifica (NL. fem. n. *avuncifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1859 sp003532555*. The type genome for the species is the GenBank assembly GCA_003532555.1. The GC content of the type genome is 45.24 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Papilana tumefilenta sp. nov.

Candidatus Papilana tumefilenta (NL. fem. n. *tumefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1859 sp002691095*. The type genome for the species is the GenBank assembly GCA_002691095.1. The GC content of the type genome is 53.09 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Papilaria novilitoga sp. nov.

Candidatus Papilaria novilitoga (NL. fem. n. *novilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-410-N11 sp003265895*. The type genome for the species is the GenBank assembly RS_GCF_902566565.1. The GC content of the type genome is 31.07 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Papilaria gen. nov.

Candidatus Papilaria (NL. fem. n. *Papilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-410-N11*. The type species for the genus is *Candidatus* Papilaria novilitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-410-N11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papilariaceae.

Description of *Candidatus* Papilariaceae fam. nov.

Candidatus Papilariaceae (NL. fem. n. *Papilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AG-410-N11*. The type genus for the taxon is *Candidatus* Papilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2716485*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resurulales.

Description of *Candidatus* Papilella noninibula sp. nov.

Candidatus Papilella noninibula (NL. fem. n. *noninibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12411 sp003511165*. The type genome for the species is the GenBank assembly GCA_000989975.1. The GC content of the type genome is 32.3 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Papilella gen. nov.

Candidatus Papilella (NL. fem. n. *Papilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12411*. The type species for the genus is *Candidatus* Papilella noninibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12411*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papilellaceae.

Description of *Candidatus* Papilellaceae fam. nov.

Candidatus Papilellaceae (NL. fem. n. *Papilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12411.* The type genus for the taxon is *Candidatus* Papilella .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Papilia maxilibula sp. nov.

Candidatus Papilia maxilibula (NL. fem. n. *maxilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1565 sp002790095*. The type genome for the species is the GenBank assembly GCA_002790095.1. The GC content of the type genome is 62.58 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Papilia gen. nov.

Candidatus Papilia (NL. fem. n. *Papilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1565*. The type species for the genus is *Candidatus* Papilia maxilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papiliaceae.

Description of *Candidatus* Papiliaceae fam. nov.

Candidatus Papiliaceae (NL. fem. n. *Papiliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1565.* The type genus for the taxon is *Candidatus* Papilia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Papiliales.

Description of *Candidatus* Papiliales ord. nov.

Candidatus Papiliales (NL. fem. n. *Papiliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1565.* The type genus for the taxon is *Candidatus* Papilia .

According to the GTDB R06-RS202, this order belongs to the class *Elusimicrobia*.

Description of *Candidatus* Papilia selecigena sp. nov.

Candidatus Papilia selecigena (NL. fem. n. *selecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1565 sp002401485*. The type genome for the species is the GenBank assembly GCA_002401485.1. The GC content of the type genome is 54.93 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Papilida invoriforma sp. nov.

Candidatus Papilida invoriforma (NL. fem. n. *invoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin98 sp002238905*. The type genome for the species is the GenBank assembly GCA_002238905.1. The GC content of the type genome is 40.65 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Papilida gen. nov.

Candidatus Papilida (NL. fem. n. *Papilida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin98*. The type species for the genus is *Candidatus* Papilida invoriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin98*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papilidaceae.

Description of *Candidatus* Papilidaceae fam. nov.

Candidatus Papilidaceae (NL. fem. n. *Papilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin98.* The type genus for the taxon is *Candidatus* Papilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin98*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Papilidales.

Description of *Candidatus* Papilidales ord. nov.

Candidatus Papilidales (NL. fem. n. *Papilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin98.* The type genus for the taxon is *Candidatus* Papilida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Papilula miracitrix sp. nov.

Candidatus Papilula miracitrix (NL. fem. n. *miracitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8558 sp002712065*. The type genome for the species is the GenBank assembly GCA_002731625.1. The GC content of the type genome is 36.44 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Papilula gen. nov.

Candidatus Papilula (NL. fem. n. *Papilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8558*. The type species for the genus is *Candidatus* Papilula miracitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papilulaceae.

Description of *Candidatus* Papilulaceae fam. nov.

Candidatus Papilulaceae (NL. fem. n. *Papilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8558.* The type genus for the taxon is *Candidatus* Papilula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Papilulales.

Description of *Candidatus* Papilulales ord. nov.

Candidatus Papilulales (NL. fem. n. *Papilulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8558.* The type genus for the taxon is *Candidatus* Papilula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Parabacteroides adessicella sp. nov.

Candidatus Parabacteroides adessicella (NL. fem. n. *adessicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900548175*. The type genome for the species is the GenBank assembly GCA_900548175.1. The GC content of the type genome is 42.72 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Parabacteroides arundifica sp. nov.

Candidatus Parabacteroides arundifica (NL. fem. n. *arundifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900760525*. The type genome for the species is the GenBank assembly GCA_900760525.1. The GC content of the type genome is 46.43 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Parabacteroides cimititoga sp. nov.

Candidatus Parabacteroides cimititoga (NL. fem. n. *cimititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900770835*. The type genome for the species is the GenBank assembly GCA_900770835.1. The GC content of the type genome is 48.36 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Parabacteroides defunitura sp. nov.

Candidatus Parabacteroides defunitura (NL. fem. n. *defunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900552465*. The type genome for the species is the GenBank assembly GCA_900552465.1. The GC content of the type genome is 46.84 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Parabacteroides denupilega sp. nov.

Candidatus Parabacteroides denupilega (NL. fem. n. *denupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900552415*. The type genome for the species is the GenBank assembly GCA_900552415.1. The GC content of the type genome is 50.55 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Parabacteroides depocago sp. nov.

Candidatus Parabacteroides depocago (NL. fem. n. *depocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp003480915*. The type genome for the species is the GenBank assembly RS_GCF_902399985.1. The GC content of the type genome is 43.87

% and the genome length is 6.09 Mbp.

Description of *Candidatus* Parabacteroides desupitura sp. nov.

Candidatus Parabacteroides desupitura (NL. fem. n. *desupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp004562445*. The type genome for the species is the GenBank assembly GCA_004562445.1. The GC content of the type genome is 50.55 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Parabacteroides dilibicula sp. nov.

Candidatus Parabacteroides dilibicula (NL. fem. n. *dilibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900540715*. The type genome for the species is the GenBank assembly GCA_900755135.1. The GC content of the type genome is 43.36 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Parabacteroides facunedo sp. nov.

Candidatus Parabacteroides facunedo (NL. fem. n. *facunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp011038785*. The type genome for the species is the GenBank assembly RS_GCF_011038785.1. The GC content of the type genome is 48.28 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Parabacteroides funamicella sp. nov.

Candidatus Parabacteroides funamicella (NL. fem. n. *funamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp000436495*. The type genome for the species is the GenBank assembly GCA_900547605.1. The GC content of the type genome is 42.97 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Parabacteroides irrecessa sp. nov.

Candidatus Parabacteroides irrecessa (NL. fem. n. *irrecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp002159645*. The type genome for the species is the GenBank assembly RS_GCF_002159645.1. The GC content of the type genome is 46.67 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Parabacteroides palifago sp. nov.

Candidatus Parabacteroides palifago (NL. fem. n. *palifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp003473295*. The type genome for the species is the GenBank assembly RS_GCF_902364495.1. The GC content of the type genome is 41.55 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Parabacteroides semilago sp. nov.

Candidatus Parabacteroides semilago (NL. fem. n. *semilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900549585*. The type genome for the species is the GenBank assembly GCA_900768235.1. The GC content of the type genome is 43.28 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Parabacteroides solacitura sp. nov.

Candidatus Parabacteroides solacitura (NL. fem. n. *solacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900541965*. The type genome for the species is the GenBank assembly GCA_900754325.1. The GC content of the type genome is 41.94 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Parabacteroides solifimonas sp. nov.

Candidatus Parabacteroides solifimonas (NL. fem. n. *solifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp014287585*. The type genome for the species is the GenBank assembly GCA_900766065.1. The GC content of the type genome is 48.28 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Parabacteroides vagabugo sp. nov.

Candidatus Parabacteroides vagabugo (NL. fem. n. *vagabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parabacteroides sp900547435*. The type genome for the species is the GenBank assembly GCA_900547435.1. The GC content of the type genome is 44.5 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Paraburkholderia adlenitrix sp. nov.

Candidatus Paraburkholderia adlenitrix (NL. fem. n. *adlenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp001319865*. The type genome for the species is the GenBank assembly GCA_001319865.1. The GC content of the type genome is 62.64 % and the genome length is 9.36 Mbp.

Description of *Candidatus* Paraburkholderia adlocimonas sp. nov.

Candidatus Paraburkholderia adlocimonas (NL. fem. n. *adlocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900996235*. The type genome for the species is the GenBank assembly RS_GCF_900996235.1. The GC content of the type genome is 62.36 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Paraburkholderia adnulax sp. nov.

Candidatus Paraburkholderia adnulax (NL. fem. n. *adnulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004339745*. The type genome for the species is the GenBank assembly RS_GCF_004339745.1. The GC content of the type genome is

62.09 % and the genome length is 9.97 Mbp.

Description of *Candidatus* Paraburkholderia adtenentia sp. nov.

Candidatus Paraburkholderia adtenentia (NL. fem. n. *adtenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004197395*. The type genome for the species is the GenBank assembly RS_GCF_004197395.1. The GC content of the type genome is 63.07 % and the genome length is 9.83 Mbp.

Description of *Candidatus* Paraburkholderia aggesetta sp. nov.

Candidatus Paraburkholderia aggesetta (NL. fem. n. *aggesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000472445*. The type genome for the species is the GenBank assembly RS_GCF_000472445.1. The GC content of the type genome is 63.07 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Paraburkholderia agratousia sp. nov.

Candidatus Paraburkholderia agratousia (NL. fem. n. *agratousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp013177695*. The type genome for the species is the GenBank assembly RS_GCF_013177695.1. The GC content of the type genome is 61.33 % and the genome length is 9.67 Mbp.

Description of *Candidatus* Paraburkholderia allacousia sp. nov.

Candidatus Paraburkholderia allacousia (NL. fem. n. *allacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000472545*. The type genome for the species is the GenBank assembly RS_GCF_000472545.1. The GC content of the type genome is 63.11 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Paraburkholderia altipibula sp. nov.

Candidatus Paraburkholderia altipibula (NL. fem. n. *altipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004361815*. The type genome for the species is the GenBank assembly RS_GCF_004361815.1. The GC content of the type genome is 61.82 % and the genome length is 9.2 Mbp.

Description of *Candidatus* Paraburkholderia apharastra sp. nov.

Candidatus Paraburkholderia apharastra (NL. fem. n. *apharastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp001634365*. The type genome for the species is the GenBank assembly RS_GCF_001634365.1. The GC content of the type genome is 60.86 % and the genome length is 8.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paraburkholderia appicifica sp. nov.

Candidatus Paraburkholderia appicifica (NL. fem. n. *appicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp011753055*. The type genome for the species is the GenBank assembly RS_GCF_011753055.1. The GC content of the type genome is 63.0 % and the genome length is 8.12 Mbp.

Description of *Candidatus* Paraburkholderia arillilenta sp. nov.

Candidatus Paraburkholderia arillilenta (NL. fem. n. *arillilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900996245*. The type genome for the species is the GenBank assembly RS_GCF_900996245.1. The GC content of the type genome is 62.86 % and the genome length is 7.68 Mbp.

Description of *Candidatus* Paraburkholderia benepitura sp. nov.

Candidatus Paraburkholderia benepitura (NL. fem. n. *benepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp012275575*. The type genome for the species is the GenBank assembly RS_GCF_012275575.1. The GC content of the type genome is 63.03 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Paraburkholderia bigemibula sp. nov.

Candidatus Paraburkholderia bigemibula (NL. fem. n. *bigemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000092885*. The type genome for the species is the GenBank assembly RS_GCF_000372985.1. The GC content of the type genome is 63.05 % and the genome length is 8.61 Mbp.

Description of *Candidatus* Paraburkholderia bucelugo sp. nov.

Candidatus Paraburkholderia bucelugo (NL. fem. n. *bucelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp005503145*. The type genome for the species is the GenBank assembly RS_GCF_005503145.1. The GC content of the type genome is 62.39 % and the genome length is 9.16 Mbp.

Description of *Candidatus* Paraburkholderia caselisca sp. nov.

Candidatus Paraburkholderia caselisca (NL. fem. n. *caselisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000178415*. The type genome for the species is the GenBank assembly RS_GCF_000178415.2. The GC content of the type genome is 62.44 % and the genome length is 8.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paraburkholderia cocibessa sp. nov.

Candidatus Paraburkholderia cocibessa (NL. fem. n. *cocibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004359985*. The type genome for the species is

the GenBank assembly RS_GCF_004359985.1. The GC content of the type genome is 63.37 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Paraburkholderia culibicula sp. nov.

Candidatus Paraburkholderia culibicula (NL. fem. n. *culibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900996225*. The type genome for the species is the GenBank assembly RS_GCF_900996225.1. The GC content of the type genome is 62.21 % and the genome length is 7.54 Mbp.

Description of *Candidatus* Paraburkholderia culigatica sp. nov.

Candidatus Paraburkholderia culigatica (NL. fem. n. *culigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp009789655*. The type genome for the species is the GenBank assembly RS_GCF_009789655.1. The GC content of the type genome is 64.33 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Paraburkholderia culiletta sp. nov.

Candidatus Paraburkholderia culiletta (NL. fem. n. *culiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp013426915*. The type genome for the species is the GenBank assembly RS_GCF_013426915.1. The GC content of the type genome is 61.71 % and the genome length is 11.25 Mbp.

Description of *Candidatus* Paraburkholderia delecitas sp. nov.

Candidatus Paraburkholderia delecitas (NL. fem. n. *delecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003002025*. The type genome for the species is the GenBank assembly RS_GCF_003634175.1. The GC content of the type genome is 62.09 % and the genome length is 8.65 Mbp.

Description of *Candidatus* Paraburkholderia dilibax sp. nov.

Candidatus Paraburkholderia dilibax (NL. fem. n. *dilibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000745015*. The type genome for the species is the GenBank assembly RS_GCF_013409255.1. The GC content of the type genome is 62.68 % and the genome length is 8.28 Mbp.

Description of *Candidatus* Paraburkholderia enuntibula sp. nov.

Candidatus Paraburkholderia enuntibula (NL. fem. n. *enuntibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp014397785*. The type genome for the species is the GenBank assembly RS_GCF_014397785.1. The GC content of the type genome is 62.74 % and the genome length is 9.36 Mbp.

Description of *Candidatus* Paraburkholderia exhedatio sp. nov.

Candidatus Paraburkholderia exhedatio (NL. fem. n. *exhedatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003121405*. The type genome for the species is the GenBank assembly RS_GCF_003121405.1. The GC content of the type genome is 61.49 % and the genome length is 9.71 Mbp.

Description of *Candidatus* Paraburkholderia exheritio sp. nov.

Candidatus Paraburkholderia exheritio (NL. fem. n. *exheritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003837865*. The type genome for the species is the GenBank assembly RS_GCF_003837865.1. The GC content of the type genome is 62.99 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Paraburkholderia fusifetta sp. nov.

Candidatus Paraburkholderia fusifetta (NL. fem. n. *fusifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003429005*. The type genome for the species is the GenBank assembly RS_GCF_003429005.1. The GC content of the type genome is 62.28 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Paraburkholderia futatastra sp. nov.

Candidatus Paraburkholderia futatastra (NL. fem. n. *futatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000148685*. The type genome for the species is the GenBank assembly RS_GCF_004790965.1. The GC content of the type genome is 63.03 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Paraburkholderia ignosimonia sp. nov.

Candidatus Paraburkholderia ignosimonia (NL. fem. n. *ignosimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp013177735*. The type genome for the species is the GenBank assembly RS_GCF_013177735.1. The GC content of the type genome is 60.95 % and the genome length is 11.08 Mbp.

Description of *Candidatus* Paraburkholderia illepax sp. nov.

Candidatus Paraburkholderia illepax (NL. fem. n. *illepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp002870125*. The type genome for the species is the GenBank assembly RS_GCF_002870125.1. The GC content of the type genome is 66.8 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Paraburkholderia inbecitica sp. nov.

Candidatus Paraburkholderia inbecitica (NL. fem. n. *inbecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp000173575*. The type genome for the species is the GenBank assembly GCA_000173575.1. The GC content of the type genome is 62.87

% and the genome length is 7.89 Mbp.

Description of *Candidatus* Paraburkholderia incomifica sp. nov.

Candidatus Paraburkholderia incomifica (NL. fem. n. *incomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003253405*. The type genome for the species is the GenBank assembly RS_GCF_003253405.1. The GC content of the type genome is 65.3 % and the genome length is 7.68 Mbp.

Description of *Candidatus* Paraburkholderia incomitica sp. nov.

Candidatus Paraburkholderia incomitica (NL. fem. n. *incomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp009362735*. The type genome for the species is the GenBank assembly RS_GCF_009362735.1. The GC content of the type genome is 62.25 % and the genome length is 10.05 Mbp.

Description of *Candidatus* Paraburkholderia irrevastra sp. nov.

Candidatus Paraburkholderia irrevastra (NL. fem. n. *irrevastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp001922345*. The type genome for the species is the GenBank assembly RS_GCF_001922345.1. The GC content of the type genome is 63.3 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Paraburkholderia lacinigena sp. nov.

Candidatus Paraburkholderia lacinigena (NL. fem. n. *lacinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp003610295*. The type genome for the species is the GenBank assembly RS_GCF_003610295.1. The GC content of the type genome is 61.37 % and the genome length is 9.12 Mbp.

Description of *Candidatus* Paraburkholderia lanugitura sp. nov.

Candidatus Paraburkholderia lanugitura (NL. fem. n. *lanugitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp008369935*. The type genome for the species is the GenBank assembly RS_GCF_008369935.1. The GC content of the type genome is 62.2 % and the genome length is 10.91 Mbp.

Description of *Candidatus* Paraburkholderia molecedo sp. nov.

Candidatus Paraburkholderia molecedo (NL. fem. n. *molecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900142905*. The type genome for the species is the GenBank assembly RS_GCF_004363325.1. The GC content of the type genome is 61.34 % and the genome length is 10.97 Mbp.

Description of *Candidatus* Paraburkholderia munifitoga sp. nov.

Candidatus Paraburkholderia munifitoga (NL. fem. n. *munifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp002973525*. The type genome for the species is the GenBank assembly RS_GCF_002973525.1. The GC content of the type genome is 62.83 % and the genome length is 8.44 Mbp.

Description of *Candidatus* Paraburkholderia redunedo sp. nov.

Candidatus Paraburkholderia redunedo (NL. fem. n. *redunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp013366925*. The type genome for the species is the GenBank assembly RS_GCF_013367595.1. The GC content of the type genome is 63.01 % and the genome length is 8.96 Mbp.

Description of *Candidatus* Paraburkholderia refocilega sp. nov.

Candidatus Paraburkholderia refocilega (NL. fem. n. *refocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp012927345*. The type genome for the species is the GenBank assembly RS_GCF_012927345.1. The GC content of the type genome is 61.34 % and the genome length is 9.67 Mbp.

Description of *Candidatus* Paraburkholderia revulastra sp. nov.

Candidatus Paraburkholderia revulastra (NL. fem. n. *revulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900104795*. The type genome for the species is the GenBank assembly GCA_903907005.1. The GC content of the type genome is 62.39 % and the genome length is 8.48 Mbp.

Description of *Candidatus* Paraburkholderia semifatio sp. nov.

Candidatus Paraburkholderia semifatio (NL. fem. n. *semifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp900230185*. The type genome for the species is the GenBank assembly RS_GCF_900230185.1. The GC content of the type genome is 61.21 % and the genome length is 10.76 Mbp.

Description of *Candidatus* Paraburkholderia seposedo sp. nov.

Candidatus Paraburkholderia seposedo (NL. fem. n. *seposedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp001931485*. The type genome for the species is the GenBank assembly RS_GCF_001931485.1. The GC content of the type genome is 64.39 % and the genome length is 7.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Paraburkholderia sicubivita sp. nov.

Candidatus Paraburkholderia sicubivita (NL. fem. n. *sicubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp012927125*. The type genome for the species is

the GenBank assembly RS_GCF_012927125.1. The GC content of the type genome is 63.72 % and the genome length is 7.44 Mbp.

Description of *Candidatus* Paraburkholderia socagentia sp. nov.

Candidatus Paraburkholderia socagentia (NL. fem. n. *socagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004353915*. The type genome for the species is the GenBank assembly RS_GCF_004353915.1. The GC content of the type genome is 64.37 % and the genome length is 9.17 Mbp.

Description of *Candidatus* Paraburkholderia subofitica sp. nov.

Candidatus Paraburkholderia subofitica (NL. fem. n. *subofitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp004298475*. The type genome for the species is the GenBank assembly GCA_004322125.1. The GC content of the type genome is 63.58 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Paraburkholderia telefigena sp. nov.

Candidatus Paraburkholderia telefigena (NL. fem. n. *telefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp013426895*. The type genome for the species is the GenBank assembly RS_GCF_013426895.1. The GC content of the type genome is 62.4 % and the genome length is 9.47 Mbp.

Description of *Candidatus* Paraburkholderia turicousia sp. nov.

Candidatus Paraburkholderia turicousia (NL. fem. n. *turicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp011752995*. The type genome for the species is the GenBank assembly RS_GCF_011752995.1. The GC content of the type genome is 63.74 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Paraburkholderia vilipessa sp. nov.

Candidatus Paraburkholderia vilipessa (NL. fem. n. *vilipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraburkholderia sp009789675*. The type genome for the species is the GenBank assembly RS_GCF_009789675.1. The GC content of the type genome is 65.39 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Paracaedimonas nugacatica sp. nov.

Candidatus Paracaedimonas nugacatica (NL. fem. n. *nugacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracaedimonas sp001898725*. The type genome for the species is the GenBank assembly GCA_001898725.1. The GC content of the type genome is 36.64 % and the genome length is 1.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Paracaedimonas pociliforma sp. nov.

Candidatus Paracaedimonas pociliforma (NL. fem. n. *pociliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracaedimonas sp001898705*. The type genome for the species is the GenBank assembly GCA_001898705.1. The GC content of the type genome is 38.12 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Paracana epogdugo sp. nov.

Candidatus Paracana epogdugo (NL. fem. n. *epogdugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABSR01 sp011390245*. The type genome for the species is the GenBank assembly GCA_011390245.1. The GC content of the type genome is 34.96 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Paracana gen. nov.

Candidatus Paracana (NL. fem. n. *Paracana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABSR01*. The type species for the genus is *Candidatus* Paracana epogdugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABSR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paracanaceae.

Description of *Candidatus* Paracanaceae fam. nov.

Candidatus Paracanaceae (NL. fem. n. *Paracanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABSR01*. The type genus for the taxon is *Candidatus* Paracana .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Parachlamydia mirifastra sp. nov.

Candidatus Parachlamydia mirifastra (NL. fem. n. *mirifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parachlamydia sp002786175*. The type genome for the species is the GenBank assembly GCA_002786175.1. The GC content of the type genome is 41.53 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Paracia inoffastra sp. nov.

Candidatus Paracia inoffastra (NL. fem. n. *inoffastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4575 sp002386945*. The type genome for the species is the GenBank assembly GCA_002386945.1. The GC content of the type genome is 46.17 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Paracia gen. nov.

Candidatus Paracia (NL. fem. n. *Paracia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA4575*. The type species for the genus is *Candidatus* Paracia inoffastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paraciaceae.

Description of *Candidatus* Paraciaceae fam. nov.

Candidatus Paraciaceae (NL. fem. n. *Paraciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4575.* The type genus for the taxon is *Candidatus* Paracia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Paraciales.

Description of *Candidatus* Paraciales ord. nov.

Candidatus Paraciales (NL. fem. n. *Paraciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4575.* The type genus for the taxon is *Candidatus* Paracia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Paracida gasifentia sp. nov.

Candidatus Paracida gasifentia (NL. fem. n. *gasifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-506 sp003168215*. The type genome for the species is the GenBank assembly GCA_003161165.1. The GC content of the type genome is 69.58 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Paracida gen. nov.

Candidatus Paracida (NL. fem. n. *Paracida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Palsa-506*. The type species for the genus is *Candidatus* Paracida gasifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Paracoccus adgesilenta sp. nov.

Candidatus Paracoccus adgesilenta (NL. fem. n. *adgesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp000787695*. The type genome for the species is the GenBank assembly RS_GCF_000787695.1. The GC content of the type genome is 66.06 % and the genome length is 4.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Paracoccus adpugitrix sp. nov.

Candidatus Paracoccus adpugitrix (NL. fem. n. *adpugitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp003324675*. The type genome for the species is the GenBank assembly RS_GCF_003324675.1. The GC content of the type genome is 66.85 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Paracoccus adsucitrix sp. nov.

Candidatus Paracoccus adsucitrix (NL. fem. n. *adsucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp002732665*. The type genome for the species is the GenBank assembly GCA_002732665.1. The GC content of the type genome is 63.42 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Paracoccus annubax sp. nov.

Candidatus Paracoccus annubax (NL. fem. n. *annubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp001447385*. The type genome for the species is the

GenBank assembly RS_GCF_001447385.1. The GC content of the type genome is 66.7 % and the genome length is 5.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Industrial Effluent".

Description of *Candidatus* Paracoccus ascisicella sp. nov.

Candidatus Paracoccus ascisicella (NL. fem. n. *ascisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp013868135*. The type genome for the species is the GenBank assembly RS_GCF_013868135.1. The GC content of the type genome is 65.38 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Paracoccus baropastra sp. nov.

Candidatus Paracoccus baropastra (NL. fem. n. *baropastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp014164625*. The type genome for the species is the GenBank assembly RS_GCF_014164635.1. The GC content of the type genome is 67.2 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Paracoccus brabrilenta sp. nov.

Candidatus Paracoccus brabrilenta (NL. fem. n. *brabrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp003590715*. The type genome for the species is the GenBank assembly RS_GCF_003590715.1. The GC content of the type genome is 59.11 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Paracoccus dimaditudo sp. nov.

Candidatus Paracoccus dimaditudo (NL. fem. n. *dimaditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp007096355*. The type genome for the species is the GenBank assembly RS_GCF_007096355.1. The GC content of the type genome is 63.89 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Paracoccus ducilifica sp. nov.

Candidatus Paracoccus ducilifica (NL. fem. n. *ducilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp009711265*. The type genome for the species is the GenBank assembly RS_GCF_009711265.1. The GC content of the type genome is 64.75 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Paracoccus impigigena sp. nov.

Candidatus Paracoccus impigigena (NL. fem. n. *impigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp011308835*. The type genome for the species is the GenBank assembly RS_GCF_011308835.1. The GC content of the type genome is 63.94 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Paracoccus inbecitudo sp. nov.

Candidatus Paracoccus inbecitudo (NL. fem. n. *inbecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp007993065*. The type genome for the species is the GenBank assembly RS_GCF_007993065.1. The GC content of the type genome is 62.54 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Paracoccus inoccilenta sp. nov.

Candidatus Paracoccus inoccilenta (NL. fem. n. *inoccilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp003591515*. The type genome for the species is the GenBank assembly RS_GCF_003591515.1. The GC content of the type genome is 60.31 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Paracoccus lubenitica sp. nov.

Candidatus Paracoccus lubenitica (NL. fem. n. *lubenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp000518925*. The type genome for the species is the GenBank assembly RS_GCF_000513975.1. The GC content of the type genome is 68.07 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Paracoccus nefaritas sp. nov.

Candidatus Paracoccus nefaritas (NL. fem. n. *nefaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp009708075*. The type genome for the species is the GenBank assembly RS_GCF_009708075.1. The GC content of the type genome is 67.12 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Paracoccus ornitiforma sp. nov.

Candidatus Paracoccus ornitiforma (NL. fem. n. *ornitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp014490725*. The type genome for the species is the GenBank assembly RS_GCF_014490725.1. The GC content of the type genome is 60.07 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Paracoccus procredo sp. nov.

Candidatus Paracoccus procredo (NL. fem. n. *procredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp002359815*. The type genome for the species is the GenBank assembly GCA_002359815.1. The GC content of the type genome is 63.5 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Paracoccus reforimonas sp. nov.

Candidatus Paracoccus reforimonas (NL. fem. n. *reforimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp002294185*. The type genome for the species is the GenBank assembly GCA_002693405.1. The GC content of the type genome is 65.79 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Paracoccus rosarivita sp. nov.

Candidatus Paracoccus rosarivita (NL. fem. n. *rosarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp009674885*. The type genome for the species is the GenBank assembly RS_GCF_009674885.1. The GC content of the type genome is 69.54 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Paracoccus semoditrix sp. nov.

Candidatus Paracoccus semoditrix (NL. fem. n. *semoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp004335005*. The type genome for the species is the GenBank assembly RS_GCF_004335005.1. The GC content of the type genome is 65.31 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Paracoccus senaciforma sp. nov.

Candidatus Paracoccus senaciforma (NL. fem. n. *senaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp009696685*. The type genome for the species is the GenBank assembly RS_GCF_009696665.1. The GC content of the type genome is 65.79 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Paracoccus vitabimonas sp. nov.

Candidatus Paracoccus vitabimonas (NL. fem. n. *vitabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracoccus sp002847305*. The type genome for the species is the GenBank assembly RS_GCF_002847305.1. The GC content of the type genome is 62.15

% and the genome length is 3.95 Mbp.

Description of *Candidatus* Paracosa homunimonas sp. nov.

Candidatus Paracosa homunimonas (NL. fem. n. *homunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J135 sp003694225*. The type genome for the species is the GenBank assembly GCA_003694225.1. The GC content of the type genome is 43.93 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Paracosa gen. nov.

Candidatus Paracosa (NL. fem. n. *Paracosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J135*. The type species for the genus is *Candidatus* Paracosa homunimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paracosaceae.

Description of *Candidatus* Paracosaceae fam. nov.

Candidatus Paracosaceae (NL. fem. n. *Paracosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J135.* The type genus for the taxon is *Candidatus* Paracosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuciales.

Description of *Candidatus* Paracraurococcus adfabicella sp. nov.

Candidatus Paracraurococcus adfabicella (NL. fem. n. *adfabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracraurococcus sp004343615*. The type genome for the species is the GenBank assembly RS_GCF_004343615.1. The GC content of the type genome is

72.0 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Paracraurococcus ambacitura sp. nov.

Candidatus Paracraurococcus ambacitura (NL. fem. n. *ambacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paracraurococcus sp013112485*. The type genome for the species is the GenBank assembly RS_GCF_013112485.1. The GC content of the type genome is 71.28 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Parafilimonas agrapivita sp. nov.

Candidatus Parafilimonas agrapivita (NL. fem. n. *agrapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parafilimonas sp903642275*. The type genome for the species is the GenBank assembly RS_GCF_903642275.1. The GC content of the type genome is 35.67 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Parafilimonas expenilega sp. nov.

Candidatus Parafilimonas expenilega (NL. fem. n. *expenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parafilimonas sp013288785*. The type genome for the species is the GenBank assembly GCA_013288785.1. The GC content of the type genome is 35.95 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Parafilimonas genocisca sp. nov.

Candidatus Parafilimonas genocisca (NL. fem. n. *genocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parafilimonas sp013289015*. The type genome for the species is the GenBank assembly GCA_013289015.1. The GC content of the type genome is 37.56 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Parafilimonas invesigena sp. nov.

Candidatus Parafilimonas invesigena (NL. fem. n. *invesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parafilimonas sp013285855*. The type genome for the species is the GenBank assembly GCA_013285855.1. The GC content of the type genome is 35.99 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Parafilimonas mimogitio sp. nov.

Candidatus Parafilimonas mimogitio (NL. fem. n. *mimogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parafilimonas sp013286425*. The type genome for the species is the GenBank assembly GCA_013286425.1. The GC content of the type genome is 37.47 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Paraflavitalea metabitia sp. nov.

Candidatus Paraflavitalea metabitia (NL. fem. n. *metabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraflavitalea sp011759375*. The type genome for the species is the GenBank assembly RS_GCF_011759375.1. The GC content of the type genome is 47.36 % and the genome length is 8.73 Mbp.

Description of *Candidatus* Paraglaciecola accucimonia sp. nov.

Candidatus Paraglaciecola accucimonia (NL. fem. n. *accucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp009796765*. The type genome for the species is the GenBank assembly RS_GCF_009796765.1. The GC content of the type genome is 38.64 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Paraglaciecola assicedo sp. nov.

Candidatus Paraglaciecola assicedo (NL. fem. n. *assicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp011378905*. The type genome for the species is the GenBank assembly RS_GCF_011378905.1. The GC content of the type genome is 42.63 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Paraglaciecola capudisca sp. nov.

Candidatus Paraglaciecola capudisca (NL. fem. n. *capudisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp009796745*. The type genome for the species is the GenBank assembly RS_GCF_009796745.1. The GC content of the type genome is 42.64 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Paraglaciecola exsufedo sp. nov.

Candidatus Paraglaciecola exsufedo (NL. fem. n. *exsufedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp002835935*. The type genome for the species is the GenBank assembly RS_GCF_002835935.1. The GC content of the type genome is 41.23 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Paraglaciecola gasometta sp. nov.

Candidatus Paraglaciecola gasometta (NL. fem. n. *gasometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp009993955*. The type genome for the species is the GenBank assembly GCA_009993955.1. The GC content of the type genome is 45.76 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Paraglaciecola progribra sp. nov.

Candidatus Paraglaciecola progribra (NL. fem. n. *progribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraglaciecola sp004360155*. The type genome for the species is the GenBank assembly RS_GCF_004360155.1. The GC content of the type genome is 39.36

% and the genome length is 4.64 Mbp.

Description of *Candidatus* Parahaliea homunastra sp. nov.

Candidatus Parahaliea homunastra (NL. fem. n. *homunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parahaliea sp014077625*. The type genome for the species is the GenBank assembly RS_GCF_014077625.1. The GC content of the type genome is 52.61 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Paralcaligenes sugilitica sp. nov.

Candidatus Paralcaligenes sugilitica (NL. fem. n. *sugilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paralcaligenes sp004297945*. The type genome for the species is the GenBank assembly GCA_004322105.1. The GC content of the type genome is 56.8 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Paraliobacillus documivita sp. nov.

Candidatus Paraliobacillus documivita (NL. fem. n. *documivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraliobacillus sp014083865*. The type genome for the species is the GenBank assembly RS_GCF_014083865.1. The GC content of the type genome is 35.28 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Paraliobacillus inbelitrix sp. nov.

Candidatus Paraliobacillus inbelitrix (NL. fem. n. *inbelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraliobacillus sp001368815*. The type genome for the species is the GenBank assembly RS_GCF_001368815.1. The GC content of the type genome is 34.79 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Paraliobacillus ludimatica sp. nov.

Candidatus Paraliobacillus ludimatica (NL. fem. n. *ludimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraliobacillus_A sp003268595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003426095.1. The GC content of the type genome is 34.92 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Paralula tibicitio sp. nov.

Candidatus Paralula tibicitio (NL. fem. n. *tibicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-45-34b sp001822675*. The type genome for the species is the GenBank assembly GCA_001822675.1. The GC content of the type genome is 44.89 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Paralula gen. nov.

Candidatus Paralula (NL. fem. n. *Paralula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-45-34b*. The type species for the genus is *Candidatus* Paralula tibicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Paramesorhizobium rosacibra sp. nov.

Candidatus Paramesorhizobium rosacibra (NL. fem. n. *rosacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramesorhizobium sp014191375*. The type genome for the species is the GenBank assembly RS_GCF_014191375.1. The GC content of the type genome is

62.06 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Paramuribaculum abrelicula sp. nov.

Candidatus Paramuribaculum abrelicula (NL. fem. n. *abrelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp009775605*. The type genome for the species is the GenBank assembly GCA_009775605.1. The GC content of the type genome is 53.3 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Paramuribaculum affulastra sp. nov.

Candidatus Paramuribaculum affulastra (NL. fem. n. *affulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900553585*. The type genome for the species is the GenBank assembly GCA_900553585.1. The GC content of the type genome is 48.55 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Paramuribaculum aprucifica sp. nov.

Candidatus Paramuribaculum aprucifica (NL. fem. n. *aprucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900759915*. The type genome for the species is the GenBank assembly RS_GCF_900759915.1. The GC content of the type genome is 55.64 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Paramuribaculum arcebentia sp. nov.

Candidatus Paramuribaculum arcebentia (NL. fem. n. *arcebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900551515*. The type genome for the species is the GenBank assembly GCA_900551515.1. The GC content of the type genome is 55.79 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Paramuribaculum baropugo sp. nov.

Candidatus Paramuribaculum baropugo (NL. fem. n. *baropugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900759835*. The type genome for the species is the GenBank assembly RS_GCF_900759835.1. The GC content of the type genome is 50.15 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Paramuribaculum binocifica sp. nov.

Candidatus Paramuribaculum binocifica (NL. fem. n. *binocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp000431155*. The type genome for the species is the GenBank assembly GCA_900542815.1. The GC content of the type genome is 47.96 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Paramuribaculum bucelicula sp. nov.

Candidatus Paramuribaculum bucelicula (NL. fem. n. *bucelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp001701115*. The type genome for the species is the GenBank assembly GCA_002477235.1. The GC content of the type genome is 47.1 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Paramuribaculum dehonimonas sp. nov.

Candidatus Paramuribaculum dehonimonas (NL. fem. n. *dehonimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900760855*. The type genome for the species is the GenBank assembly RS_GCF_900760855.1. The GC content of the type genome is 45.69 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Paramuribaculum favilatica sp. nov.

Candidatus Paramuribaculum favilatica (NL. fem. n. *favilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900752995*. The type genome for the species is the GenBank assembly RS_GCF_900752995.1. The GC content of the type genome is 51.65 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Paramuribaculum mavorimonia sp. nov.

Candidatus Paramuribaculum mavorimonia (NL. fem. n. *mavorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp001689535*. The type genome for the species is the GenBank assembly GCA_002493385.1. The GC content of the type genome is 54.07 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Paramuribaculum ruricisca sp. nov.

Candidatus Paramuribaculum ruricisca (NL. fem. n. *ruricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp001689565*. The type genome for the species is the GenBank assembly GCA_001689565.1. The GC content of the type genome is 48.96 % and the genome length is 2.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Paramuribaculum saxopitudo sp. nov.

Candidatus Paramuribaculum saxopitudo (NL. fem. n. *saxopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paramuribaculum sp900546365*. The type genome for the species is the GenBank assembly GCA_900546365.1. The GC content of the type genome is 52.42 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Paraoceanicella eccisitura sp. nov.

Candidatus Paraoceanicella eccisitura (NL. fem. n. *eccisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraoceanicella sp003448965*. The type genome for the species is the

GenBank assembly RS_GCF_003448965.1. The GC content of the type genome is 70.84 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Parapontixanthobacter adsenago sp. nov.

Candidatus Parapontixanthobacter adsenago (NL. fem. n. *adsenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parapontixanthobacter sp013370205*. The type genome for the species is the GenBank assembly RS_GCF_013370205.1. The GC content of the type genome is 62.06 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Paraprevotella anastetta sp. nov.

Candidatus Paraprevotella anastetta (NL. fem. n. *anastetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraprevotella sp900546665*. The type genome for the species is the GenBank assembly GCA_900546665.1. The GC content of the type genome is 43.62 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Paraprevotella forinitura sp. nov.

Candidatus Paraprevotella forinitura (NL. fem. n. *forinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraprevotella sp003477995*. The type genome for the species is the GenBank assembly GCA_900553235.1. The GC content of the type genome is 48.51 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Paraprevotella utrinugo sp. nov.

Candidatus Paraprevotella utrinugo (NL. fem. n. *utrinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraprevotella sp900548345*. The type genome for the species is the GenBank assembly GCA_900548345.1. The GC content of the type genome is 49.28 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Paraprevotella volubousia sp. nov.

Candidatus Paraprevotella volubousia (NL. fem. n. *volubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paraprevotella sp900760455*. The type genome for the species is the GenBank assembly GCA_900760455.1. The GC content of the type genome is 50.11 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Parapusillimonas diludessa sp. nov.

Candidatus Parapusillimonas diludessa (NL. fem. n. *diludessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parapusillimonas sp013416435*. The type genome for the species is the GenBank assembly RS_GCF_013416435.1. The GC content of the type genome is 61.43 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Pararcticibacter cruppitas sp. nov.

Candidatus Pararcticibacter cruppitas (NL. fem. n. *cruppitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararcticibacter sp002454425*. The type genome for the species is the GenBank assembly GCA_002454425.1. The GC content of the type genome is 43.93 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Pararheinheimera bonitibra sp. nov.

Candidatus Pararheinheimera bonitibra (NL. fem. n. *bonitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp000217935*. The type genome for the species is the GenBank assembly RS_GCF_000217935.1. The GC content of the type genome is 46.23 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Pararheinheimera desucitica sp. nov.

Candidatus Pararheinheimera desucitica (NL. fem. n. *desucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp004005375*. The type genome for the species is the GenBank assembly RS_GCF_004005375.1. The GC content of the type genome is 46.2 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Pararheinheimera infunitas sp. nov.

Candidatus Pararheinheimera infunitas (NL. fem. n. *infunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp001669775*. The type genome for the species is the GenBank assembly RS_GCF_001669775.1. The GC content of the type genome is 49.29 % and the genome length is 5.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "iron sludge".

Description of *Candidatus* Pararheinheimera lorarousia sp. nov.

Candidatus Pararheinheimera lorarousia (NL. fem. n. *lorarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp003543135*. The type genome for the species is the GenBank assembly GCA_003543135.1. The GC content of the type genome is 49.34 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Pararheinheimera octupitoga sp. nov.

Candidatus Pararheinheimera octupitoga (NL. fem. n. *octupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp003990335*. The type genome for the species is the GenBank assembly RS_GCF_003990335.1. The GC content of the type genome is 46.68 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Pararheinheimera procratica sp. nov.

Candidatus Pararheinheimera procratica (NL. fem. n. *procratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp008015325*. The type genome for the species is

the GenBank assembly GCA_008015325.1. The GC content of the type genome is 52.55 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Pararheinheimera subucitura sp. nov.

Candidatus Pararheinheimera subucitura (NL. fem. n. *subucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararheinheimera sp003482455*. The type genome for the species is the GenBank assembly GCA_003482455.1. The GC content of the type genome is 50.9 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Pararhizobium adlacitoga sp. nov.

Candidatus Pararhizobium adlacitoga (NL. fem. n. *adlacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900472785*. The type genome for the species is the GenBank assembly GCA_900472785.1. The GC content of the type genome is 60.38 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Pararhizobium adsibitica sp. nov.

Candidatus Pararhizobium adsibitica (NL. fem. n. *adsibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900467185*. The type genome for the species is the GenBank assembly RS_GCF_900467185.1. The GC content of the type genome is 64.04 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Pararhizobium catobitas sp. nov.

Candidatus Pararhizobium catobitas (NL. fem. n. *catobitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900473795*. The type genome for the species is the GenBank assembly RS_GCF_900473625.1. The GC content of the type genome is 60.77 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Pararhizobium codifatica sp. nov.

Candidatus Pararhizobium codifatica (NL. fem. n. *codifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001426665*. The type genome for the species is the GenBank assembly RS_GCF_900473755.1. The GC content of the type genome is 59.38 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Pararhizobium dehonibula sp. nov.

Candidatus Pararhizobium dehonibula (NL. fem. n. *dehonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001424985*. The type genome for the species is the GenBank assembly RS_GCF_001428925.1. The GC content of the type genome is 61.78 % and the genome length is 5.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pararhizobium denicitas sp. nov.

Candidatus Pararhizobium denicitas (NL. fem. n. *denicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001424045*. The type genome for the species is the GenBank assembly RS_GCF_001424045.1. The GC content of the type genome is 63.58 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pararhizobium divolatio sp. nov.

Candidatus Pararhizobium divolatio (NL. fem. n. *divolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900474095*. The type genome for the species is the GenBank assembly RS_GCF_900473525.1. The GC content of the type genome is 60.13 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Pararhizobium expalitudo sp. nov.

Candidatus Pararhizobium expalitudo (NL. fem. n. *expalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900067135*. The type genome for the species is the GenBank assembly RS_GCF_900067135.1. The GC content of the type genome is 62.52 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Pararhizobium homunifica sp. nov.

Candidatus Pararhizobium homunifica (NL. fem. n. *homunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001426685*. The type genome for the species is the GenBank assembly RS_GCF_001426685.1. The GC content of the type genome is 60.0 % and the genome length is 6.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pararhizobium homunitia sp. nov.

Candidatus Pararhizobium homunitia (NL. fem. n. *homunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900472175*. The type genome for the species is the GenBank assembly RS_GCF_900472175.1. The GC content of the type genome is 59.86 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Pararhizobium inperastra sp. nov.

Candidatus Pararhizobium inperastra (NL. fem. n. *inperastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp000744565*. The type genome for the species is the GenBank assembly RS_GCF_000744565.1. The GC content of the type genome is 60.28 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Pararhizobium mahematio sp. nov.

Candidatus Pararhizobium mahematio (NL. fem. n. *mahematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900468065*. The type genome for the species is the GenBank assembly RS_GCF_900468065.1. The GC content of the type genome is 59.28 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Pararhizobium malogibra sp. nov.

Candidatus Pararhizobium malogibra (NL. fem. n. *malogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001424065*. The type genome for the species is the GenBank assembly RS_GCF_001424325.1. The GC content of the type genome is 63.36 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pararhizobium monopilenta sp. nov.

Candidatus Pararhizobium monopilenta (NL. fem. n. *monopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp000745255*. The type genome for the species is the GenBank assembly RS_GCF_000745255.1. The GC content of the type genome is 60.06 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Pararhizobium obfiritrix sp. nov.

Candidatus Pararhizobium obfiritrix (NL. fem. n. *obfiritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900473045*. The type genome for the species is the GenBank assembly RS_GCF_900473045.1. The GC content of the type genome is 59.37 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Pararhizobium petulitio sp. nov.

Candidatus Pararhizobium petulitio (NL. fem. n. *petulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp003217095*. The type genome for the species is the GenBank assembly RS_GCF_003217135.1. The GC content of the type genome is 62.78

% and the genome length is 5.53 Mbp.

Description of *Candidatus* Pararhizobium refacitoga sp. nov.

Candidatus Pararhizobium refacitoga (NL. fem. n. *refacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001425605*. The type genome for the species is the GenBank assembly RS_GCF_900473645.1. The GC content of the type genome is 60.11 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Pararhizobium rorarisca sp. nov.

Candidatus Pararhizobium rorarisca (NL. fem. n. *rorarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp001426565*. The type genome for the species is the GenBank assembly RS_GCF_001426565.1. The GC content of the type genome is 61.46 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pararhizobium rosaritoga sp. nov.

Candidatus Pararhizobium rosaritoga (NL. fem. n. *rosaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp000745575*. The type genome for the species is the GenBank assembly RS_GCF_900473685.1. The GC content of the type genome is 59.97 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Pararhizobium solivedo sp. nov.

Candidatus Pararhizobium solivedo (NL. fem. n. *solivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhizobium sp900111275*. The type genome for the species is the GenBank assembly RS_GCF_900111275.1. The GC content of the type genome is 62.0 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Pararhodobacter allibivita sp. nov.

Candidatus Pararhodobacter allibivita (NL. fem. n. *allibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp003076755*. The type genome for the species is the GenBank assembly RS_GCF_003076755.1. The GC content of the type genome is 62.93 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Pararhodobacter apharimonas sp. nov.

Candidatus Pararhodobacter apharimonas (NL. fem. n. *apharimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp001691415*. The type genome for the species is the GenBank assembly RS_GCF_001691415.1. The GC content of the type genome is 65.95 % and the genome length is 5.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mangrove soil".

Description of *Candidatus* Pararhodobacter bicalitura sp. nov.

Candidatus Pararhodobacter bicalitura (NL. fem. n. *bicalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp007120685*. The type genome for the species is the GenBank assembly GCA_007120685.1. The GC content of the type genome is 67.87 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Pararhodobacter cululicella sp. nov.

Candidatus Pararhodobacter cululicella (NL. fem. n. *cululicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp003122215*. The type genome for the species is the GenBank assembly RS_GCF_003122215.1. The GC content of the type genome is 66.75 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Pararhodobacter edissicella sp. nov.

Candidatus Pararhodobacter edissicella (NL. fem. n. *edissicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp001314715*. The type genome for the species is the GenBank assembly GCA_001314715.1. The GC content of the type genome is 65.15 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-A from microbial mat sample; contains cyanobacterium Phormidesmis priestleyi ANA and associated heterotrophs".

Description of *Candidatus* Pararhodobacter hemidivita sp. nov.

Candidatus Pararhodobacter hemidivita (NL. fem. n. *hemidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp007134405*. The type genome for the species is the GenBank assembly GCA_007134405.1. The GC content of the type genome is 66.95 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Pararhodobacter rubicessa sp. nov.

Candidatus Pararhodobacter rubicessa (NL. fem. n. *rubicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp007131945*. The type genome for the species is the GenBank assembly GCA_003556445.1. The GC content of the type genome is 69.82 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Pararhodobacter venucetta sp. nov.

Candidatus Pararhodobacter venucetta (NL. fem. n. *venucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pararhodobacter sp007117005*. The type genome for the species is the GenBank assembly GCA_007117005.1. The GC content of the type genome is 67.44 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Parasedimentitalea arunditrix sp. nov.

Candidatus Parasedimentitalea arunditrix (NL. fem. n. *arunditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp009753675*. The type genome for the species is the GenBank assembly RS_GCF_009753675.1. The GC content of the type genome is 54.21 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Parasedimentitalea depocousia sp. nov.

Candidatus Parasedimentitalea depocousia (NL. fem. n. *depocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp005771405*. The type genome for the species is the GenBank assembly RS_GCF_005771405.1. The GC content of the type genome is 54.27 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Parasedimentitalea feditibula sp. nov.

Candidatus Parasedimentitalea feditibula (NL. fem. n. *feditibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp013214575*. The type genome for the species is the GenBank assembly GCA_013214575.1. The GC content of the type genome is 57.59 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Parasedimentitalea galacigena sp. nov.

Candidatus Parasedimentitalea galacigena (NL. fem. n. *galacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp002401945*. The type genome for the species is the GenBank assembly GCA_002401945.1. The GC content of the type genome is 57.49 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Parasedimentitalea leviditica sp. nov.

Candidatus Parasedimentitalea leviditica (NL. fem. n. *leviditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp011813015*. The type genome for the species is the GenBank assembly RS_GCF_011813015.1. The GC content of the type genome is 54.96 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Parasedimentitalea pomifisca sp. nov.

Candidatus Parasedimentitalea pomifisca (NL. fem. n. *pomifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasedimentitalea sp002162795*. The type genome for the species is the GenBank assembly GCA_002162795.1. The GC content of the type genome is 56.52 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Parashewanella redunitudo sp. nov.

Candidatus Parashewanella redunitudo (NL. fem. n. *redunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parashewanella sp004168585*. The type genome for the species is the GenBank assembly RS_GCF_004168585.1. The GC content of the type genome is 39.6 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Parasphingopyxis acropisca sp. nov.

Candidatus Parasphingopyxis acropisca (NL. fem. n. *acropisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingopyxis sp014237875*. The type genome for the species is the GenBank assembly RS_GCF_014237875.1. The GC content of the type genome is 63.72 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Parasphingopyxis eclecatio sp. nov.

Candidatus Parasphingopyxis eclecatio (NL. fem. n. *eclecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingopyxis sp014380205*. The type genome for the species is the GenBank assembly GCA_014380205.1. The GC content of the type genome is 67.86 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Parasphingopyxis insusicella sp. nov.

Candidatus Parasphingopyxis insusicella (NL. fem. n. *insusicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingopyxis sp013001755*. The type genome for the species is the GenBank assembly GCA_013001755.1. The GC content of the type genome is 62.05 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Parasphingopyxis levidatio sp. nov.

Candidatus Parasphingopyxis levidatio (NL. fem. n. *levidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingopyxis sp013378055*. The type genome for the species is the GenBank assembly RS_GCF_013378055.1. The GC content of the type genome is 58.55 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Parasphingorhabdus bipatessa sp. nov.

Candidatus Parasphingorhabdus bipatessa (NL. fem. n. *bipatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp013204445*. The type genome for the species is the GenBank assembly GCA_013204445.1. The GC content of the type genome is 55.42 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Parasphingorhabdus cerimimonas sp. nov.

Candidatus Parasphingorhabdus cerimimonas (NL. fem. n. *cerimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp012516475*. The type genome for the species is the GenBank assembly RS_GCF_012516475.1. The GC content of the type genome is 53.03 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Parasphingorhabdus coturago sp. nov.

Candidatus Parasphingorhabdus coturago (NL. fem. n. *coturago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Parasphingorhabdus sp002776575*. The type genome for the species is the GenBank assembly RS_GCF_002776575.1. The GC content of the type genome is 57.91 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Parasphingorhabdus desorugo sp. nov.

Candidatus Parasphingorhabdus desorugo (NL. fem. n. *desorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp001586275*. The type genome for the species is the GenBank assembly RS_GCF_001586275.1. The GC content of the type genome is 56.72 % and the genome length is 3.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Parasphingorhabdus grallatica sp. nov.

Candidatus Parasphingorhabdus grallatica (NL. fem. n. *grallatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp900258045*. The type genome for the species is the GenBank assembly RS_GCF_900258045.1. The GC content of the type genome is 53.14 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Parasphingorhabdus inambitia sp. nov.

Candidatus Parasphingorhabdus inambitia (NL. fem. n. *inambitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp900149705*. The type genome for the species is the GenBank assembly GCA_900149705.1. The GC content of the type genome is 52.79 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Parasphingorhabdus ineffatica sp. nov.

Candidatus Parasphingorhabdus ineffatica (NL. fem. n. *ineffatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp002733865*. The type genome for the species is the GenBank assembly GCA_002733865.1. The GC content of the type genome is 56.26 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Parasphingorhabdus inmutatica sp. nov.

Candidatus Parasphingorhabdus inmutatica (NL. fem. n. *inmutatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp002354635*. The type genome for the species is the GenBank assembly GCA_002354635.1. The GC content of the type genome is 57.84 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Parasphingorhabdus intenitura sp. nov.

Candidatus Parasphingorhabdus intenitura (NL. fem. n. *intenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp001650955*. The type genome for the species is the GenBank assembly RS_GCF_001650955.1. The GC content of the type genome is 53.7 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Parasphingorhabdus malifibula sp. nov.

Candidatus Parasphingorhabdus malifibula (NL. fem. n. *malifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp002218195*. The type genome for the species is the GenBank assembly RS_GCF_002218195.1. The GC content of the type genome is 57.97 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Parasphingorhabdus taxilitio sp. nov.

Candidatus Parasphingorhabdus taxilitio (NL. fem. n. *taxilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp902506555*. The type genome for the species is the GenBank assembly RS_GCF_902506555.1. The GC content of the type genome is 57.93 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Parasphingorhabdus xenopago sp. nov.

Candidatus Parasphingorhabdus xenopago (NL. fem. n. *xenopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasphingorhabdus sp002783865*. The type genome for the species is the GenBank assembly GCA_009992585.1. The GC content of the type genome is 57.53 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Parasutterella alcalitura sp. nov.

Candidatus Parasutterella alcalitura (NL. fem. n. *alcalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasutterella sp900766055*. The type genome for the species is the GenBank assembly GCA_900766055.1. The GC content of the type genome is 48.71 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Parasutterella canacitia sp. nov.

Candidatus Parasutterella canacitia (NL. fem. n. *canacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasutterella sp900552195*. The type genome for the species is the GenBank assembly GCA_002493705.1. The GC content of the type genome is 48.39 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Parasutterella obsatastra sp. nov.

Candidatus Parasutterella obsatastra (NL. fem. n. *obsatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasutterella sp900554375*. The type genome for the species is the GenBank assembly GCA_900554375.1. The GC content of the type genome is 48.21 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Parasutterella recumatica sp. nov.

Candidatus Parasutterella recumatica (NL. fem. n. *recumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Parasutterella sp009767915*. The type genome for the species is the GenBank assembly GCA_900752915.1. The GC content of the type genome is 50.09 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Parasutterella viragugo sp. nov.

Candidatus Parasutterella viragugo (NL. fem. n. *viragugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parasutterella sp000980495*. The type genome for the species is the GenBank assembly GCA_900538295.1. The GC content of the type genome is 49.3 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Parerythrobacter brabrugo sp. nov.

Candidatus Parerythrobacter brabrugo (NL. fem. n. *brabrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parerythrobacter sp004114695*. The type genome for the species is the GenBank assembly RS_GCF_004114695.1. The GC content of the type genome is 64.41 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Parocana adnaratica sp. nov.

Candidatus Parocana adnaratica (NL. fem. n. *adnaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp002449555*. The type genome for the species is the GenBank assembly GCA_002449555.1. The GC content of the type genome is 62.79 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Parocana gen. nov.

Candidatus Parocana (NL. fem. n. *Parocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1367*. The type species for the genus is *Candidatus* Parocana adnaratica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Parocana armipibra sp. nov.

Candidatus Parocana armipibra (NL. fem. n. *armipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902790135*. The type genome for the species is the GenBank assembly GCA_902790135.1. The GC content of the type genome is 62.16 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Parocana cilicentia sp. nov.

Candidatus Parocana cilicentia (NL. fem. n. *cilicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902779675*. The type genome for the species is the GenBank assembly GCA_902775935.1. The GC content of the type genome is 63.93 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Parocana defanitudo sp. nov.

Candidatus Parocana defanitudo (NL. fem. n. *defanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902788705*. The type genome for the species is the GenBank assembly GCA_902764955.1. The GC content of the type genome is 64.31 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Parocana dehisilega sp. nov.

Candidatus Parocana dehisilega (NL. fem. n. *dehisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp900314645*. The type genome for the species is the GenBank assembly GCA_902758085.1. The GC content of the type genome is 61.28 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Parocana inmobitrix sp. nov.

Candidatus Parocana inmobitrix (NL. fem. n. *inmobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902797175*. The type genome for the species is the GenBank assembly GCA_902797175.1. The GC content of the type genome is 62.85 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Parocana lanifessa sp. nov.

Candidatus Parocana lanifessa (NL. fem. n. *lanifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902778135*. The type genome for the species is the GenBank assembly GCA_902775125.1. The GC content of the type genome is 64.41 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Parocana maxumitrix sp. nov.

Candidatus Parocana maxumitrix (NL. fem. n. *maxumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902777325*. The type genome for the species is the GenBank assembly GCA_902777325.1. The GC content of the type genome is 63.6 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Parocana nefanessa sp. nov.

Candidatus Parocana nefanessa (NL. fem. n. *nefanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902766835*. The type genome for the species is the GenBank assembly GCA_902766835.1. The GC content of the type genome is 62.58 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Parocana ossicitica sp. nov.

Candidatus Parocana ossicitica (NL. fem. n. *ossicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1367 sp902772435*. The type genome for the species is the GenBank assembly GCA_902772435.1. The GC content of the type genome is 64.53 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Parocana semapilega sp. nov.

Candidatus Parocana semapilega (NL. fem. n. *semapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp002305995*. The type genome for the species is the GenBank assembly GCA_002305995.1. The GC content of the type genome is 65.55 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Parocana seposifica sp. nov.

Candidatus Parocana seposifica (NL. fem. n. *seposifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1367 sp902801175*. The type genome for the species is the GenBank assembly GCA_902790815.1. The GC content of the type genome is 60.42 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Parocaria adaggentia sp. nov.

Candidatus Parocaria adaggentia (NL. fem. n. *adaggentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB11 sp903881265*. The type genome for the species is the GenBank assembly GCA_903881265.1. The GC content of the type genome is 40.04 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Parocaria gen. nov.

Candidatus Parocaria (NL. fem. n. *Parocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB11*. The type species for the genus is *Candidatus* Parocaria adaggentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Parocaria adpacisca sp. nov.

Candidatus Parocaria adpacisca (NL. fem. n. *adpacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB11 sp013414745*. The type genome for the species is the GenBank assembly GCA_013414745.1. The GC content of the type genome is 42.15 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Parocaria socagitura sp. nov.

Candidatus Parocaria socagitura (NL. fem. n. *socagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB11 sp903875055*. The type genome for the species is the GenBank assembly GCA_903835295.1. The GC content of the type genome is 41.2 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Parocaria urbiciforma sp. nov.

Candidatus Parocaria urbiciforma (NL. fem. n. *urbiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB11 sp001567165*. The type genome for the species is the GenBank assembly GCA_001567165.1. The GC content of the type genome is 33.11 % and the genome length is 2.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Parocella arbavibula sp. nov.

Candidatus Parocella arbavibula (NL. fem. n. *arbavibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3830 sp902771535*. The type genome for the species is the GenBank assembly GCA_902771535.1. The GC content of the type genome is 39.78 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Parocella gen. nov.

Candidatus Parocella (NL. fem. n. *Parocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3830*. The type species for the genus is *Candidatus* Parocella arbavibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3830*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Parocellaceae.

Description of *Candidatus* Parocellaceae fam. nov.

Candidatus Parocellaceae (NL. fem. n. *Parocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3830.* The type genus for the taxon is *Candidatus* Parocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3830*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Parocellales.

Description of *Candidatus* Parocellales ord. nov.

Candidatus Parocellales (NL. fem. n. *Parocellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3830.* The type genus for the taxon is *Candidatus* Parocella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Parocella inrevastra sp. nov.

Candidatus Parocella inrevastra (NL. fem. n. *inrevastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3830 sp902790255*. The type genome for the species is the GenBank assembly GCA_902790255.1. The GC content of the type genome is 38.29 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Parocella navicessa sp. nov.

Candidatus Parocella navicessa (NL. fem. n. *navicessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3830 sp002393025*. The type genome for the species is the GenBank assembly GCA_002393025.1. The GC content of the type genome is 38.44 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Parocella tomogedo sp. nov.

Candidatus Parocella tomogedo (NL. fem. n. *tomogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3830 sp902761495*. The type genome for the species is the GenBank assembly GCA_902761495.1. The GC content of the type genome is 39.33 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Parocia cemenastra sp. nov.

Candidatus Parocia cemenastra (NL. fem. n. *cemenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACPJE01 sp902634045*. The type genome for the species is the GenBank assembly GCA_902634045.1. The GC content of the type genome is 31.97 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Parocia gen. nov.

Candidatus Parocia (NL. fem. n. *Parocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACPJE01*. The type species for the genus is *Candidatus* Parocia cemenastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-422-B15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifosaceae.

Description of *Candidatus* Parocia sonivigena sp. nov.

Candidatus Parocia sonivigena (NL. fem. n. *sonivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACPJE01 sp902510025*. The type genome for the species is the GenBank assembly GCA_902510025.1. The GC content of the type genome is 32.63 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Parocida delecentia sp. nov.

Candidatus Parocida delecentia (NL. fem. n. *delecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLRR01 sp902609415*. The type genome for the species is the GenBank assembly GCA_902609415.1. The GC content of the type genome is 36.07 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Parocida gen. nov.

Candidatus Parocida (NL. fem. n. *Parocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACLRR01*. The type species for the genus is *Candidatus* Parocida delecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACLRR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Parocidaceae.

Description of *Candidatus* Parocidaceae fam. nov.

Candidatus Parocidaceae (NL. fem. n. *Parocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACLRR01.* The type genus for the taxon is *Candidatus* Parocida .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Categanales.

Description of *Candidatus* Parocosa actaressa sp. nov.

Candidatus Parocosa actaressa (NL. fem. n. *actaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISZI01 sp903889905*. The type genome for the species is the GenBank assembly GCA_903889905.1. The GC content of the type genome is 49.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Parocosa gen. nov.

Candidatus Parocosa (NL. fem. n. *Parocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISZI01*. The type species for the genus is *Candidatus* Parocosa actaressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAISZI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Parocosaceae.

Description of *Candidatus* Parocosaceae fam. nov.

Candidatus Parocosaceae (NL. fem. n. *Parocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISZI01*. The type genus for the taxon is *Candidatus* Parocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-54-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tametanales.

Description of *Candidatus* Parocula pepenitrix sp. nov.

Candidatus Parocula pepenitrix (NL. fem. n. *pepenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LDYB01 sp001442985*. The type genome for the species is the GenBank assembly GCA_001536245.1. The GC content of the type genome is 60.47 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Parocula gen. nov.

Candidatus Parocula (NL. fem. n. *Parocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LDYB01*. The type species for the genus is *Candidatus* Parocula pepenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-DC*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebiaceae.

Description of *Candidatus* Parolsenella favilitica sp. nov.

Candidatus Parolsenella favilitica (NL. fem. n. *favilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parolsenella sp900544655*. The type genome for the species is the GenBank assembly GCA_900544655.1. The GC content of the type genome is 62.31 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Parolsenella feficousia sp. nov.

Candidatus Parolsenella feficousia (NL. fem. n. *feficousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parolsenella sp900552935*. The type genome for the species is the GenBank assembly GCA_900552935.1. The GC content of the type genome is 63.4 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Parolsenella modifigena sp. nov.

Candidatus Parolsenella modifigena (NL. fem. n. *modifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parolsenella sp900543875*. The type genome for the species is the GenBank assembly GCA_902405985.1. The GC content of the type genome is 65.78 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Parolsenella renavago sp. nov.

Candidatus Parolsenella renavago (NL. fem. n. *renavago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parolsenella sp900549525*. The type genome for the species is the GenBank assembly GCA_900549525.1. The GC content of the type genome is 66.7 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Paropana pedifugo sp. nov.

Candidatus Paropana pedifugo (NL. fem. n. *pedifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MW101C3 sp002252635*. The type genome for the species is the GenBank assembly RS_GCF_002252635.1. The GC content of the type genome is 66.13 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Paropana gen. nov.

Candidatus Paropana (NL. fem. n. *Paropana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MW101C3*. The type species for the genus is *Candidatus* Paropana pedifugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Paroparia bulapitura sp. nov.

Candidatus Paroparia bulapitura (NL. fem. n. *bulapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KMS-5 sp011008935*. The type genome for the species is the GenBank assembly RS_GCF_011008935.1. The GC content of the type genome is 65.47 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Paroparia gen. nov.

Candidatus Paroparia (NL. fem. n. *Paroparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KMS-5*. The type species for the genus is *Candidatus* Paroparia bulapitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Paropella mirifitura sp. nov.

Candidatus Paropella mirifitura (NL. fem. n. *mirifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-39-64 sp002784365*. The type genome for the species is the GenBank assembly GCA_002784365.1. The GC content of the type genome is 39.26 % and the genome length is 0.37 Mbp.

Description of *Candidatus* Paropella gen. nov.

Candidatus Paropella (NL. fem. n. *Paropella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-39-64*. The type species for the genus is *Candidatus* Paropella mirifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Paropida acistiforma sp. nov.

Candidatus Paropida acistiforma (NL. fem. n. *acistiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP5GCR1 sp014323925*. The type genome for the species is the GenBank assembly GCA_014323925.1. The GC content of the type genome is 44.28 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Paropida gen. nov.

Candidatus Paropida (NL. fem. n. *Paropida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP5GCR1*. The type species for the genus is *Candidatus* Paropida acistiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SP5GCR1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paropidaceae.

Description of *Candidatus* Paropidaceae fam. nov.

Candidatus Paropidaceae (NL. fem. n. *Paropidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SP5GCR1*. The type genus for the taxon is *Candidatus* Paropida .

According to GTDB R06-RS202, this family belongs to the order *Porisulfidales*.

Description of *Candidatus* Paroposa allapitoga sp. nov.

Candidatus Paroposa allapitoga (NL. fem. n. *allapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3951 sp012842685*. The type genome for the species is the GenBank assembly GCA_012842685.1. The GC content of the type genome is 59.18 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Paroposa gen. nov.

Candidatus Paroposa (NL. fem. n. *Paroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3951*. The type species for the genus is *Candidatus* Paroposa allapitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatosaceae.

Description of *Candidatus* Paroposa cituvibra sp. nov.

Candidatus Paroposa cituvibra (NL. fem. n. *cituvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3951 sp012842425*. The type genome for the species is the GenBank assembly GCA_012842425.1. The GC content of the type genome is 58.26 %

and the genome length is 1.68 Mbp.

Description of *Candidatus* Paroposa desuritio sp. nov.

Candidatus Paroposa desuritio (NL. fem. n. *desuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3951 sp002385465*. The type genome for the species is the GenBank assembly GCA_012510715.1. The GC content of the type genome is 57.28 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Paroposa inrevibula sp. nov.

Candidatus Paroposa inrevibula (NL. fem. n. *inrevibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3951 sp012841375*. The type genome for the species is the GenBank assembly GCA_012841375.1. The GC content of the type genome is 58.17 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Paropula ecfunago sp. nov.

Candidatus Paropula ecfunago (NL. fem. n. *ecfunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6926 sp002450835*. The type genome for the species is the GenBank assembly GCA_002450835.1. The GC content of the type genome is 40.8 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Paropula gen. nov.

Candidatus Paropula (NL. fem. n. *Paropula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6926*. The type species for the genus is *Candidatus* Paropula ecfunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6926*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paropulaceae.

Description of *Candidatus* Paropulaceae fam. nov.

Candidatus Paropulaceae (NL. fem. n. *Paropulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6926.* The type genus for the taxon is *Candidatus* Paropula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6926*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Paropulales.

Description of *Candidatus* Paropulales ord. nov.

Candidatus Paropulales (NL. fem. n. *Paropulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6926.* The type genus for the taxon is *Candidatus* Paropula .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Parvibaculum assefousia sp. nov.

Candidatus Parvibaculum assefousia (NL. fem. n. *assefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp002841195*. The type genome for the species is the GenBank assembly GCA_002841195.1. The GC content of the type genome is 63.83 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Parvibaculum cerimetta sp. nov.

Candidatus Parvibaculum cerimetta (NL. fem. n. *cerimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp002694985*. The type genome for the species is the GenBank assembly GCA_002694985.1. The GC content of the type genome is 61.18 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Parvibaculum impilastra sp. nov.

Candidatus Parvibaculum impilastra (NL. fem. n. *impilastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp002684405*. The type genome for the species is the GenBank assembly GCA_002684405.1. The GC content of the type genome is 61.97 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Parvibaculum latibivita sp. nov.

Candidatus Parvibaculum latibivita (NL. fem. n. *latibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp002480495*. The type genome for the species is the GenBank assembly GCA_002480495.1. The GC content of the type genome is 62.53 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Parvibaculum metucax sp. nov.

Candidatus Parvibaculum metucax (NL. fem. n. *metucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp014359855*. The type genome for the species is the GenBank assembly GCA_014359855.1. The GC content of the type genome is 63.19 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Parvibaculum munificula sp. nov.

Candidatus Parvibaculum munificula (NL. fem. n. *munificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp013823365*. The type genome for the species is the GenBank assembly GCA_013823365.1. The GC content of the type genome is 63.59 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Parvibaculum notabicella sp. nov.

Candidatus Parvibaculum notabicella (NL. fem. n. *notabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp903889655*. The type genome for the species is the GenBank assembly GCA_903876515.1. The GC content of the type genome is 62.76 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Parvibaculum verififica sp. nov.

Candidatus Parvibaculum verififica (NL. fem. n. *verififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvibaculum sp002842875*. The type genome for the species is the GenBank assembly GCA_002842875.1. The GC content of the type genome is 63.36 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Parvimonas conabitura sp. nov.

Candidatus Parvimonas conabitura (NL. fem. n. *conabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvimonas sp001552895*. The type genome for the species is the GenBank assembly RS_GCF_001552895.1. The GC content of the type genome is 26.17 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Parvimonas energitio sp. nov.

Candidatus Parvimonas energitio (NL. fem. n. *energitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvimonas sp001553085*. The type genome for the species is the GenBank assembly RS_GCF_001553085.1. The GC content of the type genome is 28.74 % and the genome length is 1.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Parvimonas procritio sp. nov.

Candidatus Parvimonas procritio (NL. fem. n. *procritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvimonas sp000223315*. The type genome for the species is the

GenBank assembly RS_GCF_000223315.1. The GC content of the type genome is 28.17 % and the genome length is 1.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Parvimonas xenopatica sp. nov.

Candidatus Parvimonas xenopatica (NL. fem. n. *xenopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvimonas sp000214475*. The type genome for the species is the GenBank assembly RS_GCF_000214475.1. The GC content of the type genome is 28.19 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Parvularcula adlenivita sp. nov.

Candidatus Parvularcula adlenivita (NL. fem. n. *adlenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvularcula sp013215175*. The type genome for the species is the GenBank assembly GCA_013215175.1. The GC content of the type genome is 59.45 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Parvularcula exsuribula sp. nov.

Candidatus Parvularcula exsuribula (NL. fem. n. *exsuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvularcula sp013085255*. The type genome for the species is the GenBank assembly RS_GCF_013085255.1. The GC content of the type genome is 62.49 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Parvularcula inmutibra sp. nov.

Candidatus Parvularcula inmutibra (NL. fem. n. *inmutibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Parvularcula sp003399445*. The type genome for the species is the GenBank assembly RS_GCF_003399445.1. The GC content of the type genome is 59.34 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Patibana accorugo sp. nov.

Candidatus Patibana accorugo (NL. fem. n. *accorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOJS01 sp004376435*. The type genome for the species is the GenBank assembly GCA_004376435.1. The GC content of the type genome is 52.54 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Patibana gen. nov.

Candidatus Patibana (NL. fem. n. *Patibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOJS01*. The type species for the genus is *Candidatus* Patibana accorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SOJS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibanaceae.

Description of *Candidatus* Patibanaceae fam. nov.

Candidatus Patibanaceae (NL. fem. n. *Patibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SOJS01.* The type genus for the taxon is *Candidatus* Patibana .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Patibaria adpenivita sp. nov.

Candidatus Patibaria adpenivita (NL. fem. n. *adpenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5767 sp002418765*. The type genome for the species is the GenBank assembly GCA_002418765.1. The GC content of the type genome is 43.74 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Patibaria gen. nov.

Candidatus Patibaria (NL. fem. n. *Patibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5767*. The type species for the genus is *Candidatus* Patibaria adpenivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibariaceae.

Description of *Candidatus* Patibariaceae fam. nov.

Candidatus Patibariaceae (NL. fem. n. *Patibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5767.* The type genus for the taxon is *Candidatus* Patibaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *TC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vitifariales.

Description of *Candidatus* Patibella diluvigena sp. nov.

Candidatus Patibella diluvigena (NL. fem. n. *diluvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B68-G9 sp012962735*. The type genome for the species is the GenBank assembly GCA_012962735.1. The GC content of the type genome is 59.3 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Patibella gen. nov.

Candidatus Patibella (NL. fem. n. *Patibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B68-G9*. The type species for the genus is *Candidatus* Patibella diluvigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B68-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibellaceae.

Description of *Candidatus* Patibellaceae fam. nov.

Candidatus Patibellaceae (NL. fem. n. *Patibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B68-G9.* The type genus for the taxon is *Candidatus* Patibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *B68-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Patibellales.

Description of *Candidatus* Patibellales ord. nov.

Candidatus Patibellales (NL. fem. n. *Patibellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B68-G9.* The type genus for the taxon is *Candidatus* Patibella .

According to the GTDB R06-RS202, this order belongs to the class *Latescibacteria_A*.

Description of *Candidatus* Patibella inheratio sp. nov.

Candidatus Patibella inheratio (NL. fem. n. *inheratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B68-G9 sp012961755*. The type genome for the species is the GenBank assembly GCA_012961755.1. The GC content of the type genome is 59.32 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Patibella metabago sp. nov.

Candidatus Patibella metabago (NL. fem. n. *metabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B68-G9 sp003645885*. The type genome for the species is the GenBank assembly GCA_003644685.1. The GC content of the type genome is 59.18 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Patibia vicecedo sp. nov.

Candidatus Patibia vicecedo (NL. fem. n. *vicecedo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHP01 sp011334725*. The type genome for the species is the GenBank assembly GCA_011334725.1. The GC content of the type genome is 35.1 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Patibia gen. nov.

Candidatus Patibia (NL. fem. n. *Patibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHP01*. The type species for the genus is *Candidatus* Patibia vicecedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTHP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibiaceae.

Description of *Candidatus* Patibiaceae fam. nov.

Candidatus Patibiaceae (NL. fem. n. *Patibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTHP01.* The type genus for the taxon is *Candidatus* Patibia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTHP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Patibiales.

Description of *Candidatus* Patibiales ord. nov.

Candidatus Patibiales (NL. fem. n. *Patibiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTHP01.* The type genus for the taxon is *Candidatus* Patibia .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Patibida cenobitia sp. nov.

Candidatus Patibida cenobitia (NL. fem. n. *cenobitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEA01 sp012689325*. The type genome for the species is the GenBank assembly GCA_012689325.1. The GC content of the type genome is 66.76 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Patibida gen. nov.

Candidatus Patibida (NL. fem. n. *Patibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEA01*. The type species for the genus is *Candidatus* Patibida cenobitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYEA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibidaceae.

Description of *Candidatus* Patibidaceae fam. nov.

Candidatus Patibidaceae (NL. fem. n. *Patibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYEA01.* The type genus for the taxon is *Candidatus* Patibida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYEA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Patibidales.

Description of *Candidatus* Patibidales ord. nov.

Candidatus Patibidales (NL. fem. n. *Patibidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYEA01.* The type genus for the taxon is *Candidatus* Patibida .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Patibosa venucitas sp. nov.

Candidatus Patibosa venucitas (NL. fem. n. *venucitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2798 sp002351955*. The type genome for the species is the GenBank assembly GCA_002344705.1. The GC content of the type genome is 42.13 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Patibosa gen. nov.

Candidatus Patibosa (NL. fem. n. *Patibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2798*. The type species for the genus is *Candidatus* Patibosa venucitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2798*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Patibosaceae.

Description of *Candidatus* Patibosaceae fam. nov.

Candidatus Patibosaceae (NL. fem. n. *Patibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2798.* The type genus for the taxon is *Candidatus* Patibosa .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Patulibacter obmutitrix sp. nov.

Candidatus Patulibacter obmutitrix (NL. fem. n. *obmutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Patulibacter sp009699505*. The type genome for the species is the GenBank assembly GCA_009699505.1. The GC content of the type genome is 73.74 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Paucibacter adtacessa sp. nov.

Candidatus Paucibacter adtacessa (NL. fem. n. *adtacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucibacter_A sp003852425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003852425.1. The GC content of the type genome is 63.66 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Paucibacter cerevivita sp. nov.

Candidatus Paucibacter cerevivita (NL. fem. n. *cerevivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucibacter_A sp903820745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903893475.1. The GC content of the type genome is 61.0 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Paucibacter crastifica sp. nov.

Candidatus Paucibacter crastifica (NL. fem. n. *crastifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucibacter_A sp005503085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005503085.1. The GC content of the type genome is 67.66 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Paucibacter impacisca sp. nov.

Candidatus Paucibacter impacisca (NL. fem. n. *impacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucibacter_A sp001477625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001477625.1. The GC content of the type genome is 63.19 % and the genome length is 5.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as

"Daechung reservoir".

Description of *Candidatus* Paucibacter subaditia sp. nov.

Candidatus Paucibacter subaditia (NL. fem. n. *subaditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucibacter_A sp002255955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002255955.1. The GC content of the type genome is 66.52 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Paucilactobacillus bacifatica sp. nov.

Candidatus Paucilactobacillus bacifatica (NL. fem. n. *bacifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucilactobacillus sp005405145*. The type genome for the species is the GenBank assembly RS_GCF_005405145.1. The GC content of the type genome is 38.03 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Paucimonas conigetta sp. nov.

Candidatus Paucimonas conigetta (NL. fem. n. *conigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucimonas sp003590835*. The type genome for the species is the GenBank assembly RS_GCF_003590835.1. The GC content of the type genome is 59.37 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Paucimonas democedo sp. nov.

Candidatus Paucimonas democedo (NL. fem. n. *democedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucimonas sp004114795*. The type genome for the species is the GenBank assembly RS_GCF_004114795.1. The GC content of the type genome is 59.61 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Paucimonas insicatica sp. nov.

Candidatus Paucimonas insicatica (NL. fem. n. *insicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Paucimonas sp003537575*. The type genome for the species is the GenBank assembly GCA_003537575.1. The GC content of the type genome is 59.86 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Pauljensenia adsesitoga sp. nov.

Candidatus Pauljensenia adsesitoga (NL. fem. n. *adsesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp900554605*. The type genome for the species is the GenBank assembly GCA_900554605.1. The GC content of the type genome is 56.33 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pauljensenia anancitia sp. nov.

Candidatus Pauljensenia anancitia (NL. fem. n. *anancitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp001064145*. The type genome for the species is the GenBank assembly RS_GCF_001064145.1. The GC content of the type genome is 65.41 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Pauljensenia anaplivita sp. nov.

Candidatus Pauljensenia anaplivita (NL. fem. n. *anaplivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp902373435*. The type genome for the species is the GenBank assembly GCA_902373435.1. The GC content of the type genome is 65.43 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Pauljensenia celumitura sp. nov.

Candidatus Pauljensenia celumitura (NL. fem. n. *celumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp001072465*. The type genome for the species is the GenBank assembly RS_GCF_000565035.1. The GC content of the type genome is 65.74 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Pauljensenia cuferousia sp. nov.

Candidatus Pauljensenia cuferousia (NL. fem. n. *cuferousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000466265*. The type genome for the species is the GenBank assembly RS_GCF_000283035.1. The GC content of the type genome is 66.51 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Pauljensenia depocitoga sp. nov.

Candidatus Pauljensenia depocitoga (NL. fem. n. *depocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000758755*. The type genome for the species is the GenBank assembly GCA_900542745.1. The GC content of the type genome is 57.16 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Pauljensenia diponitio sp. nov.

Candidatus Pauljensenia diponitio (NL. fem. n. *diponitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000308055*. The type genome for the species is the GenBank assembly RS_GCF_000308055.1. The GC content of the type genome is 56.03 % and the genome length is 1.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "host stool sample".

Description of *Candidatus* Pauljensenia fatifetta sp. nov.

Candidatus Pauljensenia fatifetta (NL. fem. n. *fatifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp001838165*. The type genome for the species is the GenBank assembly GCA_900540565.1. The GC content of the type genome is 65.73 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Pauljensenia infenitio sp. nov.

Candidatus Pauljensenia infenitio (NL. fem. n. *infenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp902373545*. The type genome for the species is the GenBank assembly GCA_902373545.1. The GC content of the type genome is 66.14 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Pauljensenia lavabedo sp. nov.

Candidatus Pauljensenia lavabedo (NL. fem. n. *lavabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp011038875*. The type genome for the species is the GenBank assembly RS_GCF_011038875.1. The GC content of the type genome is 57.99 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Pauljensenia negidilenta sp. nov.

Candidatus Pauljensenia negidilenta (NL. fem. n. *negidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp900541895*. The type genome for the species is the GenBank assembly RS_GCF_900755735.1. The GC content of the type genome is 55.77 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Pauljensenia panifivita sp. nov.

Candidatus Pauljensenia panifivita (NL. fem. n. *panifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000185285*. The type genome for the species is the GenBank assembly RS_GCF_000185285.1. The GC content of the type genome is 66.34

% and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Pauljensenia pepenimonas sp. nov.

Candidatus Pauljensenia pepenimonas (NL. fem. n. *pepenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000411415*. The type genome for the species is the GenBank assembly RS_GCF_000411415.1. The GC content of the type genome is 65.08 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Pauljensenia revulibula sp. nov.

Candidatus Pauljensenia revulibula (NL. fem. n. *revulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp903645355*. The type genome for the species is the GenBank assembly RS_GCF_903645355.1. The GC content of the type genome is 60.93 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Pauljensenia satacitudo sp. nov.

Candidatus Pauljensenia satacitudo (NL. fem. n. *satacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp900556405*. The type genome for the species is the GenBank assembly GCA_900556405.1. The GC content of the type genome is 65.51 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Pauljensenia taraxatica sp. nov.

Candidatus Pauljensenia taraxatica (NL. fem. n. *taraxatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pauljensenia sp000278725*. The type genome for the species is the GenBank assembly RS_GCF_000278725.1. The GC content of the type genome is 64.65 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Pavicana atricedo sp. nov.

Candidatus Pavicana atricedo (NL. fem. n. *atricedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11029 sp002411145*. The type genome for the species is the GenBank assembly GCA_002411145.1. The GC content of the type genome is 50.65 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Pavicana gen. nov.

Candidatus Pavicana (NL. fem. n. *Pavicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11029*. The type species for the genus is *Candidatus* Pavicana atricedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavicanaceae.

Description of *Candidatus* Pavicanaceae fam. nov.

Candidatus Pavicanaceae (NL. fem. n. *Pavicanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11029.* The type genus for the taxon is *Candidatus* Pavicana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pavicanales.

Description of *Candidatus* Pavicanales ord. nov.

Candidatus Pavicanales (NL. fem. n. *Pavicanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11029.* The type genus for the taxon is *Candidatus* Pavicana .

According to the GTDB R06-RS202, this order belongs to the class *Negativicutes*.

Description of *Candidatus* Pavicaria absoredo sp. nov.

Candidatus Pavicaria absoredo (NL. fem. n. *absoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp012270585*. The type genome for the species is the GenBank assembly GCA_012270585.1. The GC content of the type genome is 55.8 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Pavicaria gen. nov.

Candidatus Pavicaria (NL. fem. n. *Pavicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin75*. The type species for the genus is *Candidatus* Pavicaria absoredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Pavicaria annecatica sp. nov.

Candidatus Pavicaria annecatica (NL. fem. n. *annecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp002238765*. The type genome for the species is the GenBank assembly GCA_002238765.1. The GC content of the type genome is 56.24 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Pavicaria exhilifica sp. nov.

Candidatus Pavicaria exhilifica (NL. fem. n. *exhilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp011523385*. The type genome for the species is the GenBank assembly GCA_011523385.1. The GC content of the type genome is 56.7 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Pavicaria inmenatica sp. nov.

Candidatus Pavicaria inmenatica (NL. fem. n. *inmenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp007570995*. The type genome for the species is the GenBank assembly GCA_007570995.1. The GC content of the type genome is 57.34 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Pavicaria patibetta sp. nov.

Candidatus Pavicaria patibetta (NL. fem. n. *patibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp009840285*. The type genome for the species is the GenBank assembly GCA_009842145.1. The GC content of the type genome is 57.19 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Pavicaria salubedo sp. nov.

Candidatus Pavicaria salubedo (NL. fem. n. *salubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin75 sp009842645*. The type genome for the species is the GenBank assembly GCA_009836145.1. The GC content of the type genome is 56.15 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Pavicella depetibula sp. nov.

Candidatus Pavicella depetibula (NL. fem. n. *depetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718595 sp012959595*. The type genome for the species is the GenBank assembly GCA_012959595.1. The GC content of the type genome is 45.83 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Pavicella gen. nov.

Candidatus Pavicella (NL. fem. n. *Pavicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718595*. The type species for the genus is *Candidatus* Pavicella

depetibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Pavicella sepositia sp. nov.

Candidatus Pavicella sepositia (NL. fem. n. *sepositia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718595 sp002718595*. The type genome for the species is the GenBank assembly GCA_002450355.1. The GC content of the type genome is 45.21 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Pavicia utillousia sp. nov.

Candidatus Pavicia utillousia (NL. fem. n. *utillousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCSY01 sp902805555*. The type genome for the species is the GenBank assembly GCA_902805555.1. The GC content of the type genome is 73.26 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Pavicia gen. nov.

Candidatus Pavicia (NL. fem. n. *Pavicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCSY01*. The type species for the genus is *Candidatus* Pavicia utillousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADCSY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paviciaceae.

Description of *Candidatus* Paviciaceae fam. nov.

Candidatus Paviciaceae (NL. fem. n. *Paviciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CADCSY01*. The type genus for the taxon is *Candidatus* Pavicia .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Pavicosa capilicula sp. nov.

Candidatus Pavicosa capilicula (NL. fem. n. *capilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTN01 sp009377715*. The type genome for the species is the GenBank assembly GCA_009377715.1. The GC content of the type genome is 56.96 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Pavicosa gen. nov.

Candidatus Pavicosa (NL. fem. n. *Pavicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTN01*. The type species for the genus is *Candidatus* Pavicosa capilicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHTN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavicosaceae.

Description of *Candidatus* Pavicosaceae fam. nov.

Candidatus Pavicosaceae (NL. fem. n. *Pavicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHTN01*. The type genus for the taxon is *Candidatus* Pavicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-28-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatosales.

Description of *Candidatus* Pavimana detoticella sp. nov.

Candidatus Pavimana detoticella (NL. fem. n. *detoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *LSR1 sp002782005*. The type genome for the species is the GenBank assembly GCA_001871525.1. The GC content of the type genome is 61.71 % and the genome length is 2.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Pavimana gen. nov.

Candidatus Pavimana (NL. fem. n. *Pavimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LSR1*. The type species for the genus is *Candidatus* Pavimana detoticella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pavimana dicabatica sp. nov.

Candidatus Pavimana dicabatica (NL. fem. n. *dicabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSR1 sp013335435*. The type genome for the species is the GenBank assembly GCA_013335435.1. The GC content of the type genome is 65.86 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Pavimana inobsitio sp. nov.

Candidatus Pavimana inobsitio (NL. fem. n. *inobsitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSR1 sp004337445*. The type genome for the species is the GenBank assembly RS_GCF_004337445.1. The GC content of the type genome is 67.53 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Pavimaria abrepessa sp. nov.

Candidatus Pavimaria abrepessa (NL. fem. n. *abrepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp003331265*. The type genome for the species is

the GenBank assembly GCA_003331265.1. The GC content of the type genome is 29.56 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Pavimaria gen. nov.

Candidatus Pavimaria (NL. fem. n. *Pavimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAG-121220-bin8*. The type species for the genus is *Candidatus* Pavimaria abrepessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pavimaria affunivita sp. nov.

Candidatus Pavimaria affunivita (NL. fem. n. *affunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp014239275*. The type genome for the species is the GenBank assembly GCA_014239275.1. The GC content of the type genome is 29.01 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Pavimaria benivitura sp. nov.

Candidatus Pavimaria benivitura (NL. fem. n. *benivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp902511755*. The type genome for the species is the GenBank assembly GCA_902512795.1. The GC content of the type genome is 29.07 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pavimaria cisalibula sp. nov.

Candidatus Pavimaria cisalibula (NL. fem. n. *cisalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp902559035*. The type genome for the species is the GenBank assembly GCA_902558295.1. The GC content of the type genome is 29.7 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Pavimaria cosigigena sp. nov.

Candidatus Pavimaria cosigigena (NL. fem. n. *cosigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp012959395*. The type genome for the species is the GenBank assembly GCA_012959395.1. The GC content of the type genome is 29.01 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Pavimaria decatitrix sp. nov.

Candidatus Pavimaria decatitrix (NL. fem. n. *decatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp902635895*. The type genome for the species is the GenBank assembly GCA_902635895.1. The GC content of the type genome is 29.86 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Pavimaria depelitica sp. nov.

Candidatus Pavimaria depelitica (NL. fem. n. *depelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp002702895*. The type genome for the species is the GenBank assembly GCA_002702895.1. The GC content of the type genome is 28.43 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Pavimaria exculicula sp. nov.

Candidatus Pavimaria exculicula (NL. fem. n. *exculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp902510655*. The type genome for the species is the GenBank assembly GCA_902510655.1. The GC content of the type genome is 29.54 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pavimaria fuligitas sp. nov.

Candidatus Pavimaria fuligitas (NL. fem. n. *fuligitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp002700465*. The type genome for the species is the GenBank assembly GCA_004214265.1. The GC content of the type genome is 29.06 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Pavimaria munimitia sp. nov.

Candidatus Pavimaria munimitia (NL. fem. n. *munimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp902523635*. The type genome for the species is the GenBank assembly GCA_902523635.1. The GC content of the type genome is 31.35 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pavimaria rorulilega sp. nov.

Candidatus Pavimaria rorulilega (NL. fem. n. *rorulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp004214185*. The type genome for the species is the GenBank assembly GCA_902635355.1. The GC content of the type genome is 29.8 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pavimaria sicaricula sp. nov.

Candidatus Pavimaria sicaricula (NL. fem. n. *sicaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-121220-bin8 sp002705485*. The type genome for the species is the GenBank assembly GCA_902555095.1. The GC content of the type genome is 31.3 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pavimella delapessa sp. nov.

Candidatus Pavimella delapessa (NL. fem. n. *delapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10649 sp903940375*. The type genome for the species is the GenBank assembly GCA_903952055.1. The GC content of the type genome is 67.06 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Pavimella gen. nov.

Candidatus Pavimella (NL. fem. n. *Pavimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10649*. The type species for the genus is *Candidatus* Pavimella delapessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Pavimella dinupedo sp. nov.

Candidatus Pavimella dinupedo (NL. fem. n. *dinupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10649 sp903934925*. The type genome for the species is the GenBank assembly GCA_903934925.1. The GC content of the type genome is 67.41 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Pavimella inturatica sp. nov.

Candidatus Pavimella inturatica (NL. fem. n. *inturatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10649 sp003456155*. The type genome for the species is the GenBank assembly GCA_003456155.1. The GC content of the type genome is 67.85 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Pavimella vinulitica sp. nov.

Candidatus Pavimella vinulitica (NL. fem. n. *vinulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10649 sp903908025*. The type genome for the species is the

GenBank assembly GCA_903908025.1. The GC content of the type genome is 66.79 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Pavimia doxolax sp. nov.

Candidatus Pavimia doxolax (NL. fem. n. *doxolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-43-31 sp002788675*. The type genome for the species is the GenBank assembly GCA_002788675.1. The GC content of the type genome is 39.84 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pavimia gen. nov.

Candidatus Pavimia (NL. fem. n. *Pavimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-43-31*. The type species for the genus is *Candidatus* Pavimia doxolax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Pavimida lapicifica sp. nov.

Candidatus Pavimida lapicifica (NL. fem. n. *lapicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATM1 sp003577165*. The type genome for the species is the GenBank assembly GCA_013112795.1. The GC content of the type genome is 60.65 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Pavimida gen. nov.

Candidatus Pavimida (NL. fem. n. *Pavimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATM1*. The type species for the genus is *Candidatus* Pavimida lapicifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

ATM1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimidaceae.

Description of *Candidatus* Pavimidaceae fam. nov.

Candidatus Pavimidaceae (NL. fem. n. *Pavimidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ATM1*. The type genus for the taxon is *Candidatus* Pavimida .

According to GTDB R06-RS202, this family belongs to the order *Fimbriimonadales*.

Description of *Candidatus* Pavimosa docibibula sp. nov.

Candidatus Pavimosa docibibula (NL. fem. n. *docibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-53-15 sp001772335*. The type genome for the species is the GenBank assembly GCA_001772335.1. The GC content of the type genome is 54.03 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Pavimosa gen. nov.

Candidatus Pavimosa (NL. fem. n. *Pavimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-53-15*. The type species for the genus is *Candidatus* Pavimosa docibibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-48-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogiaceae.

Description of *Candidatus* Pavimula esculifica sp. nov.

Candidatus Pavimula esculifica (NL. fem. n. *esculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PHET01 sp002841275*. The type genome for the species is the GenBank assembly GCA_002841275.1. The GC content of the type genome is 62.76 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Pavimula gen. nov.

Candidatus Pavimula (NL. fem. n. *Pavimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHET01*. The type species for the genus is *Candidatus* Pavimula esculifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimulaceae.

Description of *Candidatus* Pavimulaceae fam. nov.

Candidatus Pavimulaceae (NL. fem. n. *Pavimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHET01.* The type genus for the taxon is *Candidatus* Pavimula .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Pectobacterium abinvimonia sp. nov.

Candidatus Pectobacterium abinvimonia (NL. fem. n. *abinvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pectobacterium sp013449375*. The type genome for the species is the GenBank assembly RS_GCF_013449375.1. The GC content of the type genome is 51.56 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Pecunana aplesilega sp. nov.

Candidatus Pecunana aplesilega (NL. fem. n. *aplesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *VFJJ01 sp009886115*. The type genome for the species is the GenBank assembly GCA_009886115.1. The GC content of the type genome is 69.46 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Pecunana gen. nov.

Candidatus Pecunana (NL. fem. n. *Pecunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJJ01*. The type species for the genus is *Candidatus* Pecunana aplesilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VFJJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pecunanaceae.

Description of *Candidatus* Pecunanaceae fam. nov.

Candidatus Pecunanaceae (NL. fem. n. *Pecunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VFJJ01.* The type genus for the taxon is *Candidatus* Pecunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosarellales.

Description of *Candidatus* Pecunaria caselicula sp. nov.

Candidatus Pecunaria caselicula (NL. fem. n. *caselicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZOP01 sp012797735*. The type genome for the species is the GenBank assembly GCA_012797735.1. The GC content of the type genome is 72.85 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Pecunaria gen. nov.

Candidatus Pecunaria (NL. fem. n. *Pecunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZOP01*. The type species for the genus is *Candidatus* Pecunaria

caselicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZOP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pecunariaceae.

Description of *Candidatus* Pecunariaceae fam. nov.

Candidatus Pecunariaceae (NL. fem. n. *Pecunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZOP01.* The type genus for the taxon is *Candidatus* Pecunaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRWM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vicatellales.

Description of *Candidatus* Pecunaria ducilatio sp. nov.

Candidatus Pecunaria ducilatio (NL. fem. n. *ducilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZOP01 sp011367485*. The type genome for the species is the GenBank assembly GCA_011367485.1. The GC content of the type genome is 72.94 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Pecunella astipentia sp. nov.

Candidatus Pecunella astipentia (NL. fem. n. *astipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9570 sp003512175*. The type genome for the species is the GenBank assembly GCA_003512175.1. The GC content of the type genome is 46.43 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pecunella gen. nov.

Candidatus Pecunella (NL. fem. n. *Pecunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9570*. The type species for the genus is *Candidatus* Pecunella

astipentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9570*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pecunellaceae.

Description of *Candidatus* Pecunellaceae fam. nov.

Candidatus Pecunellaceae (NL. fem. n. *Pecunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9570.* The type genus for the taxon is *Candidatus* Pecunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9570*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pecunellales.

Description of *Candidatus* Pecunellales ord. nov.

Candidatus Pecunellales (NL. fem. n. *Pecunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9570.* The type genus for the taxon is *Candidatus* Pecunella .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Pecunida colimifica sp. nov.

Candidatus Pecunida colimifica (NL. fem. n. *colimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-42-10 sp002784945*. The type genome for the species is the GenBank assembly GCA_002784945.1. The GC content of the type genome is 41.88 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pecunida gen. nov.

Candidatus Pecunida (NL. fem. n. *Pecunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UM-FILTER-42-10*. The type species for the genus is *Candidatus* Pecunida colimifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-42-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pecunidaceae.

Description of *Candidatus* Pecunidaceae fam. nov.

Candidatus Pecunidaceae (NL. fem. n. *Pecunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-42-10.* The type genus for the taxon is *Candidatus* Pecunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-42-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pecunidales.

Description of *Candidatus* Pecunidales ord. nov.

Candidatus Pecunidales (NL. fem. n. *Pecunidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-42-10.* The type genus for the taxon is *Candidatus* Pecunida .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Pecunida homagifica sp. nov.

Candidatus Pecunida homagifica (NL. fem. n. *homagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-42-10 sp002774635*. The type genome for the species is the GenBank assembly GCA_002774635.1. The GC content of the type genome is 39.67 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pecunosa abantetta sp. nov.

Candidatus Pecunosa abantetta (NL. fem. n. *abantetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-841 sp902791785*. The type genome for the species is the GenBank assembly GCA_902791785.1. The GC content of the type genome is 42.31 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Pecunosa gen. nov.

Candidatus Pecunosa (NL. fem. n. *Pecunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-841*. The type species for the genus is *Candidatus* Pecunosa abantetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Pecunosa inpurivita sp. nov.

Candidatus Pecunosa inpurivita (NL. fem. n. *inpurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-841 sp002405565*. The type genome for the species is the GenBank assembly GCA_002405565.1. The GC content of the type genome is 49.22 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Pecunosa papavibra sp. nov.

Candidatus Pecunosa papavibra (NL. fem. n. *papavibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-841 sp002479075*. The type genome for the species is the GenBank assembly GCA_002479075.1. The GC content of the type genome is 48.35 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Pecunosa peridibra sp. nov.

Candidatus Pecunosa peridibra (NL. fem. n. *peridibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-841 sp000437375*. The type genome for the species is the GenBank assembly GCA_900544055.1. The GC content of the type genome is 45.18 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Pecunosa pudibitas sp. nov.

Candidatus Pecunosa pudibitas (NL. fem. n. *pudibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-841 sp900544285*. The type genome for the species is the GenBank assembly RS_GCF_900767755.1. The GC content of the type genome is 48.46 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Pecunula inaspugo sp. nov.

Candidatus Pecunula inaspugo (NL. fem. n. *inaspugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXPC01 sp009839685*. The type genome for the species is the GenBank assembly GCA_009839685.1. The GC content of the type genome is 55.89 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pecunula gen. nov.

Candidatus Pecunula (NL. fem. n. *Pecunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXPC01*. The type species for the genus is *Candidatus* Pecunula inaspugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pecunulaceae.

Description of *Candidatus* Pecunulaceae fam. nov.

Candidatus Pecunulaceae (NL. fem. n. *Pecunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXPC01*. The type genus for the taxon is *Candidatus* Pecunula .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Pedepana depasedo sp. nov.

Candidatus Pedepana depasedo (NL. fem. n. *depasedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790695 sp002780915*. The type genome for the species is the GenBank assembly GCA_002782325.1. The GC content of the type genome is 34.46 % and the genome length is 0.43 Mbp.

Description of *Candidatus* Pedepana gen. nov.

Candidatus Pedepana (NL. fem. n. *Pedepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002790695*. The type species for the genus is *Candidatus* Pedepana depasedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Pedeparia ecfacatio sp. nov.

Candidatus Pedeparia ecfacatio (NL. fem. n. *ecfacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-979 sp903929315*. The type genome for the species is the GenBank assembly GCA_903929315.1. The GC content of the type genome is 40.63 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Pedeparia gen. nov.

Candidatus Pedeparia (NL. fem. n. *Pedeparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-979*. The type species for the genus is *Candidatus* Pedeparia

ecfacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepariaceae.

Description of *Candidatus* Pedepariaceae fam. nov.

Candidatus Pedepariaceae (NL. fem. n. *Pedepariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-979.* The type genus for the taxon is *Candidatus* Pedeparia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Pedeparia foricentia sp. nov.

Candidatus Pedeparia foricentia (NL. fem. n. *foricentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-979 sp903915465*. The type genome for the species is the GenBank assembly GCA_903915465.1. The GC content of the type genome is 41.19 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Pedeparia minuriforma sp. nov.

Candidatus Pedeparia minuriforma (NL. fem. n. *minuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-979 sp003142515*. The type genome for the species is the GenBank assembly GCA_003142515.1. The GC content of the type genome is 43.8 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Pedepella ambecisca sp. nov.

Candidatus Pedepella ambecisca (NL. fem. n. *ambecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp003228875*. The type genome for the species is the GenBank assembly GCA_003228875.1. The GC content of the type genome is 51.14 %

and the genome length is 2.61 Mbp.

Description of *Candidatus* Pedepella gen. nov.

Candidatus Pedepella (NL. fem. n. *Pedepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3077*. The type species for the genus is *Candidatus* Pedepella ambecisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedepella dehonastra sp. nov.

Candidatus Pedepella dehonastra (NL. fem. n. *dehonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp002367255*. The type genome for the species is the GenBank assembly GCA_002367255.1. The GC content of the type genome is 53.69 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Pedepella epistessa sp. nov.

Candidatus Pedepella epistessa (NL. fem. n. *epistessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp002162875*. The type genome for the species is the GenBank assembly GCA_002162875.1. The GC content of the type genome is 51.77 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Pedepella fetifilega sp. nov.

Candidatus Pedepella fetifilega (NL. fem. n. *fetifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp013139635*. The type genome for the species is the GenBank assembly GCA_013139635.1. The GC content of the type genome is 55.02 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Pedepella inabribra sp. nov.

Candidatus Pedepella inabribra (NL. fem. n. *inabribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp002366685*. The type genome for the species is the GenBank assembly GCA_002366685.1. The GC content of the type genome is 54.52 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Pedepella maledatio sp. nov.

Candidatus Pedepella maledatio (NL. fem. n. *maledatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp002366645*. The type genome for the species is the GenBank assembly GCA_002366645.1. The GC content of the type genome is 53.82 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Pedepella tenebax sp. nov.

Candidatus Pedepella tenebax (NL. fem. n. *tenebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3077 sp002746395*. The type genome for the species is the GenBank assembly GCA_002746395.1. The GC content of the type genome is 53.68 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Pedepia bicinibra sp. nov.

Candidatus Pedepia bicinibra (NL. fem. n. *bicinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J016 sp003696105*. The type genome for the species is the GenBank assembly GCA_003696105.1. The GC content of the type genome is 72.23 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Pedepia gen. nov.

Candidatus Pedepia (NL. fem. n. *Pedepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J016*. The type species for the genus is *Candidatus* Pedepia bicinibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J016*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepiaceae.

Description of *Candidatus* Pedepiaceae fam. nov.

Candidatus Pedepiaceae (NL. fem. n. *Pedepiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J016.* The type genus for the taxon is *Candidatus* Pedepia .

According to GTDB R06-RS202, this family belongs to the order *Haliangiales*.

Description of *Candidatus* Pedepida pudibitura sp. nov.

Candidatus Pedepida pudibitura (NL. fem. n. *pudibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPUE01 sp903885635*. The type genome for the species is the GenBank assembly GCA_903903885.1. The GC content of the type genome is 35.36 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Pedepida gen. nov.

Candidatus Pedepida (NL. fem. n. *Pedepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPUE01*. The type species for the genus is *Candidatus* Pedepida pudibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedepida vitifitia sp. nov.

Candidatus Pedepida vitifitia (NL. fem. n. *vitifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPUE01 sp903868125*. The type genome for the species is the

GenBank assembly GCA_903880175.1. The GC content of the type genome is 34.84 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Pedeposa cimititrix sp. nov.

Candidatus Pedeposa cimititrix (NL. fem. n. *cimititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp005793215*. The type genome for the species is the GenBank assembly GCA_005773205.1. The GC content of the type genome is 59.42 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Pedeposa gen. nov.

Candidatus Pedeposa (NL. fem. n. *Pedeposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs027*. The type species for the genus is *Candidatus* Pedeposa cimititrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedeposa derelitas sp. nov.

Candidatus Pedeposa derelitas (NL. fem. n. *derelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp005800965*. The type genome for the species is the GenBank assembly GCA_005800965.1. The GC content of the type genome is 58.5 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Pedeposa edulcilega sp. nov.

Candidatus Pedeposa edulcilega (NL. fem. n. *edulcilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp009926705*. The type genome for the species is the GenBank assembly GCA_009926705.1. The GC content of the type genome is 62.73 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pedeposa periditica sp. nov.

Candidatus Pedeposa periditica (NL. fem. n. *periditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp009927665*. The type genome for the species is the GenBank assembly GCA_009927665.1. The GC content of the type genome is 60.81 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Pedeposa taraxastra sp. nov.

Candidatus Pedeposa taraxastra (NL. fem. n. *taraxastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp010025655*. The type genome for the species is the GenBank assembly GCA_010025735.1. The GC content of the type genome is 61.0 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Pedeposa tumeficula sp. nov.

Candidatus Pedeposa tumeficula (NL. fem. n. *tumeficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs027 sp005793785*. The type genome for the species is the GenBank assembly GCA_005808605.1. The GC content of the type genome is 61.99 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Pedepula cacalifica sp. nov.

Candidatus Pedepula cacalifica (NL. fem. n. *cacalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-224 sp003229375*. The type genome for the species is the GenBank assembly GCA_003229375.1. The GC content of the type genome is 41.27 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Pedepula gen. nov.

Candidatus Pedepula (NL. fem. n. *Pedepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-224*. The type species for the genus is *Candidatus* Pedepula cacalifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-224*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepulaceae.

Description of *Candidatus* Pedepulaceae fam. nov.

Candidatus Pedepulaceae (NL. fem. n. *Pedepulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-224.* The type genus for the taxon is *Candidatus* Pedepula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9942*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vivifidales.

Description of *Candidatus* Pedifana detunousia sp. nov.

Candidatus Pedifana detunousia (NL. fem. n. *detunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGY01 sp900696665*. The type genome for the species is the GenBank assembly GCA_900696665.1. The GC content of the type genome is 59.11 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Pedifana gen. nov.

Candidatus Pedifana (NL. fem. n. *Pedifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGY01*. The type species for the genus is *Candidatus* Pedifana detunousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedifaria alcedentia sp. nov.

Candidatus Pedifaria alcedentia (NL. fem. n. *alcedentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1668 sp002716385*. The type genome for the species is the GenBank assembly GCA_002716385.1. The GC content of the type genome is 57.68 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Pedifaria gen. nov.

Candidatus Pedifaria (NL. fem. n. *Pedifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1668*. The type species for the genus is *Candidatus* Pedifaria alcedentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Pedifaria bicipitrix sp. nov.

Candidatus Pedifaria bicipitrix (NL. fem. n. *bicipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1668 sp002364555*. The type genome for the species is the GenBank assembly GCA_002364555.1. The GC content of the type genome is 57.41 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Pedifaria susicatio sp. nov.

Candidatus Pedifaria susicatio (NL. fem. n. *susicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1668 sp002717655*. The type genome for the species is the GenBank assembly GCA_002717655.1. The GC content of the type genome is 55.25 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Pedifaria turilicella sp. nov.

Candidatus Pedifaria turilicella (NL. fem. n. *turilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1668 sp002702575*. The type genome for the species is the GenBank assembly GCA_002702575.1. The GC content of the type genome is 57.84 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Pedifella coteniforma sp. nov.

Candidatus Pedifella coteniforma (NL. fem. n. *coteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYN01 sp009781225*. The type genome for the species is the GenBank assembly GCA_009781225.1. The GC content of the type genome is 65.76 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Pedifella gen. nov.

Candidatus Pedifella (NL. fem. n. *Pedifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQYN01*. The type species for the genus is *Candidatus* Pedifella coteniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedifia detesitura sp. nov.

Candidatus Pedifia detesitura (NL. fem. n. *detesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA729 sp014238985*. The type genome for the species is the GenBank assembly GCA_014238985.1. The GC content of the type genome is 43.73 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pedifia gen. nov.

Candidatus Pedifia (NL. fem. n. *Pedifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA729*. The type species for the genus is *Candidatus* Pedifia detesitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA729*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedifiaceae.

Description of *Candidatus* Pedifiaceae fam. nov.

Candidatus Pedifiaceae (NL. fem. n. *Pedifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA729.* The type genus for the taxon is *Candidatus* Pedifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venuniales.

Description of *Candidatus* Pedifia revulifica sp. nov.

Candidatus Pedifia revulifica (NL. fem. n. *revulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA729 sp002722995*. The type genome for the species is the GenBank assembly GCA_002297985.1. The GC content of the type genome is 40.89 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pedifida decupax sp. nov.

Candidatus Pedifida decupax (NL. fem. n. *decupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CPC320 sp002336405*. The type genome for the species is the GenBank assembly GCA_002336405.1. The GC content of the type genome is 53.38 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Pedifida gen. nov.

Candidatus Pedifida (NL. fem. n. *Pedifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CPC320*. The type species for the genus is *Candidatus* Pedifida decupax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pedifida demogessa sp. nov.

Candidatus Pedifida demogessa (NL. fem. n. *demogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CPC320 sp002684375*. The type genome for the species is the GenBank assembly GCA_002684375.1. The GC content of the type genome is 52.73 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Pedifosa bimetibra sp. nov.

Candidatus Pedifosa bimetibra (NL. fem. n. *bimetibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1382 sp003167365*. The type genome for the species is the GenBank assembly GCA_003136875.1. The GC content of the type genome is 55.21 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Pedifosa gen. nov.

Candidatus Pedifosa (NL. fem. n. *Pedifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1382*. The type species for the genus is *Candidatus* Pedifosa bimetibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Pedifula nubecax sp. nov.

Candidatus Pedifula nubecax (NL. fem. n. *nubecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG293 sp900317575*. The type genome for the species is the GenBank assembly GCA_902759655.1. The GC content of the type genome is 28.28 %

and the genome length is 1.43 Mbp.

Description of *Candidatus* Pedifula gen. nov.

Candidatus Pedifula (NL. fem. n. *Pedifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG293*. The type species for the genus is *Candidatus* Pedifula nubecax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Pedobacter abnorifica sp. nov.

Candidatus Pedobacter abnorifica (NL. fem. n. *abnorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp000708265*. The type genome for the species is the GenBank assembly RS_GCF_000708265.2. The GC content of the type genome is 37.13 % and the genome length is 5.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater creek".

Description of *Candidatus* Pedobacter abrumibula sp. nov.

Candidatus Pedobacter abrumibula (NL. fem. n. *abrumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014306625*. The type genome for the species is the GenBank assembly RS_GCF_014306625.1. The GC content of the type genome is 36.3 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Pedobacter accumigena sp. nov.

Candidatus Pedobacter accumigena (NL. fem. n. *accumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014172405*. The type genome for the species is the GenBank assembly RS_GCF_014172405.1. The GC content of the type genome is 39.83

% and the genome length is 5.59 Mbp.

Description of *Candidatus* Pedobacter acrufigena sp. nov.

Candidatus Pedobacter acrufigena (NL. fem. n. *acrufigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014472395*. The type genome for the species is the GenBank assembly RS_GCF_014472395.1. The GC content of the type genome is 40.56 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Pedobacter adrecifica sp. nov.

Candidatus Pedobacter adrecifica (NL. fem. n. *adrecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002151545*. The type genome for the species is the GenBank assembly RS_GCF_002151545.1. The GC content of the type genome is 39.18 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Pedobacter advecitica sp. nov.

Candidatus Pedobacter advecitica (NL. fem. n. *advecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003054145*. The type genome for the species is the GenBank assembly RS_GCF_003054145.1. The GC content of the type genome is 38.5 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Pedobacter aggenibula sp. nov.

Candidatus Pedobacter aggenibula (NL. fem. n. *aggenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002320935*. The type genome for the species is the GenBank assembly GCA_002320935.1. The GC content of the type genome is 43.4 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Pedobacter alluvimonia sp. nov.

Candidatus Pedobacter alluvimonia (NL. fem. n. *alluvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001423945*. The type genome for the species is the GenBank assembly RS_GCF_001423945.1. The GC content of the type genome is 39.26 % and the genome length is 4.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pedobacter alsulibula sp. nov.

Candidatus Pedobacter alsulibula (NL. fem. n. *alsulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp000523515*. The type genome for the species is the GenBank assembly RS_GCF_000523515.1. The GC content of the type genome is 38.9 % and the genome length is 6.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coastal dune".

Description of *Candidatus* Pedobacter aminnatio sp. nov.

Candidatus Pedobacter aminnatio (NL. fem. n. *aminnatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003339865*. The type genome for the species is the GenBank assembly RS_GCF_003339865.1. The GC content of the type genome is 37.53 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Pedobacter antepitoga sp. nov.

Candidatus Pedobacter antepitoga (NL. fem. n. *antepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004342125*. The type genome for the species is the GenBank assembly RS_GCF_004342125.1. The GC content of the type genome is 38.54 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Pedobacter appositudo sp. nov.

Candidatus Pedobacter appositudo (NL. fem. n. *appositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp005116445*. The type genome for the species is the GenBank assembly RS_GCF_005116445.1. The GC content of the type genome is 40.13 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Pedobacter arbavitica sp. nov.

Candidatus Pedobacter arbavitica (NL. fem. n. *arbavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003061025*. The type genome for the species is the GenBank assembly RS_GCF_003061025.1. The GC content of the type genome is 40.5 % and the genome length is 6.91 Mbp.

Description of *Candidatus* Pedobacter arnogitudo sp. nov.

Candidatus Pedobacter arnogitudo (NL. fem. n. *arnogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014302835*. The type genome for the species is the GenBank assembly GCA_014302835.1. The GC content of the type genome is 38.18 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Pedobacter arrecimonia sp. nov.

Candidatus Pedobacter arrecimonia (NL. fem. n. *arrecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001412215*. The type genome for the species is the GenBank assembly RS_GCF_001412215.1. The GC content of the type genome is 37.18 % and the genome length is 4.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leech mucosal secretions".

Description of *Candidatus* Pedobacter asporax sp. nov.

Candidatus Pedobacter asporax (NL. fem. n. *asporax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004331695*. The type genome for the species is the GenBank assembly RS_GCF_004331695.1. The GC content of the type genome is 41.84 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Pedobacter atropessa sp. nov.

Candidatus Pedobacter atropessa (NL. fem. n. *atropessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002336465*. The type genome for the species is the GenBank assembly GCA_002336465.1. The GC content of the type genome is 36.64 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Pedobacter benivimonas sp. nov.

Candidatus Pedobacter benivimonas (NL. fem. n. *benivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004331685*. The type genome for the species is the GenBank assembly RS_GCF_004331685.1. The GC content of the type genome is 39.37 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Pedobacter bigemivita sp. nov.

Candidatus Pedobacter bigemivita (NL. fem. n. *bigemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp900564155*. The type genome for the species is the GenBank assembly RS_GCF_900564155.1. The GC content of the type genome is 41.14 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Pedobacter cilibilega sp. nov.

Candidatus Pedobacter cilibilega (NL. fem. n. *cilibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001421515*. The type genome for the species is the GenBank assembly RS_GCF_001421515.1. The GC content of the type genome is 38.17 % and the genome length is 5.68 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pedobacter colepitura sp. nov.

Candidatus Pedobacter colepitura (NL. fem. n. *colepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004331735*. The type genome for the species is the GenBank assembly RS_GCF_004331735.1. The GC content of the type genome is 38.22 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Pedobacter cululatio sp. nov.

Candidatus Pedobacter cululatio (NL. fem. n. *cululatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004295885*. The type genome for the species is the GenBank assembly GCA_004295885.1. The GC content of the type genome is 36.39 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Pedobacter curabitoga sp. nov.

Candidatus Pedobacter curabitoga (NL. fem. n. *curabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp011759615*. The type genome for the species is the GenBank assembly RS_GCF_011759615.1. The GC content of the type genome is 38.55 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Pedobacter debucimonas sp. nov.

Candidatus Pedobacter debucimonas (NL. fem. n. *debucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004331645*. The type genome for the species is the GenBank assembly RS_GCF_004331645.1. The GC content of the type genome is 35.92 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Pedobacter demogivita sp. nov.

Candidatus Pedobacter demogivita (NL. fem. n. *demogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002333205*. The type genome for the species is the GenBank assembly GCA_002333205.1. The GC content of the type genome is 43.86 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Pedobacter detotitura sp. nov.

Candidatus Pedobacter detotitura (NL. fem. n. *detotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp005116505*. The type genome for the species is the GenBank assembly RS_GCF_005116505.1. The GC content of the type genome is 34.91 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Pedobacter dicanivita sp. nov.

Candidatus Pedobacter dicanivita (NL. fem. n. *dicanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp000170795*. The type genome for the species is the GenBank assembly RS_GCF_000170795.1. The GC content of the type genome is 44.92 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Pedobacter exceribra sp. nov.

Candidatus Pedobacter exceribra (NL. fem. n. *exceribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002197755*. The type genome for the species is the GenBank assembly RS_GCF_002197755.1. The GC content of the type genome is 39.07 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Pedobacter expisitica sp. nov.

Candidatus Pedobacter expisitica (NL. fem. n. *expisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001424305*. The type genome for the species is the GenBank assembly RS_GCF_001424305.1. The GC content of the type genome is 38.38 % and the genome length is 4.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pedobacter exsomimonas sp. nov.

Candidatus Pedobacter exsomimonas (NL. fem. n. *exsomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp005938645*. The type genome for the species is the GenBank assembly RS_GCF_005938645.2. The GC content of the type genome is 38.99 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Pedobacter feditugo sp. nov.

Candidatus Pedobacter feditugo (NL. fem. n. *feditugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002432345*. The type genome for the species is the GenBank assembly GCA_002432345.1. The GC content of the type genome is 39.79 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Pedobacter fetifibula sp. nov.

Candidatus Pedobacter fetifibula (NL. fem. n. *fetifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004211595*. The type genome for the species is the GenBank assembly GCA_004211595.1. The GC content of the type genome is 35.11 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Pedobacter frigdastra sp. nov.

Candidatus Pedobacter frigdastra (NL. fem. n. *frigdastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003387415*. The type genome for the species is the

GenBank assembly RS_GCF_003387415.1. The GC content of the type genome is 38.57 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Pedobacter haricugo sp. nov.

Candidatus Pedobacter haricugo (NL. fem. n. *haricugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003688475*. The type genome for the species is the GenBank assembly RS_GCF_003688475.1. The GC content of the type genome is 39.42 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Pedobacter hibisifica sp. nov.

Candidatus Pedobacter hibisifica (NL. fem. n. *hibisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp900100435*. The type genome for the species is the GenBank assembly RS_GCF_900100435.1. The GC content of the type genome is 39.4 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Pedobacter ignipetta sp. nov.

Candidatus Pedobacter ignipetta (NL. fem. n. *ignipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp009765875*. The type genome for the species is the GenBank assembly RS_GCF_009765875.1. The GC content of the type genome is 40.12 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Pedobacter inabrivita sp. nov.

Candidatus Pedobacter inabrivita (NL. fem. n. *inabrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003054115*. The type genome for the species is the GenBank assembly RS_GCF_003054115.1. The GC content of the type genome is 37.71 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Pedobacter infatimonia sp. nov.

Candidatus Pedobacter infatimonia (NL. fem. n. *infatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004364225*. The type genome for the species is the GenBank assembly RS_GCF_004364225.1. The GC content of the type genome is 40.71 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Pedobacter intabilenta sp. nov.

Candidatus Pedobacter intabilenta (NL. fem. n. *intabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014377665*. The type genome for the species is the GenBank assembly GCA_014377665.1. The GC content of the type genome is 39.55 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Pedobacter munimitas sp. nov.

Candidatus Pedobacter munimitas (NL. fem. n. *munimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014172375*. The type genome for the species is the GenBank assembly RS_GCF_014172375.1. The GC content of the type genome is 35.08 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Pedobacter offiritio sp. nov.

Candidatus Pedobacter offiritio (NL. fem. n. *offiritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001422545*. The type genome for the species is the GenBank assembly RS_GCF_001422545.1. The GC content of the type genome is 37.78 % and the genome length is 4.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pedobacter penuratica sp. nov.

Candidatus Pedobacter penuratica (NL. fem. n. *penuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004331675*. The type genome for the species is the GenBank assembly RS_GCF_004331675.1. The GC content of the type genome is 37.47 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Pedobacter pinacousia sp. nov.

Candidatus Pedobacter pinacousia (NL. fem. n. *pinacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014377775*. The type genome for the species is the GenBank assembly GCA_014377775.1. The GC content of the type genome is 36.14 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Pedobacter podagedo sp. nov.

Candidatus Pedobacter podagedo (NL. fem. n. *podagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003852525*. The type genome for the species is the GenBank assembly RS_GCF_003852525.1. The GC content of the type genome is 42.43 % and the genome length is 8.14 Mbp.

Description of *Candidatus* Pedobacter propressa sp. nov.

Candidatus Pedobacter propressa (NL. fem. n. *propressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp002399615*. The type genome for the species is the GenBank assembly GCA_002399615.1. The GC content of the type genome is 37.65 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Pedobacter pulegitas sp. nov.

Candidatus Pedobacter pulegitas (NL. fem. n. *pulegitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004138205*. The type genome for the species is the GenBank assembly RS_GCF_004138205.1. The GC content of the type genome is 47.64

% and the genome length is 4.47 Mbp.

Description of *Candidatus* Pedobacter revulisca sp. nov.

Candidatus Pedobacter revulisca (NL. fem. n. *revulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001412655*. The type genome for the species is the GenBank assembly RS_GCF_001412655.1. The GC content of the type genome is 40.54 % and the genome length is 6.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Pedobacter rubigivita sp. nov.

Candidatus Pedobacter rubigivita (NL. fem. n. *rubigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp004210715*. The type genome for the species is the GenBank assembly GCA_004210715.1. The GC content of the type genome is 37.09 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Pedobacter senipitio sp. nov.

Candidatus Pedobacter senipitio (NL. fem. n. *senipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp013266735*. The type genome for the species is the GenBank assembly RS_GCF_013266735.1. The GC content of the type genome is 37.85 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Pedobacter sifunessa sp. nov.

Candidatus Pedobacter sifunessa (NL. fem. n. *sifunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp014205835*. The type genome for the species is the GenBank assembly RS_GCF_014205835.1. The GC content of the type genome is 38.41 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Pedobacter tegumago sp. nov.

Candidatus Pedobacter tegumago (NL. fem. n. *tegumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp903166585*. The type genome for the species is the GenBank assembly RS_GCF_903166585.1. The GC content of the type genome is 40.33 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Pedobacter tresvatio sp. nov.

Candidatus Pedobacter tresvatio (NL. fem. n. *tresvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp005116475*. The type genome for the species is the GenBank assembly RS_GCF_005116475.1. The GC content of the type genome is 34.81 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pedobacter turibilenta sp. nov.

Candidatus Pedobacter turibilenta (NL. fem. n. *turibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp003852395*. The type genome for the species is the GenBank assembly RS_GCF_011303555.1. The GC content of the type genome is 39.8 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Pedobacter voragigena sp. nov.

Candidatus Pedobacter voragigena (NL. fem. n. *voragigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedobacter sp001027745*. The type genome for the species is the GenBank assembly RS_GCF_001027745.1. The GC content of the type genome is 40.5 % and the genome length is 5.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Pedococcus absurastra sp. nov.

Candidatus Pedococcus absurastra (NL. fem. n. *absurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedococcus sp009707485*. The type genome for the species is the GenBank assembly RS_GCF_009707485.1. The GC content of the type genome is 70.56 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Pedococcus appecitio sp. nov.

Candidatus Pedococcus appecitio (NL. fem. n. *appecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedococcus sp001428025*. The type genome for the species is the GenBank assembly RS_GCF_001428025.1. The GC content of the type genome is 71.92 % and the genome length is 3.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pedococcus benepatio sp. nov.

Candidatus Pedococcus benepatio (NL. fem. n. *benepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedococcus sp001426245*. The type genome for the species is the GenBank assembly RS_GCF_001427915.1. The GC content of the type genome is 71.36 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pedococcus cituvifica sp. nov.

Candidatus Pedococcus cituvifica (NL. fem. n. *cituvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pedococcus sp013041615*. The type genome for the species is the GenBank assembly RS_GCF_013041615.1. The GC content of the type genome is 70.5 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Pedococcus fedititura sp. nov.

Candidatus Pedococcus fedititura (NL. fem. n. *fedititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pedococcus sp001429605*. The type genome for the species is the GenBank assembly RS_GCF_001429605.1. The GC content of the type genome is 70.71 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pelagerythrobacter arrecedo sp. nov.

Candidatus Pelagerythrobacter arrecedo (NL. fem. n. *arrecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagerythrobacter sp003581645*. The type genome for the species is the GenBank assembly RS_GCF_003581645.1. The GC content of the type genome is 65.4 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Pelagerythrobacter calipousia sp. nov.

Candidatus Pelagerythrobacter calipousia (NL. fem. n. *calipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagerythrobacter sp004135625*. The type genome for the species is the GenBank assembly RS_GCF_004135625.1. The GC content of the type genome is 66.34 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Pelagibacter abagmax sp. nov.

Candidatus Pelagibacter abagmax (NL. fem. n. *abagmax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902598015*. The type genome for the species is the GenBank assembly GCA_902598015.1. The GC content of the type genome is 29.21 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter abambimonas sp. nov.

Candidatus Pelagibacter abambimonas (NL. fem. n. *abambimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629695*. The type genome for the species is the GenBank assembly GCA_902629695.1. The GC content of the type genome is 28.92 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter abhinago sp. nov.

Candidatus Pelagibacter abhinago (NL. fem. n. *abhinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559075*. The type genome for the species is the GenBank assembly GCA_902559075.1. The GC content of the type genome is 29.29 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter abmatentia sp. nov.

Candidatus Pelagibacter abmatentia (NL. fem. n. *abmatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902612605*. The type genome for the species is the GenBank assembly GCA_902612605.1. The GC content of the type genome is 28.98 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pelagibacter abmatitura sp. nov.

Candidatus Pelagibacter abmatitura (NL. fem. n. *abmatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583455*. The type genome for the species is the GenBank assembly GCA_902583455.1. The GC content of the type genome is 28.94 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter abnocitica sp. nov.

Candidatus Pelagibacter abnocitica (NL. fem. n. *abnocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902573385*. The type genome for the species is the GenBank assembly GCA_902573385.1. The GC content of the type genome is 28.31 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter abnoretta sp. nov.

Candidatus Pelagibacter abnoretta (NL. fem. n. *abnoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524045*. The type genome for the species is the GenBank assembly GCA_902524045.1. The GC content of the type genome is 29.41 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter abnoritudo sp. nov.

Candidatus Pelagibacter abnoritudo (NL. fem. n. *abnoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592375*. The type genome for the species is the GenBank assembly GCA_902592375.1. The GC content of the type genome is 29.43 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Pelagibacter abrelitas sp. nov.

Candidatus Pelagibacter abrelitas (NL. fem. n. *abrelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524865*. The type genome for the species is the GenBank assembly GCA_902524865.1. The GC content of the type genome is 29.51 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter abrumax sp. nov.

Candidatus Pelagibacter abrumax (NL. fem. n. *abrumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902523895*. The type genome for the species is the GenBank assembly GCA_902523895.1. The GC content of the type genome is 29.42 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter absegessa sp. nov.

Candidatus Pelagibacter absegessa (NL. fem. n. *absegessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902514805*. The type genome for the species is the GenBank assembly GCA_902514805.1. The GC content of the type genome is 29.83 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter absegetta sp. nov.

Candidatus Pelagibacter absegetta (NL. fem. n. *absegetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576815*. The type genome for the species is the GenBank assembly GCA_902576815.1. The GC content of the type genome is 29.05 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter accapiforma sp. nov.

Candidatus Pelagibacter accapiforma (NL. fem. n. *accapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902565325*. The type genome for the species is the GenBank assembly GCA_902565325.1. The GC content of the type genome is 29.65 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter accogisca sp. nov.

Candidatus Pelagibacter accogisca (NL. fem. n. *accogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594405*. The type genome for the species is the GenBank assembly GCA_902594405.1. The GC content of the type genome is 29.2 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Pelagibacter accoressa sp. nov.

Candidatus Pelagibacter accoressa (NL. fem. n. *accoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902536575*. The type genome for the species is the GenBank assembly GCA_902536575.1. The GC content of the type genome is 29.6 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter accoritudo sp. nov.

Candidatus Pelagibacter accoritudo (NL. fem. n. *accoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902553845*. The type genome for the species is the GenBank assembly GCA_902553845.1. The GC content of the type genome is 28.5 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter accucatica sp. nov.

Candidatus Pelagibacter accucatica (NL. fem. n. *accucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599665*. The type genome for the species is the GenBank assembly GCA_902599665.1. The GC content of the type genome is 29.52 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter acculilenta sp. nov.

Candidatus Pelagibacter acculilenta (NL. fem. n. *acculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902598425*. The type genome for the species is the GenBank assembly GCA_902598425.1. The GC content of the type genome is 29.01 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter accumatio sp. nov.

Candidatus Pelagibacter accumatio (NL. fem. n. *accumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902608305*. The type genome for the species is the GenBank assembly GCA_902608305.1. The GC content of the type genome is 28.73 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter acertatica sp. nov.

Candidatus Pelagibacter acertatica (NL. fem. n. *acertatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635975*. The type genome for the species is the GenBank assembly GCA_902635975.1. The GC content of the type genome is 30.18 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter acrimitudo sp. nov.

Candidatus Pelagibacter acrimitudo (NL. fem. n. *acrimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592715*. The type genome for the species is the GenBank assembly GCA_902592715.1. The GC content of the type genome is 29.6 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter acrocitia sp. nov.

Candidatus Pelagibacter acrocitia (NL. fem. n. *acrocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595725*. The type genome for the species is the GenBank assembly GCA_902595725.1. The GC content of the type genome is 28.19 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter actarago sp. nov.

Candidatus Pelagibacter actarago (NL. fem. n. *actarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653585*. The type genome for the species is the GenBank assembly GCA_014653585.1. The GC content of the type genome is 29.39 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter actutatica sp. nov.

Candidatus Pelagibacter actutatica (NL. fem. n. *actutatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902592275*. The type genome for the species is the GenBank assembly GCA_902592275.1. The GC content of the type genome is 29.43 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter actutetta sp. nov.

Candidatus Pelagibacter actutetta (NL. fem. n. *actutetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582105*. The type genome for the species is the GenBank assembly GCA_902582105.1. The GC content of the type genome is 28.83 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter actutigena sp. nov.

Candidatus Pelagibacter actutigena (NL. fem. n. *actutigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902526085*. The type genome for the species is the GenBank assembly GCA_902526085.1. The GC content of the type genome is 29.69 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter adcumastra sp. nov.

Candidatus Pelagibacter adcumastra (NL. fem. n. *adcumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627045*. The type genome for the species is the GenBank assembly GCA_902627045.1. The GC content of the type genome is 29.56 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter addubentia sp. nov.

Candidatus Pelagibacter addubentia (NL. fem. n. *addubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617715*. The type genome for the species is the GenBank assembly GCA_902617715.1. The GC content of the type genome is 28.71 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter adfiriforma sp. nov.

Candidatus Pelagibacter adfiriforma (NL. fem. n. *adfiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902601785*. The type genome for the species is the GenBank assembly GCA_902601785.1. The GC content of the type genome is 29.61 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter adgubax sp. nov.

Candidatus Pelagibacter adgubax (NL. fem. n. *adgubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629215*. The type genome for the species is the GenBank assembly GCA_902629215.1. The GC content of the type genome is 28.42 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter adgubitia sp. nov.

Candidatus Pelagibacter adgubitia (NL. fem. n. *adgubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522225*. The type genome for the species is the GenBank assembly GCA_902522225.1. The GC content of the type genome is 28.44 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter adinvitas sp. nov.

Candidatus Pelagibacter adinvitas (NL. fem. n. *adinvitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629955*. The type genome for the species is the GenBank assembly GCA_902629955.1. The GC content of the type genome is 29.36 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter adinvitura sp. nov.

Candidatus Pelagibacter adinvitura (NL. fem. n. *adinvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588635*. The type genome for the species is the GenBank assembly GCA_902588635.1. The GC content of the type genome is 29.24 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter adlacousia sp. nov.

Candidatus Pelagibacter adlacousia (NL. fem. n. *adlacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596675*. The type genome for the species is the GenBank assembly GCA_902596675.1. The GC content of the type genome is 29.62 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter adlapimonas sp. nov.

Candidatus Pelagibacter adlapimonas (NL. fem. n. *adlapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902631255*. The type genome for the species is the GenBank assembly GCA_902631255.1. The GC content of the type genome is 30.13 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter adlocedo sp. nov.

Candidatus Pelagibacter adlocedo (NL. fem. n. *adlocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902607945*. The type genome for the species is the GenBank assembly GCA_902607945.1. The GC content of the type genome is 28.69 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter adlocitrix sp. nov.

Candidatus Pelagibacter adlocitrix (NL. fem. n. *adlocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902573235*. The type genome for the species is the GenBank assembly GCA_902573235.1. The GC content of the type genome is 28.74 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter adnilifica sp. nov.

Candidatus Pelagibacter adnilifica (NL. fem. n. *adnilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635665*. The type genome for the species is the GenBank assembly GCA_902635665.1. The GC content of the type genome is 29.24 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter adorditoga sp. nov.

Candidatus Pelagibacter adorditoga (NL. fem. n. *adorditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581605*. The type genome for the species is the GenBank assembly GCA_902581605.1. The GC content of the type genome is 29.42 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter adoscitia sp. nov.

Candidatus Pelagibacter adoscitia (NL. fem. n. *adoscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533955*. The type genome for the species is the GenBank assembly GCA_902533955.1. The GC content of the type genome is 28.45 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter adpanitas sp. nov.

Candidatus Pelagibacter adpanitas (NL. fem. n. *adpanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617805*. The type genome for the species is the GenBank assembly GCA_902617805.1. The GC content of the type genome is 29.29 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter adpelitas sp. nov.

Candidatus Pelagibacter adpelitas (NL. fem. n. *adpelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902538745*. The type genome for the species is the GenBank assembly GCA_902538745.1. The GC content of the type genome is 29.72 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter adpinilenta sp. nov.

Candidatus Pelagibacter adpinilenta (NL. fem. n. *adpinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559565*. The type genome for the species is the GenBank assembly GCA_902559565.1. The GC content of the type genome is 28.82 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter adpugitura sp. nov.

Candidatus Pelagibacter adpugitura (NL. fem. n. *adpugitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902615045*. The type genome for the species is the GenBank assembly GCA_902615045.1. The GC content of the type genome is 29.39 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter adremicella sp. nov.

Candidatus Pelagibacter adremicella (NL. fem. n. *adremicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524115*. The type genome for the species is the GenBank assembly GCA_902524115.1. The GC content of the type genome is 29.77 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter adremitoga sp. nov.

Candidatus Pelagibacter adremitoga (NL. fem. n. *adremitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902552705*. The type genome for the species is the GenBank assembly GCA_902552705.1. The GC content of the type genome is 27.93 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter adsecilenta sp. nov.

Candidatus Pelagibacter adsecilenta (NL. fem. n. *adsecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902601315*. The type genome for the species is the GenBank assembly GCA_902601315.1. The GC content of the type genome is 29.46 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter adsifimonas sp. nov.

Candidatus Pelagibacter adsifimonas (NL. fem. n. *adsifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624185*. The type genome for the species is the GenBank assembly GCA_902624185.1. The GC content of the type genome is 28.83 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter adsudicula sp. nov.

Candidatus Pelagibacter adsudicula (NL. fem. n. *adsudicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617895*. The type genome for the species is the GenBank assembly GCA_902617895.1. The GC content of the type genome is 29.41 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter adsusitas sp. nov.

Candidatus Pelagibacter adsusitas (NL. fem. n. *adsusitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902629535*. The type genome for the species is the GenBank assembly GCA_902629535.1. The GC content of the type genome is 29.86 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter adsusitura sp. nov.

Candidatus Pelagibacter adsusitura (NL. fem. n. *adsusitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517455*. The type genome for the species is the GenBank assembly GCA_902517455.1. The GC content of the type genome is 29.44 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter adtagivita sp. nov.

Candidatus Pelagibacter adtagivita (NL. fem. n. *adtagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558835*. The type genome for the species is the GenBank assembly GCA_902558835.1. The GC content of the type genome is 29.13 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter adtenugo sp. nov.

Candidatus Pelagibacter adtenugo (NL. fem. n. *adtenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902598485*. The type genome for the species is the GenBank assembly GCA_902598485.1. The GC content of the type genome is 29.19 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter adtubimonia sp. nov.

Candidatus Pelagibacter adtubimonia (NL. fem. n. *adtubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902527215*. The type genome for the species is the GenBank assembly GCA_902527215.1. The GC content of the type genome is 29.45 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Pelagibacter adtumitoga sp. nov.

Candidatus Pelagibacter adtumitoga (NL. fem. n. *adtumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528505*. The type genome for the species is the GenBank assembly GCA_902528505.1. The GC content of the type genome is 29.67 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter advecatica sp. nov.

Candidatus Pelagibacter advecatica (NL. fem. n. *advecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653935*. The type genome for the species is the GenBank assembly GCA_014653935.1. The GC content of the type genome is 29.13 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Pelagibacter advoritas sp. nov.

Candidatus Pelagibacter advoritas (NL. fem. n. *advoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635335*. The type genome for the species is the GenBank assembly GCA_902635335.1. The GC content of the type genome is 29.26 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter afranitura sp. nov.

Candidatus Pelagibacter afranitura (NL. fem. n. *afranitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902521615*. The type genome for the species is the GenBank assembly GCA_902521615.1. The GC content of the type genome is 29.42 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter aggenatica sp. nov.

Candidatus Pelagibacter aggenatica (NL. fem. n. *aggenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596355*. The type genome for the species is the GenBank assembly GCA_902596355.1. The GC content of the type genome is 29.42 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter aglasitica sp. nov.

Candidatus Pelagibacter aglasitica (NL. fem. n. *aglasitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902630945*. The type genome for the species is the GenBank assembly GCA_902630945.1. The GC content of the type genome is 29.03 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter agrapessa sp. nov.

Candidatus Pelagibacter agrapessa (NL. fem. n. *agrapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559935*. The type genome for the species is the GenBank assembly GCA_902559935.1. The GC content of the type genome is 29.75 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter agratago sp. nov.

Candidatus Pelagibacter agratago (NL. fem. n. *agratago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628525*. The type genome for the species is the GenBank assembly GCA_902628525.1. The GC content of the type genome is 29.25 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter albogilenta sp. nov.

Candidatus Pelagibacter albogilenta (NL. fem. n. *albogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902609065*. The type genome for the species is the GenBank assembly GCA_902609065.1. The GC content of the type genome is 29.18 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter alcibilega sp. nov.

Candidatus Pelagibacter alcibilega (NL. fem. n. *alcibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524635*. The type genome for the species is the GenBank assembly GCA_902524635.1. The GC content of the type genome is 29.59 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter algifugo sp. nov.

Candidatus Pelagibacter algifugo (NL. fem. n. *algifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592545*. The type genome for the species is the GenBank assembly GCA_902592545.1. The GC content of the type genome is 29.17 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter alismousia sp. nov.

Candidatus Pelagibacter alismousia (NL. fem. n. *alismousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632665*. The type genome for the species is the GenBank assembly GCA_902632665.1. The GC content of the type genome is 29.71 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter alsisitrix sp. nov.

Candidatus Pelagibacter alsisitrix (NL. fem. n. *alsisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902540545*. The type genome for the species is the GenBank assembly GCA_902540545.1. The GC content of the type genome is 29.33 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter altififica sp. nov.

Candidatus Pelagibacter altififica (NL. fem. n. *altififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595745*. The type genome for the species is the GenBank assembly GCA_902595745.1. The GC content of the type genome is 29.88 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter altivugo sp. nov.

Candidatus Pelagibacter altivugo (NL. fem. n. *altivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902511185*. The type genome for the species is the GenBank assembly GCA_902511185.1. The GC content of the type genome is 29.24 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter ambaditia sp. nov.

Candidatus Pelagibacter ambaditia (NL. fem. n. *ambaditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902523125*. The type genome for the species is the GenBank assembly GCA_902523125.1. The GC content of the type genome is 29.64 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter ambidisca sp. nov.

Candidatus Pelagibacter ambidisca (NL. fem. n. *ambidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566785*. The type genome for the species is the GenBank assembly GCA_902566785.1. The GC content of the type genome is 28.84 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter amercilenta sp. nov.

Candidatus Pelagibacter amercilenta (NL. fem. n. *amercilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624075*. The type genome for the species is the GenBank assembly GCA_902624075.1. The GC content of the type genome is 28.33 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter ammatitrix sp. nov.

Candidatus Pelagibacter ammatitrix (NL. fem. n. *ammatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588855*. The type genome for the species is the GenBank assembly GCA_902588855.1. The GC content of the type genome is 29.54 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter ammigatica sp. nov.

Candidatus Pelagibacter ammigatica (NL. fem. n. *ammigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902542235*. The type genome for the species is the GenBank assembly GCA_902542235.1. The GC content of the type genome is 29.36 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter ammixatica sp. nov.

Candidatus Pelagibacter ammixatica (NL. fem. n. *ammixatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902610655*. The type genome for the species is the GenBank assembly GCA_902610655.1. The GC content of the type genome is 29.1 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter ammulessa sp. nov.

Candidatus Pelagibacter ammulessa (NL. fem. n. *ammulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902546375*. The type genome for the species is the GenBank assembly GCA_902546375.1. The GC content of the type genome is 29.43 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter anaclicella sp. nov.

Candidatus Pelagibacter anaclicella (NL. fem. n. *anaclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628965*. The type genome for the species is the GenBank assembly GCA_902628965.1. The GC content of the type genome is 29.07 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter aneclifica sp. nov.

Candidatus Pelagibacter aneclifica (NL. fem. n. *aneclifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554795*. The type genome for the species is the GenBank assembly GCA_902554795.1. The GC content of the type genome is 29.38 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter aneclivita sp. nov.

Candidatus Pelagibacter aneclivita (NL. fem. n. *aneclivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902593285*. The type genome for the species is the GenBank assembly GCA_902593285.1. The GC content of the type genome is 29.33 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter annificella sp. nov.

Candidatus Pelagibacter annificella (NL. fem. n. *annificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622955*. The type genome for the species is the GenBank assembly GCA_902622955.1. The GC content of the type genome is 29.64 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter annucisca sp. nov.

Candidatus Pelagibacter annucisca (NL. fem. n. *annucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514695*. The type genome for the species is the GenBank assembly GCA_902514695.1. The GC content of the type genome is 28.69 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter antacax sp. nov.

Candidatus Pelagibacter antacax (NL. fem. n. *antacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902513955*. The type genome for the species is the GenBank assembly GCA_902513955.1. The GC content of the type genome is 28.95 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter antefitio sp. nov.

Candidatus Pelagibacter antefitio (NL. fem. n. *antefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603665*. The type genome for the species is the GenBank assembly GCA_902603665.1. The GC content of the type genome is 29.83 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter antirimonas sp. nov.

Candidatus Pelagibacter antirimonas (NL. fem. n. *antirimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902593405*. The type genome for the species is the GenBank assembly GCA_902593405.1. The GC content of the type genome is 29.43 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter antomivita sp. nov.

Candidatus Pelagibacter antomivita (NL. fem. n. *antomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571235*. The type genome for the species is the GenBank assembly GCA_902571235.1. The GC content of the type genome is 28.75 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter appagilega sp. nov.

Candidatus Pelagibacter appagilega (NL. fem. n. *appagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902568875*. The type genome for the species is the GenBank assembly GCA_902568875.1. The GC content of the type genome is 27.88 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter appecitia sp. nov.

Candidatus Pelagibacter appecitia (NL. fem. n. *appecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581405*. The type genome for the species is the GenBank assembly GCA_902581405.1. The GC content of the type genome is 29.88 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter apporicula sp. nov.

Candidatus Pelagibacter apporicula (NL. fem. n. *apporicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514945*. The type genome for the species is the GenBank assembly GCA_902514945.1. The GC content of the type genome is 29.29 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter apporisca sp. nov.

Candidatus Pelagibacter apporisca (NL. fem. n. *apporisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp900177485*. The type genome for the species is the GenBank assembly RS_GCF_900177485.1. The GC content of the type genome is 29.04 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Pelagibacter appugedo sp. nov.

Candidatus Pelagibacter appugedo (NL. fem. n. *appugedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902521675*. The type genome for the species is the GenBank assembly GCA_902521675.1. The GC content of the type genome is 29.22 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter appugimonas sp. nov.

Candidatus Pelagibacter appugimonas (NL. fem. n. *appugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569615*. The type genome for the species is the GenBank assembly GCA_902569615.1. The GC content of the type genome is 28.18 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter apsocicella sp. nov.

Candidatus Pelagibacter apsocicella (NL. fem. n. *apsocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576765*. The type genome for the species is the GenBank assembly GCA_902576765.1. The GC content of the type genome is 29.08 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter apsurivita sp. nov.

Candidatus Pelagibacter apsurivita (NL. fem. n. *apsurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902584225*. The type genome for the species is the GenBank assembly GCA_902584225.1. The GC content of the type genome is 29.77 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter arancilega sp. nov.

Candidatus Pelagibacter arancilega (NL. fem. n. *arancilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579085*. The type genome for the species is the GenBank assembly GCA_902579085.1. The GC content of the type genome is 28.58 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter arancitrix sp. nov.

Candidatus Pelagibacter arancitrix (NL. fem. n. *arancitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570915*. The type genome for the species is the GenBank assembly GCA_902570915.1. The GC content of the type genome is 29.79 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter arcatimonia sp. nov.

Candidatus Pelagibacter arcatimonia (NL. fem. n. *arcatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571525*. The type genome for the species is the GenBank assembly GCA_902571525.1. The GC content of the type genome is 29.14 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter arcatitrix sp. nov.

Candidatus Pelagibacter arcatitrix (NL. fem. n. *arcatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574215*. The type genome for the species is the GenBank assembly GCA_902574215.1. The GC content of the type genome is 29.51 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter arceligena sp. nov.

Candidatus Pelagibacter arceligena (NL. fem. n. *arceligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653365*. The type genome for the species is the GenBank assembly GCA_014653365.1. The GC content of the type genome is 29.06 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter arcubitia sp. nov.

Candidatus Pelagibacter arcubitia (NL. fem. n. *arcubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902608845*. The type genome for the species is the GenBank assembly GCA_902608845.1. The GC content of the type genome is 29.45 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter argitimonas sp. nov.

Candidatus Pelagibacter argitimonas (NL. fem. n. *argitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628565*. The type genome for the species is the GenBank assembly GCA_902628565.1. The GC content of the type genome is 29.5 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter armipibula sp. nov.

Candidatus Pelagibacter armipibula (NL. fem. n. *armipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902626575*. The type genome for the species is the GenBank assembly GCA_902626575.1. The GC content of the type genome is 29.17 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter armipugo sp. nov.

Candidatus Pelagibacter armipugo (NL. fem. n. *armipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902535745*. The type genome for the species is the GenBank assembly GCA_902535745.1. The GC content of the type genome is 29.65 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter arnacicella sp. nov.

Candidatus Pelagibacter arnacicella (NL. fem. n. *arnacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594335*. The type genome for the species is the GenBank assembly GCA_902594335.1. The GC content of the type genome is 29.63 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter artilitas sp. nov.

Candidatus Pelagibacter artilitas (NL. fem. n. *artilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591775*. The type genome for the species is the GenBank assembly GCA_902591775.1. The GC content of the type genome is 29.5 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter artocedo sp. nov.

Candidatus Pelagibacter artocedo (NL. fem. n. *artocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516425*. The type genome for the species is the GenBank assembly GCA_902516425.1. The GC content of the type genome is 29.68 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter artocitura sp. nov.

Candidatus Pelagibacter artocitura (NL. fem. n. *artocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551735*. The type genome for the species is the GenBank assembly GCA_902551735.1. The GC content of the type genome is 28.19 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter artolicella sp. nov.

Candidatus Pelagibacter artolicella (NL. fem. n. *artolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515195*. The type genome for the species is the GenBank assembly GCA_902515195.1. The GC content of the type genome is 28.54 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter artufigena sp. nov.

Candidatus Pelagibacter artufigena (NL. fem. n. *artufigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515095*. The type genome for the species is the GenBank assembly GCA_902515095.1. The GC content of the type genome is 29.2 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter aruspigena sp. nov.

Candidatus Pelagibacter aruspigena (NL. fem. n. *aruspigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902568975*. The type genome for the species is the GenBank assembly GCA_902568975.1. The GC content of the type genome is 28.26 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter ascelivita sp. nov.

Candidatus Pelagibacter ascelivita (NL. fem. n. *ascelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595795*. The type genome for the species is the GenBank assembly GCA_902595795.1. The GC content of the type genome is 29.31 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter ascisentia sp. nov.

Candidatus Pelagibacter ascisentia (NL. fem. n. *ascisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902605865*. The type genome for the species is the GenBank assembly GCA_902605865.1. The GC content of the type genome is 29.53 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Pelagibacter assefago sp. nov.

Candidatus Pelagibacter assefago (NL. fem. n. *assefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632545*. The type genome for the species is the GenBank assembly GCA_902632545.1. The GC content of the type genome is 29.17 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter assicax sp. nov.

Candidatus Pelagibacter assicax (NL. fem. n. *assicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902535155*. The type genome for the species is the GenBank assembly GCA_902535155.1. The GC content of the type genome is 29.09 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter attelastra sp. nov.

Candidatus Pelagibacter attelastra (NL. fem. n. *attelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902577285*. The type genome for the species is the GenBank assembly GCA_902577285.1. The GC content of the type genome is 29.52 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter baropitoga sp. nov.

Candidatus Pelagibacter baropitoga (NL. fem. n. *baropitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902525565*. The type genome for the species is the GenBank assembly GCA_902525565.1. The GC content of the type genome is 29.4 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter benemisca sp. nov.

Candidatus Pelagibacter benemisca (NL. fem. n. *benemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557385*. The type genome for the species is the GenBank assembly GCA_902556865.1. The GC content of the type genome is 28.91 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter benepitia sp. nov.

Candidatus Pelagibacter benepitia (NL. fem. n. *benepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574725*. The type genome for the species is the GenBank assembly GCA_902574725.1. The GC content of the type genome is 28.64 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter benevigena sp. nov.

Candidatus Pelagibacter benevigena (NL. fem. n. *benevigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003215185*. The type genome for the species is the GenBank assembly GCA_003215185.1. The GC content of the type genome is 27.9 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter benevitas sp. nov.

Candidatus Pelagibacter benevitas (NL. fem. n. *benevitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611465*. The type genome for the species is the GenBank assembly GCA_902611465.1. The GC content of the type genome is 29.33 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter benivisca sp. nov.

Candidatus Pelagibacter benivisca (NL. fem. n. *benivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902572005*. The type genome for the species is the GenBank assembly GCA_902572005.1. The GC content of the type genome is 29.32 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter betacousia sp. nov.

Candidatus Pelagibacter betacousia (NL. fem. n. *betacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524235*. The type genome for the species is the GenBank assembly GCA_902524235.1. The GC content of the type genome is 28.85 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter bicalugo sp. nov.

Candidatus Pelagibacter bicalugo (NL. fem. n. *bicalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569285*. The type genome for the species is the GenBank assembly GCA_902569285.1. The GC content of the type genome is 28.07 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter bicinivita sp. nov.

Candidatus Pelagibacter bicinivita (NL. fem. n. *bicinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560015*. The type genome for the species is the GenBank assembly GCA_902560015.1. The GC content of the type genome is 29.16 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Pelagibacter bicorimonia sp. nov.

Candidatus Pelagibacter bicorimonia (NL. fem. n. *bicorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574345*. The type genome for the species is the GenBank assembly GCA_902574345.1. The GC content of the type genome is 29.81 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter bicorivita sp. nov.

Candidatus Pelagibacter bicorivita (NL. fem. n. *bicorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555945*. The type genome for the species is the GenBank assembly GCA_902555945.1. The GC content of the type genome is 28.54 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter bifaratio sp. nov.

Candidatus Pelagibacter bifaratio (NL. fem. n. *bifaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902512765*. The type genome for the species is the GenBank assembly GCA_902512765.1. The GC content of the type genome is 29.57 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter bifisimonas sp. nov.

Candidatus Pelagibacter bifisimonas (NL. fem. n. *bifisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578175*. The type genome for the species is the GenBank assembly GCA_902578175.1. The GC content of the type genome is 29.82 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter binocedo sp. nov.

Candidatus Pelagibacter binocedo (NL. fem. n. *binocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902527485*. The type genome for the species is the GenBank assembly GCA_902527485.1. The GC content of the type genome is 29.51 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter bipaliforma sp. nov.

Candidatus Pelagibacter bipaliforma (NL. fem. n. *bipaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902572945*. The type genome for the species is the GenBank assembly GCA_902572945.1. The GC content of the type genome is 29.37 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter biparago sp. nov.

Candidatus Pelagibacter biparago (NL. fem. n. *biparago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003283905*. The type genome for the species is the GenBank assembly GCA_003283905.1. The GC content of the type genome is 29.15 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter biparastra sp. nov.

Candidatus Pelagibacter biparastra (NL. fem. n. *biparastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580275*. The type genome for the species is the GenBank assembly GCA_902580275.1. The GC content of the type genome is 29.16 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter biparax sp. nov.

Candidatus Pelagibacter biparax (NL. fem. n. *biparax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902536005*. The type genome for the species is the GenBank assembly GCA_902536005.1. The GC content of the type genome is 29.32 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter biparimonas sp. nov.

Candidatus Pelagibacter biparimonas (NL. fem. n. *biparimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282985*. The type genome for the species is the GenBank assembly GCA_902518535.1. The GC content of the type genome is 29.63 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter biparitudo sp. nov.

Candidatus Pelagibacter biparitudo (NL. fem. n. *biparitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003281005*. The type genome for the species is the GenBank assembly GCA_003281005.1. The GC content of the type genome is 29.17 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter biparivita sp. nov.

Candidatus Pelagibacter biparivita (NL. fem. n. *biparivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543575*. The type genome for the species is the GenBank assembly GCA_902518585.1. The GC content of the type genome is 29.28 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter bipenentia sp. nov.

Candidatus Pelagibacter bipenentia (NL. fem. n. *bipenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596595*. The type genome for the species is the GenBank assembly GCA_902596595.1. The GC content of the type genome is 29.23 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter bipenitudo sp. nov.

Candidatus Pelagibacter bipenitudo (NL. fem. n. *bipenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902590125*. The type genome for the species is the GenBank assembly GCA_902590125.1. The GC content of the type genome is 28.75 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter bisacatica sp. nov.

Candidatus Pelagibacter bisacatica (NL. fem. n. *bisacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282975*. The type genome for the species is the GenBank assembly GCA_003282975.1. The GC content of the type genome is 29.53 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter bisulitrix sp. nov.

Candidatus Pelagibacter bisulitrix (NL. fem. n. *bisulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558795*. The type genome for the species is the GenBank assembly GCA_902558795.1. The GC content of the type genome is 29.66 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter biveritrix sp. nov.

Candidatus Pelagibacter biveritrix (NL. fem. n. *biveritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634935*. The type genome for the species is the GenBank assembly GCA_902634935.1. The GC content of the type genome is 29.44 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter bonititrix sp. nov.

Candidatus Pelagibacter bonititrix (NL. fem. n. *bonititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902550285*. The type genome for the species is the GenBank assembly GCA_902550285.1. The GC content of the type genome is 28.27 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter bugilessa sp. nov.

Candidatus Pelagibacter bugilessa (NL. fem. n. *bugilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560625*. The type genome for the species is the GenBank assembly GCA_902560625.1. The GC content of the type genome is 28.83 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter bulapatica sp. nov.

Candidatus Pelagibacter bulapatica (NL. fem. n. *bulapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606065*. The type genome for the species is the GenBank assembly GCA_902606065.1. The GC content of the type genome is 29.63 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter bulapitio sp. nov.

Candidatus Pelagibacter bulapitio (NL. fem. n. *bulapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654265*. The type genome for the species is the GenBank assembly GCA_014654265.1. The GC content of the type genome is 28.65 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter buxanicella sp. nov.

Candidatus Pelagibacter buxanicella (NL. fem. n. *buxanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635685*. The type genome for the species is the GenBank assembly GCA_902635685.1. The GC content of the type genome is 29.43 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter buxanitica sp. nov.

Candidatus Pelagibacter buxanitica (NL. fem. n. *buxanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003210025*. The type genome for the species is the GenBank assembly GCA_902578885.1. The GC content of the type genome is 29.13 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Pelagibacter cacaligena sp. nov.

Candidatus Pelagibacter cacaligena (NL. fem. n. *cacaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537665*. The type genome for the species is the GenBank assembly GCA_902537665.1. The GC content of the type genome is 29.39 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter cacopilega sp. nov.

Candidatus Pelagibacter cacopilega (NL. fem. n. *cacopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902541515*. The type genome for the species is the GenBank assembly GCA_902541515.1. The GC content of the type genome is 29.77 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter cadavessa sp. nov.

Candidatus Pelagibacter cadavessa (NL. fem. n. *cadavessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902529105*. The type genome for the species is the GenBank assembly GCA_902529105.1. The GC content of the type genome is 29.03 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter cadavimonia sp. nov.

Candidatus Pelagibacter cadavimonia (NL. fem. n. *cadavimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604565*. The type genome for the species is the GenBank assembly GCA_902604565.1. The GC content of the type genome is 29.55 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter caduritas sp. nov.

Candidatus Pelagibacter caduritas (NL. fem. n. *caduritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560565*. The type genome for the species is the GenBank assembly GCA_902630695.1. The GC content of the type genome is 29.39 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter canacicula sp. nov.

Candidatus Pelagibacter canacicula (NL. fem. n. *canacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576045*. The type genome for the species is the GenBank assembly GCA_902576045.1. The GC content of the type genome is 29.49 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter capilentia sp. nov.

Candidatus Pelagibacter capilentia (NL. fem. n. *capilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902567045*. The type genome for the species is the GenBank assembly GCA_014654125.1. The GC content of the type genome is 29.36 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter capilibra sp. nov.

Candidatus Pelagibacter capilibra (NL. fem. n. *capilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902636075*. The type genome for the species is the GenBank assembly GCA_902636075.1. The GC content of the type genome is 29.71 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Pelagibacter capiligena sp. nov.

Candidatus Pelagibacter capiligena (NL. fem. n. *capiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902610315*. The type genome for the species is the GenBank assembly GCA_902610315.1. The GC content of the type genome is 28.82 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter capilugo sp. nov.

Candidatus Pelagibacter capilugo (NL. fem. n. *capilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571925*. The type genome for the species is the GenBank assembly GCA_902571925.1. The GC content of the type genome is 29.14 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter capucitica sp. nov.

Candidatus Pelagibacter capucitica (NL. fem. n. *capucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902625825*. The type genome for the species is the GenBank assembly GCA_902625825.1. The GC content of the type genome is 29.9 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter capucugo sp. nov.

Candidatus Pelagibacter capucugo (NL. fem. n. *capucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003216235*. The type genome for the species is the GenBank assembly GCA_902564395.1. The GC content of the type genome is 28.5 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter carunigena sp. nov.

Candidatus Pelagibacter carunigena (NL. fem. n. *carunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556765*. The type genome for the species is the GenBank assembly GCA_902585665.1. The GC content of the type genome is 29.23 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter casabilega sp. nov.

Candidatus Pelagibacter casabilega (NL. fem. n. *casabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557585*. The type genome for the species is the GenBank assembly GCA_902557585.1. The GC content of the type genome is 30.38 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter caseliforma sp. nov.

Candidatus Pelagibacter caseliforma (NL. fem. n. *caseliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633185*. The type genome for the species is the GenBank assembly GCA_902633185.1. The GC content of the type genome is 29.76 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter casigicella sp. nov.

Candidatus Pelagibacter casigicella (NL. fem. n. *casigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569105*. The type genome for the species is the GenBank assembly GCA_902569105.1. The GC content of the type genome is 29.02 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter catafax sp. nov.

Candidatus Pelagibacter catafax (NL. fem. n. *catafax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571425*. The type genome for the species is the GenBank assembly GCA_902571425.1. The GC content of the type genome is 29.33 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pelagibacter catagitudo sp. nov.

Candidatus Pelagibacter catagitudo (NL. fem. n. *catagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902532225*. The type genome for the species is the GenBank assembly GCA_902532225.1. The GC content of the type genome is 28.64 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter catalibra sp. nov.

Candidatus Pelagibacter catalibra (NL. fem. n. *catalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592965*. The type genome for the species is the GenBank assembly GCA_902592965.1. The GC content of the type genome is 28.91 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter catalitas sp. nov.

Candidatus Pelagibacter catalitas (NL. fem. n. *catalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003281725*. The type genome for the species is the GenBank assembly GCA_003281725.1. The GC content of the type genome is 28.92 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter catecax sp. nov.

Candidatus Pelagibacter catecax (NL. fem. n. *catecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902586025*. The type genome for the species is the GenBank assembly GCA_902586025.1. The GC content of the type genome is 29.45 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter catilimonas sp. nov.

Candidatus Pelagibacter catilimonas (NL. fem. n. *catilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514665*. The type genome for the species is the GenBank assembly GCA_902514665.1. The GC content of the type genome is 29.37 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter catilitica sp. nov.

Candidatus Pelagibacter catilitica (NL. fem. n. *catilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604305*. The type genome for the species is the GenBank assembly GCA_902604305.1. The GC content of the type genome is 28.4 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter catobitudo sp. nov.

Candidatus Pelagibacter catobitudo (NL. fem. n. *catobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902614905*. The type genome for the species is the GenBank assembly GCA_902614905.1. The GC content of the type genome is 28.88 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter cenobitudo sp. nov.

Candidatus Pelagibacter cenobitudo (NL. fem. n. *cenobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902538885*. The type genome for the species is the GenBank assembly GCA_902538885.1. The GC content of the type genome is 29.53 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter ceracicella sp. nov.

Candidatus Pelagibacter ceracicella (NL. fem. n. *ceracicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902586395*. The type genome for the species is the GenBank assembly GCA_902586395.1. The GC content of the type genome is 29.52 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Pelagibacter ceracilega sp. nov.

Candidatus Pelagibacter ceracilega (NL. fem. n. *ceracilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902613065*. The type genome for the species is the GenBank assembly GCA_902567545.1. The GC content of the type genome is 29.25 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter ceracitrix sp. nov.

Candidatus Pelagibacter ceracitrix (NL. fem. n. *ceracitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578525*. The type genome for the species is the GenBank assembly GCA_902578525.1. The GC content of the type genome is 28.6 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter cerebousia sp. nov.

Candidatus Pelagibacter cerebousia (NL. fem. n. *cerebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003210095*. The type genome for the species is the GenBank assembly GCA_902576855.1. The GC content of the type genome is 28.7 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter cerucicella sp. nov.

Candidatus Pelagibacter cerucicella (NL. fem. n. *cerucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902565935*. The type genome for the species is the GenBank assembly GCA_902597265.1. The GC content of the type genome is 29.15 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter cerucitas sp. nov.

Candidatus Pelagibacter cerucitas (NL. fem. n. *cerucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597515*. The type genome for the species is the GenBank assembly GCA_902597515.1. The GC content of the type genome is 29.16 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter chalbax sp. nov.

Candidatus Pelagibacter chalbax (NL. fem. n. *chalbax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902615975*. The type genome for the species is the GenBank assembly GCA_902615975.1. The GC content of the type genome is 29.37 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter cibariforma sp. nov.

Candidatus Pelagibacter cibariforma (NL. fem. n. *cibariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902527415*. The type genome for the species is the GenBank assembly GCA_902527415.1. The GC content of the type genome is 29.39 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter cibicago sp. nov.

Candidatus Pelagibacter cibicago (NL. fem. n. *cibicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902532565*. The type genome for the species is the GenBank assembly GCA_902532565.1. The GC content of the type genome is 28.95 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter cibicicella sp. nov.

Candidatus Pelagibacter cibicicella (NL. fem. n. *cibicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902609535*. The type genome for the species is the GenBank assembly GCA_902609535.1. The GC content of the type genome is 29.44 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter cicatastra sp. nov.

Candidatus Pelagibacter cicatastra (NL. fem. n. *cicatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599995*. The type genome for the species is the GenBank assembly GCA_902599995.1. The GC content of the type genome is 29.96 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter cicatitura sp. nov.

Candidatus Pelagibacter cicatitura (NL. fem. n. *cicatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902544135*. The type genome for the species is the GenBank assembly GCA_902567075.1. The GC content of the type genome is 29.71 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter cicilatica sp. nov.

Candidatus Pelagibacter cicilatica (NL. fem. n. *cicilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556505*. The type genome for the species is the GenBank assembly GCA_902556505.1. The GC content of the type genome is 29.33 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter cilibitia sp. nov.

Candidatus Pelagibacter cilibitia (NL. fem. n. *cilibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902526115*. The type genome for the species is the GenBank assembly GCA_902526115.1. The GC content of the type genome is 29.93 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter cilibitudo sp. nov.

Candidatus Pelagibacter cilibitudo (NL. fem. n. *cilibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003212275*. The type genome for the species is the GenBank assembly GCA_003212275.1. The GC content of the type genome is 29.49 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter cimelago sp. nov.

Candidatus Pelagibacter cimelago (NL. fem. n. *cimelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537055*. The type genome for the species is the GenBank assembly GCA_902537055.1. The GC content of the type genome is 29.1 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter cimelilega sp. nov.

Candidatus Pelagibacter cimelilega (NL. fem. n. *cimelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003279715*. The type genome for the species is the GenBank assembly GCA_003279715.1. The GC content of the type genome is 29.2 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter cimitedo sp. nov.

Candidatus Pelagibacter cimitedo (NL. fem. n. *cimitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902600635*. The type genome for the species is the GenBank assembly GCA_902600635.1. The GC content of the type genome is 29.17 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter cinipimonia sp. nov.

Candidatus Pelagibacter cinipimonia (NL. fem. n. *cinipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587435*. The type genome for the species is the GenBank assembly GCA_902587435.1. The GC content of the type genome is 28.43 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter cisoritudo sp. nov.

Candidatus Pelagibacter cisoritudo (NL. fem. n. *cisoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902586485*. The type genome for the species is the GenBank assembly GCA_902586485.1. The GC content of the type genome is 29.33 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter cisorousia sp. nov.

Candidatus Pelagibacter cisorousia (NL. fem. n. *cisorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551755*. The type genome for the species is the GenBank assembly GCA_902551755.1. The GC content of the type genome is 29.51 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter citipitoga sp. nov.

Candidatus Pelagibacter citipitoga (NL. fem. n. *citipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902572925*. The type genome for the species is the GenBank assembly GCA_902572925.1. The GC content of the type genome is 29.13 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter citivivita sp. nov.

Candidatus Pelagibacter citivivita (NL. fem. n. *citivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902526405*. The type genome for the species is the GenBank assembly GCA_902526405.1. The GC content of the type genome is 29.58 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter citocastra sp. nov.

Candidatus Pelagibacter citocastra (NL. fem. n. *citocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587665*. The type genome for the species is the GenBank assembly GCA_902588095.1. The GC content of the type genome is 29.47 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter cituvatio sp. nov.

Candidatus Pelagibacter cituvatio (NL. fem. n. *cituvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581445*. The type genome for the species is the GenBank assembly GCA_902581445.1. The GC content of the type genome is 29.23 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter cituvilenta sp. nov.

Candidatus Pelagibacter cituvilenta (NL. fem. n. *cituvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902612325*. The type genome for the species is the GenBank assembly GCA_902616875.1. The GC content of the type genome is 29.86 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter clancitoga sp. nov.

Candidatus Pelagibacter clancitoga (NL. fem. n. *clancitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902532195*. The type genome for the species is the GenBank assembly GCA_902532195.1. The GC content of the type genome is 28.03 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter cnestetta sp. nov.

Candidatus Pelagibacter cnestetta (NL. fem. n. *cnestetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606445*. The type genome for the species is the GenBank assembly GCA_902606445.1. The GC content of the type genome is 28.91 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter cobalibula sp. nov.

Candidatus Pelagibacter cobalibula (NL. fem. n. *cobalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp000155895*. The type genome for the species is the GenBank assembly GCA_902558745.1. The GC content of the type genome is 29.11 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter codifimonia sp. nov.

Candidatus Pelagibacter codifimonia (NL. fem. n. *codifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633585*. The type genome for the species is the GenBank assembly GCA_902633585.1. The GC content of the type genome is 29.31 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter cohonax sp. nov.

Candidatus Pelagibacter cohonax (NL. fem. n. *cohonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537905*. The type genome for the species is the GenBank assembly GCA_902537905.1. The GC content of the type genome is 29.45 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter colubicella sp. nov.

Candidatus Pelagibacter colubicella (NL. fem. n. *colubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902562875*. The type genome for the species is the GenBank assembly GCA_902562875.1. The GC content of the type genome is 28.8 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter colutimonas sp. nov.

Candidatus Pelagibacter colutimonas (NL. fem. n. *colutimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902609675*. The type genome for the species is the GenBank assembly GCA_902609675.1. The GC content of the type genome is 29.56 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter conabitia sp. nov.

Candidatus Pelagibacter conabitia (NL. fem. n. *conabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611845*. The type genome for the species is the GenBank assembly GCA_902586795.1. The GC content of the type genome is 29.21 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter conibago sp. nov.

Candidatus Pelagibacter conibago (NL. fem. n. *conibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902561095*. The type genome for the species is the GenBank assembly GCA_902561095.1. The GC content of the type genome is 30.05 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter conifilega sp. nov.

Candidatus Pelagibacter conifilega (NL. fem. n. *conifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528645*. The type genome for the species is the GenBank assembly GCA_902528645.1. The GC content of the type genome is 29.4 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter conopitudo sp. nov.

Candidatus Pelagibacter conopitudo (NL. fem. n. *conopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581585*. The type genome for the species is the GenBank assembly GCA_902581585.1. The GC content of the type genome is 29.45 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Pelagibacter cosiditrix sp. nov.

Candidatus Pelagibacter cosiditrix (NL. fem. n. *cosiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569405*. The type genome for the species is the GenBank assembly GCA_902569405.1. The GC content of the type genome is 28.47 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter coticitio sp. nov.

Candidatus Pelagibacter coticitio (NL. fem. n. *coticitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524545*. The type genome for the species is the GenBank assembly GCA_902524545.1. The GC content of the type genome is 29.26 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter crastetta sp. nov.

Candidatus Pelagibacter crastetta (NL. fem. n. *crastetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902609915*. The type genome for the species is the GenBank assembly GCA_902609915.1. The GC content of the type genome is 28.94 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter crastitio sp. nov.

Candidatus Pelagibacter crastitio (NL. fem. n. *crastitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551895*. The type genome for the species is the GenBank assembly GCA_902551895.1. The GC content of the type genome is 28.47 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter crusmatica sp. nov.

Candidatus Pelagibacter crusmatica (NL. fem. n. *crusmatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597425*. The type genome for the species is the GenBank assembly GCA_902597425.1. The GC content of the type genome is 28.38 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter cucurifica sp. nov.

Candidatus Pelagibacter cucurifica (NL. fem. n. *cucurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596045*. The type genome for the species is the GenBank assembly GCA_902572705.1. The GC content of the type genome is 28.89 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter culibitica sp. nov.

Candidatus Pelagibacter culibitica (NL. fem. n. *culibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902564245*. The type genome for the species is the GenBank assembly GCA_902564245.1. The GC content of the type genome is 27.68 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter culigilenta sp. nov.

Candidatus Pelagibacter culigilenta (NL. fem. n. *culigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623215*. The type genome for the species is the GenBank assembly GCA_902615935.1. The GC content of the type genome is 29.51 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter cululibula sp. nov.

Candidatus Pelagibacter cululibula (NL. fem. n. *cululibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580505*. The type genome for the species is the GenBank assembly GCA_902580505.1. The GC content of the type genome is 29.09 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter cunabisca sp. nov.

Candidatus Pelagibacter cunabisca (NL. fem. n. *cunabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581925*. The type genome for the species is the GenBank assembly GCA_902581925.1. The GC content of the type genome is 29.26 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter cunabitoga sp. nov.

Candidatus Pelagibacter cunabitoga (NL. fem. n. *cunabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902616645*. The type genome for the species is the GenBank assembly GCA_902616645.1. The GC content of the type genome is 29.15 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter cuticimonia sp. nov.

Candidatus Pelagibacter cuticimonia (NL. fem. n. *cuticimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587155*. The type genome for the species is the GenBank assembly GCA_902587155.1. The GC content of the type genome is 29.27 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter daducetta sp. nov.

Candidatus Pelagibacter daducetta (NL. fem. n. *daducetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003278805*. The type genome for the species is the GenBank assembly GCA_003278805.1. The GC content of the type genome is 29.28 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter daducicula sp. nov.

Candidatus Pelagibacter daducicula (NL. fem. n. *daducicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603925*. The type genome for the species is the GenBank assembly GCA_902603925.1. The GC content of the type genome is 29.35 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter dapifago sp. nov.

Candidatus Pelagibacter dapifago (NL. fem. n. *dapifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902619665*. The type genome for the species is the GenBank assembly GCA_902578145.1. The GC content of the type genome is 28.87 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter dapifentia sp. nov.

Candidatus Pelagibacter dapifentia (NL. fem. n. *dapifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902573465*. The type genome for the species is the GenBank assembly GCA_902557925.1. The GC content of the type genome is 29.47 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter debucatica sp. nov.

Candidatus Pelagibacter debucatica (NL. fem. n. *debucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902567235*. The type genome for the species is the GenBank assembly GCA_902567235.1. The GC content of the type genome is 28.63 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter debucilega sp. nov.

Candidatus Pelagibacter debucilega (NL. fem. n. *debucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627645*. The type genome for the species is the GenBank assembly GCA_902627645.1. The GC content of the type genome is 29.28 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter debucitura sp. nov.

Candidatus Pelagibacter debucitura (NL. fem. n. *debucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902520355*. The type genome for the species is the GenBank assembly GCA_902520355.1. The GC content of the type genome is 29.43 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter decacifica sp. nov.

Candidatus Pelagibacter decacifica (NL. fem. n. *decacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515185*. The type genome for the species is the GenBank assembly GCA_902515185.1. The GC content of the type genome is 28.89 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter decapilenta sp. nov.

Candidatus Pelagibacter decapilenta (NL. fem. n. *decapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595635*. The type genome for the species is the GenBank assembly GCA_902595635.1. The GC content of the type genome is 29.35 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter decapitudo sp. nov.

Candidatus Pelagibacter decapitudo (NL. fem. n. *decapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592675*. The type genome for the species is the GenBank assembly GCA_902592675.1. The GC content of the type genome is 29.18 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter decativita sp. nov.

Candidatus Pelagibacter decativita (NL. fem. n. *decativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003211555*. The type genome for the species is the GenBank assembly GCA_003283045.1. The GC content of the type genome is 29.72 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter dececilega sp. nov.

Candidatus Pelagibacter dececilega (NL. fem. n. *dececilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902598655*. The type genome for the species is the GenBank assembly GCA_902598655.1. The GC content of the type genome is 29.21 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter dececitas sp. nov.

Candidatus Pelagibacter dececitas (NL. fem. n. *dececitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606075*. The type genome for the species is the GenBank assembly GCA_902610725.1. The GC content of the type genome is 29.06 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter decinago sp. nov.

Candidatus Pelagibacter decinago (NL. fem. n. *decinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902593445*. The type genome for the species is the GenBank assembly GCA_902593445.1. The GC content of the type genome is 29.4 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter decinedo sp. nov.

Candidatus Pelagibacter decinedo (NL. fem. n. *decinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902540595*. The type genome for the species is the GenBank assembly GCA_902554715.1. The GC content of the type genome is 30.03 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter decinentia sp. nov.

Candidatus Pelagibacter decinentia (NL. fem. n. *decinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902538255*. The type genome for the species is the GenBank assembly GCA_902538255.1. The GC content of the type genome is 29.2 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter decunilenta sp. nov.

Candidatus Pelagibacter decunilenta (NL. fem. n. *decunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282945*. The type genome for the species is the GenBank assembly GCA_902515595.1. The GC content of the type genome is 29.4 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter defacatio sp. nov.

Candidatus Pelagibacter defacatio (NL. fem. n. *defacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902542855*. The type genome for the species is the GenBank assembly GCA_902542855.1. The GC content of the type genome is 29.68 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter defenax sp. nov.

Candidatus Pelagibacter defenax (NL. fem. n. *defenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597895*. The type genome for the species is the GenBank assembly GCA_902633835.1. The GC content of the type genome is 28.71 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter defunilenta sp. nov.

Candidatus Pelagibacter defunilenta (NL. fem. n. *defunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902523515*. The type genome for the species is the GenBank assembly GCA_902523515.1. The GC content of the type genome is 29.16 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter dehinicula sp. nov.

Candidatus Pelagibacter dehinicula (NL. fem. n. *dehinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558585*. The type genome for the species is the GenBank assembly GCA_902558585.1. The GC content of the type genome is 29.15 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter dehinousia sp. nov.

Candidatus Pelagibacter dehinousia (NL. fem. n. *dehinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634455*. The type genome for the species is the GenBank assembly GCA_902634455.1. The GC content of the type genome is 28.05 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter dehonitoga sp. nov.

Candidatus Pelagibacter dehonitoga (NL. fem. n. *dehonitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902548405*. The type genome for the species is the GenBank assembly GCA_902548405.1. The GC content of the type genome is 29.66 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter delapetta sp. nov.

Candidatus Pelagibacter delapetta (NL. fem. n. *delapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603045*. The type genome for the species is the GenBank assembly GCA_902603045.1. The GC content of the type genome is 29.64 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter delapimonia sp. nov.

Candidatus Pelagibacter delapimonia (NL. fem. n. *delapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902625715*. The type genome for the species is the GenBank assembly GCA_902625715.1. The GC content of the type genome is 29.39 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter delubitudo sp. nov.

Candidatus Pelagibacter delubitudo (NL. fem. n. *delubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902540275*. The type genome for the species is the GenBank assembly GCA_902540275.1. The GC content of the type genome is 28.31 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter delucessa sp. nov.

Candidatus Pelagibacter delucessa (NL. fem. n. *delucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618205*. The type genome for the species is the GenBank assembly GCA_902575895.1. The GC content of the type genome is 29.42 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter demadifica sp. nov.

Candidatus Pelagibacter demadifica (NL. fem. n. *demadifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533585*. The type genome for the species is the GenBank assembly GCA_902533585.1. The GC content of the type genome is 28.79 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter demagedo sp. nov.

Candidatus Pelagibacter demagedo (NL. fem. n. *demagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580895*. The type genome for the species is the GenBank assembly GCA_902592865.1. The GC content of the type genome is 29.79 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter demagimonia sp. nov.

Candidatus Pelagibacter demagimonia (NL. fem. n. *demagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902527635*. The type genome for the species is the GenBank assembly GCA_902527635.1. The GC content of the type genome is 29.73 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter denavastra sp. nov.

Candidatus Pelagibacter denavastra (NL. fem. n. *denavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003212295*. The type genome for the species is the GenBank assembly GCA_902592815.1. The GC content of the type genome is 28.94 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter denavedo sp. nov.

Candidatus Pelagibacter denavedo (NL. fem. n. *denavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902609685*. The type genome for the species is the GenBank assembly GCA_902547665.1. The GC content of the type genome is 30.01 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter denicago sp. nov.

Candidatus Pelagibacter denicago (NL. fem. n. *denicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557235*. The type genome for the species is the GenBank assembly GCA_902557235.1. The GC content of the type genome is 29.02 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter denigousia sp. nov.

Candidatus Pelagibacter denigousia (NL. fem. n. *denigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618485*. The type genome for the species is the GenBank assembly GCA_902585725.1. The GC content of the type genome is 29.4 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter denoritica sp. nov.

Candidatus Pelagibacter denoritica (NL. fem. n. *denoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518925*. The type genome for the species is the GenBank assembly GCA_902518925.1. The GC content of the type genome is 29.04 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Pelagibacter depacilega sp. nov.

Candidatus Pelagibacter depacilega (NL. fem. n. *depacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594655*. The type genome for the species is the GenBank assembly GCA_902594655.1. The GC content of the type genome is 29.2 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter deparitudo sp. nov.

Candidatus Pelagibacter deparitudo (NL. fem. n. *deparitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902593845*. The type genome for the species is the GenBank assembly GCA_902577125.1. The GC content of the type genome is 29.22 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter depasigena sp. nov.

Candidatus Pelagibacter depasigena (NL. fem. n. *depasigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902536765*. The type genome for the species is the GenBank assembly GCA_902536765.1. The GC content of the type genome is 29.26 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter depelago sp. nov.

Candidatus Pelagibacter depelago (NL. fem. n. *depelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623495*. The type genome for the species is the GenBank assembly GCA_902541935.1. The GC content of the type genome is 29.09 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter depeletta sp. nov.

Candidatus Pelagibacter depeletta (NL. fem. n. *depeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571975*. The type genome for the species is the GenBank assembly GCA_902571975.1. The GC content of the type genome is 29.64 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter depelitoga sp. nov.

Candidatus Pelagibacter depelitoga (NL. fem. n. *depelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597335*. The type genome for the species is the GenBank assembly GCA_902560585.1. The GC content of the type genome is 29.54 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter depubitia sp. nov.

Candidatus Pelagibacter depubitia (NL. fem. n. *depubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002170205*. The type genome for the species is the GenBank assembly GCA_002170205.2. The GC content of the type genome is 30.12 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter derecax sp. nov.

Candidatus Pelagibacter derecax (NL. fem. n. *derecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578265*. The type genome for the species is the GenBank assembly GCA_902621155.1. The GC content of the type genome is 29.51 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter desacitas sp. nov.

Candidatus Pelagibacter desacitas (NL. fem. n. *desacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578325*. The type genome for the species is the GenBank assembly GCA_902578325.1. The GC content of the type genome is 29.06 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter desepatica sp. nov.

Candidatus Pelagibacter desepatica (NL. fem. n. *desepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533445*. The type genome for the species is the GenBank assembly GCA_902570835.1. The GC content of the type genome is 29.36 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter desepivita sp. nov.

Candidatus Pelagibacter desepivita (NL. fem. n. *desepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622545*. The type genome for the species is the GenBank assembly GCA_902547585.1. The GC content of the type genome is 28.78 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter desonetta sp. nov.

Candidatus Pelagibacter desonetta (NL. fem. n. *desonetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902544985*. The type genome for the species is the GenBank assembly GCA_902544985.1. The GC content of the type genome is 29.21 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter desorilega sp. nov.

Candidatus Pelagibacter desorilega (NL. fem. n. *desorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519695*. The type genome for the species is the GenBank assembly GCA_902519695.1. The GC content of the type genome is 29.68 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter detesastra sp. nov.

Candidatus Pelagibacter detesastra (NL. fem. n. *detesastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653625*. The type genome for the species is the GenBank assembly GCA_014653625.1. The GC content of the type genome is 28.45 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter detesibra sp. nov.

Candidatus Pelagibacter detesibra (NL. fem. n. *detesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558205*. The type genome for the species is the GenBank assembly GCA_902558205.1. The GC content of the type genome is 29.29 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter detorentia sp. nov.

Candidatus Pelagibacter detorentia (NL. fem. n. *detorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp000299095*. The type genome for the species is the GenBank assembly RS_GCF_000299095.1. The GC content of the type genome is 28.63 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Pelagibacter detoritura sp. nov.

Candidatus Pelagibacter detoritura (NL. fem. n. *detoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902541745*. The type genome for the species is the GenBank assembly GCA_902532515.1. The GC content of the type genome is 29.12 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter detosicella sp. nov.

Candidatus Pelagibacter detosicella (NL. fem. n. *detosicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594255*. The type genome for the species is the GenBank assembly GCA_902594255.1. The GC content of the type genome is 29.52 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter detumastra sp. nov.

Candidatus Pelagibacter detumastra (NL. fem. n. *detumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628495*. The type genome for the species is the GenBank assembly GCA_902628495.1. The GC content of the type genome is 28.94 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter detumisca sp. nov.

Candidatus Pelagibacter detumisca (NL. fem. n. *detumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634775*. The type genome for the species is the GenBank assembly GCA_902634775.1. The GC content of the type genome is 29.87 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter dicanax sp. nov.

Candidatus Pelagibacter dicanax (NL. fem. n. *dicanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604575*. The type genome for the species is the GenBank assembly GCA_902604575.1. The GC content of the type genome is 29.31 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter dicibatio sp. nov.

Candidatus Pelagibacter dicibatio (NL. fem. n. *dicibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603555*. The type genome for the species is the GenBank assembly GCA_902603555.1. The GC content of the type genome is 28.4 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter dicimitica sp. nov.

Candidatus Pelagibacter dicimitica (NL. fem. n. *dicimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587095*. The type genome for the species is the GenBank assembly GCA_902587095.1. The GC content of the type genome is 28.91 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter didacitia sp. nov.

Candidatus Pelagibacter didacitia (NL. fem. n. *didacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519945*. The type genome for the species is the GenBank assembly GCA_902519945.1. The GC content of the type genome is 29.4 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter dilacilenta sp. nov.

Candidatus Pelagibacter dilacilenta (NL. fem. n. *dilacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597675*. The type genome for the species is the GenBank assembly GCA_902580835.1. The GC content of the type genome is 29.76 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter dilacivita sp. nov.

Candidatus Pelagibacter dilacivita (NL. fem. n. *dilacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554765*. The type genome for the species is the GenBank assembly GCA_902554765.1. The GC content of the type genome is 28.74 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter dileciforma sp. nov.

Candidatus Pelagibacter dileciforma (NL. fem. n. *dileciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902573585*. The type genome for the species is the GenBank assembly GCA_902573585.1. The GC content of the type genome is 28.78 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter dilibicella sp. nov.

Candidatus Pelagibacter dilibicella (NL. fem. n. *dilibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517615*. The type genome for the species is the GenBank assembly GCA_902517615.1. The GC content of the type genome is 29.15 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Pelagibacter dilicatica sp. nov.

Candidatus Pelagibacter dilicatica (NL. fem. n. *dilicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902571135*. The type genome for the species is the GenBank assembly GCA_902571135.1. The GC content of the type genome is 29.28 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter diluvitas sp. nov.

Candidatus Pelagibacter diluvitas (NL. fem. n. *diluvitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902636025*. The type genome for the species is the GenBank assembly GCA_902547155.1. The GC content of the type genome is 29.54 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter dimacifica sp. nov.

Candidatus Pelagibacter dimacifica (NL. fem. n. *dimacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604265*. The type genome for the species is the GenBank assembly GCA_902604265.1. The GC content of the type genome is 28.05 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter dimacousia sp. nov.

Candidatus Pelagibacter dimacousia (NL. fem. n. *dimacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003213015*. The type genome for the species is the GenBank assembly GCA_003213015.1. The GC content of the type genome is 29.49 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter dinupitoga sp. nov.

Candidatus Pelagibacter dinupitoga (NL. fem. n. *dinupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902605605*. The type genome for the species is the GenBank assembly GCA_902605605.1. The GC content of the type genome is 29.62 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter diponentia sp. nov.

Candidatus Pelagibacter diponentia (NL. fem. n. *diponentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902614975*. The type genome for the species is the GenBank assembly GCA_902614975.1. The GC content of the type genome is 29.36 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter diponiforma sp. nov.

Candidatus Pelagibacter diponiforma (NL. fem. n. *diponiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902590365*. The type genome for the species is the GenBank assembly GCA_902590365.1. The GC content of the type genome is 28.29 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter direpago sp. nov.

Candidatus Pelagibacter direpago (NL. fem. n. *direpago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524345*. The type genome for the species is the GenBank assembly GCA_902542605.1. The GC content of the type genome is 29.55 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter direpatica sp. nov.

Candidatus Pelagibacter direpatica (NL. fem. n. *direpatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555465*. The type genome for the species is the GenBank assembly GCA_902577975.1. The GC content of the type genome is 28.75 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter direpisca sp. nov.

Candidatus Pelagibacter direpisca (NL. fem. n. *direpisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653535*. The type genome for the species is the GenBank assembly GCA_014653535.1. The GC content of the type genome is 28.9 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter diritentia sp. nov.

Candidatus Pelagibacter diritentia (NL. fem. n. *diritentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902534735*. The type genome for the species is the GenBank assembly GCA_902623855.1. The GC content of the type genome is 29.46 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter diriticella sp. nov.

Candidatus Pelagibacter diriticella (NL. fem. n. *diriticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599485*. The type genome for the species is the GenBank assembly GCA_902599485.1. The GC content of the type genome is 29.5 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter diritisca sp. nov.

Candidatus Pelagibacter diritisca (NL. fem. n. *diritisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623785*. The type genome for the species is the GenBank assembly GCA_902623785.1. The GC content of the type genome is 29.72 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter divolitica sp. nov.

Candidatus Pelagibacter divolitica (NL. fem. n. *divolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp002732835*. The type genome for the species is the GenBank assembly GCA_002732835.1. The GC content of the type genome is 30.03 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter divorousia sp. nov.

Candidatus Pelagibacter divorousia (NL. fem. n. *divorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606105*. The type genome for the species is the GenBank assembly GCA_902606105.1. The GC content of the type genome is 29.68 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter docibitio sp. nov.

Candidatus Pelagibacter docibitio (NL. fem. n. *docibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902521075*. The type genome for the species is the GenBank assembly GCA_902521075.1. The GC content of the type genome is 29.42 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter domabitudo sp. nov.

Candidatus Pelagibacter domabitudo (NL. fem. n. *domabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558435*. The type genome for the species is the GenBank assembly GCA_902558435.1. The GC content of the type genome is 29.29 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Pelagibacter domicimonia sp. nov.

Candidatus Pelagibacter domicimonia (NL. fem. n. *domicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902572515*. The type genome for the species is the GenBank assembly GCA_902572515.1. The GC content of the type genome is 29.3 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter domipatio sp. nov.

Candidatus Pelagibacter domipatio (NL. fem. n. *domipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558705*. The type genome for the species is the GenBank assembly GCA_902525025.1. The GC content of the type genome is 29.33 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter doxolitas sp. nov.

Candidatus Pelagibacter doxolitas (NL. fem. n. *doxolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543405*. The type genome for the species is the GenBank assembly GCA_902543405.1. The GC content of the type genome is 29.51 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter ducilitica sp. nov.

Candidatus Pelagibacter ducilitica (NL. fem. n. *ducilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603625*. The type genome for the species is the GenBank assembly GCA_902603625.1. The GC content of the type genome is 28.89 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter duponessa sp. nov.

Candidatus Pelagibacter duponessa (NL. fem. n. *duponessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902546765*. The type genome for the species is the GenBank assembly GCA_902579025.1. The GC content of the type genome is 29.65 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter dupunitudo sp. nov.

Candidatus Pelagibacter dupunitudo (NL. fem. n. *dupunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003216255*. The type genome for the species is the GenBank assembly GCA_003209635.1. The GC content of the type genome is 28.29 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter eccilatica sp. nov.

Candidatus Pelagibacter eccilatica (NL. fem. n. *eccilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518595*. The type genome for the species is the GenBank assembly GCA_902518595.1. The GC content of the type genome is 28.79 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter ecfacitia sp. nov.

Candidatus Pelagibacter ecfacitia (NL. fem. n. *ecfacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902613755*. The type genome for the species is the GenBank assembly GCA_902613755.1. The GC content of the type genome is 29.19 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Pelagibacter echogentia sp. nov.

Candidatus Pelagibacter echogentia (NL. fem. n. *echogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551445*. The type genome for the species is the GenBank assembly GCA_902551445.1. The GC content of the type genome is 28.86 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter echogimonia sp. nov.

Candidatus Pelagibacter echogimonia (NL. fem. n. *echogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902538525*. The type genome for the species is the GenBank assembly GCA_902538525.1. The GC content of the type genome is 29.06 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter echogousia sp. nov.

Candidatus Pelagibacter echogousia (NL. fem. n. *echogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902620265*. The type genome for the species is the GenBank assembly GCA_902620265.1. The GC content of the type genome is 29.11 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter ectenax sp. nov.

Candidatus Pelagibacter ectenax (NL. fem. n. *ectenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603475*. The type genome for the species is the GenBank assembly GCA_902603475.1. The GC content of the type genome is 29.62 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter edulcibula sp. nov.

Candidatus Pelagibacter edulcibula (NL. fem. n. *edulcibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524535*. The type genome for the species is the GenBank assembly GCA_902524535.1. The GC content of the type genome is 29.42 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter edulcitas sp. nov.

Candidatus Pelagibacter edulcitas (NL. fem. n. *edulcitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902572155*. The type genome for the species is the GenBank assembly GCA_902572155.1. The GC content of the type genome is 29.06 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter effemessa sp. nov.

Candidatus Pelagibacter effemessa (NL. fem. n. *effemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566775*. The type genome for the species is the GenBank assembly GCA_902566775.1. The GC content of the type genome is 28.69 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter effemicella sp. nov.

Candidatus Pelagibacter effemicella (NL. fem. n. *effemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583635*. The type genome for the species is the GenBank assembly GCA_902583635.1. The GC content of the type genome is 29.37 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter effigedo sp. nov.

Candidatus Pelagibacter effigedo (NL. fem. n. *effigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902581695*. The type genome for the species is the GenBank assembly GCA_902581695.1. The GC content of the type genome is 29.28 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter egritiforma sp. nov.

Candidatus Pelagibacter egritiforma (NL. fem. n. *egritiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633535*. The type genome for the species is the GenBank assembly GCA_902633535.1. The GC content of the type genome is 28.85 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Pelagibacter ellipax sp. nov.

Candidatus Pelagibacter ellipax (NL. fem. n. *ellipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp013204495*. The type genome for the species is the GenBank assembly GCA_013204495.1. The GC content of the type genome is 30.19 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter emancago sp. nov.

Candidatus Pelagibacter emancago (NL. fem. n. *emancago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515175*. The type genome for the species is the GenBank assembly GCA_902515175.1. The GC content of the type genome is 29.66 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Pelagibacter emancentia sp. nov.

Candidatus Pelagibacter emancentia (NL. fem. n. *emancentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566755*. The type genome for the species is the GenBank assembly GCA_902566755.1. The GC content of the type genome is 29.7 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter encenilega sp. nov.

Candidatus Pelagibacter encenilega (NL. fem. n. *encenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606115*. The type genome for the species is the GenBank assembly GCA_902606115.1. The GC content of the type genome is 29.03 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter encolago sp. nov.

Candidatus Pelagibacter encolago (NL. fem. n. *encolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902614125*. The type genome for the species is the GenBank assembly GCA_902614125.1. The GC content of the type genome is 29.64 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter endivedo sp. nov.

Candidatus Pelagibacter endivedo (NL. fem. n. *endivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902567765*. The type genome for the species is the GenBank assembly GCA_902567765.1. The GC content of the type genome is 29.15 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter endivibra sp. nov.

Candidatus Pelagibacter endivibra (NL. fem. n. *endivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002692475*. The type genome for the species is the GenBank assembly GCA_002692475.1. The GC content of the type genome is 29.54 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter endivibula sp. nov.

Candidatus Pelagibacter endivibula (NL. fem. n. *endivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634275*. The type genome for the species is the GenBank assembly GCA_902634275.1. The GC content of the type genome is 28.52 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter endivitia sp. nov.

Candidatus Pelagibacter endivitia (NL. fem. n. *endivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592285*. The type genome for the species is the GenBank assembly GCA_902592285.1. The GC content of the type genome is 28.76 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter energatica sp. nov.

Candidatus Pelagibacter energatica (NL. fem. n. *energatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582845*. The type genome for the species is the GenBank assembly GCA_902582845.1. The GC content of the type genome is 29.47 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter enimvimonia sp. nov.

Candidatus Pelagibacter enimvimonia (NL. fem. n. *enimvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595115*. The type genome for the species is the GenBank assembly GCA_902595115.1. The GC content of the type genome is 29.12 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter ensicibula sp. nov.

Candidatus Pelagibacter ensicibula (NL. fem. n. *ensicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604795*. The type genome for the species is the GenBank assembly GCA_902604795.1. The GC content of the type genome is 29.24 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter ensifisca sp. nov.

Candidatus Pelagibacter ensifisca (NL. fem. n. *ensifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902538915*. The type genome for the species is the GenBank assembly GCA_902538915.1. The GC content of the type genome is 29.41 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter ephipitio sp. nov.

Candidatus Pelagibacter ephipitio (NL. fem. n. *ephipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002101315*. The type genome for the species is the GenBank assembly RS_GCF_002101315.1. The GC content of the type genome is 29.21 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter episcitica sp. nov.

Candidatus Pelagibacter episcitica (NL. fem. n. *episcitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560225*. The type genome for the species is the GenBank assembly GCA_902560225.1. The GC content of the type genome is 28.93 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter epitrifica sp. nov.

Candidatus Pelagibacter epitrifica (NL. fem. n. *epitrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603305*. The type genome for the species is the GenBank assembly GCA_902603305.1. The GC content of the type genome is 29.63 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter errabivita sp. nov.

Candidatus Pelagibacter errabivita (NL. fem. n. *errabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533775*. The type genome for the species is the GenBank assembly GCA_902533775.1. The GC content of the type genome is 29.38 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter eviscigena sp. nov.

Candidatus Pelagibacter eviscigena (NL. fem. n. *eviscigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902587735*. The type genome for the species is the GenBank assembly GCA_902587735.1. The GC content of the type genome is 28.17 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter exaspitas sp. nov.

Candidatus Pelagibacter exaspitas (NL. fem. n. *exaspitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551985*. The type genome for the species is the GenBank assembly GCA_902551985.1. The GC content of the type genome is 29.52 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Pelagibacter excomedo sp. nov.

Candidatus Pelagibacter excomedo (NL. fem. n. *excomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604605*. The type genome for the species is the GenBank assembly GCA_902604605.1. The GC content of the type genome is 28.61 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter excomimonas sp. nov.

Candidatus Pelagibacter excomimonas (NL. fem. n. *excomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628305*. The type genome for the species is the GenBank assembly GCA_902628305.1. The GC content of the type genome is 29.71 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter excucitia sp. nov.

Candidatus Pelagibacter excucitia (NL. fem. n. *excucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558225*. The type genome for the species is the GenBank assembly GCA_902558225.1. The GC content of the type genome is 29.34 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter excucivita sp. nov.

Candidatus Pelagibacter excucivita (NL. fem. n. *excucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524995*. The type genome for the species is the GenBank assembly GCA_902524995.1. The GC content of the type genome is 29.37 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter exentigena sp. nov.

Candidatus Pelagibacter exentigena (NL. fem. n. *exentigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902546145*. The type genome for the species is the GenBank assembly GCA_902546145.1. The GC content of the type genome is 29.56 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter exhilibra sp. nov.

Candidatus Pelagibacter exhilibra (NL. fem. n. *exhilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902531885*. The type genome for the species is the GenBank assembly GCA_902531885.1. The GC content of the type genome is 28.51 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter exhilicella sp. nov.

Candidatus Pelagibacter exhilicella (NL. fem. n. *exhilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556825*. The type genome for the species is the GenBank assembly GCA_902556825.1. The GC content of the type genome is 28.5 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter exhilitoga sp. nov.

Candidatus Pelagibacter exhilitoga (NL. fem. n. *exhilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591845*. The type genome for the species is the GenBank assembly GCA_902591845.1. The GC content of the type genome is 29.37 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter exhorivita sp. nov.

Candidatus Pelagibacter exhorivita (NL. fem. n. *exhorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902600855*. The type genome for the species is the GenBank assembly GCA_902600855.1. The GC content of the type genome is 29.07 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter expasax sp. nov.

Candidatus Pelagibacter expasax (NL. fem. n. *expasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594395*. The type genome for the species is the GenBank assembly GCA_902594395.1. The GC content of the type genome is 29.46 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Pelagibacter expisedo sp. nov.

Candidatus Pelagibacter expisedo (NL. fem. n. *expisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902513415*. The type genome for the species is the GenBank assembly GCA_902513415.1. The GC content of the type genome is 28.09 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Pelagibacter exsatisca sp. nov.

Candidatus Pelagibacter exsatisca (NL. fem. n. *exsatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902551215*. The type genome for the species is the GenBank assembly GCA_902551215.1. The GC content of the type genome is 28.24 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter exsisiforma sp. nov.

Candidatus Pelagibacter exsisiforma (NL. fem. n. *exsisiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627935*. The type genome for the species is the GenBank assembly GCA_902627935.1. The GC content of the type genome is 29.08 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter exsisitio sp. nov.

Candidatus Pelagibacter exsisitio (NL. fem. n. *exsisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902539035*. The type genome for the species is the GenBank assembly GCA_902539035.1. The GC content of the type genome is 29.83 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter exsolitura sp. nov.

Candidatus Pelagibacter exsolitura (NL. fem. n. *exsolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635515*. The type genome for the species is the GenBank assembly GCA_902635515.1. The GC content of the type genome is 29.3 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter extinitia sp. nov.

Candidatus Pelagibacter extinitia (NL. fem. n. *extinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902602575*. The type genome for the species is the GenBank assembly GCA_902602575.1. The GC content of the type genome is 29.89 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Pelagibacter extorilenta sp. nov.

Candidatus Pelagibacter extorilenta (NL. fem. n. *extorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597215*. The type genome for the species is the GenBank assembly GCA_902597215.1. The GC content of the type genome is 28.7 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter exturiforma sp. nov.

Candidatus Pelagibacter exturiforma (NL. fem. n. *exturiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624515*. The type genome for the species is the GenBank assembly GCA_902624515.1. The GC content of the type genome is 28.75 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter famelilega sp. nov.

Candidatus Pelagibacter famelilega (NL. fem. n. *famelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902520685*. The type genome for the species is the GenBank assembly GCA_902520685.1. The GC content of the type genome is 29.05 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter famelitudo sp. nov.

Candidatus Pelagibacter famelitudo (NL. fem. n. *famelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902529645*. The type genome for the species is the GenBank assembly GCA_902529645.1. The GC content of the type genome is 29.21 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Pelagibacter faticitura sp. nov.

Candidatus Pelagibacter faticitura (NL. fem. n. *faticitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522115*. The type genome for the species is the GenBank assembly GCA_902528895.1. The GC content of the type genome is 29.81 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter fatilitio sp. nov.

Candidatus Pelagibacter fatilitio (NL. fem. n. *fatilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569055*. The type genome for the species is the GenBank assembly GCA_902619645.1. The GC content of the type genome is 27.88 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter favilibra sp. nov.

Candidatus Pelagibacter favilibra (NL. fem. n. *favilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902520645*. The type genome for the species is the GenBank assembly GCA_902520645.1. The GC content of the type genome is 29.84 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter favilugo sp. nov.

Candidatus Pelagibacter favilugo (NL. fem. n. *favilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902547535*. The type genome for the species is the GenBank assembly GCA_902561315.1. The GC content of the type genome is 29.93 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter feculax sp. nov.

Candidatus Pelagibacter feculax (NL. fem. n. *feculax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902552035*. The type genome for the species is the GenBank assembly GCA_902540115.1. The GC content of the type genome is 29.03 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter fecunibra sp. nov.

Candidatus Pelagibacter fecunibra (NL. fem. n. *fecunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597865*. The type genome for the species is the GenBank assembly GCA_902597865.1. The GC content of the type genome is 29.7 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter fedititia sp. nov.

Candidatus Pelagibacter fedititia (NL. fem. n. *fedititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516625*. The type genome for the species is the GenBank assembly GCA_902516625.1. The GC content of the type genome is 29.63 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter fefeligena sp. nov.

Candidatus Pelagibacter fefeligena (NL. fem. n. *fefeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560075*. The type genome for the species is the GenBank assembly GCA_902560075.1. The GC content of the type genome is 29.06 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter fefelimonas sp. nov.

Candidatus Pelagibacter fefelimonas (NL. fem. n. *fefelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902584685*. The type genome for the species is the GenBank assembly GCA_902584685.1. The GC content of the type genome is 29.7 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter fefelitas sp. nov.

Candidatus Pelagibacter fefelitas (NL. fem. n. *fefelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653605*. The type genome for the species is the GenBank assembly GCA_014653605.1. The GC content of the type genome is 28.81 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter fefelitica sp. nov.

Candidatus Pelagibacter fefelitica (NL. fem. n. *fefelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622245*. The type genome for the species is the GenBank assembly GCA_902622245.1. The GC content of the type genome is 29.14 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Pelagibacter feficimonia sp. nov.

Candidatus Pelagibacter feficimonia (NL. fem. n. *feficimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628635*. The type genome for the species is the GenBank assembly GCA_902628635.1. The GC content of the type genome is 29.06 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter femelastra sp. nov.

Candidatus Pelagibacter femelastra (NL. fem. n. *femelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902589345*. The type genome for the species is the GenBank assembly GCA_902582915.1. The GC content of the type genome is 28.54 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter femelimonas sp. nov.

Candidatus Pelagibacter femelimonas (NL. fem. n. *femelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902561765*. The type genome for the species is the GenBank assembly GCA_902569655.1. The GC content of the type genome is 29.32 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter fibicastra sp. nov.

Candidatus Pelagibacter fibicastra (NL. fem. n. *fibicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902538495*. The type genome for the species is the GenBank assembly GCA_902600515.1. The GC content of the type genome is 29.71 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter ficedifica sp. nov.

Candidatus Pelagibacter ficedifica (NL. fem. n. *ficedifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596185*. The type genome for the species is the GenBank assembly GCA_902596185.1. The GC content of the type genome is 29.53 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter fidenibula sp. nov.

Candidatus Pelagibacter fidenibula (NL. fem. n. *fidenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902590295*. The type genome for the species is the GenBank assembly GCA_902590295.1. The GC content of the type genome is 29.48 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Pelagibacter fiducastra sp. nov.

Candidatus Pelagibacter fiducastra (NL. fem. n. *fiducastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902594825*. The type genome for the species is the GenBank assembly GCA_902594825.1. The GC content of the type genome is 28.9 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter fiducimonia sp. nov.

Candidatus Pelagibacter fiducimonia (NL. fem. n. *fiducimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902561075*. The type genome for the species is the GenBank assembly GCA_902561075.1. The GC content of the type genome is 28.72 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter figilimonas sp. nov.

Candidatus Pelagibacter figilimonas (NL. fem. n. *figilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902563555*. The type genome for the species is the GenBank assembly GCA_902563555.1. The GC content of the type genome is 29.64 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter forinitica sp. nov.

Candidatus Pelagibacter forinitica (NL. fem. n. *forinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633125*. The type genome for the species is the GenBank assembly GCA_902536225.1. The GC content of the type genome is 29.56 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter fraglibula sp. nov.

Candidatus Pelagibacter fraglibula (NL. fem. n. *fraglibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902525935*. The type genome for the species is the GenBank assembly GCA_902525935.1. The GC content of the type genome is 29.23 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter fragliforma sp. nov.

Candidatus Pelagibacter fragliforma (NL. fem. n. *fragliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543535*. The type genome for the species is the GenBank assembly GCA_902543535.1. The GC content of the type genome is 29.46 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter fragmastra sp. nov.

Candidatus Pelagibacter fragmastra (NL. fem. n. *fragmastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569725*. The type genome for the species is the GenBank assembly GCA_902569725.1. The GC content of the type genome is 28.54 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter fragmibula sp. nov.

Candidatus Pelagibacter fragmibula (NL. fem. n. *fragmibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902523495*. The type genome for the species is the GenBank assembly GCA_902523495.1. The GC content of the type genome is 29.71 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter fuligivita sp. nov.

Candidatus Pelagibacter fuligivita (NL. fem. n. *fuligivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570505*. The type genome for the species is the GenBank assembly GCA_902570505.1. The GC content of the type genome is 28.64 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter fumaciforma sp. nov.

Candidatus Pelagibacter fumaciforma (NL. fem. n. *fumaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604785*. The type genome for the species is the GenBank assembly GCA_902604785.1. The GC content of the type genome is 28.45 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter fumacigena sp. nov.

Candidatus Pelagibacter fumacigena (NL. fem. n. *fumacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623075*. The type genome for the species is the GenBank assembly GCA_902623075.1. The GC content of the type genome is 29.36 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter fumifousia sp. nov.

Candidatus Pelagibacter fumifousia (NL. fem. n. *fumifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543485*. The type genome for the species is the GenBank assembly GCA_902543485.1. The GC content of the type genome is 29.13 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pelagibacter funebitio sp. nov.

Candidatus Pelagibacter funebitio (NL. fem. n. *funebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902526595*. The type genome for the species is the GenBank assembly GCA_902526595.1. The GC content of the type genome is 29.57 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter furibimonia sp. nov.

Candidatus Pelagibacter furibimonia (NL. fem. n. *furibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902597055*. The type genome for the species is the GenBank assembly GCA_902597055.1. The GC content of the type genome is 29.75 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter futatifica sp. nov.

Candidatus Pelagibacter futatifica (NL. fem. n. *futatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578255*. The type genome for the species is the GenBank assembly GCA_902578255.1. The GC content of the type genome is 29.65 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter galacitura sp. nov.

Candidatus Pelagibacter galacitura (NL. fem. n. *galacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902525355*. The type genome for the species is the GenBank assembly GCA_902525355.1. The GC content of the type genome is 29.34 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter gasificula sp. nov.

Candidatus Pelagibacter gasificula (NL. fem. n. *gasificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902616245*. The type genome for the species is the GenBank assembly GCA_902519015.1. The GC content of the type genome is 29.18 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter gasomilenta sp. nov.

Candidatus Pelagibacter gasomilenta (NL. fem. n. *gasomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003213215*. The type genome for the species is the GenBank assembly GCA_902550995.1. The GC content of the type genome is 29.53 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter gemebago sp. nov.

Candidatus Pelagibacter gemebago (NL. fem. n. *gemebago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558545*. The type genome for the species is the GenBank assembly GCA_902558545.1. The GC content of the type genome is 29.5 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter gemebitura sp. nov.

Candidatus Pelagibacter gemebitura (NL. fem. n. *gemebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617645*. The type genome for the species is the GenBank assembly GCA_902617645.1. The GC content of the type genome is 29.2 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter genufitica sp. nov.

Candidatus Pelagibacter genufitica (NL. fem. n. *genufitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902600205*. The type genome for the species is the GenBank assembly GCA_902600205.1. The GC content of the type genome is 29.4 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter grallibula sp. nov.

Candidatus Pelagibacter grallibula (NL. fem. n. *grallibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528575*. The type genome for the species is the GenBank assembly GCA_902528575.1. The GC content of the type genome is 29.53 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter grallitoga sp. nov.

Candidatus Pelagibacter grallitoga (NL. fem. n. *grallitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282055*. The type genome for the species is the GenBank assembly GCA_003282055.1. The GC content of the type genome is 29.36 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter halucentia sp. nov.

Candidatus Pelagibacter halucentia (NL. fem. n. *halucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576395*. The type genome for the species is the GenBank assembly GCA_902576395.1. The GC content of the type genome is 29.53 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter halucimonas sp. nov.

Candidatus Pelagibacter halucimonas (NL. fem. n. *halucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617825*. The type genome for the species is the GenBank assembly GCA_902617825.1. The GC content of the type genome is 29.8 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter halucisca sp. nov.

Candidatus Pelagibacter halucisca (NL. fem. n. *halucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574705*. The type genome for the species is the GenBank assembly GCA_902574705.1. The GC content of the type genome is 29.05 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter hegumilenta sp. nov.

Candidatus Pelagibacter hegumilenta (NL. fem. n. *hegumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902596515*. The type genome for the species is the GenBank assembly GCA_902551505.1. The GC content of the type genome is 29.59 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter hemidilega sp. nov.

Candidatus Pelagibacter hemidilega (NL. fem. n. *hemidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003210075*. The type genome for the species is the GenBank assembly GCA_902577415.1. The GC content of the type genome is 28.77 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter hemidugo sp. nov.

Candidatus Pelagibacter hemidugo (NL. fem. n. *hemidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902553675*. The type genome for the species is the GenBank assembly GCA_902553675.1. The GC content of the type genome is 29.5 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter hemitisca sp. nov.

Candidatus Pelagibacter hemitisca (NL. fem. n. *hemitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592265*. The type genome for the species is the GenBank assembly GCA_902592265.1. The GC content of the type genome is 29.31 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter hexapifica sp. nov.

Candidatus Pelagibacter hexapifica (NL. fem. n. *hexapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604525*. The type genome for the species is the GenBank assembly GCA_902604525.1. The GC content of the type genome is 29.88 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter hibisago sp. nov.

Candidatus Pelagibacter hibisago (NL. fem. n. *hibisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518835*. The type genome for the species is the GenBank assembly GCA_902518835.1. The GC content of the type genome is 28.96 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter hibisiforma sp. nov.

Candidatus Pelagibacter hibisiforma (NL. fem. n. *hibisiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902620465*. The type genome for the species is the GenBank assembly GCA_902635745.1. The GC content of the type genome is 29.22 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter hirunifica sp. nov.

Candidatus Pelagibacter hirunifica (NL. fem. n. *hirunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902552755*. The type genome for the species is the GenBank assembly GCA_902552755.1. The GC content of the type genome is 29.29 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter hirunisca sp. nov.

Candidatus Pelagibacter hirunisca (NL. fem. n. *hirunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902526645*. The type genome for the species is the GenBank assembly GCA_902596395.1. The GC content of the type genome is 28.79 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter homicago sp. nov.

Candidatus Pelagibacter homicago (NL. fem. n. *homicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594605*. The type genome for the species is the GenBank assembly GCA_902594605.1. The GC content of the type genome is 29.89 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter homiledo sp. nov.

Candidatus Pelagibacter homiledo (NL. fem. n. *homiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902539145*. The type genome for the species is the GenBank assembly GCA_902539145.1. The GC content of the type genome is 29.61 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter homilitura sp. nov.

Candidatus Pelagibacter homilitura (NL. fem. n. *homilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902616725*. The type genome for the species is the GenBank assembly GCA_902541925.1. The GC content of the type genome is 29.74 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter homogitio sp. nov.

Candidatus Pelagibacter homogitio (NL. fem. n. *homogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560815*. The type genome for the species is the GenBank assembly GCA_902560815.1. The GC content of the type genome is 28.33 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter homolifica sp. nov.

Candidatus Pelagibacter homolifica (NL. fem. n. *homolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp003214525*. The type genome for the species is the GenBank assembly GCA_902569805.1. The GC content of the type genome is 28.68 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter homulilenta sp. nov.

Candidatus Pelagibacter homulilenta (NL. fem. n. *homulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582385*. The type genome for the species is the GenBank assembly GCA_902582385.1. The GC content of the type genome is 28.56 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter homuniforma sp. nov.

Candidatus Pelagibacter homuniforma (NL. fem. n. *homuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902545405*. The type genome for the species is the GenBank assembly GCA_902545405.1. The GC content of the type genome is 29.51 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter idcirastra sp. nov.

Candidatus Pelagibacter idcirastra (NL. fem. n. *idcirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624465*. The type genome for the species is the GenBank assembly GCA_902624465.1. The GC content of the type genome is 29.3 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter idipsitoga sp. nov.

Candidatus Pelagibacter idipsitoga (NL. fem. n. *idipsitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574695*. The type genome for the species is the GenBank assembly GCA_902574695.1. The GC content of the type genome is 29.08 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter ignifessa sp. nov.

Candidatus Pelagibacter ignifessa (NL. fem. n. *ignifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592875*. The type genome for the species is the GenBank assembly GCA_902592875.1. The GC content of the type genome is 30.82 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter ignifisca sp. nov.

Candidatus Pelagibacter ignifisca (NL. fem. n. *ignifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556285*. The type genome for the species is the GenBank assembly GCA_902556285.1. The GC content of the type genome is 29.67 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter ignipatio sp. nov.

Candidatus Pelagibacter ignipatio (NL. fem. n. *ignipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635545*. The type genome for the species is the GenBank assembly GCA_902635545.1. The GC content of the type genome is 28.4 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter ignomatica sp. nov.

Candidatus Pelagibacter ignomatica (NL. fem. n. *ignomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592325*. The type genome for the species is the GenBank assembly GCA_902592325.1. The GC content of the type genome is 28.56 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter ignosastra sp. nov.

Candidatus Pelagibacter ignosastra (NL. fem. n. *ignosastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570425*. The type genome for the species is the GenBank assembly GCA_902570425.1. The GC content of the type genome is 28.79 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter ignosetta sp. nov.

Candidatus Pelagibacter ignosetta (NL. fem. n. *ignosetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595815*. The type genome for the species is the GenBank assembly GCA_902595815.1. The GC content of the type genome is 29.4 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter illapousia sp. nov.

Candidatus Pelagibacter illapousia (NL. fem. n. *illapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902577875*. The type genome for the species is the GenBank assembly GCA_902577875.1. The GC content of the type genome is 29.2 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter illepilenta sp. nov.

Candidatus Pelagibacter illepilenta (NL. fem. n. *illepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902535275*. The type genome for the species is the GenBank assembly GCA_902535275.1. The GC content of the type genome is 29.51 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter illunitas sp. nov.

Candidatus Pelagibacter illunitas (NL. fem. n. *illunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902627745*. The type genome for the species is the GenBank assembly GCA_902627745.1. The GC content of the type genome is 29.55 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter imbecitica sp. nov.

Candidatus Pelagibacter imbecitica (NL. fem. n. *imbecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566365*. The type genome for the species is the GenBank assembly GCA_902566365.1. The GC content of the type genome is 28.85 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter immacimonas sp. nov.

Candidatus Pelagibacter immacimonas (NL. fem. n. *immacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518235*. The type genome for the species is the GenBank assembly GCA_902518235.1. The GC content of the type genome is 29.86 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter immacitas sp. nov.

Candidatus Pelagibacter immacitas (NL. fem. n. *immacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902563435*. The type genome for the species is the GenBank assembly GCA_902563435.1. The GC content of the type genome is 29.81 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter immacitoga sp. nov.

Candidatus Pelagibacter immacitoga (NL. fem. n. *immacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571955*. The type genome for the species is the GenBank assembly GCA_902571955.1. The GC content of the type genome is 29.19 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter immigicula sp. nov.

Candidatus Pelagibacter immigicula (NL. fem. n. *immigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902600245*. The type genome for the species is the GenBank assembly GCA_902600245.1. The GC content of the type genome is 29.41 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter impacago sp. nov.

Candidatus Pelagibacter impacago (NL. fem. n. *impacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627735*. The type genome for the species is the GenBank assembly GCA_902627735.1. The GC content of the type genome is 28.45 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter impavitudo sp. nov.

Candidatus Pelagibacter impavitudo (NL. fem. n. *impavitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582735*. The type genome for the species is the GenBank assembly GCA_902582735.1. The GC content of the type genome is 29.61 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter impilibra sp. nov.

Candidatus Pelagibacter impilibra (NL. fem. n. *impilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554745*. The type genome for the species is the GenBank assembly GCA_902554745.1. The GC content of the type genome is 29.5 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter impiressa sp. nov.

Candidatus Pelagibacter impiressa (NL. fem. n. *impiressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604035*. The type genome for the species is the GenBank assembly GCA_902604035.1. The GC content of the type genome is 29.85 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter impugago sp. nov.

Candidatus Pelagibacter impugago (NL. fem. n. *impugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566315*. The type genome for the species is the GenBank assembly GCA_902566315.1. The GC content of the type genome is 29.7 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter inabrisca sp. nov.

Candidatus Pelagibacter inabrisca (NL. fem. n. *inabrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583075*. The type genome for the species is the GenBank assembly GCA_902583075.1. The GC content of the type genome is 29.39 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter inabsitoga sp. nov.

Candidatus Pelagibacter inabsitoga (NL. fem. n. *inabsitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902546085*. The type genome for the species is the GenBank assembly GCA_902546085.1. The GC content of the type genome is 29.19 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter inacciforma sp. nov.

Candidatus Pelagibacter inacciforma (NL. fem. n. *inacciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902556265*. The type genome for the species is the GenBank assembly GCA_902556265.1. The GC content of the type genome is 28.72 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter inbelitas sp. nov.

Candidatus Pelagibacter inbelitas (NL. fem. n. *inbelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587755*. The type genome for the species is the GenBank assembly GCA_902587755.1. The GC content of the type genome is 29.01 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Pelagibacter incesax sp. nov.

Candidatus Pelagibacter incesax (NL. fem. n. *incesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902547785*. The type genome for the species is the GenBank assembly GCA_902547785.1. The GC content of the type genome is 29.24 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter inconilega sp. nov.

Candidatus Pelagibacter inconilega (NL. fem. n. *inconilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902564385*. The type genome for the species is the GenBank assembly GCA_902564385.1. The GC content of the type genome is 29.4 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter indevigena sp. nov.

Candidatus Pelagibacter indevigena (NL. fem. n. *indevigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537575*. The type genome for the species is the GenBank assembly GCA_902537575.1. The GC content of the type genome is 29.71 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter indilax sp. nov.

Candidatus Pelagibacter indilax (NL. fem. n. *indilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902510635*. The type genome for the species is the GenBank assembly GCA_902510635.1. The GC content of the type genome is 28.29 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter indipitica sp. nov.

Candidatus Pelagibacter indipitica (NL. fem. n. *indipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522385*. The type genome for the species is the GenBank assembly GCA_902522385.1. The GC content of the type genome is 29.23 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter indupax sp. nov.

Candidatus Pelagibacter indupax (NL. fem. n. *indupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514745*. The type genome for the species is the GenBank assembly GCA_902514745.1. The GC content of the type genome is 29.56 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter inergitoga sp. nov.

Candidatus Pelagibacter inergitoga (NL. fem. n. *inergitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559605*. The type genome for the species is the GenBank assembly GCA_902559605.1. The GC content of the type genome is 29.47 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter infacugo sp. nov.

Candidatus Pelagibacter infacugo (NL. fem. n. *infacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902520695*. The type genome for the species is the GenBank assembly GCA_902520695.1. The GC content of the type genome is 29.52 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Pelagibacter infanedo sp. nov.

Candidatus Pelagibacter infanedo (NL. fem. n. *infanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570125*. The type genome for the species is the GenBank assembly GCA_902570125.1. The GC content of the type genome is 29.51 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Pelagibacter infanitia sp. nov.

Candidatus Pelagibacter infanitia (NL. fem. n. *infanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902590915*. The type genome for the species is the GenBank assembly GCA_902590915.1. The GC content of the type genome is 30.08 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter infelatica sp. nov.

Candidatus Pelagibacter infelatica (NL. fem. n. *infelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622655*. The type genome for the species is the GenBank assembly GCA_902622655.1. The GC content of the type genome is 29.42 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter infisimonas sp. nov.

Candidatus Pelagibacter infisimonas (NL. fem. n. *infisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902572775*. The type genome for the species is the GenBank assembly GCA_902572775.1. The GC content of the type genome is 29.53 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter inhonitas sp. nov.

Candidatus Pelagibacter inhonitas (NL. fem. n. *inhonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588835*. The type genome for the species is the GenBank assembly GCA_902588835.1. The GC content of the type genome is 29.74 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter inlecitoga sp. nov.

Candidatus Pelagibacter inlecitoga (NL. fem. n. *inlecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555655*. The type genome for the species is the GenBank assembly GCA_902555655.1. The GC content of the type genome is 28.76 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter inlecivita sp. nov.

Candidatus Pelagibacter inlecivita (NL. fem. n. *inlecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902585415*. The type genome for the species is the GenBank assembly GCA_902585415.1. The GC content of the type genome is 28.81 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter inmemigena sp. nov.

Candidatus Pelagibacter inmemigena (NL. fem. n. *inmemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515625*. The type genome for the species is the GenBank assembly GCA_902515625.1. The GC content of the type genome is 30.14 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter inmeniforma sp. nov.

Candidatus Pelagibacter inmeniforma (NL. fem. n. *inmeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002708525*. The type genome for the species is the GenBank assembly GCA_002708525.1. The GC content of the type genome is 29.76 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Pelagibacter inmitilega sp. nov.

Candidatus Pelagibacter inmitilega (NL. fem. n. *inmitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595285*. The type genome for the species is the GenBank assembly GCA_902595285.1. The GC content of the type genome is 29.44 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter inmobugo sp. nov.

Candidatus Pelagibacter inmobugo (NL. fem. n. *inmobugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902575835*. The type genome for the species is the GenBank assembly GCA_902575835.1. The GC content of the type genome is 29.65 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter inmodentia sp. nov.

Candidatus Pelagibacter inmodentia (NL. fem. n. *inmodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002169255*. The type genome for the species is the GenBank assembly GCA_002169255.1. The GC content of the type genome is 30.01 % and the genome length is 0.44 Mbp.

Description of *Candidatus* Pelagibacter inmodiforma sp. nov.

Candidatus Pelagibacter inmodiforma (NL. fem. n. *inmodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604175*. The type genome for the species is the GenBank assembly GCA_902604175.1. The GC content of the type genome is 29.98 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter inmodigena sp. nov.

Candidatus Pelagibacter inmodigena (NL. fem. n. *inmodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902510495*. The type genome for the species is the GenBank assembly GCA_902510495.1. The GC content of the type genome is 29.01 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Pelagibacter inmuticella sp. nov.

Candidatus Pelagibacter inmuticella (NL. fem. n. *inmuticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514605*. The type genome for the species is the GenBank assembly GCA_902514605.1. The GC content of the type genome is 29.77 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter innuletta sp. nov.

Candidatus Pelagibacter innuletta (NL. fem. n. *innuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902523615*. The type genome for the species is the GenBank assembly GCA_902523615.1. The GC content of the type genome is 28.72 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter innulitoga sp. nov.

Candidatus Pelagibacter innulitoga (NL. fem. n. *innulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902570715*. The type genome for the species is the GenBank assembly GCA_902570715.1. The GC content of the type genome is 28.63 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Pelagibacter innupetta sp. nov.

Candidatus Pelagibacter innupetta (NL. fem. n. *innupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624045*. The type genome for the species is the GenBank assembly GCA_902624045.1. The GC content of the type genome is 29.49 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter inpasilega sp. nov.

Candidatus Pelagibacter inpasilega (NL. fem. n. *inpasilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902524595*. The type genome for the species is the GenBank assembly GCA_902524595.1. The GC content of the type genome is 29.03 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter inperiforma sp. nov.

Candidatus Pelagibacter inperiforma (NL. fem. n. *inperiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902610755*. The type genome for the species is the GenBank assembly GCA_902610755.1. The GC content of the type genome is 29.69 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter inpudilega sp. nov.

Candidatus Pelagibacter inpudilega (NL. fem. n. *inpudilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522525*. The type genome for the species is the GenBank assembly GCA_902522525.1. The GC content of the type genome is 29.68 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter inrecilenta sp. nov.

Candidatus Pelagibacter inrecilenta (NL. fem. n. *inrecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902530715*. The type genome for the species is the GenBank assembly GCA_902530715.1. The GC content of the type genome is 29.15 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter inrefitrix sp. nov.

Candidatus Pelagibacter inrefitrix (NL. fem. n. *inrefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902531765*. The type genome for the species is the GenBank assembly GCA_902531765.1. The GC content of the type genome is 29.29 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter inregedo sp. nov.

Candidatus Pelagibacter inregedo (NL. fem. n. *inregedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902606645*. The type genome for the species is the GenBank assembly GCA_902606645.1. The GC content of the type genome is 30.06 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter inrelisca sp. nov.

Candidatus Pelagibacter inrelisca (NL. fem. n. *inrelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604005*. The type genome for the species is the GenBank assembly GCA_902604005.1. The GC content of the type genome is 28.68 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter inrevedo sp. nov.

Candidatus Pelagibacter inrevedo (NL. fem. n. *inrevedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902572225*. The type genome for the species is the GenBank assembly GCA_902572225.1. The GC content of the type genome is 29.79 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter insemibra sp. nov.

Candidatus Pelagibacter insemibra (NL. fem. n. *insemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570525*. The type genome for the species is the GenBank assembly GCA_902570525.1. The GC content of the type genome is 29.12 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter insemitio sp. nov.

Candidatus Pelagibacter insemitio (NL. fem. n. *insemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566535*. The type genome for the species is the GenBank assembly GCA_902566535.1. The GC content of the type genome is 28.78 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter insibitas sp. nov.

Candidatus Pelagibacter insibitas (NL. fem. n. *insibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519375*. The type genome for the species is the GenBank assembly GCA_902519375.1. The GC content of the type genome is 29.03 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter insinilega sp. nov.

Candidatus Pelagibacter insinilega (NL. fem. n. *insinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp002169475*. The type genome for the species is the GenBank assembly GCA_002169475.2. The GC content of the type genome is 29.14 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter insomitica sp. nov.

Candidatus Pelagibacter insomitica (NL. fem. n. *insomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522325*. The type genome for the species is the GenBank assembly GCA_902522325.1. The GC content of the type genome is 28.32 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter insorisca sp. nov.

Candidatus Pelagibacter insorisca (NL. fem. n. *insorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515985*. The type genome for the species is the GenBank assembly GCA_902515985.1. The GC content of the type genome is 29.07 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter insorousia sp. nov.

Candidatus Pelagibacter insorousia (NL. fem. n. *insorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902539195*. The type genome for the species is the GenBank assembly GCA_902539195.1. The GC content of the type genome is 28.91 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter insufax sp. nov.

Candidatus Pelagibacter insufax (NL. fem. n. *insufax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902626645*. The type genome for the species is the GenBank assembly GCA_902626645.1. The GC content of the type genome is 29.68 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter insufisca sp. nov.

Candidatus Pelagibacter insufisca (NL. fem. n. *insufisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576785*. The type genome for the species is the GenBank assembly GCA_902576785.1. The GC content of the type genome is 28.88 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter intabitudo sp. nov.

Candidatus Pelagibacter intabitudo (NL. fem. n. *intabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517735*. The type genome for the species is the GenBank assembly GCA_902517735.1. The GC content of the type genome is 28.7 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter intamicella sp. nov.

Candidatus Pelagibacter intamicella (NL. fem. n. *intamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902626725*. The type genome for the species is the GenBank assembly GCA_902626725.1. The GC content of the type genome is 29.17 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter intorimonia sp. nov.

Candidatus Pelagibacter intorimonia (NL. fem. n. *intorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654165*. The type genome for the species is the GenBank assembly GCA_014654165.1. The GC content of the type genome is 28.9 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter intorisca sp. nov.

Candidatus Pelagibacter intorisca (NL. fem. n. *intorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902630065*. The type genome for the species is the GenBank assembly GCA_902630065.1. The GC content of the type genome is 29.41 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter inurbax sp. nov.

Candidatus Pelagibacter inurbax (NL. fem. n. *inurbax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579855*. The type genome for the species is the GenBank assembly GCA_902579855.1. The GC content of the type genome is 29.33 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter invicitia sp. nov.

Candidatus Pelagibacter invicitia (NL. fem. n. *invicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519625*. The type genome for the species is the GenBank assembly GCA_902519625.1. The GC content of the type genome is 28.12 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter invinilega sp. nov.

Candidatus Pelagibacter invinilega (NL. fem. n. *invinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902607805*. The type genome for the species is the GenBank assembly GCA_902607805.1. The GC content of the type genome is 27.7 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter invoritio sp. nov.

Candidatus Pelagibacter invoritio (NL. fem. n. *invoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902624015*. The type genome for the species is the GenBank assembly GCA_902624015.1. The GC content of the type genome is 29.26 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter irredibra sp. nov.

Candidatus Pelagibacter irredibra (NL. fem. n. *irredibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595105*. The type genome for the species is the GenBank assembly GCA_902595105.1. The GC content of the type genome is 30.1 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter irredicula sp. nov.

Candidatus Pelagibacter irredicula (NL. fem. n. *irredicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579985*. The type genome for the species is the GenBank assembly GCA_902579985.1. The GC content of the type genome is 27.63 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter irrelago sp. nov.

Candidatus Pelagibacter irrelago (NL. fem. n. *irrelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617625*. The type genome for the species is the GenBank assembly GCA_902617625.1. The GC content of the type genome is 29.62 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter irremilega sp. nov.

Candidatus Pelagibacter irremilega (NL. fem. n. *irremilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902545635*. The type genome for the species is the GenBank assembly GCA_902545635.1. The GC content of the type genome is 29.41 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter irrevicella sp. nov.

Candidatus Pelagibacter irrevicella (NL. fem. n. *irrevicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902617975*. The type genome for the species is the GenBank assembly GCA_902617975.1. The GC content of the type genome is 29.31 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter labeciforma sp. nov.

Candidatus Pelagibacter labeciforma (NL. fem. n. *labeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560805*. The type genome for the species is the GenBank assembly GCA_902560805.1. The GC content of the type genome is 29.28 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter labecitrix sp. nov.

Candidatus Pelagibacter labecitrix (NL. fem. n. *labecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902552475*. The type genome for the species is the GenBank assembly GCA_902552475.1. The GC content of the type genome is 28.12 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter laculivita sp. nov.

Candidatus Pelagibacter laculivita (NL. fem. n. *laculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902545825*. The type genome for the species is the GenBank assembly GCA_902545825.1. The GC content of the type genome is 29.3 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter lanifimonia sp. nov.

Candidatus Pelagibacter lanifimonia (NL. fem. n. *lanifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557155*. The type genome for the species is the GenBank assembly GCA_902557155.1. The GC content of the type genome is 29.25 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Pelagibacter lanigitrix sp. nov.

Candidatus Pelagibacter lanigitrix (NL. fem. n. *lanigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902573295*. The type genome for the species is the GenBank assembly GCA_902573295.1. The GC content of the type genome is 29.28 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter lapicivita sp. nov.

Candidatus Pelagibacter lapicivita (NL. fem. n. *lapicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522365*. The type genome for the species is the GenBank assembly GCA_902522365.1. The GC content of the type genome is 29.57 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter lapiledo sp. nov.

Candidatus Pelagibacter lapiledo (NL. fem. n. *lapiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902540785*. The type genome for the species is the GenBank assembly GCA_902540785.1. The GC content of the type genome is 29.69 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter lapilitia sp. nov.

Candidatus Pelagibacter lapilitia (NL. fem. n. *lapilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902633515*. The type genome for the species is the GenBank assembly GCA_902633515.1. The GC content of the type genome is 29.93 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter lavabigena sp. nov.

Candidatus Pelagibacter lavabigena (NL. fem. n. *lavabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624635*. The type genome for the species is the GenBank assembly GCA_902624635.1. The GC content of the type genome is 29.45 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter laxitigena sp. nov.

Candidatus Pelagibacter laxitigena (NL. fem. n. *laxitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902527265*. The type genome for the species is the GenBank assembly GCA_902527265.1. The GC content of the type genome is 29.42 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter lenimax sp. nov.

Candidatus Pelagibacter lenimax (NL. fem. n. *lenimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902636165*. The type genome for the species is the GenBank assembly GCA_902636165.1. The GC content of the type genome is 29.15 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter lenimimonia sp. nov.

Candidatus Pelagibacter lenimimonia (NL. fem. n. *lenimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902532525*. The type genome for the species is the GenBank assembly GCA_902532525.1. The GC content of the type genome is 29.33 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter lenocago sp. nov.

Candidatus Pelagibacter lenocago (NL. fem. n. *lenocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629285*. The type genome for the species is the GenBank assembly GCA_902629285.1. The GC content of the type genome is 28.97 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pelagibacter lenunatica sp. nov.

Candidatus Pelagibacter lenunatica (NL. fem. n. *lenunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622795*. The type genome for the species is the GenBank assembly GCA_902557265.1. The GC content of the type genome is 29.59 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter lenunimonas sp. nov.

Candidatus Pelagibacter lenunimonas (NL. fem. n. *lenunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595885*. The type genome for the species is the GenBank assembly GCA_902595885.1. The GC content of the type genome is 29.29 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter lenunitura sp. nov.

Candidatus Pelagibacter lenunitura (NL. fem. n. *lenunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902631265*. The type genome for the species is the GenBank assembly GCA_902631265.1. The GC content of the type genome is 29.98 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter letifastra sp. nov.

Candidatus Pelagibacter letifastra (NL. fem. n. *letifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902621345*. The type genome for the species is the GenBank assembly GCA_902621345.1. The GC content of the type genome is 29.5 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter letifentia sp. nov.

Candidatus Pelagibacter letifentia (NL. fem. n. *letifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618695*. The type genome for the species is the GenBank assembly GCA_902618695.1. The GC content of the type genome is 29.25 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pelagibacter letifisca sp. nov.

Candidatus Pelagibacter letifisca (NL. fem. n. *letifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902603905*. The type genome for the species is the GenBank assembly GCA_902603905.1. The GC content of the type genome is 28.56 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter licenax sp. nov.

Candidatus Pelagibacter licenax (NL. fem. n. *licenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624585*. The type genome for the species is the GenBank assembly GCA_902624585.1. The GC content of the type genome is 29.65 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter licenetta sp. nov.

Candidatus Pelagibacter licenetta (NL. fem. n. *licenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902629585*. The type genome for the species is the GenBank assembly GCA_902629585.1. The GC content of the type genome is 29.03 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter linigastra sp. nov.

Candidatus Pelagibacter linigastra (NL. fem. n. *linigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596925*. The type genome for the species is the GenBank assembly GCA_902596925.1. The GC content of the type genome is 29.3 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter locelilenta sp. nov.

Candidatus Pelagibacter locelilenta (NL. fem. n. *locelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599575*. The type genome for the species is the GenBank assembly GCA_902599575.1. The GC content of the type genome is 29.06 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter loraricella sp. nov.

Candidatus Pelagibacter loraricella (NL. fem. n. *loraricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629075*. The type genome for the species is the GenBank assembly GCA_902629075.1. The GC content of the type genome is 28.8 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter loripicula sp. nov.

Candidatus Pelagibacter loripicula (NL. fem. n. *loripicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902608975*. The type genome for the species is the GenBank assembly GCA_902608975.1. The GC content of the type genome is 28.52 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter lubenetta sp. nov.

Candidatus Pelagibacter lubenetta (NL. fem. n. *lubenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902551455*. The type genome for the species is the GenBank assembly GCA_902551455.1. The GC content of the type genome is 27.76 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter lubenitas sp. nov.

Candidatus Pelagibacter lubenitas (NL. fem. n. *lubenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515965*. The type genome for the species is the GenBank assembly GCA_902515965.1. The GC content of the type genome is 29.8 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter lubenitio sp. nov.

Candidatus Pelagibacter lubenitio (NL. fem. n. *lubenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002170275*. The type genome for the species is the GenBank assembly GCA_002170275.2. The GC content of the type genome is 27.73 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter lucelifica sp. nov.

Candidatus Pelagibacter lucelifica (NL. fem. n. *lucelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594245*. The type genome for the species is the GenBank assembly GCA_902594245.1. The GC content of the type genome is 29.09 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter lucubentia sp. nov.

Candidatus Pelagibacter lucubentia (NL. fem. n. *lucubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570055*. The type genome for the species is the GenBank assembly GCA_902570055.1. The GC content of the type genome is 28.59 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter luculitas sp. nov.

Candidatus Pelagibacter luculitas (NL. fem. n. *luculitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597575*. The type genome for the species is the GenBank assembly GCA_902597575.1. The GC content of the type genome is 29.77 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter ludimousia sp. nov.

Candidatus Pelagibacter ludimousia (NL. fem. n. *ludimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654115*. The type genome for the species is the GenBank assembly GCA_014654115.1. The GC content of the type genome is 29.55 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter luticitoga sp. nov.

Candidatus Pelagibacter luticitoga (NL. fem. n. *luticitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629935*. The type genome for the species is the GenBank assembly GCA_902629935.1. The GC content of the type genome is 29.57 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter lutulatio sp. nov.

Candidatus Pelagibacter lutulatio (NL. fem. n. *lutulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902589455*. The type genome for the species is the GenBank assembly GCA_902589455.1. The GC content of the type genome is 29.5 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter luxuratica sp. nov.

Candidatus Pelagibacter luxuratica (NL. fem. n. *luxuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp011526385*. The type genome for the species is the GenBank assembly GCA_010025285.1. The GC content of the type genome is 30.42 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter mahemicella sp. nov.

Candidatus Pelagibacter mahemicella (NL. fem. n. *mahemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624535*. The type genome for the species is the GenBank assembly GCA_902624535.1. The GC content of the type genome is 29.95 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter mahemicula sp. nov.

Candidatus Pelagibacter mahemicula (NL. fem. n. *mahemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653975*. The type genome for the species is the GenBank assembly GCA_014653975.1. The GC content of the type genome is 28.86 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter maledimonas sp. nov.

Candidatus Pelagibacter maledimonas (NL. fem. n. *maledimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634695*. The type genome for the species is the GenBank assembly GCA_902634695.1. The GC content of the type genome is 28.05 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter malifatio sp. nov.

Candidatus Pelagibacter malifatio (NL. fem. n. *malifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653385*. The type genome for the species is the GenBank assembly GCA_014653385.1. The GC content of the type genome is 29.21 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Pelagibacter malifentia sp. nov.

Candidatus Pelagibacter malifentia (NL. fem. n. *malifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp012963775*. The type genome for the species is the GenBank assembly GCA_012963775.1. The GC content of the type genome is 28.33 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter malifimonia sp. nov.

Candidatus Pelagibacter malifimonia (NL. fem. n. *malifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591535*. The type genome for the species is the GenBank assembly GCA_902591535.1. The GC content of the type genome is 29.3 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter malifugo sp. nov.

Candidatus Pelagibacter malifugo (NL. fem. n. *malifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902549785*. The type genome for the species is the GenBank assembly GCA_902549785.1. The GC content of the type genome is 29.45 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter maligicella sp. nov.

Candidatus Pelagibacter maligicella (NL. fem. n. *maligicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003279765*. The type genome for the species is the GenBank assembly GCA_902558955.1. The GC content of the type genome is 29.65 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter maligilenta sp. nov.

Candidatus Pelagibacter maligilenta (NL. fem. n. *maligilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519325*. The type genome for the species is the GenBank assembly GCA_902519325.1. The GC content of the type genome is 29.1 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter malogitio sp. nov.

Candidatus Pelagibacter malogitio (NL. fem. n. *malogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902584995*. The type genome for the species is the GenBank assembly GCA_902584995.1. The GC content of the type genome is 29.71 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter manubibra sp. nov.

Candidatus Pelagibacter manubibra (NL. fem. n. *manubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003278065*. The type genome for the species is the GenBank assembly GCA_902559505.1. The GC content of the type genome is 28.57 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter manubigena sp. nov.

Candidatus Pelagibacter manubigena (NL. fem. n. *manubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp003212415*. The type genome for the species is the GenBank assembly GCA_902589275.1. The GC content of the type genome is 28.53 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter manubisca sp. nov.

Candidatus Pelagibacter manubisca (NL. fem. n. *manubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533945*. The type genome for the species is the GenBank assembly GCA_902533945.1. The GC content of the type genome is 28.18 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter manufitas sp. nov.

Candidatus Pelagibacter manufitas (NL. fem. n. *manufitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594865*. The type genome for the species is the GenBank assembly GCA_902594865.1. The GC content of the type genome is 29.2 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter masocetta sp. nov.

Candidatus Pelagibacter masocetta (NL. fem. n. *masocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522895*. The type genome for the species is the GenBank assembly GCA_902522895.1. The GC content of the type genome is 28.71 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pelagibacter masocisca sp. nov.

Candidatus Pelagibacter masocisca (NL. fem. n. *masocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516395*. The type genome for the species is the GenBank assembly GCA_902516395.1. The GC content of the type genome is 29.88 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter masocitica sp. nov.

Candidatus Pelagibacter masocitica (NL. fem. n. *masocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902529715*. The type genome for the species is the GenBank assembly GCA_902529715.1. The GC content of the type genome is 28.44 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter mavorilenta sp. nov.

Candidatus Pelagibacter mavorilenta (NL. fem. n. *mavorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902577075*. The type genome for the species is the GenBank assembly GCA_902577075.1. The GC content of the type genome is 29.41 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pelagibacter mavorousia sp. nov.

Candidatus Pelagibacter mavorousia (NL. fem. n. *mavorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628195*. The type genome for the species is the GenBank assembly GCA_902628195.1. The GC content of the type genome is 28.48 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter maxiliforma sp. nov.

Candidatus Pelagibacter maxiliforma (NL. fem. n. *maxiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902619925*. The type genome for the species is the GenBank assembly GCA_902619925.1. The GC content of the type genome is 29.03 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter maxilitio sp. nov.

Candidatus Pelagibacter maxilitio (NL. fem. n. *maxilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634885*. The type genome for the species is the GenBank assembly GCA_902528455.1. The GC content of the type genome is 30.04 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter medimisca sp. nov.

Candidatus Pelagibacter medimisca (NL. fem. n. *medimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902552985*. The type genome for the species is the GenBank assembly GCA_902552985.1. The GC content of the type genome is 28.13 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter melilibra sp. nov.

Candidatus Pelagibacter melilibra (NL. fem. n. *melilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902545555*. The type genome for the species is the GenBank assembly GCA_902545555.1. The GC content of the type genome is 29.34 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter melopibra sp. nov.

Candidatus Pelagibacter melopibra (NL. fem. n. *melopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594235*. The type genome for the species is the GenBank assembly GCA_902594235.1. The GC content of the type genome is 28.67 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter menapisca sp. nov.

Candidatus Pelagibacter menapisca (NL. fem. n. *menapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902598825*. The type genome for the species is the GenBank assembly GCA_902602935.1. The GC content of the type genome is 28.97 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pelagibacter meridicella sp. nov.

Candidatus Pelagibacter meridicella (NL. fem. n. *meridicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587315*. The type genome for the species is the GenBank assembly GCA_902587315.1. The GC content of the type genome is 28.37 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter meridimonia sp. nov.

Candidatus Pelagibacter meridimonia (NL. fem. n. *meridimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902584915*. The type genome for the species is the GenBank assembly GCA_902584915.1. The GC content of the type genome is 28.71 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter milifentia sp. nov.

Candidatus Pelagibacter milifentia (NL. fem. n. *milifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516465*. The type genome for the species is the GenBank assembly GCA_902516465.1. The GC content of the type genome is 29.09 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter milifetta sp. nov.

Candidatus Pelagibacter milifetta (NL. fem. n. *milifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654245*. The type genome for the species is the GenBank assembly GCA_014654245.1. The GC content of the type genome is 28.95 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter milipatica sp. nov.

Candidatus Pelagibacter milipatica (NL. fem. n. *milipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555065*. The type genome for the species is the GenBank assembly GCA_902555065.1. The GC content of the type genome is 29.22 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pelagibacter miracicula sp. nov.

Candidatus Pelagibacter miracicula (NL. fem. n. *miracicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632875*. The type genome for the species is the GenBank assembly GCA_902632875.1. The GC content of the type genome is 29.28 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Pelagibacter miracitica sp. nov.

Candidatus Pelagibacter miracitica (NL. fem. n. *miracitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902536925*. The type genome for the species is the GenBank assembly GCA_902536925.1. The GC content of the type genome is 29.23 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter mirifibra sp. nov.

Candidatus Pelagibacter mirifibra (NL. fem. n. *mirifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517745*. The type genome for the species is the GenBank assembly GCA_902540725.1. The GC content of the type genome is 29.41 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter momoriforma sp. nov.

Candidatus Pelagibacter momoriforma (NL. fem. n. *momoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902531175*. The type genome for the species is the GenBank assembly GCA_902531175.1. The GC content of the type genome is 29.15 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Pelagibacter momoritudo sp. nov.

Candidatus Pelagibacter momoritudo (NL. fem. n. *momoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591755*. The type genome for the species is the GenBank assembly GCA_902554875.1. The GC content of the type genome is 29.67 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter momorugo sp. nov.

Candidatus Pelagibacter momorugo (NL. fem. n. *momorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623975*. The type genome for the species is the GenBank assembly GCA_902548495.1. The GC content of the type genome is 29.06 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter monumago sp. nov.

Candidatus Pelagibacter monumago (NL. fem. n. *monumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902589725*. The type genome for the species is the GenBank assembly GCA_902591955.1. The GC content of the type genome is 29.2 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter monumivita sp. nov.

Candidatus Pelagibacter monumivita (NL. fem. n. *monumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902612345*. The type genome for the species is the GenBank assembly GCA_902612345.1. The GC content of the type genome is 28.79 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter morigigena sp. nov.

Candidatus Pelagibacter morigigena (NL. fem. n. *morigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588925*. The type genome for the species is the GenBank assembly GCA_902588925.1. The GC content of the type genome is 29.57 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter munificella sp. nov.

Candidatus Pelagibacter munificella (NL. fem. n. *munificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902589765*. The type genome for the species is the GenBank assembly GCA_902589765.1. The GC content of the type genome is 29.5 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter munifimonia sp. nov.

Candidatus Pelagibacter munifimonia (NL. fem. n. *munifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902531455*. The type genome for the species is the GenBank assembly GCA_902531455.1. The GC content of the type genome is 29.78 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter munifitio sp. nov.

Candidatus Pelagibacter munifitio (NL. fem. n. *munifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902531025*. The type genome for the species is the GenBank assembly GCA_902531025.1. The GC content of the type genome is 28.76 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter munimisca sp. nov.

Candidatus Pelagibacter munimisca (NL. fem. n. *munimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583295*. The type genome for the species is the GenBank assembly GCA_902583295.1. The GC content of the type genome is 29.74 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter murilifica sp. nov.

Candidatus Pelagibacter murilifica (NL. fem. n. *murilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902629575*. The type genome for the species is the GenBank assembly GCA_902629575.1. The GC content of the type genome is 29.12 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter musulicella sp. nov.

Candidatus Pelagibacter musulicella (NL. fem. n. *musulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582315*. The type genome for the species is the GenBank assembly GCA_902539855.1. The GC content of the type genome is 29.86 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter musulilenta sp. nov.

Candidatus Pelagibacter musulilenta (NL. fem. n. *musulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588975*. The type genome for the species is the GenBank assembly GCA_902588975.1. The GC content of the type genome is 29.4 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter navicax sp. nov.

Candidatus Pelagibacter navicax (NL. fem. n. *navicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591185*. The type genome for the species is the GenBank assembly GCA_902591185.1. The GC content of the type genome is 28.67 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter necopatica sp. nov.

Candidatus Pelagibacter necopatica (NL. fem. n. *necopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902565385*. The type genome for the species is the GenBank assembly GCA_902565385.1. The GC content of the type genome is 29.19 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter necubatica sp. nov.

Candidatus Pelagibacter necubatica (NL. fem. n. *necubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518155*. The type genome for the species is the GenBank assembly GCA_902550055.1. The GC content of the type genome is 29.72 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter nicomisca sp. nov.

Candidatus Pelagibacter nicomisca (NL. fem. n. *nicomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003213615*. The type genome for the species is the GenBank assembly GCA_902571845.1. The GC content of the type genome is 29.29 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Pelagibacter nicotago sp. nov.

Candidatus Pelagibacter nicotago (NL. fem. n. *nicotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902609235*. The type genome for the species is the GenBank assembly GCA_902609235.1. The GC content of the type genome is 29.54 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter nimirago sp. nov.

Candidatus Pelagibacter nimirago (NL. fem. n. *nimirago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518185*. The type genome for the species is the GenBank assembly GCA_902518185.1. The GC content of the type genome is 29.2 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter nimiressa sp. nov.

Candidatus Pelagibacter nimiressa (NL. fem. n. *nimiressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902547215*. The type genome for the species is the GenBank assembly GCA_902547215.1. The GC content of the type genome is 29.57 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter noninilega sp. nov.

Candidatus Pelagibacter noninilega (NL. fem. n. *noninilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635865*. The type genome for the species is the GenBank assembly GCA_902635865.1. The GC content of the type genome is 29.16 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter notabago sp. nov.

Candidatus Pelagibacter notabago (NL. fem. n. *notabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571055*. The type genome for the species is the GenBank assembly GCA_902605255.1. The GC content of the type genome is 29.36 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter notabatio sp. nov.

Candidatus Pelagibacter notabatio (NL. fem. n. *notabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571375*. The type genome for the species is the GenBank assembly GCA_902571375.1. The GC content of the type genome is 28.75 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter notacedo sp. nov.

Candidatus Pelagibacter notacedo (NL. fem. n. *notacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588595*. The type genome for the species is the GenBank assembly GCA_902588595.1. The GC content of the type genome is 28.64 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter notacifica sp. nov.

Candidatus Pelagibacter notacifica (NL. fem. n. *notacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902509725*. The type genome for the species is the GenBank assembly GCA_902509725.1. The GC content of the type genome is 29.02 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Pelagibacter notacitas sp. nov.

Candidatus Pelagibacter notacitas (NL. fem. n. *notacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902558815*. The type genome for the species is the GenBank assembly GCA_902536055.1. The GC content of the type genome is 28.89 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter nubecitica sp. nov.

Candidatus Pelagibacter nubecitica (NL. fem. n. *nubecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003279775*. The type genome for the species is the GenBank assembly GCA_902554775.1. The GC content of the type genome is 29.41 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter nubigedo sp. nov.

Candidatus Pelagibacter nubigedo (NL. fem. n. *nubigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595465*. The type genome for the species is the GenBank assembly GCA_902595465.1. The GC content of the type genome is 29.08 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter nubigentia sp. nov.

Candidatus Pelagibacter nubigentia (NL. fem. n. *nubigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574525*. The type genome for the species is the GenBank assembly GCA_902574525.1. The GC content of the type genome is 29.42 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter nubigitrix sp. nov.

Candidatus Pelagibacter nubigitrix (NL. fem. n. *nubigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597725*. The type genome for the species is the GenBank assembly GCA_902597725.1. The GC content of the type genome is 29.68 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter nugacisca sp. nov.

Candidatus Pelagibacter nugacisca (NL. fem. n. *nugacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902569245*. The type genome for the species is the GenBank assembly GCA_902569245.1. The GC content of the type genome is 29.77 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter nugacousia sp. nov.

Candidatus Pelagibacter nugacousia (NL. fem. n. *nugacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560185*. The type genome for the species is the GenBank assembly GCA_902520215.1. The GC content of the type genome is 29.95 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter nutamibula sp. nov.

Candidatus Pelagibacter nutamibula (NL. fem. n. *nutamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632315*. The type genome for the species is the GenBank assembly GCA_902632315.1. The GC content of the type genome is 29.28 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter nutamugo sp. nov.

Candidatus Pelagibacter nutamugo (NL. fem. n. *nutamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543295*. The type genome for the species is the GenBank assembly GCA_902543295.1. The GC content of the type genome is 29.27 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pelagibacter obambimonas sp. nov.

Candidatus Pelagibacter obambimonas (NL. fem. n. *obambimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569975*. The type genome for the species is the GenBank assembly GCA_902569975.1. The GC content of the type genome is 28.77 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter obambitia sp. nov.

Candidatus Pelagibacter obambitia (NL. fem. n. *obambitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596785*. The type genome for the species is the GenBank assembly GCA_902596785.1. The GC content of the type genome is 29.47 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter obfusilega sp. nov.

Candidatus Pelagibacter obfusilega (NL. fem. n. *obfusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902601895*. The type genome for the species is the GenBank assembly GCA_902601895.1. The GC content of the type genome is 29.08 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter oblanastra sp. nov.

Candidatus Pelagibacter oblanastra (NL. fem. n. *oblanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618565*. The type genome for the species is the GenBank assembly GCA_902618565.1. The GC content of the type genome is 29.48 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter oblivitio sp. nov.

Candidatus Pelagibacter oblivitio (NL. fem. n. *oblivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519455*. The type genome for the species is the GenBank assembly GCA_902519455.1. The GC content of the type genome is 30.26 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter oblucatio sp. nov.

Candidatus Pelagibacter oblucatio (NL. fem. n. *oblucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634485*. The type genome for the species is the GenBank assembly GCA_902634485.1. The GC content of the type genome is 28.18 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter oblucessa sp. nov.

Candidatus Pelagibacter oblucessa (NL. fem. n. *oblucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576115*. The type genome for the species is the GenBank assembly GCA_902576115.1. The GC content of the type genome is 29.3 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter obsecitio sp. nov.

Candidatus Pelagibacter obsecitio (NL. fem. n. *obsecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653375*. The type genome for the species is the GenBank assembly GCA_014653375.1. The GC content of the type genome is 29.24 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter obtecicula sp. nov.

Candidatus Pelagibacter obtecicula (NL. fem. n. *obtecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623415*. The type genome for the species is the GenBank assembly GCA_902623415.1. The GC content of the type genome is 29.09 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter obtesetta sp. nov.

Candidatus Pelagibacter obtesetta (NL. fem. n. *obtesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902561015*. The type genome for the species is the GenBank assembly GCA_902561015.1. The GC content of the type genome is 29.52 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter obtesimonia sp. nov.

Candidatus Pelagibacter obtesimonia (NL. fem. n. *obtesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp009693705*. The type genome for the species is the GenBank assembly GCA_009693705.1. The GC content of the type genome is 28.68 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Pelagibacter obtorastra sp. nov.

Candidatus Pelagibacter obtorastra (NL. fem. n. *obtorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556905*. The type genome for the species is the GenBank assembly GCA_902556905.1. The GC content of the type genome is 29.45 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Pelagibacter obvalilega sp. nov.

Candidatus Pelagibacter obvalilega (NL. fem. n. *obvalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902585265*. The type genome for the species is the GenBank assembly GCA_902585265.1. The GC content of the type genome is 29.13 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter obveratio sp. nov.

Candidatus Pelagibacter obveratio (NL. fem. n. *obveratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579465*. The type genome for the species is the GenBank assembly GCA_902579465.1. The GC content of the type genome is 29.69 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter obvolitudo sp. nov.

Candidatus Pelagibacter obvolitudo (NL. fem. n. *obvolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592985*. The type genome for the species is the GenBank assembly GCA_902592985.1. The GC content of the type genome is 28.22 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter occenessa sp. nov.

Candidatus Pelagibacter occenessa (NL. fem. n. *occenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902608385*. The type genome for the species is the GenBank assembly GCA_902608385.1. The GC content of the type genome is 28.4 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter occenifica sp. nov.

Candidatus Pelagibacter occenifica (NL. fem. n. *occenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654035*. The type genome for the species is the GenBank assembly GCA_014654035.1. The GC content of the type genome is 28.34 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter occucugo sp. nov.

Candidatus Pelagibacter occucugo (NL. fem. n. *occucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902616205*. The type genome for the species is the GenBank assembly GCA_902616205.1. The GC content of the type genome is 29.55 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter occumivita sp. nov.

Candidatus Pelagibacter occumivita (NL. fem. n. *occumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554315*. The type genome for the species is the GenBank assembly GCA_902554315.1. The GC content of the type genome is 28.36 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter ocissilega sp. nov.

Candidatus Pelagibacter ocissilega (NL. fem. n. *ocissilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555535*. The type genome for the species is the GenBank assembly GCA_902555535.1. The GC content of the type genome is 29.42 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter ocissilenta sp. nov.

Candidatus Pelagibacter ocissilenta (NL. fem. n. *ocissilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632935*. The type genome for the species is the GenBank assembly GCA_902632935.1. The GC content of the type genome is 29.15 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter octobago sp. nov.

Candidatus Pelagibacter octobago (NL. fem. n. *octobago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599605*. The type genome for the species is the GenBank assembly GCA_902599605.1. The GC content of the type genome is 29.68 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter octobugo sp. nov.

Candidatus Pelagibacter octobugo (NL. fem. n. *octobugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902529785*. The type genome for the species is the GenBank assembly GCA_902529785.1. The GC content of the type genome is 29.97 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter octupiforma sp. nov.

Candidatus Pelagibacter octupiforma (NL. fem. n. *octupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579215*. The type genome for the species is the GenBank assembly GCA_902579215.1. The GC content of the type genome is 28.59 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter octupilenta sp. nov.

Candidatus Pelagibacter octupilenta (NL. fem. n. *octupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604545*. The type genome for the species is the GenBank assembly GCA_902604545.1. The GC content of the type genome is 29.22 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter octusicula sp. nov.

Candidatus Pelagibacter octusicula (NL. fem. n. *octusicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902614355*. The type genome for the species is the GenBank assembly GCA_902614355.1. The GC content of the type genome is 29.57 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter odollicula sp. nov.

Candidatus Pelagibacter odollicula (NL. fem. n. *odollicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902553465*. The type genome for the species is the GenBank assembly GCA_902553465.1. The GC content of the type genome is 28.44 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter odollitoga sp. nov.

Candidatus Pelagibacter odollitoga (NL. fem. n. *odollitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518395*. The type genome for the species is the GenBank assembly GCA_902518395.1. The GC content of the type genome is 29.54 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter offulimonas sp. nov.

Candidatus Pelagibacter offulimonas (NL. fem. n. *offulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611405*. The type genome for the species is the GenBank assembly GCA_902611405.1. The GC content of the type genome is 29.33 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter omninentia sp. nov.

Candidatus Pelagibacter omninentia (NL. fem. n. *omninentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902635845*. The type genome for the species is the GenBank assembly GCA_902635845.1. The GC content of the type genome is 29.57 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter omnipitio sp. nov.

Candidatus Pelagibacter omnipitio (NL. fem. n. *omnipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902631595*. The type genome for the species is the GenBank assembly GCA_902631595.1. The GC content of the type genome is 29.35 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter omnivitia sp. nov.

Candidatus Pelagibacter omnivitia (NL. fem. n. *omnivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653455*. The type genome for the species is the GenBank assembly GCA_014653455.1. The GC content of the type genome is 28.84 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter omnivousia sp. nov.

Candidatus Pelagibacter omnivousia (NL. fem. n. *omnivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537895*. The type genome for the species is the GenBank assembly GCA_902537895.1. The GC content of the type genome is 29.64 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter onocrisca sp. nov.

Candidatus Pelagibacter onocrisca (NL. fem. n. *onocrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592935*. The type genome for the species is the GenBank assembly GCA_902592935.1. The GC content of the type genome is 29.17 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter oppanilenta sp. nov.

Candidatus Pelagibacter oppanilenta (NL. fem. n. *oppanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902537555*. The type genome for the species is the GenBank assembly GCA_902537555.1. The GC content of the type genome is 29.13 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Pelagibacter oppugifica sp. nov.

Candidatus Pelagibacter oppugifica (NL. fem. n. *oppugifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902580535*. The type genome for the species is the GenBank assembly GCA_902580535.1. The GC content of the type genome is 29.82 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter optabax sp. nov.

Candidatus Pelagibacter optabax (NL. fem. n. *optabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902574685*. The type genome for the species is the GenBank assembly GCA_902574685.1. The GC content of the type genome is 29.28 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter optumetta sp. nov.

Candidatus Pelagibacter optumetta (NL. fem. n. *optumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902626245*. The type genome for the species is the GenBank assembly GCA_902626245.1. The GC content of the type genome is 28.73 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter pabiligena sp. nov.

Candidatus Pelagibacter pabiligena (NL. fem. n. *pabiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902619595*. The type genome for the species is the GenBank assembly GCA_902619595.1. The GC content of the type genome is 29.16 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter pabilisca sp. nov.

Candidatus Pelagibacter pabilisca (NL. fem. n. *pabilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902609705*. The type genome for the species is the GenBank assembly GCA_902609705.1. The GC content of the type genome is 29.28 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter papavitio sp. nov.

Candidatus Pelagibacter papavitio (NL. fem. n. *papavitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604355*. The type genome for the species is the GenBank assembly GCA_902604355.1. The GC content of the type genome is 29.81 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter paralitio sp. nov.

Candidatus Pelagibacter paralitio (NL. fem. n. *paralitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902563075*. The type genome for the species is the GenBank assembly GCA_902563075.1. The GC content of the type genome is 29.69 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter parocugo sp. nov.

Candidatus Pelagibacter parocugo (NL. fem. n. *parocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596375*. The type genome for the species is the GenBank assembly GCA_902596375.1. The GC content of the type genome is 29.3 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter paropetta sp. nov.

Candidatus Pelagibacter paropetta (NL. fem. n. *paropetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902550635*. The type genome for the species is the GenBank assembly GCA_902550635.1. The GC content of the type genome is 28.25 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter paropitoga sp. nov.

Candidatus Pelagibacter paropitoga (NL. fem. n. *paropitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902539445*. The type genome for the species is the GenBank assembly GCA_902539445.1. The GC content of the type genome is 29.33 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter paropivita sp. nov.

Candidatus Pelagibacter paropivita (NL. fem. n. *paropivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902556065*. The type genome for the species is the GenBank assembly GCA_902572465.1. The GC content of the type genome is 29.83 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter patibimonas sp. nov.

Candidatus Pelagibacter patibimonas (NL. fem. n. *patibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp001704055*. The type genome for the species is the GenBank assembly GCA_902521355.1. The GC content of the type genome is 29.41 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter pavicatio sp. nov.

Candidatus Pelagibacter pavicatio (NL. fem. n. *pavicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003213155*. The type genome for the species is the GenBank assembly GCA_902596765.1. The GC content of the type genome is 29.58 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter pedepago sp. nov.

Candidatus Pelagibacter pedepago (NL. fem. n. *pedepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902586125*. The type genome for the species is the GenBank assembly GCA_902579505.1. The GC content of the type genome is 29.24 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter pedifitio sp. nov.

Candidatus Pelagibacter pedifitio (NL. fem. n. *pedifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902542975*. The type genome for the species is the GenBank assembly GCA_902542975.1. The GC content of the type genome is 29.42 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter penecitia sp. nov.

Candidatus Pelagibacter penecitia (NL. fem. n. *penecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902541315*. The type genome for the species is the GenBank assembly GCA_902541315.1. The GC content of the type genome is 29.19 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter pericitrix sp. nov.

Candidatus Pelagibacter pericitrix (NL. fem. n. *pericitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555585*. The type genome for the species is the GenBank assembly GCA_902530875.1. The GC content of the type genome is 29.66 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter peripitudo sp. nov.

Candidatus Pelagibacter peripitudo (NL. fem. n. *peripitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902619745*. The type genome for the species is the GenBank assembly GCA_902619745.1. The GC content of the type genome is 29.36 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter pimenago sp. nov.

Candidatus Pelagibacter pimenago (NL. fem. n. *pimenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515205*. The type genome for the species is the GenBank assembly GCA_902515205.1. The GC content of the type genome is 28.84 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter pinacessa sp. nov.

Candidatus Pelagibacter pinacessa (NL. fem. n. *pinacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902593235*. The type genome for the species is the GenBank assembly GCA_902593235.1. The GC content of the type genome is 29.57 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter pinaciforma sp. nov.

Candidatus Pelagibacter pinaciforma (NL. fem. n. *pinaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003212925*. The type genome for the species is the GenBank assembly GCA_003212925.1. The GC content of the type genome is 29.35 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter pinifibula sp. nov.

Candidatus Pelagibacter pinifibula (NL. fem. n. *pinifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902518165*. The type genome for the species is the GenBank assembly GCA_902518165.1. The GC content of the type genome is 29.3 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pelagibacter pinigessa sp. nov.

Candidatus Pelagibacter pinigessa (NL. fem. n. *pinigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654065*. The type genome for the species is the GenBank assembly GCA_014654065.1. The GC content of the type genome is 28.88 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter pinigimonia sp. nov.

Candidatus Pelagibacter pinigimonia (NL. fem. n. *pinigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902550805*. The type genome for the species is the GenBank assembly GCA_902550805.1. The GC content of the type genome is 28.26 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter pocilifica sp. nov.

Candidatus Pelagibacter pocilifica (NL. fem. n. *pocilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp008638165*. The type genome for the species is the GenBank assembly GCA_008638165.1. The GC content of the type genome is 29.54 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter podagicella sp. nov.

Candidatus Pelagibacter podagicella (NL. fem. n. *podagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543375*. The type genome for the species is the GenBank assembly GCA_902543375.1. The GC content of the type genome is 29.22 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter pomifigena sp. nov.

Candidatus Pelagibacter pomifigena (NL. fem. n. *pomifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902573705*. The type genome for the species is the GenBank assembly GCA_902573705.1. The GC content of the type genome is 28.94 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter pomifitio sp. nov.

Candidatus Pelagibacter pomifitio (NL. fem. n. *pomifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902602105*. The type genome for the species is the GenBank assembly GCA_902602105.1. The GC content of the type genome is 28.85 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Pelagibacter procrugo sp. nov.

Candidatus Pelagibacter procrugo (NL. fem. n. *procrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902541285*. The type genome for the species is the GenBank assembly GCA_902541285.1. The GC content of the type genome is 28.95 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter prodritrix sp. nov.

Candidatus Pelagibacter prodritrix (NL. fem. n. *prodritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902515485*. The type genome for the species is the GenBank assembly GCA_902515485.1. The GC content of the type genome is 29.39 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter prognitia sp. nov.

Candidatus Pelagibacter prognitia (NL. fem. n. *prognitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002457485*. The type genome for the species is the GenBank assembly GCA_002457485.1. The GC content of the type genome is 28.34 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter pudibedo sp. nov.

Candidatus Pelagibacter pudibedo (NL. fem. n. *pudibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902601235*. The type genome for the species is the GenBank assembly GCA_902601235.1. The GC content of the type genome is 28.7 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter ranunatio sp. nov.

Candidatus Pelagibacter ranunatio (NL. fem. n. *ranunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579925*. The type genome for the species is the GenBank assembly GCA_902524035.1. The GC content of the type genome is 29.27 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter rarefatica sp. nov.

Candidatus Pelagibacter rarefatica (NL. fem. n. *rarefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588315*. The type genome for the species is the GenBank assembly GCA_902588315.1. The GC content of the type genome is 29.23 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter rarefivita sp. nov.

Candidatus Pelagibacter rarefivita (NL. fem. n. *rarefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560685*. The type genome for the species is the GenBank assembly GCA_902560685.1. The GC content of the type genome is 28.48 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter ratifibula sp. nov.

Candidatus Pelagibacter ratifibula (NL. fem. n. *ratifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627805*. The type genome for the species is the GenBank assembly GCA_902627805.1. The GC content of the type genome is 29.51 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter ratifitia sp. nov.

Candidatus Pelagibacter ratifitia (NL. fem. n. *ratifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594705*. The type genome for the species is the GenBank assembly GCA_902622695.1. The GC content of the type genome is 29.18 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter ratifitio sp. nov.

Candidatus Pelagibacter ratifitio (NL. fem. n. *ratifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611265*. The type genome for the species is the GenBank assembly GCA_902611265.1. The GC content of the type genome is 29.72 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter recocitura sp. nov.

Candidatus Pelagibacter recocitura (NL. fem. n. *recocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp001704065*. The type genome for the species is the GenBank assembly GCA_902519165.1. The GC content of the type genome is 29.2 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pelagibacter recomessa sp. nov.

Candidatus Pelagibacter recomessa (NL. fem. n. *recomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter sp902624345*. The type genome for the species is the GenBank assembly GCA_902624345.1. The GC content of the type genome is 30.48 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Pelagibacter recorastra sp. nov.

Candidatus Pelagibacter recorastra (NL. fem. n. *recorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571915*. The type genome for the species is the GenBank assembly GCA_902571915.1. The GC content of the type genome is 29.34 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter refinilenta sp. nov.

Candidatus Pelagibacter refinilenta (NL. fem. n. *refinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580135*. The type genome for the species is the GenBank assembly GCA_902580135.1. The GC content of the type genome is 28.33 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter reforitio sp. nov.

Candidatus Pelagibacter reforitio (NL. fem. n. *reforitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282205*. The type genome for the species is the GenBank assembly GCA_902525505.1. The GC content of the type genome is 29.39 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Pelagibacter refunugo sp. nov.

Candidatus Pelagibacter refunugo (NL. fem. n. *refunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902568235*. The type genome for the species is the GenBank assembly GCA_902568235.1. The GC content of the type genome is 28.53 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter regifitoga sp. nov.

Candidatus Pelagibacter regifitoga (NL. fem. n. *regifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp001438335*. The type genome for the species is the GenBank assembly GCA_001439165.1. The GC content of the type genome is 31.57 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Pelagibacter regigatio sp. nov.

Candidatus Pelagibacter regigatio (NL. fem. n. *regigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555275*. The type genome for the species is the GenBank assembly GCA_902601645.1. The GC content of the type genome is 29.83 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter regigitoga sp. nov.

Candidatus Pelagibacter regigitoga (NL. fem. n. *regigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557995*. The type genome for the species is the GenBank assembly GCA_902557995.1. The GC content of the type genome is 29.64 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter relapago sp. nov.

Candidatus Pelagibacter relapago (NL. fem. n. *relapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516065*. The type genome for the species is the GenBank assembly GCA_902516065.1. The GC content of the type genome is 28.53 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter relapatio sp. nov.

Candidatus Pelagibacter relapatio (NL. fem. n. *relapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902525295*. The type genome for the species is the GenBank assembly GCA_902525295.1. The GC content of the type genome is 29.08 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter relapibra sp. nov.

Candidatus Pelagibacter relapibra (NL. fem. n. *relapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902613855*. The type genome for the species is the GenBank assembly GCA_902613855.1. The GC content of the type genome is 29.38 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter relapitica sp. nov.

Candidatus Pelagibacter relapitica (NL. fem. n. *relapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003209915*. The type genome for the species is the GenBank assembly GCA_902524825.1. The GC content of the type genome is 30.2 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter relecatio sp. nov.

Candidatus Pelagibacter relecatio (NL. fem. n. *relecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599625*. The type genome for the species is the GenBank assembly GCA_902599625.1. The GC content of the type genome is 29.72 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter relecetta sp. nov.

Candidatus Pelagibacter relecetta (NL. fem. n. *relecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp002101295*. The type genome for the species is the GenBank assembly RS_GCF_002101295.1. The GC content of the type genome is 29.44 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Pelagibacter relecimonia sp. nov.

Candidatus Pelagibacter relecimonia (NL. fem. n. *relecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902590535*. The type genome for the species is the GenBank assembly GCA_902590535.1. The GC content of the type genome is 29.34 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter renavastra sp. nov.

Candidatus Pelagibacter renavastra (NL. fem. n. *renavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902587215*. The type genome for the species is the GenBank assembly GCA_902587215.1. The GC content of the type genome is 28.91 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter repagatio sp. nov.

Candidatus Pelagibacter repagatio (NL. fem. n. *repagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003278165*. The type genome for the species is the GenBank assembly GCA_003278165.1. The GC content of the type genome is 29.21 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter repecitoga sp. nov.

Candidatus Pelagibacter repecitoga (NL. fem. n. *repecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902589315*. The type genome for the species is the GenBank assembly GCA_902589315.1. The GC content of the type genome is 29.46 %

and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter repecivita sp. nov.

Candidatus Pelagibacter repecivita (NL. fem. n. *repecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582765*. The type genome for the species is the GenBank assembly GCA_902582765.1. The GC content of the type genome is 29.59 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter repepivita sp. nov.

Candidatus Pelagibacter repepivita (NL. fem. n. *repepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902521805*. The type genome for the species is the GenBank assembly GCA_902521805.1. The GC content of the type genome is 28.58 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter repuritoga sp. nov.

Candidatus Pelagibacter repuritoga (NL. fem. n. *repuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570695*. The type genome for the species is the GenBank assembly GCA_902570695.1. The GC content of the type genome is 29.22 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Pelagibacter repuritudo sp. nov.

Candidatus Pelagibacter repuritudo (NL. fem. n. *repuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611175*. The type genome for the species is the GenBank assembly GCA_902611175.1. The GC content of the type genome is 29.42 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter resacicula sp. nov.

Candidatus Pelagibacter resacicula (NL. fem. n. *resacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902610675*. The type genome for the species is the GenBank assembly GCA_902610675.1. The GC content of the type genome is 29.15 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter resalago sp. nov.

Candidatus Pelagibacter resalago (NL. fem. n. *resalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560245*. The type genome for the species is the GenBank assembly GCA_902560245.1. The GC content of the type genome is 29.0 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter resalilenta sp. nov.

Candidatus Pelagibacter resalilenta (NL. fem. n. *resalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902615145*. The type genome for the species is the GenBank assembly GCA_902585885.1. The GC content of the type genome is 29.36 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter resalimonia sp. nov.

Candidatus Pelagibacter resalimonia (NL. fem. n. *resalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555435*. The type genome for the species is the GenBank assembly GCA_902594715.1. The GC content of the type genome is 29.43 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Pelagibacter resulilenta sp. nov.

Candidatus Pelagibacter resulilenta (NL. fem. n. *resulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902564565*. The type genome for the species is the GenBank assembly GCA_902564565.1. The GC content of the type genome is 28.72 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter resupicella sp. nov.

Candidatus Pelagibacter resupicella (NL. fem. n. *resupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902514755*. The type genome for the species is the GenBank assembly GCA_902514755.1. The GC content of the type genome is 29.51 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter retunibra sp. nov.

Candidatus Pelagibacter retunibra (NL. fem. n. *retunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282825*. The type genome for the species is the GenBank assembly GCA_003282825.1. The GC content of the type genome is 29.0 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter revecedo sp. nov.

Candidatus Pelagibacter revecedo (NL. fem. n. *revecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902600485*. The type genome for the species is the GenBank assembly GCA_902600485.1. The GC content of the type genome is 28.84 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter revecisca sp. nov.

Candidatus Pelagibacter revecisca (NL. fem. n. *revecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902535625*. The type genome for the species is the GenBank assembly GCA_902535625.1. The GC content of the type genome is 29.22 %

and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter ridibessa sp. nov.

Candidatus Pelagibacter ridibessa (NL. fem. n. *ridibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596915*. The type genome for the species is the GenBank assembly GCA_902596915.1. The GC content of the type genome is 29.58 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter rinocicula sp. nov.

Candidatus Pelagibacter rinocicula (NL. fem. n. *rinocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559635*. The type genome for the species is the GenBank assembly GCA_902582125.1. The GC content of the type genome is 28.15 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter rinocimonas sp. nov.

Candidatus Pelagibacter rinocimonas (NL. fem. n. *rinocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516435*. The type genome for the species is the GenBank assembly GCA_902516435.1. The GC content of the type genome is 29.71 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter rorarax sp. nov.

Candidatus Pelagibacter rorarax (NL. fem. n. *rorarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902624315*. The type genome for the species is the GenBank assembly GCA_902624315.1. The GC content of the type genome is 29.72 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter rorarilenta sp. nov.

Candidatus Pelagibacter rorarilenta (NL. fem. n. *rorarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566805*. The type genome for the species is the GenBank assembly GCA_902576565.1. The GC content of the type genome is 28.6 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter rosarimonia sp. nov.

Candidatus Pelagibacter rosarimonia (NL. fem. n. *rosarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576335*. The type genome for the species is the GenBank assembly GCA_902528885.1. The GC content of the type genome is 29.91 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter rudecitrix sp. nov.

Candidatus Pelagibacter rudecitrix (NL. fem. n. *rudecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633885*. The type genome for the species is the GenBank assembly GCA_902633885.1. The GC content of the type genome is 28.08 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter rudicedo sp. nov.

Candidatus Pelagibacter rudicedo (NL. fem. n. *rudicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623735*. The type genome for the species is the GenBank assembly GCA_902623735.1. The GC content of the type genome is 29.4 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter ruricitica sp. nov.

Candidatus Pelagibacter ruricitica (NL. fem. n. *ruricitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003280485*. The type genome for the species is the GenBank assembly GCA_003280485.1. The GC content of the type genome is 29.23 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter ruricivita sp. nov.

Candidatus Pelagibacter ruricivita (NL. fem. n. *ruricivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902607215*. The type genome for the species is the GenBank assembly GCA_902607215.1. The GC content of the type genome is 28.96 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter sacomitica sp. nov.

Candidatus Pelagibacter sacomitica (NL. fem. n. *sacomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902564265*. The type genome for the species is the GenBank assembly GCA_902564265.1. The GC content of the type genome is 29.49 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter sacopimonas sp. nov.

Candidatus Pelagibacter sacopimonas (NL. fem. n. *sacopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528175*. The type genome for the species is the GenBank assembly GCA_902528175.1. The GC content of the type genome is 29.06 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter salubetta sp. nov.

Candidatus Pelagibacter salubetta (NL. fem. n. *salubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902577525*. The type genome for the species is the GenBank assembly GCA_902577525.1. The GC content of the type genome is 28.59 %

and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter sarabibra sp. nov.

Candidatus Pelagibacter sarabibra (NL. fem. n. *sarabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597695*. The type genome for the species is the GenBank assembly GCA_902597695.1. The GC content of the type genome is 29.95 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter sarabivita sp. nov.

Candidatus Pelagibacter sarabivita (NL. fem. n. *sarabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902573755*. The type genome for the species is the GenBank assembly GCA_902573755.1. The GC content of the type genome is 29.71 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter saxopitrix sp. nov.

Candidatus Pelagibacter saxopitrix (NL. fem. n. *saxopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003215055*. The type genome for the species is the GenBank assembly GCA_902566655.1. The GC content of the type genome is 28.5 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter scelledo sp. nov.

Candidatus Pelagibacter scelledo (NL. fem. n. *scelledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588965*. The type genome for the species is the GenBank assembly GCA_902588965.1. The GC content of the type genome is 28.7 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter scellicula sp. nov.

Candidatus Pelagibacter scellicula (NL. fem. n. *scellicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902569415*. The type genome for the species is the GenBank assembly GCA_902569415.1. The GC content of the type genome is 28.54 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter scorbatio sp. nov.

Candidatus Pelagibacter scorbatio (NL. fem. n. *scorbatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595595*. The type genome for the species is the GenBank assembly GCA_902595595.1. The GC content of the type genome is 29.45 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter secunibula sp. nov.

Candidatus Pelagibacter secunibula (NL. fem. n. *secunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653985*. The type genome for the species is the GenBank assembly GCA_014653985.1. The GC content of the type genome is 29.45 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Pelagibacter selecitrix sp. nov.

Candidatus Pelagibacter selecitrix (NL. fem. n. *selecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902616165*. The type genome for the species is the GenBank assembly GCA_902616165.1. The GC content of the type genome is 29.01 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter semifitio sp. nov.

Candidatus Pelagibacter semifitio (NL. fem. n. *semifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902612575*. The type genome for the species is the GenBank assembly GCA_902541335.1. The GC content of the type genome is 29.83 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter semigago sp. nov.

Candidatus Pelagibacter semigago (NL. fem. n. *semigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594675*. The type genome for the species is the GenBank assembly GCA_902594675.1. The GC content of the type genome is 29.32 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Pelagibacter semigilenta sp. nov.

Candidatus Pelagibacter semigilenta (NL. fem. n. *semigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528375*. The type genome for the species is the GenBank assembly GCA_902528375.1. The GC content of the type genome is 29.55 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter semigousia sp. nov.

Candidatus Pelagibacter semigousia (NL. fem. n. *semigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902614055*. The type genome for the species is the GenBank assembly GCA_902614055.1. The GC content of the type genome is 29.6 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter semipago sp. nov.

Candidatus Pelagibacter semipago (NL. fem. n. *semipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902528135*. The type genome for the species is the GenBank assembly GCA_902528135.1. The GC content of the type genome is 29.62 %

and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter semipetta sp. nov.

Candidatus Pelagibacter semipetta (NL. fem. n. *semipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902579105*. The type genome for the species is the GenBank assembly GCA_902530335.1. The GC content of the type genome is 27.96 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter semipicella sp. nov.

Candidatus Pelagibacter semipicella (NL. fem. n. *semipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618975*. The type genome for the species is the GenBank assembly GCA_902618975.1. The GC content of the type genome is 28.85 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter semipousia sp. nov.

Candidatus Pelagibacter semipousia (NL. fem. n. *semipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588255*. The type genome for the species is the GenBank assembly GCA_902588255.1. The GC content of the type genome is 28.88 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pelagibacter semodentia sp. nov.

Candidatus Pelagibacter semodentia (NL. fem. n. *semodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003282895*. The type genome for the species is the GenBank assembly GCA_902515655.1. The GC content of the type genome is 29.12 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter semunatica sp. nov.

Candidatus Pelagibacter semunatica (NL. fem. n. *semunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902568855*. The type genome for the species is the GenBank assembly GCA_902568855.1. The GC content of the type genome is 29.32 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter semunitio sp. nov.

Candidatus Pelagibacter semunitio (NL. fem. n. *semunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003210015*. The type genome for the species is the GenBank assembly GCA_003210015.1. The GC content of the type genome is 28.86 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter senipetta sp. nov.

Candidatus Pelagibacter senipetta (NL. fem. n. *senipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902585365*. The type genome for the species is the GenBank assembly GCA_902620685.1. The GC content of the type genome is 28.85 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter seposatio sp. nov.

Candidatus Pelagibacter seposatio (NL. fem. n. *seposatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902516345*. The type genome for the species is the GenBank assembly GCA_902516345.1. The GC content of the type genome is 29.33 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter sicinitas sp. nov.

Candidatus Pelagibacter sicinitas (NL. fem. n. *sicinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654455*. The type genome for the species is the GenBank assembly GCA_014654455.1. The GC content of the type genome is 28.42 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter sicubilega sp. nov.

Candidatus Pelagibacter sicubilega (NL. fem. n. *sicubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554195*. The type genome for the species is the GenBank assembly GCA_902554195.1. The GC content of the type genome is 29.39 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter sicubitura sp. nov.

Candidatus Pelagibacter sicubitura (NL. fem. n. *sicubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627075*. The type genome for the species is the GenBank assembly GCA_902627075.1. The GC content of the type genome is 29.35 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter siminitoga sp. nov.

Candidatus Pelagibacter siminitoga (NL. fem. n. *siminitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580945*. The type genome for the species is the GenBank assembly GCA_902580945.1. The GC content of the type genome is 29.38 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pelagibacter siteletta sp. nov.

Candidatus Pelagibacter siteletta (NL. fem. n. *siteletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902553695*. The type genome for the species is the GenBank assembly GCA_902553695.1. The GC content of the type genome is 28.6 %

and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter sitelifica sp. nov.

Candidatus Pelagibacter sitelifica (NL. fem. n. *sitelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653355*. The type genome for the species is the GenBank assembly GCA_014653355.1. The GC content of the type genome is 28.55 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter sitelitoga sp. nov.

Candidatus Pelagibacter sitelitoga (NL. fem. n. *sitelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599335*. The type genome for the species is the GenBank assembly GCA_902599335.1. The GC content of the type genome is 28.99 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Pelagibacter siticatica sp. nov.

Candidatus Pelagibacter siticatica (NL. fem. n. *siticatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902540235*. The type genome for the species is the GenBank assembly GCA_902540235.1. The GC content of the type genome is 29.6 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter socagibula sp. nov.

Candidatus Pelagibacter socagibula (NL. fem. n. *socagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902536975*. The type genome for the species is the GenBank assembly GCA_902536975.1. The GC content of the type genome is 29.75 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter socagitia sp. nov.

Candidatus Pelagibacter socagitia (NL. fem. n. *socagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003281045*. The type genome for the species is the GenBank assembly GCA_003281045.1. The GC content of the type genome is 29.86 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter solacimonia sp. nov.

Candidatus Pelagibacter solacimonia (NL. fem. n. *solacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp007833635*. The type genome for the species is the GenBank assembly RS_GCF_007833635.1. The GC content of the type genome is 29.22 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pelagibacter solifago sp. nov.

Candidatus Pelagibacter solifago (NL. fem. n. *solifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517175*. The type genome for the species is the GenBank assembly GCA_902517175.1. The GC content of the type genome is 29.72 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter solificula sp. nov.

Candidatus Pelagibacter solificula (NL. fem. n. *solificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559395*. The type genome for the species is the GenBank assembly GCA_902559395.1. The GC content of the type genome is 29.42 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter sonabimonas sp. nov.

Candidatus Pelagibacter sonabimonas (NL. fem. n. *sonabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902557215*. The type genome for the species is the GenBank assembly GCA_902541105.1. The GC content of the type genome is 29.27 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter sonivitio sp. nov.

Candidatus Pelagibacter sonivitio (NL. fem. n. *sonivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902578775*. The type genome for the species is the GenBank assembly GCA_902578775.1. The GC content of the type genome is 28.87 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter sotulatio sp. nov.

Candidatus Pelagibacter sotulatio (NL. fem. n. *sotulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902592445*. The type genome for the species is the GenBank assembly GCA_902538815.1. The GC content of the type genome is 29.42 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter spastilega sp. nov.

Candidatus Pelagibacter spastilega (NL. fem. n. *spastilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653665*. The type genome for the species is the GenBank assembly GCA_014653665.1. The GC content of the type genome is 29.57 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter stercitura sp. nov.

Candidatus Pelagibacter stercitura (NL. fem. n. *stercitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902552805*. The type genome for the species is the GenBank assembly GCA_902552805.1. The GC content of the type genome is 29.45 %

and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter subinousia sp. nov.

Candidatus Pelagibacter subinousia (NL. fem. n. *subinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902586495*. The type genome for the species is the GenBank assembly GCA_902586495.1. The GC content of the type genome is 29.54 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter suboditoga sp. nov.

Candidatus Pelagibacter suboditoga (NL. fem. n. *suboditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902599955*. The type genome for the species is the GenBank assembly GCA_902599955.1. The GC content of the type genome is 29.92 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter suboditura sp. nov.

Candidatus Pelagibacter suboditura (NL. fem. n. *suboditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595535*. The type genome for the species is the GenBank assembly GCA_902595535.1. The GC content of the type genome is 28.72 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Pelagibacter subucisca sp. nov.

Candidatus Pelagibacter subucisca (NL. fem. n. *subucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902589395*. The type genome for the species is the GenBank assembly GCA_902589395.1. The GC content of the type genome is 29.34 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Pelagibacter sugiliforma sp. nov.

Candidatus Pelagibacter sugiliforma (NL. fem. n. *sugiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632515*. The type genome for the species is the GenBank assembly GCA_902632515.1. The GC content of the type genome is 28.51 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter supelessa sp. nov.

Candidatus Pelagibacter supelessa (NL. fem. n. *supelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596975*. The type genome for the species is the GenBank assembly GCA_902596975.1. The GC content of the type genome is 29.5 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Pelagibacter supelilenta sp. nov.

Candidatus Pelagibacter supelilenta (NL. fem. n. *supelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014654235*. The type genome for the species is the GenBank assembly GCA_014654235.1. The GC content of the type genome is 29.52 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter susicitia sp. nov.

Candidatus Pelagibacter susicitia (NL. fem. n. *susicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902597555*. The type genome for the species is the GenBank assembly GCA_902597555.1. The GC content of the type genome is 29.41 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter tabifisca sp. nov.

Candidatus Pelagibacter tabifisca (NL. fem. n. *tabifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902625035*. The type genome for the species is the GenBank assembly GCA_902625035.1. The GC content of the type genome is 29.33 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter tabitetta sp. nov.

Candidatus Pelagibacter tabitetta (NL. fem. n. *tabitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003280005*. The type genome for the species is the GenBank assembly GCA_003280005.1. The GC content of the type genome is 28.81 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter taraxitas sp. nov.

Candidatus Pelagibacter taraxitas (NL. fem. n. *taraxitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902622805*. The type genome for the species is the GenBank assembly GCA_902625795.1. The GC content of the type genome is 29.11 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter televitrix sp. nov.

Candidatus Pelagibacter televitrix (NL. fem. n. *televitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902576375*. The type genome for the species is the GenBank assembly GCA_902576375.1. The GC content of the type genome is 29.37 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Pelagibacter tenebimonas sp. nov.

Candidatus Pelagibacter tenebimonas (NL. fem. n. *tenebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582605*. The type genome for the species is the GenBank assembly GCA_902582605.1. The GC content of the type genome is 29.58 %

and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter tenemivita sp. nov.

Candidatus Pelagibacter tenemivita (NL. fem. n. *tenemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902584015*. The type genome for the species is the GenBank assembly GCA_902584015.1. The GC content of the type genome is 29.54 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter tenemugo sp. nov.

Candidatus Pelagibacter tenemugo (NL. fem. n. *tenemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902559305*. The type genome for the species is the GenBank assembly GCA_902559305.1. The GC content of the type genome is 28.4 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Pelagibacter tenilax sp. nov.

Candidatus Pelagibacter tenilax (NL. fem. n. *tenilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902623305*. The type genome for the species is the GenBank assembly GCA_902623305.1. The GC content of the type genome is 29.05 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter tenilivita sp. nov.

Candidatus Pelagibacter tenilivita (NL. fem. n. *tenilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902520335*. The type genome for the species is the GenBank assembly GCA_902520335.1. The GC content of the type genome is 29.18 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter tetenedo sp. nov.

Candidatus Pelagibacter tetenedo (NL. fem. n. *tetenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902634305*. The type genome for the species is the GenBank assembly GCA_902634305.1. The GC content of the type genome is 28.28 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter thapsax sp. nov.

Candidatus Pelagibacter thapsax (NL. fem. n. *thapsax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902582235*. The type genome for the species is the GenBank assembly GCA_902582235.1. The GC content of the type genome is 29.68 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter tibicugo sp. nov.

Candidatus Pelagibacter tibicugo (NL. fem. n. *tibicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp014653775*. The type genome for the species is the GenBank assembly GCA_014653775.1. The GC content of the type genome is 27.8 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter timeficella sp. nov.

Candidatus Pelagibacter timeficella (NL. fem. n. *timeficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902562645*. The type genome for the species is the GenBank assembly GCA_902533545.1. The GC content of the type genome is 29.2 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter timefisca sp. nov.

Candidatus Pelagibacter timefisca (NL. fem. n. *timefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003213695*. The type genome for the species is the GenBank assembly GCA_003213695.1. The GC content of the type genome is 28.66 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter tirocimonas sp. nov.

Candidatus Pelagibacter tirocimonas (NL. fem. n. *tirocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902519255*. The type genome for the species is the GenBank assembly GCA_902534025.1. The GC content of the type genome is 29.33 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter tirunicella sp. nov.

Candidatus Pelagibacter tirunicella (NL. fem. n. *tirunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902615445*. The type genome for the species is the GenBank assembly GCA_902615445.1. The GC content of the type genome is 29.41 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter tirunilega sp. nov.

Candidatus Pelagibacter tirunilega (NL. fem. n. *tirunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902596325*. The type genome for the species is the GenBank assembly GCA_902601715.1. The GC content of the type genome is 29.13 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Pelagibacter tumefitoga sp. nov.

Candidatus Pelagibacter tumefitoga (NL. fem. n. *tumefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902571015*. The type genome for the species is the GenBank assembly GCA_902571015.1. The GC content of the type genome is 29.13 %

and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter turibibula sp. nov.

Candidatus Pelagibacter turibibula (NL. fem. n. *turibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902611145*. The type genome for the species is the GenBank assembly GCA_902567935.1. The GC content of the type genome is 28.18 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter turibousia sp. nov.

Candidatus Pelagibacter turibousia (NL. fem. n. *turibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902560855*. The type genome for the species is the GenBank assembly GCA_902560855.1. The GC content of the type genome is 28.39 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter turifibra sp. nov.

Candidatus Pelagibacter turifibra (NL. fem. n. *turifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554995*. The type genome for the species is the GenBank assembly GCA_902554995.1. The GC content of the type genome is 29.67 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter umbiletta sp. nov.

Candidatus Pelagibacter umbiletta (NL. fem. n. *umbiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902545035*. The type genome for the species is the GenBank assembly GCA_902545035.1. The GC content of the type genome is 29.39 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter utillitas sp. nov.

Candidatus Pelagibacter utillitas (NL. fem. n. *utillitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902632275*. The type genome for the species is the GenBank assembly GCA_902632275.1. The GC content of the type genome is 28.78 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter utrarisca sp. nov.

Candidatus Pelagibacter utrarisca (NL. fem. n. *utrarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902633985*. The type genome for the species is the GenBank assembly GCA_902633985.1. The GC content of the type genome is 29.23 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pelagibacter uxorcitica sp. nov.

Candidatus Pelagibacter uxorcitica (NL. fem. n. *uxorcitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902588895*. The type genome for the species is the GenBank assembly GCA_902588895.1. The GC content of the type genome is 29.28 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Pelagibacter uxorcousia sp. nov.

Candidatus Pelagibacter uxorcousia (NL. fem. n. *uxorcousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902570545*. The type genome for the species is the GenBank assembly GCA_902570545.1. The GC content of the type genome is 29.66 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter vacilitoga sp. nov.

Candidatus Pelagibacter vacilitoga (NL. fem. n. *vacilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583345*. The type genome for the species is the GenBank assembly GCA_902583345.1. The GC content of the type genome is 28.85 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Pelagibacter vanidago sp. nov.

Candidatus Pelagibacter vanidago (NL. fem. n. *vanidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902628275*. The type genome for the species is the GenBank assembly GCA_902628275.1. The GC content of the type genome is 29.19 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Pelagibacter vaniditudo sp. nov.

Candidatus Pelagibacter vaniditudo (NL. fem. n. *vaniditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902543245*. The type genome for the species is the GenBank assembly GCA_902578735.1. The GC content of the type genome is 29.17 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter vanitatica sp. nov.

Candidatus Pelagibacter vanitatica (NL. fem. n. *vanitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902594915*. The type genome for the species is the GenBank assembly GCA_902594915.1. The GC content of the type genome is 28.74 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter vecorastra sp. nov.

Candidatus Pelagibacter vecorastra (NL. fem. n. *vecorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902525625*. The type genome for the species is the GenBank assembly GCA_902526275.1. The GC content of the type genome is 29.68 %

and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter vecoratio sp. nov.

Candidatus Pelagibacter vecoratio (NL. fem. n. *vecoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902564785*. The type genome for the species is the GenBank assembly GCA_902564785.1. The GC content of the type genome is 29.53 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter vehemibra sp. nov.

Candidatus Pelagibacter vehemibra (NL. fem. n. *vehemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902521005*. The type genome for the species is the GenBank assembly GCA_902573185.1. The GC content of the type genome is 28.63 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter venefedo sp. nov.

Candidatus Pelagibacter venefedo (NL. fem. n. *venefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902532645*. The type genome for the species is the GenBank assembly GCA_902532645.1. The GC content of the type genome is 29.42 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter vepalicella sp. nov.

Candidatus Pelagibacter vepalicella (NL. fem. n. *vepalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902555665*. The type genome for the species is the GenBank assembly GCA_902555665.1. The GC content of the type genome is 29.39 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter vepalisca sp. nov.

Candidatus Pelagibacter vepalisca (NL. fem. n. *vepalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554335*. The type genome for the species is the GenBank assembly GCA_902554335.1. The GC content of the type genome is 28.89 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter vepalitio sp. nov.

Candidatus Pelagibacter vepalitio (NL. fem. n. *vepalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902541825*. The type genome for the species is the GenBank assembly GCA_902612225.1. The GC content of the type genome is 29.46 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter veridifica sp. nov.

Candidatus Pelagibacter veridifica (NL. fem. n. *veridifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902534465*. The type genome for the species is the GenBank assembly GCA_902534465.1. The GC content of the type genome is 29.6 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pelagibacter viburicella sp. nov.

Candidatus Pelagibacter viburicella (NL. fem. n. *viburicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591025*. The type genome for the species is the GenBank assembly GCA_902591025.1. The GC content of the type genome is 29.37 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pelagibacter viburitoga sp. nov.

Candidatus Pelagibacter viburitoga (NL. fem. n. *viburitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902618855*. The type genome for the species is the GenBank assembly GCA_902618855.1. The GC content of the type genome is 28.99 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter vicatedo sp. nov.

Candidatus Pelagibacter vicatedo (NL. fem. n. *vicatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902562205*. The type genome for the species is the GenBank assembly GCA_902562205.1. The GC content of the type genome is 29.65 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter vicecatica sp. nov.

Candidatus Pelagibacter vicecatica (NL. fem. n. *vicecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902566705*. The type genome for the species is the GenBank assembly GCA_902566705.1. The GC content of the type genome is 29.28 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pelagibacter videlitrix sp. nov.

Candidatus Pelagibacter videlitrix (NL. fem. n. *videlitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902591695*. The type genome for the species is the GenBank assembly GCA_902591695.1. The GC content of the type genome is 29.33 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter vigenitas sp. nov.

Candidatus Pelagibacter vigenitas (NL. fem. n. *vigenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902539165*. The type genome for the species is the GenBank assembly GCA_902555265.1. The GC content of the type genome is 29.82 %

and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter viginifica sp. nov.

Candidatus Pelagibacter viginifica (NL. fem. n. *viginifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604975*. The type genome for the species is the GenBank assembly GCA_902604975.1. The GC content of the type genome is 29.43 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter vinolilenta sp. nov.

Candidatus Pelagibacter vinolilenta (NL. fem. n. *vinolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902607115*. The type genome for the species is the GenBank assembly GCA_902607115.1. The GC content of the type genome is 28.53 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter vinulousia sp. nov.

Candidatus Pelagibacter vinulousia (NL. fem. n. *vinulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902533075*. The type genome for the species is the GenBank assembly GCA_902533075.1. The GC content of the type genome is 28.79 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter viragetta sp. nov.

Candidatus Pelagibacter viragetta (NL. fem. n. *viragetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902554035*. The type genome for the species is the GenBank assembly GCA_902554035.1. The GC content of the type genome is 28.7 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter visibicella sp. nov.

Candidatus Pelagibacter visibicella (NL. fem. n. *visibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902631135*. The type genome for the species is the GenBank assembly GCA_902631135.1. The GC content of the type genome is 28.94 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter visificella sp. nov.

Candidatus Pelagibacter visificella (NL. fem. n. *visificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902627565*. The type genome for the species is the GenBank assembly GCA_902627565.1. The GC content of the type genome is 28.98 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter visifivita sp. nov.

Candidatus Pelagibacter visifivita (NL. fem. n. *visifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902517495*. The type genome for the species is the GenBank assembly GCA_902517495.1. The GC content of the type genome is 29.69 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter visocitia sp. nov.

Candidatus Pelagibacter visocitia (NL. fem. n. *visocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902522915*. The type genome for the species is the GenBank assembly GCA_902522915.1. The GC content of the type genome is 28.95 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter vitupitudo sp. nov.

Candidatus Pelagibacter vitupitudo (NL. fem. n. *vitupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902580335*. The type genome for the species is the GenBank assembly GCA_902580335.1. The GC content of the type genome is 29.26 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter vocifedo sp. nov.

Candidatus Pelagibacter vocifedo (NL. fem. n. *vocifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902615425*. The type genome for the species is the GenBank assembly GCA_902615425.1. The GC content of the type genome is 29.39 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter volubiforma sp. nov.

Candidatus Pelagibacter volubiforma (NL. fem. n. *volubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp003279685*. The type genome for the species is the GenBank assembly GCA_902558255.1. The GC content of the type genome is 29.27 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Pelagibacter voragentia sp. nov.

Candidatus Pelagibacter voragentia (NL. fem. n. *voragentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902604245*. The type genome for the species is the GenBank assembly GCA_902604245.1. The GC content of the type genome is 29.58 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Pelagibacter voragitia sp. nov.

Candidatus Pelagibacter voragitia (NL. fem. n. *voragitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902577625*. The type genome for the species is the GenBank assembly GCA_902577625.1. The GC content of the type genome is 28.57 %

and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter xenopitrix sp. nov.

Candidatus Pelagibacter xenopitrix (NL. fem. n. *xenopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902583645*. The type genome for the species is the GenBank assembly GCA_902583645.1. The GC content of the type genome is 29.25 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter xeramastra sp. nov.

Candidatus Pelagibacter xeramastra (NL. fem. n. *xeramastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter sp902595125*. The type genome for the species is the GenBank assembly GCA_902605005.1. The GC content of the type genome is 28.76 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Pelagibacter aclasicella sp. nov.

Candidatus Pelagibacter aclasicella (NL. fem. n. *aclasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902603945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902603945.1. The GC content of the type genome is 30.08 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter adfulimonas sp. nov.

Candidatus Pelagibacter adfulimonas (NL. fem. n. *adfulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902631535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902631535.1. The GC

content of the type genome is 29.65 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter adnecedo sp. nov.

Candidatus Pelagibacter adnecedo (NL. fem. n. *adnecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp002169755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002169755.1. The GC content of the type genome is 29.61 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter adoscessa sp. nov.

Candidatus Pelagibacter adoscessa (NL. fem. n. *adoscessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp014653815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014653815.1. The GC content of the type genome is 29.12 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter adsesessa sp. nov.

Candidatus Pelagibacter adsesessa (NL. fem. n. *adsesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902598125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902598125.1. The GC content of the type genome is 29.57 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pelagibacter adtacilega sp. nov.

Candidatus Pelagibacter adtacilega (NL. fem. n. *adtacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902535255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902535255.1. The GC content of the type genome is 29.98 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter advigivita sp. nov.

Candidatus Pelagibacter advigivita (NL. fem. n. *advigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902582165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902582165.1. The GC content of the type genome is 29.71 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter affanibra sp. nov.

Candidatus Pelagibacter affanibra (NL. fem. n. *affanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902569465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902569465.1. The GC content of the type genome is 29.84 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Pelagibacter affulatio sp. nov.

Candidatus Pelagibacter affulatio (NL. fem. n. *affulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902624495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624495.1. The GC content of the type genome is 30.43 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter agratitura sp. nov.

Candidatus Pelagibacter agratitura (NL. fem. n. *agratitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902625945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902625945.1. The GC content of the type genome is 29.7 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter allibedo sp. nov.

Candidatus Pelagibacter allibedo (NL. fem. n. *allibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902615435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902615435.1. The GC content of the type genome is 29.64 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter alluvicella sp. nov.

Candidatus Pelagibacter alluvicella (NL. fem. n. *alluvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902633595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902633595.1. The GC content of the type genome is 30.25 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Pelagibacter ambadatica sp. nov.

Candidatus Pelagibacter ambadatica (NL. fem. n. *ambadatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp014653835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014653835.1. The GC

content of the type genome is 29.58 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter anactimonas sp. nov.

Candidatus Pelagibacter anactimonas (NL. fem. n. *anactimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902561585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902561585.1. The GC content of the type genome is 29.55 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter anarricula sp. nov.

Candidatus Pelagibacter anarricula (NL. fem. n. *anarricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902523095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902523095.1. The GC content of the type genome is 29.51 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter ancipitoga sp. nov.

Candidatus Pelagibacter ancipitoga (NL. fem. n. *ancipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902545945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902545945.1. The GC content of the type genome is 29.7 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter annucibra sp. nov.

Candidatus Pelagibacter annucibra (NL. fem. n. *annucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902578315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902578315.1. The GC content of the type genome is 29.86 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter aphoretta sp. nov.

Candidatus Pelagibacter aphoretta (NL. fem. n. *aphoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902635795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902635795.1. The GC content of the type genome is 29.89 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter apposousia sp. nov.

Candidatus Pelagibacter apposousia (NL. fem. n. *apposousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902554785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902554785.1. The GC content of the type genome is 30.0 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter arcipitrix sp. nov.

Candidatus Pelagibacter arcipitrix (NL. fem. n. *arcipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902623395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902623395.1. The GC content of the type genome is 29.57 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter aspilitudo sp. nov.

Candidatus Pelagibacter aspilitudo (NL. fem. n. *aspilitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902590465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590465.1. The GC content of the type genome is 29.81 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter atlanibula sp. nov.

Candidatus Pelagibacter atlanibula (NL. fem. n. *atlanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902536385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536385.1. The GC content of the type genome is 29.79 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter baditicella sp. nov.

Candidatus Pelagibacter baditicella (NL. fem. n. *baditicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902619675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902633135.1. The GC content of the type genome is 30.04 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter badititia sp. nov.

Candidatus Pelagibacter badititia (NL. fem. n. *badititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902630925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902630925.1. The GC

content of the type genome is 29.85 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter benepivita sp. nov.

Candidatus Pelagibacter benepivita (NL. fem. n. *benepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902610975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902610975.1. The GC content of the type genome is 29.7 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter bicapastra sp. nov.

Candidatus Pelagibacter bicapastra (NL. fem. n. *bicapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902566945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902566945.1. The GC content of the type genome is 29.62 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter brasmitas sp. nov.

Candidatus Pelagibacter brasmitas (NL. fem. n. *brasmitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902632445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902632445.1. The GC content of the type genome is 29.66 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter bucolicula sp. nov.

Candidatus Pelagibacter bucolicula (NL. fem. n. *bucolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902618555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902618555.1. The GC content of the type genome is 29.91 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter cacomitica sp. nov.

Candidatus Pelagibacter cacomitica (NL. fem. n. *cacomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902583585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902583585.1. The GC content of the type genome is 29.78 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter cadavax sp. nov.

Candidatus Pelagibacter cadavax (NL. fem. n. *cadavax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902569785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902569785.1. The GC content of the type genome is 29.4 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter catalessa sp. nov.

Candidatus Pelagibacter catalessa (NL. fem. n. *catalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902592655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902592655.1. The GC content of the type genome is 29.82 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter catalitoga sp. nov.

Candidatus Pelagibacter catalitoga (NL. fem. n. *catalitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003283025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902514955.1. The GC content of the type genome is 29.22 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Pelagibacter catobastra sp. nov.

Candidatus Pelagibacter catobastra (NL. fem. n. *catobastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902574045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902574045.1. The GC content of the type genome is 29.69 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter cenacimonas sp. nov.

Candidatus Pelagibacter cenacimonas (NL. fem. n. *cenacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902619835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902619835.1. The GC content of the type genome is 29.61 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter cenotastra sp. nov.

Candidatus Pelagibacter cenotastra (NL. fem. n. *cenotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902552345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902552345.1. The GC

content of the type genome is 29.85 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter codifastra sp. nov.

Candidatus Pelagibacter codifastra (NL. fem. n. *codifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003213555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213555.1. The GC content of the type genome is 30.05 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Pelagibacter colubimonia sp. nov.

Candidatus Pelagibacter colubimonia (NL. fem. n. *colubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003284275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902509665.1. The GC content of the type genome is 29.91 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter cosigax sp. nov.

Candidatus Pelagibacter cosigax (NL. fem. n. *cosigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902587515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902587515.1. The GC content of the type genome is 29.51 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Pelagibacter cruppitoga sp. nov.

Candidatus Pelagibacter cruppitoga (NL. fem. n. *cruppitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902613915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902613915.1. The GC content of the type genome is 29.49 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter culilibula sp. nov.

Candidatus Pelagibacter culilibula (NL. fem. n. *culilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902539235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902539235.1. The GC content of the type genome is 29.66 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter decupatio sp. nov.

Candidatus Pelagibacter decupatio (NL. fem. n. *decupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902536205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536205.1. The GC content of the type genome is 29.75 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Pelagibacter delacentia sp. nov.

Candidatus Pelagibacter delacentia (NL. fem. n. *delacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902572605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902558755.1. The GC content of the type genome is 29.34 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter delapitio sp. nov.

Candidatus Pelagibacter delapitio (NL. fem. n. *delapitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902580565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902580565.1. The GC content of the type genome is 29.24 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter demagisca sp. nov.

Candidatus Pelagibacter demagisca (NL. fem. n. *demagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902590755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590755.1. The GC content of the type genome is 29.98 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter demigitoga sp. nov.

Candidatus Pelagibacter demigitoga (NL. fem. n. *demigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902620585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902620585.1. The GC content of the type genome is 29.57 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter denigitoga sp. nov.

Candidatus Pelagibacter denigitoga (NL. fem. n. *denigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902585045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902557915.1. The GC

content of the type genome is 29.83 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter denomisca sp. nov.

Candidatus Pelagibacter denomisca (NL. fem. n. *denomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp002169935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002169935.2. The GC content of the type genome is 30.25 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter depecifica sp. nov.

Candidatus Pelagibacter depecifica (NL. fem. n. *depecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902566675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902566675.1. The GC content of the type genome is 30.18 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter desorax sp. nov.

Candidatus Pelagibacter desorax (NL. fem. n. *desorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902601705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902611735.1. The GC content of the type genome is 29.96 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter detesago sp. nov.

Candidatus Pelagibacter detesago (NL. fem. n. *detesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902569735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902580485.1. The GC content of the type genome is 29.32 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter dilicax sp. nov.

Candidatus Pelagibacter dilicax (NL. fem. n. *dilicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902624195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624195.1. The GC content of the type genome is 30.1 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter dilicitica sp. nov.

Candidatus Pelagibacter dilicitica (NL. fem. n. *dilicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902610115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902610115.1. The GC content of the type genome is 29.82 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter dilogicella sp. nov.

Candidatus Pelagibacter dilogicella (NL. fem. n. *dilogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902517535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902517535.1. The GC content of the type genome is 29.49 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter diluvitia sp. nov.

Candidatus Pelagibacter diluvitia (NL. fem. n. *diluvitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902596205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902537695.1. The GC content of the type genome is 30.12 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Pelagibacter divoribra sp. nov.

Candidatus Pelagibacter divoribra (NL. fem. n. *divoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902616145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902616145.1. The GC content of the type genome is 29.9 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter docibisca sp. nov.

Candidatus Pelagibacter docibisca (NL. fem. n. *docibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902590625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590625.1. The GC content of the type genome is 30.0 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter domabitia sp. nov.

Candidatus Pelagibacter domabitia (NL. fem. n. *domabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902593905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902593905.1. The GC

content of the type genome is 30.06 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Pelagibacter doxolibula sp. nov.

Candidatus Pelagibacter doxolibula (NL. fem. n. *doxolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902577575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902577575.1. The GC content of the type genome is 29.96 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter ducilousia sp. nov.

Candidatus Pelagibacter ducilousia (NL. fem. n. *ducilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902591415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902591415.1. The GC content of the type genome is 29.64 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter duricatica sp. nov.

Candidatus Pelagibacter duricatica (NL. fem. n. *duricatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902544345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902544345.1. The GC content of the type genome is 30.07 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter effemedo sp. nov.

Candidatus Pelagibacter effemedo (NL. fem. n. *effemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902556855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902556855.1. The GC content of the type genome is 29.89 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter effemifica sp. nov.

Candidatus Pelagibacter effemifica (NL. fem. n. *effemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902573345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902573345.1. The GC content of the type genome is 29.5 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter epicrentia sp. nov.

Candidatus Pelagibacter epicrentia (NL. fem. n. *epicrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902519635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902519635.1. The GC content of the type genome is 29.71 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pelagibacter expanigena sp. nov.

Candidatus Pelagibacter expanigena (NL. fem. n. *expanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902547825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902547825.1. The GC content of the type genome is 29.63 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter exsorigena sp. nov.

Candidatus Pelagibacter exsorigena (NL. fem. n. *exsorigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902598735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902598735.1. The GC content of the type genome is 29.72 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pelagibacter fidenivita sp. nov.

Candidatus Pelagibacter fidenivita (NL. fem. n. *fidenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902557785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902557785.1. The GC content of the type genome is 29.95 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pelagibacter fiducilega sp. nov.

Candidatus Pelagibacter fiducilega (NL. fem. n. *fiducilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902619495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902597295.1. The GC content of the type genome is 30.05 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter forabitica sp. nov.

Candidatus Pelagibacter forabitica (NL. fem. n. *forabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp002704145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002704145.1. The GC

content of the type genome is 28.55 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter fuligastra sp. nov.

Candidatus Pelagibacter fuligastra (NL. fem. n. *fuligastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902589705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902589705.1. The GC content of the type genome is 29.64 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Pelagibacter fumacilega sp. nov.

Candidatus Pelagibacter fumacilega (NL. fem. n. *fumacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902538445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902550265.1. The GC content of the type genome is 29.98 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter hecatugo sp. nov.

Candidatus Pelagibacter hecatugo (NL. fem. n. *hecatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902613545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902613545.1. The GC content of the type genome is 29.65 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter homagigena sp. nov.

Candidatus Pelagibacter homagigena (NL. fem. n. *homagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902590505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902592505.1. The GC content of the type genome is 29.97 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter homagitas sp. nov.

Candidatus Pelagibacter homagitas (NL. fem. n. *homagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902579115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902579115.1. The GC content of the type genome is 29.73 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Pelagibacter homunago sp. nov.

Candidatus Pelagibacter homunago (NL. fem. n. *homunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902537845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902537845.1. The GC content of the type genome is 29.91 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter humecitia sp. nov.

Candidatus Pelagibacter humecitia (NL. fem. n. *humecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902573985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902634675.1. The GC content of the type genome is 29.79 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter idcirigena sp. nov.

Candidatus Pelagibacter idcirigena (NL. fem. n. *idcirigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902572345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572345.1. The GC content of the type genome is 29.91 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter ignobatica sp. nov.

Candidatus Pelagibacter ignobatica (NL. fem. n. *ignobatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902626045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902626045.1. The GC content of the type genome is 29.9 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter imbelatica sp. nov.

Candidatus Pelagibacter imbelatica (NL. fem. n. *imbelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902542795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902542795.1. The GC content of the type genome is 30.1 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter immatitas sp. nov.

Candidatus Pelagibacter immatitas (NL. fem. n. *immatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902532595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902532595.1. The GC

content of the type genome is 29.85 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Pelagibacter impacitio sp. nov.

Candidatus Pelagibacter impacitio (NL. fem. n. *impacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902615715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902615715.1. The GC content of the type genome is 29.6 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Pelagibacter indevugo sp. nov.

Candidatus Pelagibacter indevugo (NL. fem. n. *indevugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902557935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902557935.1. The GC content of the type genome is 29.96 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter indomilenta sp. nov.

Candidatus Pelagibacter indomilenta (NL. fem. n. *indomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902617025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902617025.1. The GC content of the type genome is 29.7 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter inlecax sp. nov.

Candidatus Pelagibacter inlecax (NL. fem. n. *inlecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902572475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572475.1. The GC content of the type genome is 30.46 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Pelagibacter innasibra sp. nov.

Candidatus Pelagibacter innasibra (NL. fem. n. *innasibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902542165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902542165.1. The GC content of the type genome is 29.76 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Pelagibacter innasicella sp. nov.

Candidatus Pelagibacter innasicella (NL. fem. n. *innasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902630665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902630665.1. The GC content of the type genome is 30.21 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Pelagibacter inpelimonas sp. nov.

Candidatus Pelagibacter inpelimonas (NL. fem. n. *inpelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902551865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902551865.1. The GC content of the type genome is 28.92 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pelagibacter intecitica sp. nov.

Candidatus Pelagibacter intecitica (NL. fem. n. *intecitica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902594835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902594835.1. The GC content of the type genome is 30.17 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter irregax sp. nov.

Candidatus Pelagibacter irregax (NL. fem. n. *irregax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902582875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902582875.1. The GC content of the type genome is 29.07 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Pelagibacter lupanibula sp. nov.

Candidatus Pelagibacter lupanibula (NL. fem. n. *lupanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902589155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902589155.1. The GC content of the type genome is 29.69 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter mahelibra sp. nov.

Candidatus Pelagibacter mahelibra (NL. fem. n. *mahelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp014653545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014653545.1. The GC

content of the type genome is 29.56 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter melilatica sp. nov.

Candidatus Pelagibacter melilatica (NL. fem. n. *melilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902597175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902597175.1. The GC content of the type genome is 30.09 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pelagibacter melopiforma sp. nov.

Candidatus Pelagibacter melopiforma (NL. fem. n. *melopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902632145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902632145.1. The GC content of the type genome is 29.81 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pelagibacter metapilenta sp. nov.

Candidatus Pelagibacter metapilenta (NL. fem. n. *metapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902610515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902610515.1. The GC content of the type genome is 29.77 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Pelagibacter monopastra sp. nov.

Candidatus Pelagibacter monopastra (NL. fem. n. *monopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902605035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902605035.1. The GC content of the type genome is 29.71 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter musulitoga sp. nov.

Candidatus Pelagibacter musulitoga (NL. fem. n. *musulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902523185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902523185.1. The GC content of the type genome is 30.08 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter myalgibra sp. nov.

Candidatus Pelagibacter myalgibra (NL. fem. n. *myalgibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902590845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590845.1. The GC content of the type genome is 29.61 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Pelagibacter nubifatio sp. nov.

Candidatus Pelagibacter nubifatio (NL. fem. n. *nubifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902570575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902570575.1. The GC content of the type genome is 29.72 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter obrigiforma sp. nov.

Candidatus Pelagibacter obrigiforma (NL. fem. n. *obrigiforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902595375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902595375.1. The GC content of the type genome is 29.71 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pelagibacter octinimonia sp. nov.

Candidatus Pelagibacter octinimonia (NL. fem. n. *octinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902543665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902543665.1. The GC content of the type genome is 29.94 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Pelagibacter perabatica sp. nov.

Candidatus Pelagibacter perabatica (NL. fem. n. *perabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902635225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902588845.1. The GC content of the type genome is 30.3 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter peribetta sp. nov.

Candidatus Pelagibacter peribetta (NL. fem. n. *peribetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902612235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902612235.1. The GC

content of the type genome is 29.72 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter peripisca sp. nov.

Candidatus Pelagibacter peripisca (NL. fem. n. *peripisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902598315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902598315.1. The GC content of the type genome is 29.74 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter plosticula sp. nov.

Candidatus Pelagibacter plosticula (NL. fem. n. *plosticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902524945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902524945.1. The GC content of the type genome is 29.6 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Pelagibacter proclitura sp. nov.

Candidatus Pelagibacter proclitura (NL. fem. n. *proclitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902604055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902604055.1. The GC content of the type genome is 29.82 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter prospibula sp. nov.

Candidatus Pelagibacter prospibula (NL. fem. n. *prospibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902624885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624885.1. The GC content of the type genome is 30.06 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Pelagibacter refacatio sp. nov.

Candidatus Pelagibacter refacatio (NL. fem. n. *refacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902573905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902573905.1. The GC content of the type genome is 29.47 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Pelagibacter remedago sp. nov.

Candidatus Pelagibacter remedago (NL. fem. n. *remedago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902536305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536305.1. The GC content of the type genome is 29.51 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Pelagibacter renavimonia sp. nov.

Candidatus Pelagibacter renavimonia (NL. fem. n. *renavimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902557775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902557775.1. The GC content of the type genome is 29.59 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter repudicella sp. nov.

Candidatus Pelagibacter repudicella (NL. fem. n. *repudicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003278125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278125.1. The GC content of the type genome is 29.37 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Pelagibacter rumifibula sp. nov.

Candidatus Pelagibacter rumifibula (NL. fem. n. *rumifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003282965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003282965.1. The GC content of the type genome is 29.37 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Pelagibacter scintitrix sp. nov.

Candidatus Pelagibacter scintitrix (NL. fem. n. *scintitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902535505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902535505.1. The GC content of the type genome is 30.0 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Pelagibacter selibimonia sp. nov.

Candidatus Pelagibacter selibimonia (NL. fem. n. *selibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902589305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902589305.1. The GC

content of the type genome is 29.58 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pelagibacter semipimonas sp. nov.

Candidatus Pelagibacter semipimonas (NL. fem. n. *semipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902628815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902628815.1. The GC content of the type genome is 30.15 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Pelagibacter semivedo sp. nov.

Candidatus Pelagibacter semivedo (NL. fem. n. *semivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp014654415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014654415.1. The GC content of the type genome is 29.17 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter senacatica sp. nov.

Candidatus Pelagibacter senacatica (NL. fem. n. *senacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003282835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003282835.1. The GC content of the type genome is 29.63 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter serotilega sp. nov.

Candidatus Pelagibacter serotilega (NL. fem. n. *serotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902601545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902601545.1. The GC content of the type genome is 29.91 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Pelagibacter siligitas sp. nov.

Candidatus Pelagibacter siligitas (NL. fem. n. *siligitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902555185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902553215.1. The GC content of the type genome is 30.12 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Pelagibacter subofiforma sp. nov.

Candidatus Pelagibacter subofiforma (NL. fem. n. *subofiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902536085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536085.1. The GC content of the type genome is 29.94 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Pelagibacter tegimitoga sp. nov.

Candidatus Pelagibacter tegimitoga (NL. fem. n. *tegimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902590285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590285.1. The GC content of the type genome is 29.84 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter telefivita sp. nov.

Candidatus Pelagibacter telefivita (NL. fem. n. *telefivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902598595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902598595.1. The GC content of the type genome is 29.33 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Pelagibacter tigurimonia sp. nov.

Candidatus Pelagibacter tigurimonia (NL. fem. n. *tigurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp002457475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002457475.1. The GC content of the type genome is 29.4 % and the genome length is 0.42 Mbp.

Description of *Candidatus* Pelagibacter utrolivita sp. nov.

Candidatus Pelagibacter utrolivita (NL. fem. n. *utrolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902557605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902557605.1. The GC content of the type genome is 30.0 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pelagibacter velifisca sp. nov.

Candidatus Pelagibacter velifisca (NL. fem. n. *velifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902548045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902548045.1. The GC

content of the type genome is 29.37 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Pelagibacter venabentia sp. nov.

Candidatus Pelagibacter venabentia (NL. fem. n. *venabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp002170125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002170125.1. The GC content of the type genome is 28.46 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Pelagibacter verifago sp. nov.

Candidatus Pelagibacter verifago (NL. fem. n. *verifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902522955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902522955.1. The GC content of the type genome is 29.49 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Pelagibacter vinulibra sp. nov.

Candidatus Pelagibacter vinulibra (NL. fem. n. *vinulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902575095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902575095.1. The GC content of the type genome is 29.58 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Pelagibacter visibedo sp. nov.

Candidatus Pelagibacter visibedo (NL. fem. n. *visibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pelagibacter_A sp902609855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902609855.1. The GC content of the type genome is 29.57 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pelagibacter visocicella sp. nov.

Candidatus Pelagibacter visocicella (NL. fem. n. *visocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902595625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902595625.1. The GC content of the type genome is 30.13 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Pelagibacter visocitas sp. nov.

Candidatus Pelagibacter visocitas (NL. fem. n. *visocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902625125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902625125.1. The GC content of the type genome is 29.87 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Pelagibacter vitifitica sp. nov.

Candidatus Pelagibacter vitifitica (NL. fem. n. *vitifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902549495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902549495.1. The GC content of the type genome is 30.0 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pelagibacter vivifitrix sp. nov.

Candidatus Pelagibacter vivifitrix (NL. fem. n. *vivifitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902626185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902626185.1. The GC content of the type genome is 29.97 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Pelagibacter volucimonas sp. nov.

Candidatus Pelagibacter volucimonas (NL. fem. n. *volucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp003281795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281795.1. The GC content of the type genome is 29.78 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Pelagibacter xeropatica sp. nov.

Candidatus Pelagibacter xeropatica (NL. fem. n. *xeropatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacter_A sp902630915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902630915.1. The GC content of the type genome is 29.92 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Pelagibacterium colubatio sp. nov.

Candidatus Pelagibacterium colubatio (NL. fem. n. *colubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacterium sp003345525*. The type genome for the species is the GenBank assembly RS_GCF_003345525.1. The GC content of the type genome is 64.5 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Pelagibacterium conopugo sp. nov.

Candidatus Pelagibacterium conopugo (NL. fem. n. *conopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacterium sp003390885*. The type genome for the species is the GenBank assembly RS_GCF_003390885.1. The GC content of the type genome is 62.68 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Pelagibacterium lucifitura sp. nov.

Candidatus Pelagibacterium lucifitura (NL. fem. n. *lucifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacterium sp002337455*. The type genome for the species is the GenBank assembly GCA_002337455.1. The GC content of the type genome is 61.2 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Pelagibacterium pinigilega sp. nov.

Candidatus Pelagibacterium pinigilega (NL. fem. n. *pinigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacterium sp002723255*. The type genome for the species is the GenBank assembly GCA_002337365.1. The GC content of the type genome is 60.86 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Pelagibacterium vatilitica sp. nov.

Candidatus Pelagibacterium vatilitica (NL. fem. n. *vatilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibacterium sp002375765*. The type genome for the species is the GenBank assembly GCA_002375765.1. The GC content of the type genome is 60.72 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Pelagibius effosisca sp. nov.

Candidatus Pelagibius effosisca (NL. fem. n. *effosisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagibius sp001657395*. The type genome for the species is the GenBank assembly GCA_001657395.1. The GC content of the type genome is 66.03 % and the genome length is 5.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture inoculated with black band disease microbial mat".

Description of *Candidatus* Pelagicoccus resulastra sp. nov.

Candidatus Pelagicoccus resulastra (NL. fem. n. *resulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagicoccus sp000155695*. The type genome for the species is the GenBank assembly RS_GCF_000155695.1. The GC content of the type genome is 54.26 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Pelagimonas adpicitoga sp. nov.

Candidatus Pelagimonas adpicitoga (NL. fem. n. *adpicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelagimonas sp004804335*. The type genome for the species is the GenBank assembly RS_GCF_004804335.1. The GC content of the type genome is 61.26 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Pelistega conamilega sp. nov.

Candidatus Pelistega conamilega (NL. fem. n. *conamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelistega sp009833965*. The type genome for the species is the GenBank assembly RS_GCF_010686785.1. The GC content of the type genome is 37.13 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Pelobium abpatimonas sp. nov.

Candidatus Pelobium abpatimonas (NL. fem. n. *abpatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp005116455*. The type genome for the species is the GenBank assembly RS_GCF_005116455.1. The GC content of the type genome is 33.91 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Pelobium curabivita sp. nov.

Candidatus Pelobium curabivita (NL. fem. n. *curabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp014378285*. The type genome for the species is the GenBank assembly GCA_014378285.1. The GC content of the type genome is 32.89 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Pelobium demulitica sp. nov.

Candidatus Pelobium demulitica (NL. fem. n. *demulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp014378105*. The type genome for the species is the GenBank assembly GCA_014378105.1. The GC content of the type genome is 34.41 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Pelobium excinitrix sp. nov.

Candidatus Pelobium excinitrix (NL. fem. n. *excinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp004294495*. The type genome for the species is the GenBank assembly GCA_004294495.1. The GC content of the type genome is 34.01 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Pelobium exentessa sp. nov.

Candidatus Pelobium exentessa (NL. fem. n. *exentessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp009674685*. The type genome for the species is the GenBank assembly RS_GCF_009674685.1. The GC content of the type genome is 34.39

% and the genome length is 3.9 Mbp.

Description of *Candidatus* Pelobium halucitura sp. nov.

Candidatus Pelobium halucitura (NL. fem. n. *halucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp004293485*. The type genome for the species is the GenBank assembly GCA_004293485.1. The GC content of the type genome is 35.61 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Pelobium hegumilega sp. nov.

Candidatus Pelobium hegumilega (NL. fem. n. *hegumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp013298995*. The type genome for the species is the GenBank assembly GCA_013298995.1. The GC content of the type genome is 36.48 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Pelobium vilitentia sp. nov.

Candidatus Pelobium vilitentia (NL. fem. n. *vilitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelobium sp004292865*. The type genome for the species is the GenBank assembly GCA_004292865.1. The GC content of the type genome is 36.6 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Pelolinea exaggatio sp. nov.

Candidatus Pelolinea exaggatio (NL. fem. n. *exaggatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelolinea sp013178095*. The type genome for the species is the GenBank assembly GCA_013178095.1. The GC content of the type genome is 52.64 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Pelolinea impinitoga sp. nov.

Candidatus Pelolinea impinitoga (NL. fem. n. *impinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelolinea sp002412595*. The type genome for the species is the GenBank assembly GCA_002412595.1. The GC content of the type genome is 50.07 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Pelomonas abluvugo sp. nov.

Candidatus Pelomonas abluvugo (NL. fem. n. *abluvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp001425055*. The type genome for the species is the GenBank assembly RS_GCF_001425055.1. The GC content of the type genome is 67.62 % and the genome length is 6.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pelomonas adpelastra sp. nov.

Candidatus Pelomonas adpelastra (NL. fem. n. *adpelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp001426885*. The type genome for the species is the GenBank assembly RS_GCF_001426885.1. The GC content of the type genome is 69.0 % and the genome length is 5.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pelomonas almucago sp. nov.

Candidatus Pelomonas almucago (NL. fem. n. *almucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp003550215*. The type genome for the species is the GenBank assembly RS_GCF_003550215.1. The GC content of the type genome is 68.4 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Pelomonas cerarilega sp. nov.

Candidatus Pelomonas cerarilega (NL. fem. n. *cerarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp001425165*. The type genome for the species is the GenBank assembly RS_GCF_001427705.1. The GC content of the type genome is 67.79 % and the genome length is 5.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pelomonas desucitia sp. nov.

Candidatus Pelomonas desucitia (NL. fem. n. *desucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp003963075*. The type genome for the species is the GenBank assembly GCA_013823315.1. The GC content of the type genome is 69.06 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Pelomonas eccisilega sp. nov.

Candidatus Pelomonas eccisilega (NL. fem. n. *eccisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp001425705*. The type genome for the species is the GenBank assembly RS_GCF_001425705.1. The GC content of the type genome is 67.41 % and the genome length is 6.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pelomonas inordisca sp. nov.

Candidatus Pelomonas inordisca (NL. fem. n. *inordisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp003963005*. The type genome for the species is the GenBank assembly GCA_003963005.1. The GC content of the type genome is 68.7 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Pelomonas lenocitrix sp. nov.

Candidatus Pelomonas lenocitrix (NL. fem. n. *lenocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelomonas sp009996515*. The type genome for the species is the GenBank assembly GCA_009996515.1. The GC content of the type genome is 70.22 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Pelosinus ludibilega sp. nov.

Candidatus Pelosinus ludibilega (NL. fem. n. *ludibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pelosinus sp000725345*. The type genome for the species is the GenBank assembly RS_GCF_000725345.1. The GC content of the type genome is 38.68 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pristine sediments".

Description of *Candidatus* Penecana cobalessa sp. nov.

Candidatus Penecana cobalessa (NL. fem. n. *cobalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMQ01 sp005503335*. The type genome for the species is the GenBank assembly RS_GCF_005503345.1. The GC content of the type genome is 68.22 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Penecana gen. nov.

Candidatus Penecana (NL. fem. n. *Penecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCMQ01*. The type species for the genus is *Candidatus* Penecana cobalessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Penecaria obsatigena sp. nov.

Candidatus Penecaria obsatigena (NL. fem. n. *obsatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *E26-bin7 sp004377365*. The type genome for the species is the GenBank assembly GCA_004377365.1. The GC content of the type genome is 57.14 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Penecaria gen. nov.

Candidatus Penecaria (NL. fem. n. *Penecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E26-bin7*. The type species for the genus is *Candidatus* Penecaria obsatigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E26-bin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penecariaceae.

Description of *Candidatus* Penecariaceae fam. nov.

Candidatus Penecariaceae (NL. fem. n. *Penecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E26-bin7.* The type genus for the taxon is *Candidatus* Penecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *E26-bin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Penecariales.

Description of *Candidatus* Penecariales ord. nov.

Candidatus Penecariales (NL. fem. n. *Penecariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E26-bin7.* The type genus for the taxon is *Candidatus* Penecaria .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Penecella afranitica sp. nov.

Candidatus Penecella afranitica (NL. fem. n. *afranitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGQ01 sp011338205*. The type genome for the species is the

GenBank assembly GCA_011338205.1. The GC content of the type genome is 47.38 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Penecella gen. nov.

Candidatus Penecella (NL. fem. n. *Penecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGQ01*. The type species for the genus is *Candidatus* Penecella afranitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penecellaceae.

Description of *Candidatus* Penecellaceae fam. nov.

Candidatus Penecellaceae (NL. fem. n. *Penecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGQ01.* The type genus for the taxon is *Candidatus* Penecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTGQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Penecellales.

Description of *Candidatus* Penecellales ord. nov.

Candidatus Penecellales (NL. fem. n. *Penecellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGQ01.* The type genus for the taxon is *Candidatus* Penecella .

According to the original version of GTDB R06-RS202, this family belongs to the class *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rinocanae.

Description of *Candidatus* Penecia antacicella sp. nov.

Candidatus Penecia antacicella (NL. fem. n. *antacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NP-4 sp005888595*. The type genome for the species is the GenBank assembly GCA_005888595.1. The GC content of the type genome is 64.76 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Penecia gen. nov.

Candidatus Penecia (NL. fem. n. *Penecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NP-4*. The type species for the genus is *Candidatus* Penecia antacicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *13-1-40CM-64-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refululaceae.

Description of *Candidatus* Penecia benemitio sp. nov.

Candidatus Penecia benemitio (NL. fem. n. *benemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NP-4 sp005882335*. The type genome for the species is the GenBank assembly GCA_005882335.1. The GC content of the type genome is 64.87 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Penecia lanifitia sp. nov.

Candidatus Penecia lanifitia (NL. fem. n. *lanifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NP-4 sp005882295*. The type genome for the species is the GenBank assembly GCA_005884525.1. The GC content of the type genome is 65.2 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Penecida benepilega sp. nov.

Candidatus Penecida benepilega (NL. fem. n. *benepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722455 sp002722455*. The type genome for the species is the GenBank assembly GCA_002722455.1. The GC content of the type genome is 30.95 %

and the genome length is 2.48 Mbp.

Description of *Candidatus* Penecida gen. nov.

Candidatus Penecida (NL. fem. n. *Penecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722455*. The type species for the genus is *Candidatus* Penecida benepilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2722455*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penecidaceae.

Description of *Candidatus* Penecidaceae fam. nov.

Candidatus Penecidaceae (NL. fem. n. *Penecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2722455.* The type genus for the taxon is *Candidatus* Penecida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Penecosa democugo sp. nov.

Candidatus Penecosa democugo (NL. fem. n. *democugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002478685*. The type genome for the species is the GenBank assembly GCA_002470905.1. The GC content of the type genome is 39.56 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Penecosa gen. nov.

Candidatus Penecosa (NL. fem. n. *Penecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7446*. The type species for the genus is *Candidatus* Penecosa democugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Penecosa expugitica sp. nov.

Candidatus Penecosa expugitica (NL. fem. n. *expugitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002862645*. The type genome for the species is the GenBank assembly GCA_002862645.1. The GC content of the type genome is 40.15 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Penecosa habacitudo sp. nov.

Candidatus Penecosa habacitudo (NL. fem. n. *habacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002313325*. The type genome for the species is the GenBank assembly GCA_002313325.1. The GC content of the type genome is 41.3 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Penecosa hemidatica sp. nov.

Candidatus Penecosa hemidatica (NL. fem. n. *hemidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002470745*. The type genome for the species is the GenBank assembly GCA_003331305.1. The GC content of the type genome is 39.78 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Penecosa intoritia sp. nov.

Candidatus Penecosa intoritia (NL. fem. n. *intoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp009886265*. The type genome for the species is the GenBank assembly GCA_009886265.1. The GC content of the type genome is 41.83 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Penecosa panifedo sp. nov.

Candidatus Penecosa panifedo (NL. fem. n. *panifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002698745*. The type genome for the species is the GenBank assembly GCA_002698745.1. The GC content of the type genome is 37.8 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Penecosa patibicella sp. nov.

Candidatus Penecosa patibicella (NL. fem. n. *patibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp002862705*. The type genome for the species is the GenBank assembly GCA_002862705.1. The GC content of the type genome is 42.01 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Penecosa uxorcimonas sp. nov.

Candidatus Penecosa uxorcimonas (NL. fem. n. *uxorcimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7446 sp009937085*. The type genome for the species is the GenBank assembly GCA_009937085.1. The GC content of the type genome is 39.81 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Penecula semibimonas sp. nov.

Candidatus Penecula semibimonas (NL. fem. n. *semibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHNJ01 sp004295055*. The type genome for the species is the GenBank assembly GCA_004295055.1. The GC content of the type genome is 48.51 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Penecula gen. nov.

Candidatus Penecula (NL. fem. n. *Penecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHNJ01*. The type species for the genus is *Candidatus* Penecula semibimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHNJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peneculaceae.

Description of *Candidatus* Peneculaceae fam. nov.

Candidatus Peneculaceae (NL. fem. n. *Peneculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHNJ01.* The type genus for the taxon is *Candidatus* Penecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHNJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peneculales.

Description of *Candidatus* Peneculales ord. nov.

Candidatus Peneculales (NL. fem. n. *Peneculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHNJ01.* The type genus for the taxon is *Candidatus* Penecula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Penicana labecibra sp. nov.

Candidatus Penicana labecibra (NL. fem. n. *labecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITYE01 sp903896535*. The type genome for the species is the GenBank assembly GCA_903893615.1. The GC content of the type genome is 67.97 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Penicana gen. nov.

Candidatus Penicana (NL. fem. n. *Penicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAITYE01*. The type species for the genus is *Candidatus* Penicana labecibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Penicella agnicimonas sp. nov.

Candidatus Penicella agnicimonas (NL. fem. n. *agnicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWR01 sp004356735*. The type genome for the species is the GenBank assembly GCA_004356735.1. The GC content of the type genome is 65.63 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Penicella gen. nov.

Candidatus Penicella (NL. fem. n. *Penicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWR01*. The type species for the genus is *Candidatus* Penicella agnicimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penicellaceae.

Description of *Candidatus* Penicellaceae fam. nov.

Candidatus Penicellaceae (NL. fem. n. *Penicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMWR01.* The type genus for the taxon is *Candidatus* Penicella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifiales.

Description of *Candidatus* Penicia antegiforma sp. nov.

Candidatus Penicia antegiforma (NL. fem. n. *antegiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBP01 sp011049465*. The type genome for the species is the GenBank assembly GCA_011049465.1. The GC content of the type genome is 48.48 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Penicia gen. nov.

Candidatus Penicia (NL. fem. n. *Penicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBP01*. The type species for the genus is *Candidatus* Penicia antegiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSBP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peniciaceae.

Description of *Candidatus* Peniciaceae fam. nov.

Candidatus Peniciaceae (NL. fem. n. *Peniciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSBP01.* The type genus for the taxon is *Candidatus* Penicia .

According to the original version of GTDB R06-RS202, this family belongs to the order *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decinulales.

Description of *Candidatus* Penicida butubimonia sp. nov.

Candidatus Penicida butubimonia (NL. fem. n. *butubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8653 sp002862275*. The type genome for the species is the GenBank assembly GCA_002862275.1. The GC content of the type genome is 57.1 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Penicida gen. nov.

Candidatus Penicida (NL. fem. n. *Penicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA8653*. The type species for the genus is *Candidatus* Penicida butubimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Penicida coninilenta sp. nov.

Candidatus Penicida coninilenta (NL. fem. n. *coninilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8653 sp002705085*. The type genome for the species is the GenBank assembly GCA_002705085.1. The GC content of the type genome is 57.74 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Penicida domipugo sp. nov.

Candidatus Penicida domipugo (NL. fem. n. *domipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8653 sp002168105*. The type genome for the species is the GenBank assembly GCA_003516385.1. The GC content of the type genome is 57.58 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Penicida inocciforma sp. nov.

Candidatus Penicida inocciforma (NL. fem. n. *inocciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8653 sp002700845*. The type genome for the species is the GenBank assembly GCA_002700845.1. The GC content of the type genome is 55.05 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Penicosa bucelago sp. nov.

Candidatus Penicosa bucelago (NL. fem. n. *bucelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIKNB01 sp903828685*. The type genome for the species is the GenBank assembly GCA_903891345.1. The GC content of the type genome is 54.42 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Penicosa gen. nov.

Candidatus Penicosa (NL. fem. n. *Penicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKNB01*. The type species for the genus is *Candidatus* Penicosa bucelago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Penurana aspilatio sp. nov.

Candidatus Penurana aspilatio (NL. fem. n. *aspilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002724975 sp002724975*. The type genome for the species is the GenBank assembly GCA_002724975.1. The GC content of the type genome is 35.87 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Penurana gen. nov.

Candidatus Penurana (NL. fem. n. *Penurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002724975*. The type species for the genus is *Candidatus* Penurana aspilatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002724975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penuranaceae.

Description of *Candidatus* Penuranaceae fam. nov.

Candidatus Penuranaceae (NL. fem. n. *Penuranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GCA-002724975*. The type genus for the taxon is *Candidatus* Penurana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Penurana nivomessa sp. nov.

Candidatus Penurana nivomessa (NL. fem. n. *nivomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002724975 sp002771565*. The type genome for the species is the GenBank assembly GCA_002796365.1. The GC content of the type genome is 43.77 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Penuraria forabax sp. nov.

Candidatus Penuraria forabax (NL. fem. n. *forabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12470 sp000999315*. The type genome for the species is the GenBank assembly GCA_000999315.1. The GC content of the type genome is 43.09 % and the genome length is 1.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Penuraria gen. nov.

Candidatus Penuraria (NL. fem. n. *Penuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12470*. The type species for the genus is *Candidatus* Penuraria forabax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12470*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penurariaceae.

Description of *Candidatus* Penurariaceae fam. nov.

Candidatus Penurariaceae (NL. fem. n. *Penurariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12470.* The type genus for the taxon is *Candidatus* Penuraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Penurella ammurugo sp. nov.

Candidatus Penurella ammurugo (NL. fem. n. *ammurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3254 sp903890885*. The type genome for the species is the GenBank assembly GCA_903890885.1. The GC content of the type genome is 47.07 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Penurella gen. nov.

Candidatus Penurella (NL. fem. n. *Penurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3254*. The type species for the genus is *Candidatus* Penurella ammurugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penurellaceae.

Description of *Candidatus* Penurellaceae fam. nov.

Candidatus Penurellaceae (NL. fem. n. *Penurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3254.* The type genus for the taxon is *Candidatus* Penurella .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Penurella arvecax sp. nov.

Candidatus Penurella arvecax (NL. fem. n. *arvecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3254 sp011389395*. The type genome for the species is the GenBank assembly GCA_011389395.1. The GC content of the type genome is 47.35 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Penurella ascelicula sp. nov.

Candidatus Penurella ascelicula (NL. fem. n. *ascelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3254 sp011328975*. The type genome for the species is the GenBank assembly GCA_011328975.1. The GC content of the type genome is 45.9 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Penurella bicoritas sp. nov.

Candidatus Penurella bicoritas (NL. fem. n. *bicoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3254 sp002362735*. The type genome for the species is the GenBank assembly GCA_002362735.1. The GC content of the type genome is 45.33 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Penurida capudentia sp. nov.

Candidatus Penurida capudentia (NL. fem. n. *capudentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp000431135*. The type genome for the species is the GenBank assembly GCA_000431135.1. The GC content of the type genome is 40.62 % and the genome length is 2.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Penurida gen. nov.

Candidatus Penurida (NL. fem. n. *Penurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-590*. The type species for the genus is *Candidatus* Penurida capudentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Penurida colepifica sp. nov.

Candidatus Penurida colepifica (NL. fem. n. *colepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp900769115*. The type genome for the species is the GenBank assembly RS_GCF_900769115.1. The GC content of the type genome is 41.55 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Penurida denunivita sp. nov.

Candidatus Penurida denunivita (NL. fem. n. *denunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp900313855*. The type genome for the species is the GenBank assembly GCA_902763015.1. The GC content of the type genome is 40.0 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Penurida dimacitudo sp. nov.

Candidatus Penurida dimacitudo (NL. fem. n. *dimacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp900552885*. The type genome for the species is the GenBank assembly GCA_900552885.1. The GC content of the type genome is 41.94 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Penurida maledastra sp. nov.

Candidatus Penurida maledastra (NL. fem. n. *maledastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp900548855*. The type genome for the species is the GenBank assembly GCA_900548855.1. The GC content of the type genome is 40.45 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Penurida pecunugo sp. nov.

Candidatus Penurida pecunugo (NL. fem. n. *pecunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp003530125*. The type genome for the species is the GenBank assembly GCA_003530125.1. The GC content of the type genome is 40.78 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Penurida saburicella sp. nov.

Candidatus Penurida saburicella (NL. fem. n. *saburicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp900544905*. The type genome for the species is the GenBank assembly RS_GCF_900752105.1. The GC content of the type genome is 41.98 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Penurida thessastra sp. nov.

Candidatus Penurida thessastra (NL. fem. n. *thessastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-590 sp902793335*. The type genome for the species is the GenBank assembly GCA_902793335.1. The GC content of the type genome is 37.15 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Penurosa desoritoga sp. nov.

Candidatus Penurosa desoritoga (NL. fem. n. *desoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6934 sp002346625*. The type genome for the species is the GenBank assembly GCA_002450735.1. The GC content of the type genome is 44.84 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Penurosa gen. nov.

Candidatus Penurosa (NL. fem. n. *Penurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6934*. The type species for the genus is *Candidatus* Penurosa desoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Penurula curabifica sp. nov.

Candidatus Penurula curabifica (NL. fem. n. *curabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITVN01 sp903895855*. The type genome for the species is the GenBank assembly GCA_903840645.1. The GC content of the type genome is 47.32 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Penurula gen. nov.

Candidatus Penurula (NL. fem. n. *Penurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITVN01*. The type species for the genus is *Candidatus* Penurula curabifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Pepenana resalitia sp. nov.

Candidatus Pepenana resalitia (NL. fem. n. *resalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPGG2 sp001643475*. The type genome for the species is the GenBank assembly GCA_001643475.1. The GC content of the type genome is 54.25 % and the genome length is 2.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment sample collected at the water-sediment interface from the South Pacific gyre; IODP site U1369".

Description of *Candidatus* Pepenana gen. nov.

Candidatus Pepenana (NL. fem. n. *Pepenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPGG2*. The type species for the genus is *Candidatus* Pepenana resalitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPGG2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenanaceae.

Description of *Candidatus* Pepenanaceae fam. nov.

Candidatus Pepenanaceae (NL. fem. n. *Pepenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPGG2.* The type genus for the taxon is *Candidatus* Pepenana .

According to GTDB R06-RS202, this family belongs to the order *Acidiferrobacterales*.

Description of *Candidatus* Pepenaria cunabiforma sp. nov.

Candidatus Pepenaria cunabiforma (NL. fem. n. *cunabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLRQ01 sp903826575*. The type genome for the species is the GenBank assembly GCA_903854465.1. The GC content of the type genome is 58.91 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Pepenaria gen. nov.

Candidatus Pepenaria (NL. fem. n. *Pepenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLRQ01*. The type species for the genus is *Candidatus* Pepenaria cunabiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifidaceae.

Description of *Candidatus* Pepenaria lacinatica sp. nov.

Candidatus Pepenaria lacinatica (NL. fem. n. *lacinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLRQ01 sp009697815*. The type genome for the species is the GenBank assembly GCA_009697815.1. The GC content of the type genome is 66.26 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Pepenaria saburitica sp. nov.

Candidatus Pepenaria saburitica (NL. fem. n. *saburitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLRQ01 sp903918645*. The type genome for the species is the GenBank assembly GCA_903900425.1. The GC content of the type genome is 62.0 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Pepenella antepentia sp. nov.

Candidatus Pepenella antepentia (NL. fem. n. *antepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-61-11 sp001799195*. The type genome for the species is the GenBank assembly GCA_001799195.1. The GC content of the type genome is 60.63 % and the genome length is 4.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Pepenella gen. nov.

Candidatus Pepenella (NL. fem. n. *Pepenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YA12-FULL-61-11*. The type species for the genus is *Candidatus* Pepenella antepentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YA12-FULL-61-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenellaceae.

Description of *Candidatus* Pepenellaceae fam. nov.

Candidatus Pepenellaceae (NL. fem. n. *Pepenellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YA12-FULL-61-11.* The type genus for the taxon is *Candidatus* Pepenella .

According to the original version of GTDB R06-RS202, this family belongs to the order *YA12-FULL-61-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pepenellales.

Description of *Candidatus* Pepenellales ord. nov.

Candidatus Pepenellales (NL. fem. n. *Pepenellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YA12-FULL-61-11.* The type genus for the taxon is *Candidatus* Pepenella .

According to the original version of GTDB R06-RS202, this family belongs to the class *YA12-FULL-61-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Pepenellae.

Description of *Candidatus* Pepenellae class. nov.

Candidatus Pepenellae (NL. fem. n. *c__Pepenellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YA12-FULL-61-11.* The type genus for the taxon is *Candidatus* Pepenella .

According to GTDB R06-RS202, this class belongs to the phylum *Bdellovibrionota*.

Description of *Candidatus* Pepenia assubicella sp. nov.

Candidatus Pepenia assubicella (NL. fem. n. *assubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-67-14b sp009694735*. The type genome for the species is the GenBank assembly GCA_009694735.1. The GC content of the type genome is 65.39 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Pepenia gen. nov.

Candidatus Pepenia (NL. fem. n. *Pepenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *12-FULL-67-14b*. The type species for the genus is *Candidatus* Pepenia assubicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Pepenia cocodago sp. nov.

Candidatus Pepenia cocodago (NL. fem. n. *cocodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-67-14b sp001768615*. The type genome for the species is the GenBank assembly GCA_001768615.1. The GC content of the type genome is 67.21 % and the genome length is 5.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Pepenia hecatatica sp. nov.

Candidatus Pepenia hecatatica (NL. fem. n. *hecatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-67-14b sp013813075*. The type genome for the species is the GenBank assembly GCA_013813075.1. The GC content of the type genome is 63.92 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Pepenia rubigitoga sp. nov.

Candidatus Pepenia rubigitoga (NL. fem. n. *rubigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-67-14b sp002737365*. The type genome for the species is the GenBank assembly GCA_009694685.1. The GC content of the type genome is 65.14 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Pepenida decaciforma sp. nov.

Candidatus Pepenida decaciforma (NL. fem. n. *decaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002722525*. The type genome for the species is the GenBank assembly GCA_002722525.1. The GC content of the type genome is 45.68 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pepenida gen. nov.

Candidatus Pepenida (NL. fem. n. *Pepenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8592*. The type species for the genus is *Candidatus* Pepenida decaciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8592*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenidaceae.

Description of *Candidatus* Pepenidaceae fam. nov.

Candidatus Pepenidaceae (NL. fem. n. *Pepenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8592.* The type genus for the taxon is *Candidatus* Pepenida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Pepenida diminitica sp. nov.

Candidatus Pepenida diminitica (NL. fem. n. *diminitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002720485*. The type genome for the species is the GenBank assembly RS_GCF_902550405.1. The GC content of the type genome is 47.08 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Pepenida hirunitrix sp. nov.

Candidatus Pepenida hirunitrix (NL. fem. n. *hirunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002703045*. The type genome for the species is the GenBank assembly GCA_002703045.1. The GC content of the type genome is 46.28 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Pepenida immeditica sp. nov.

Candidatus Pepenida immeditica (NL. fem. n. *immeditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002715405*. The type genome for the species is the GenBank assembly GCA_002715405.1. The GC content of the type genome is 41.92 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Pepenida omnivitica sp. nov.

Candidatus Pepenida omnivitica (NL. fem. n. *omnivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp902565595*. The type genome for the species is the GenBank assembly RS_GCF_902565595.1. The GC content of the type genome is 46.28 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Pepenida recumigena sp. nov.

Candidatus Pepenida recumigena (NL. fem. n. *recumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002724825*. The type genome for the species is the GenBank assembly GCA_002321515.1. The GC content of the type genome is 46.1 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Pepenida regigibra sp. nov.

Candidatus Pepenida regigibra (NL. fem. n. *regigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8592 sp002715425*. The type genome for the species is the GenBank assembly GCA_002715425.1. The GC content of the type genome is 45.68 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Pepenosa gemebicula sp. nov.

Candidatus Pepenosa gemebicula (NL. fem. n. *gemebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3947 sp002385545*. The type genome for the species is the GenBank assembly GCA_012521235.1. The GC content of the type genome is 34.2 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Pepenosa gen. nov.

Candidatus Pepenosa (NL. fem. n. *Pepenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3947*. The type species for the genus is *Candidatus* Pepenosa gemebicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pepenosa malivilenta sp. nov.

Candidatus Pepenosa malivilenta (NL. fem. n. *malivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3947 sp003541575*. The type genome for the species is the GenBank assembly GCA_003541575.1. The GC content of the type genome is 34.22 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Pepenosa subofitrix sp. nov.

Candidatus Pepenosa subofitrix (NL. fem. n. *subofitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3947 sp006351925*. The type genome for the species is the

GenBank assembly RS_GCF_010367625.1. The GC content of the type genome is 36.31 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Pepenosa tametitio sp. nov.

Candidatus Pepenosa tametitio (NL. fem. n. *tametitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3947 sp900095445*. The type genome for the species is the GenBank assembly RS_GCF_900095445.1. The GC content of the type genome is 32.42 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biogas sludge".

Description of *Candidatus* Pepenula venabitica sp. nov.

Candidatus Pepenula venabitica (NL. fem. n. *venabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PETJ01 sp002781125*. The type genome for the species is the GenBank assembly GCA_009993345.1. The GC content of the type genome is 37.09 % and the genome length is 0.32 Mbp.

Description of *Candidatus* Pepenula gen. nov.

Candidatus Pepenula (NL. fem. n. *Pepenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PETJ01*. The type species for the genus is *Candidatus* Pepenula venabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PETJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenulaceae.

Description of *Candidatus* Pepenulaceae fam. nov.

Candidatus Pepenulaceae (NL. fem. n. *Pepenulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PETJ01*. The type genus for the taxon is *Candidatus* Pepenula .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Peptacetobacter dicanentia sp. nov.

Candidatus Peptacetobacter dicanentia (NL. fem. n. *dicanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptacetobacter sp900539645*. The type genome for the species is the GenBank assembly GCA_900539645.1. The GC content of the type genome is 31.41 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Peptacetobacter selecitura sp. nov.

Candidatus Peptacetobacter selecitura (NL. fem. n. *selecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptacetobacter sp900550335*. The type genome for the species is the GenBank assembly RS_GCF_900758995.1. The GC content of the type genome is 31.41 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Peptidiphaga bucolessa sp. nov.

Candidatus Peptidiphaga bucolessa (NL. fem. n. *bucolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptidiphaga sp000466165*. The type genome for the species is the GenBank assembly RS_GCF_000466165.1. The GC content of the type genome is 67.72 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "subgingival plaque biofilm of oral cavity".

Description of *Candidatus* Peptoclostridium encomitio sp. nov.

Candidatus Peptoclostridium encomitio (NL. fem. n. *encomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoclostridium_A sp009881055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009881055.1. The GC content of the type genome is 44.16 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Peptoniphilus manubitura sp. nov.

Candidatus Peptoniphilus manubitura (NL. fem. n. *manubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_A sp900538655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900538655.1. The GC content of the type genome is 31.37 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Peptoniphilus depocilega sp. nov.

Candidatus Peptoniphilus depocilega (NL. fem. n. *depocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_B sp000478985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000478985.1. The GC content of the type genome is 31.62 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Peptoniphilus bucelimonia sp. nov.

Candidatus Peptoniphilus bucelimonia (NL. fem. n. *bucelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_C sp900343085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900343085.1. The GC content of the type genome is 48.62 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Peptoniphilus renavatio sp. nov.

Candidatus Peptoniphilus renavatio (NL. fem. n. *renavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_C sp903819165*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_903819165.1. The GC content of the type genome is 45.74 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Peptoniphilus sarabitrix sp. nov.

Candidatus Peptoniphilus sarabitrix (NL. fem. n. *sarabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_C sp902363535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902363535.1. The GC content of the type genome is 48.91 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Peptoniphilus eccisax sp. nov.

Candidatus Peptoniphilus eccisax (NL. fem. n. *eccisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptoniphilus_E sp000952975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000952975.1. The GC content of the type genome is 34.85 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Peptostreptococcus adposimonas sp. nov.

Candidatus Peptostreptococcus adposimonas (NL. fem. n. *adposimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptostreptococcus sp000758885*. The type genome for the species is the GenBank assembly RS_GCF_000758885.1. The GC content of the type genome is 36.58 % and the genome length is 1.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Peptostreptococcus armificula sp. nov.

Candidatus Peptostreptococcus armificula (NL. fem. n. *armificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptostreptococcus sp900112955*. The type genome for the species is the GenBank assembly RS_GCF_900112955.1. The GC content of the type genome is 32.93 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Peptostreptococcus cunabimonia sp. nov.

Candidatus Peptostreptococcus cunabimonia (NL. fem. n. *cunabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptostreptococcus sp900240845*. The type genome for the species is the GenBank assembly RS_GCF_900240845.1. The GC content of the type genome is 30.43 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Peptostreptococcus desurimonia sp. nov.

Candidatus Peptostreptococcus desurimonia (NL. fem. n. *desurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peptostreptococcus sp900759325*. The type genome for the species is the GenBank assembly GCA_900759325.1. The GC content of the type genome is 37.41 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Perabana velivedo sp. nov.

Candidatus Perabana velivedo (NL. fem. n. *velivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYK01 sp009692845*. The type genome for the species is the GenBank assembly GCA_009692845.1. The GC content of the type genome is 62.66 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Perabana gen. nov.

Candidatus Perabana (NL. fem. n. *Perabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYK01*. The type species for the genus is *Candidatus* Perabana

velivedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perabanaceae.

Description of *Candidatus* Perabanaceae fam. nov.

Candidatus Perabanaceae (NL. fem. n. *Perabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYK01*. The type genus for the taxon is *Candidatus* Perabana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Doxolariales.

Description of *Candidatus* Perabaria laxitatica sp. nov.

Candidatus Perabaria laxitatica (NL. fem. n. *laxitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITEC01 sp903891325*. The type genome for the species is the GenBank assembly GCA_903911625.1. The GC content of the type genome is 66.87 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Perabaria gen. nov.

Candidatus Perabaria (NL. fem. n. *Perabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITEC01*. The type species for the genus is *Candidatus* Perabaria laxitatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Perabella inmacastra sp. nov.

Candidatus Perabella inmacastra (NL. fem. n. *inmacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CACZRW01 sp902783675*. The type genome for the species is the GenBank assembly GCA_902783675.1. The GC content of the type genome is 47.87 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Perabella gen. nov.

Candidatus Perabella (NL. fem. n. *Perabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZRW01*. The type species for the genus is *Candidatus* Perabella inmacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACZRW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perabellaceae.

Description of *Candidatus* Perabellaceae fam. nov.

Candidatus Perabellaceae (NL. fem. n. *Perabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACZRW01.* The type genus for the taxon is *Candidatus* Perabella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Perabia cituvessa sp. nov.

Candidatus Perabia cituvessa (NL. fem. n. *cituvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2287 sp002345675*. The type genome for the species is the GenBank assembly GCA_002345675.1. The GC content of the type genome is 39.72 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Perabia gen. nov.

Candidatus Perabia (NL. fem. n. *Perabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2287*. The type species for the genus is *Candidatus* Perabia

cituvessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Perabida adcogisca sp. nov.

Candidatus Perabida adcogisca (NL. fem. n. *adcogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-11 sp003560935*. The type genome for the species is the GenBank assembly GCA_003560935.1. The GC content of the type genome is 45.93 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Perabida gen. nov.

Candidatus Perabida (NL. fem. n. *Perabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-11*. The type species for the genus is *Candidatus* Perabida adcogisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T3Sed10-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perabidaceae.

Description of *Candidatus* Perabidaceae fam. nov.

Candidatus Perabidaceae (NL. fem. n. *Perabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T3Sed10-11.* The type genus for the taxon is *Candidatus* Perabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *T3Sed10-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Perabidales.

Description of *Candidatus* Perabidales ord. nov.

Candidatus Perabidales (NL. fem. n. *Perabidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T3Sed10-11*. The type genus for the taxon is *Candidatus* Perabida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vagabanae.

Description of *Candidatus* Perabida defunifica sp. nov.

Candidatus Perabida defunifica (NL. fem. n. *defunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-11 sp007131635*. The type genome for the species is the GenBank assembly GCA_007118365.1. The GC content of the type genome is 45.35 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Perabida metucibula sp. nov.

Candidatus Perabida metucibula (NL. fem. n. *metucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-11 sp007128495*. The type genome for the species is the GenBank assembly GCA_007128495.1. The GC content of the type genome is 45.02 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Perabida subofigena sp. nov.

Candidatus Perabida subofigena (NL. fem. n. *subofigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-11 sp003567775*. The type genome for the species is the GenBank assembly GCA_003560035.1. The GC content of the type genome is 44.61 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Perabida tetenitica sp. nov.

Candidatus Perabida tetenitica (NL. fem. n. *tetenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *T3Sed10-11 sp003568415*. The type genome for the species is the GenBank assembly GCA_003561255.1. The GC content of the type genome is 44.07 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Perabida vocamugo sp. nov.

Candidatus Perabida vocamugo (NL. fem. n. *vocamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-11 sp003562775*. The type genome for the species is the GenBank assembly GCA_003562775.1. The GC content of the type genome is 44.6 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Perabosa bigaritura sp. nov.

Candidatus Perabosa bigaritura (NL. fem. n. *bigaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOV01 sp012838615*. The type genome for the species is the GenBank assembly GCA_012838615.1. The GC content of the type genome is 38.88 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Perabosa gen. nov.

Candidatus Perabosa (NL. fem. n. *Perabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOV01*. The type species for the genus is *Candidatus* Perabosa bigaritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUOV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perabosaceae.

Description of *Candidatus* Perabosaceae fam. nov.

Candidatus Perabosaceae (NL. fem. n. *Perabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUOV01.* The type genus for the taxon is *Candidatus* Perabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order

DULZ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lucelellales.

Description of *Candidatus* Perabula peracitas sp. nov.

Candidatus Perabula peracitas (NL. fem. n. *peracitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1188 sp003132605*. The type genome for the species is the GenBank assembly GCA_003132605.1. The GC content of the type genome is 58.52 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Perabula gen. nov.

Candidatus Perabula (NL. fem. n. *Perabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1188*. The type species for the genus is *Candidatus* Perabula peracitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Perabula sonabatio sp. nov.

Candidatus Perabula sonabatio (NL. fem. n. *sonabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1188 sp003160265*. The type genome for the species is the GenBank assembly GCA_003139295.1. The GC content of the type genome is 56.98 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Peracana aciscessa sp. nov.

Candidatus Peracana aciscessa (NL. fem. n. *aciscessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWJ01 sp011327585*. The type genome for the species is the GenBank assembly GCA_011327585.1. The GC content of the type genome is 41.27 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Peracana gen. nov.

Candidatus Peracana (NL. fem. n. *Peracana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWJ01*. The type species for the genus is *Candidatus* Peracana aciscessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSWJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peracanaceae.

Description of *Candidatus* Peracanaceae fam. nov.

Candidatus Peracanaceae (NL. fem. n. *Peracanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWJ01.* The type genus for the taxon is *Candidatus* Peracana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Peracaria adnubibra sp. nov.

Candidatus Peracaria adnubibra (NL. fem. n. *adnubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B51-G9 sp003648225*. The type genome for the species is the GenBank assembly GCA_003648225.1. The GC content of the type genome is 37.86 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Peracaria gen. nov.

Candidatus Peracaria (NL. fem. n. *Peracaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B51-G9*. The type species for the genus is *Candidatus* Peracaria adnubibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B51-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peracariaceae.

Description of *Candidatus* Peracariaceae fam. nov.

Candidatus Peracariaceae (NL. fem. n. *Peracariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B51-G9.* The type genus for the taxon is *Candidatus* Peracaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3054*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venunellales.

Description of *Candidatus* Peracella cerevimonia sp. nov.

Candidatus Peracella cerevimonia (NL. fem. n. *cerevimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-45-19 sp001002405*. The type genome for the species is the GenBank assembly GCA_001002405.1. The GC content of the type genome is 46.78 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Peracella gen. nov.

Candidatus Peracella (NL. fem. n. *Peracella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-45-19*. The type species for the genus is *Candidatus* Peracella cerevimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peracella verifigena sp. nov.

Candidatus Peracella verifigena (NL. fem. n. *verifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-45-19 sp001001555*. The type genome for the species is the GenBank assembly GCA_001001555.1. The GC content of the type genome is 46.12 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Peracia sicunitica sp. nov.

Candidatus Peracia sicunitica (NL. fem. n. *sicunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLGK01 sp007123775*. The type genome for the species is the GenBank assembly GCA_003562215.1. The GC content of the type genome is 56.76 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Peracia gen. nov.

Candidatus Peracia (NL. fem. n. *Peracia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLGK01*. The type species for the genus is *Candidatus* Peracia sicunitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peracida peripitas sp. nov.

Candidatus Peracida peripitas (NL. fem. n. *peripitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790615 sp002780175*. The type genome for the species is the GenBank assembly GCA_002771255.1. The GC content of the type genome is 40.23 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Peracida gen. nov.

Candidatus Peracida (NL. fem. n. *Peracida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002790615*. The type species for the genus is *Candidatus* Peracida peripitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Peracosa benevessa sp. nov.

Candidatus Peracosa benevessa (NL. fem. n. *benevessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIY01 sp004376785*. The type genome for the species is the GenBank assembly GCA_004376785.1. The GC content of the type genome is 36.57 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Peracosa gen. nov.

Candidatus Peracosa (NL. fem. n. *Peracosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOIY01*. The type species for the genus is *Candidatus* Peracosa benevessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Peradana defunedo sp. nov.

Candidatus Peradana defunedo (NL. fem. n. *defunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-60-10 sp001803315*. The type genome for the species is the GenBank assembly GCA_001803285.1. The GC content of the type genome is 60.15 % and the genome length is 3.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Peradana gen. nov.

Candidatus Peradana (NL. fem. n. *Peradana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YA12-FULL-60-10*. The type species for the genus is *Candidatus* Peradana defunedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YA12-FULL-60-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peradanaceae.

Description of *Candidatus* Peradanaceae fam. nov.

Candidatus Peradanaceae (NL. fem. n. *Peradanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YA12-FULL-60-10.* The type genus for the taxon is *Candidatus* Peradana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Peradaria maleditura sp. nov.

Candidatus Peradaria maleditura (NL. fem. n. *maleditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-57-13 sp001805055*. The type genome for the species is the GenBank assembly GCA_001803725.1. The GC content of the type genome is 57.07 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.2 filter".

Description of *Candidatus* Peradaria gen. nov.

Candidatus Peradaria (NL. fem. n. *Peradaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-57-13*. The type species for the genus is *Candidatus* Peradaria maleditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volucosaceae.

Description of *Candidatus* Peradella detesicella sp. nov.

Candidatus Peradella detesicella (NL. fem. n. *detesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7336 sp000332275*. The type genome for the species is the

GenBank assembly RS_GCF_000332275.1. The GC content of the type genome is 53.71 % and the genome length is 5.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water from a tank".

Description of *Candidatus* Peradella gen. nov.

Candidatus Peradella (NL. fem. n. *Peradella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7336*. The type species for the genus is *Candidatus* Peradella detesicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PCC-7336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peradellaceae.

Description of *Candidatus* Peradellaceae fam. nov.

Candidatus Peradellaceae (NL. fem. n. *Peradellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PCC-7336.* The type genus for the taxon is *Candidatus* Peradella .

According to the original version of GTDB R06-RS202, this family belongs to the order *PCC-7336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peradellales.

Description of *Candidatus* Peradellales ord. nov.

Candidatus Peradellales (NL. fem. n. *Peradellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PCC-7336.* The type genus for the taxon is *Candidatus* Peradella .

According to the GTDB R06-RS202, this order belongs to the class *Cyanobacteriia*.

Description of *Candidatus* Peradia amnenilega sp. nov.

Candidatus Peradia amnenilega (NL. fem. n. *amnenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2253 sp002068415*. The type genome for the species is the

GenBank assembly GCA_002068415.1. The GC content of the type genome is 37.27 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Peradia gen. nov.

Candidatus Peradia (NL. fem. n. *Peradia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2253*. The type species for the genus is *Candidatus* Peradia amnenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Peradia feculimonia sp. nov.

Candidatus Peradia feculimonia (NL. fem. n. *feculimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2253 sp002347755*. The type genome for the species is the GenBank assembly GCA_002347755.1. The GC content of the type genome is 45.44 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Peradida antipimonia sp. nov.

Candidatus Peradida antipimonia (NL. fem. n. *antipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVL01 sp007129455*. The type genome for the species is the GenBank assembly GCA_007129455.1. The GC content of the type genome is 43.4 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Peradida gen. nov.

Candidatus Peradida (NL. fem. n. *Peradida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKVL01*. The type species for the genus is *Candidatus* Peradida antipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CSBR16-193. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimidosaceae.

Description of *Candidatus* Peradida nubifimonia sp. nov.

Candidatus Peradida nubifimonia (NL. fem. n. *nubifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVL01 sp007125155*. The type genome for the species is the GenBank assembly GCA_003565365.1. The GC content of the type genome is 45.03 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Peradosa cemenifica sp. nov.

Candidatus Peradosa cemenifica (NL. fem. n. *cemenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6777 sp002731275*. The type genome for the species is the GenBank assembly GCA_002453135.1. The GC content of the type genome is 51.31 % and the genome length is 10.17 Mbp.

Description of *Candidatus* Peradosa gen. nov.

Candidatus Peradosa (NL. fem. n. *Peradosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6777*. The type species for the genus is *Candidatus* Peradosa cemenifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peradosaceae.

Description of *Candidatus* Peradosaceae fam. nov.

Candidatus Peradosaceae (NL. fem. n. *Peradosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6777*. The type genus for the taxon is *Candidatus* Peradosa .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA6777. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peradosales.

Description of *Candidatus* Peradosales ord. nov.

Candidatus Peradosales (NL. fem. n. *Peradosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6777.* The type genus for the taxon is *Candidatus* Peradosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Peradosae.

Description of *Candidatus* Peradosae class. nov.

Candidatus Peradosae (NL. fem. n. *c__Peradosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6777.* The type genus for the taxon is *Candidatus* Peradosa .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Peradula demadentia sp. nov.

Candidatus Peradula demadentia (NL. fem. n. *demadentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12086 sp003518365*. The type genome for the species is the GenBank assembly GCA_003536515.1. The GC content of the type genome is 42.51 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Peradula gen. nov.

Candidatus Peradula (NL. fem. n. *Peradula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12086*. The type species for the genus is *Candidatus* Peradula demadentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Peradula domigugo sp. nov.

Candidatus Peradula domigugo (NL. fem. n. *domigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12086 sp002792995*. The type genome for the species is the GenBank assembly GCA_002792995.1. The GC content of the type genome is 41.19 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Peradula murelitia sp. nov.

Candidatus Peradula murelitia (NL. fem. n. *murelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12086 sp002784795*. The type genome for the species is the GenBank assembly GCA_002773105.1. The GC content of the type genome is 42.57 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Peradula turicisca sp. nov.

Candidatus Peradula turicisca (NL. fem. n. *turicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12086 sp001871445*. The type genome for the species is the GenBank assembly GCA_002322435.1. The GC content of the type genome is 41.0 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Perexana sarabatio sp. nov.

Candidatus Perexana sarabatio (NL. fem. n. *sarabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AF33-28 sp003477885*. The type genome for the species is the GenBank assembly RS_GCF_900751945.1. The GC content of the type genome is 50.01 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Perexana gen. nov.

Candidatus Perexana (NL. fem. n. *Perexana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AF33-28*. The type species for the genus is *Candidatus* Perexana sarabatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Perexaria resacitas sp. nov.

Candidatus Perexaria resacitas (NL. fem. n. *resacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4124 sp903862255*. The type genome for the species is the GenBank assembly GCA_903862255.1. The GC content of the type genome is 39.28 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Perexaria gen. nov.

Candidatus Perexaria (NL. fem. n. *Perexaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4124*. The type species for the genus is *Candidatus* Perexaria resacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Perexaria rudecilenta sp. nov.

Candidatus Perexaria rudecilenta (NL. fem. n. *rudecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4124 sp002413705*. The type genome for the species is the GenBank assembly GCA_002413705.1. The GC content of the type genome is 42.81 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Perexella exosciforma sp. nov.

Candidatus Perexella exosciforma (NL. fem. n. *exosciforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-39-9b sp001816695*. The type genome for the species is the GenBank assembly GCA_001816695.1. The GC content of the type genome is 39.34 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Perexella gen. nov.

Candidatus Perexella (NL. fem. n. *Perexella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-39-9b*. The type species for the genus is *Candidatus* Perexella exosciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-39-9b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexellaceae.

Description of *Candidatus* Perexellaceae fam. nov.

Candidatus Perexellaceae (NL. fem. n. *Perexellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-39-9b.* The type genus for the taxon is *Candidatus* Perexella .

According to GTDB R06-RS202, this family belongs to the order *Woykebacterales*.

Description of *Candidatus* Perexia detecimonia sp. nov.

Candidatus Perexia detecimonia (NL. fem. n. *detecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYQ01 sp002839745*. The type genome for the species is the GenBank assembly GCA_002839745.1. The GC content of the type genome is 27.65 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Perexia gen. nov.

Candidatus Perexia (NL. fem. n. *Perexia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYQ01*. The type species for the genus is *Candidatus* Perexia detecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PGYQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexiaceae.

Description of *Candidatus* Perexiaceae fam. nov.

Candidatus Perexiaceae (NL. fem. n. *Perexiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PGYQ01*. The type genus for the taxon is *Candidatus* Perexia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2591*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peribosales.

Description of *Candidatus* Perexida depetatio sp. nov.

Candidatus Perexida depetatio (NL. fem. n. *depetatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYT01 sp903903945*. The type genome for the species is the GenBank assembly GCA_903870205.1. The GC content of the type genome is 52.71 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Perexida gen. nov.

Candidatus Perexida (NL. fem. n. *Perexida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYYT01*. The type species for the genus is *Candidatus* Perexida depetatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexidaceae.

Description of *Candidatus* Perexidaceae fam. nov.

Candidatus Perexidaceae (NL. fem. n. *Perexidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYYT01*. The type genus for the taxon is *Candidatus* Perexida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIYYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Perexidales.

Description of *Candidatus* Perexidales ord. nov.

Candidatus Perexidales (NL. fem. n. *Perexidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYYT01*. The type genus for the taxon is *Candidatus* Perexida .

According to the original version of GTDB R06-RS202, this family belongs to the class *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripellae.

Description of *Candidatus* Perexida semipatica sp. nov.

Candidatus Perexida semipatica (NL. fem. n. *semipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYT01 sp903930455*. The type genome for the species is the GenBank assembly GCA_903930455.1. The GC content of the type genome is 52.39 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Perexosa obtenastra sp. nov.

Candidatus Perexosa obtenastra (NL. fem. n. *obtenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tc-Br11-B2g6-7 sp009908945*. The type genome for the species is the GenBank assembly GCA_009908945.1. The GC content of the type genome is 63.63 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Perexosa gen. nov.

Candidatus Perexosa (NL. fem. n. *Perexosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Tc-Br11-B2g6-7*. The type species for the genus is *Candidatus* Perexosa obtenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Perexosa retecilenta sp. nov.

Candidatus Perexosa retecilenta (NL. fem. n. *retecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tc-Br11-B2g6-7 sp001564055*. The type genome for the species is the GenBank assembly GCA_003554425.1. The GC content of the type genome is 62.03 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Perexosa subabisca sp. nov.

Candidatus Perexosa subabisca (NL. fem. n. *subabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tc-Br11-B2g6-7 sp007124945*. The type genome for the species is the GenBank assembly GCA_007130135.1. The GC content of the type genome is 57.95 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Perexula defaratio sp. nov.

Candidatus Perexula defaratio (NL. fem. n. *defaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRQ01 sp009837205*. The type genome for the species is the GenBank assembly GCA_009837205.1. The GC content of the type genome is 50.52 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Perexula gen. nov.

Candidatus Perexula (NL. fem. n. *Perexula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKRQ01*. The type species for the genus is *Candidatus* Perexula defaratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RKRQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perexulaceae.

Description of *Candidatus* Perexulaceae fam. nov.

Candidatus Perexulaceae (NL. fem. n. *Perexulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RKRQ01.* The type genus for the taxon is *Candidatus* Perexula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RKRQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Perexulales.

Description of *Candidatus* Perexulales ord. nov.

Candidatus Perexulales (NL. fem. n. *Perexulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RKRQ01.* The type genus for the taxon is *Candidatus* Perexula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Conifellae.

Description of *Candidatus* Perexula detumedo sp. nov.

Candidatus Perexula detumedo (NL. fem. n. *detumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRQ01 sp009840385*. The type genome for the species is the GenBank assembly GCA_009835375.1. The GC content of the type genome is 50.96 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Perexula rurigentia sp. nov.

Candidatus Perexula rurigentia (NL. fem. n. *rurigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKRQ01 sp007571325*. The type genome for the species is the GenBank assembly GCA_007571035.1. The GC content of the type genome is 44.21 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Peribacillus admodugo sp. nov.

Candidatus Peribacillus admodugo (NL. fem. n. *admodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp003429085*. The type genome for the species is the GenBank assembly RS_GCF_003429085.1. The GC content of the type genome is 41.71 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Peribacillus cepurigena sp. nov.

Candidatus Peribacillus cepurigena (NL. fem. n. *cepurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp001510645*. The type genome for the species is the GenBank assembly RS_GCF_001510645.1. The GC content of the type genome is 37.41 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Peribacillus detosivita sp. nov.

Candidatus Peribacillus detosivita (NL. fem. n. *detosivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp002835675*. The type genome for the species is the GenBank assembly RS_GCF_005217145.1. The GC content of the type genome is 40.04 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Peribacillus immodilenta sp. nov.

Candidatus Peribacillus immodilenta (NL. fem. n. *immodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp002863565*. The type genome for the species is the GenBank assembly RS_GCF_002863565.1. The GC content of the type genome is 40.81 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Peribacillus incivimonas sp. nov.

Candidatus Peribacillus incivimonas (NL. fem. n. *incivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp002860285*. The type genome for the species is the GenBank assembly RS_GCF_002860285.1. The GC content of the type genome is 39.53 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Peribacillus sepositrix sp. nov.

Candidatus Peribacillus sepositrix (NL. fem. n. *sepositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacillus sp900112495*. The type genome for the species is the GenBank assembly RS_GCF_900112495.1. The GC content of the type genome is 41.0 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Peribacter divolicula sp. nov.

Candidatus Peribacter divolicula (NL. fem. n. *divolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Peribacter sp001872575*. The type genome for the species is the GenBank assembly GCA_002322595.1. The GC content of the type genome is 54.3 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Peribana funivicella sp. nov.

Candidatus Peribana funivicella (NL. fem. n. *funivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFJ01 sp011064745*. The type genome for the species is the GenBank assembly GCA_011064745.1. The GC content of the type genome is 30.93 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Peribana gen. nov.

Candidatus Peribana (NL. fem. n. *Peribana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFJ01*. The type species for the genus is *Candidatus* Peribana funivicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Peribaria dilibimonas sp. nov.

Candidatus Peribaria dilibimonas (NL. fem. n. *dilibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4811 sp002328075*. The type genome for the species is the GenBank assembly GCA_002328075.1. The GC content of the type genome is 62.27 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Peribaria gen. nov.

Candidatus Peribaria (NL. fem. n. *Peribaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4811*. The type species for the genus is *Candidatus* Peribaria dilibimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4811*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribariaceae.

Description of *Candidatus* Peribariaceae fam. nov.

Candidatus Peribariaceae (NL. fem. n. *Peribariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4811*. The type genus for the taxon is *Candidatus* Peribaria .

According to GTDB R06-RS202, this family belongs to the order *Promineofilales*.

Description of *Candidatus* Peribella redunitio sp. nov.

Candidatus Peribella redunitio (NL. fem. n. *redunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSMQ01 sp011047655*. The type genome for the species is the GenBank assembly GCA_011047655.1. The GC content of the type genome is 41.86 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Peribella gen. nov.

Candidatus Peribella (NL. fem. n. *Peribella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSMQ01*. The type species for the genus is *Candidatus* Peribella redunitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribellaceae.

Description of *Candidatus* Peribellaceae fam. nov.

Candidatus Peribellaceae (NL. fem. n. *Peribellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSMQ01.* The type genus for the taxon is *Candidatus* Peribella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monodosales.

Description of *Candidatus* Peribida periditura sp. nov.

Candidatus Peribida periditura (NL. fem. n. *periditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYZ01 sp009692535*. The type genome for the species is the GenBank assembly GCA_009692535.1. The GC content of the type genome is 70.53 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Peribida gen. nov.

Candidatus Peribida (NL. fem. n. *Peribida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYZ01*. The type species for the genus is *Candidatus* Peribida periditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribidaceae.

Description of *Candidatus* Peribidaceae fam. nov.

Candidatus Peribidaceae (NL. fem. n. *Peribidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYZ01.* The type genus for the taxon is *Candidatus* Peribida .

According to GTDB R06-RS202, this family belongs to the order *Haliangiales*.

Description of *Candidatus* Peribosa arundimonia sp. nov.

Candidatus Peribosa arundimonia (NL. fem. n. *arundimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2591 sp002339755*. The type genome for the species is the GenBank assembly GCA_002339755.1. The GC content of the type genome is 32.65 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Peribosa gen. nov.

Candidatus Peribosa (NL. fem. n. *Peribosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2591*. The type species for the genus is *Candidatus* Peribosa arundimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2591*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribosaceae.

Description of *Candidatus* Peribosaceae fam. nov.

Candidatus Peribosaceae (NL. fem. n. *Peribosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2591*. The type genus for the taxon is *Candidatus* Peribosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2591*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peribosales.

Description of *Candidatus* Peribosales ord. nov.

Candidatus Peribosales (NL. fem. n. *Peribosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2591*. The type genus for the taxon is *Candidatus* Peribosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Peribula recucitoga sp. nov.

Candidatus Peribula recucitoga (NL. fem. n. *recucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM07-15 sp003477405*. The type genome for the species is the GenBank assembly GCA_900553375.1. The GC content of the type genome is 56.15 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Peribula gen. nov.

Candidatus Peribula (NL. fem. n. *Peribula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AM07-15*. The type species for the genus is *Candidatus* Peribula recucitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pericaria funivitrix sp. nov.

Candidatus Pericaria funivitrix (NL. fem. n. *funivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1 sp903855705*. The type genome for the species is the GenBank assembly GCA_903906915.1. The GC content of the type genome is 65.29 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Pericaria gen. nov.

Candidatus Pericaria (NL. fem. n. *Pericaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BAIKAL-G1*. The type species for the genus is *Candidatus* Pericaria funivitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pericaria serotessa sp. nov.

Candidatus Pericaria serotessa (NL. fem. n. *serotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1 sp002737305*. The type genome for the species is the GenBank assembly GCA_002737305.1. The GC content of the type genome is 66.35 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Pericella arcubilega sp. nov.

Candidatus Pericella arcubilega (NL. fem. n. *arcubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBAY01 sp005239945*. The type genome for the species is the GenBank assembly GCA_005239945.1. The GC content of the type genome is 37.92 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Pericella gen. nov.

Candidatus Pericella (NL. fem. n. *Pericella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBAY01*. The type species for the genus is *Candidatus* Pericella arcubilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBAY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pericellaceae.

Description of *Candidatus* Pericellaceae fam. nov.

Candidatus Pericellaceae (NL. fem. n. *Pericellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBAY01*. The type genus for the taxon is *Candidatus* Pericella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nivomanales.

Description of *Candidatus* Pericida anancitura sp. nov.

Candidatus Pericida anancitura (NL. fem. n. *anancitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-46-11 sp001779955*. The type genome for the species is the GenBank assembly GCA_001779955.1. The GC content of the type genome is 46.04 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Pericida gen. nov.

Candidatus Pericida (NL. fem. n. *Pericida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-46-11*. The type species for the genus is *Candidatus* Pericida anancitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-46-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pericidaceae.

Description of *Candidatus* Pericidaceae fam. nov.

Candidatus Pericidaceae (NL. fem. n. *Pericidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-46-11.* The type genus for the taxon is *Candidatus* Pericida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Pericosa catagivita sp. nov.

Candidatus Pericosa catagivita (NL. fem. n. *catagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp001604105*. The type genome for the species is the GenBank assembly GCA_001604105.1. The GC content of the type genome is 55.2 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Pericosa gen. nov.

Candidatus Pericosa (NL. fem. n. *Pericosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-11*. The type species for the genus is *Candidatus* Pericosa catagivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Pericosa celumimonia sp. nov.

Candidatus Pericosa celumimonia (NL. fem. n. *celumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp012517815*. The type genome for the species is the GenBank assembly GCA_012517815.1. The GC content of the type genome is 63.66 %

and the genome length is 3.88 Mbp.

Description of *Candidatus* Pericosa cocolibula sp. nov.

Candidatus Pericosa cocolibula (NL. fem. n. *cocolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp004556545*. The type genome for the species is the GenBank assembly GCA_004556545.1. The GC content of the type genome is 58.39 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Pericosa defulicella sp. nov.

Candidatus Pericosa defulicella (NL. fem. n. *defulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp012523405*. The type genome for the species is the GenBank assembly GCA_012523405.1. The GC content of the type genome is 49.04 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Pericosa domigago sp. nov.

Candidatus Pericosa domigago (NL. fem. n. *domigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp001604115*. The type genome for the species is the GenBank assembly GCA_001604115.1. The GC content of the type genome is 61.16 % and the genome length is 1.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Pericosa exsuribra sp. nov.

Candidatus Pericosa exsuribra (NL. fem. n. *exsuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp009783365*. The type genome for the species is the GenBank assembly GCA_009783365.1. The GC content of the type genome is 55.85 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Pericosa infucicella sp. nov.

Candidatus Pericosa infucicella (NL. fem. n. *infucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp900550955*. The type genome for the species is the GenBank assembly GCA_900550955.1. The GC content of the type genome is 59.59 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Pericosa luxuritrix sp. nov.

Candidatus Pericosa luxuritrix (NL. fem. n. *luxuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp900540045*. The type genome for the species is the GenBank assembly RS_GCF_900759065.1. The GC content of the type genome is 60.77 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Pericosa panifitura sp. nov.

Candidatus Pericosa panifitura (NL. fem. n. *panifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp900553905*. The type genome for the species is the GenBank assembly RS_GCF_900759185.1. The GC content of the type genome is 62.72 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Pericosa pocilitica sp. nov.

Candidatus Pericosa pocilitica (NL. fem. n. *pocilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp012729115*. The type genome for the species is the GenBank assembly GCA_012729115.1. The GC content of the type genome is 55.84 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Pericosa sotulivita sp. nov.

Candidatus Pericosa sotulivita (NL. fem. n. *sotulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-11 sp900548145*. The type genome for the species is the GenBank assembly RS_GCF_900756425.1. The GC content of the type genome is 58.01 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Peridana herinastra sp. nov.

Candidatus Peridana herinastra (NL. fem. n. *herinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHBD01 sp002841865*. The type genome for the species is the GenBank assembly GCA_002841865.1. The GC content of the type genome is 59.86 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Peridana gen. nov.

Candidatus Peridana (NL. fem. n. *Peridana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHBD01*. The type species for the genus is *Candidatus* Peridana herinastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHBD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridanaceae.

Description of *Candidatus* Peridanaceae fam. nov.

Candidatus Peridanaceae (NL. fem. n. *Peridanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHBD01.* The type genus for the taxon is *Candidatus* Peridana .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Peridana indevisca sp. nov.

Candidatus Peridana indevisca (NL. fem. n. *indevisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHBD01 sp013177825*. The type genome for the species is the GenBank assembly GCA_013177825.1. The GC content of the type genome is 59.92 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Peridaria accorimonas sp. nov.

Candidatus Peridaria accorimonas (NL. fem. n. *accorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902509695*. The type genome for the species is the GenBank assembly GCA_902509695.1. The GC content of the type genome is 31.36 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Peridaria gen. nov.

Candidatus Peridaria (NL. fem. n. *Peridaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HIMB59*. The type species for the genus is *Candidatus* Peridaria accorimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HIMB59*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridariaceae.

Description of *Candidatus* Peridariaceae fam. nov.

Candidatus Peridariaceae (NL. fem. n. *Peridariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HIMB59.* The type genus for the taxon is *Candidatus* Peridaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *HIMB59*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peridariales.

Description of *Candidatus* Peridariales ord. nov.

Candidatus Peridariales (NL. fem. n. *Peridariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HIMB59.* The type genus for the taxon is *Candidatus* Peridaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Peridaria adfanitoga sp. nov.

Candidatus Peridaria adfanitoga (NL. fem. n. *adfanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp004321805*. The type genome for the species is the GenBank assembly GCA_004321805.1. The GC content of the type genome is 31.07 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Peridaria adpelago sp. nov.

Candidatus Peridaria adpelago (NL. fem. n. *adpelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902527045*. The type genome for the species is the GenBank assembly GCA_902527045.1. The GC content of the type genome is 30.73 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Peridaria adpicentia sp. nov.

Candidatus Peridaria adpicentia (NL. fem. n. *adpicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902632575*. The type genome for the species is the GenBank assembly GCA_902632575.1. The GC content of the type genome is 30.77 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Peridaria atrusessa sp. nov.

Candidatus Peridaria atrusessa (NL. fem. n. *atrusessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902574995*. The type genome for the species is the GenBank assembly GCA_902574995.1. The GC content of the type genome is 30.88 %

and the genome length is 1.16 Mbp.

Description of *Candidatus* Peridaria bipalilenta sp. nov.

Candidatus Peridaria bipalilenta (NL. fem. n. *bipalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902527545*. The type genome for the species is the GenBank assembly GCA_902613445.1. The GC content of the type genome is 30.47 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Peridaria bipatimonia sp. nov.

Candidatus Peridaria bipatimonia (NL. fem. n. *bipatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902615815*. The type genome for the species is the GenBank assembly GCA_902599045.1. The GC content of the type genome is 30.64 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Peridaria catecitio sp. nov.

Candidatus Peridaria catecitio (NL. fem. n. *catecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902524245*. The type genome for the species is the GenBank assembly GCA_902590065.1. The GC content of the type genome is 30.43 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Peridaria cisalilenta sp. nov.

Candidatus Peridaria cisalilenta (NL. fem. n. *cisalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902610415*. The type genome for the species is the GenBank assembly GCA_902523865.1. The GC content of the type genome is 31.13 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Peridaria cucurax sp. nov.

Candidatus Peridaria cucurax (NL. fem. n. *cucurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902594145*. The type genome for the species is the GenBank assembly GCA_902594145.1. The GC content of the type genome is 30.65 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Peridaria curabago sp. nov.

Candidatus Peridaria curabago (NL. fem. n. *curabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902521155*. The type genome for the species is the GenBank assembly GCA_902521155.1. The GC content of the type genome is 31.01 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Peridaria decomastra sp. nov.

Candidatus Peridaria decomastra (NL. fem. n. *decomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp003281065*. The type genome for the species is the GenBank assembly GCA_003281065.1. The GC content of the type genome is 30.33 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Peridaria delubibra sp. nov.

Candidatus Peridaria delubibra (NL. fem. n. *delubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902521465*. The type genome for the species is the GenBank assembly GCA_902521465.1. The GC content of the type genome is 30.33 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Peridaria denomatica sp. nov.

Candidatus Peridaria denomatica (NL. fem. n. *denomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902595525*. The type genome for the species is the GenBank assembly GCA_902595525.1. The GC content of the type genome is 30.95 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Peridaria depopastra sp. nov.

Candidatus Peridaria depopastra (NL. fem. n. *depopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902518505*. The type genome for the species is the GenBank assembly GCA_902561065.1. The GC content of the type genome is 30.81 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Peridaria desacibula sp. nov.

Candidatus Peridaria desacibula (NL. fem. n. *desacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902610175*. The type genome for the species is the GenBank assembly GCA_902610175.1. The GC content of the type genome is 30.32 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Peridaria desonago sp. nov.

Candidatus Peridaria desonago (NL. fem. n. *desonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902613845*. The type genome for the species is the GenBank assembly GCA_902543135.1. The GC content of the type genome is 30.76 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Peridaria detecicula sp. nov.

Candidatus Peridaria detecicula (NL. fem. n. *detecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp003216195*. The type genome for the species is the GenBank assembly GCA_003216195.1. The GC content of the type genome is 30.3 %

and the genome length is 1.24 Mbp.

Description of *Candidatus* Peridaria dicimiforma sp. nov.

Candidatus Peridaria dicimiforma (NL. fem. n. *dicimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902530745*. The type genome for the species is the GenBank assembly GCA_902560395.1. The GC content of the type genome is 30.44 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Peridaria dimidibula sp. nov.

Candidatus Peridaria dimidibula (NL. fem. n. *dimidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902610255*. The type genome for the species is the GenBank assembly GCA_902610255.1. The GC content of the type genome is 30.42 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Peridaria dinupivita sp. nov.

Candidatus Peridaria dinupivita (NL. fem. n. *dinupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902543855*. The type genome for the species is the GenBank assembly GCA_902543855.1. The GC content of the type genome is 30.44 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Peridaria domicitrix sp. nov.

Candidatus Peridaria domicitrix (NL. fem. n. *domicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp000299115*. The type genome for the species is the GenBank assembly RS_GCF_000299115.1. The GC content of the type genome is 32.26 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Peridaria domigitia sp. nov.

Candidatus Peridaria domigitia (NL. fem. n. *domigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902538085*. The type genome for the species is the GenBank assembly GCA_902538085.1. The GC content of the type genome is 30.32 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Peridaria famelatio sp. nov.

Candidatus Peridaria famelatio (NL. fem. n. *famelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902536405*. The type genome for the species is the GenBank assembly GCA_902633905.1. The GC content of the type genome is 30.9 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Peridaria forinastra sp. nov.

Candidatus Peridaria forinastra (NL. fem. n. *forinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902591315*. The type genome for the species is the GenBank assembly GCA_902591315.1. The GC content of the type genome is 30.49 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Peridaria holovatica sp. nov.

Candidatus Peridaria holovatica (NL. fem. n. *holovatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902575065*. The type genome for the species is the GenBank assembly GCA_902575065.1. The GC content of the type genome is 30.52 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Peridaria homolilenta sp. nov.

Candidatus Peridaria homolilenta (NL. fem. n. *homolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902555695*. The type genome for the species is the GenBank assembly GCA_902617075.1. The GC content of the type genome is 31.01 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Peridaria impinivita sp. nov.

Candidatus Peridaria impinivita (NL. fem. n. *impinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902529795*. The type genome for the species is the GenBank assembly GCA_902529795.1. The GC content of the type genome is 32.1 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Peridaria intemessa sp. nov.

Candidatus Peridaria intemessa (NL. fem. n. *intemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902575725*. The type genome for the species is the GenBank assembly GCA_902575725.1. The GC content of the type genome is 30.85 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Peridaria luxurax sp. nov.

Candidatus Peridaria luxurax (NL. fem. n. *luxurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902599405*. The type genome for the species is the GenBank assembly GCA_902523135.1. The GC content of the type genome is 30.85 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Peridaria manibatio sp. nov.

Candidatus Peridaria manibatio (NL. fem. n. *manibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902560595*. The type genome for the species is the GenBank assembly GCA_902560595.1. The GC content of the type genome is 30.73 %

and the genome length is 1.1 Mbp.

Description of *Candidatus* Peridaria meriditudo sp. nov.

Candidatus Peridaria meriditudo (NL. fem. n. *meriditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902616855*. The type genome for the species is the GenBank assembly GCA_902595575.1. The GC content of the type genome is 30.45 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Peridaria minurax sp. nov.

Candidatus Peridaria minurax (NL. fem. n. *minurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902617465*. The type genome for the species is the GenBank assembly GCA_902564165.1. The GC content of the type genome is 30.59 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Peridaria murelitas sp. nov.

Candidatus Peridaria murelitas (NL. fem. n. *murelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902514885*. The type genome for the species is the GenBank assembly GCA_902514885.1. The GC content of the type genome is 30.94 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Peridaria obnunax sp. nov.

Candidatus Peridaria obnunax (NL. fem. n. *obnunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902528805*. The type genome for the species is the GenBank assembly GCA_902528805.1. The GC content of the type genome is 31.04 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Peridaria palificella sp. nov.

Candidatus Peridaria palificella (NL. fem. n. *palificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902526965*. The type genome for the species is the GenBank assembly GCA_902526965.1. The GC content of the type genome is 30.68 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Peridaria peraditoga sp. nov.

Candidatus Peridaria peraditoga (NL. fem. n. *peraditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902515765*. The type genome for the species is the GenBank assembly GCA_902515765.1. The GC content of the type genome is 31.51 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Peridaria pimenitio sp. nov.

Candidatus Peridaria pimenitio (NL. fem. n. *pimenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp008638215*. The type genome for the species is the GenBank assembly GCA_008638275.1. The GC content of the type genome is 32.28 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Peridaria propricella sp. nov.

Candidatus Peridaria propricella (NL. fem. n. *propricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902516235*. The type genome for the species is the GenBank assembly GCA_902516235.1. The GC content of the type genome is 30.81 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Peridaria relecentia sp. nov.

Candidatus Peridaria relecentia (NL. fem. n. *relecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902522585*. The type genome for the species is the GenBank assembly GCA_902522585.1. The GC content of the type genome is 32.26 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Peridaria repudentia sp. nov.

Candidatus Peridaria repudentia (NL. fem. n. *repudentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902588615*. The type genome for the species is the GenBank assembly GCA_902589775.1. The GC content of the type genome is 30.73 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Peridaria robigitoga sp. nov.

Candidatus Peridaria robigitoga (NL. fem. n. *robigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp002705265*. The type genome for the species is the GenBank assembly GCA_002705265.1. The GC content of the type genome is 27.99 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Peridaria sanabicula sp. nov.

Candidatus Peridaria sanabicula (NL. fem. n. *sanabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902617515*. The type genome for the species is the GenBank assembly GCA_902617515.1. The GC content of the type genome is 30.67 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Peridaria serotitas sp. nov.

Candidatus Peridaria serotitas (NL. fem. n. *serotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp002690585*. The type genome for the species is the GenBank assembly GCA_902538105.1. The GC content of the type genome is 30.66 %

and the genome length is 1.21 Mbp.

Description of *Candidatus* Peridaria siligatio sp. nov.

Candidatus Peridaria siligatio (NL. fem. n. *siligatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902521485*. The type genome for the species is the GenBank assembly GCA_902597535.1. The GC content of the type genome is 30.68 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Peridaria sonipiforma sp. nov.

Candidatus Peridaria sonipiforma (NL. fem. n. *sonipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902542505*. The type genome for the species is the GenBank assembly GCA_902542505.1. The GC content of the type genome is 30.36 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Peridaria susicugo sp. nov.

Candidatus Peridaria susicugo (NL. fem. n. *susicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902621205*. The type genome for the species is the GenBank assembly GCA_902530005.1. The GC content of the type genome is 30.63 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Peridaria tegumivita sp. nov.

Candidatus Peridaria tegumivita (NL. fem. n. *tegumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902546975*. The type genome for the species is the GenBank assembly GCA_902614175.1. The GC content of the type genome is 30.91 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Peridaria tenemigena sp. nov.

Candidatus Peridaria tenemigena (NL. fem. n. *tenemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902524785*. The type genome for the species is the GenBank assembly GCA_902524785.1. The GC content of the type genome is 31.09 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Peridaria tenemisca sp. nov.

Candidatus Peridaria tenemisca (NL. fem. n. *tenemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902619375*. The type genome for the species is the GenBank assembly GCA_902592365.1. The GC content of the type genome is 30.48 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Peridaria timefentia sp. nov.

Candidatus Peridaria timefentia (NL. fem. n. *timefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902611415*. The type genome for the species is the GenBank assembly GCA_902539635.1. The GC content of the type genome is 30.64 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Peridaria tomacugo sp. nov.

Candidatus Peridaria tomacugo (NL. fem. n. *tomacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902527525*. The type genome for the species is the GenBank assembly GCA_902527525.1. The GC content of the type genome is 31.03 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Peridaria verifimonia sp. nov.

Candidatus Peridaria verifimonia (NL. fem. n. *verifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp002169365*. The type genome for the species is the GenBank assembly GCA_002169365.1. The GC content of the type genome is 34.02 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Peridaria visibetta sp. nov.

Candidatus Peridaria visibetta (NL. fem. n. *visibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902613185*. The type genome for the species is the GenBank assembly GCA_902519575.1. The GC content of the type genome is 30.85 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Peridaria visifitica sp. nov.

Candidatus Peridaria visifitica (NL. fem. n. *visifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB59 sp902540985*. The type genome for the species is the GenBank assembly GCA_902619695.1. The GC content of the type genome is 30.59 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Peridella detecetta sp. nov.

Candidatus Peridella detecetta (NL. fem. n. *detecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-01-FULL-39-8 sp001789355*. The type genome for the species is the GenBank assembly GCA_001789355.1. The GC content of the type genome is 38.73 % and the genome length is 1.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Peridella gen. nov.

Candidatus Peridella (NL. fem. n. *Peridella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-01-FULL-39-8*. The type species for the genus is *Candidatus*

Peridella detecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Peridida cotenousia sp. nov.

Candidatus Peridida cotenousia (NL. fem. n. *cotenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-932 sp903970575*. The type genome for the species is the GenBank assembly GCA_903970575.1. The GC content of the type genome is 62.29 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Peridida gen. nov.

Candidatus Peridida (NL. fem. n. *Peridida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-932*. The type species for the genus is *Candidatus* Peridida cotenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BOG-932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perididaceae.

Description of *Candidatus* Perididaceae fam. nov.

Candidatus Perididaceae (NL. fem. n. *Perididaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BOG-932.* The type genus for the taxon is *Candidatus* Peridida .

According to GTDB R06-RS202, this family belongs to the order *Azospirillales_A*.

Description of *Candidatus* Peridida echidifica sp. nov.

Candidatus Peridida echidifica (NL. fem. n. *echidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BOG-932 sp003165335*. The type genome for the species is the GenBank assembly GCA_003165335.1. The GC content of the type genome is 59.22 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Peridosa haricatica sp. nov.

Candidatus Peridosa haricatica (NL. fem. n. *haricatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2252 sp002382605*. The type genome for the species is the GenBank assembly GCA_002382605.1. The GC content of the type genome is 53.97 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Peridosa gen. nov.

Candidatus Peridosa (NL. fem. n. *Peridosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2252*. The type species for the genus is *Candidatus* Peridosa haricatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peripana nimirax sp. nov.

Candidatus Peripana nimirax (NL. fem. n. *nimirax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-48-32b sp001773725*. The type genome for the species is the GenBank assembly GCA_001773725.1. The GC content of the type genome is 47.81 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Peripana gen. nov.

Candidatus Peripana (NL. fem. n. *Peripana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-48-32b*. The type species for the genus is *Candidatus* Peripana nimirax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peripella inhabitoga sp. nov.

Candidatus Peripella inhabitoga (NL. fem. n. *inhabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGX01 sp013152135*. The type genome for the species is the GenBank assembly GCA_013152135.1. The GC content of the type genome is 54.23 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Peripella gen. nov.

Candidatus Peripella (NL. fem. n. *Peripella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGX01*. The type species for the genus is *Candidatus* Peripella inhabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peripellaceae.

Description of *Candidatus* Peripellaceae fam. nov.

Candidatus Peripellaceae (NL. fem. n. *Peripellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGX01*. The type genus for the taxon is *Candidatus* Peripella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipinariales.

Description of *Candidatus* Periposa impiligena sp. nov.

Candidatus Periposa impiligena (NL. fem. n. *impiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXB01 sp013178305*. The type genome for the species is the

GenBank assembly GCA_013178305.1. The GC content of the type genome is 62.14 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Periposa gen. nov.

Candidatus Periposa (NL. fem. n. *Periposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXB01*. The type species for the genus is *Candidatus* Periposa impiligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABLXB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Periposaceae.

Description of *Candidatus* Periposaceae fam. nov.

Candidatus Periposaceae (NL. fem. n. *Periposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABLXB01*. The type genus for the taxon is *Candidatus* Periposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABLXB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Periposales.

Description of *Candidatus* Periposales ord. nov.

Candidatus Periposales (NL. fem. n. *Periposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABLXB01*. The type genus for the taxon is *Candidatus* Periposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Peripula delubimonia sp. nov.

Candidatus Peripula delubimonia (NL. fem. n. *delubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2786225 sp009991425*. The type genome for the species is the GenBank assembly GCA_009995445.1. The GC content of the type genome is 34.8 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Peripula gen. nov.

Candidatus Peripula (NL. fem. n. *Peripula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2786225*. The type species for the genus is *Candidatus* Peripula delubimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peripula inoblessa sp. nov.

Candidatus Peripula inoblessa (NL. fem. n. *inoblessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2786225 sp002786225*. The type genome for the species is the GenBank assembly GCA_002786225.1. The GC content of the type genome is 35.11 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Perlucidibaca codifitrix sp. nov.

Candidatus Perlucidibaca codifitrix (NL. fem. n. *codifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Perlucidibaca sp002943415*. The type genome for the species is the GenBank assembly RS_GCF_002943415.1. The GC content of the type genome is 67.79 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Perlucidibaca occucatica sp. nov.

Candidatus Perlucidibaca occucatica (NL. fem. n. *occucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Perlucidibaca sp002342025*. The type genome for the species is the GenBank assembly GCA_002342025.1. The GC content of the type genome is 55.18 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Permianibacter incesibra sp. nov.

Candidatus Permianibacter incesibra (NL. fem. n. *incesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Permianibacter sp013179735*. The type genome for the species is the GenBank assembly RS_GCF_013179735.1. The GC content of the type genome is 59.14 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Peroparia cohurugo sp. nov.

Candidatus Peroparia cohurugo (NL. fem. n. *cohurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACEL01 sp011682535*. The type genome for the species is the GenBank assembly GCA_011682535.1. The GC content of the type genome is 61.94 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Peroparia gen. nov.

Candidatus Peroparia (NL. fem. n. *Peroparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACEL01*. The type species for the genus is *Candidatus* Peroparia cohurugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peropariaceae.

Description of *Candidatus* Peropariaceae fam. nov.

Candidatus Peropariaceae (NL. fem. n. *Peropariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACEL01.* The type genus for the taxon is *Candidatus* Peroparia .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Peropella abnepibra sp. nov.

Candidatus Peropella abnepibra (NL. fem. n. *abnepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AcAMD-2 sp903922115*. The type genome for the species is the GenBank assembly GCA_903922115.1. The GC content of the type genome is 57.42 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Peropella gen. nov.

Candidatus Peropella (NL. fem. n. *Peropella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AcAMD-2*. The type species for the genus is *Candidatus* Peropella abnepibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12327*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denoriaceae.

Description of *Candidatus* Peropella embamitio sp. nov.

Candidatus Peropella embamitio (NL. fem. n. *embamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AcAMD-2 sp000754455*. The type genome for the species is the GenBank assembly GCA_000754455.1. The GC content of the type genome is 57.34 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water column of the freshwater reservoir Embalse de Amadorio in Spain".

Description of *Candidatus* Peropella subofetta sp. nov.

Candidatus Peropella subofetta (NL. fem. n. *subofetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AcAMD-2 sp903920865*. The type genome for the species is the GenBank assembly GCA_903880055.1. The GC content of the type genome is 55.44 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Peropia cocodicula sp. nov.

Candidatus Peropia cocodicula (NL. fem. n. *cocodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTS01 sp011389735*. The type genome for the species is the GenBank assembly GCA_011389735.1. The GC content of the type genome is 48.78 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Peropia gen. nov.

Candidatus Peropia (NL. fem. n. *Peropia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTS01*. The type species for the genus is *Candidatus* Peropia cocodicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABTS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peropiaceae.

Description of *Candidatus* Peropiaceae fam. nov.

Candidatus Peropiaceae (NL. fem. n. *Peropiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABTS01*. The type genus for the taxon is *Candidatus* Peropia .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Peropida demulugo sp. nov.

Candidatus Peropida demulugo (NL. fem. n. *demulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712105 sp002712105*. The type genome for the species is the GenBank assembly RS_GCF_902601495.1. The GC content of the type genome is 31.49 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Peropida gen. nov.

Candidatus Peropida (NL. fem. n. *Peropida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712105*. The type species for the genus is *Candidatus* Peropida demulugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peroposa ignifitia sp. nov.

Candidatus Peroposa ignifitia (NL. fem. n. *ignifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU036 sp012727635*. The type genome for the species is the GenBank assembly GCA_012727635.1. The GC content of the type genome is 40.88 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Peroposa gen. nov.

Candidatus Peroposa (NL. fem. n. *Peroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU036*. The type species for the genus is *Candidatus* Peroposa ignifitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Peroposa lenocivita sp. nov.

Candidatus Peroposa lenocivita (NL. fem. n. *lenocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU036 sp001512625*. The type genome for the species is the GenBank assembly GCA_001512625.1. The GC content of the type genome is 41.18 % and the genome length is 1.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Peropula adlocimonia sp. nov.

Candidatus Peropula adlocimonia (NL. fem. n. *adlocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp902763535*. The type genome for the species is the GenBank assembly GCA_902763535.1. The GC content of the type genome is 39.4 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Peropula gen. nov.

Candidatus Peropula (NL. fem. n. *Peropula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-495*. The type species for the genus is *Candidatus* Peropula adlocimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Peropula artolitoga sp. nov.

Candidatus Peropula artolitoga (NL. fem. n. *artolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp902799835*. The type genome for the species is the GenBank assembly GCA_902799835.1. The GC content of the type genome is 38.58 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Peropula bimotitio sp. nov.

Candidatus Peropula bimotitio (NL. fem. n. *bimotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp001917125*. The type genome for the species is the GenBank assembly GCA_900540245.1. The GC content of the type genome is 47.38 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Peropula brabrivita sp. nov.

Candidatus Peropula brabrivita (NL. fem. n. *brabrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp900551585*. The type genome for the species is the GenBank assembly GCA_900551585.1. The GC content of the type genome is 44.23 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Peropula casabousia sp. nov.

Candidatus Peropula casabousia (NL. fem. n. *casabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp900762585*. The type genome for the species is the GenBank assembly RS_GCF_900762585.1. The GC content of the type genome is 44.3 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Peropula citipedo sp. nov.

Candidatus Peropula citipedo (NL. fem. n. *citipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp000436375*. The type genome for the species is the GenBank assembly GCA_900538915.1. The GC content of the type genome is 49.03 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Peropula defalitica sp. nov.

Candidatus Peropula defalitica (NL. fem. n. *defalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp902761535*. The type genome for the species is the GenBank assembly GCA_902761535.1. The GC content of the type genome is 38.01 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Peropula denixisca sp. nov.

Candidatus Peropula denixisca (NL. fem. n. *denixisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp900538765*. The type genome for the species is the GenBank assembly GCA_900538765.1. The GC content of the type genome is 44.62 %

and the genome length is 1.87 Mbp.

Description of *Candidatus* Peropula miracitudo sp. nov.

Candidatus Peropula miracitudo (NL. fem. n. *miracitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp900540425*. The type genome for the species is the GenBank assembly GCA_900540425.1. The GC content of the type genome is 46.76 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Peropula selecedo sp. nov.

Candidatus Peropula selecedo (NL. fem. n. *selecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp902778645*. The type genome for the species is the GenBank assembly GCA_902778645.1. The GC content of the type genome is 40.44 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Peropula viripugo sp. nov.

Candidatus Peropula viripugo (NL. fem. n. *viripugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-495 sp000432275*. The type genome for the species is the GenBank assembly GCA_000432275.1. The GC content of the type genome is 46.08 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Persephonella arrugessa sp. nov.

Candidatus Persephonella arrugessa (NL. fem. n. *arrugessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persephonella sp013153235*. The type genome for the species is the GenBank assembly GCA_013153235.1. The GC content of the type genome is 42.36 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Persephonella cetarimonas sp. nov.

Candidatus Persephonella cetarimonas (NL. fem. n. *cetarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persephonella sp000703045*. The type genome for the species is the GenBank assembly RS_GCF_000703045.1. The GC content of the type genome is 34.57 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Persephonella direcessa sp. nov.

Candidatus Persephonella direcessa (NL. fem. n. *direcessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persephonella sp013153295*. The type genome for the species is the GenBank assembly GCA_013153295.1. The GC content of the type genome is 39.5 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Persephonella essonatica sp. nov.

Candidatus Persephonella essonatica (NL. fem. n. *essonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persephonella sp013153765*. The type genome for the species is the GenBank assembly GCA_013153765.1. The GC content of the type genome is 45.25 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Persephonella nehalibra sp. nov.

Candidatus Persephonella nehalibra (NL. fem. n. *nehalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persephonella sp000703085*. The type genome for the species is the GenBank assembly RS_GCF_000703085.1. The GC content of the type genome is 34.44 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Persicitalea maledicula sp. nov.

Candidatus Persicitalea maledicula (NL. fem. n. *maledicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persicitalea sp009296315*. The type genome for the species is the GenBank assembly RS_GCF_009296315.1. The GC content of the type genome is 50.67 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Persicobacter dilecitica sp. nov.

Candidatus Persicobacter dilecitica (NL. fem. n. *dilecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Persicobacter sp001274635*. The type genome for the species is the GenBank assembly RS_GCF_001274635.1. The GC content of the type genome is 42.46 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Seaweeds surface".

Description of *Candidatus* Petrimonas algifitio sp. nov.

Candidatus Petrimonas algifitio (NL. fem. n. *algifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrimonas sp002069095*. The type genome for the species is the GenBank assembly GCA_002069095.1. The GC content of the type genome is 40.11 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Petrimonas mavorilega sp. nov.

Candidatus Petrimonas mavorilega (NL. fem. n. *mavorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrimonas sp012728465*. The type genome for the species is the GenBank assembly GCA_012728465.1. The GC content of the type genome is 36.26 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Petrimonas redacigena sp. nov.

Candidatus Petrimonas redacigena (NL. fem. n. *redacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrimonas sp001898165*. The type genome for the species is the

GenBank assembly GCA_001898165.1. The GC content of the type genome is 43.11 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Petrimonas turibicula sp. nov.

Candidatus Petrimonas turibicula (NL. fem. n. *turibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrimonas sp002356435*. The type genome for the species is the GenBank assembly GCA_003519725.1. The GC content of the type genome is 44.82 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Petrimonas vocamibra sp. nov.

Candidatus Petrimonas vocamibra (NL. fem. n. *vocamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrimonas sp002316835*. The type genome for the species is the GenBank assembly GCA_002316835.1. The GC content of the type genome is 40.26 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Petrocella apposatio sp. nov.

Candidatus Petrocella apposatio (NL. fem. n. *apposatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrocella sp002841495*. The type genome for the species is the GenBank assembly GCA_002841495.1. The GC content of the type genome is 37.21 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Petrocella omnimisca sp. nov.

Candidatus Petrocella omnimisca (NL. fem. n. *omnimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrocella sp002841435*. The type genome for the species is the GenBank assembly GCA_002841435.1. The GC content of the type genome is 36.78 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Petrotoga invesax sp. nov.

Candidatus Petrotoga invesax (NL. fem. n. *invesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Petrotoga sp003265365*. The type genome for the species is the GenBank assembly RS_GCF_003265365.1. The GC content of the type genome is 31.19 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Petulana docibugo sp. nov.

Candidatus Petulana docibugo (NL. fem. n. *docibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-8 sp000992165*. The type genome for the species is the GenBank assembly GCA_000992985.1. The GC content of the type genome is 37.62 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Petulana gen. nov.

Candidatus Petulana (NL. fem. n. *Petulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-37-8*. The type species for the genus is *Candidatus* Petulana docibugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Petularia inhabago sp. nov.

Candidatus Petularia inhabago (NL. fem. n. *inhabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-41-21 sp002778645*. The type genome for the species is the GenBank assembly GCA_002778645.1. The GC content of the type genome is 38.59 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Petularia gen. nov.

Candidatus Petularia (NL. fem. n. *Petularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-41-21*. The type species for the genus is *Candidatus* Petularia inhabago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Petularia secunilega sp. nov.

Candidatus Petularia secunilega (NL. fem. n. *secunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-41-21 sp001871235*. The type genome for the species is the GenBank assembly GCA_002772225.1. The GC content of the type genome is 40.56 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Petulella derelugo sp. nov.

Candidatus Petulella derelugo (NL. fem. n. *derelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU083 sp012838915*. The type genome for the species is the GenBank assembly GCA_012838915.1. The GC content of the type genome is 43.39 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Petulella gen. nov.

Candidatus Petulella (NL. fem. n. *Petulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU083*. The type species for the genus is *Candidatus* Petulella derelugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Petulellaceae fam. nov.

Candidatus Petulellaceae (NL. fem. n. *Petulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU083.* The type genus for the taxon is *Candidatus* Petulella .

According to GTDB R06-RS202, this family belongs to the order *Caldicoprobacterales*.

Description of *Candidatus* Petulella nugigedo sp. nov.

Candidatus Petulella nugigedo (NL. fem. n. *nugigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU083 sp001512915*. The type genome for the species is the GenBank assembly GCA_012719725.1. The GC content of the type genome is 43.32 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Petulia manibibula sp. nov.

Candidatus Petulia manibibula (NL. fem. n. *manibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA133 sp003224995*. The type genome for the species is the GenBank assembly GCA_003224995.1. The GC content of the type genome is 57.38 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Petulia gen. nov.

Candidatus Petulia (NL. fem. n. *Petulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA133*. The type species for the genus is *Candidatus* Petulia manibibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Petulia penuritoga sp. nov.

Candidatus Petulia penuritoga (NL. fem. n. *penuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA133 sp003225465*. The type genome for the species is the GenBank assembly GCA_013289925.1. The GC content of the type genome is 58.42 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Petulida derelisca sp. nov.

Candidatus Petulida derelisca (NL. fem. n. *derelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-FULL-52-10 sp001805645*. The type genome for the species is the GenBank assembly GCA_001805645.1. The GC content of the type genome is 49.9 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Petulida gen. nov.

Candidatus Petulida (NL. fem. n. *Petulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-FULL-52-10*. The type species for the genus is *Candidatus* Petulida derelisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Petulosa homilax sp. nov.

Candidatus Petulosa homilax (NL. fem. n. *homilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKLF01 sp002725175*. The type genome for the species is the GenBank assembly GCA_002725175.2. The GC content of the type genome is 36.06 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Petulosa gen. nov.

Candidatus Petulosa (NL. fem. n. *Petulosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACKLF01*. The type species for the genus is *Candidatus* Petulosa homilax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Petulosa homilitoga sp. nov.

Candidatus Petulosa homilitoga (NL. fem. n. *homilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKLF01 sp902600895*. The type genome for the species is the GenBank assembly GCA_902600895.1. The GC content of the type genome is 36.81 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Petulosa lavabatica sp. nov.

Candidatus Petulosa lavabatica (NL. fem. n. *lavabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKLF01 sp002704385*. The type genome for the species is the GenBank assembly GCA_002704385.2. The GC content of the type genome is 36.95 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Petulula apsocago sp. nov.

Candidatus Petulula apsocago (NL. fem. n. *apsocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2294 sp002345625*. The type genome for the species is the GenBank assembly GCA_002345625.1. The GC content of the type genome is 56.78 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Petulula gen. nov.

Candidatus Petulula (NL. fem. n. *Petulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA2294*. The type species for the genus is *Candidatus* Petulula apsocago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petululaceae.

Description of *Candidatus* Petululaceae fam. nov.

Candidatus Petululaceae (NL. fem. n. *Petululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2294.* The type genus for the taxon is *Candidatus* Petulula .

According to GTDB R06-RS202, this family belongs to the order *Desulfuromonadales*.

Description of *Candidatus* Phaeocystidibacter semoditura sp. nov.

Candidatus Phaeocystidibacter semoditura (NL. fem. n. *semoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeocystidibacter sp013373425*. The type genome for the species is the GenBank assembly GCA_013373425.1. The GC content of the type genome is 45.8 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Phaeodactylibacter facunigena sp. nov.

Candidatus Phaeodactylibacter facunigena (NL. fem. n. *facunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeodactylibacter sp009908745*. The type genome for the species is the GenBank assembly GCA_009908745.1. The GC content of the type genome is 53.45 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Phaeospirillum antecifica sp. nov.

Candidatus Phaeospirillum antecifica (NL. fem. n. *antecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp902729425*. The type genome for the species is the

GenBank assembly RS_GCF_902729425.1. The GC content of the type genome is 66.02 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Phaeospirillum cadaviforma sp. nov.

Candidatus Phaeospirillum cadaviforma (NL. fem. n. *cadaviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp002105535*. The type genome for the species is the GenBank assembly RS_GCF_002105535.1. The GC content of the type genome is 65.63 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Phaeospirillum dapifatica sp. nov.

Candidatus Phaeospirillum dapifatica (NL. fem. n. *dapifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp001511835*. The type genome for the species is the GenBank assembly RS_GCF_001511835.1. The GC content of the type genome is 65.67 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Phaeospirillum denigitas sp. nov.

Candidatus Phaeospirillum denigitas (NL. fem. n. *denigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp903853455*. The type genome for the species is the GenBank assembly GCA_903929595.1. The GC content of the type genome is 65.48 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Phaeospirillum panifibula sp. nov.

Candidatus Phaeospirillum panifibula (NL. fem. n. *panifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp903901915*. The type genome for the species is the GenBank assembly GCA_903889115.1. The GC content of the type genome is 65.33 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Phaeospirillum selibitrix sp. nov.

Candidatus Phaeospirillum selibitrix (NL. fem. n. *selibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeospirillum sp900184795*. The type genome for the species is the GenBank assembly RS_GCF_900184795.1. The GC content of the type genome is 65.61 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Phaeovulum cepuribula sp. nov.

Candidatus Phaeovulum cepuribula (NL. fem. n. *cepuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeovulum sp002421605*. The type genome for the species is the GenBank assembly GCA_002421605.1. The GC content of the type genome is 61.92 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Phaeovulum haricousia sp. nov.

Candidatus Phaeovulum haricousia (NL. fem. n. *haricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeovulum sp002842855*. The type genome for the species is the GenBank assembly GCA_002842855.1. The GC content of the type genome is 64.92 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Phaeovulum obvalifica sp. nov.

Candidatus Phaeovulum obvalifica (NL. fem. n. *obvalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phaeovulum sp002422085*. The type genome for the species is the GenBank assembly GCA_002422085.1. The GC content of the type genome is 63.8 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Phascolarctobacterium ampenousia sp. nov.

Candidatus Phascolarctobacterium ampenousia (NL. fem. n. *ampenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp900551745*. The type genome for the species is the GenBank assembly GCA_900551745.1. The GC content of the type genome is 42.82 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Phascolarctobacterium attemilenta sp. nov.

Candidatus Phascolarctobacterium attemilenta (NL. fem. n. *attemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp003150755*. The type genome for the species is the GenBank assembly GCA_003150755.1. The GC content of the type genome is 45.32 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Phascolarctobacterium meridugo sp. nov.

Candidatus Phascolarctobacterium meridugo (NL. fem. n. *meridugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp000436095*. The type genome for the species is the GenBank assembly GCA_900540445.1. The GC content of the type genome is 45.71 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Phascolarctobacterium nugacilenta sp. nov.

Candidatus Phascolarctobacterium nugacilenta (NL. fem. n. *nugacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp900544795*. The type genome for the species is the GenBank assembly GCA_900544795.1. The GC content of the type genome is 47.45 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Phascolarctobacterium rurigedo sp. nov.

Candidatus Phascolarctobacterium rurigedo (NL. fem. n. *rurigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp900545535*. The type genome for the species is the GenBank assembly RS_GCF_900765715.1. The GC content of the type genome is

46.95 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Phascolarctobacterium subabigena sp. nov.

Candidatus Phascolarctobacterium subabigena (NL. fem. n. *subabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium sp900554395*. The type genome for the species is the GenBank assembly GCA_900554395.1. The GC content of the type genome is 45.16 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Phascolarctobacterium arcifastra sp. nov.

Candidatus Phascolarctobacterium arcifastra (NL. fem. n. *arcifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900552005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900552005.1. The GC content of the type genome is 43.92 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Phascolarctobacterium baditentia sp. nov.

Candidatus Phascolarctobacterium baditentia (NL. fem. n. *baditentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900544885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900761835.1. The GC content of the type genome is 39.65 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Phascolarctobacterium betacisca sp. nov.

Candidatus Phascolarctobacterium betacisca (NL. fem. n. *betacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Phascolarctobacterium_A sp900545025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900545025.1. The GC content of the type genome is 45.3 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Phascolarctobacterium bicalitudo sp. nov.

Candidatus Phascolarctobacterium bicalitudo (NL. fem. n. *bicalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900547415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900547415.1. The GC content of the type genome is 42.59 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Phascolarctobacterium casigessa sp. nov.

Candidatus Phascolarctobacterium casigessa (NL. fem. n. *casigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp004558595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004558595.1. The GC content of the type genome is 47.93 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Phascolarctobacterium dupuniforma sp. nov.

Candidatus Phascolarctobacterium dupuniforma (NL. fem. n. *dupuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900541915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541915.1. The GC content of the type genome is 42.53 % and the genome

length is 1.8 Mbp.

Description of *Candidatus* Phascolarctobacterium embamax sp. nov.

Candidatus Phascolarctobacterium embamax (NL. fem. n. *embamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900770955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900770955.1. The GC content of the type genome is 47.43 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Phascolarctobacterium exurressa sp. nov.

Candidatus Phascolarctobacterium exurressa (NL. fem. n. *exurressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900753045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900753045.1. The GC content of the type genome is 46.94 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Phascolarctobacterium exurricella sp. nov.

Candidatus Phascolarctobacterium exurricella (NL. fem. n. *exurricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp004562175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004562175.1. The GC content of the type genome is 49.93 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Phascolarctobacterium innoxiforma sp. nov.

Candidatus Phascolarctobacterium innoxiforma (NL. fem. n. *innoxiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin;

used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900757795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900757795.1. The GC content of the type genome is 43.53 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Phascolarctobacterium latibatio sp. nov.

Candidatus Phascolarctobacterium latibatio (NL. fem. n. *latibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900551335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900551335.1. The GC content of the type genome is 50.93 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Phascolarctobacterium malifastra sp. nov.

Candidatus Phascolarctobacterium malifastra (NL. fem. n. *malifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900553055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004555045.1. The GC content of the type genome is 49.07 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Phascolarctobacterium subofivita sp. nov.

Candidatus Phascolarctobacterium subofivita (NL. fem. n. *subofivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phascolarctobacterium_A sp900552855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be

incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900552855.1. The GC content of the type genome is 40.93 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Phenylobacterium adluvigena sp. nov.

Candidatus Phenylobacterium adluvigena (NL. fem. n. *adluvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp002441055*. The type genome for the species is the GenBank assembly GCA_002441055.1. The GC content of the type genome is 67.36 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Phenylobacterium anaplentia sp. nov.

Candidatus Phenylobacterium anaplentia (NL. fem. n. *anaplentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp004297125*. The type genome for the species is the GenBank assembly GCA_004297125.1. The GC content of the type genome is 69.38 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Phenylobacterium aprarivita sp. nov.

Candidatus Phenylobacterium aprarivita (NL. fem. n. *aprarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp003254475*. The type genome for the species is the GenBank assembly RS_GCF_003254475.1. The GC content of the type genome is 70.07 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Phenylobacterium chancax sp. nov.

Candidatus Phenylobacterium chancax (NL. fem. n. *chancax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001429025*. The type genome for the species is the GenBank assembly RS_GCF_001429025.1. The GC content of the type genome is 67.42 % and the genome length is 4.58 Mbp. The isolation source for the NCBI

BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Phenylobacterium conabisca sp. nov.

Candidatus Phenylobacterium conabisca (NL. fem. n. *conabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001425305*. The type genome for the species is the GenBank assembly RS_GCF_001425915.1. The GC content of the type genome is 67.96 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Phenylobacterium conipax sp. nov.

Candidatus Phenylobacterium conipax (NL. fem. n. *conipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903930545*. The type genome for the species is the GenBank assembly GCA_903885745.1. The GC content of the type genome is 64.64 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Phenylobacterium dececivita sp. nov.

Candidatus Phenylobacterium dececivita (NL. fem. n. *dececivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001557235*. The type genome for the species is the GenBank assembly RS_GCF_001557235.1. The GC content of the type genome is 69.48 % and the genome length is 5.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Phenylobacterium decomago sp. nov.

Candidatus Phenylobacterium decomago (NL. fem. n. *decomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp004799395*. The type genome for the species is the GenBank assembly GCA_004799395.1. The GC content of the type genome is 68.21 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Phenylobacterium defanimonas sp. nov.

Candidatus Phenylobacterium defanimonas (NL. fem. n. *defanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp004799545*. The type genome for the species is the GenBank assembly GCA_004799545.1. The GC content of the type genome is 70.02 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Phenylobacterium defulilenta sp. nov.

Candidatus Phenylobacterium defulilenta (NL. fem. n. *defulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903822175*. The type genome for the species is the GenBank assembly GCA_903843495.1. The GC content of the type genome is 68.43 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Phenylobacterium desupetta sp. nov.

Candidatus Phenylobacterium desupetta (NL. fem. n. *desupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903909375*. The type genome for the species is the GenBank assembly GCA_903909375.1. The GC content of the type genome is 65.48 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Phenylobacterium dicimitrix sp. nov.

Candidatus Phenylobacterium dicimitrix (NL. fem. n. *dicimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001824475*. The type genome for the species is the GenBank assembly GCA_001824475.1. The GC content of the type genome is 69.37 % and the genome length is 4.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Phenylobacterium dilibitura sp. nov.

Candidatus Phenylobacterium dilibitura (NL. fem. n. *dilibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp002256425*. The type genome for the species is the GenBank assembly GCA_002256425.1. The GC content of the type genome is 64.04 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Phenylobacterium fatilimonia sp. nov.

Candidatus Phenylobacterium fatilimonia (NL. fem. n. *fatilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp004799515*. The type genome for the species is the GenBank assembly GCA_004799515.1. The GC content of the type genome is 69.54 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Phenylobacterium hexagibula sp. nov.

Candidatus Phenylobacterium hexagibula (NL. fem. n. *hexagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903928755*. The type genome for the species is the GenBank assembly GCA_903928755.1. The GC content of the type genome is 62.53 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Phenylobacterium inmacetta sp. nov.

Candidatus Phenylobacterium inmacetta (NL. fem. n. *inmacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp004299445*. The type genome for the species is the GenBank assembly GCA_004299445.1. The GC content of the type genome is 68.76 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Phenylobacterium innupiforma sp. nov.

Candidatus Phenylobacterium innupiforma (NL. fem. n. *innupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp013822795*. The type genome for the species is the GenBank assembly GCA_013822795.1. The GC content of the type genome is 68.37 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Phenylobacterium isoscousia sp. nov.

Candidatus Phenylobacterium isoscousia (NL. fem. n. *isoscousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001724985*. The type genome for the species is the GenBank assembly GCA_001724985.1. The GC content of the type genome is 69.19 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Phenylobacterium obfenitura sp. nov.

Candidatus Phenylobacterium obfenitura (NL. fem. n. *obfenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903912465*. The type genome for the species is the GenBank assembly GCA_903912465.1. The GC content of the type genome is 68.26 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Phenylobacterium peracifica sp. nov.

Candidatus Phenylobacterium peracifica (NL. fem. n. *peracifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp902826855*. The type genome for the species is the GenBank assembly GCA_902826855.1. The GC content of the type genome is 68.7 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Phenylobacterium perexitrix sp. nov.

Candidatus Phenylobacterium perexitrix (NL. fem. n. *perexitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp002363865*. The type genome for the species is

the GenBank assembly GCA_002363865.1. The GC content of the type genome is 68.06 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Phenylobacterium pimenibra sp. nov.

Candidatus Phenylobacterium pimenibra (NL. fem. n. *pimenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp003150835*. The type genome for the species is the GenBank assembly RS_GCF_003150835.1. The GC content of the type genome is 69.9 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Phenylobacterium revecax sp. nov.

Candidatus Phenylobacterium revecax (NL. fem. n. *revecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903933475*. The type genome for the species is the GenBank assembly GCA_903933475.1. The GC content of the type genome is 68.17 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Phenylobacterium rinocax sp. nov.

Candidatus Phenylobacterium rinocax (NL. fem. n. *rinocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp013911965*. The type genome for the species is the GenBank assembly GCA_013911965.1. The GC content of the type genome is 70.05 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Phenylobacterium semigivita sp. nov.

Candidatus Phenylobacterium semigivita (NL. fem. n. *semigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp001724605*. The type genome for the species is the GenBank assembly GCA_001724605.1. The GC content of the type genome is 69.52 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Phenylobacterium utrolatica sp. nov.

Candidatus Phenylobacterium utrolatica (NL. fem. n. *utrolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903892305*. The type genome for the species is the GenBank assembly GCA_903892305.1. The GC content of the type genome is 59.95 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Phenylobacterium vinacentia sp. nov.

Candidatus Phenylobacterium vinacentia (NL. fem. n. *vinacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903842425*. The type genome for the species is the GenBank assembly GCA_903842425.1. The GC content of the type genome is 70.68 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Phenylobacterium volubigena sp. nov.

Candidatus Phenylobacterium volubigena (NL. fem. n. *volubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp003136395*. The type genome for the species is the GenBank assembly GCA_003136395.1. The GC content of the type genome is 68.21 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Phenylobacterium xenodifica sp. nov.

Candidatus Phenylobacterium xenodifica (NL. fem. n. *xenodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phenylobacterium sp903860975*. The type genome for the species is the GenBank assembly GCA_903876395.1. The GC content of the type genome is 62.15 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Phocaeicola arnogousia sp. nov.

Candidatus Phocaeicola arnogousia (NL. fem. n. *arnogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900551065*. The type genome for the species is the GenBank assembly GCA_900551065.1. The GC content of the type genome is 46.42 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Phocaeicola bimeticula sp. nov.

Candidatus Phocaeicola bimeticula (NL. fem. n. *bimeticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900540105*. The type genome for the species is the GenBank assembly RS_GCF_900752755.1. The GC content of the type genome is 45.99 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Phocaeicola capilifica sp. nov.

Candidatus Phocaeicola capilifica (NL. fem. n. *capilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900541515*. The type genome for the species is the GenBank assembly GCA_900541515.1. The GC content of the type genome is 47.54 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Phocaeicola cicaritas sp. nov.

Candidatus Phocaeicola cicaritas (NL. fem. n. *cicaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900751965*. The type genome for the species is the GenBank assembly RS_GCF_900751965.1. The GC content of the type genome is 41.54 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Phocaeicola ciliciforma sp. nov.

Candidatus Phocaeicola ciliciforma (NL. fem. n. *ciliciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Phocaeicola sp900552075*. The type genome for the species is the GenBank assembly GCA_900552075.1. The GC content of the type genome is 46.23 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Phocaeicola culigimonia sp. nov.

Candidatus Phocaeicola culigimonia (NL. fem. n. *culigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900760795*. The type genome for the species is the GenBank assembly RS_GCF_900760795.1. The GC content of the type genome is 41.83 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Phocaeicola decomisca sp. nov.

Candidatus Phocaeicola decomisca (NL. fem. n. *decomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900544675*. The type genome for the species is the GenBank assembly GCA_900544675.1. The GC content of the type genome is 47.27 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Phocaeicola diludugo sp. nov.

Candidatus Phocaeicola diludugo (NL. fem. n. *diludugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900553715*. The type genome for the species is the GenBank assembly GCA_900553715.1. The GC content of the type genome is 39.28 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Phocaeicola direpastra sp. nov.

Candidatus Phocaeicola direpastra (NL. fem. n. *direpastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp011959205*. The type genome for the species is the GenBank assembly RS_GCF_011959205.1. The GC content of the type genome is 43.09 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Phocaeicola famelisca sp. nov.

Candidatus Phocaeicola famelisca (NL. fem. n. *famelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp002315285*. The type genome for the species is the GenBank assembly GCA_002315285.1. The GC content of the type genome is 48.83 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Phocaeicola fragmiforma sp. nov.

Candidatus Phocaeicola fragmiforma (NL. fem. n. *fragmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900546355*. The type genome for the species is the GenBank assembly GCA_900546355.1. The GC content of the type genome is 46.92 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Phocaeicola hexapicula sp. nov.

Candidatus Phocaeicola hexapicula (NL. fem. n. *hexapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900542985*. The type genome for the species is the GenBank assembly GCA_900542985.1. The GC content of the type genome is 41.45 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Phocaeicola indotiforma sp. nov.

Candidatus Phocaeicola indotiforma (NL. fem. n. *indotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900556845*. The type genome for the species is the GenBank assembly GCA_900556845.1. The GC content of the type genome is 42.62 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Phocaeicola legificula sp. nov.

Candidatus Phocaeicola legificula (NL. fem. n. *legificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900552645*. The type genome for the species is the GenBank assembly GCA_900552645.1. The GC content of the type genome is 36.35 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Phocaeicola ludibago sp. nov.

Candidatus Phocaeicola ludibago (NL. fem. n. *ludibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900553185*. The type genome for the species is the GenBank assembly RS_GCF_900753025.1. The GC content of the type genome is 45.74 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Phocaeicola luxuritoga sp. nov.

Candidatus Phocaeicola luxuritoga (NL. fem. n. *luxuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp000434735*. The type genome for the species is the GenBank assembly GCA_900540795.1. The GC content of the type genome is 43.03 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Phocaeicola medimitura sp. nov.

Candidatus Phocaeicola medimitura (NL. fem. n. *medimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900554435*. The type genome for the species is the GenBank assembly GCA_900554435.1. The GC content of the type genome is 40.88 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Phocaeicola metucitia sp. nov.

Candidatus Phocaeicola metucitia (NL. fem. n. *metucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Phocaeicola sp900066455*. The type genome for the species is the GenBank assembly RS_GCF_902362595.1. The GC content of the type genome is 46.41 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Phocaeicola munimastra sp. nov.

Candidatus Phocaeicola munimastra (NL. fem. n. *munimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900544075*. The type genome for the species is the GenBank assembly GCA_900544075.1. The GC content of the type genome is 40.34 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Phocaeicola nubigitura sp. nov.

Candidatus Phocaeicola nubigitura (NL. fem. n. *nubigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900551645*. The type genome for the species is the GenBank assembly GCA_900551645.1. The GC content of the type genome is 43.32 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Phocaeicola regigago sp. nov.

Candidatus Phocaeicola regigago (NL. fem. n. *regigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900551445*. The type genome for the species is the GenBank assembly GCA_900551445.1. The GC content of the type genome is 47.02 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Phocaeicola rubigago sp. nov.

Candidatus Phocaeicola rubigago (NL. fem. n. *rubigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp000432735*. The type genome for the species is the GenBank assembly GCA_000432735.1. The GC content of the type genome is 43.43 % and the genome length is 3.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Phocaeicola rudecatica sp. nov.

Candidatus Phocaeicola rudecatica (NL. fem. n. *rudecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900557085*. The type genome for the species is the GenBank assembly GCA_900557085.1. The GC content of the type genome is 41.8 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Phocaeicola sacomimonia sp. nov.

Candidatus Phocaeicola sacomimonia (NL. fem. n. *sacomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp002493165*. The type genome for the species is the GenBank assembly GCA_002492785.1. The GC content of the type genome is 42.91 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Phocaeicola sugilax sp. nov.

Candidatus Phocaeicola sugilax (NL. fem. n. *sugilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp902388365*. The type genome for the species is the GenBank assembly RS_GCF_900765365.1. The GC content of the type genome is 43.01 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Phocaeicola telefitica sp. nov.

Candidatus Phocaeicola telefitica (NL. fem. n. *telefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp002161765*. The type genome for the species is the GenBank assembly GCA_900547425.1. The GC content of the type genome is 45.43 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Phocaeicola tenemedo sp. nov.

Candidatus Phocaeicola tenemedo (NL. fem. n. *tenemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900546095*. The type genome for the species is the GenBank assembly GCA_900546095.1. The GC content of the type genome is 48.65 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Phocaeicola tenilisca sp. nov.

Candidatus Phocaeicola tenilisca (NL. fem. n. *tenilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900546645*. The type genome for the species is the GenBank assembly GCA_900546645.1. The GC content of the type genome is 43.09 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Phocaeicola tirocessa sp. nov.

Candidatus Phocaeicola tirocessa (NL. fem. n. *tirocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp900066445*. The type genome for the species is the GenBank assembly RS_GCF_902362605.1. The GC content of the type genome is 40.19 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Phocaeicola veridigena sp. nov.

Candidatus Phocaeicola veridigena (NL. fem. n. *veridigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp902779535*. The type genome for the species is the GenBank assembly GCA_902801285.1. The GC content of the type genome is 43.3 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Phocaeicola veriditudo sp. nov.

Candidatus Phocaeicola veriditudo (NL. fem. n. *veriditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Phocaeicola sp000436795*. The type genome for the species is the GenBank assembly GCA_900540195.1. The GC content of the type genome is 43.01 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Phocaeicola virecisca sp. nov.

Candidatus Phocaeicola virecisca (NL. fem. n. *virecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phocaeicola sp002161565*. The type genome for the species is the GenBank assembly GCA_000432695.1. The GC content of the type genome is 45.85 % and the genome length is 3.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Phorcysia culibedo sp. nov.

Candidatus Phorcysia culibedo (NL. fem. n. *culibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phorcysia sp003978805*. The type genome for the species is the GenBank assembly GCA_003978805.1. The GC content of the type genome is 46.98 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Phormidesmis alembimonas sp. nov.

Candidatus Phormidesmis alembimonas (NL. fem. n. *alembimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidesmis sp000155595*. The type genome for the species is the GenBank assembly RS_GCF_000155595.1. The GC content of the type genome is 48.24 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Phormidesmis arremitura sp. nov.

Candidatus Phormidesmis arremitura (NL. fem. n. *arremitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidesmis sp002286735*. The type genome for the species is the GenBank assembly RS_GCF_002286735.1. The GC content of the type genome is 52.93 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Phormidesmis idcirousia sp. nov.

Candidatus Phormidesmis idcirousia (NL. fem. n. *idcirousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidesmis sp012033015*. The type genome for the species is the GenBank assembly GCA_012033015.1. The GC content of the type genome is 49.89 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Phormidium citivitio sp. nov.

Candidatus Phormidium citivitio (NL. fem. n. *citivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidium_A sp007126595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012911965.1. The GC content of the type genome is 51.4 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Phormidium dicabedo sp. nov.

Candidatus Phormidium dicabedo (NL. fem. n. *dicabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidium_A sp004299065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004299065.1. The GC content of the type genome is 52.15 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Phormidium impilimonia sp. nov.

Candidatus Phormidium impilimonia (NL. fem. n. *impilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidium_A sp001314905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_001314905.1. The GC content of the type genome is 51.08 % and the genome length is 4.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Phormidium lanifitoga sp. nov.

Candidatus Phormidium lanifitoga (NL. fem. n. *lanifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidium_A sp009846485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009846485.1. The GC content of the type genome is 51.83 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Phormidium salubousia sp. nov.

Candidatus Phormidium salubousia (NL. fem. n. *salubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phormidium_A sp007693465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007693465.1. The GC content of the type genome is 52.47 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Photobacterium antegimonas sp. nov.

Candidatus Photobacterium antegimonas (NL. fem. n. *antegimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Photobacterium sp003614885*. The type genome for the species is the GenBank assembly RS_GCF_003614885.1. The GC content of the type genome is 50.16 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Photobacterium daducitoga sp. nov.

Candidatus Photobacterium daducitoga (NL. fem. n. *daducitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Photobacterium sp003026105*. The type genome for the species is the GenBank assembly RS_GCF_003026075.1. The GC content of the type genome is 40.04 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Photobacterium tameticella sp. nov.

Candidatus Photobacterium tameticella (NL. fem. n. *tameticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Photobacterium sp000153325*. The type genome for the species is the GenBank assembly RS_GCF_000153325.1. The GC content of the type genome is 39.56 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Photobacterium tubicastra sp. nov.

Candidatus Photobacterium tubicastra (NL. fem. n. *tubicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Photobacterium sp004104355*. The type genome for the species is the GenBank assembly RS_GCF_004104355.1. The GC content of the type genome is 46.45 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Photorhabdus citocax sp. nov.

Candidatus Photorhabdus citocax (NL. fem. n. *citocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Photorhabdus sp003545805*. The type genome for the species is the GenBank assembly RS_GCF_003545805.1. The GC content of the type genome is 42.96 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Phreatobacter colapitia sp. nov.

Candidatus Phreatobacter colapitia (NL. fem. n. *colapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phreatobacter sp005160265*. The type genome for the species is the GenBank assembly RS_GCF_005160265.1. The GC content of the type genome is 65.77

% and the genome length is 4.98 Mbp.

Description of *Candidatus* Phreatobacter incocastra sp. nov.

Candidatus Phreatobacter incocastra (NL. fem. n. *incocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phreatobacter sp000751295*. The type genome for the species is the GenBank assembly RS_GCF_000751295.2. The GC content of the type genome is 68.27 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Phreatobacter volubatica sp. nov.

Candidatus Phreatobacter volubatica (NL. fem. n. *volubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phreatobacter sp001464235*. The type genome for the species is the GenBank assembly GCA_001464235.1. The GC content of the type genome is 69.84 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Phycicoccus antipitoga sp. nov.

Candidatus Phycicoccus antipitoga (NL. fem. n. *antipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phycicoccus sp013201035*. The type genome for the species is the GenBank assembly RS_GCF_013201035.1. The GC content of the type genome is 73.98 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Phycicoccus detositura sp. nov.

Candidatus Phycicoccus detositura (NL. fem. n. *detositura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phycicoccus sp004025965*. The type genome for the species is the GenBank assembly RS_GCF_004025965.2. The GC content of the type genome is 74.11 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Phycicoccus excucitoga sp. nov.

Candidatus Phycicoccus excucitoga (NL. fem. n. *excucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phycicoccus sp011383005*. The type genome for the species is the GenBank assembly RS_GCF_011383005.1. The GC content of the type genome is 73.61 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Phycicoccus subabitura sp. nov.

Candidatus Phycicoccus subabitura (NL. fem. n. *subabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phycicoccus sp001428065*. The type genome for the species is the GenBank assembly RS_GCF_001428065.1. The GC content of the type genome is 73.31 % and the genome length is 3.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Phyllobacterium acertiforma sp. nov.

Candidatus Phyllobacterium acertiforma (NL. fem. n. *acertiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900473175*. The type genome for the species is the GenBank assembly RS_GCF_900473175.1. The GC content of the type genome is 58.26 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Phyllobacterium citocedo sp. nov.

Candidatus Phyllobacterium citocedo (NL. fem. n. *citocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900113985*. The type genome for the species is the GenBank assembly RS_GCF_900113985.1. The GC content of the type genome is 58.95 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Phyllobacterium conabatio sp. nov.

Candidatus Phyllobacterium conabatio (NL. fem. n. *conabatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp014189505*. The type genome for the species is the GenBank assembly RS_GCF_014189505.1. The GC content of the type genome is 55.4 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Phyllobacterium domigatica sp. nov.

Candidatus Phyllobacterium domigatica (NL. fem. n. *domigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900473335*. The type genome for the species is the GenBank assembly RS_GCF_900473335.1. The GC content of the type genome is 52.5 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Phyllobacterium encenitoga sp. nov.

Candidatus Phyllobacterium encenitoga (NL. fem. n. *encenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900471815*. The type genome for the species is the GenBank assembly RS_GCF_900471815.1. The GC content of the type genome is 53.21 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Phyllobacterium forinibra sp. nov.

Candidatus Phyllobacterium forinibra (NL. fem. n. *forinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900104355*. The type genome for the species is the GenBank assembly RS_GCF_900104355.1. The GC content of the type genome is 55.12 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Phyllobacterium inpinitica sp. nov.

Candidatus Phyllobacterium inpinitica (NL. fem. n. *inpinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp000282595*. The type genome for the species is the GenBank assembly RS_GCF_000282595.1. The GC content of the type genome is 52.98 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Phyllobacterium invicifica sp. nov.

Candidatus Phyllobacterium invicifica (NL. fem. n. *invicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900539805*. The type genome for the species is the GenBank assembly GCA_900539805.1. The GC content of the type genome is 59.29 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Phyllobacterium rutabiforma sp. nov.

Candidatus Phyllobacterium rutabiforma (NL. fem. n. *rutabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phyllobacterium sp900472835*. The type genome for the species is the GenBank assembly RS_GCF_900465825.1. The GC content of the type genome is 55.14 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Phytoactinopolyspora scintimonia sp. nov.

Candidatus Phytoactinopolyspora scintimonia (NL. fem. n. *scintimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoactinopolyspora sp011320225*. The type genome for the species is the GenBank assembly RS_GCF_011320225.1. The GC content of the type genome is 66.86 % and the genome length is 6.59 Mbp.

Description of *Candidatus* Phytobacter sugilisca sp. nov.

Candidatus Phytobacter sugilisca (NL. fem. n. *sugilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytobacter sp002377245*. The type genome for the species is the GenBank assembly GCA_002377245.1. The GC content of the type genome is 53.67 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Phytoplasma catagisca sp. nov.

Candidatus Phytoplasma catagisca (NL. fem. n. *catagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp000309485*. The type genome for the species is the GenBank assembly RS_GCF_000309405.1. The GC content of the type genome is 27.33 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Vaccinium witches -broom".

Description of *Candidatus* Phytoplasma cenobastra sp. nov.

Candidatus Phytoplasma cenobastra (NL. fem. n. *cenobastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp000012225*. The type genome for the species is the GenBank assembly GCA_002554195.1. The GC content of the type genome is 27.11 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Phytoplasma egritibula sp. nov.

Candidatus Phytoplasma egritibula (NL. fem. n. *egritibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp009268105*. The type genome for the species is the GenBank assembly RS_GCF_009268105.1. The GC content of the type genome is 19.86 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Phytoplasma locelimonas sp. nov.

Candidatus Phytoplasma locelimonas (NL. fem. n. *locelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp009268075*. The type genome for the species is the GenBank assembly RS_GCF_009268075.1. The GC content of the type genome is 20.48 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Phytoplasma noninitica sp. nov.

Candidatus Phytoplasma noninitica (NL. fem. n. *noninitica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp001623385*. The type genome for the species is the GenBank assembly GCA_001623385.2. The GC content of the type genome is 27.87 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf veins".

Description of *Candidatus* Phytoplasma pacifimonas sp. nov.

Candidatus Phytoplasma pacifimonas (NL. fem. n. *pacifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp000009845*. The type genome for the species is the GenBank assembly GCA_000009845.1. The GC content of the type genome is 27.76 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Phytoplasma perexetta sp. nov.

Candidatus Phytoplasma perexetta (NL. fem. n. *perexetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp000364425*. The type genome for the species is the GenBank assembly RS_GCF_000364425.1. The GC content of the type genome is 24.37 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "artificially infected Catharanthus roseus".

Description of *Candidatus* Phytoplasma tomogivita sp. nov.

Candidatus Phytoplasma tomogivita (NL. fem. n. *tomogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Phytoplasma sp000495255*. The type genome for the species is the GenBank assembly RS_GCF_000495255.1. The GC content of the type genome is 27.14 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "WBD-infected periwinkle".

Description of *Candidatus* Pigmentiphaga bicalatica sp. nov.

Candidatus Pigmentiphaga bicalatica (NL. fem. n. *bicalatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pigmentiphaga sp002188465*. The type genome for the species is the GenBank assembly RS_GCF_002188465.1. The GC content of the type genome is 66.74 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Pigmentiphaga letifousia sp. nov.

Candidatus Pigmentiphaga letifousia (NL. fem. n. *letifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pigmentiphaga sp001898625*. The type genome for the species is the GenBank assembly GCA_001724095.1. The GC content of the type genome is 67.23 % and the genome length is 6.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Pigmentiphaga macilitica sp. nov.

Candidatus Pigmentiphaga macilitica (NL. fem. n. *macilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pigmentiphaga sp009360345*. The type genome for the species is the GenBank assembly GCA_009360905.1. The GC content of the type genome is 67.39 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Pigmentiphaga palificula sp. nov.

Candidatus Pigmentiphaga palificula (NL. fem. n. *palificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pigmentiphaga sp002188635*. The type genome for the species is the GenBank assembly RS_GCF_004352985.1. The GC content of the type genome is 67.37 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Pigmentiphaga teteniforma sp. nov.

Candidatus Pigmentiphaga teteniforma (NL. fem. n. *teteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pigmentiphaga sp003854895*. The type genome for the species is the GenBank assembly RS_GCF_003854895.1. The GC content of the type genome is 67.8 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Pimenana emancitio sp. nov.

Candidatus Pimenana emancitio (NL. fem. n. *emancitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYKU01 sp009697455*. The type genome for the species is the GenBank assembly GCA_009697455.1. The GC content of the type genome is 60.78 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Pimenana gen. nov.

Candidatus Pimenana (NL. fem. n. *Pimenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYKU01*. The type species for the genus is *Candidatus* Pimenana emancitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pimenana gasomitoga sp. nov.

Candidatus Pimenana gasomitoga (NL. fem. n. *gasomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYKU01 sp005808865*. The type genome for the species is the GenBank assembly GCA_005773685.1. The GC content of the type genome is 60.61 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Pimenaria vagabitudo sp. nov.

Candidatus Pimenaria vagabitudo (NL. fem. n. *vagabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-80-42-15 sp002780005*. The type genome for the species is the

GenBank assembly GCA_002322955.1. The GC content of the type genome is 42.75 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pimenaria gen. nov.

Candidatus Pimenaria (NL. fem. n. *Pimenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-80-42-15*. The type species for the genus is *Candidatus* Pimenaria vagabitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenariaceae.

Description of *Candidatus* Pimenariaceae fam. nov.

Candidatus Pimenariaceae (NL. fem. n. *Pimenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-80-42-15.* The type genus for the taxon is *Candidatus* Pimenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1560_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetutulales.

Description of *Candidatus* Pimenella ranunessa sp. nov.

Candidatus Pimenella ranunessa (NL. fem. n. *ranunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2690565 sp011522825*. The type genome for the species is the GenBank assembly GCA_011522825.1. The GC content of the type genome is 40.22 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Pimenella gen. nov.

Candidatus Pimenella (NL. fem. n. *Pimenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2690565*. The type species for the genus is *Candidatus* Pimenella ranunessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Pimenella vavasitoga sp. nov.

Candidatus Pimenella vavasitoga (NL. fem. n. *vavasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2690565 sp002457235*. The type genome for the species is the GenBank assembly GCA_002690565.1. The GC content of the type genome is 38.42 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pimenia genufentia sp. nov.

Candidatus Pimenia genufentia (NL. fem. n. *genufentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1472 sp900552095*. The type genome for the species is the GenBank assembly GCA_900552095.1. The GC content of the type genome is 49.57 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Pimenia gen. nov.

Candidatus Pimenia (NL. fem. n. *Pimenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1472*. The type species for the genus is *Candidatus* Pimenia genufentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pimenida lavacax sp. nov.

Candidatus Pimenida lavacax (NL. fem. n. *lavacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2392 sp002343805*. The type genome for the species is the GenBank assembly GCA_013361035.1. The GC content of the type genome is 63.89 %

and the genome length is 3.29 Mbp.

Description of *Candidatus* Pimenida gen. nov.

Candidatus Pimenida (NL. fem. n. *Pimenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2392*. The type species for the genus is *Candidatus* Pimenida lavacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2392*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenidaceae.

Description of *Candidatus* Pimenidaceae fam. nov.

Candidatus Pimenidaceae (NL. fem. n. *Pimenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2392.* The type genus for the taxon is *Candidatus* Pimenida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2392*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pimenidales.

Description of *Candidatus* Pimenidales ord. nov.

Candidatus Pimenidales (NL. fem. n. *Pimenidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2392.* The type genus for the taxon is *Candidatus* Pimenida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8742*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Pavicidae.

Description of *Candidatus* Pimenida sarabastra sp. nov.

Candidatus Pimenida sarabastra (NL. fem. n. *sarabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2392 sp003576915*. The type genome for the species is the

GenBank assembly GCA_008363065.1. The GC content of the type genome is 64.63 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Pimenosa fumacibra sp. nov.

Candidatus Pimenosa fumacibra (NL. fem. n. *fumacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12402 sp001801305*. The type genome for the species is the GenBank assembly GCA_001801305.1. The GC content of the type genome is 42.06 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m depth; 0.2 filter".

Description of *Candidatus* Pimenosa gen. nov.

Candidatus Pimenosa (NL. fem. n. *Pimenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12402*. The type species for the genus is *Candidatus* Pimenosa fumacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenosaceae.

Description of *Candidatus* Pimenosaceae fam. nov.

Candidatus Pimenosaceae (NL. fem. n. *Pimenosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12402.* The type genus for the taxon is *Candidatus* Pimenosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pimenosales.

Description of *Candidatus* Pimenosales ord. nov.

Candidatus Pimenosales (NL. fem. n. *Pimenosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA12402*. The type genus for the taxon is *Candidatus* Pimenosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Pimenosa irrecibula sp. nov.

Candidatus Pimenosa irrecibula (NL. fem. n. *irrecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12402 sp001801315*. The type genome for the species is the GenBank assembly GCA_001801315.1. The GC content of the type genome is 41.28 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Pinacana adlenitica sp. nov.

Candidatus Pinacana adlenitica (NL. fem. n. *adlenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp009691705*. The type genome for the species is the GenBank assembly GCA_009691705.1. The GC content of the type genome is 58.71 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Pinacana gen. nov.

Candidatus Pinacana (NL. fem. n. *Pinacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs104*. The type species for the genus is *Candidatus* Pinacana adlenitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Pinacana bicodiforma sp. nov.

Candidatus Pinacana bicodiforma (NL. fem. n. *bicodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp005799495*. The type genome for the species is the GenBank assembly GCA_005799495.1. The GC content of the type genome is 63.48 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Pinacana decitibra sp. nov.

Candidatus Pinacana decitibra (NL. fem. n. *decitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp009692015*. The type genome for the species is the GenBank assembly GCA_009692015.1. The GC content of the type genome is 60.42 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Pinacana depupitoga sp. nov.

Candidatus Pinacana depupitoga (NL. fem. n. *depupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp005799205*. The type genome for the species is the GenBank assembly GCA_005808715.1. The GC content of the type genome is 60.11 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Pinacana disidentia sp. nov.

Candidatus Pinacana disidentia (NL. fem. n. *disidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp903919715*. The type genome for the species is the GenBank assembly GCA_903836795.1. The GC content of the type genome is 54.01 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Pinacana meriditica sp. nov.

Candidatus Pinacana meriditica (NL. fem. n. *meriditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp903961015*. The type genome for the species is the GenBank assembly GCA_903949295.1. The GC content of the type genome is 51.38 %

and the genome length is 2.86 Mbp.

Description of *Candidatus* Pinacana negotibula sp. nov.

Candidatus Pinacana negotibula (NL. fem. n. *negotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp009926625*. The type genome for the species is the GenBank assembly GCA_009926625.1. The GC content of the type genome is 63.61 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Pinacana nicotitas sp. nov.

Candidatus Pinacana nicotitas (NL. fem. n. *nicotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp009691915*. The type genome for the species is the GenBank assembly GCA_009691915.1. The GC content of the type genome is 63.6 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Pinacana nubecessa sp. nov.

Candidatus Pinacana nubecessa (NL. fem. n. *nubecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp005792145*. The type genome for the species is the GenBank assembly GCA_005788705.1. The GC content of the type genome is 52.07 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Pinacana peripax sp. nov.

Candidatus Pinacana peripax (NL. fem. n. *peripax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp005799475*. The type genome for the species is the GenBank assembly GCA_005805125.1. The GC content of the type genome is 64.96 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Pinacana volucigena sp. nov.

Candidatus Pinacana volucigena (NL. fem. n. *volucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs104 sp009691725*. The type genome for the species is the GenBank assembly GCA_009691725.1. The GC content of the type genome is 58.49 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Pinacaria navifitia sp. nov.

Candidatus Pinacaria navifitia (NL. fem. n. *navifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7366 sp002469885*. The type genome for the species is the GenBank assembly GCA_002469885.1. The GC content of the type genome is 43.4 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Pinacaria gen. nov.

Candidatus Pinacaria (NL. fem. n. *Pinacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7366*. The type species for the genus is *Candidatus* Pinacaria navifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinacariaceae.

Description of *Candidatus* Pinacariaceae fam. nov.

Candidatus Pinacariaceae (NL. fem. n. *Pinacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7366.* The type genus for the taxon is *Candidatus* Pinacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pinacariales.

Description of *Candidatus* Pinacariales ord. nov.

Candidatus Pinacariales (NL. fem. n. *Pinacariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7366.* The type genus for the taxon is *Candidatus* Pinacaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Pinacida abrepitura sp. nov.

Candidatus Pinacida abrepitura (NL. fem. n. *abrepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-10-38-17 sp002774085*. The type genome for the species is the GenBank assembly GCA_002774085.1. The GC content of the type genome is 38.46 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Pinacida gen. nov.

Candidatus Pinacida (NL. fem. n. *Pinacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-10-38-17*. The type species for the genus is *Candidatus* Pinacida abrepitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-10-38-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinacidaceae.

Description of *Candidatus* Pinacidaceae fam. nov.

Candidatus Pinacidaceae (NL. fem. n. *Pinacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-10-38-17.* The type genus for the taxon is *Candidatus* Pinacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *0-14-0-10-38-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pinacidales.

Description of *Candidatus* Pinacidales ord. nov.

Candidatus Pinacidales (NL. fem. n. *Pinacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-10-38-17.* The type genus for the taxon is *Candidatus* Pinacida .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Pinacosa bicinax sp. nov.

Candidatus Pinacosa bicinax (NL. fem. n. *bicinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-39-10 sp000993275*. The type genome for the species is the GenBank assembly GCA_000993275.1. The GC content of the type genome is 38.32 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Pinacosa gen. nov.

Candidatus Pinacosa (NL. fem. n. *Pinacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-39-10*. The type species for the genus is *Candidatus* Pinacosa bicinax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CPR2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defanosaceae.

Description of *Candidatus* Pinacosa nocenitia sp. nov.

Candidatus Pinacosa nocenitia (NL. fem. n. *nocenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-39-10 sp001872945*. The type genome for the species is the GenBank assembly GCA_002790275.1. The GC content of the type genome is 37.2 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pinifana figilitas sp. nov.

Candidatus Pinifana figilitas (NL. fem. n. *figilitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYN01 sp903930435*. The type genome for the species is the GenBank assembly GCA_903930435.1. The GC content of the type genome is 58.25 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Pinifana gen. nov.

Candidatus Pinifana (NL. fem. n. *Pinifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYYN01*. The type species for the genus is *Candidatus* Pinifana figilitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinifaria cotenifica sp. nov.

Candidatus Pinifaria cotenifica (NL. fem. n. *cotenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WG-1 sp900539665*. The type genome for the species is the GenBank assembly GCA_900539665.1. The GC content of the type genome is 40.44 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Pinifaria gen. nov.

Candidatus Pinifaria (NL. fem. n. *Pinifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WG-1*. The type species for the genus is *Candidatus* Pinifaria cotenifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinifaria excamilenta sp. nov.

Candidatus Pinifaria excamilenta (NL. fem. n. *excamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WG-1 sp000222855*. The type genome for the species is the GenBank assembly RS_GCF_000222855.1. The GC content of the type genome is 30.42 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "foregut of the Tammar wallaby".

Description of *Candidatus* Pinifella ceromiforma sp. nov.

Candidatus Pinifella ceromiforma (NL. fem. n. *ceromiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD1 sp003569365*. The type genome for the species is the GenBank assembly GCA_014191295.1. The GC content of the type genome is 61.29 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Pinifella gen. nov.

Candidatus Pinifella (NL. fem. n. *Pinifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BD1*. The type species for the genus is *Candidatus* Pinifella ceromiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11657*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapulaceae.

Description of *Candidatus* Pinifella dilicibra sp. nov.

Candidatus Pinifella dilicibra (NL. fem. n. *dilicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BD1 sp003670425*. The type genome for the species is the GenBank assembly GCA_003670425.1. The GC content of the type genome is 61.9 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Pinifia adsifibula sp. nov.

Candidatus Pinifia adsifibula (NL. fem. n. *adsifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTKA01 sp011524605*. The type genome for the species is the GenBank assembly GCA_011524605.1. The GC content of the type genome is 39.24 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Pinifia gen. nov.

Candidatus Pinifia (NL. fem. n. *Pinifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTKA01*. The type species for the genus is *Candidatus* Pinifia adsifibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WTKA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinifiaceae.

Description of *Candidatus* Pinifiaceae fam. nov.

Candidatus Pinifiaceae (NL. fem. n. *Pinifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTKA01.* The type genus for the taxon is *Candidatus* Pinifia .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Pinifida defenago sp. nov.

Candidatus Pinifida defenago (NL. fem. n. *defenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002690875 sp902618535*. The type genome for the species is the GenBank assembly GCA_902595915.1. The GC content of the type genome is 30.26 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pinifida gen. nov.

Candidatus Pinifida (NL. fem. n. *Pinifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002690875*. The type species for the genus is *Candidatus* Pinifida

defenago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Pinifida depopousia sp. nov.

Candidatus Pinifida depopousia (NL. fem. n. *depopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002690875 sp902536485*. The type genome for the species is the GenBank assembly GCA_902536485.1. The GC content of the type genome is 29.82 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Pinifida holisivita sp. nov.

Candidatus Pinifida holisivita (NL. fem. n. *holisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002690875 sp002689325*. The type genome for the species is the GenBank assembly GCA_002689325.1. The GC content of the type genome is 29.48 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Pinifida manupitia sp. nov.

Candidatus Pinifida manupitia (NL. fem. n. *manupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002690875 sp902537615*. The type genome for the species is the GenBank assembly GCA_902537615.1. The GC content of the type genome is 29.77 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Pinifida salubitoga sp. nov.

Candidatus Pinifida salubitoga (NL. fem. n. *salubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002690875 sp002690875*. The type genome for the species is the

GenBank assembly GCA_002690875.1. The GC content of the type genome is 29.05 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Pinifosa denicentia sp. nov.

Candidatus Pinifosa denicentia (NL. fem. n. *denicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXLM01 sp009841605*. The type genome for the species is the GenBank assembly GCA_009838445.1. The GC content of the type genome is 60.95 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Pinifosa gen. nov.

Candidatus Pinifosa (NL. fem. n. *Pinifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXLM01*. The type species for the genus is *Candidatus* Pinifosa denicentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXLM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinifosaceae.

Description of *Candidatus* Pinifosaceae fam. nov.

Candidatus Pinifosaceae (NL. fem. n. *Pinifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXLM01.* The type genus for the taxon is *Candidatus* Pinifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Pinifula cohonastra sp. nov.

Candidatus Pinifula cohonastra (NL. fem. n. *cohonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6770 sp002453255*. The type genome for the species is the

GenBank assembly GCA_002453255.1. The GC content of the type genome is 36.03 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Pinifula gen. nov.

Candidatus Pinifula (NL. fem. n. *Pinifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6770*. The type species for the genus is *Candidatus* Pinifula cohonastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinifula munimicula sp. nov.

Candidatus Pinifula munimicula (NL. fem. n. *munimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6770 sp002707155*. The type genome for the species is the GenBank assembly GCA_002707155.1. The GC content of the type genome is 37.22 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Pinigana delecastra sp. nov.

Candidatus Pinigana delecastra (NL. fem. n. *delecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISUE01 sp903888615*. The type genome for the species is the GenBank assembly GCA_903888615.1. The GC content of the type genome is 42.35 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Pinigana gen. nov.

Candidatus Pinigana (NL. fem. n. *Pinigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISUE01*. The type species for the genus is *Candidatus* Pinigana delecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAISUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Piniganaceae.

Description of *Candidatus* Piniganaceae fam. nov.

Candidatus Piniganaceae (NL. fem. n. *Piniganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISUE01*. The type genus for the taxon is *Candidatus* Pinigana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAISUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Piniganales.

Description of *Candidatus* Piniganales ord. nov.

Candidatus Piniganales (NL. fem. n. *Piniganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISUE01*. The type genus for the taxon is *Candidatus* Pinigana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Pinigaria depecetta sp. nov.

Candidatus Pinigaria depecetta (NL. fem. n. *depecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXOB01 sp005776945*. The type genome for the species is the GenBank assembly GCA_005800745.1. The GC content of the type genome is 68.39 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Pinigaria gen. nov.

Candidatus Pinigaria (NL. fem. n. *Pinigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXOB01*. The type species for the genus is *Candidatus* Pinigaria depecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Pinigella vanitatio sp. nov.

Candidatus Pinigella vanitatio (NL. fem. n. *vanitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-911 sp003133265*. The type genome for the species is the GenBank assembly GCA_003133265.1. The GC content of the type genome is 66.26 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Pinigella gen. nov.

Candidatus Pinigella (NL. fem. n. *Pinigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-911*. The type species for the genus is *Candidatus* Pinigella vanitatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinigia palifugo sp. nov.

Candidatus Pinigia palifugo (NL. fem. n. *palifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TTA-H9 sp002071415*. The type genome for the species is the GenBank assembly GCA_002071415.1. The GC content of the type genome is 39.67 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Pinigia gen. nov.

Candidatus Pinigia (NL. fem. n. *Pinigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TTA-H9*. The type species for the genus is *Candidatus* Pinigia palifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TTA-H9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinigiaceae.

Description of *Candidatus* Pinigiaceae fam. nov.

Candidatus Pinigiaceae (NL. fem. n. *Pinigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TTA-H9.* The type genus for the taxon is *Candidatus* Pinigia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Pinigia purulitica sp. nov.

Candidatus Pinigia purulitica (NL. fem. n. *purulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TTA-H9 sp002418865*. The type genome for the species is the GenBank assembly GCA_001509275.1. The GC content of the type genome is 37.84 % and the genome length is 2.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample SB1".

Description of *Candidatus* Pinigida adinvicula sp. nov.

Candidatus Pinigida adinvicula (NL. fem. n. *adinvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp903928365*. The type genome for the species is the GenBank assembly GCA_903928365.1. The GC content of the type genome is 41.53 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Pinigida gen. nov.

Candidatus Pinigida (NL. fem. n. *Pinigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0103*. The type species for the genus is *Candidatus* Pinigida adinvicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinigida alceditia sp. nov.

Candidatus Pinigida alceditia (NL. fem. n. *alceditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp903930085*. The type genome for the species is the GenBank assembly GCA_903930085.1. The GC content of the type genome is 36.91 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Pinigida bimetigena sp. nov.

Candidatus Pinigida bimetigena (NL. fem. n. *bimetigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp903945495*. The type genome for the species is the GenBank assembly GCA_903936675.1. The GC content of the type genome is 36.32 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Pinigida coninitudo sp. nov.

Candidatus Pinigida coninitudo (NL. fem. n. *coninitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp006227105*. The type genome for the species is the GenBank assembly GCA_006227105.1. The GC content of the type genome is 39.83 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Pinigida dedigatio sp. nov.

Candidatus Pinigida dedigatio (NL. fem. n. *dedigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp903873915*. The type genome for the species is the GenBank assembly GCA_903920645.1. The GC content of the type genome is 42.08 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Pinigida denupivita sp. nov.

Candidatus Pinigida denupivita (NL. fem. n. *denupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp903887095*. The type genome for the species is the GenBank assembly GCA_903887095.1. The GC content of the type genome is 38.15 % and the

genome length is 2.55 Mbp.

Description of *Candidatus* Pinigida homolisca sp. nov.

Candidatus Pinigida homolisca (NL. fem. n. *homolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0103 sp009885545*. The type genome for the species is the GenBank assembly GCA_009885545.1. The GC content of the type genome is 33.81 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Pinigosa famelibula sp. nov.

Candidatus Pinigosa famelibula (NL. fem. n. *famelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS687 sp900551705*. The type genome for the species is the GenBank assembly RS_GCF_900770135.1. The GC content of the type genome is 32.81 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pinigosa gen. nov.

Candidatus Pinigosa (NL. fem. n. *Pinigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS687*. The type species for the genus is *Candidatus* Pinigosa famelibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Pinigosa pinifitia sp. nov.

Candidatus Pinigosa pinifitia (NL. fem. n. *pinifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS687 sp900545735*. The type genome for the species is the GenBank assembly GCA_900545735.1. The GC content of the type genome is 32.81 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Pinigosa venabilenta sp. nov.

Candidatus Pinigosa venabilenta (NL. fem. n. *venabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS687 sp900544595*. The type genome for the species is the GenBank assembly RS_GCF_900768255.1. The GC content of the type genome is 35.15 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Pinigula ascenitrix sp. nov.

Candidatus Pinigula ascenitrix (NL. fem. n. *ascenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQR01 sp007117625*. The type genome for the species is the GenBank assembly GCA_007117625.1. The GC content of the type genome is 37.88 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Pinigula gen. nov.

Candidatus Pinigula (NL. fem. n. *Pinigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLQR01*. The type species for the genus is *Candidatus* Pinigula ascenitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pinigula dilacitia sp. nov.

Candidatus Pinigula dilacitia (NL. fem. n. *dilacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQR01 sp007132465*. The type genome for the species is the GenBank assembly GCA_007132465.1. The GC content of the type genome is 51.12 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Pinigula ectenugo sp. nov.

Candidatus Pinigula ectenugo (NL. fem. n. *ectenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQR01 sp007131405*. The type genome for the species is the GenBank assembly GCA_007131405.1. The GC content of the type genome is 39.76 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Pinigula recoretta sp. nov.

Candidatus Pinigula recoretta (NL. fem. n. *recoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQR01 sp007123975*. The type genome for the species is the GenBank assembly GCA_007116395.1. The GC content of the type genome is 51.94 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pinigula vagabimonas sp. nov.

Candidatus Pinigula vagabimonas (NL. fem. n. *vagabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQR01 sp007116205*. The type genome for the species is the GenBank assembly GCA_007116205.1. The GC content of the type genome is 36.93 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Pirellula bicubentia sp. nov.

Candidatus Pirellula bicubentia (NL. fem. n. *bicubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp001610875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001610875.1. The GC content of the type genome is 54.25 % and the genome length is 6.53 Mbp.

Description of *Candidatus* Pirellula ciciletta sp. nov.

Candidatus Pirellula ciciletta (NL. fem. n. *ciciletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903930765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903930765.1. The GC content of the type genome is 54.39 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Pirellula fusifago sp. nov.

Candidatus Pirellula fusifago (NL. fem. n. *fusifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp003671195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003670855.1. The GC content of the type genome is 55.56 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Pirellula indiricula sp. nov.

Candidatus Pirellula indiricula (NL. fem. n. *indiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903858115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903858115.1. The GC content of the type genome is 50.89 % and the genome length is 7.89 Mbp.

Description of *Candidatus* Pirellula palifentia sp. nov.

Candidatus Pirellula palifentia (NL. fem. n. *palifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903820735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903820735.1. The GC content of the type genome is 52.19 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Pirellula parociforma sp. nov.

Candidatus Pirellula parociforma (NL. fem. n. *parociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903892365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903892365.1. The GC content of the type genome is 51.45 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Pirellula recumousia sp. nov.

Candidatus Pirellula recumousia (NL. fem. n. *recumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903837255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903915205.1. The GC content of the type genome is 54.67 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Pirellula refunitura sp. nov.

Candidatus Pirellula refunitura (NL. fem. n. *refunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pirellula_B sp903892355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903892355.1. The GC content of the type genome is 53.95 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Piscirickettsia inlumilega sp. nov.

Candidatus Piscirickettsia inlumilega (NL. fem. n. *inlumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Piscirickettsia sp001644975*. The type genome for the species is the

GenBank assembly RS_GCF_001644975.1. The GC content of the type genome is 39.22 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Planctomonas dehonimonia sp. nov.

Candidatus Planctomonas dehonimonia (NL. fem. n. *dehonimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planctomonas sp008642235*. The type genome for the species is the GenBank assembly RS_GCF_008642235.1. The GC content of the type genome is 69.07 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Planctomyces lenunentia sp. nov.

Candidatus Planctomyces lenunentia (NL. fem. n. *lenunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planctomyces_A sp001610835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001610835.1. The GC content of the type genome is 65.56 % and the genome length is 8.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sugar beet rhizosphere".

Description of *Candidatus* Planctomyces abveritica sp. nov.

Candidatus Planctomyces abveritica (NL. fem. n. *abveritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planctomyces_B sp007750395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007750395.1. The GC content of the type genome is 50.32 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Planctomyces delucentia sp. nov.

Candidatus Planctomyces delucentia (NL. fem. n. *delucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planctomyces_B sp002702685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002702685.1. The GC content of the type genome is 56.03 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Planctopirus denomago sp. nov.

Candidatus Planctopirus denomago (NL. fem. n. *denomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planctopirus sp013822855*. The type genome for the species is the GenBank assembly GCA_013822855.1. The GC content of the type genome is 60.4 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Planktomarina decacitio sp. nov.

Candidatus Planktomarina decacitio (NL. fem. n. *decacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktomarina sp000981705*. The type genome for the species is the GenBank assembly GCA_003452055.1. The GC content of the type genome is 48.15 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Planktomarina lubenigena sp. nov.

Candidatus Planktomarina lubenigena (NL. fem. n. *lubenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktomarina sp002683685*. The type genome for the species is the GenBank assembly GCA_902732755.1. The GC content of the type genome is 54.8 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Planktomarina ruricessa sp. nov.

Candidatus Planktomarina ruricessa (NL. fem. n. *ruricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktomarina sp002698165*. The type genome for the species is the

GenBank assembly GCA_002698165.1. The GC content of the type genome is 42.31 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Planktophila ablepilenta sp. nov.

Candidatus Planktophila ablepilenta (NL. fem. n. *ablepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009700025*. The type genome for the species is the GenBank assembly GCA_009700025.1. The GC content of the type genome is 45.03 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Planktophila adfamatica sp. nov.

Candidatus Planktophila adfamatica (NL. fem. n. *adfamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009691145*. The type genome for the species is the GenBank assembly GCA_009691145.1. The GC content of the type genome is 48.92 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Planktophila adnumilega sp. nov.

Candidatus Planktophila adnumilega (NL. fem. n. *adnumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009700715*. The type genome for the species is the GenBank assembly GCA_009700715.1. The GC content of the type genome is 47.79 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Planktophila adtagigena sp. nov.

Candidatus Planktophila adtagigena (NL. fem. n. *adtagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903858325*. The type genome for the species is the GenBank assembly GCA_903858325.1. The GC content of the type genome is 45.4 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Planktophila aggubousia sp. nov.

Candidatus Planktophila aggubousia (NL. fem. n. *aggubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699765*. The type genome for the species is the GenBank assembly GCA_009699765.1. The GC content of the type genome is 46.46 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Planktophila agrimitas sp. nov.

Candidatus Planktophila agrimitas (NL. fem. n. *agrimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903839585*. The type genome for the species is the GenBank assembly GCA_903839585.1. The GC content of the type genome is 48.39 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Planktophila apsimugo sp. nov.

Candidatus Planktophila apsimugo (NL. fem. n. *apsimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903922325*. The type genome for the species is the GenBank assembly GCA_903922325.1. The GC content of the type genome is 45.86 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Planktophila capilatica sp. nov.

Candidatus Planktophila capilatica (NL. fem. n. *capilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp002430075*. The type genome for the species is the GenBank assembly GCA_002430075.1. The GC content of the type genome is 47.38 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Planktophila capuditura sp. nov.

Candidatus Planktophila capuditura (NL. fem. n. *capuditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903894425*. The type genome for the species is the GenBank assembly GCA_903894425.1. The GC content of the type genome is 45.91 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Planktophila carecugo sp. nov.

Candidatus Planktophila carecugo (NL. fem. n. *carecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009706135*. The type genome for the species is the GenBank assembly GCA_009706135.1. The GC content of the type genome is 44.31 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Planktophila catagicella sp. nov.

Candidatus Planktophila catagicella (NL. fem. n. *catagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp007279945*. The type genome for the species is the GenBank assembly GCA_007279945.1. The GC content of the type genome is 46.48 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Planktophila cepulifica sp. nov.

Candidatus Planktophila cepulifica (NL. fem. n. *cepulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903921405*. The type genome for the species is the GenBank assembly GCA_903856755.1. The GC content of the type genome is 46.8 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Planktophila chancousia sp. nov.

Candidatus Planktophila chancousia (NL. fem. n. *chancousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009703165*. The type genome for the species is the GenBank assembly GCA_009703165.1. The GC content of the type genome is 49.42 %

and the genome length is 0.97 Mbp.

Description of *Candidatus* Planktophila cibaritrix sp. nov.

Candidatus Planktophila cibaritrix (NL. fem. n. *cibaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009694515*. The type genome for the species is the GenBank assembly GCA_009691125.1. The GC content of the type genome is 48.62 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Planktophila cocodifica sp. nov.

Candidatus Planktophila cocodifica (NL. fem. n. *cocodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp002284875*. The type genome for the species is the GenBank assembly GCA_013467655.1. The GC content of the type genome is 46.96 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Planktophila codifitas sp. nov.

Candidatus Planktophila codifitas (NL. fem. n. *codifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009702965*. The type genome for the species is the GenBank assembly GCA_009702965.1. The GC content of the type genome is 47.98 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Planktophila decamilenta sp. nov.

Candidatus Planktophila decamilenta (NL. fem. n. *decamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009704505*. The type genome for the species is the GenBank assembly GCA_009704505.1. The GC content of the type genome is 44.3 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Planktophila decamitura sp. nov.

Candidatus Planktophila decamitura (NL. fem. n. *decamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009701085*. The type genome for the species is the GenBank assembly GCA_009705805.1. The GC content of the type genome is 49.31 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Planktophila defulatio sp. nov.

Candidatus Planktophila defulatio (NL. fem. n. *defulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903932885*. The type genome for the species is the GenBank assembly GCA_903934975.1. The GC content of the type genome is 45.25 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Planktophila democitudo sp. nov.

Candidatus Planktophila democitudo (NL. fem. n. *democitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903874255*. The type genome for the species is the GenBank assembly GCA_903874255.1. The GC content of the type genome is 44.91 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Planktophila denicibula sp. nov.

Candidatus Planktophila denicibula (NL. fem. n. *denicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp001438925*. The type genome for the species is the GenBank assembly GCA_002346325.1. The GC content of the type genome is 47.1 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Planktophila denoratica sp. nov.

Candidatus Planktophila denoratica (NL. fem. n. *denoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009702835*. The type genome for the species is the GenBank assembly GCA_009705965.1. The GC content of the type genome is 47.26 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Planktophila depetibra sp. nov.

Candidatus Planktophila depetibra (NL. fem. n. *depetibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903954055*. The type genome for the species is the GenBank assembly GCA_903953775.1. The GC content of the type genome is 48.71 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Planktophila depupatio sp. nov.

Candidatus Planktophila depupatio (NL. fem. n. *depupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp010032875*. The type genome for the species is the GenBank assembly GCA_010033045.1. The GC content of the type genome is 44.36 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Planktophila dilibitia sp. nov.

Candidatus Planktophila dilibitia (NL. fem. n. *dilibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698845*. The type genome for the species is the GenBank assembly GCA_009698845.1. The GC content of the type genome is 46.36 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Planktophila direcicella sp. nov.

Candidatus Planktophila direcicella (NL. fem. n. *direcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903825015*. The type genome for the species is the GenBank assembly GCA_903823235.1. The GC content of the type genome is 45.42 %

and the genome length is 1.21 Mbp.

Description of *Candidatus* Planktophila docibitudo sp. nov.

Candidatus Planktophila docibitudo (NL. fem. n. *docibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp010024385*. The type genome for the species is the GenBank assembly GCA_010022475.1. The GC content of the type genome is 45.42 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Planktophila excucitrix sp. nov.

Candidatus Planktophila excucitrix (NL. fem. n. *excucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009705165*. The type genome for the species is the GenBank assembly GCA_009705165.1. The GC content of the type genome is 44.83 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Planktophila exorbetta sp. nov.

Candidatus Planktophila exorbetta (NL. fem. n. *exorbetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699575*. The type genome for the species is the GenBank assembly GCA_009699575.1. The GC content of the type genome is 46.18 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Planktophila expanimonia sp. nov.

Candidatus Planktophila expanimonia (NL. fem. n. *expanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp002284895*. The type genome for the species is the GenBank assembly RS_GCF_002284895.1. The GC content of the type genome is 45.45 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Planktophila exsatitia sp. nov.

Candidatus Planktophila exsatitia (NL. fem. n. *exsatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp000372185*. The type genome for the species is the GenBank assembly GCA_000372185.1. The GC content of the type genome is 47.61 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Planktophila feculiforma sp. nov.

Candidatus Planktophila feculiforma (NL. fem. n. *feculiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009701945*. The type genome for the species is the GenBank assembly GCA_009701945.1. The GC content of the type genome is 47.92 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Planktophila fetulibula sp. nov.

Candidatus Planktophila fetulibula (NL. fem. n. *fetulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp013205535*. The type genome for the species is the GenBank assembly GCA_013205535.1. The GC content of the type genome is 49.58 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Planktophila forinitas sp. nov.

Candidatus Planktophila forinitas (NL. fem. n. *forinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903865885*. The type genome for the species is the GenBank assembly GCA_903865885.1. The GC content of the type genome is 47.98 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Planktophila galacilega sp. nov.

Candidatus Planktophila galacilega (NL. fem. n. *galacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698295*. The type genome for the species is the GenBank assembly GCA_009698295.1. The GC content of the type genome is 46.81 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Planktophila genocigena sp. nov.

Candidatus Planktophila genocigena (NL. fem. n. *genocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009924725*. The type genome for the species is the GenBank assembly GCA_009924725.1. The GC content of the type genome is 46.24 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Planktophila hegumiforma sp. nov.

Candidatus Planktophila hegumiforma (NL. fem. n. *hegumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699825*. The type genome for the species is the GenBank assembly GCA_009701555.1. The GC content of the type genome is 44.16 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Planktophila hemidetta sp. nov.

Candidatus Planktophila hemidetta (NL. fem. n. *hemidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903852955*. The type genome for the species is the GenBank assembly GCA_009705835.1. The GC content of the type genome is 44.74 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Planktophila hemitago sp. nov.

Candidatus Planktophila hemitago (NL. fem. n. *hemitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903939005*. The type genome for the species is the GenBank assembly GCA_903939005.1. The GC content of the type genome is 46.27 %

and the genome length is 1.2 Mbp.

Description of *Candidatus* Planktophila homagitudo sp. nov.

Candidatus Planktophila homagitudo (NL. fem. n. *homagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903893085*. The type genome for the species is the GenBank assembly GCA_903893085.1. The GC content of the type genome is 46.49 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Planktophila inadfibra sp. nov.

Candidatus Planktophila inadfibra (NL. fem. n. *inadfibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009691135*. The type genome for the species is the GenBank assembly GCA_009691135.1. The GC content of the type genome is 46.74 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Planktophila infinitoga sp. nov.

Candidatus Planktophila infinitoga (NL. fem. n. *infinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903901905*. The type genome for the species is the GenBank assembly GCA_903901905.1. The GC content of the type genome is 44.19 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Planktophila innupatio sp. nov.

Candidatus Planktophila innupatio (NL. fem. n. *innupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903844585*. The type genome for the species is the GenBank assembly GCA_903844585.1. The GC content of the type genome is 45.76 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Planktophila inobsedo sp. nov.

Candidatus Planktophila inobsedo (NL. fem. n. *inobsedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699645*. The type genome for the species is the GenBank assembly GCA_009699645.1. The GC content of the type genome is 47.43 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Planktophila irrefago sp. nov.

Candidatus Planktophila irrefago (NL. fem. n. *irrefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009923805*. The type genome for the species is the GenBank assembly GCA_009923805.1. The GC content of the type genome is 46.8 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Planktophila ludibax sp. nov.

Candidatus Planktophila ludibax (NL. fem. n. *ludibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp000378885*. The type genome for the species is the GenBank assembly GCA_000504645.1. The GC content of the type genome is 44.24 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Planktophila macililega sp. nov.

Candidatus Planktophila macililega (NL. fem. n. *macililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009702845*. The type genome for the species is the GenBank assembly GCA_009702845.1. The GC content of the type genome is 47.5 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Planktophila manibisca sp. nov.

Candidatus Planktophila manibisca (NL. fem. n. *manibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699165*. The type genome for the species is the GenBank assembly GCA_009699165.1. The GC content of the type genome is 46.43 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Planktophila metucifica sp. nov.

Candidatus Planktophila metucifica (NL. fem. n. *metucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009702925*. The type genome for the species is the GenBank assembly GCA_009703025.1. The GC content of the type genome is 44.08 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Planktophila milipitica sp. nov.

Candidatus Planktophila milipitica (NL. fem. n. *milipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903904665*. The type genome for the species is the GenBank assembly GCA_903904665.1. The GC content of the type genome is 45.93 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Planktophila mimogibula sp. nov.

Candidatus Planktophila mimogibula (NL. fem. n. *mimogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009702525*. The type genome for the species is the GenBank assembly GCA_009700555.1. The GC content of the type genome is 45.85 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Planktophila negotatica sp. nov.

Candidatus Planktophila negotatica (NL. fem. n. *negotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009705025*. The type genome for the species is the GenBank assembly GCA_009702655.1. The GC content of the type genome is 44.59 %

and the genome length is 0.9 Mbp.

Description of *Candidatus* Planktophila nehalisca sp. nov.

Candidatus Planktophila nehalisca (NL. fem. n. *nehalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp002284855*. The type genome for the species is the GenBank assembly GCA_013467635.1. The GC content of the type genome is 49.05 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Planktophila nucifimonas sp. nov.

Candidatus Planktophila nucifimonas (NL. fem. n. *nucifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp005800815*. The type genome for the species is the GenBank assembly GCA_005809035.1. The GC content of the type genome is 50.34 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Planktophila nugacicula sp. nov.

Candidatus Planktophila nugacicula (NL. fem. n. *nugacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903890345*. The type genome for the species is the GenBank assembly GCA_903890345.1. The GC content of the type genome is 44.64 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Planktophila nutabitoga sp. nov.

Candidatus Planktophila nutabitoga (NL. fem. n. *nutabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698975*. The type genome for the species is the GenBank assembly GCA_009698975.1. The GC content of the type genome is 48.38 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Planktophila obtecax sp. nov.

Candidatus Planktophila obtecax (NL. fem. n. *obtecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009704515*. The type genome for the species is the GenBank assembly GCA_009704515.1. The GC content of the type genome is 47.22 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Planktophila obvalitura sp. nov.

Candidatus Planktophila obvalitura (NL. fem. n. *obvalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009705185*. The type genome for the species is the GenBank assembly GCA_009705185.1. The GC content of the type genome is 45.91 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Planktophila obvericula sp. nov.

Candidatus Planktophila obvericula (NL. fem. n. *obvericula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009704445*. The type genome for the species is the GenBank assembly GCA_009704445.1. The GC content of the type genome is 44.11 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Planktophila pavicugo sp. nov.

Candidatus Planktophila pavicugo (NL. fem. n. *pavicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009726135*. The type genome for the species is the GenBank assembly GCA_009705975.1. The GC content of the type genome is 44.96 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Planktophila peripigena sp. nov.

Candidatus Planktophila peripigena (NL. fem. n. *peripigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009700365*. The type genome for the species is the GenBank assembly GCA_009700365.1. The GC content of the type genome is 47.32 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Planktophila pomifibula sp. nov.

Candidatus Planktophila pomifibula (NL. fem. n. *pomifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698815*. The type genome for the species is the GenBank assembly GCA_009698815.1. The GC content of the type genome is 46.79 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Planktophila refacisca sp. nov.

Candidatus Planktophila refacisca (NL. fem. n. *refacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009705035*. The type genome for the species is the GenBank assembly GCA_009703585.1. The GC content of the type genome is 47.31 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Planktophila robigessa sp. nov.

Candidatus Planktophila robigessa (NL. fem. n. *robigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698675*. The type genome for the species is the GenBank assembly GCA_009698675.1. The GC content of the type genome is 47.52 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Planktophila rosacifica sp. nov.

Candidatus Planktophila rosacifica (NL. fem. n. *rosacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp003569265*. The type genome for the species is the GenBank assembly GCA_003569265.1. The GC content of the type genome is 46.26 %

and the genome length is 0.64 Mbp.

Description of *Candidatus* Planktophila rutabilega sp. nov.

Candidatus Planktophila rutabilega (NL. fem. n. *rutabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903922745*. The type genome for the species is the GenBank assembly GCA_903922745.1. The GC content of the type genome is 45.83 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Planktophila sacopatio sp. nov.

Candidatus Planktophila sacopatio (NL. fem. n. *sacopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903845465*. The type genome for the species is the GenBank assembly GCA_903836915.1. The GC content of the type genome is 48.01 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Planktophila scellitudo sp. nov.

Candidatus Planktophila scellitudo (NL. fem. n. *scellitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009705235*. The type genome for the species is the GenBank assembly GCA_009705235.1. The GC content of the type genome is 45.24 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Planktophila siminitio sp. nov.

Candidatus Planktophila siminitio (NL. fem. n. *siminitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903852815*. The type genome for the species is the GenBank assembly GCA_903852815.1. The GC content of the type genome is 44.38 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Planktophila smegmitura sp. nov.

Candidatus Planktophila smegmitura (NL. fem. n. *smegmitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp005789205*. The type genome for the species is the GenBank assembly GCA_005789205.1. The GC content of the type genome is 45.41 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Planktophila smegmivita sp. nov.

Candidatus Planktophila smegmivita (NL. fem. n. *smegmivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp014190015*. The type genome for the species is the GenBank assembly GCA_014190015.1. The GC content of the type genome is 45.11 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Planktophila subucitoga sp. nov.

Candidatus Planktophila subucitoga (NL. fem. n. *subucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903920065*. The type genome for the species is the GenBank assembly GCA_903920065.1. The GC content of the type genome is 48.27 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Planktophila susicessa sp. nov.

Candidatus Planktophila susicessa (NL. fem. n. *susicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009701185*. The type genome for the species is the GenBank assembly GCA_903831525.1. The GC content of the type genome is 45.86 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Planktophila telegessa sp. nov.

Candidatus Planktophila telegessa (NL. fem. n. *telegessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903832395*. The type genome for the species is the GenBank assembly GCA_903876055.1. The GC content of the type genome is 47.13 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Planktophila televugo sp. nov.

Candidatus Planktophila televugo (NL. fem. n. *televugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009698445*. The type genome for the species is the GenBank assembly GCA_009701915.1. The GC content of the type genome is 44.9 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Planktophila tresvugo sp. nov.

Candidatus Planktophila tresvugo (NL. fem. n. *tresvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903820565*. The type genome for the species is the GenBank assembly GCA_903820565.1. The GC content of the type genome is 45.65 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Planktophila velifastra sp. nov.

Candidatus Planktophila velifastra (NL. fem. n. *velifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp009699795*. The type genome for the species is the GenBank assembly GCA_009699795.1. The GC content of the type genome is 45.58 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Planktophila vinacatio sp. nov.

Candidatus Planktophila vinacatio (NL. fem. n. *vinacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktophila sp903918325*. The type genome for the species is the GenBank assembly GCA_903918325.1. The GC content of the type genome is 45.59 %

and the genome length is 1.23 Mbp.

Description of *Candidatus* Planktosalinus encenisca sp. nov.

Candidatus Planktosalinus encenisca (NL. fem. n. *encenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktosalinus sp002842575*. The type genome for the species is the GenBank assembly GCA_002842575.1. The GC content of the type genome is 34.06 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Planktosalinus metabiforma sp. nov.

Candidatus Planktosalinus metabiforma (NL. fem. n. *metabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktosalinus sp001873105*. The type genome for the species is the GenBank assembly GCA_002770945.1. The GC content of the type genome is 34.29 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Planktotalea bigemetta sp. nov.

Candidatus Planktotalea bigemetta (NL. fem. n. *bigemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktotalea sp000156115*. The type genome for the species is the GenBank assembly GCA_003539745.1. The GC content of the type genome is 53.54 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Planktothricoides annucousia sp. nov.

Candidatus Planktothricoides annucousia (NL. fem. n. *annucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothricoides sp001276715*. The type genome for the species is the GenBank assembly RS_GCF_001276715.1. The GC content of the type genome is 43.46 % and the genome length is 7.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater reservoir".

Description of *Candidatus* Planktothricoides pecunago sp. nov.

Candidatus Planktothricoides pecunago (NL. fem. n. *pecunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothricoides sp011390955*. The type genome for the species is the GenBank assembly GCA_011390955.1. The GC content of the type genome is 43.72 % and the genome length is 7.12 Mbp.

Description of *Candidatus* Planktothrix armidastra sp. nov.

Candidatus Planktothrix armidastra (NL. fem. n. *armidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothrix sp903893625*. The type genome for the species is the GenBank assembly GCA_903893625.1. The GC content of the type genome is 39.53 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Planktothrix depubago sp. nov.

Candidatus Planktothrix depubago (NL. fem. n. *depubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothrix sp003456035*. The type genome for the species is the GenBank assembly GCA_003456035.1. The GC content of the type genome is 38.87 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Planktothrix levidiforma sp. nov.

Candidatus Planktothrix levidiforma (NL. fem. n. *levidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothrix sp900009135*. The type genome for the species is the GenBank assembly RS_GCF_900009135.1. The GC content of the type genome is 40.14 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Planktothrix oblocago sp. nov.

Candidatus Planktothrix oblocago (NL. fem. n. *oblocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planktothrix sp001873365*. The type genome for the species is the GenBank assembly GCA_001873365.1. The GC content of the type genome is 39.84 % and the genome length is 4.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Planobacterium herinitrix sp. nov.

Candidatus Planobacterium herinitrix (NL. fem. n. *herinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planobacterium sp014041915*. The type genome for the species is the GenBank assembly RS_GCF_014041915.1. The GC content of the type genome is 43.03 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Planobacterium pavimigena sp. nov.

Candidatus Planobacterium pavimigena (NL. fem. n. *pavimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planobacterium sp002319955*. The type genome for the species is the GenBank assembly GCA_002319955.1. The GC content of the type genome is 42.47 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Planobacterium rubigibra sp. nov.

Candidatus Planobacterium rubigibra (NL. fem. n. *rubigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planobacterium sp008831505*. The type genome for the species is the GenBank assembly RS_GCF_008831505.1. The GC content of the type genome is 43.42 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Planococcus anamnisca sp. nov.

Candidatus Planococcus anamnisca (NL. fem. n. *anamnisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Planococcus sp007859275*. The type genome for the species is the GenBank assembly RS_GCF_007859275.1. The GC content of the type genome is 44.27 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Planococcus assudilenta sp. nov.

Candidatus Planococcus assudilenta (NL. fem. n. *assudilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp009707665*. The type genome for the species is the GenBank assembly RS_GCF_009707665.1. The GC content of the type genome is 49.06 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Planococcus biparitio sp. nov.

Candidatus Planococcus biparitio (NL. fem. n. *biparitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp002833405*. The type genome for the species is the GenBank assembly RS_GCF_002835975.1. The GC content of the type genome is 47.85 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Planococcus bisacibula sp. nov.

Candidatus Planococcus bisacibula (NL. fem. n. *bisacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp007004635*. The type genome for the species is the GenBank assembly RS_GCF_007004635.1. The GC content of the type genome is 44.78 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Planococcus defasitoga sp. nov.

Candidatus Planococcus defasitoga (NL. fem. n. *defasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp007859295*. The type genome for the species is the GenBank assembly RS_GCF_007859295.1. The GC content of the type genome is 43.63 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Planococcus peripifica sp. nov.

Candidatus Planococcus peripifica (NL. fem. n. *peripifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp000775575*. The type genome for the species is the GenBank assembly RS_GCF_000775575.1. The GC content of the type genome is 46.28 % and the genome length is 3.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Planococcus rubefatio sp. nov.

Candidatus Planococcus rubefatio (NL. fem. n. *rubefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp007859395*. The type genome for the species is the GenBank assembly RS_GCF_007859395.1. The GC content of the type genome is 45.61 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Planococcus saburibra sp. nov.

Candidatus Planococcus saburibra (NL. fem. n. *saburibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp003668635*. The type genome for the species is the GenBank assembly RS_GCF_003668635.1. The GC content of the type genome is 44.49 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Planococcus xenopitoga sp. nov.

Candidatus Planococcus xenopitoga (NL. fem. n. *xenopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Planococcus sp000785555*. The type genome for the species is the GenBank assembly RS_GCF_000785555.1. The GC content of the type genome is 39.33 % and the genome length is 3.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil (sea shore)".

Description of *Candidatus* Plantibacter arbavastra sp. nov.

Candidatus Plantibacter arbavastra (NL. fem. n. *arbavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Plantibacter sp900177795*. The type genome for the species is the GenBank assembly RS_GCF_900177795.1. The GC content of the type genome is 69.23 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Plantibacter ficulax sp. nov.

Candidatus Plantibacter ficulax (NL. fem. n. *ficulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Plantibacter sp001423185*. The type genome for the species is the GenBank assembly RS_GCF_001423185.1. The GC content of the type genome is 69.67 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Plascella exaspilega sp. nov.

Candidatus Plascella exaspilega (NL. fem. n. *exaspilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISUK01 sp903888645*. The type genome for the species is the GenBank assembly GCA_903888645.1. The GC content of the type genome is 59.33 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Plascella gen. nov.

Candidatus Plascella (NL. fem. n. *Plascella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISUK01*. The type species for the genus is *Candidatus* Plascella exaspilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Plascida herinatio sp. nov.

Candidatus Plascida herinatio (NL. fem. n. *herinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDZ01 sp013287335*. The type genome for the species is the GenBank assembly GCA_013287335.1. The GC content of the type genome is 42.2 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Plascida gen. nov.

Candidatus Plascida (NL. fem. n. *Plascida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDZ01*. The type species for the genus is *Candidatus* Plascida herinatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAKFR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucanaceae.

Description of *Candidatus* Plascula advoredo sp. nov.

Candidatus Plascula advoredo (NL. fem. n. *advoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An7 sp002161805*. The type genome for the species is the GenBank assembly RS_GCF_002161805.1. The GC content of the type genome is 62.94 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Plascula gen. nov.

Candidatus Plascula (NL. fem. n. *Plascula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An7*. The type species for the genus is *Candidatus* Plascula advoredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Plascula aggenessa sp. nov.

Candidatus Plascula aggenessa (NL. fem. n. *aggenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An7 sp002159335*. The type genome for the species is the GenBank assembly RS_GCF_002159335.1. The GC content of the type genome is 65.33 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Plascula anaclimonia sp. nov.

Candidatus Plascula anaclimonia (NL. fem. n. *anaclimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An7 sp002159765*. The type genome for the species is the GenBank assembly RS_GCF_002159765.1. The GC content of the type genome is 65.27 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Plasticicumulans masocivita sp. nov.

Candidatus Plasticicumulans masocivita (NL. fem. n. *masocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Plasticicumulans sp003962905*. The type genome for the species is the GenBank assembly GCA_003962905.1. The GC content of the type genome is 70.14 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Pleionea arcebilega sp. nov.

Candidatus Pleionea arcebilega (NL. fem. n. *arcebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleionea sp013373375*. The type genome for the species is the GenBank assembly GCA_013373375.1. The GC content of the type genome is 40.45 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Pleionea hirunentia sp. nov.

Candidatus Pleionea hirunentia (NL. fem. n. *hirunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleionea sp013373545*. The type genome for the species is the GenBank assembly GCA_013372895.1. The GC content of the type genome is 45.36 %

and the genome length is 3.45 Mbp.

Description of *Candidatus* Pleomorphomonas adposastra sp. nov.

Candidatus Pleomorphomonas adposastra (NL. fem. n. *adposastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleomorphomonas sp004366315*. The type genome for the species is the GenBank assembly RS_GCF_004366315.1. The GC content of the type genome is 61.69 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Pleomorphomonas notacentia sp. nov.

Candidatus Pleomorphomonas notacentia (NL. fem. n. *notacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleomorphomonas sp011759535*. The type genome for the species is the GenBank assembly RS_GCF_011761225.1. The GC content of the type genome is 63.23 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Pleurocapsa cisoritura sp. nov.

Candidatus Pleurocapsa cisoritura (NL. fem. n. *cisoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleurocapsa sp003003995*. The type genome for the species is the GenBank assembly RS_GCF_003003995.1. The GC content of the type genome is 39.73 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Pleurocapsa crabritica sp. nov.

Candidatus Pleurocapsa crabritica (NL. fem. n. *crabritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleurocapsa sp002368355*. The type genome for the species is the GenBank assembly RS_GCF_002368355.1. The GC content of the type genome is 36.62 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Pleurocapsa depelilega sp. nov.

Candidatus Pleurocapsa depelilega (NL. fem. n. *depelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleurocapsa sp012034765*. The type genome for the species is the GenBank assembly GCA_012033675.1. The GC content of the type genome is 39.88 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Pleurocapsa lupanisca sp. nov.

Candidatus Pleurocapsa lupanisca (NL. fem. n. *lupanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pleurocapsa sp000332195*. The type genome for the species is the GenBank assembly RS_GCF_000332195.1. The GC content of the type genome is 38.74 % and the genome length is 7.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "snail shell".

Description of *Candidatus* Plostella benepatica sp. nov.

Candidatus Plostella benepatica (NL. fem. n. *benepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PPGL01 sp003173915*. The type genome for the species is the GenBank assembly GCA_003173915.1. The GC content of the type genome is 36.42 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Plostella gen. nov.

Candidatus Plostella (NL. fem. n. *Plostella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PPGL01*. The type species for the genus is *Candidatus* Plostella benepatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Plostia proscicella sp. nov.

Candidatus Plostia proscicella (NL. fem. n. *proscicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRKO01 sp011051745*. The type genome for the species is the GenBank assembly GCA_011051745.1. The GC content of the type genome is 63.19 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Plostia gen. nov.

Candidatus Plostia (NL. fem. n. *Plostia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRKO01*. The type species for the genus is *Candidatus* Plostia proscicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3940*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpidaceae.

Description of *Candidatus* Plostida semifastra sp. nov.

Candidatus Plostida semifastra (NL. fem. n. *semifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YN15 sp003285005*. The type genome for the species is the GenBank assembly RS_GCF_003285005.1. The GC content of the type genome is 55.01 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Plostida gen. nov.

Candidatus Plostida (NL. fem. n. *Plostida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YN15*. The type species for the genus is *Candidatus* Plostida semifastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Plostosa anacledo sp. nov.

Candidatus Plostosa anacledo (NL. fem. n. *anacledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2272 sp002347725*. The type genome for the species is the GenBank assembly GCA_002347725.1. The GC content of the type genome is 66.85 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Plostosa gen. nov.

Candidatus Plostosa (NL. fem. n. *Plostosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2272*. The type species for the genus is *Candidatus* Plostosa anacledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Plostula enigmitrix sp. nov.

Candidatus Plostula enigmitrix (NL. fem. n. *enigmitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-42-9 sp002790635*. The type genome for the species is the GenBank assembly GCA_002790635.1. The GC content of the type genome is 42.3 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Plostula gen. nov.

Candidatus Plostula (NL. fem. n. *Plostula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-42-9*. The type species for the genus is *Candidatus* Plostula enigmitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Pluscaria impilitia sp. nov.

Candidatus Pluscaria impilitia (NL. fem. n. *impilitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED722 sp002690625*. The type genome for the species is the GenBank assembly GCA_002690625.1. The GC content of the type genome is 28.69 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Pluscaria gen. nov.

Candidatus Pluscaria (NL. fem. n. *Pluscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED722*. The type species for the genus is *Candidatus* Pluscaria impilitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Pluscella propritio sp. nov.

Candidatus Pluscella propritio (NL. fem. n. *propritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMHY01 sp900298985*. The type genome for the species is the GenBank assembly GCA_900298985.1. The GC content of the type genome is 37.77 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Pluscella gen. nov.

Candidatus Pluscella (NL. fem. n. *Pluscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMHY01*. The type species for the genus is *Candidatus* Pluscella propritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pluscida andabitas sp. nov.

Candidatus Pluscida andabitas (NL. fem. n. *andabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AMD01 sp004100265*. The type genome for the species is the GenBank assembly GCA_004100265.1. The GC content of the type genome is 54.77 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Pluscida gen. nov.

Candidatus Pluscida (NL. fem. n. *Pluscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AMD01*. The type species for the genus is *Candidatus* Pluscida andabitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pluscosa hemidicula sp. nov.

Candidatus Pluscosa hemidicula (NL. fem. n. *hemidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEZ01 sp011174845*. The type genome for the species is the GenBank assembly GCA_011174845.1. The GC content of the type genome is 51.34 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Pluscosa gen. nov.

Candidatus Pluscosa (NL. fem. n. *Pluscosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEZ01*. The type species for the genus is *Candidatus* Pluscosa hemidicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binocidaceae.

Description of *Candidatus* Pluscosa inmolibra sp. nov.

Candidatus Pluscosa inmolibra (NL. fem. n. *inmolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEZ01 sp011174825*. The type genome for the species is the GenBank assembly GCA_011174825.1. The GC content of the type genome is 51.27 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Pocilana delebisca sp. nov.

Candidatus Pocilana delebisca (NL. fem. n. *delebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUWA01 sp903827245*. The type genome for the species is the GenBank assembly GCA_903825655.1. The GC content of the type genome is 64.86 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Pocilana gen. nov.

Candidatus Pocilana (NL. fem. n. *Pocilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUWA01*. The type species for the genus is *Candidatus* Pocilana delebisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pocilana resulicula sp. nov.

Candidatus Pocilana resulicula (NL. fem. n. *resulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUWA01 sp903902745*. The type genome for the species is the GenBank assembly GCA_903888405.1. The GC content of the type genome is 64.31 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Pocilaria expalatica sp. nov.

Candidatus Pocilaria expalatica (NL. fem. n. *expalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch38 sp013178105*. The type genome for the species is the GenBank

assembly GCA_013178105.1. The GC content of the type genome is 40.45 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Pocilaria gen. nov.

Candidatus Pocilaria (NL. fem. n. *Pocilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch38*. The type species for the genus is *Candidatus* Pocilaria expalatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilariaceae.

Description of *Candidatus* Pocilariaceae fam. nov.

Candidatus Pocilariaceae (NL. fem. n. *Pocilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch38.* The type genus for the taxon is *Candidatus* Pocilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bugilellales.

Description of *Candidatus* Pocilella defalugo sp. nov.

Candidatus Pocilella defalugo (NL. fem. n. *defalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002779355 sp002779355*. The type genome for the species is the GenBank assembly GCA_002779355.1. The GC content of the type genome is 39.02 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Pocilella gen. nov.

Candidatus Pocilella (NL. fem. n. *Pocilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002779355*. The type species for the genus is *Candidatus* Pocilella defalugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002779355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilellaceae.

Description of *Candidatus* Pocilellaceae fam. nov.

Candidatus Pocilellaceae (NL. fem. n. *Pocilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002779355.* The type genus for the taxon is *Candidatus* Pocilella .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Pocilida conibessa sp. nov.

Candidatus Pocilida conibessa (NL. fem. n. *conibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBLK01 sp002084505*. The type genome for the species is the GenBank assembly GCA_002084505.1. The GC content of the type genome is 32.08 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Pocilida gen. nov.

Candidatus Pocilida (NL. fem. n. *Pocilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBLK01*. The type species for the genus is *Candidatus* Pocilida conibessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NBLK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilidaceae.

Description of *Candidatus* Pocilidaceae fam. nov.

Candidatus Pocilidaceae (NL. fem. n. *Pocilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NBLK01.* The type genus for the taxon is *Candidatus* Pocilida .

According to the original version of GTDB R06-RS202, this family belongs to the order

Rs-D84. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapiales.

Description of *Candidatus* Pocilosa petulitrix sp. nov.

Candidatus Pocilosa petulitrix (NL. fem. n. *petulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXV01 sp010672785*. The type genome for the species is the GenBank assembly GCA_010672785.1. The GC content of the type genome is 36.27 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Pocilosa gen. nov.

Candidatus Pocilosa (NL. fem. n. *Pocilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXV01*. The type species for the genus is *Candidatus* Pocilosa petulitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pocilosa semilatica sp. nov.

Candidatus Pocilosa semilatica (NL. fem. n. *semilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXV01 sp004292695*. The type genome for the species is the GenBank assembly GCA_004292695.1. The GC content of the type genome is 36.01 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Pocilula medimedo sp. nov.

Candidatus Pocilula medimedo (NL. fem. n. *medimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-555 sp003140175*. The type genome for the species is the GenBank assembly GCA_003140175.1. The GC content of the type genome is 69.45 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pocilula gen. nov.

Candidatus Pocilula (NL. fem. n. *Pocilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-555*. The type species for the genus is *Candidatus* Pocilula medimedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilulaceae.

Description of *Candidatus* Pocilulaceae fam. nov.

Candidatus Pocilulaceae (NL. fem. n. *Pocilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-555.* The type genus for the taxon is *Candidatus* Pocilula .

According to the original version of GTDB R06-RS202, this family belongs to the order *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosarellales.

Description of *Candidatus* Podagana ceraritas sp. nov.

Candidatus Podagana ceraritas (NL. fem. n. *ceraritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUVD01 sp903902515*. The type genome for the species is the GenBank assembly GCA_903882295.1. The GC content of the type genome is 65.14 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Podagana gen. nov.

Candidatus Podagana (NL. fem. n. *Podagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUVD01*. The type species for the genus is *Candidatus* Podagana ceraritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Podagaria denupigena sp. nov.

Candidatus Podagaria denupigena (NL. fem. n. *denupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12087 sp001796335*. The type genome for the species is the GenBank assembly GCA_003518405.1. The GC content of the type genome is 48.48 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Podagaria gen. nov.

Candidatus Podagaria (NL. fem. n. *Podagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12087*. The type species for the genus is *Candidatus* Podagaria denupigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Podagella penecitudo sp. nov.

Candidatus Podagella penecitudo (NL. fem. n. *penecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQV01 sp007131285*. The type genome for the species is the GenBank assembly GCA_007131285.1. The GC content of the type genome is 61.37 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Podagella gen. nov.

Candidatus Podagella (NL. fem. n. *Podagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLQV01*. The type species for the genus is *Candidatus* Podagella penecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SLQV01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagellaceae.

Description of *Candidatus* Podagellaceae fam. nov.

Candidatus Podagellaceae (NL. fem. n. *Podagellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLQV01*. The type genus for the taxon is *Candidatus* Podagella .

According to GTDB R06-RS202, this family belongs to the order *Polyangiales*.

Description of *Candidatus* Podagella tumefago sp. nov.

Candidatus Podagella tumefago (NL. fem. n. *tumefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQV01 sp007124745*. The type genome for the species is the GenBank assembly GCA_007120075.1. The GC content of the type genome is 63.42 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Podagia aspilousia sp. nov.

Candidatus Podagia aspilousia (NL. fem. n. *aspilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXJ01 sp013002065*. The type genome for the species is the GenBank assembly GCA_013002065.1. The GC content of the type genome is 39.55 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Podagia gen. nov.

Candidatus Podagia (NL. fem. n. *Podagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXJ01*. The type species for the genus is *Candidatus* Podagia aspilousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Podagia cilibivita sp. nov.

Candidatus Podagia cilibivita (NL. fem. n. *cilibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXJ01 sp004356305*. The type genome for the species is the GenBank assembly GCA_004356275.1. The GC content of the type genome is 40.24 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Podagia conipibula sp. nov.

Candidatus Podagia conipibula (NL. fem. n. *conipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXJ01 sp009827225*. The type genome for the species is the GenBank assembly GCA_009827225.1. The GC content of the type genome is 41.85 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Podagia dehonetta sp. nov.

Candidatus Podagia dehonetta (NL. fem. n. *dehonetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXJ01 sp013043825*. The type genome for the species is the GenBank assembly GCA_013043825.1. The GC content of the type genome is 43.75 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Podagida favonastra sp. nov.

Candidatus Podagida favonastra (NL. fem. n. *favonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG159 sp902796435*. The type genome for the species is the GenBank assembly GCA_902773275.1. The GC content of the type genome is 55.04 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Podagida gen. nov.

Candidatus Podagida (NL. fem. n. *Podagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG159*. The type species for the genus is *Candidatus* Podagida favonastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1390*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibiaceae.

Description of *Candidatus* Podagida hegumitas sp. nov.

Candidatus Podagida hegumitas (NL. fem. n. *hegumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG159 sp900316145*. The type genome for the species is the GenBank assembly GCA_902796645.1. The GC content of the type genome is 52.74 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Podagosa viburousia sp. nov.

Candidatus Podagosa viburousia (NL. fem. n. *viburousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITYL01 sp903896595*. The type genome for the species is the GenBank assembly GCA_903957455.1. The GC content of the type genome is 62.08 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Podagosa gen. nov.

Candidatus Podagosa (NL. fem. n. *Podagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITYL01*. The type species for the genus is *Candidatus* Podagosa viburousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagosaceae.

Description of *Candidatus* Podagosaceae fam. nov.

Candidatus Podagosaceae (NL. fem. n. *Podagosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAITYL01*. The type genus for the taxon is *Candidatus* Podagosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Podagula desupivita sp. nov.

Candidatus Podagula desupivita (NL. fem. n. *desupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP197 sp014323865*. The type genome for the species is the GenBank assembly GCA_014323865.1. The GC content of the type genome is 63.96 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Podagula gen. nov.

Candidatus Podagula (NL. fem. n. *Podagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP197*. The type species for the genus is *Candidatus* Podagula desupivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SP197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagulaceae.

Description of *Candidatus* Podagulaceae fam. nov.

Candidatus Podagulaceae (NL. fem. n. *Podagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SP197*. The type genus for the taxon is *Candidatus* Podagula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SP197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Podagulales.

Description of *Candidatus* Podagulales ord. nov.

Candidatus Podagulales (NL. fem. n. *Podagulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SP197.* The type genus for the taxon is *Candidatus* Podagula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Podagula exindibra sp. nov.

Candidatus Podagula exindibra (NL. fem. n. *exindibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP197 sp002722885*. The type genome for the species is the GenBank assembly GCA_002722885.1. The GC content of the type genome is 62.11 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Polaribacter adcesitura sp. nov.

Candidatus Polaribacter adcesitura (NL. fem. n. *adcesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp000687935*. The type genome for the species is the GenBank assembly RS_GCF_000687935.1. The GC content of the type genome is 29.99 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Polaribacter adlacilenta sp. nov.

Candidatus Polaribacter adlacilenta (NL. fem. n. *adlacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp003537695*. The type genome for the species is the GenBank assembly GCA_003537695.1. The GC content of the type genome is 35.09 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Polaribacter apoplilenta sp. nov.

Candidatus Polaribacter apoplilenta (NL. fem. n. *apoplilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp003335085*. The type genome for the species is the GenBank assembly RS_GCF_003335085.1. The GC content of the type genome is 30.7 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Polaribacter artilax sp. nov.

Candidatus Polaribacter artilax (NL. fem. n. *artilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp011379025*. The type genome for the species is the GenBank assembly RS_GCF_011379025.1. The GC content of the type genome is 30.37 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Polaribacter cacaliforma sp. nov.

Candidatus Polaribacter cacaliforma (NL. fem. n. *cacaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp001873065*. The type genome for the species is the GenBank assembly GCA_002784685.1. The GC content of the type genome is 31.36 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Polaribacter conabitudo sp. nov.

Candidatus Polaribacter conabitudo (NL. fem. n. *conabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp900105145*. The type genome for the species is the GenBank assembly RS_GCF_900105145.1. The GC content of the type genome is 29.04 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Polaribacter cuticivita sp. nov.

Candidatus Polaribacter cuticivita (NL. fem. n. *cuticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002831685*. The type genome for the species is the GenBank assembly RS_GCF_002831685.1. The GC content of the type genome is 30.64 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Polaribacter dehinastra sp. nov.

Candidatus Polaribacter dehinastra (NL. fem. n. *dehinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp900106075*. The type genome for the species is the GenBank assembly RS_GCF_900106075.1. The GC content of the type genome is 30.89 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Polaribacter denoressa sp. nov.

Candidatus Polaribacter denoressa (NL. fem. n. *denoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002163835*. The type genome for the species is the GenBank assembly RS_GCF_002163835.1. The GC content of the type genome is 30.23 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Polaribacter ephemitio sp. nov.

Candidatus Polaribacter ephemitio (NL. fem. n. *ephemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp000766795*. The type genome for the species is the GenBank assembly RS_GCF_000766795.1. The GC content of the type genome is 29.24 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface seawater; North Sea".

Description of *Candidatus* Polaribacter expalax sp. nov.

Candidatus Polaribacter expalax (NL. fem. n. *expalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp009832745*. The type genome for the species is the GenBank assembly RS_GCF_009832745.1. The GC content of the type genome is 30.54 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Polaribacter faticisca sp. nov.

Candidatus Polaribacter faticisca (NL. fem. n. *faticisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002005425*. The type genome for the species is the GenBank assembly RS_GCF_900143115.1. The GC content of the type genome is 29.91 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Polaribacter hemititas sp. nov.

Candidatus Polaribacter hemititas (NL. fem. n. *hemititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp007997085*. The type genome for the species is the GenBank assembly RS_GCF_007997085.1. The GC content of the type genome is 31.46 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Polaribacter illepitura sp. nov.

Candidatus Polaribacter illepitura (NL. fem. n. *illepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp003129485*. The type genome for the species is the GenBank assembly RS_GCF_003129485.1. The GC content of the type genome is 30.09 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Polaribacter inconitica sp. nov.

Candidatus Polaribacter inconitica (NL. fem. n. *inconitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp000981625*. The type genome for the species is the GenBank assembly GCA_000981625.1. The GC content of the type genome is 30.31 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Amundsen Sea polynya".

Description of *Candidatus* Polaribacter insopibra sp. nov.

Candidatus Polaribacter insopibra (NL. fem. n. *insopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp007997075*. The type genome for the species is the GenBank assembly RS_GCF_007997075.1. The GC content of the type genome is 31.34 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Polaribacter lucerastra sp. nov.

Candidatus Polaribacter lucerastra (NL. fem. n. *lucerastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp000152945*. The type genome for the species is the GenBank assembly RS_GCF_000152945.2. The GC content of the type genome is 30.59 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Polaribacter monumimonia sp. nov.

Candidatus Polaribacter monumimonia (NL. fem. n. *monumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002340765*. The type genome for the species is the GenBank assembly GCA_002340765.1. The GC content of the type genome is 31.6 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Polaribacter patibicula sp. nov.

Candidatus Polaribacter patibicula (NL. fem. n. *patibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp014352875*. The type genome for the species is the GenBank assembly RS_GCF_014352875.1. The GC content of the type genome is 29.71 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Polaribacter pinacitrix sp. nov.

Candidatus Polaribacter pinacitrix (NL. fem. n. *pinacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002471825*. The type genome for the species is the GenBank assembly GCA_002471825.1. The GC content of the type genome is 38.04 %

and the genome length is 2.95 Mbp.

Description of *Candidatus* Polaribacter protrisca sp. nov.

Candidatus Polaribacter protrisca (NL. fem. n. *protrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp013373105*. The type genome for the species is the GenBank assembly GCA_013373105.1. The GC content of the type genome is 29.62 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Polaribacter ranunisca sp. nov.

Candidatus Polaribacter ranunisca (NL. fem. n. *ranunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp002163675*. The type genome for the species is the GenBank assembly RS_GCF_002163675.1. The GC content of the type genome is 29.72 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Polaribacter reforetta sp. nov.

Candidatus Polaribacter reforetta (NL. fem. n. *reforetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter sp009796785*. The type genome for the species is the GenBank assembly RS_GCF_009796785.1. The GC content of the type genome is 30.45 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Polaribacter detepago sp. nov.

Candidatus Polaribacter detepago (NL. fem. n. *detepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaribacter_A sp013373385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013373385.1. The GC content of the type genome is 31.96 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Polaromonas aciscitura sp. nov.

Candidatus Polaromonas aciscitura (NL. fem. n. *aciscitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp903926695*. The type genome for the species is the GenBank assembly GCA_903926695.1. The GC content of the type genome is 61.35 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Polaromonas addivibula sp. nov.

Candidatus Polaromonas addivibula (NL. fem. n. *addivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002413395*. The type genome for the species is the GenBank assembly GCA_002413395.1. The GC content of the type genome is 59.13 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Polaromonas addubibra sp. nov.

Candidatus Polaromonas addubibra (NL. fem. n. *addubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp900103405*. The type genome for the species is the GenBank assembly RS_GCF_900103405.1. The GC content of the type genome is 64.71 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Polaromonas adnarigena sp. nov.

Candidatus Polaromonas adnarigena (NL. fem. n. *adnarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002001015*. The type genome for the species is the GenBank assembly RS_GCF_002001015.1. The GC content of the type genome is 61.07 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Polaromonas agrapax sp. nov.

Candidatus Polaromonas agrapax (NL. fem. n. *agrapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp000282655*. The type genome for the species is the GenBank assembly RS_GCF_000282655.1. The GC content of the type genome is 64.95 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Polaromonas alcedatica sp. nov.

Candidatus Polaromonas alcedatica (NL. fem. n. *alcedatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002379085*. The type genome for the species is the GenBank assembly RS_GCF_002379085.1. The GC content of the type genome is 63.77 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Polaromonas amercago sp. nov.

Candidatus Polaromonas amercago (NL. fem. n. *amercago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp903941205*. The type genome for the species is the GenBank assembly GCA_903941205.1. The GC content of the type genome is 62.33 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Polaromonas annubedo sp. nov.

Candidatus Polaromonas annubedo (NL. fem. n. *annubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp900116715*. The type genome for the species is the GenBank assembly RS_GCF_900116715.1. The GC content of the type genome is 62.82 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Polaromonas antecicula sp. nov.

Candidatus Polaromonas antecicula (NL. fem. n. *antecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Polaromonas sp002381615*. The type genome for the species is the GenBank assembly GCA_002381615.1. The GC content of the type genome is 59.57 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Polaromonas apporitia sp. nov.

Candidatus Polaromonas apporitia (NL. fem. n. *apporitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp014376885*. The type genome for the species is the GenBank assembly GCA_014376885.1. The GC content of the type genome is 64.77 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Polaromonas arnogetta sp. nov.

Candidatus Polaromonas arnogetta (NL. fem. n. *arnogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp013205645*. The type genome for the species is the GenBank assembly GCA_013205645.1. The GC content of the type genome is 58.76 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Polaromonas ceraricella sp. nov.

Candidatus Polaromonas ceraricella (NL. fem. n. *ceraricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp003711205*. The type genome for the species is the GenBank assembly RS_GCF_009664225.1. The GC content of the type genome is 63.05 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Polaromonas decomigena sp. nov.

Candidatus Polaromonas decomigena (NL. fem. n. *decomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp012927485*. The type genome for the species is the GenBank assembly GCA_012927485.1. The GC content of the type genome is 57.71 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Polaromonas ficulentia sp. nov.

Candidatus Polaromonas ficulentia (NL. fem. n. *ficulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp900112285*. The type genome for the species is the GenBank assembly RS_GCF_900112285.1. The GC content of the type genome is 61.26 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Polaromonas lacinisca sp. nov.

Candidatus Polaromonas lacinisca (NL. fem. n. *lacinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp010365105*. The type genome for the species is the GenBank assembly GCA_010365105.1. The GC content of the type genome is 61.53 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Polaromonas obsigitia sp. nov.

Candidatus Polaromonas obsigitia (NL. fem. n. *obsigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002379095*. The type genome for the species is the GenBank assembly RS_GCF_002379095.1. The GC content of the type genome is 63.51 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Polaromonas offirago sp. nov.

Candidatus Polaromonas offirago (NL. fem. n. *offirago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp000013865*. The type genome for the species is the GenBank assembly RS_GCF_000013865.1. The GC content of the type genome is 61.97 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Polaromonas patibatica sp. nov.

Candidatus Polaromonas patibatica (NL. fem. n. *patibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp013824015*. The type genome for the species is the GenBank assembly GCA_013824015.1. The GC content of the type genome is 65.14 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Polaromonas plostitrix sp. nov.

Candidatus Polaromonas plostitrix (NL. fem. n. *plostitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp001770785*. The type genome for the species is the GenBank assembly GCA_001770785.1. The GC content of the type genome is 60.47 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Polaromonas pocilitrix sp. nov.

Candidatus Polaromonas pocilitrix (NL. fem. n. *pocilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp000688115*. The type genome for the species is the GenBank assembly RS_GCF_000688115.1. The GC content of the type genome is 59.87 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Polaromonas sacomitio sp. nov.

Candidatus Polaromonas sacomitio (NL. fem. n. *sacomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002256925*. The type genome for the species is the GenBank assembly GCA_002278975.1. The GC content of the type genome is 62.57 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Polaromonas scombatica sp. nov.

Candidatus Polaromonas scombatica (NL. fem. n. *scombatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp012927455*. The type genome for the species is the GenBank assembly GCA_012927455.1. The GC content of the type genome is 60.7 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Polaromonas semimitudo sp. nov.

Candidatus Polaromonas semimitudo (NL. fem. n. *semimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp012927415*. The type genome for the species is the GenBank assembly GCA_012927415.1. The GC content of the type genome is 59.73 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Polaromonas telegetta sp. nov.

Candidatus Polaromonas telegetta (NL. fem. n. *telegetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp002278925*. The type genome for the species is the GenBank assembly GCA_002282035.1. The GC content of the type genome is 62.54 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Polaromonas tenemibula sp. nov.

Candidatus Polaromonas tenemibula (NL. fem. n. *tenemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp004293655*. The type genome for the species is the GenBank assembly GCA_004293655.1. The GC content of the type genome is 57.98 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Polaromonas totiditoga sp. nov.

Candidatus Polaromonas totiditoga (NL. fem. n. *totiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp903844825*. The type genome for the species is the GenBank assembly GCA_903844825.1. The GC content of the type genome is 62.4 %

and the genome length is 4.66 Mbp.

Description of *Candidatus* Polaromonas vehicatica sp. nov.

Candidatus Polaromonas vehicatica (NL. fem. n. *vehicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp013817205*. The type genome for the species is the GenBank assembly GCA_013817205.1. The GC content of the type genome is 62.2 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Polaromonas velifitia sp. nov.

Candidatus Polaromonas velifitia (NL. fem. n. *velifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polaromonas sp000751355*. The type genome for the species is the GenBank assembly RS_GCF_000751355.1. The GC content of the type genome is 61.38 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Polyangium lenunibra sp. nov.

Candidatus Polyangium lenunibra (NL. fem. n. *lenunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polyangium sp005144635*. The type genome for the species is the GenBank assembly RS_GCF_005144635.1. The GC content of the type genome is 69.45 % and the genome length is 12.31 Mbp.

Description of *Candidatus* Polycyclovorans cisorivita sp. nov.

Candidatus Polycyclovorans cisorivita (NL. fem. n. *cisorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polycyclovorans sp002706265*. The type genome for the species is the GenBank assembly GCA_002414935.1. The GC content of the type genome is 65.96 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Polymorphobacter adsusivita sp. nov.

Candidatus Polymorphobacter adsusivita (NL. fem. n. *adsusivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polymorphobacter sp002256005*. The type genome for the species is the GenBank assembly GCA_002256005.1. The GC content of the type genome is 66.85 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Polymorphobacter favonitas sp. nov.

Candidatus Polymorphobacter favonitas (NL. fem. n. *favonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polymorphobacter sp002423025*. The type genome for the species is the GenBank assembly GCA_002423025.1. The GC content of the type genome is 65.72 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Polymorphobacter inculitio sp. nov.

Candidatus Polymorphobacter inculitio (NL. fem. n. *inculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polymorphobacter sp013298745*. The type genome for the species is the GenBank assembly GCA_013298745.1. The GC content of the type genome is 63.92 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Polymorphobacter obsolitio sp. nov.

Candidatus Polymorphobacter obsolitio (NL. fem. n. *obsolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polymorphobacter sp003241875*. The type genome for the species is the GenBank assembly GCA_003241875.1. The GC content of the type genome is 67.73 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Polymorphobacter papililega sp. nov.

Candidatus Polymorphobacter papililega (NL. fem. n. *papililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polymorphobacter sp903939555*. The type genome for the species is the GenBank assembly GCA_903937155.1. The GC content of the type genome is 64.45 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Polynucleobacter acricatio sp. nov.

Candidatus Polynucleobacter acricatio (NL. fem. n. *acricatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903835865*. The type genome for the species is the GenBank assembly GCA_903835865.1. The GC content of the type genome is 45.26 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Polynucleobacter acrifitica sp. nov.

Candidatus Polynucleobacter acrifitica (NL. fem. n. *acrifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp000428385*. The type genome for the species is the GenBank assembly GCA_000428385.1. The GC content of the type genome is 43.7 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Polynucleobacter admurastra sp. nov.

Candidatus Polynucleobacter admurastra (NL. fem. n. *admurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp002797575*. The type genome for the species is the GenBank assembly RS_GCF_002797575.1. The GC content of the type genome is 45.56 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Polynucleobacter adnecitio sp. nov.

Candidatus Polynucleobacter adnecitio (NL. fem. n. *adnecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp009923575*. The type genome for the species is the GenBank assembly GCA_009923575.1. The GC content of the type genome is 45.95 %

and the genome length is 1.63 Mbp.

Description of *Candidatus* Polynucleobacter agravatica sp. nov.

Candidatus Polynucleobacter agravatica (NL. fem. n. *agravatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp013307225*. The type genome for the species is the GenBank assembly RS_GCF_013307225.1. The GC content of the type genome is 45.11 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Polynucleobacter artolitrix sp. nov.

Candidatus Polynucleobacter artolitrix (NL. fem. n. *artolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp000342265*. The type genome for the species is the GenBank assembly RS_GCF_000342265.1. The GC content of the type genome is 46.09 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Polynucleobacter ascelitia sp. nov.

Candidatus Polynucleobacter ascelitia (NL. fem. n. *ascelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903909925*. The type genome for the species is the GenBank assembly GCA_903909925.1. The GC content of the type genome is 45.09 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Polynucleobacter assibitas sp. nov.

Candidatus Polynucleobacter assibitas (NL. fem. n. *assibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903930665*. The type genome for the species is the GenBank assembly GCA_903930665.1. The GC content of the type genome is 44.04 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Polynucleobacter attesisca sp. nov.

Candidatus Polynucleobacter attesisca (NL. fem. n. *attesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903900805*. The type genome for the species is the GenBank assembly GCA_903900805.1. The GC content of the type genome is 44.84 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Polynucleobacter cepuligena sp. nov.

Candidatus Polynucleobacter cepuligena (NL. fem. n. *cepuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903918115*. The type genome for the species is the GenBank assembly GCA_903918115.1. The GC content of the type genome is 45.92 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Polynucleobacter cilibimonia sp. nov.

Candidatus Polynucleobacter cilibimonia (NL. fem. n. *cilibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903821995*. The type genome for the species is the GenBank assembly GCA_903851665.1. The GC content of the type genome is 40.08 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Polynucleobacter colipitio sp. nov.

Candidatus Polynucleobacter colipitio (NL. fem. n. *colipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903880555*. The type genome for the species is the GenBank assembly GCA_903911705.1. The GC content of the type genome is 45.74 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Polynucleobacter colubago sp. nov.

Candidatus Polynucleobacter colubago (NL. fem. n. *colubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903843235*. The type genome for the species is the GenBank assembly GCA_903905925.1. The GC content of the type genome is 45.59 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Polynucleobacter cosigessa sp. nov.

Candidatus Polynucleobacter cosigessa (NL. fem. n. *cosigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903858445*. The type genome for the species is the GenBank assembly GCA_903858445.1. The GC content of the type genome is 44.62 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Polynucleobacter cunabitas sp. nov.

Candidatus Polynucleobacter cunabitas (NL. fem. n. *cunabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903953215*. The type genome for the species is the GenBank assembly GCA_903860375.1. The GC content of the type genome is 46.65 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Polynucleobacter debucago sp. nov.

Candidatus Polynucleobacter debucago (NL. fem. n. *debucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903889595*. The type genome for the species is the GenBank assembly GCA_903889595.1. The GC content of the type genome is 39.8 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Polynucleobacter decunisca sp. nov.

Candidatus Polynucleobacter decunisca (NL. fem. n. *decunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903995005*. The type genome for the species is the GenBank assembly GCA_903995005.1. The GC content of the type genome is 44.92 %

and the genome length is 1.66 Mbp.

Description of *Candidatus* Polynucleobacter defanilega sp. nov.

Candidatus Polynucleobacter defanilega (NL. fem. n. *defanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp013205155*. The type genome for the species is the GenBank assembly GCA_013205155.1. The GC content of the type genome is 43.62 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Polynucleobacter defarimonia sp. nov.

Candidatus Polynucleobacter defarimonia (NL. fem. n. *defarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903944725*. The type genome for the species is the GenBank assembly GCA_903934065.1. The GC content of the type genome is 44.33 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Polynucleobacter defulousia sp. nov.

Candidatus Polynucleobacter defulousia (NL. fem. n. *defulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903935355*. The type genome for the species is the GenBank assembly GCA_903945305.1. The GC content of the type genome is 44.31 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Polynucleobacter desupigena sp. nov.

Candidatus Polynucleobacter desupigena (NL. fem. n. *desupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp013307245*. The type genome for the species is the GenBank assembly RS_GCF_013307245.1. The GC content of the type genome is 44.92 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Polynucleobacter dilemugo sp. nov.

Candidatus Polynucleobacter dilemugo (NL. fem. n. *dilemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903846025*. The type genome for the species is the GenBank assembly GCA_903860025.1. The GC content of the type genome is 44.8 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Polynucleobacter fuligilenta sp. nov.

Candidatus Polynucleobacter fuligilenta (NL. fem. n. *fuligilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp900176405*. The type genome for the species is the GenBank assembly RS_GCF_900176405.1. The GC content of the type genome is 40.97 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Polynucleobacter luculitoga sp. nov.

Candidatus Polynucleobacter luculitoga (NL. fem. n. *luculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903827075*. The type genome for the species is the GenBank assembly GCA_903856235.1. The GC content of the type genome is 45.8 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Polynucleobacter maligiforma sp. nov.

Candidatus Polynucleobacter maligiforma (NL. fem. n. *maligiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903843315*. The type genome for the species is the GenBank assembly GCA_903869295.1. The GC content of the type genome is 45.32 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Polynucleobacter mirabimonia sp. nov.

Candidatus Polynucleobacter mirabimonia (NL. fem. n. *mirabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903837335*. The type genome for the species is the GenBank assembly GCA_903860235.1. The GC content of the type genome is 45.5 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Polynucleobacter munifatio sp. nov.

Candidatus Polynucleobacter munifatio (NL. fem. n. *munifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903875135*. The type genome for the species is the GenBank assembly GCA_903832385.1. The GC content of the type genome is 42.01 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Polynucleobacter mutabimonia sp. nov.

Candidatus Polynucleobacter mutabimonia (NL. fem. n. *mutabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp009924985*. The type genome for the species is the GenBank assembly GCA_009924985.1. The GC content of the type genome is 45.96 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Polynucleobacter nicomilega sp. nov.

Candidatus Polynucleobacter nicomilega (NL. fem. n. *nicomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp002359975*. The type genome for the species is the GenBank assembly GCA_002359975.1. The GC content of the type genome is 46.24 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Polynucleobacter obnunentia sp. nov.

Candidatus Polynucleobacter obnunentia (NL. fem. n. *obnunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp001889925*. The type genome for the species is the GenBank assembly RS_GCF_001889925.1. The GC content of the type genome is 45.55

% and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Polynucleobacter regifastra sp. nov.

Candidatus Polynucleobacter regifastra (NL. fem. n. *regifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903826775*. The type genome for the species is the GenBank assembly GCA_903827885.1. The GC content of the type genome is 42.96 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Polynucleobacter relecitas sp. nov.

Candidatus Polynucleobacter relecitas (NL. fem. n. *relecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903867305*. The type genome for the species is the GenBank assembly GCA_903846645.1. The GC content of the type genome is 41.21 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Polynucleobacter semifilenta sp. nov.

Candidatus Polynucleobacter semifilenta (NL. fem. n. *semifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp001870365*. The type genome for the species is the GenBank assembly RS_GCF_001870365.1. The GC content of the type genome is 45.46 % and the genome length is 2.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Polynucleobacter sugilimonia sp. nov.

Candidatus Polynucleobacter sugilimonia (NL. fem. n. *sugilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903892315*. The type genome for the species is the GenBank assembly GCA_903892315.1. The GC content of the type genome is 45.87 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Polynucleobacter tegumilenta sp. nov.

Candidatus Polynucleobacter tegumilenta (NL. fem. n. *tegumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903871735*. The type genome for the species is the GenBank assembly GCA_903871735.1. The GC content of the type genome is 42.06 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Polynucleobacter televastra sp. nov.

Candidatus Polynucleobacter televastra (NL. fem. n. *televastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp008015455*. The type genome for the species is the GenBank assembly GCA_008015455.1. The GC content of the type genome is 42.98 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Polynucleobacter tomogago sp. nov.

Candidatus Polynucleobacter tomogago (NL. fem. n. *tomogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903845455*. The type genome for the species is the GenBank assembly GCA_903850475.1. The GC content of the type genome is 44.7 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Polynucleobacter urbicisca sp. nov.

Candidatus Polynucleobacter urbicisca (NL. fem. n. *urbicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp009927445*. The type genome for the species is the GenBank assembly GCA_009927445.1. The GC content of the type genome is 42.41 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Polynucleobacter veridetta sp. nov.

Candidatus Polynucleobacter veridetta (NL. fem. n. *veridetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903876105*. The type genome for the species is the GenBank assembly GCA_903876105.1. The GC content of the type genome is 44.92 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Polynucleobacter vilitimonia sp. nov.

Candidatus Polynucleobacter vilitimonia (NL. fem. n. *vilitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp009928245*. The type genome for the species is the GenBank assembly GCA_010027495.1. The GC content of the type genome is 47.81 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Polynucleobacter vitifessa sp. nov.

Candidatus Polynucleobacter vitifessa (NL. fem. n. *vitifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp903944255*. The type genome for the species is the GenBank assembly GCA_903944255.1. The GC content of the type genome is 43.84 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Polynucleobacter vitupitura sp. nov.

Candidatus Polynucleobacter vitupitura (NL. fem. n. *vitupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp003482545*. The type genome for the species is the GenBank assembly GCA_003482545.1. The GC content of the type genome is 44.55 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Polynucleobacter vocifentia sp. nov.

Candidatus Polynucleobacter vocifentia (NL. fem. n. *vocifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Polynucleobacter sp001830325*. The type genome for the species is the GenBank assembly GCA_001830325.1. The GC content of the type genome is 45.55 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Polynucleobacter xeropastra sp. nov.

Candidatus Polynucleobacter xeropastra (NL. fem. n. *xeropastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Polynucleobacter sp002292975*. The type genome for the species is the GenBank assembly GCA_002292975.1. The GC content of the type genome is 46.53 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Pomifana detotessa sp. nov.

Candidatus Pomifana detotessa (NL. fem. n. *detotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1609 sp002321895*. The type genome for the species is the GenBank assembly GCA_002712385.1. The GC content of the type genome is 42.06 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Pomifana gen. nov.

Candidatus Pomifana (NL. fem. n. *Pomifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1609*. The type species for the genus is *Candidatus* Pomifana detotessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Pomifanaceae fam. nov.

Candidatus Pomifanaceae (NL. fem. n. *Pomifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA1609*. The type genus for the taxon is *Candidatus* Pomifana .

According to GTDB R06-RS202, this family belongs to the order *Bdellovibrionales*.

Description of *Candidatus* Pomifaria albogitrix sp. nov.

Candidatus Pomifaria albogitrix (NL. fem. n. *albogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED144 sp002170005*. The type genome for the species is the GenBank assembly GCA_002170005.2. The GC content of the type genome is 33.41 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Pomifaria gen. nov.

Candidatus Pomifaria (NL. fem. n. *Pomifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED144*. The type species for the genus is *Candidatus* Pomifaria albogitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Pomifaria nubigimonas sp. nov.

Candidatus Pomifaria nubigimonas (NL. fem. n. *nubigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED144 sp902615915*. The type genome for the species is the GenBank assembly GCA_902615915.1. The GC content of the type genome is 33.35 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Pomifella metucitoga sp. nov.

Candidatus Pomifella metucitoga (NL. fem. n. *metucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCJ01 sp007125835*. The type genome for the species is the

GenBank assembly GCA_007121895.1. The GC content of the type genome is 61.86 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Pomifella gen. nov.

Candidatus Pomifella (NL. fem. n. *Pomifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLCJ01*. The type species for the genus is *Candidatus* Pomifella metucitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLCJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifellaceae.

Description of *Candidatus* Pomifellaceae fam. nov.

Candidatus Pomifellaceae (NL. fem. n. *Pomifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLCJ01*. The type genus for the taxon is *Candidatus* Pomifella .

According to GTDB R06-RS202, this family belongs to the order *Verrucomicrobiales*.

Description of *Candidatus* Pomifia catilatica sp. nov.

Candidatus Pomifia catilatica (NL. fem. n. *catilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-46-22 sp002796245*. The type genome for the species is the GenBank assembly GCA_002787725.1. The GC content of the type genome is 46.34 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Pomifia gen. nov.

Candidatus Pomifia (NL. fem. n. *Pomifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-46-22*. The type species for the genus is *Candidatus* Pomifia catilatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA12402. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenosaceae.

Description of *Candidatus* Pomifida capilivita sp. nov.

Candidatus Pomifida capilivita (NL. fem. n. *capilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPN01 sp003557125*. The type genome for the species is the GenBank assembly GCA_003557125.1. The GC content of the type genome is 62.64 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Pomifida gen. nov.

Candidatus Pomifida (NL. fem. n. *Pomifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWPN01*. The type species for the genus is *Candidatus* Pomifida capilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifidaceae.

Description of *Candidatus* Pomifidaceae fam. nov.

Candidatus Pomifidaceae (NL. fem. n. *Pomifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWPN01.* The type genus for the taxon is *Candidatus* Pomifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomariales.

Description of *Candidatus* Pomifosa negiditoga sp. nov.

Candidatus Pomifosa negiditoga (NL. fem. n. *negiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MWDF01 sp002070415*. The type genome for the species is the GenBank assembly GCA_002070415.1. The GC content of the type genome is 58.08 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Pomifosa gen. nov.

Candidatus Pomifosa (NL. fem. n. *Pomifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDF01*. The type species for the genus is *Candidatus* Pomifosa negiditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWDF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifosaceae.

Description of *Candidatus* Pomifosaceae fam. nov.

Candidatus Pomifosaceae (NL. fem. n. *Pomifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWDF01.* The type genus for the taxon is *Candidatus* Pomifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTUO25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifariales.

Description of *Candidatus* Pomifula conifitoga sp. nov.

Candidatus Pomifula conifitoga (NL. fem. n. *conifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISYW01 sp903889795*. The type genome for the species is the GenBank assembly GCA_903863625.1. The GC content of the type genome is 44.86 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Pomifula gen. nov.

Candidatus Pomifula (NL. fem. n. *Pomifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISYW01*. The type species for the genus is *Candidatus* Pomifula

conifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Pontibacillus cosigugo sp. nov.

Candidatus Pontibacillus cosigugo (NL. fem. n. *cosigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacillus sp009858175*. The type genome for the species is the GenBank assembly RS_GCF_009858175.1. The GC content of the type genome is 38.59 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Pontibacter adlubicella sp. nov.

Candidatus Pontibacter adlubicella (NL. fem. n. *adlubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp014306105*. The type genome for the species is the GenBank assembly RS_GCF_014306105.1. The GC content of the type genome is 45.38 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pontibacter artolivita sp. nov.

Candidatus Pontibacter artolivita (NL. fem. n. *artolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp010119545*. The type genome for the species is the GenBank assembly RS_GCF_010119545.1. The GC content of the type genome is 45.58 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Pontibacter demagifica sp. nov.

Candidatus Pontibacter demagifica (NL. fem. n. *demagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp003284895*. The type genome for the species is the

GenBank assembly RS_GCF_003284895.1. The GC content of the type genome is 45.52 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Pontibacter domabimonia sp. nov.

Candidatus Pontibacter domabimonia (NL. fem. n. *domabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp010015475*. The type genome for the species is the GenBank assembly RS_GCF_010015475.1. The GC content of the type genome is 47.7 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Pontibacter exsatentia sp. nov.

Candidatus Pontibacter exsatentia (NL. fem. n. *exsatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp006385705*. The type genome for the species is the GenBank assembly RS_GCF_006385705.1. The GC content of the type genome is 52.57 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Pontibacter homicitica sp. nov.

Candidatus Pontibacter homicitica (NL. fem. n. *homicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp014297265*. The type genome for the species is the GenBank assembly RS_GCF_014297265.1. The GC content of the type genome is 43.93 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Pontibacter obnoxatica sp. nov.

Candidatus Pontibacter obnoxatica (NL. fem. n. *obnoxatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp014212495*. The type genome for the species is the GenBank assembly RS_GCF_014212495.1. The GC content of the type genome is 47.81 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Pontibacter obrigitas sp. nov.

Candidatus Pontibacter obrigitas (NL. fem. n. *obrigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp001907195*. The type genome for the species is the GenBank assembly RS_GCF_001907195.1. The GC content of the type genome is 53.56 % and the genome length is 4.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Pontibacter vepalitia sp. nov.

Candidatus Pontibacter vepalitia (NL. fem. n. *vepalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontibacter sp010686685*. The type genome for the species is the GenBank assembly RS_GCF_010686685.1. The GC content of the type genome is 46.06 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Ponticaulis cacalitura sp. nov.

Candidatus Ponticaulis cacalitura (NL. fem. n. *cacalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002173095*. The type genome for the species is the GenBank assembly GCA_002691215.1. The GC content of the type genome is 54.75 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Ponticaulis cosigousia sp. nov.

Candidatus Ponticaulis cosigousia (NL. fem. n. *cosigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002723155*. The type genome for the species is the GenBank assembly GCA_002687635.1. The GC content of the type genome is 54.81 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ponticaulis dicibago sp. nov.

Candidatus Ponticaulis dicibago (NL. fem. n. *dicibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002699325*. The type genome for the species is the GenBank assembly GCA_002699325.1. The GC content of the type genome is 55.61 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Ponticaulis hexagigena sp. nov.

Candidatus Ponticaulis hexagigena (NL. fem. n. *hexagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002692725*. The type genome for the species is the GenBank assembly GCA_002692725.1. The GC content of the type genome is 55.2 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Ponticaulis holisastra sp. nov.

Candidatus Ponticaulis holisastra (NL. fem. n. *holisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002338565*. The type genome for the species is the GenBank assembly GCA_002338565.1. The GC content of the type genome is 55.27 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Ponticaulis siligitio sp. nov.

Candidatus Ponticaulis siligitio (NL. fem. n. *siligitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ponticaulis sp002701295*. The type genome for the species is the GenBank assembly GCA_002701295.1. The GC content of the type genome is 54.4 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Pontiella alecticula sp. nov.

Candidatus Pontiella alecticula (NL. fem. n. *alecticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp003230915*. The type genome for the species is the GenBank assembly GCA_003230915.1. The GC content of the type genome is 52.57 %

and the genome length is 1.9 Mbp.

Description of *Candidatus* Pontiella mahelitrix sp. nov.

Candidatus Pontiella mahelitrix (NL. fem. n. *mahelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp004299845*. The type genome for the species is the GenBank assembly RS_GCF_004299845.1. The GC content of the type genome is 52.0 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Pontiella nosocousia sp. nov.

Candidatus Pontiella nosocousia (NL. fem. n. *nosocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp013042165*. The type genome for the species is the GenBank assembly GCA_013042165.1. The GC content of the type genome is 55.77 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Pontiella obfenetta sp. nov.

Candidatus Pontiella obfenetta (NL. fem. n. *obfenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp003246265*. The type genome for the species is the GenBank assembly GCA_003246265.1. The GC content of the type genome is 63.43 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Pontiella omnigilega sp. nov.

Candidatus Pontiella omnigilega (NL. fem. n. *omnigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp003252225*. The type genome for the species is the GenBank assembly GCA_003252225.1. The GC content of the type genome is 53.63 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Pontiella sicunibra sp. nov.

Candidatus Pontiella sicunibra (NL. fem. n. *sicunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontiella sp012729265*. The type genome for the species is the GenBank assembly GCA_012729265.1. The GC content of the type genome is 53.1 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Pontimonas depubatica sp. nov.

Candidatus Pontimonas depubatica (NL. fem. n. *depubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontimonas sp009704535*. The type genome for the species is the GenBank assembly GCA_009704535.1. The GC content of the type genome is 58.9 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Pontimonas impigetta sp. nov.

Candidatus Pontimonas impigetta (NL. fem. n. *impigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontimonas sp007117135*. The type genome for the species is the GenBank assembly GCA_007117135.1. The GC content of the type genome is 56.67 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Pontimonas rubigilega sp. nov.

Candidatus Pontimonas rubigilega (NL. fem. n. *rubigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontimonas sp002172585*. The type genome for the species is the GenBank assembly GCA_002172585.1. The GC content of the type genome is 59.43 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Pontimonas rurigitura sp. nov.

Candidatus Pontimonas rurigitura (NL. fem. n. *rurigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontimonas sp001438965*. The type genome for the species is the GenBank assembly GCA_001438965.1. The GC content of the type genome is 55.73 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Pontimonas sacomitudo sp. nov.

Candidatus Pontimonas sacomitudo (NL. fem. n. *sacomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontimonas sp000754445*. The type genome for the species is the GenBank assembly GCA_002293055.1. The GC content of the type genome is 59.17 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Pontixanthobacter sacomedo sp. nov.

Candidatus Pontixanthobacter sacomedo (NL. fem. n. *sacomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontixanthobacter sp012972675*. The type genome for the species is the GenBank assembly RS_GCF_012972675.1. The GC content of the type genome is 55.49 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Pontixanthobacter visifousia sp. nov.

Candidatus Pontixanthobacter visifousia (NL. fem. n. *visifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pontixanthobacter sp003344885*. The type genome for the species is the GenBank assembly RS_GCF_003344885.1. The GC content of the type genome is 57.87 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Porisulfidus exsorifica sp. nov.

Candidatus Porisulfidus exsorifica (NL. fem. n. *exsorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Porisulfidus sp002631715*. The type genome for the species is the GenBank assembly GCA_002631715.1. The GC content of the type genome is 59.48 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Porphyromonas ammatibra sp. nov.

Candidatus Porphyromonas ammatibra (NL. fem. n. *ammatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp000768875*. The type genome for the species is the GenBank assembly RS_GCF_000768875.1. The GC content of the type genome is 53.86 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dog mouth".

Description of *Candidatus* Porphyromonas attoritura sp. nov.

Candidatus Porphyromonas attoritura (NL. fem. n. *attoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp001552775*. The type genome for the species is the GenBank assembly RS_GCF_001552775.1. The GC content of the type genome is 42.86 % and the genome length is 1.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Porphyromonas bacifax sp. nov.

Candidatus Porphyromonas bacifax (NL. fem. n. *bacifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp900538385*. The type genome for the species is the GenBank assembly GCA_900761795.1. The GC content of the type genome is 52.23 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Porphyromonas butubugo sp. nov.

Candidatus Porphyromonas butubugo (NL. fem. n. *butubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp900539155*. The type genome for the species is the GenBank assembly GCA_900759085.1. The GC content of the type genome is 53.63 %

and the genome length is 1.88 Mbp.

Description of *Candidatus* Porphyromonas deculousia sp. nov.

Candidatus Porphyromonas deculousia (NL. fem. n. *deculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp900548415*. The type genome for the species is the GenBank assembly GCA_900548415.1. The GC content of the type genome is 54.62 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Porphyromonas defasibra sp. nov.

Candidatus Porphyromonas defasibra (NL. fem. n. *defasibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp000467855*. The type genome for the species is the GenBank assembly RS_GCF_000467855.2. The GC content of the type genome is 55.68 % and the genome length is 2.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dental plaque biofilm of the third molar".

Description of *Candidatus* Porphyromonas intesiforma sp. nov.

Candidatus Porphyromonas intesiforma (NL. fem. n. *intesiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp003640335*. The type genome for the species is the GenBank assembly GCA_003640335.1. The GC content of the type genome is 42.75 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Porphyromonas megalimonas sp. nov.

Candidatus Porphyromonas megalimonas (NL. fem. n. *megalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp000769075*. The type genome for the species is the GenBank assembly RS_GCF_000768935.1. The GC content of the type genome is 49.69 % and the genome length is 2.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dog mouth".

Description of *Candidatus* Porphyromonas senacax sp. nov.

Candidatus Porphyromonas senacax (NL. fem. n. *senacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp900546675*. The type genome for the species is the GenBank assembly GCA_900546675.1. The GC content of the type genome is 52.72 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Porphyromonas vitifedo sp. nov.

Candidatus Porphyromonas vitifedo (NL. fem. n. *vitifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas sp900539765*. The type genome for the species is the GenBank assembly GCA_900759295.1. The GC content of the type genome is 52.99 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Porphyromonas acrifax sp. nov.

Candidatus Porphyromonas acrifax (NL. fem. n. *acrifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas_A sp900541275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541275.1. The GC content of the type genome is 56.35 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Porphyromonas capilitica sp. nov.

Candidatus Porphyromonas capilitica (NL. fem. n. *capilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas_A sp900554935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900554935.1. The GC content of the type genome is 48.01 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Porphyromonas cohuriforma sp. nov.

Candidatus Porphyromonas cohuriforma (NL. fem. n. *cohuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas_A sp001808555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001808555.1. The GC content of the type genome is 55.56 % and the genome length is 2.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "bone misc".

Description of *Candidatus* Porphyromonas delubugo sp. nov.

Candidatus Porphyromonas delubugo (NL. fem. n. *delubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas_A sp004555765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004555765.1. The GC content of the type genome is 53.69 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Porphyromonas monacitia sp. nov.

Candidatus Porphyromonas monacitia (NL. fem. n. *monacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porphyromonas_A sp900120395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900120395.1. The GC content of the type genome is 51.86 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Porticoccus accapax sp. nov.

Candidatus Porticoccus accapax (NL. fem. n. *accapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002733125*. The type genome for the species is the GenBank assembly GCA_002733125.1. The GC content of the type genome is 53.44 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Porticoccus anaplilega sp. nov.

Candidatus Porticoccus anaplilega (NL. fem. n. *anaplilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002390525*. The type genome for the species is the GenBank assembly GCA_002390525.1. The GC content of the type genome is 36.59 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Porticoccus arcititura sp. nov.

Candidatus Porticoccus arcititura (NL. fem. n. *arcititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp006227015*. The type genome for the species is the GenBank assembly GCA_006227015.1. The GC content of the type genome is 53.24 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Porticoccus catocitura sp. nov.

Candidatus Porticoccus catocitura (NL. fem. n. *catocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp006226995*. The type genome for the species is the GenBank assembly GCA_006226995.1. The GC content of the type genome is 52.64 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Porticoccus expurimonas sp. nov.

Candidatus Porticoccus expurimonas (NL. fem. n. *expurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp011049795*. The type genome for the species is the GenBank assembly GCA_011049795.1. The GC content of the type genome is 47.02 %

and the genome length is 3.19 Mbp.

Description of *Candidatus* Porticoccus intecicella sp. nov.

Candidatus Porticoccus intecicella (NL. fem. n. *intecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002341315*. The type genome for the species is the GenBank assembly GCA_002341315.1. The GC content of the type genome is 53.51 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Porticoccus metucisca sp. nov.

Candidatus Porticoccus metucisca (NL. fem. n. *metucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002707685*. The type genome for the species is the GenBank assembly GCA_002325295.1. The GC content of the type genome is 52.77 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Porticoccus solivilenta sp. nov.

Candidatus Porticoccus solivilenta (NL. fem. n. *solivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002367235*. The type genome for the species is the GenBank assembly GCA_002367235.1. The GC content of the type genome is 48.36 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Porticoccus triclatica sp. nov.

Candidatus Porticoccus triclatica (NL. fem. n. *triclatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002685455*. The type genome for the species is the GenBank assembly GCA_002685455.1. The GC content of the type genome is 34.63 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Porticoccus vitabitia sp. nov.

Candidatus Porticoccus vitabitia (NL. fem. n. *vitabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002746985*. The type genome for the species is the GenBank assembly GCA_002746985.1. The GC content of the type genome is 44.46 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Porticoccus xeramitica sp. nov.

Candidatus Porticoccus xeramitica (NL. fem. n. *xeramitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Porticoccus sp002390285*. The type genome for the species is the GenBank assembly GCA_002389205.1. The GC content of the type genome is 47.59 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Poseidonibacter abrepousia sp. nov.

Candidatus Poseidonibacter abrepousia (NL. fem. n. *abrepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Poseidonibacter sp002685075*. The type genome for the species is the GenBank assembly GCA_002685075.1. The GC content of the type genome is 27.4 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Poseidonibacter anxifugo sp. nov.

Candidatus Poseidonibacter anxifugo (NL. fem. n. *anxifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Poseidonibacter sp002470185*. The type genome for the species is the GenBank assembly GCA_002470185.1. The GC content of the type genome is 28.19 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Poseidonibacter inrecicella sp. nov.

Candidatus Poseidonibacter inrecicella (NL. fem. n. *inrecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Poseidonibacter sp003667345*. The type genome for the species is the GenBank assembly RS_GCF_003667345.1. The GC content of the type genome is 27.07 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Poseidonibacter malificella sp. nov.

Candidatus Poseidonibacter malificella (NL. fem. n. *malificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Poseidonibacter sp009208075*. The type genome for the species is the GenBank assembly RS_GCF_009208095.1. The GC content of the type genome is 27.57 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Practella adtacisca sp. nov.

Candidatus Practella adtacisca (NL. fem. n. *adtacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MM1 sp001648895*. The type genome for the species is the GenBank assembly RS_GCF_001648895.1. The GC content of the type genome is 46.78 % and the genome length is 2.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "grassland soil".

Description of *Candidatus* Practella gen. nov.

Candidatus Practella (NL. fem. n. *Practella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MM1*. The type species for the genus is *Candidatus* Practella adtacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Practia alluventia sp. nov.

Candidatus Practia alluventia (NL. fem. n. *alluventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-48-17 sp001818775*. The type genome for the species is

the GenBank assembly GCA_001818775.1. The GC content of the type genome is 48.11 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Practia gen. nov.

Candidatus Practia (NL. fem. n. *Practia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-48-17*. The type species for the genus is *Candidatus* Practia alluventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-48-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubariaceae.

Description of *Candidatus* Practida dilogisca sp. nov.

Candidatus Practida dilogisca (NL. fem. n. *dilogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICB01 sp009691555*. The type genome for the species is the GenBank assembly GCA_009691555.1. The GC content of the type genome is 46.49 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Practida gen. nov.

Candidatus Practida (NL. fem. n. *Practida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICB01*. The type species for the genus is *Candidatus* Practida dilogisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BJGX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Necopellaceae.

Description of *Candidatus* Practida foricousia sp. nov.

Candidatus Practida foricousia (NL. fem. n. *foricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICB01 sp009691435*. The type genome for the species is the GenBank assembly GCA_009691435.1. The GC content of the type genome is 42.94 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Practosa atricisca sp. nov.

Candidatus Practosa atricisca (NL. fem. n. *atricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJS01 sp009777165*. The type genome for the species is the GenBank assembly GCA_009777165.1. The GC content of the type genome is 60.9 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Practosa gen. nov.

Candidatus Practosa (NL. fem. n. *Practosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRJS01*. The type species for the genus is *Candidatus* Practosa atricisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Practosa estoviforma sp. nov.

Candidatus Practosa estoviforma (NL. fem. n. *estoviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJS01 sp009778475*. The type genome for the species is the GenBank assembly GCA_009778475.1. The GC content of the type genome is 62.97 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Practula ancepitudo sp. nov.

Candidatus Practula ancepitudo (NL. fem. n. *ancepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1191 sp013289615*. The type genome for the species is the GenBank assembly GCA_013289615.1. The GC content of the type genome is 64.54 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Practula gen. nov.

Candidatus Practula (NL. fem. n. *Practula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1191*. The type species for the genus is *Candidatus* Practula ancepitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Practula cibicivita sp. nov.

Candidatus Practula cibicivita (NL. fem. n. *cibicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1191 sp003162555*. The type genome for the species is the GenBank assembly GCA_003162555.1. The GC content of the type genome is 65.33 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Practula resalibula sp. nov.

Candidatus Practula resalibula (NL. fem. n. *resalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1191 sp003132025*. The type genome for the species is the GenBank assembly GCA_003132025.1. The GC content of the type genome is 64.2 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Pradoshia extunicula sp. nov.

Candidatus Pradoshia extunicula (NL. fem. n. *extunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pradoshia sp001183965*. The type genome for the species is the GenBank assembly RS_GCF_001183965.1. The GC content of the type genome is 42.9

% and the genome length is 4.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pradoshia fecunitica sp. nov.

Candidatus Pradoshia fecunitica (NL. fem. n. *fecunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pradoshia sp001685035*. The type genome for the species is the GenBank assembly RS_GCF_008087365.1. The GC content of the type genome is 37.58 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Pragmana indupentia sp. nov.

Candidatus Pragmana indupentia (NL. fem. n. *indupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSYU01 sp011367365*. The type genome for the species is the GenBank assembly GCA_011367365.1. The GC content of the type genome is 59.5 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Pragmana gen. nov.

Candidatus Pragmana (NL. fem. n. *Pragmana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSYU01*. The type species for the genus is *Candidatus* Pragmana indupentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pragmaria inmenicula sp. nov.

Candidatus Pragmaria inmenicula (NL. fem. n. *inmenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGF01 sp007376445*. The type genome for the species is the GenBank assembly GCA_007376445.1. The GC content of the type genome is 46.38 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Pragmaria gen. nov.

Candidatus Pragmaria (NL. fem. n. *Pragmaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGF01*. The type species for the genus is *Candidatus* Pragmaria inmenicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WO2-44-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinacellaceae.

Description of *Candidatus* Pragmella epigrisca sp. nov.

Candidatus Pragmella epigrisca (NL. fem. n. *epigrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHC01 sp013152085*. The type genome for the species is the GenBank assembly GCA_013152085.1. The GC content of the type genome is 43.57 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Pragmella gen. nov.

Candidatus Pragmella (NL. fem. n. *Pragmella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHC01*. The type species for the genus is *Candidatus* Pragmella epigrisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Pragmida lugubitura sp. nov.

Candidatus Pragmida lugubitura (NL. fem. n. *lugubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-368 sp003246505*. The type genome for the species is the GenBank assembly GCA_003246505.1. The GC content of the type genome is 58.37 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Pragmida gen. nov.

Candidatus Pragmida (NL. fem. n. *Pragmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-368*. The type species for the genus is *Candidatus* Pragmida lugubitura .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Pragmosa adtilicella sp. nov.

Candidatus Pragmosa adtilicella (NL. fem. n. *adtilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIW01 sp011333945*. The type genome for the species is the GenBank assembly GCA_011333945.1. The GC content of the type genome is 51.46 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Pragmosa gen. nov.

Candidatus Pragmosa (NL. fem. n. *Pragmosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIW01*. The type species for the genus is *Candidatus* Pragmosa adtilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicellaceae.

Description of *Candidatus* Prevotella ablepugo sp. nov.

Candidatus Prevotella ablepugo (NL. fem. n. *ablepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902790625*. The type genome for the species is the GenBank assembly GCA_902790625.1. The GC content of the type genome is 55.19 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Prevotella acculousia sp. nov.

Candidatus Prevotella acculousia (NL. fem. n. *acculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900548535*. The type genome for the species is the GenBank assembly GCA_900548535.1. The GC content of the type genome is 46.59 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Prevotella adaggetta sp. nov.

Candidatus Prevotella adaggetta (NL. fem. n. *adaggetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900772835*. The type genome for the species is the GenBank assembly GCA_900772835.1. The GC content of the type genome is 51.83 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Prevotella adcubitudo sp. nov.

Candidatus Prevotella adcubitudo (NL. fem. n. *adcubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900550365*. The type genome for the species is the GenBank assembly GCA_900550365.1. The GC content of the type genome is 49.76 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Prevotella adlapitrix sp. nov.

Candidatus Prevotella adlapitrix (NL. fem. n. *adlapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002317355*. The type genome for the species is the GenBank assembly GCA_002317355.1. The GC content of the type genome is 43.16 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Prevotella admuratica sp. nov.

Candidatus Prevotella admuratica (NL. fem. n. *admuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902778265*. The type genome for the species is the GenBank assembly GCA_902778265.1. The GC content of the type genome is 43.28 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Prevotella adnicilenta sp. nov.

Candidatus Prevotella adnicilenta (NL. fem. n. *adnicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902789415*. The type genome for the species is the GenBank assembly GCA_902789415.1. The GC content of the type genome is 47.39 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Prevotella adnubivita sp. nov.

Candidatus Prevotella adnubivita (NL. fem. n. *adnubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002363695*. The type genome for the species is the GenBank assembly GCA_002363695.1. The GC content of the type genome is 53.39 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Prevotella adpagitura sp. nov.

Candidatus Prevotella adpagitura (NL. fem. n. *adpagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp013166605*. The type genome for the species is the GenBank assembly RS_GCF_013166605.1. The GC content of the type genome is 44.4 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Prevotella adrecago sp. nov.

Candidatus Prevotella adrecago (NL. fem. n. *adrecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000619825*. The type genome for the species is the GenBank assembly RS_GCF_000619825.1. The GC content of the type genome is 47.75

% and the genome length is 3.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cow rumen".

Description of *Candidatus* Prevotella adsicessa sp. nov.

Candidatus Prevotella adsicessa (NL. fem. n. *adsicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002316005*. The type genome for the species is the GenBank assembly GCA_002316005.1. The GC content of the type genome is 45.55 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella affamifica sp. nov.

Candidatus Prevotella affamifica (NL. fem. n. *affamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902772585*. The type genome for the species is the GenBank assembly GCA_902772585.1. The GC content of the type genome is 48.8 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Prevotella affunifica sp. nov.

Candidatus Prevotella affunifica (NL. fem. n. *affunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800495*. The type genome for the species is the GenBank assembly GCA_902800495.1. The GC content of the type genome is 52.88 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Prevotella aggubibula sp. nov.

Candidatus Prevotella aggubibula (NL. fem. n. *aggubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902803475*. The type genome for the species is the GenBank assembly GCA_902803475.1. The GC content of the type genome is 46.2 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Prevotella agnomago sp. nov.

Candidatus Prevotella agnomago (NL. fem. n. *agnomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002372235*. The type genome for the species is the GenBank assembly GCA_002372235.1. The GC content of the type genome is 51.89 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Prevotella alcibiforma sp. nov.

Candidatus Prevotella alcibiforma (NL. fem. n. *alcibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353525*. The type genome for the species is the GenBank assembly GCA_002353525.1. The GC content of the type genome is 51.14 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Prevotella algifatio sp. nov.

Candidatus Prevotella algifatio (NL. fem. n. *algifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900556825*. The type genome for the species is the GenBank assembly GCA_900556825.1. The GC content of the type genome is 46.09 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Prevotella allacilega sp. nov.

Candidatus Prevotella allacilega (NL. fem. n. *allacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902770845*. The type genome for the species is the GenBank assembly GCA_902770845.1. The GC content of the type genome is 53.41 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Prevotella almucax sp. nov.

Candidatus Prevotella almucax (NL. fem. n. *almucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002361535*. The type genome for the species is the GenBank assembly GCA_002361535.1. The GC content of the type genome is 48.71 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Prevotella almucitia sp. nov.

Candidatus Prevotella almucitia (NL. fem. n. *almucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000163055*. The type genome for the species is the GenBank assembly RS_GCF_000163055.2. The GC content of the type genome is 37.5 % and the genome length is 2.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Prevotella alsulibra sp. nov.

Candidatus Prevotella alsulibra (NL. fem. n. *alsulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp003043945*. The type genome for the species is the GenBank assembly RS_GCF_003043945.1. The GC content of the type genome is 49.47 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Prevotella ambidetta sp. nov.

Candidatus Prevotella ambidetta (NL. fem. n. *ambidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp001552765*. The type genome for the species is the GenBank assembly RS_GCF_001552765.1. The GC content of the type genome is 45.82 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Prevotella ammatetta sp. nov.

Candidatus Prevotella ammatetta (NL. fem. n. *ammatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp002251435*. The type genome for the species is the GenBank assembly RS_GCF_002251435.1. The GC content of the type genome is 45.62 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Prevotella anteciforma sp. nov.

Candidatus Prevotella anteciforma (NL. fem. n. *anteciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902803455*. The type genome for the species is the GenBank assembly GCA_902803455.1. The GC content of the type genome is 49.37 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Prevotella antepifica sp. nov.

Candidatus Prevotella antepifica (NL. fem. n. *antepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002392645*. The type genome for the species is the GenBank assembly GCA_002392645.1. The GC content of the type genome is 47.22 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Prevotella arcatitica sp. nov.

Candidatus Prevotella arcatitica (NL. fem. n. *arcatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002379425*. The type genome for the species is the GenBank assembly GCA_002379425.1. The GC content of the type genome is 52.13 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Prevotella argimessa sp. nov.

Candidatus Prevotella argimessa (NL. fem. n. *argimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902774795*. The type genome for the species is the GenBank assembly GCA_902774795.1. The GC content of the type genome is 46.48 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Prevotella ascisago sp. nov.

Candidatus Prevotella ascisago (NL. fem. n. *ascisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900771975*. The type genome for the species is the GenBank assembly GCA_900771975.1. The GC content of the type genome is 44.45 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Prevotella baditugo sp. nov.

Candidatus Prevotella baditugo (NL. fem. n. *baditugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004554665*. The type genome for the species is the GenBank assembly GCA_004554665.1. The GC content of the type genome is 53.59 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Prevotella benivatio sp. nov.

Candidatus Prevotella benivatio (NL. fem. n. *benivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900556395*. The type genome for the species is the GenBank assembly GCA_900556395.1. The GC content of the type genome is 45.34 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Prevotella betacitio sp. nov.

Candidatus Prevotella betacitio (NL. fem. n. *betacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318555*. The type genome for the species is the GenBank assembly GCA_900317115.1. The GC content of the type genome is 49.68 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Prevotella bicapatica sp. nov.

Candidatus Prevotella bicapatica (NL. fem. n. *bicapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900290275*. The type genome for the species is the GenBank assembly GCA_900542775.1. The GC content of the type genome is 44.68 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Prevotella bicapetta sp. nov.

Candidatus Prevotella bicapetta (NL. fem. n. *bicapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318815*. The type genome for the species is the GenBank assembly GCA_902780275.1. The GC content of the type genome is 52.31 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Prevotella bigaricella sp. nov.

Candidatus Prevotella bigaricella (NL. fem. n. *bigaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900554695*. The type genome for the species is the GenBank assembly GCA_900752585.1. The GC content of the type genome is 46.92 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Prevotella bipinibra sp. nov.

Candidatus Prevotella bipinibra (NL. fem. n. *bipinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318685*. The type genome for the species is the GenBank assembly GCA_902801505.1. The GC content of the type genome is 53.25 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Prevotella bisacedo sp. nov.

Candidatus Prevotella bisacedo (NL. fem. n. *bisacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902801375*. The type genome for the species is the GenBank assembly GCA_902761765.1. The GC content of the type genome is 51.8 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Prevotella bisulago sp. nov.

Candidatus Prevotella bisulago (NL. fem. n. *bisulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900550035*. The type genome for the species is the GenBank assembly GCA_900550035.1. The GC content of the type genome is 47.39 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Prevotella bonificula sp. nov.

Candidatus Prevotella bonificula (NL. fem. n. *bonificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000424185*. The type genome for the species is the GenBank assembly RS_GCF_000424185.1. The GC content of the type genome is 51.48 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Prevotella bovicilenta sp. nov.

Candidatus Prevotella bovicilenta (NL. fem. n. *bovicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900554835*. The type genome for the species is the GenBank assembly GCA_900554835.1. The GC content of the type genome is 42.77 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Prevotella bucelatio sp. nov.

Candidatus Prevotella bucelatio (NL. fem. n. *bucelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353225*. The type genome for the species is the GenBank assembly GCA_002353445.1. The GC content of the type genome is 46.89 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Prevotella butubedo sp. nov.

Candidatus Prevotella butubedo (NL. fem. n. *butubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900317405*. The type genome for the species is the GenBank assembly GCA_902758595.1. The GC content of the type genome is 47.79 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Prevotella camilicula sp. nov.

Candidatus Prevotella camilicula (NL. fem. n. *camilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316285*. The type genome for the species is the GenBank assembly GCA_900316285.1. The GC content of the type genome is 52.44 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Prevotella canacentia sp. nov.

Candidatus Prevotella canacentia (NL. fem. n. *canacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900770395*. The type genome for the species is the GenBank assembly GCA_900770395.1. The GC content of the type genome is 47.78 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Prevotella capucibra sp. nov.

Candidatus Prevotella capucibra (NL. fem. n. *capucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002440225*. The type genome for the species is the GenBank assembly GCA_002440225.1. The GC content of the type genome is 46.63 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Prevotella caravastra sp. nov.

Candidatus Prevotella caravastra (NL. fem. n. *caravastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902761605*. The type genome for the species is the GenBank assembly GCA_902761605.1. The GC content of the type genome is 46.57 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Prevotella carucatica sp. nov.

Candidatus Prevotella carucatica (NL. fem. n. *carucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902780025*. The type genome for the species is the GenBank assembly GCA_902780025.1. The GC content of the type genome is 52.76 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Prevotella carunousia sp. nov.

Candidatus Prevotella carunousia (NL. fem. n. *carunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002314055*. The type genome for the species is the GenBank assembly GCA_003517365.1. The GC content of the type genome is 45.62 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Prevotella casigitia sp. nov.

Candidatus Prevotella casigitia (NL. fem. n. *casigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902798425*. The type genome for the species is the GenBank assembly GCA_902798425.1. The GC content of the type genome is 48.75 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Prevotella catagimonia sp. nov.

Candidatus Prevotella catagimonia (NL. fem. n. *catagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902800185*. The type genome for the species is the GenBank assembly GCA_902800185.1. The GC content of the type genome is 50.29 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Prevotella catapilega sp. nov.

Candidatus Prevotella catapilega (NL. fem. n. *catapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318915*. The type genome for the species is the GenBank assembly GCA_902779555.1. The GC content of the type genome is 55.22 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Prevotella catobiforma sp. nov.

Candidatus Prevotella catobiforma (NL. fem. n. *catobiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900762125*. The type genome for the species is the GenBank assembly GCA_900762125.1. The GC content of the type genome is 55.99 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Prevotella catobimonas sp. nov.

Candidatus Prevotella catobimonas (NL. fem. n. *catobimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900313215*. The type genome for the species is the GenBank assembly GCA_000431915.1. The GC content of the type genome is 46.82 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella celamitoga sp. nov.

Candidatus Prevotella celamitoga (NL. fem. n. *celamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315835*. The type genome for the species is the GenBank assembly GCA_902756465.1. The GC content of the type genome is 54.79 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Prevotella cementitura sp. nov.

Candidatus Prevotella cementitura (NL. fem. n. *cementitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799765*. The type genome for the species is the GenBank assembly GCA_902764205.1. The GC content of the type genome is 48.15 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Prevotella cenacatio sp. nov.

Candidatus Prevotella cenacatio (NL. fem. n. *cenacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900552965*. The type genome for the species is the GenBank assembly GCA_900552965.1. The GC content of the type genome is 48.75 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Prevotella cenodousia sp. nov.

Candidatus Prevotella cenodousia (NL. fem. n. *cenodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902769805*. The type genome for the species is the GenBank assembly GCA_902769025.1. The GC content of the type genome is 46.75 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Prevotella cenotitio sp. nov.

Candidatus Prevotella cenotitio (NL. fem. n. *cenotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002449535*. The type genome for the species is the GenBank assembly GCA_002449535.1. The GC content of the type genome is 44.7 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Prevotella cerebicula sp. nov.

Candidatus Prevotella cerebicula (NL. fem. n. *cerebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902783165*. The type genome for the species is the GenBank assembly GCA_902783165.1. The GC content of the type genome is 45.22 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Prevotella cerimax sp. nov.

Candidatus Prevotella cerimax (NL. fem. n. *cerimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799455*. The type genome for the species is the GenBank assembly GCA_902799455.1. The GC content of the type genome is 45.08 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Prevotella cerofilenta sp. nov.

Candidatus Prevotella cerofilenta (NL. fem. n. *cerofilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902776665*. The type genome for the species is the GenBank assembly GCA_902775015.1. The GC content of the type genome is 50.81 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Prevotella ceromisca sp. nov.

Candidatus Prevotella ceromisca (NL. fem. n. *ceromisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902786565*. The type genome for the species is the GenBank assembly GCA_902786565.1. The GC content of the type genome is 55.74 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Prevotella cibarimonas sp. nov.

Candidatus Prevotella cibarimonas (NL. fem. n. *cibarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902770635*. The type genome for the species is the GenBank assembly GCA_902770635.1. The GC content of the type genome is 48.13 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Prevotella cicaritica sp. nov.

Candidatus Prevotella cicaritica (NL. fem. n. *cicaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315095*. The type genome for the species is the GenBank assembly GCA_902771415.1. The GC content of the type genome is 48.07 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Prevotella ciciligena sp. nov.

Candidatus Prevotella ciciligena (NL. fem. n. *ciciligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002317385*. The type genome for the species is the GenBank assembly GCA_002317385.1. The GC content of the type genome is 53.2 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Prevotella ciminiforma sp. nov.

Candidatus Prevotella ciminiforma (NL. fem. n. *ciminiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002251295*. The type genome for the species is the GenBank assembly GCA_902756905.1. The GC content of the type genome is 46.15 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Prevotella cinipax sp. nov.

Candidatus Prevotella cinipax (NL. fem. n. *cinipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004558865*. The type genome for the species is the GenBank assembly GCA_004558865.1. The GC content of the type genome is 56.3 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Prevotella cisoribula sp. nov.

Candidatus Prevotella cisoribula (NL. fem. n. *cisoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353585*. The type genome for the species is the GenBank assembly GCA_902768195.1. The GC content of the type genome is 47.01 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Prevotella citipago sp. nov.

Candidatus Prevotella citipago (NL. fem. n. *citipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902762565*. The type genome for the species is the GenBank assembly GCA_902762565.1. The GC content of the type genome is 47.51 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Prevotella cocibivita sp. nov.

Candidatus Prevotella cocibivita (NL. fem. n. *cocibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002372575*. The type genome for the species is the GenBank assembly GCA_902781295.1. The GC content of the type genome is 52.69 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Prevotella cohonugo sp. nov.

Candidatus Prevotella cohonugo (NL. fem. n. *cohonugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902797505*. The type genome for the species is the GenBank assembly GCA_902797505.1. The GC content of the type genome is 46.94 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Prevotella cohoritura sp. nov.

Candidatus Prevotella cohoritura (NL. fem. n. *cohoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900769275*. The type genome for the species is the GenBank assembly GCA_900769275.1. The GC content of the type genome is 49.31 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Prevotella colipentia sp. nov.

Candidatus Prevotella colipentia (NL. fem. n. *colipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314985*. The type genome for the species is the GenBank assembly GCA_900316765.1. The GC content of the type genome is 48.48 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Prevotella conabastra sp. nov.

Candidatus Prevotella conabastra (NL. fem. n. *conabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900100635*. The type genome for the species is the GenBank assembly GCA_902790305.1. The GC content of the type genome is 49.01 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Prevotella conifentia sp. nov.

Candidatus Prevotella conifentia (NL. fem. n. *conifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902774925*. The type genome for the species is the GenBank assembly GCA_902774925.1. The GC content of the type genome is 49.66 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Prevotella corocivita sp. nov.

Candidatus Prevotella corocivita (NL. fem. n. *corocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp900314935*. The type genome for the species is the GenBank assembly GCA_900313325.1. The GC content of the type genome is 48.5 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Prevotella cosidibula sp. nov.

Candidatus Prevotella cosidibula (NL. fem. n. *cosidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900544825*. The type genome for the species is the GenBank assembly GCA_900544825.1. The GC content of the type genome is 46.48 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Prevotella cosiditio sp. nov.

Candidatus Prevotella cosiditio (NL. fem. n. *cosiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902767775*. The type genome for the species is the GenBank assembly GCA_902780705.1. The GC content of the type genome is 50.05 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Prevotella coturatica sp. nov.

Candidatus Prevotella coturatica (NL. fem. n. *coturatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902785945*. The type genome for the species is the GenBank assembly GCA_902785945.1. The GC content of the type genome is 49.08 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Prevotella coturugo sp. nov.

Candidatus Prevotella coturugo (NL. fem. n. *coturugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900543585*. The type genome for the species is the GenBank assembly GCA_900765035.1. The GC content of the type genome is 51.44 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Prevotella culibax sp. nov.

Candidatus Prevotella culibax (NL. fem. n. *culibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp013333285*. The type genome for the species is the GenBank assembly GCA_013333075.2. The GC content of the type genome is 42.07 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Prevotella culigitio sp. nov.

Candidatus Prevotella culigitio (NL. fem. n. *culigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320445*. The type genome for the species is the GenBank assembly GCA_900320445.1. The GC content of the type genome is 47.2 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Prevotella curotitoga sp. nov.

Candidatus Prevotella curotitoga (NL. fem. n. *curotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000436695*. The type genome for the species is the GenBank assembly GCA_000436695.1. The GC content of the type genome is 43.69 % and the genome length is 3.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella daducitura sp. nov.

Candidatus Prevotella daducitura (NL. fem. n. *daducitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900554545*. The type genome for the species is the GenBank assembly GCA_900765385.1. The GC content of the type genome is 50.44 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Prevotella dapifitia sp. nov.

Candidatus Prevotella dapifitia (NL. fem. n. *dapifitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902801155*. The type genome for the species is the GenBank assembly GCA_902778865.1. The GC content of the type genome is 43.64 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Prevotella debucax sp. nov.

Candidatus Prevotella debucax (NL. fem. n. *debucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000434975*. The type genome for the species is the GenBank assembly GCA_004562625.1. The GC content of the type genome is 52.59 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Prevotella decacugo sp. nov.

Candidatus Prevotella decacugo (NL. fem. n. *decacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900545525*. The type genome for the species is the GenBank assembly GCA_900545525.1. The GC content of the type genome is 47.87 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Prevotella decapugo sp. nov.

Candidatus Prevotella decapugo (NL. fem. n. *decapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002350805*. The type genome for the species is the GenBank assembly GCA_002350805.1. The GC content of the type genome is 52.7 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Prevotella decunetta sp. nov.

Candidatus Prevotella decunetta (NL. fem. n. *decunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900769055*. The type genome for the species is the GenBank assembly GCA_900769055.1. The GC content of the type genome is 49.85 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Prevotella decunitrix sp. nov.

Candidatus Prevotella decunitrix (NL. fem. n. *decunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902801425*. The type genome for the species is the GenBank assembly GCA_902801425.1. The GC content of the type genome is 43.52 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Prevotella defaliforma sp. nov.

Candidatus Prevotella defaliforma (NL. fem. n. *defaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800585*. The type genome for the species is the GenBank assembly GCA_902771475.1. The GC content of the type genome is 45.27 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Prevotella defasisca sp. nov.

Candidatus Prevotella defasisca (NL. fem. n. *defasisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902776195*. The type genome for the species is the GenBank assembly GCA_902776195.1. The GC content of the type genome is 47.71 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Prevotella defetugo sp. nov.

Candidatus Prevotella defetugo (NL. fem. n. *defetugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902784755*. The type genome for the species is the GenBank assembly GCA_902772175.1. The GC content of the type genome is 46.82 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Prevotella deforilega sp. nov.

Candidatus Prevotella deforilega (NL. fem. n. *deforilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799355*. The type genome for the species is the GenBank assembly GCA_902799355.1. The GC content of the type genome is 49.51 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Prevotella defunastra sp. nov.

Candidatus Prevotella defunastra (NL. fem. n. *defunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002490315*. The type genome for the species is the GenBank assembly GCA_002490315.1. The GC content of the type genome is 52.52 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Prevotella dehisitica sp. nov.

Candidatus Prevotella dehisitica (NL. fem. n. *dehisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353295*. The type genome for the species is the GenBank assembly GCA_002342425.1. The GC content of the type genome is 45.94 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Prevotella dehonatica sp. nov.

Candidatus Prevotella dehonatica (NL. fem. n. *dehonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902780635*. The type genome for the species is the GenBank assembly GCA_902780635.1. The GC content of the type genome is 49.99 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Prevotella delebago sp. nov.

Candidatus Prevotella delebago (NL. fem. n. *delebago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900546575*. The type genome for the species is the GenBank assembly GCA_900763605.1. The GC content of the type genome is 49.53 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Prevotella delebicella sp. nov.

Candidatus Prevotella delebicella (NL. fem. n. *delebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp003447235*. The type genome for the species is the GenBank assembly GCA_900539795.1. The GC content of the type genome is 54.45 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Prevotella delebitica sp. nov.

Candidatus Prevotella delebitica (NL. fem. n. *delebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900551275*. The type genome for the species is the GenBank assembly GCA_900551275.1. The GC content of the type genome is 44.6 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Prevotella delebitudo sp. nov.

Candidatus Prevotella delebitudo (NL. fem. n. *delebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318625*. The type genome for the species is the GenBank assembly GCA_900318625.1. The GC content of the type genome is 53.13 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Prevotella delucicella sp. nov.

Candidatus Prevotella delucicella (NL. fem. n. *delucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp900318855*. The type genome for the species is the GenBank assembly GCA_002353675.1. The GC content of the type genome is 53.38 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Prevotella delucivita sp. nov.

Candidatus Prevotella delucivita (NL. fem. n. *delucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353975*. The type genome for the species is the GenBank assembly GCA_002353975.1. The GC content of the type genome is 51.0 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Prevotella demagitura sp. nov.

Candidatus Prevotella demagitura (NL. fem. n. *demagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900557035*. The type genome for the species is the GenBank assembly GCA_900557035.1. The GC content of the type genome is 46.85 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Prevotella demigimonia sp. nov.

Candidatus Prevotella demigimonia (NL. fem. n. *demigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900547085*. The type genome for the species is the GenBank assembly GCA_900547085.1. The GC content of the type genome is 46.24 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Prevotella demigitas sp. nov.

Candidatus Prevotella demigitas (NL. fem. n. *demigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902771785*. The type genome for the species is the GenBank assembly GCA_902771785.1. The GC content of the type genome is 54.54 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Prevotella denavago sp. nov.

Candidatus Prevotella denavago (NL. fem. n. *denavago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000702825*. The type genome for the species is the GenBank assembly RS_GCF_000702825.1. The GC content of the type genome is 47.6 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Prevotella denixitoga sp. nov.

Candidatus Prevotella denixitoga (NL. fem. n. *denixitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320845*. The type genome for the species is the GenBank assembly GCA_900320845.1. The GC content of the type genome is 49.75 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Prevotella denupilenta sp. nov.

Candidatus Prevotella denupilenta (NL. fem. n. *denupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900540375*. The type genome for the species is the GenBank assembly GCA_900765965.1. The GC content of the type genome is 51.33 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Prevotella deparilenta sp. nov.

Candidatus Prevotella deparilenta (NL. fem. n. *deparilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316985*. The type genome for the species is the GenBank assembly GCA_902775365.1. The GC content of the type genome is 49.03 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Prevotella depicax sp. nov.

Candidatus Prevotella depicax (NL. fem. n. *depicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002394385*. The type genome for the species is the GenBank assembly GCA_002353365.1. The GC content of the type genome is 49.72 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Prevotella derelifica sp. nov.

Candidatus Prevotella derelifica (NL. fem. n. *derelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004556065*. The type genome for the species is the GenBank assembly GCA_004560865.1. The GC content of the type genome is 52.38 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Prevotella derelousia sp. nov.

Candidatus Prevotella derelousia (NL. fem. n. *derelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900313615*. The type genome for the species is the GenBank assembly GCA_902772255.1. The GC content of the type genome is 48.73 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Prevotella desepentia sp. nov.

Candidatus Prevotella desepentia (NL. fem. n. *desepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900549175*. The type genome for the species is the GenBank assembly GCA_900549175.1. The GC content of the type genome is 51.6 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Prevotella detecisca sp. nov.

Candidatus Prevotella detecisca (NL. fem. n. *detecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp002353825*. The type genome for the species is the GenBank assembly GCA_002353825.1. The GC content of the type genome is 49.22 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Prevotella detenetta sp. nov.

Candidatus Prevotella detenetta (NL. fem. n. *detenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900322095*. The type genome for the species is the GenBank assembly GCA_002481285.1. The GC content of the type genome is 52.45 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Prevotella detosatio sp. nov.

Candidatus Prevotella detosatio (NL. fem. n. *detosatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314995*. The type genome for the species is the GenBank assembly GCA_902786485.1. The GC content of the type genome is 50.46 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Prevotella detositio sp. nov.

Candidatus Prevotella detositio (NL. fem. n. *detositio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900551055*. The type genome for the species is the GenBank assembly GCA_900765345.1. The GC content of the type genome is 52.39 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Prevotella devecisca sp. nov.

Candidatus Prevotella devecisca (NL. fem. n. *devecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002391185*. The type genome for the species is the GenBank assembly GCA_902802675.1. The GC content of the type genome is 41.3 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Prevotella dibapibra sp. nov.

Candidatus Prevotella dibapibra (NL. fem. n. *dibapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316445*. The type genome for the species is the GenBank assembly GCA_900316445.1. The GC content of the type genome is 49.96 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Prevotella dibucicella sp. nov.

Candidatus Prevotella dibucicella (NL. fem. n. *dibucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316565*. The type genome for the species is the GenBank assembly GCA_002472535.1. The GC content of the type genome is 49.34 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Prevotella dicanetta sp. nov.

Candidatus Prevotella dicanetta (NL. fem. n. *dicanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315035*. The type genome for the species is the GenBank assembly GCA_900315035.1. The GC content of the type genome is 48.15 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Prevotella dilecivita sp. nov.

Candidatus Prevotella dilecivita (NL. fem. n. *dilecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004792655*. The type genome for the species is the GenBank assembly RS_GCF_004792655.1. The GC content of the type genome is 47.05 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Prevotella diludatica sp. nov.

Candidatus Prevotella diludatica (NL. fem. n. *diludatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902760315*. The type genome for the species is the GenBank assembly GCA_902760315.1. The GC content of the type genome is 51.66 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Prevotella diludousia sp. nov.

Candidatus Prevotella diludousia (NL. fem. n. *diludousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900109055*. The type genome for the species is the GenBank assembly RS_GCF_000746155.1. The GC content of the type genome is 47.44 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Prevotella dimacitas sp. nov.

Candidatus Prevotella dimacitas (NL. fem. n. *dimacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902792855*. The type genome for the species is the GenBank assembly GCA_902792855.1. The GC content of the type genome is 53.31 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Prevotella domabilenta sp. nov.

Candidatus Prevotella domabilenta (NL. fem. n. *domabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002373375*. The type genome for the species is the GenBank assembly GCA_002396105.1. The GC content of the type genome is 47.23 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Prevotella domipilenta sp. nov.

Candidatus Prevotella domipilenta (NL. fem. n. *domipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902792685*. The type genome for the species is the GenBank assembly GCA_902792685.1. The GC content of the type genome is 47.72 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Prevotella duricitica sp. nov.

Candidatus Prevotella duricitica (NL. fem. n. *duricitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900110895*. The type genome for the species is the GenBank assembly RS_GCF_900110895.1. The GC content of the type genome is 49.0 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Prevotella ecciledo sp. nov.

Candidatus Prevotella ecciledo (NL. fem. n. *ecciledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900546345*. The type genome for the species is the GenBank assembly GCA_900546345.1. The GC content of the type genome is 51.15 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Prevotella egregatica sp. nov.

Candidatus Prevotella egregatica (NL. fem. n. *egregatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902776545*. The type genome for the species is the GenBank assembly GCA_902776545.1. The GC content of the type genome is 49.81 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Prevotella encepedo sp. nov.

Candidatus Prevotella encepedo (NL. fem. n. *encepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900767615*. The type genome for the species is the GenBank assembly GCA_900767615.1. The GC content of the type genome is 47.79 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Prevotella ensifilenta sp. nov.

Candidatus Prevotella ensifilenta (NL. fem. n. *ensifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902786665*. The type genome for the species is the GenBank assembly GCA_902786665.1. The GC content of the type genome is 50.95 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Prevotella epigrax sp. nov.

Candidatus Prevotella epigrax (NL. fem. n. *epigrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902795605*. The type genome for the species is the GenBank assembly GCA_902795605.1. The GC content of the type genome is 53.86 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Prevotella everbibula sp. nov.

Candidatus Prevotella everbibula (NL. fem. n. *everbibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902770195*. The type genome for the species is the GenBank assembly GCA_902770195.1. The GC content of the type genome is 47.63 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Prevotella excinitas sp. nov.

Candidatus Prevotella excinitas (NL. fem. n. *excinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000599605*. The type genome for the species is the GenBank assembly RS_GCF_000599605.1. The GC content of the type genome is 45.08 % and the genome length is 3.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dental abscess".

Description of *Candidatus* Prevotella excomugo sp. nov.

Candidatus Prevotella excomugo (NL. fem. n. *excomugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002407775*. The type genome for the species is the GenBank assembly GCA_002407775.1. The GC content of the type genome is 43.51 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Prevotella facunitoga sp. nov.

Candidatus Prevotella facunitoga (NL. fem. n. *facunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp013166545*. The type genome for the species is the GenBank assembly RS_GCF_013166575.1. The GC content of the type genome is 47.73 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Prevotella faticatio sp. nov.

Candidatus Prevotella faticatio (NL. fem. n. *faticatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353205*. The type genome for the species is the GenBank assembly GCA_002353205.1. The GC content of the type genome is 54.54 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Prevotella faticentia sp. nov.

Candidatus Prevotella faticentia (NL. fem. n. *faticentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320045*. The type genome for the species is the GenBank assembly GCA_902784655.1. The GC content of the type genome is 51.85 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Prevotella fatilitas sp. nov.

Candidatus Prevotella fatilitas (NL. fem. n. *fatilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900322175*. The type genome for the species is the GenBank assembly GCA_900322175.1. The GC content of the type genome is 47.23 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Prevotella favonilega sp. nov.

Candidatus Prevotella favonilega (NL. fem. n. *favonilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002297965*. The type genome for the species is the GenBank assembly GCA_002297965.1. The GC content of the type genome is 46.74 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Prevotella femelicella sp. nov.

Candidatus Prevotella femelicella (NL. fem. n. *femelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900553965*. The type genome for the species is the GenBank assembly GCA_900764985.1. The GC content of the type genome is 52.65 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Prevotella fetifessa sp. nov.

Candidatus Prevotella fetifessa (NL. fem. n. *fetifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315765*. The type genome for the species is the GenBank assembly GCA_902756705.1. The GC content of the type genome is 46.32 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Prevotella fetulentia sp. nov.

Candidatus Prevotella fetulentia (NL. fem. n. *fetulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900548745*. The type genome for the species is the GenBank assembly GCA_900548745.1. The GC content of the type genome is 45.1 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Prevotella fetulicula sp. nov.

Candidatus Prevotella fetulicula (NL. fem. n. *fetulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002371695*. The type genome for the species is the GenBank assembly GCA_002371695.1. The GC content of the type genome is 51.73 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Prevotella fidenitia sp. nov.

Candidatus Prevotella fidenitia (NL. fem. n. *fidenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315635*. The type genome for the species is the GenBank assembly GCA_902788355.1. The GC content of the type genome is 47.4 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Prevotella forabessa sp. nov.

Candidatus Prevotella forabessa (NL. fem. n. *forabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314455*. The type genome for the species is the GenBank assembly GCA_900314455.1. The GC content of the type genome is 48.26 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Prevotella foricitas sp. nov.

Candidatus Prevotella foricitas (NL. fem. n. *foricitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900322035*. The type genome for the species is the GenBank assembly GCA_900322035.1. The GC content of the type genome is 50.14 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Prevotella gabinicella sp. nov.

Candidatus Prevotella gabinicella (NL. fem. n. *gabinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315565*. The type genome for the species is the GenBank assembly GCA_900315565.1. The GC content of the type genome is 51.08 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Prevotella galacetta sp. nov.

Candidatus Prevotella galacetta (NL. fem. n. *galacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902785695*. The type genome for the species is the GenBank assembly GCA_902785695.1. The GC content of the type genome is 47.66 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Prevotella genocastra sp. nov.

Candidatus Prevotella genocastra (NL. fem. n. *genocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900552675*. The type genome for the species is the GenBank assembly GCA_900552675.1. The GC content of the type genome is 48.01 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Prevotella genuficella sp. nov.

Candidatus Prevotella genuficella (NL. fem. n. *genuficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320905*. The type genome for the species is the GenBank assembly GCA_902792705.1. The GC content of the type genome is 49.9 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Prevotella gerunedo sp. nov.

Candidatus Prevotella gerunedo (NL. fem. n. *gerunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp900318885*. The type genome for the species is the GenBank assembly GCA_900318885.1. The GC content of the type genome is 50.02 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Prevotella haricigena sp. nov.

Candidatus Prevotella haricigena (NL. fem. n. *haricigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902779455*. The type genome for the species is the GenBank assembly GCA_902779455.1. The GC content of the type genome is 57.9 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Prevotella hegumitudo sp. nov.

Candidatus Prevotella hegumitudo (NL. fem. n. *hegumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002481295*. The type genome for the species is the GenBank assembly GCA_902779715.1. The GC content of the type genome is 52.21 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Prevotella hexamatica sp. nov.

Candidatus Prevotella hexamatica (NL. fem. n. *hexamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002409785*. The type genome for the species is the GenBank assembly GCA_002417885.1. The GC content of the type genome is 44.42 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Prevotella homogitica sp. nov.

Candidatus Prevotella homogitica (NL. fem. n. *homogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000479005*. The type genome for the species is the GenBank assembly RS_GCF_000479005.1. The GC content of the type genome is 45.66 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Prevotella homulatica sp. nov.

Candidatus Prevotella homulatica (NL. fem. n. *homulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315525*. The type genome for the species is the GenBank assembly GCA_902794785.1. The GC content of the type genome is 49.68 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Prevotella homunetta sp. nov.

Candidatus Prevotella homunetta (NL. fem. n. *homunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902782305*. The type genome for the species is the GenBank assembly GCA_902782305.1. The GC content of the type genome is 46.66 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Prevotella homunitica sp. nov.

Candidatus Prevotella homunitica (NL. fem. n. *homunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902775975*. The type genome for the species is the GenBank assembly GCA_902775975.1. The GC content of the type genome is 50.38 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Prevotella horometta sp. nov.

Candidatus Prevotella horometta (NL. fem. n. *horometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp003043925*. The type genome for the species is the GenBank assembly RS_GCF_003043925.1. The GC content of the type genome is 47.54 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Prevotella illunago sp. nov.

Candidatus Prevotella illunago (NL. fem. n. *illunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002251245*. The type genome for the species is the GenBank assembly RS_GCF_002251245.1. The GC content of the type genome is 47.64 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Prevotella immadisca sp. nov.

Candidatus Prevotella immadisca (NL. fem. n. *immadisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799975*. The type genome for the species is the GenBank assembly GCA_902799975.1. The GC content of the type genome is 46.27 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Prevotella immedibula sp. nov.

Candidatus Prevotella immedibula (NL. fem. n. *immedibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002437115*. The type genome for the species is the GenBank assembly GCA_002437115.1. The GC content of the type genome is 53.04 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Prevotella impigivita sp. nov.

Candidatus Prevotella impigivita (NL. fem. n. *impigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902775605*. The type genome for the species is the GenBank assembly GCA_902775605.1. The GC content of the type genome is 49.55 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Prevotella indecitica sp. nov.

Candidatus Prevotella indecitica (NL. fem. n. *indecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902776685*. The type genome for the species is the GenBank assembly GCA_902776685.1. The GC content of the type genome is 51.4 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Prevotella indubedo sp. nov.

Candidatus Prevotella indubedo (NL. fem. n. *indubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002393725*. The type genome for the species is the GenBank assembly GCA_002393725.1. The GC content of the type genome is 48.86 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella indubugo sp. nov.

Candidatus Prevotella indubugo (NL. fem. n. *indubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002393705*. The type genome for the species is the GenBank assembly GCA_002393705.1. The GC content of the type genome is 54.88 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Prevotella infinetta sp. nov.

Candidatus Prevotella infinetta (NL. fem. n. *infinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000467895*. The type genome for the species is the GenBank assembly RS_GCF_000467895.1. The GC content of the type genome is 41.11 % and the genome length is 3.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "subgingival plaque biofilm".

Description of *Candidatus* Prevotella infisitura sp. nov.

Candidatus Prevotella infisitura (NL. fem. n. *infisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799655*. The type genome for the species is the GenBank assembly GCA_902799655.1. The GC content of the type genome is 48.83 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella inhosessa sp. nov.

Candidatus Prevotella inhosessa (NL. fem. n. *inhosessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902798285*. The type genome for the species is the GenBank assembly GCA_902798285.1. The GC content of the type genome is 48.28 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Prevotella inlapastra sp. nov.

Candidatus Prevotella inlapastra (NL. fem. n. *inlapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000688375*. The type genome for the species is the GenBank assembly RS_GCF_000688375.1. The GC content of the type genome is 45.26 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Prevotella inlepousia sp. nov.

Candidatus Prevotella inlepousia (NL. fem. n. *inlepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902768785*. The type genome for the species is the GenBank assembly GCA_902768785.1. The GC content of the type genome is 48.38 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Prevotella inlibivita sp. nov.

Candidatus Prevotella inlibivita (NL. fem. n. *inlibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900556275*. The type genome for the species is the GenBank assembly GCA_900556275.1. The GC content of the type genome is 51.01 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Prevotella innumedo sp. nov.

Candidatus Prevotella innumedo (NL. fem. n. *innumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902765585*. The type genome for the species is the GenBank assembly GCA_902765585.1. The GC content of the type genome is 53.0 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Prevotella inretibra sp. nov.

Candidatus Prevotella inretibra (NL. fem. n. *inretibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900770515*. The type genome for the species is the GenBank assembly GCA_900770515.1. The GC content of the type genome is 46.25 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Prevotella intesilega sp. nov.

Candidatus Prevotella intesilega (NL. fem. n. *intesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002342415*. The type genome for the species is the GenBank assembly GCA_002342415.1. The GC content of the type genome is 52.02 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Prevotella intolitio sp. nov.

Candidatus Prevotella intolitio (NL. fem. n. *intolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900555035*. The type genome for the species is the GenBank assembly GCA_900555035.1. The GC content of the type genome is 46.69 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Prevotella inveticella sp. nov.

Candidatus Prevotella inveticella (NL. fem. n. *inveticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prevotella sp902763615*. The type genome for the species is the GenBank assembly GCA_902763615.1. The GC content of the type genome is 48.16 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Prevotella irremibula sp. nov.

Candidatus Prevotella irremibula (NL. fem. n. *irremibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002305505*. The type genome for the species is the GenBank assembly GCA_002305505.1. The GC content of the type genome is 52.6 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Prevotella irrotibra sp. nov.

Candidatus Prevotella irrotibra (NL. fem. n. *irrotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902767045*. The type genome for the species is the GenBank assembly GCA_902767045.1. The GC content of the type genome is 51.42 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Prevotella laculago sp. nov.

Candidatus Prevotella laculago (NL. fem. n. *laculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002371715*. The type genome for the species is the GenBank assembly GCA_002371715.1. The GC content of the type genome is 54.43 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Prevotella laculicula sp. nov.

Candidatus Prevotella laculicula (NL. fem. n. *laculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp013166515*. The type genome for the species is the GenBank assembly RS_GCF_013166515.1. The GC content of the type genome is 46.24 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Prevotella lavacago sp. nov.

Candidatus Prevotella lavacago (NL. fem. n. *lavacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000435635*. The type genome for the species is the GenBank assembly GCA_000435635.1. The GC content of the type genome is 50.99 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella lenimitica sp. nov.

Candidatus Prevotella lenimitica (NL. fem. n. *lenimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002479145*. The type genome for the species is the GenBank assembly GCA_002436785.1. The GC content of the type genome is 53.71 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Prevotella lubenicula sp. nov.

Candidatus Prevotella lubenicula (NL. fem. n. *lubenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902784065*. The type genome for the species is the GenBank assembly GCA_902784065.1. The GC content of the type genome is 48.77 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Prevotella lubenisca sp. nov.

Candidatus Prevotella lubenisca (NL. fem. n. *lubenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902762325*. The type genome for the species is the GenBank assembly GCA_902762325.1. The GC content of the type genome is 45.75 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Prevotella lucelatio sp. nov.

Candidatus Prevotella lucelatio (NL. fem. n. *lucelatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000436035*. The type genome for the species is the GenBank assembly GCA_000436035.1. The GC content of the type genome is 46.14 % and the genome length is 2.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella ludimitio sp. nov.

Candidatus Prevotella ludimitio (NL. fem. n. *ludimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353555*. The type genome for the species is the GenBank assembly GCA_002353555.1. The GC content of the type genome is 51.26 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Prevotella lugubitia sp. nov.

Candidatus Prevotella lugubitia (NL. fem. n. *lugubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902779745*. The type genome for the species is the GenBank assembly GCA_902779745.1. The GC content of the type genome is 48.64 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Prevotella lugubitudo sp. nov.

Candidatus Prevotella lugubitudo (NL. fem. n. *lugubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900770845*. The type genome for the species is the GenBank assembly GCA_900770845.1. The GC content of the type genome is 55.3 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella lupanentia sp. nov.

Candidatus Prevotella lupanentia (NL. fem. n. *lupanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900557255*. The type genome for the species is the GenBank assembly GCA_003450425.1. The GC content of the type genome is 45.05 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Prevotella lupanimonia sp. nov.

Candidatus Prevotella lupanimonia (NL. fem. n. *lupanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800925*. The type genome for the species is the GenBank assembly GCA_902800925.1. The GC content of the type genome is 49.19 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Prevotella mahemimonas sp. nov.

Candidatus Prevotella mahemimonas (NL. fem. n. *mahemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902776475*. The type genome for the species is the GenBank assembly GCA_902776475.1. The GC content of the type genome is 52.37 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Prevotella malagitio sp. nov.

Candidatus Prevotella malagitio (NL. fem. n. *malagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900199555*. The type genome for the species is the GenBank assembly GCA_902760775.1. The GC content of the type genome is 46.12 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Prevotella malivatio sp. nov.

Candidatus Prevotella malivatio (NL. fem. n. *malivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902775075*. The type genome for the species is the GenBank assembly GCA_902775075.1. The GC content of the type genome is 41.93 %

and the genome length is 3.7 Mbp.

Description of *Candidatus* Prevotella manomigena sp. nov.

Candidatus Prevotella manomigena (NL. fem. n. *manomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315695*. The type genome for the species is the GenBank assembly GCA_902765065.1. The GC content of the type genome is 48.24 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Prevotella metucatica sp. nov.

Candidatus Prevotella metucatica (NL. fem. n. *metucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902774815*. The type genome for the species is the GenBank assembly GCA_902774815.1. The GC content of the type genome is 51.59 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Prevotella milifitrix sp. nov.

Candidatus Prevotella milifitrix (NL. fem. n. *milifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900319905*. The type genome for the species is the GenBank assembly GCA_902759695.1. The GC content of the type genome is 51.47 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Prevotella mimogitia sp. nov.

Candidatus Prevotella mimogitia (NL. fem. n. *mimogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902775475*. The type genome for the species is the GenBank assembly GCA_902777445.1. The GC content of the type genome is 57.28 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Prevotella miracibula sp. nov.

Candidatus Prevotella miracibula (NL. fem. n. *miracibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800595*. The type genome for the species is the GenBank assembly GCA_902798045.1. The GC content of the type genome is 48.56 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Prevotella momoressa sp. nov.

Candidatus Prevotella momoressa (NL. fem. n. *momoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314655*. The type genome for the species is the GenBank assembly GCA_002394045.1. The GC content of the type genome is 49.53 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Prevotella morigivita sp. nov.

Candidatus Prevotella morigivita (NL. fem. n. *morigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315455*. The type genome for the species is the GenBank assembly GCA_902778915.1. The GC content of the type genome is 51.87 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Prevotella munimicella sp. nov.

Candidatus Prevotella munimicella (NL. fem. n. *munimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900199655*. The type genome for the species is the GenBank assembly RS_GCF_900199655.1. The GC content of the type genome is 53.14 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Prevotella murelilega sp. nov.

Candidatus Prevotella murelilega (NL. fem. n. *murelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314755*. The type genome for the species is the GenBank assembly GCA_002472625.1. The GC content of the type genome is 47.44 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Prevotella murilentia sp. nov.

Candidatus Prevotella murilentia (NL. fem. n. *murilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902771445*. The type genome for the species is the GenBank assembly GCA_902769115.1. The GC content of the type genome is 51.83 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Prevotella musulatio sp. nov.

Candidatus Prevotella musulatio (NL. fem. n. *musulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900540415*. The type genome for the species is the GenBank assembly GCA_900757985.1. The GC content of the type genome is 55.93 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Prevotella negotitrix sp. nov.

Candidatus Prevotella negotitrix (NL. fem. n. *negotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002350355*. The type genome for the species is the GenBank assembly GCA_902793365.1. The GC content of the type genome is 51.16 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Prevotella nidififorma sp. nov.

Candidatus Prevotella nidififorma (NL. fem. n. *nidififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002265625*. The type genome for the species is the GenBank assembly RS_GCF_002265625.1. The GC content of the type genome is 48.69

% and the genome length is 3.72 Mbp.

Description of *Candidatus* Prevotella nimirilenta sp. nov.

Candidatus Prevotella nimirilenta (NL. fem. n. *nimirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900107705*. The type genome for the species is the GenBank assembly GCA_902767515.1. The GC content of the type genome is 49.19 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Prevotella nocenitoga sp. nov.

Candidatus Prevotella nocenitoga (NL. fem. n. *nocenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902766505*. The type genome for the species is the GenBank assembly GCA_902796275.1. The GC content of the type genome is 48.47 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Prevotella nocumastra sp. nov.

Candidatus Prevotella nocumastra (NL. fem. n. *nocumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900319715*. The type genome for the species is the GenBank assembly GCA_902758495.1. The GC content of the type genome is 51.41 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Prevotella noninedo sp. nov.

Candidatus Prevotella noninedo (NL. fem. n. *noninedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002300055*. The type genome for the species is the GenBank assembly GCA_004553805.1. The GC content of the type genome is 54.71 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Prevotella nubecitoga sp. nov.

Candidatus Prevotella nubecitoga (NL. fem. n. *nubecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314195*. The type genome for the species is the GenBank assembly GCA_902804035.1. The GC content of the type genome is 46.9 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Prevotella nubifisca sp. nov.

Candidatus Prevotella nubifisca (NL. fem. n. *nubifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002361655*. The type genome for the species is the GenBank assembly GCA_002361655.1. The GC content of the type genome is 53.88 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Prevotella nubigago sp. nov.

Candidatus Prevotella nubigago (NL. fem. n. *nubigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316475*. The type genome for the species is the GenBank assembly GCA_902789235.1. The GC content of the type genome is 52.66 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Prevotella nucifilega sp. nov.

Candidatus Prevotella nucifilega (NL. fem. n. *nucifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002251365*. The type genome for the species is the GenBank assembly GCA_004553465.1. The GC content of the type genome is 50.77 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Prevotella nugacentia sp. nov.

Candidatus Prevotella nugacentia (NL. fem. n. *nugacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002298815*. The type genome for the species is the GenBank assembly RS_GCF_013166595.1. The GC content of the type genome is 46.99 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Prevotella nugacicella sp. nov.

Candidatus Prevotella nugacicella (NL. fem. n. *nugacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315545*. The type genome for the species is the GenBank assembly GCA_902756085.1. The GC content of the type genome is 45.95 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Prevotella nugivigena sp. nov.

Candidatus Prevotella nugivigena (NL. fem. n. *nugivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314365*. The type genome for the species is the GenBank assembly GCA_900314365.1. The GC content of the type genome is 51.16 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Prevotella nutabilega sp. nov.

Candidatus Prevotella nutabilega (NL. fem. n. *nutabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900554045*. The type genome for the species is the GenBank assembly GCA_900753105.1. The GC content of the type genome is 52.68 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Prevotella obfusitas sp. nov.

Candidatus Prevotella obfusitas (NL. fem. n. *obfusitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800245*. The type genome for the species is the GenBank assembly GCA_902800245.1. The GC content of the type genome is 49.66 %

and the genome length is 3.48 Mbp.

Description of *Candidatus* Prevotella obfusitrix sp. nov.

Candidatus Prevotella obfusitrix (NL. fem. n. *obfusitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902784565*. The type genome for the species is the GenBank assembly GCA_902784565.1. The GC content of the type genome is 50.22 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Prevotella oblonatio sp. nov.

Candidatus Prevotella oblonatio (NL. fem. n. *oblonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902781315*. The type genome for the species is the GenBank assembly GCA_902781315.1. The GC content of the type genome is 54.01 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Prevotella obsecisca sp. nov.

Candidatus Prevotella obsecisca (NL. fem. n. *obsecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902769705*. The type genome for the species is the GenBank assembly GCA_902769705.1. The GC content of the type genome is 49.21 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Prevotella omnivitio sp. nov.

Candidatus Prevotella omnivitio (NL. fem. n. *omnivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002369515*. The type genome for the species is the GenBank assembly GCA_002369515.1. The GC content of the type genome is 53.59 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Prevotella opusciforma sp. nov.

Candidatus Prevotella opusciforma (NL. fem. n. *opusciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902768105*. The type genome for the species is the GenBank assembly GCA_902768105.1. The GC content of the type genome is 51.84 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Prevotella oratricula sp. nov.

Candidatus Prevotella oratricula (NL. fem. n. *oratricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902776935*. The type genome for the species is the GenBank assembly GCA_902776935.1. The GC content of the type genome is 46.67 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Prevotella pabililenta sp. nov.

Candidatus Prevotella pabililenta (NL. fem. n. *pabililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902760345*. The type genome for the species is the GenBank assembly GCA_902775655.1. The GC content of the type genome is 50.15 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella panifatio sp. nov.

Candidatus Prevotella panifatio (NL. fem. n. *panifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002439605*. The type genome for the species is the GenBank assembly GCA_002439605.1. The GC content of the type genome is 47.03 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Prevotella papavivita sp. nov.

Candidatus Prevotella papavivita (NL. fem. n. *papavivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900110085*. The type genome for the species is the GenBank assembly GCA_902755835.1. The GC content of the type genome is 49.07 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Prevotella pavicago sp. nov.

Candidatus Prevotella pavicago (NL. fem. n. *pavicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900113305*. The type genome for the species is the GenBank assembly RS_GCF_900113305.1. The GC content of the type genome is 50.46 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Prevotella pedifago sp. nov.

Candidatus Prevotella pedifago (NL. fem. n. *pedifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902783625*. The type genome for the species is the GenBank assembly GCA_902783625.1. The GC content of the type genome is 48.05 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Prevotella penicastra sp. nov.

Candidatus Prevotella penicastra (NL. fem. n. *penicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900551985*. The type genome for the species is the GenBank assembly GCA_900551985.1. The GC content of the type genome is 46.68 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Prevotella perabiforma sp. nov.

Candidatus Prevotella perabiforma (NL. fem. n. *perabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902799905*. The type genome for the species is the GenBank assembly GCA_902799905.1. The GC content of the type genome is 50.79 %

and the genome length is 3.42 Mbp.

Description of *Candidatus* Prevotella perabitura sp. nov.

Candidatus Prevotella perabitura (NL. fem. n. *perabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002449845*. The type genome for the species is the GenBank assembly GCA_002449845.1. The GC content of the type genome is 43.44 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Prevotella perexessa sp. nov.

Candidatus Prevotella perexessa (NL. fem. n. *perexessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316295*. The type genome for the species is the GenBank assembly GCA_902759545.1. The GC content of the type genome is 47.81 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Prevotella perexitio sp. nov.

Candidatus Prevotella perexitio (NL. fem. n. *perexitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000758925*. The type genome for the species is the GenBank assembly RS_GCF_000758925.1. The GC content of the type genome is 48.38 % and the genome length is 2.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Prevotella peridatio sp. nov.

Candidatus Prevotella peridatio (NL. fem. n. *peridatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314945*. The type genome for the species is the GenBank assembly GCA_902799215.1. The GC content of the type genome is 50.97 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Prevotella petulimonia sp. nov.

Candidatus Prevotella petulimonia (NL. fem. n. *petulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900557405*. The type genome for the species is the GenBank assembly GCA_900557405.1. The GC content of the type genome is 50.62 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Prevotella petulousia sp. nov.

Candidatus Prevotella petulousia (NL. fem. n. *petulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900321965*. The type genome for the species is the GenBank assembly GCA_900321965.1. The GC content of the type genome is 52.54 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Prevotella pinigentia sp. nov.

Candidatus Prevotella pinigentia (NL. fem. n. *pinigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318395*. The type genome for the species is the GenBank assembly GCA_900317895.1. The GC content of the type genome is 49.94 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Prevotella pocilatica sp. nov.

Candidatus Prevotella pocilatica (NL. fem. n. *pocilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900319305*. The type genome for the species is the GenBank assembly GCA_902778445.1. The GC content of the type genome is 49.58 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Prevotella purulilega sp. nov.

Candidatus Prevotella purulilega (NL. fem. n. *purulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900547005*. The type genome for the species is the GenBank assembly GCA_900547005.1. The GC content of the type genome is 46.31 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Prevotella reforigena sp. nov.

Candidatus Prevotella reforigena (NL. fem. n. *reforigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002299635*. The type genome for the species is the GenBank assembly GCA_900545355.1. The GC content of the type genome is 51.71 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Prevotella reforilega sp. nov.

Candidatus Prevotella reforilega (NL. fem. n. *reforilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900119285*. The type genome for the species is the GenBank assembly RS_GCF_900119285.1. The GC content of the type genome is 45.26 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Prevotella refunax sp. nov.

Candidatus Prevotella refunax (NL. fem. n. *refunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004555245*. The type genome for the species is the GenBank assembly GCA_004562255.1. The GC content of the type genome is 53.76 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Prevotella refunitoga sp. nov.

Candidatus Prevotella refunitoga (NL. fem. n. *refunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316265*. The type genome for the species is the GenBank assembly GCA_902788065.1. The GC content of the type genome is 48.58 %

and the genome length is 2.99 Mbp.

Description of *Candidatus* Prevotella regigedo sp. nov.

Candidatus Prevotella regigedo (NL. fem. n. *regigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp003483565*. The type genome for the species is the GenBank assembly GCA_002418045.1. The GC content of the type genome is 39.0 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Prevotella relapitudo sp. nov.

Candidatus Prevotella relapitudo (NL. fem. n. *relapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900115435*. The type genome for the species is the GenBank assembly GCA_002394225.1. The GC content of the type genome is 47.17 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Prevotella relecisca sp. nov.

Candidatus Prevotella relecisca (NL. fem. n. *relecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900321425*. The type genome for the species is the GenBank assembly GCA_002351045.1. The GC content of the type genome is 48.04 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Prevotella remuliforma sp. nov.

Candidatus Prevotella remuliforma (NL. fem. n. *remuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000431975*. The type genome for the species is the GenBank assembly GCA_000431975.1. The GC content of the type genome is 49.81 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella remulugo sp. nov.

Candidatus Prevotella remulugo (NL. fem. n. *remulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002451555*. The type genome for the species is the GenBank assembly GCA_002296725.1. The GC content of the type genome is 45.25 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Prevotella repagimonas sp. nov.

Candidatus Prevotella repagimonas (NL. fem. n. *repagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900313805*. The type genome for the species is the GenBank assembly GCA_902760185.1. The GC content of the type genome is 52.13 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Prevotella repepibra sp. nov.

Candidatus Prevotella repepibra (NL. fem. n. *repepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002392835*. The type genome for the species is the GenBank assembly GCA_902769385.1. The GC content of the type genome is 58.43 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Prevotella repuribula sp. nov.

Candidatus Prevotella repuribula (NL. fem. n. *repuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320585*. The type genome for the species is the GenBank assembly GCA_902767835.1. The GC content of the type genome is 54.78 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Prevotella resalitudo sp. nov.

Candidatus Prevotella resalitudo (NL. fem. n. *resalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800365*. The type genome for the species is the GenBank assembly GCA_902800365.1. The GC content of the type genome is 46.86 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella resulessa sp. nov.

Candidatus Prevotella resulessa (NL. fem. n. *resulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900317305*. The type genome for the species is the GenBank assembly GCA_900317305.1. The GC content of the type genome is 52.88 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Prevotella resurago sp. nov.

Candidatus Prevotella resurago (NL. fem. n. *resurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316015*. The type genome for the species is the GenBank assembly GCA_902790705.1. The GC content of the type genome is 46.74 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Prevotella resurimonas sp. nov.

Candidatus Prevotella resurimonas (NL. fem. n. *resurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902778535*. The type genome for the species is the GenBank assembly GCA_902762575.1. The GC content of the type genome is 53.26 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Prevotella retunivita sp. nov.

Candidatus Prevotella retunivita (NL. fem. n. *retunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318795*. The type genome for the species is the GenBank assembly GCA_900318795.1. The GC content of the type genome is 50.71 %

and the genome length is 2.77 Mbp.

Description of *Candidatus* Prevotella ridibedo sp. nov.

Candidatus Prevotella ridibedo (NL. fem. n. *ridibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315105*. The type genome for the species is the GenBank assembly GCA_902756335.1. The GC content of the type genome is 42.5 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Prevotella risibilega sp. nov.

Candidatus Prevotella risibilega (NL. fem. n. *risibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900320255*. The type genome for the species is the GenBank assembly GCA_902775225.1. The GC content of the type genome is 51.35 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Prevotella rorarousia sp. nov.

Candidatus Prevotella rorarousia (NL. fem. n. *rorarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002298545*. The type genome for the species is the GenBank assembly GCA_002298545.1. The GC content of the type genome is 45.14 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Prevotella rosarigena sp. nov.

Candidatus Prevotella rosarigena (NL. fem. n. *rosarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902764705*. The type genome for the species is the GenBank assembly GCA_902764705.1. The GC content of the type genome is 49.11 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Prevotella rubigessa sp. nov.

Candidatus Prevotella rubigessa (NL. fem. n. *rubigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902761905*. The type genome for the species is the GenBank assembly GCA_902761905.1. The GC content of the type genome is 47.44 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Prevotella rumifitrix sp. nov.

Candidatus Prevotella rumifitrix (NL. fem. n. *rumifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902800435*. The type genome for the species is the GenBank assembly GCA_902800435.1. The GC content of the type genome is 55.71 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Prevotella ruricetta sp. nov.

Candidatus Prevotella ruricetta (NL. fem. n. *ruricetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp001553265*. The type genome for the species is the GenBank assembly RS_GCF_001553265.1. The GC content of the type genome is 43.78 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Prevotella sacopentia sp. nov.

Candidatus Prevotella sacopentia (NL. fem. n. *sacopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315075*. The type genome for the species is the GenBank assembly GCA_902757795.1. The GC content of the type genome is 45.79 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Prevotella saxifitrix sp. nov.

Candidatus Prevotella saxifitrix (NL. fem. n. *saxifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316685*. The type genome for the species is the GenBank assembly GCA_902758895.1. The GC content of the type genome is 51.94 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Prevotella saxopisca sp. nov.

Candidatus Prevotella saxopisca (NL. fem. n. *saxopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002437285*. The type genome for the species is the GenBank assembly GCA_002476725.1. The GC content of the type genome is 56.45 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Prevotella selecastra sp. nov.

Candidatus Prevotella selecastra (NL. fem. n. *selecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315955*. The type genome for the species is the GenBank assembly GCA_002472205.1. The GC content of the type genome is 51.32 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Prevotella semapentia sp. nov.

Candidatus Prevotella semapentia (NL. fem. n. *semapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900317685*. The type genome for the species is the GenBank assembly GCA_002353775.1. The GC content of the type genome is 51.98 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Prevotella semapicella sp. nov.

Candidatus Prevotella semapicella (NL. fem. n. *semapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902778255*. The type genome for the species is the GenBank assembly GCA_902774545.1. The GC content of the type genome is 48.66 %

and the genome length is 3.1 Mbp.

Description of *Candidatus* Prevotella semilugo sp. nov.

Candidatus Prevotella semilugo (NL. fem. n. *semilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902788605*. The type genome for the species is the GenBank assembly GCA_902762015.1. The GC content of the type genome is 50.38 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella semipifica sp. nov.

Candidatus Prevotella semipifica (NL. fem. n. *semipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002354095*. The type genome for the species is the GenBank assembly GCA_002373015.1. The GC content of the type genome is 47.45 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Prevotella semoditio sp. nov.

Candidatus Prevotella semoditio (NL. fem. n. *semoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902798615*. The type genome for the species is the GenBank assembly GCA_902799115.1. The GC content of the type genome is 43.45 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Prevotella semunousia sp. nov.

Candidatus Prevotella semunousia (NL. fem. n. *semunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002437565*. The type genome for the species is the GenBank assembly GCA_002451485.1. The GC content of the type genome is 51.87 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Prevotella semunugo sp. nov.

Candidatus Prevotella semunugo (NL. fem. n. *semunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002394365*. The type genome for the species is the GenBank assembly GCA_002448415.1. The GC content of the type genome is 47.42 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Prevotella siligivita sp. nov.

Candidatus Prevotella siligivita (NL. fem. n. *siligivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900548585*. The type genome for the species is the GenBank assembly GCA_900548585.1. The GC content of the type genome is 52.58 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Prevotella siminago sp. nov.

Candidatus Prevotella siminago (NL. fem. n. *siminago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900765465*. The type genome for the species is the GenBank assembly GCA_900765465.1. The GC content of the type genome is 47.66 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Prevotella siminibula sp. nov.

Candidatus Prevotella siminibula (NL. fem. n. *siminibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900317545*. The type genome for the species is the GenBank assembly GCA_902794525.1. The GC content of the type genome is 52.59 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Prevotella solifatica sp. nov.

Candidatus Prevotella solifatica (NL. fem. n. *solifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902784615*. The type genome for the species is the GenBank assembly GCA_902784615.1. The GC content of the type genome is 50.49 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Prevotella subabax sp. nov.

Candidatus Prevotella subabax (NL. fem. n. *subabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp013333935*. The type genome for the species is the GenBank assembly GCA_013333935.1. The GC content of the type genome is 47.98 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Prevotella subacatio sp. nov.

Candidatus Prevotella subacatio (NL. fem. n. *subacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000436595*. The type genome for the species is the GenBank assembly GCA_000436595.1. The GC content of the type genome is 48.74 % and the genome length is 2.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella subacetta sp. nov.

Candidatus Prevotella subacetta (NL. fem. n. *subacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315775*. The type genome for the species is the GenBank assembly GCA_902774975.1. The GC content of the type genome is 47.59 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Prevotella subadicula sp. nov.

Candidatus Prevotella subadicula (NL. fem. n. *subadicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900552515*. The type genome for the species is the

GenBank assembly GCA_900757805.1. The GC content of the type genome is 47.91 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Prevotella subofitio sp. nov.

Candidatus Prevotella subofitio (NL. fem. n. *subofitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900553465*. The type genome for the species is the GenBank assembly GCA_900553465.1. The GC content of the type genome is 48.36 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Prevotella sugilitio sp. nov.

Candidatus Prevotella sugilitio (NL. fem. n. *sugilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902794405*. The type genome for the species is the GenBank assembly GCA_902794405.1. The GC content of the type genome is 50.26 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Prevotella supelentia sp. nov.

Candidatus Prevotella supelentia (NL. fem. n. *supelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900315745*. The type genome for the species is the GenBank assembly GCA_902799635.1. The GC content of the type genome is 46.92 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Prevotella supelitas sp. nov.

Candidatus Prevotella supelitas (NL. fem. n. *supelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314915*. The type genome for the species is the GenBank assembly GCA_900319825.1. The GC content of the type genome is 48.6 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Prevotella tabifimonia sp. nov.

Candidatus Prevotella tabifimonia (NL. fem. n. *tabifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900318585*. The type genome for the species is the GenBank assembly GCA_900318585.1. The GC content of the type genome is 53.02 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Prevotella tegimitica sp. nov.

Candidatus Prevotella tegimitica (NL. fem. n. *tegimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900548195*. The type genome for the species is the GenBank assembly GCA_902766535.1. The GC content of the type genome is 45.02 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Prevotella tenebessa sp. nov.

Candidatus Prevotella tenebessa (NL. fem. n. *tenebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002351725*. The type genome for the species is the GenBank assembly GCA_902765795.1. The GC content of the type genome is 47.02 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Prevotella tenematica sp. nov.

Candidatus Prevotella tenematica (NL. fem. n. *tenematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900313235*. The type genome for the species is the GenBank assembly GCA_902758125.1. The GC content of the type genome is 50.38 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Prevotella terebilega sp. nov.

Candidatus Prevotella terebilega (NL. fem. n. *terebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900314715*. The type genome for the species is the GenBank assembly GCA_902755825.1. The GC content of the type genome is 42.85 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Prevotella tolutitudo sp. nov.

Candidatus Prevotella tolutitudo (NL. fem. n. *tolutitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900553595*. The type genome for the species is the GenBank assembly GCA_900763795.1. The GC content of the type genome is 53.86 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prevotella totidessa sp. nov.

Candidatus Prevotella totidessa (NL. fem. n. *totidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900546535*. The type genome for the species is the GenBank assembly GCA_004562525.1. The GC content of the type genome is 47.27 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Prevotella turicessa sp. nov.

Candidatus Prevotella turicessa (NL. fem. n. *turicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002480935*. The type genome for the species is the GenBank assembly GCA_002481425.1. The GC content of the type genome is 51.37 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Prevotella utricatica sp. nov.

Candidatus Prevotella utricatica (NL. fem. n. *utricatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp003932845*. The type genome for the species is the GenBank assembly RS_GCF_003932845.1. The GC content of the type genome is 44.37

% and the genome length is 2.61 Mbp.

Description of *Candidatus* Prevotella vacilitia sp. nov.

Candidatus Prevotella vacilitia (NL. fem. n. *vacilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000436915*. The type genome for the species is the GenBank assembly GCA_900546165.1. The GC content of the type genome is 43.15 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Prevotella vavasiforma sp. nov.

Candidatus Prevotella vavasiforma (NL. fem. n. *vavasiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002353485*. The type genome for the species is the GenBank assembly GCA_002353485.1. The GC content of the type genome is 53.55 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Prevotella vehemibula sp. nov.

Candidatus Prevotella vehemibula (NL. fem. n. *vehemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp004557285*. The type genome for the species is the GenBank assembly GCA_004557285.1. The GC content of the type genome is 50.84 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Prevotella venucilenta sp. nov.

Candidatus Prevotella venucilenta (NL. fem. n. *venucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900543975*. The type genome for the species is the GenBank assembly GCA_004553785.1. The GC content of the type genome is 51.34 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Prevotella venucisca sp. nov.

Candidatus Prevotella venucisca (NL. fem. n. *venucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000433175*. The type genome for the species is the GenBank assembly GCA_000433175.1. The GC content of the type genome is 48.13 % and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Prevotella verecitas sp. nov.

Candidatus Prevotella verecitas (NL. fem. n. *verecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900553155*. The type genome for the species is the GenBank assembly GCA_900763235.1. The GC content of the type genome is 50.28 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Prevotella veridivita sp. nov.

Candidatus Prevotella veridivita (NL. fem. n. *veridivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002305235*. The type genome for the species is the GenBank assembly GCA_002305235.1. The GC content of the type genome is 53.35 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Prevotella viburisca sp. nov.

Candidatus Prevotella viburisca (NL. fem. n. *viburisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900544495*. The type genome for the species is the GenBank assembly GCA_900544495.1. The GC content of the type genome is 48.3 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Prevotella vigenax sp. nov.

Candidatus Prevotella vigenax (NL. fem. n. *vigenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900768785*. The type genome for the species is the GenBank assembly GCA_900768785.1. The GC content of the type genome is 39.5 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Prevotella vinaciforma sp. nov.

Candidatus Prevotella vinaciforma (NL. fem. n. *vinaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900319895*. The type genome for the species is the GenBank assembly GCA_900319895.1. The GC content of the type genome is 48.5 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Prevotella virecimonas sp. nov.

Candidatus Prevotella virecimonas (NL. fem. n. *virecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900770025*. The type genome for the species is the GenBank assembly GCA_900770025.1. The GC content of the type genome is 51.43 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Prevotella viripousia sp. nov.

Candidatus Prevotella viripousia (NL. fem. n. *viripousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902792635*. The type genome for the species is the GenBank assembly GCA_902791045.1. The GC content of the type genome is 50.74 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Prevotella visifetta sp. nov.

Candidatus Prevotella visifetta (NL. fem. n. *visifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002405875*. The type genome for the species is the GenBank assembly GCA_002405875.1. The GC content of the type genome is 46.22 %

and the genome length is 2.14 Mbp.

Description of *Candidatus* Prevotella visociforma sp. nov.

Candidatus Prevotella visociforma (NL. fem. n. *visociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp902771155*. The type genome for the species is the GenBank assembly GCA_902771155.1. The GC content of the type genome is 49.26 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Prevotella visocitoga sp. nov.

Candidatus Prevotella visocitoga (NL. fem. n. *visocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002933775*. The type genome for the species is the GenBank assembly GCA_002493205.1. The GC content of the type genome is 48.6 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Prevotella vitifitoga sp. nov.

Candidatus Prevotella vitifitoga (NL. fem. n. *vitifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002299275*. The type genome for the species is the GenBank assembly GCA_002299275.1. The GC content of the type genome is 44.01 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Prevotella vitigatio sp. nov.

Candidatus Prevotella vitigatio (NL. fem. n. *vitigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900556795*. The type genome for the species is the GenBank assembly GCA_900767545.1. The GC content of the type genome is 45.62 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Prevotella vocifimonia sp. nov.

Candidatus Prevotella vocifimonia (NL. fem. n. *vocifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp900316645*. The type genome for the species is the GenBank assembly GCA_900317665.1. The GC content of the type genome is 47.99 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Prevotella volunivita sp. nov.

Candidatus Prevotella volunivita (NL. fem. n. *volunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp000257925*. The type genome for the species is the GenBank assembly RS_GCF_009728485.1. The GC content of the type genome is 41.48 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Prevotella voragitrix sp. nov.

Candidatus Prevotella voragitrix (NL. fem. n. *voragitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002251385*. The type genome for the species is the GenBank assembly GCA_900551785.1. The GC content of the type genome is 54.43 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Prevotella xenopilenta sp. nov.

Candidatus Prevotella xenopilenta (NL. fem. n. *xenopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002395135*. The type genome for the species is the GenBank assembly GCA_902781335.1. The GC content of the type genome is 49.5 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Prevotella xeropicula sp. nov.

Candidatus Prevotella xeropicula (NL. fem. n. *xeropicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotella sp002342665*. The type genome for the species is the GenBank assembly GCA_002342665.1. The GC content of the type genome is 52.47 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Prevotellamassilia adperentia sp. nov.

Candidatus Prevotellamassilia adperentia (NL. fem. n. *adperentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004552195*. The type genome for the species is the GenBank assembly GCA_004552195.1. The GC content of the type genome is 54.92 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Prevotellamassilia alsulimonia sp. nov.

Candidatus Prevotellamassilia alsulimonia (NL. fem. n. *alsulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900772575*. The type genome for the species is the GenBank assembly RS_GCF_900772575.1. The GC content of the type genome is 57.44 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Prevotellamassilia aperciforma sp. nov.

Candidatus Prevotellamassilia aperciforma (NL. fem. n. *aperciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp002431845*. The type genome for the species is the GenBank assembly GCA_002431845.1. The GC content of the type genome is 42.41 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Prevotellamassilia arcatago sp. nov.

Candidatus Prevotellamassilia arcatago (NL. fem. n. *arcatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004552155*. The type genome for the species is the GenBank assembly GCA_004552155.1. The GC content of the type genome is 54.44

% and the genome length is 2.34 Mbp.

Description of *Candidatus* Prevotellamassilia cerimitura sp. nov.

Candidatus Prevotellamassilia cerimitura (NL. fem. n. *cerimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004557035*. The type genome for the species is the GenBank assembly GCA_004557035.1. The GC content of the type genome is 54.44 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Prevotellamassilia cocodilega sp. nov.

Candidatus Prevotellamassilia cocodilega (NL. fem. n. *cocodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004555425*. The type genome for the species is the GenBank assembly GCA_004553195.1. The GC content of the type genome is 54.96 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Prevotellamassilia defetessa sp. nov.

Candidatus Prevotellamassilia defetessa (NL. fem. n. *defetessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900556465*. The type genome for the species is the GenBank assembly GCA_900556465.1. The GC content of the type genome is 62.66 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prevotellamassilia defunousia sp. nov.

Candidatus Prevotellamassilia defunousia (NL. fem. n. *defunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900541335*. The type genome for the species is the GenBank assembly GCA_900541335.1. The GC content of the type genome is 48.76 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Prevotellamassilia excetugo sp. nov.

Candidatus Prevotellamassilia excetugo (NL. fem. n. *excetugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900752815*. The type genome for the species is the GenBank assembly RS_GCF_900752815.1. The GC content of the type genome is 53.88 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Prevotellamassilia feditetta sp. nov.

Candidatus Prevotellamassilia feditetta (NL. fem. n. *feditetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900768625*. The type genome for the species is the GenBank assembly RS_GCF_900768625.1. The GC content of the type genome is 51.61 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Prevotellamassilia homogugo sp. nov.

Candidatus Prevotellamassilia homogugo (NL. fem. n. *homogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004557185*. The type genome for the species is the GenBank assembly GCA_004557185.1. The GC content of the type genome is 58.14 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Prevotellamassilia inbecimonas sp. nov.

Candidatus Prevotellamassilia inbecimonas (NL. fem. n. *inbecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004558535*. The type genome for the species is the GenBank assembly GCA_004558535.1. The GC content of the type genome is 56.89 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Prevotellamassilia manomivita sp. nov.

Candidatus Prevotellamassilia manomivita (NL. fem. n. *manomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900542795*. The type genome for the species is the GenBank assembly GCA_900542795.1. The GC content of the type genome is 43.77 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Prevotellamassilia mimogicella sp. nov.

Candidatus Prevotellamassilia mimogicella (NL. fem. n. *mimogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp002933955*. The type genome for the species is the GenBank assembly RS_GCF_011960185.1. The GC content of the type genome is 47.12 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Prevotellamassilia nidifessa sp. nov.

Candidatus Prevotellamassilia nidifessa (NL. fem. n. *nidifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900541575*. The type genome for the species is the GenBank assembly GCA_900541575.1. The GC content of the type genome is 46.09 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Prevotellamassilia obsuribula sp. nov.

Candidatus Prevotellamassilia obsuribula (NL. fem. n. *obsuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004562975*. The type genome for the species is the GenBank assembly GCA_004562975.1. The GC content of the type genome is 55.2 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Prevotellamassilia ornitimonia sp. nov.

Candidatus Prevotellamassilia ornitimonia (NL. fem. n. *ornitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp009775705*. The type genome for the species is the GenBank assembly GCA_009775705.1. The GC content of the type genome is 51.89

% and the genome length is 2.52 Mbp.

Description of *Candidatus* Prevotellamassilia perexitas sp. nov.

Candidatus Prevotellamassilia perexitas (NL. fem. n. *perexitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900539625*. The type genome for the species is the GenBank assembly RS_GCF_900767245.1. The GC content of the type genome is 50.86 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Prevotellamassilia relecilega sp. nov.

Candidatus Prevotellamassilia relecilega (NL. fem. n. *relecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900546605*. The type genome for the species is the GenBank assembly RS_GCF_900767625.1. The GC content of the type genome is 43.25 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Prevotellamassilia resupessa sp. nov.

Candidatus Prevotellamassilia resupessa (NL. fem. n. *resupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900543155*. The type genome for the species is the GenBank assembly RS_GCF_900768945.1. The GC content of the type genome is 43.72 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Prevotellamassilia sotulicula sp. nov.

Candidatus Prevotellamassilia sotulicula (NL. fem. n. *sotulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004556745*. The type genome for the species is the GenBank assembly GCA_004551685.1. The GC content of the type genome is 54.94 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Prevotellamassilia totidifica sp. nov.

Candidatus Prevotellamassilia totidifica (NL. fem. n. *totidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp004552865*. The type genome for the species is the GenBank assembly GCA_004552865.1. The GC content of the type genome is 53.27 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Prevotellamassilia visocitura sp. nov.

Candidatus Prevotellamassilia visocitura (NL. fem. n. *visocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp000437675*. The type genome for the species is the GenBank assembly GCA_900547665.1. The GC content of the type genome is 47.5 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Prevotellamassilia xenopessa sp. nov.

Candidatus Prevotellamassilia xenopessa (NL. fem. n. *xenopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prevotellamassilia sp900540885*. The type genome for the species is the GenBank assembly RS_GCF_900763495.1. The GC content of the type genome is 45.51 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Priestia saburatica sp. nov.

Candidatus Priestia saburatica (NL. fem. n. *saburatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Priestia sp003184905*. The type genome for the species is the GenBank assembly RS_GCF_003184905.1. The GC content of the type genome is 37.64 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Problana turibitrix sp. nov.

Candidatus Problana turibitrix (NL. fem. n. *turibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMML01 sp014379105*. The type genome for the species is the GenBank assembly GCA_014379105.1. The GC content of the type genome is 59.68 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Problana gen. nov.

Candidatus Problana (NL. fem. n. *Problana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMML01*. The type species for the genus is *Candidatus* Problana turibitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Problaria invinisca sp. nov.

Candidatus Problaria invinisca (NL. fem. n. *invinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CEB3 sp001029295*. The type genome for the species is the GenBank assembly RS_GCF_001029295.1. The GC content of the type genome is 52.58 % and the genome length is 5.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sulfidogenic bioreactor run at pH 2.4 which was inoculated with two (moderately) acidophilic sulfate reducing isolates and an enrichment culture of an anaerobic streamer mat from an acidic (pH 2.5) stream draining of an abandoned copper mine in south-west Spain".

Description of *Candidatus* Problaria gen. nov.

Candidatus Problaria (NL. fem. n. *Problaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CEB3*. The type species for the genus is *Candidatus* Problaria invinisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Problella apposastra sp. nov.

Candidatus Problella apposastra (NL. fem. n. *apposastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GM202ARS2 sp014323835*. The type genome for the species is the GenBank assembly GCA_014323835.1. The GC content of the type genome is 53.12 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Problella gen. nov.

Candidatus Problella (NL. fem. n. *Problella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GM202ARS2*. The type species for the genus is *Candidatus* Problella apposastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GM7ARS4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomellaceae.

Description of *Candidatus* Problia fraglitica sp. nov.

Candidatus Problia fraglitica (NL. fem. n. *fraglitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR5 sp005887895*. The type genome for the species is the GenBank assembly GCA_005887895.1. The GC content of the type genome is 71.05 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Problia gen. nov.

Candidatus Problia (NL. fem. n. *Problia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR5*. The type species for the genus is *Candidatus* Problia fraglitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Problia veriditas sp. nov.

Candidatus Problia veriditas (NL. fem. n. *veriditas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR5 sp003220265*. The type genome for the species is the GenBank assembly GCA_003220265.1. The GC content of the type genome is 70.65 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Problida absorugo sp. nov.

Candidatus Problida absorugo (NL. fem. n. *absorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3222 sp002363035*. The type genome for the species is the GenBank assembly GCA_002363035.1. The GC content of the type genome is 48.4 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Problida gen. nov.

Candidatus Problida (NL. fem. n. *Problida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3222*. The type species for the genus is *Candidatus* Problida absorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9783*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisanaceae.

Description of *Candidatus* Problosa depetitio sp. nov.

Candidatus Problosa depetitio (NL. fem. n. *depetitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOA01 sp012520525*. The type genome for the species is the GenBank assembly GCA_012520525.1. The GC content of the type genome is 42.34 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Problosa gen. nov.

Candidatus Problosa (NL. fem. n. *Problosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYOA01*. The type species for the genus is *Candidatus* Problosa depetitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Problula mutabimonas sp. nov.

Candidatus Problula mutabimonas (NL. fem. n. *mutabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840935 sp002840935*. The type genome for the species is the GenBank assembly GCA_002840935.1. The GC content of the type genome is 37.6 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Problula gen. nov.

Candidatus Problula (NL. fem. n. *Problula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002840935*. The type species for the genus is *Candidatus* Problula mutabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-32-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domigidaceae.

Description of *Candidatus* Prochlorococcus bicinitoga sp. nov.

Candidatus Prochlorococcus bicinitoga (NL. fem. n. *bicinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003212515*. The type genome for the species is the GenBank assembly GCA_003280255.1. The GC content of the type genome is 36.25 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Prochlorococcus coturitio sp. nov.

Candidatus Prochlorococcus coturitio (NL. fem. n. *coturitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp000760215*. The type genome for the species is the GenBank assembly RS_GCF_000760215.1. The GC content of the type genome is 36.35 % and the genome length is 1.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ocean".

Description of *Candidatus* Prochlorococcus depopimonas sp. nov.

Candidatus Prochlorococcus depopimonas (NL. fem. n. *depopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003278345*. The type genome for the species is the GenBank assembly GCA_003278345.1. The GC content of the type genome is 34.86 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus endivitrix sp. nov.

Candidatus Prochlorococcus endivitrix (NL. fem. n. *endivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003215475*. The type genome for the species is the GenBank assembly GCA_003215475.1. The GC content of the type genome is 35.24 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Prochlorococcus fetifibra sp. nov.

Candidatus Prochlorococcus fetifibra (NL. fem. n. *fetifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003215795*. The type genome for the species is the GenBank assembly GCA_003215795.1. The GC content of the type genome is 37.39 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Prochlorococcus ignipibula sp. nov.

Candidatus Prochlorococcus ignipibula (NL. fem. n. *ignipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp902590775*. The type genome for the species is the

GenBank assembly GCA_902590775.1. The GC content of the type genome is 34.65 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Prochlorococcus inlacicella sp. nov.

Candidatus Prochlorococcus inlacicella (NL. fem. n. *inlacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003278425*. The type genome for the species is the GenBank assembly GCA_003278425.1. The GC content of the type genome is 36.47 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus inretitica sp. nov.

Candidatus Prochlorococcus inretitica (NL. fem. n. *inretitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003212695*. The type genome for the species is the GenBank assembly GCA_003212695.1. The GC content of the type genome is 35.11 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Prochlorococcus lugubousia sp. nov.

Candidatus Prochlorococcus lugubousia (NL. fem. n. *lugubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003279445*. The type genome for the species is the GenBank assembly GCA_003209775.1. The GC content of the type genome is 37.41 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Prochlorococcus nugivago sp. nov.

Candidatus Prochlorococcus nugivago (NL. fem. n. *nugivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003215555*. The type genome for the species is the GenBank assembly GCA_003215555.1. The GC content of the type genome is 34.79 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus panifitrix sp. nov.

Candidatus Prochlorococcus panifitrix (NL. fem. n. *panifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003214695*. The type genome for the species is the GenBank assembly GCA_003214695.1. The GC content of the type genome is 37.11 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Prochlorococcus viburitura sp. nov.

Candidatus Prochlorococcus viburitura (NL. fem. n. *viburitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus sp003212555*. The type genome for the species is the GenBank assembly GCA_003212555.1. The GC content of the type genome is 36.78 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus abhinibula sp. nov.
